

HEALTH INTERVIEW SURVEY

CALENDAR YEAR 1971

TAPE FORMATS

TAPE RELEASE PACKAGE

IV.1. FINAL TAPE FORMATS

HIS - CALENDAR YEAR 1971 - FINAL TAPE RECORDS

The basic HIS tape files are created and maintained by Processing Quarter by Record Type. The contents of these tape files are presented by Record Type in the attached Outlines of Items and Codes. The outlines are arranged by location of items in the tape records. Note that Household items in tape locations 1-49 are the same for all records associated with a household; Person items in tape locations 50-97 are the same for all records associated with a person.

Users of the tape files should take note of the following tape characteristics:

1. Type of Records (Tape Location 14)

- 1 = Households
- 2 = Persons
- 3 = Conditions
- 4 = Hospital Episodes
- 5 = Doctor Visits

2. File Sequence

The file is in sequence on the following identifying items for each Processing Quarter and Record Type as identified in locations 19 and 14 respectively:

<u>Items</u>	<u>Tape Locations</u>
PSU - Original Census Code	3-5
Week - Census Code	6-7
Segment	8-9
Household Number	10-11
Person Number	12-13
Record Serial Number	15-16

2. File Sequence--Contd.

The PSU x Week x Segment x Household Number identifies a Household.

The Person Number identifies a person within a household.

The Record Serial Number identifies multiple records within a Record Type for a person; for example, condition records for a person are identified with a unique number beginning with 01 for each condition associated with the person.

3. Other Tape Characteristics

- .1 Headers and trailers = Standard 360 labels
- .2 Density = 1600 bpi
- .3 Record length = Fixed length of 486 bytes
- .4 Block size = 4860 (10 records per block)
- .5 Tape format = All fields are in character format
- .6 DS NAME = HIS 1971Y.PERSONSX

NOTE: Standard Metropolitan Statistical Areas as defined for the 1960 Decennial Census.

Description of Class of Accident Code

The three-digit Class of Accident Code described in detail below classifies accidents as follows:

- Total Motor Vehicle Accidents = Codes 1 and 2 in first digit of recode
Moving Motor Vehicle Accidents = Code 1 in first digit of recode
Nonmoving Motor Vehicle Accidents = Code 2 in first digit of recode
Total Work Accidents = Code 1 in second digit of recode
Total Home Accidents = Code 1 in third digit of recode

Class of Accident
Recode
Loc. 169-171

Description

111	Moving motor vehicle - at work - at home
112	Moving motor vehicle - at work - not at home - street or highway
113	Moving motor vehicle - at work - not at home - not on street or highway
121	Moving motor vehicle - not at work - at home - not on street or highway
122	Moving motor vehicle - not at work - not at home - on street or highway
123	Moving motor vehicle - not at work - not at home - not on street or highway
211	Nonmoving motor vehicle - at work - at home
212	Nonmoving motor vehicle - at work - not at home
221	Nonmoving motor vehicle - not at work - at home

Attachment to Final Condition Record--Contd.

<u>Class of Accident Recode Loc. 169-171</u>	<u>Description</u>
222	Nonmoving motor vehicle - not at work - not at home
311	Nonmotor vehicle - at work - at home
312	Nonmotor vehicle - at work - not at home
321	Nonmotor vehicle - not at work - at home
322	Nonmotor vehicle - not at work - not at home
400	Injured in Armed Forces
500	Therapeutic misadventure
600	Injury Condition - No Table A

DIAGNOSTIC RECODES

HEALTH INTERVIEW SURVEY

January 1969

Diagnostic Recode #1

Diseases, Injuries, and Impairments

- I. Purpose: Recode #1 is a list of 278 categories of diseases and injuries selected from the complete list of 3- and 4-digit categories of the International Classification of Diseases, Adapted for Use in the United States (ICDA), 8th Revision, as modified for survey purposes. In addition, a complete list of types and sites of impairments of the Classification of Impairments (X-code) completes the recode. The recode has been used as a device to simplify tabulating of diagnostic information. In general, this recode contains the greatest amount of detail tabulated; very rarely are the 4-digit ICDA rubrics used for final tabulation purposes.

- II. Content: Each line of the recode contains the following elements: recode number, title summarizing the contents, and the equivalent rubric numbers from the ICDA. The full detail of all modifications of the ICDA is shown in the Medical Coding Manual, Appendix III. A summary listing of modifications which directly affect the use of the recode is shown as follows:
 - (a) The letter "S" following a rubric means that this is a special number devised for survey purposes which is not to be found in the ICDA.
 - (b) Certain ICDA rubrics are recoded to other locations within the list of rubrics; these recoded ICDA rubrics are shown in parentheses in the recode listing.
 - (c) ICDA rubrics for impairments and most of the late effects of diseases are not used in the survey medical coding and, therefore are not shown in Recode #1. Impairments and their causes, as reported by the household members, are coded directly to the X-codes according to a system that differs considerably from the ICDA method. A complete description of the Classification of Impairments (X-code) is given in the Medical Coding Manual.
 - (d) The abbreviations "NOS," "NEC," and "Pt." represent, respectively, "not otherwise specified," "not elsewhere classified," and "part."

- III. A log of changes in Recode #1 is attached. The log indicates the date of the change, the previous notation and the changed notation.

Title

All impairments (X00-X99). For additional 1-digit codes expressing etiology of impairments, see Appendix I, Medical Coding Manual.

Impairment of Vision (X00-X05)

- X00 Visual impairment: Inability to read ordinary newspaper print with glasses, and impairment indicating no useful vision in either eye
- X01 Blind in one eye, other eye defective, but not blind
- X02 Blind in one eye, other eye good or not mentioned
- X03 Visual impairment in both eyes
- X05 Impaired vision—except as in X00-X03

Impairment of Hearing (X06-X09)

- X06 Deafness, total, both ears including deaf-mutism
Includes persons, with or without speech, who are completely deaf.
- X07 Hearing loss not codeable to X06 involving both ears
- X08 All hearing impairments involving only one ear
- X09 Hearing loss, complete or partial, for which it is impossible to determine whether one or both ears are involved

Impairment of Speech, Special Sense, Intelligence (X10-X19)

- X10 Stammering, stuttering
- X11 Other speech defect except deaf-mutism and cleft palate speech
- X12 Loss or impairment of sense of smell or taste
- X13 Loss or disturbance of sensation, NEC
- X14 Special learning disability (reading) (mixed dominance)
- X15 Mental deficiency, in mongolism

Health Interview Survey

Diagnostic Recode #2

Acute Conditions

I. Purpose: Recode #2 consists of 33 4-digit categories of frequently reported acute conditions. These acute condition categories have been selected from the more extensive diagnostic listing in Diagnostic Recode #1 following the definition of acute condition shown below. Categories shown in this recode are used for summary tabulation and publication.

II. Arrangement of the Recode: The first two digits of the recode are to be used for subtotals for use in the annual Acute Conditions report. The first digit will be used to separate the data into the five major condition groups, and the second digit into subcategories of these five. The third and fourth digits are the basic units of the recode.

III. Definition of Acute Condition: For the purposes of the Health Interview Survey an acute condition is any disease or injury with onset in the 3-month reference period prior to the week of interview, exclusive of certain conditions always classed as chronic regardless of date of onset. The incidence of acute conditions is limited to acute conditions with onset in the 2-week reference period prior to the interview week. Acute conditions also include current deliveries, normal or complicated, and current complications of pregnancy and the puerperium. Acute conditions must have had either activity restriction or medical attention in order to be included in the survey statistics.

Acute conditions, as defined, are given a supplementary 1-digit code number identifying them as acute, and are sorted for tabulation under Recode #2 categories on this basis. Also, the incidence of acute conditions is tabulated under Recodes #1 and #2 only for those conditions with onset in the 2-week period prior to interview.

IV. Content: Each line of the recode contains the following elements: Recode #2 number, title summarizing the contents of the category, Recode #1 inclusions, and rubric numbers from the International Classification of Diseases (ICDA), 8th Revision.

A summary listing of modifications which affect the use of the recode is shown as follows:

- (a) The letter "S" following an ICDA rubric means that this is a special number devised for survey purposes which is not to be found in the ICDA.

Diagnostic Recode #2

Acute Conditions

- (b) Certain ICDA rubrics are recoded to other locations within the list of rubrics; these recoded ICDA rubrics are shown in parenthesis in the recode listing.
- (c) Abbreviations "NOS," "NEC," "Pt.," represent respectively, "not otherwise specified," "not elsewhere classified," and "part."

V. A log of changes in Recode #2 is attached. Refer to Recode #1 for details of changes in that listing.

Diagnostic Recode #3
Chronic Conditions and Impairments

I. Purpose: Recode #3 consists of 53 2-digit categories of chronic conditions and impairments. These categories have been selected from the more extensive diagnostic listing in Diagnostic Recode #1 following definitions shown below. Categories shown in this recode are used for summary tabulation and publication purposes.

II. Definition of Chronic Condition and Impairment: For the purposes of the Health Interview Survey a chronic condition and an impairment are any departures from normal health with onset more than 3 months from date of interview, except certain complications of pregnancy. Also included are certain conditions listed on the check lists of chronic conditions and impairments which are classed as chronic regardless of the date of onset. All chronic conditions are counted in the survey whether or not they have necessitated activity restriction or medical care. All impairments coded with "X" in the first digit are, by definition, chronic.

Chronic conditions and impairments, as defined, are given a supplementary 1-digit code number identifying them as chronic and are sorted for tabulation under Recode #3 categories on this basis.

III. Content: Each line of the recode contains the following elements: Recode #3 number, title summarizing the contents of the category, Recode #1 inclusions, and rubric numbers from the International Classification of Diseases (ICDA). Since the impairment categories are coded according to the Classification of Impairments (X-code) instead of the ICD method, no corresponding ICD rubric numbers are shown in the last column for these categories. See Appendix I of the Medical Coding Manual for a listing of the X-codes.

A summary listing of modifications which affect the use of the recode is shown as follows:

- (a) The letter "S" following an ICDA rubric number means that this is a special number devised for survey purposes which is not to be found in the ICDA.
- (b) Certain ICDA rubrics are recoded to other locations within the list of rubrics; these recoded ICDA rubrics are shown in parentheses in the recode listing.
- (c) Abbreviations "NOS," "NEC," and "Pt." represent respectively, "not otherwise specified," "not elsewhere classified," and "part."

IV. A log of changes in Recode #3 is attached. Refer to Recode #1 for details of changes in that listing.

Diagnostic Recode #4
Hospital Diagnosis

- I. Purpose: Recode #4 is a list of 38 categories of diseases, injuries, and impairments selected from Recode #1. It is designed for use in tabulating the diagnosis reported for each hospitalization.
- II. Contents: Each line of the recode contains the following elements: recode number, title summarizing the contents, Recode #1 inclusions, rubric numbers from the ICDA. The full detail of all modifications of ICDA is shown in Appendix III of the Medical Coding Manual. A summary listing of modifications which directly affect the use of the recode is shown as follows:
 - (a) The letter "S" following a rubric means that this is a special number devised for survey purposes which is not to be found in the ICDA.
 - (b) Certain ICDA rubrics are recoded to other locations within the list of rubrics; these recoded ICDA rubrics are shown in parentheses in the recode listing.
 - (c) ICDA rubrics for impairments and most of the late effects of diseases are not used in the survey medical coding and, therefore are not shown in Recode #1. Impairments and their causes, as reported by the household members, are coded directly to the X-codes according to a system that differs considerably from the ICDA method. A complete listing of the Classification of Impairments (X-code) is given in the Appendix I of the Medical Coding Manual.
 - (d) The abbreviations "NOS" and "NEC" represent, respectively, "not otherwise specified" and "not elsewhere classified."

NATIONAL CENTER FOR HEALTH STATISTICS
DIVISION OF HEALTH INTERVIEW STATISTICS

The accompanying charts are designed to show procedures for deriving estimates from Health Interview Survey data tapes. The publication "Current Estimates" for the year 1977, is used as a source for the examples.

Each of the detailed tables from "Current Estimates" is listed in the first column of Chart 1. The column next to that, Tab. Spec. #, shows the number of the tabulation specification from which these data are drawn and the next column shows which columns on the tabulation specification contain that particular data set. For example, Table 1 in "Current Estimates," "Incidence of Acute Conditions, Percent Distribution, etc." is derived from tabulation specification C1, Column 1.

Note that not all the columns in the tabulation specifications contain data that were used in this publication, and that tabulation specifications are not included in this package for all the detailed tables.

CHART 1
TABULATING DATA FOR CURRENT ESTIMATES TABLES

Table	Tab Spec. #	Col. #	Item	Tape Location	Code
<u>Annual Estimates</u>					
<u>Incidence of Acute Conditions:</u>					
1	C1	1	Use: Condition records Acute	14 103	3 2
2	C1	1	Onset in 2 weeks Weight (2-week reference) inflated by 6.5 to obtain a quarterly estimate. Annual estimate is the sum of 4 quarterly estimates Quarterly estimates: Use Processing quarter codes.	104 Binary 217-220 19	1 or 1,2,3 4
<u>Condition disability days for acute conditions:</u>					
3.5	C1	8	Use: Condition records Acute	14 103	3 2
4.6	C1	9	Weight: Restricted activity Bed disability	Binary 225- 228 233-236	
7	C1	10	School loss: Persons 6-16 years of age	122	2
8	C1	11	and weight	or 75 Binary 241- 244	0
5			Work loss days Currently employed and weight	75 Binary 241-244	1-
<u>Limitation of activity status:</u>					
9	B1	1-5	Use: Person records Total population: All person records with activity limitation	14 98	2 1-
3			With limitation in major activity With no activity limitation Weight: Annual	98 98 209-212 Binary	1,2 4

HEALTH INTERVIEW SURVEY - 1977

TABULATION SPECIFICATIONS AND WEIGHTING

INTRODUCTION

The tabulation specifications which were used to tabulate data for the "Current Estimates" report are attached. A brief description of the key points of each tabulation used to prepare each table is shown on the attached chart.

The weighting procedure used requires some explanation. If the table to be prepared has used only one quarter of data (for instance, the second quarter of data collected during April-June, as evidenced by the Code 2 in the processing quarter field 19) the appropriate weights are shown under the quarterly column of the tabulation specification, e.g., C-1, and if the entire tape for the year is run, use the weights in the Annual column.

The weight for an event occurring or not occurring (binomial 0 or 1) uses the basic weights for the person. Similarly, if the event has occurred and when it occurs it can have a frequency of 1, 2, 3, etc.; the weight shown includes the cross product of the person's weight times the frequency. For instance, suppose a person is injured and requires 5 days in bed, thus the weight shown in the appropriate table is the person's weight times 5.

In most instances in the Health Interview Survey there are three reference periods used to make estimates: the 2-week reference period, 6 months, and 12 months. In producing estimates two weights are presented in the tape records; the Basic Weight and the 6.5 Weight.

The 6.5 Weight is a modification of the Basic Weight obtained by multiplying the Basic Weight by 6.5. The figure 6.5 indicates that 2 weeks multiplied by 6.5 represents 13 weeks or one calendar quarter. Summing over 4 calendar quarters equals 52 weeks. The Basic Weight for a quarter is 4 times the size of the Annual Weight.

To illustrate the use of reference periods, suppose we have a person whose weight is 6,000 in the tape for the quarter. This person's annual weight is $6000/4 = 1500$. His 6.5 weight is obtained by multiplying 6000×6.5 to obtain the 6.5 weight of 39,000. Therefore, if this person had 2 doctor visits occurring in the 2-week reference period, his contribution to the annual volume of doctor visits would have been $39,000 \times 2$ or 78,000. If he had been discharged from a hospital once during the 6 months prior to interview, his contribution to the annual volume of hospital discharges would be 1500×2 or 3000 for the full year's sample, or 6000×2 or 12,000 for a sample of one quarter. If the reference period was 12 months, the weight for the year's sample is 1500 (or 6000 for the quarterly sample).

The weights in the original tapes were presented in binary format. In the tape release package, all binary weights have been converted to character format. However, the previous binary weight tape locations are also shown in the tape format since much of the tape documentation is based on the HIS working tape files which uses the binary weights.

The weights are presented in character format in the tape in locations 201-254. Locations from 254 onward contain cross products of variables with frequency greater than one. For instance, the number of restricted activity days in the Person record locations 106-107 may be, say, 5 days. As a convenience in tabulation, these 5 days have been multiplied times the appropriate weight (the 6.5 weight in Locations 237-245) to obtain the weighted estimate of restricted activity days in Locations 255-263.
