The First Centennial and on to the Next

Stuart B. Levy

The ASM centennial is a major milestone-a time for members to reflect on the wealth of experience this organization has accumulated in its first century. We have come a long way since our beginnings in 1899. We have grown to an organization of over 43,000 members, encompassing diverse disciplines represented by our 25 divisions. We have recognized the importance, and encouraged and reaped the benefits of education and research. We have seen contributions of our members to the field of microbiology and to other fields of science.

The expanding organizational structure of ASM reveals the increasing need to represent adequately our members and our discipline. Our Boards on Publications, Education and Training, Membership, Public and Scientific Affairs, and Meetings; the American

Welcome to CSTE

Welcome to the Council of State and Territorial Epidemiologists (CSTE) website. The Council of State and Territorial Epidemiologists was organized in the early 1950's in response to the need to have at least one person in each state and territory responsible for public health surveillance of diseases and conditions of public health significance.

Since then, CSTE has grown to include members from every U.S. state and territory, Canada, and Great Britain. Almost 400 epidemiologists are now members of CSTE.

The surveillance and epidemiology of infectious diseases, chronic diseases and conditions, and environmental health concerns are priority areas for CSTE. Over 150 members serve as special topic consultants for a broad range of public health concerns such as HIV/AIDS and vaccine-preventable diseases.

Health provides a model for more effective development aid

20 March 2002 | Geneva | The experience of bringing essential health interventions to the poorest people offers lessons for improving development assistance in other areas. At the International Conference on Financing for Development in Monterrey, WHO outlined key factors for making aid for health work, such as setting quantifiable, time-based goals and linking funding to performance. This approach can be adopted in areas as diverse as education, nutrition and environmental management.

March 2002 World TB Day

WTBD'01

WTBD'00

The theme for World TB Day 2002 is "Stop TB, fight poverty". The theme suggests that tackling TB, one of several illnesses that affect the poor, is one way of achieving greater global prosperity.

"Stop TB, fight poverty": a yearlong campaign:

Unlike previous years, a sustained campaign emphasizing this year's theme is envisioned. ***Stop TB partners are encouraged to develop year-round activities and stress the targets for case detection and cures***, as this indicates both that the global partnership has a plan and that massive expansion of DOTS is necessary to

Who we are

Lilly is a leading innovation-driven pharmaceutical corporation. We are developing a growing portfolio of best-in-class pharmaceutical products by applying the latest research from our own worldwide laboratories and from collaborations with eminent scientific organizations.

We're seeking answers for some of the world's most urgent medical needs. As our products save and improve lives, they also save overall health care costs: They are often less expensive than other forms of health care, such as surgery and hospitalization.

We employ more than 35,000 people worldwide and market our medicines in 159 countries. Lilly has major research and development facilities in nine countries and conducts clinical trials in more than 30 countries.

What we do

Ellison Medical Foundation A Non-Profit Corporation

- Ellison Medical Foundation
- Aging
- Global Infectious Disease
- Funded Scholars
- Funded Institutions
- Conferences and Workshops
- Infrastructure Award

Overview

The Ellison Medical Foundation, established and supported by Lawrence J. Ellison, supports two areas of research:

1. **Aging** - Basic biomedical research on aging relevant to understanding aging processes and age-related diseases and disabilities.
2. **Global Infectious Disease** - Basic research on molecular and cellular mechanisms of parasitic and infectious diseases of major global public health importance, caused by viral, bacterial, fungal, protozoal or helminthic pathogens.

The foundation particularly wishes to stimulate new creative research that might not be funded by traditional sources or that is often under-funded in the U.S. The Ellison Medical Foundation fosters research by means of grants-in-aid to investigators at universities and laboratories within the United States using a variety of award mechanisms including a New Scholars Program, Senior Scholars Program, Conferences and Workshops Awards Program, a Training Program, and an Infrastructure Awards Program.

Instructions for applying for an award can be found on the Applications and Receipt Dates page. For a complete list of past award recipients, refer to the Funded Scholars page.

Scientific Advisory Board

Decisions about grants and awards are made under the guidance of the distinguished Scientific Advisory Board. The board consists of:
