National Health Interview Survey: fiscal year 1967 - calendar year 1968

Diagnostic Recode #3
Chronic Conditions and Impairments

Purpose: Recode #3 consists of 47 2-digit categories of chronic conditions and impairments. These categories have been selected from the more extensive diagnostic listing in Diagnostic Recode #1 following definitions shown below. Categories shown in this recode are used for summary tabulation and publication purposes.

Definition of Chronic Condition and Impairment: For the purposes of the National Health Interview Survey a chronic condition and an impairment are any departures from normal health with onset more than 3 months from date of interview, except certain complications of pregnancy. Also included are certain conditions listed on the check lists of chronic conditions and impairments which are classed as chronic regardless of the date of onset. All chronic conditions are counted in the survey whether or not they have necessitated activity restriction or medical care. All impairments coded as "X" in the first digit are, by definition, chronic.

Chronic conditions and impairments, as defined, are given a supplementary 1-digit code number identifying them as chronic and are sorted for tabulation under Recode #3 categories on this basis.

Content: Each line of the recode contains the following elements: recode #3 number, title summarizing the contents of the category, Recode #1 inclusions, and rubric numbers from the International Classification of Diseases (ICD). Since the impairment categories are coded according to the Classification of Impairments (X-code) instead of the ICD method, no corresponding ICD rubric numbers are shown in the last column for these categories. See Appendix I of the Medical Coding Manual for a description of the X-codes.

A summary listing of modifications which affect the use of the recode is shown as follows:

- (a) The letter "S" following an ICD rubric number means that this is a special number devised for survey purposes which is not to be found in the ICD.
- (b) Certain ICD rubrics are recoded to other locations within the list of rubrics; these recoded ICD rubrics are shown in parentheses in the recode listing.
- (c) A 4th digit "9" of any ICD rubric has been changed to "X" to avoid confusion with the use of ".9" as a 4th-digit denoting traumatic origin of a chronic condition.
- (d) The abbreviations "NOS" and "NEC" represent, respectively, "not otherwise specified" and "not elsewhere classified".
