

Possible questions for exams

Some exam question choices:

1. Why is the human irrelevant to the control of cysticercosis?
2. What point(s) in the lifecycle of *T. solium* will you attack in a control program?
3. Oxfendazole is the new porcine drug for cysticercosis and has been shown to have almost 100% efficacy. The good thing about this new drug is the fact that cysts are reduced to micro-lesions after treatment, why is this important?
4. What are the most commonly accepted & used immunological diagnostic tests for *T. solium* infections in epidemiological studies; contrast these tests with those used in clinical diagnosis and patient management.
5. Name or describe the relevant antigens used in the diagnosis of cysticercosis.
