

# Utility Programs 1.0

Released August 2004

[Download](#) the latest version of **nconv.dll** Dynamic Link Library Program (Northcon10 3.0.7 using nconv.dll 3.0.25)

[Download](#) the latest version of **Recnizer** Utility Program (Version 0.9.5)

## Utility Programs Version 1.0 Release Notes

- **Recnizer** – This utility is used to identify files of cancer registry abstracts in formats prescribed by the North American Association of Central Cancer Registries (NAACCR). It is useful in quickly determining the characteristics of files that are received from an outside source. The utility can be used to test for validity in files that have caused unexplained problems for other software.

## Dynamic Link Library

- **nconv.dll** – This function library contains several functions to perform file conversion or record-by-record conversion when called by an application program. This is the same DLL used by other Registry Plus software.
