

An Inventory Of Family Planning Service Sites: Institutional Characteristics United States-1974

From information collected in the first annual survey of all facilities included in the National Inventory of Family Planning Services, statistics are presented on demographic and institutional characteristics of service sites which render medical and nonmedical family planning services. The family planning service site is described in terms of its geographic and physical location, the agency or project responsible for its operation, its funding source, its primary purpose, the length of time it has been operational, the medical and ancillary services it performed, and the contraceptive methods that it provided.

AN INVENTORY OF FAMILY PLANNING SERVICE SITES: INSTITUTIONAL CHARACTERISTICS

Donna L. Morrow and Hugo K. Koch, *Division of Health Manpower and Facilities Statistics*

INTRODUCTION

This report offers statistical information about institutional characteristics of 8,170 family planning service sites in the United States and three of its territories. The information was gathered in 1974 through the first of an annual series of surveys of all facilities included in the newly instituted National Inventory of Family Planning Services.

The rapid expansion of family planning services in the United States since the mid-sixties has accentuated the need for accurate and current information about the extent to which these services are available nationally. The National Center for Health Statistics (NCHS) is charged with the responsibility for collecting and reporting statistical information about family planning services throughout the Nation and its territories. To learn more about the number and characteristics of these *providers* of family planning services NCHS compiled, during 1972-73, a comprehensive inventory of all family planning service sites in the United States. Through annual surveys of service sites detailed facility characteristics are collected. The first annual survey of the Inventory was conducted in the summer of 1974.

The annual surveys have been designed to gather the following information about the Nation's institutional providers of family planning services—numbers and location, institutional characteristics, patients, and their staffing patterns.

Findings of the 1974 survey will be presented in four statistical reports. This report presents statistics on selected geographic and institutional characteristics of the family planning service site, including its physical location; the

agency responsible for its operation; its funding source or sources; the length of time it has been operational; and the services and contraceptive methods provided at time of survey. The second report will describe the methodology used in planning and compiling the Inventory and in developing the survey design (e.g., both data collection and processing). Two subsequent reports will center their attention on patients and staffs of family planning service sites.

A total of 10,321 service sites were surveyed. Of these, 8,170 sites responded in whole or in part to the Inventory questionnaire. No attempt has been made to inflate the figure, 8,170, in order to compensate statistically for total nonresponse by a facility and thus to establish a hypothetical total universe of family planning service sites. (See appendix I for further details.) However, a statistical adjustment for nonresponses to specific items on the Inventory questionnaire was made. This imputation process is explained in appendix I.

The methodology used in collecting and processing the survey information may be found in appendix I. Certain definitions and classifications not defined elsewhere in this report are in appendix II. Appendix III contains facsimiles of the project letter and questionnaire used in this survey.

FAMILY PLANNING SERVICE SITES

Service sites which provided family planning services are classified into two basic categories.

The first category contains all service sites which offer family planning services that can only be provided by a physician, nurse-midwife, registered nurse, or other authorized personnel. These "medical family planning services" include: medi-

cal history; physical examination; laboratory testing (testing, consultation, and treatment including continuing medical supervision); issuance of drugs and contraceptive supplies; and appropriate medical referral when indicated. Service sites in this category will alternately be referred to as "medical family planning clinics."

In the second category are placed those service sites which do not directly provide any of the medical family planning services described in the preceding paragraph. For the purposes of this report such service sites will be referred to as "nonmedical family planning service sites." The functions of such nonmedical service sites are:

- To refer patients to any other site for medical family planning services.
- To provide space, equipment, contraceptive supplies, and/or staff to others who provided medical family planning services.
- To contract or pay others for the provision of medical family planning services.

Most of the data presented in this report come from 8,057 medical and nonmedical providers of family planning services throughout the 50 States, the District of Columbia, and the territories of American Samoa, Puerto Rico, and the Canal Zone. Of this total, 4,494 were medical family planning clinics and 3,563 were nonmedical family planning service sites. This total of 8,057 is a literal census count of all family planning service sites which responded in whole or in part to the Inventory questionnaire and were known to be operational as of December 31, 1973. It forms the statistical base for all the detailed tables and most of the textual commentary in this report. The survey also yielded information on an additional 89 facilities known to have opened in 1974 prior to the formal completion of data collection for this survey. These 89 service sites, along with 24 other "special category" service sites, are discussed in the sections entitled "1974 Newly Established Sites," and "Special Category Sites," respectively. The total number responding to the survey, therefore, was 8,170 service sites, of which 8,057 are medical and nonmedical providers, 89 are newly established sites, and 24 are special category sites.

Geographic Distribution

The distribution of the 8,057 medical and nonmedical service sites by State and territory is shown in table 1. Table 2 shows the distribution of these facilities by geographic region and division, and by the 10 Standard Federal Administrative Regions. (See appendix II for the States and territories included in these geographic areas.) Figure 1 illustrates the percent distribution of these 8,057 service sites by Federal regions, and also shows as a rough index to adequacy of coverage by Federal region a comparison of a "special risk population," namely, the Nation's estimated 5,613,300 women at risk of unwanted pregnancy with incomes below 150 percent of poverty level.¹ The fit between the supply of family planning services and this measure of potential demand for them is seen to be close in every region.

MEDICAL FAMILY PLANNING SERVICE SITES (CLINICS)

The medical family planning service site (or clinic) was the chief target of the survey. These clinics were requested to complete all the items on the survey questionnaire. Thus, in addition to their geographic and physical location and the agency responsible for the operation, data are also available about the primary purpose, funding source or sources, types of clinic sessions that were held, the length of time of continuous operation, the medical and ancillary services performed, and the contraceptive methods that were provided. (Information about patient characteristics and staffing patterns was also gathered from the responding clinics; these will be described in subsequent reports.)

Of the 5,719 medical family planning clinics included in the initial mailing, 4,494 clinics and 113 service sites responded in whole or in part to the survey questionnaire. The total of 4,607 respondents yielded an actual response rate of 81 percent. The 113 service sites are discussed in the section "Additional Sites."

¹Estimates for 1973 of the "special risk population" appear in the publication *Data and Analyses for 1974 Revision of DHEW Five-Year Plan for Family Planning Services*: Center for Family Planning Development, 515 Madison Avenue, New York, New York, 1974, p. 11.

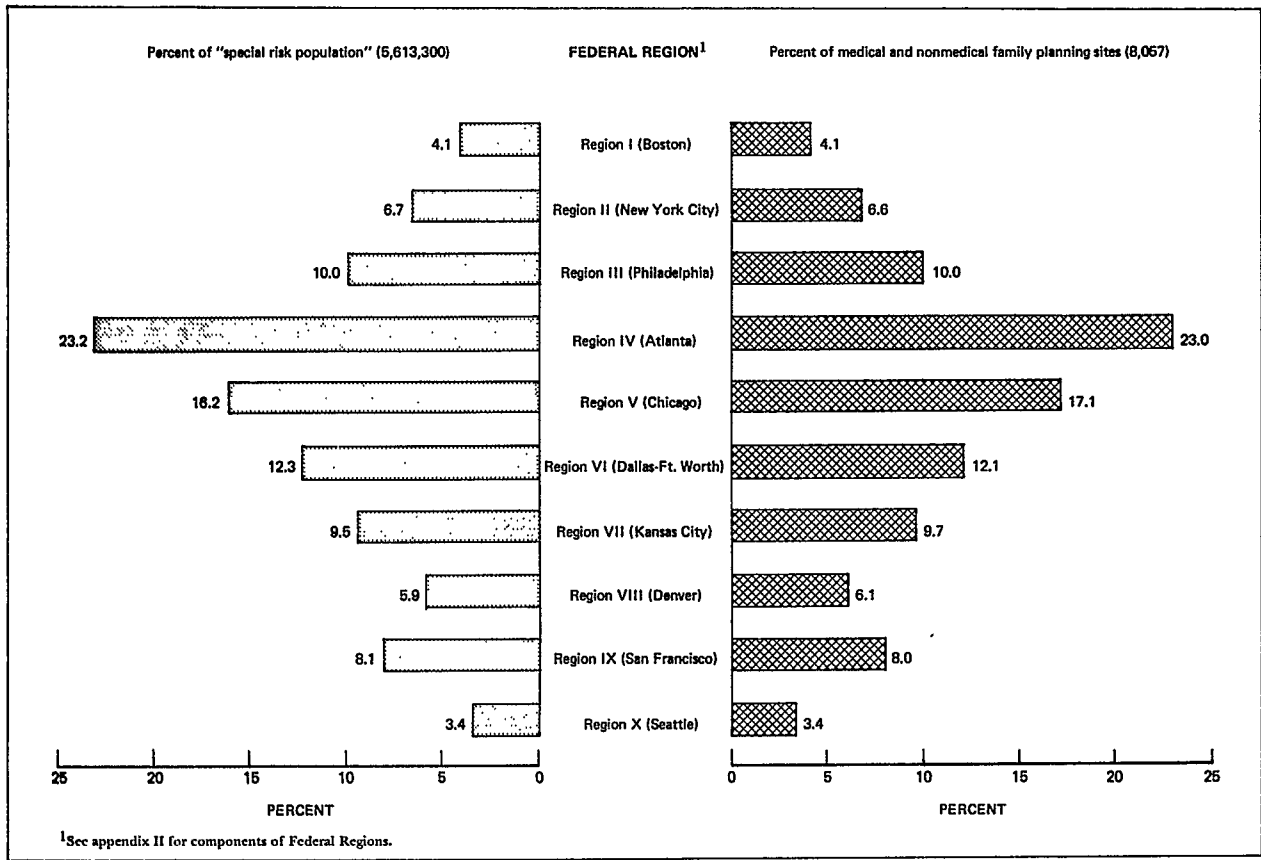

Figure 1. Percent distribution of medical and nonmedical family planning sites and of a "special risk population" by Standard Federal Administrative Region: United States, 1974

Regional Distribution

Tables 1 and 2 show a distribution of the responding clinics.

It was interesting to determine the relative

proportions of medical and nonmedical sites within each Federal region. The findings, rounded to the nearest whole percentage, are tabulated below:

Federal region	Total	Medical clinics	Nonmedical service sites
		Percent	
United States and territories-----	100	56	44
Region I (Boston)-----	100	59	41
Region II (New York City)-----	100	73	27
Region III (Philadelphia)-----	100	67	33
Region IV (Atlanta)-----	100	66	34
Region V (Chicago)-----	100	34	66
Region VI (Dallas-Ft. Worth)-----	100	69	31
Region VII (Kansas City)-----	100	28	72
Region VIII (Denver)-----	100	21	79
Region IX (San Francisco)-----	100	81	19
Region X (Seattle)-----	100	63	37

Note that though the national tendency is for medical clinics to outnumber nonmedical service sites by substantial margins, the tendency is reversed in Federal Regions V (Chicago), VII (Kansas City), and VIII (Denver), markedly so in the latter two regions.

Operating Responsibility for the Clinic

In table 3 the 4,494 responding medical family planning clinics are distributed geographically according to the agency responsible for their operation. From the national perspective, operating responsibility for the clinics was vested as follows:

Operating responsibility	Percent of clinics
United States and territories (4,494 clinics)-----	100.0
Government-operated-----	66.0
State-----	17.3
County-----	29.1
City or metropolitan area-----	4.8
Health district-----	5.7
Indian Health Service-----	1.8
Other Federal Government (Department of Defense, Veterans Administration, Public Health Service, etc.)-----	6.8
Other non-Federal government----	0.6
Nongovernment-operated-----	34.0
Planned Parenthood affiliates-----	10.3
University-----	3.8
Church-----	0.1
Hospital-----	5.6
Corporation-----	13.2
Individual-----	0.3
Partnership-----	0.1
Other nongovernment-----	0.6

Like the nonmedical service sites, the largest proportion of medical family clinics were government-operated, the greater number of these by State and county governments. However, the proportion of medical family planning clinics operated by nongovernment agents was clearly greater than the similar proportion for nonmedical service sites, the two principal nongovernment providers being Planned Parent-

hood affiliates and other nonprofit corporations. Though supporting data are not presented in the tables, profitmaking was found to be minimal in the provision of family planning services, as evidenced in the finding that profitmaking hospitals, corporations, individuals, and partnerships accounted for the operation of fewer than 1 percent of all family planning clinics.

Patterns of operating responsibility were far from uniform among the individual States and territories, as the data in table 4 reveal. In the listing that follows, the States and territories are grouped according to the agency responsible for operating the *largest proportion* of the clinics within their boundaries, while recognizing that a variety of providers may support this main provider within any given State or territorial jurisdiction.

Chiefly county-operated (15 jurisdictions).— Arizona, California, Florida, Georgia, Kansas, Kentucky, Maryland, Michigan, Mississippi, Missouri, North Carolina, North Dakota, Oklahoma, Oregon, and West Virginia.

Chiefly State-operated (9 jurisdictions).— Arkansas, Colorado, Delaware, Montana, Nevada, New Mexico, Tennessee, Virginia, and Puerto Rico.

Chiefly operated by a corporate entity other than Planned Parenthood (9 jurisdictions).— Hawaii, Iowa, Louisiana, Maine, Massachusetts, Nebraska, New Hampshire, Texas, and Wyoming.

Chiefly operated by affiliates of Planned Parenthood (7 jurisdictions).— Connecticut, Indiana, New Jersey, New York, Ohio, Vermont, and Wisconsin.

Chiefly operated by the Health District (5 jurisdictions).— Alabama, Idaho, South Carolina, Utah, and Washington.

Chiefly operated by city or metropolitan area government (3 jurisdictions).— Illinois, Minnesota, and the District of Columbia.

Chiefly operated by agencies of the Federal Government other than the Indian Health Service (3 jurisdictions).— Rhode Island, South Dakota, and the Canal Zone.

Chiefly operated by nongovernment hospitals (2 jurisdictions).— Pennsylvania and American Samoa.

Chiefly operated by Indian Health Service (1 jurisdiction).— Alaska.

Funding Sources

Table 4 presents data about funding sources for the medical family planning clinics. By the extent—either full or partial—to which they supported the operation of these 4,494 responding medical clinics, the Nation's funders of family planning services appear as follows:

Funding source	Total	Clinics fully funded	Clinics partially funded
	Percent		
Department of Health, Education, and Welfare----	69.0	14.2	54.8
Other Federal agencies---	12.0	5.3	6.7
State government----	48.1	6.0	42.1
County government----	32.7	0.9	31.8
City government----	12.1	0.7	11.4
Special research grant-----	1.4	1.4	0.0
Fees, contributions, donations, nonprofit corporations, university and hospital free clinics, and other miscellaneous funders----	26.3	9.4	16.9

It is evident that a substantial majority of medical family planning clinics owed their financial support chiefly to Federal, State, and county funding. The Federal Government led the funding field by an appreciable margin, chiefly through the U. S. Department of Health, Education, and Welfare (DHEW).

Funding patterns varied among clinics, dependent on the government or nongovernment agency responsible for their operation. (See table 4.)

As expected, government-sponsored clinics

are supported almost entirely by public funds. The typical funding pattern is one of partial support from two or more government sources. For example, State-operated clinics most frequently received support primarily from State funds, secondly from DHEW funds, and to a lesser degree from county and city funds. County-operated clinics received support primarily from county funds, secondly from DHEW funds, and to a lesser degree from partial support by city funds. City-operated clinics received support primarily from funding by city government, secondly from DHEW funds, thirdly (and about equally) by State and county contributions.

The funding pattern for nongovernment clinics also reveals a substantial contribution from public funds, chiefly from DHEW, as table 4 will show. However, with such clinics there is an increased reliance on funds from the private sector, e.g., fees, donations, contributions, etc.

Primary Purpose of the Clinic

The medical clinics' responses to the Inventory question "What is your primary service or purpose?" are presented in table 4. They may be summarized as follows:

Primary purpose	Percent distribution
Medical family planning-----	72.0
Comprehensive health care-----	22.9
Other (chiefly general gynecology services)-----	3.2
Sterilization-----	0.2
V-D testing-----	0.3
Postpartum/prenatal care-----	1.4

It was evident, and expected, that a clear plurality of medical family planning clinics would report their primary function to be the provision of medical family planning services as defined earlier. This tendency held for all clinics regardless of the agent—government or nongovernment—responsible for their operation. Only to a minor degree, e.g., among clinics operated by the Indian Health Service and among the university clinics, did respondents report a primary purpose other than medical family planning. Most often this minority indicated a primary emphasis on

comprehensive health care with medical family planning services receiving relatively less.

Clinic Site

In its general instructions to respondents, the survey questionnaire defined a "clinic site" as follows:

"A clinic site is a place or facility at which any family planning services are provided on a regularly scheduled basis. It may be a hospital, health center, mobile unit, free-standing site, church, or store front. For

mobile units each stop is considered a clinic location...Physician's offices should be considered as clinic locations only when there is a formal relationship with some project or agency which is responsible for providing family planning services. Physicians, nurses, volunteers, etc., who make home visits for the purpose of delivering a family planning service should count their home base of operation as the clinic location."

Responses designating clinic sites are tabulated in tables 4 and 5 and summarized as follows:

Clinic site	Percent distribution
State or local health department building-----	46.0
Hospital-----	14.3
School or community building-----	12.8
Store-front-----	1.4
Physician's office-----	3.2
Church-----	3.0
Mobile unit-----	2.4
Other sites (e.g., privately owned, leased, or rented sites)-----	17.0

It is evident that a substantial majority of all clinics used the State or local health department building as their primary locus of activity. This was, of course, especially true for clinics under the operational authority of States, counties, health districts, and cities or metropolitan areas. An examination of tables 4 and 5 will yield information about sites used by other government-operated clinics as well as by those clinics which operated under nongovernment auspices. The reader may consult appendix II for the long and varied listing of miscellaneous "other sites" where medical family planning services were provided.

Type of Clinic Session

Findings are reported in table 6 on the type of clinic sessions held by the reporting clinics. Statistics are presented on three types of clinic sessions—specialized, combined, and mixed.

For the purposes of the Inventory, a session was "specialized" if only services related to medical family planning were provided. A "combined" session was one where family planning services were offered in conjunction with other health services such as maternity care, postpartum care, maternal and child health, obstetrics and gynecology, comprehensive, or other

health care. A clinic classified as holding "mixed" sessions is one which conducted both specialized and combined sessions.

By these criteria, survey findings revealed that a clear majority (about 54 percent) of the reporting clinics conducted specialized sessions, about 29 percent conducted combined sessions, and about 17 percent conducted mixed sessions. This order of preference for types of clinic session proved to be generally true regardless of

clinic site or the agent or project responsible for the clinic's operation.

Years of Operation

Table 4 presents statistics on the years of operation of the reporting clinics as of December 31, 1973. From an overall perspective, the findings may be summarized as follows:

Years of operation	Percent distribution
All responding clinics-----	100.0
Less than 1 year-----	11.7
More than 1, less than 2 years-----	15.4
More than 2, less than 3 years-----	15.9
3-4 years-----	20.1
5-6 years-----	11.8
7-8 years-----	12.3
9-10 years-----	4.8
More than 10 years-----	8.0

According to the data the average clinic was 4.9 years old. About 63 percent of all reporting clinics had been in operation less than 5 years.

The following tabulation shows the mean years

of operation of the clinics according to the public or nonprofit agent or project responsible for the operation.

Operating agency	Number of reporting clinics	Mean years of clinic operation
All responding clinics-----	4,494	4.9
Government-----	2,966	4.9
State-----	775	4.4
County-----	1,308	4.9
City or metropolitan area-----	216	3.9
Health district-----	256	4.3
Indian Health Service-----	81	7.2
Other Federal Government-----	305	6.7
Other non-Federal government-----	25	3.2
Nongovernment-----	1,528	5.0
Planned Parenthood affiliates-----	461	6.9
University-----	171	3.8
Church-----	6	4.2
Hospital-----	252	6.0
Corporation-----	594	3.3
Individual-----	12	2.9
Partnership-----	5	8.6
Other nongovernment agent-----	27	4.3

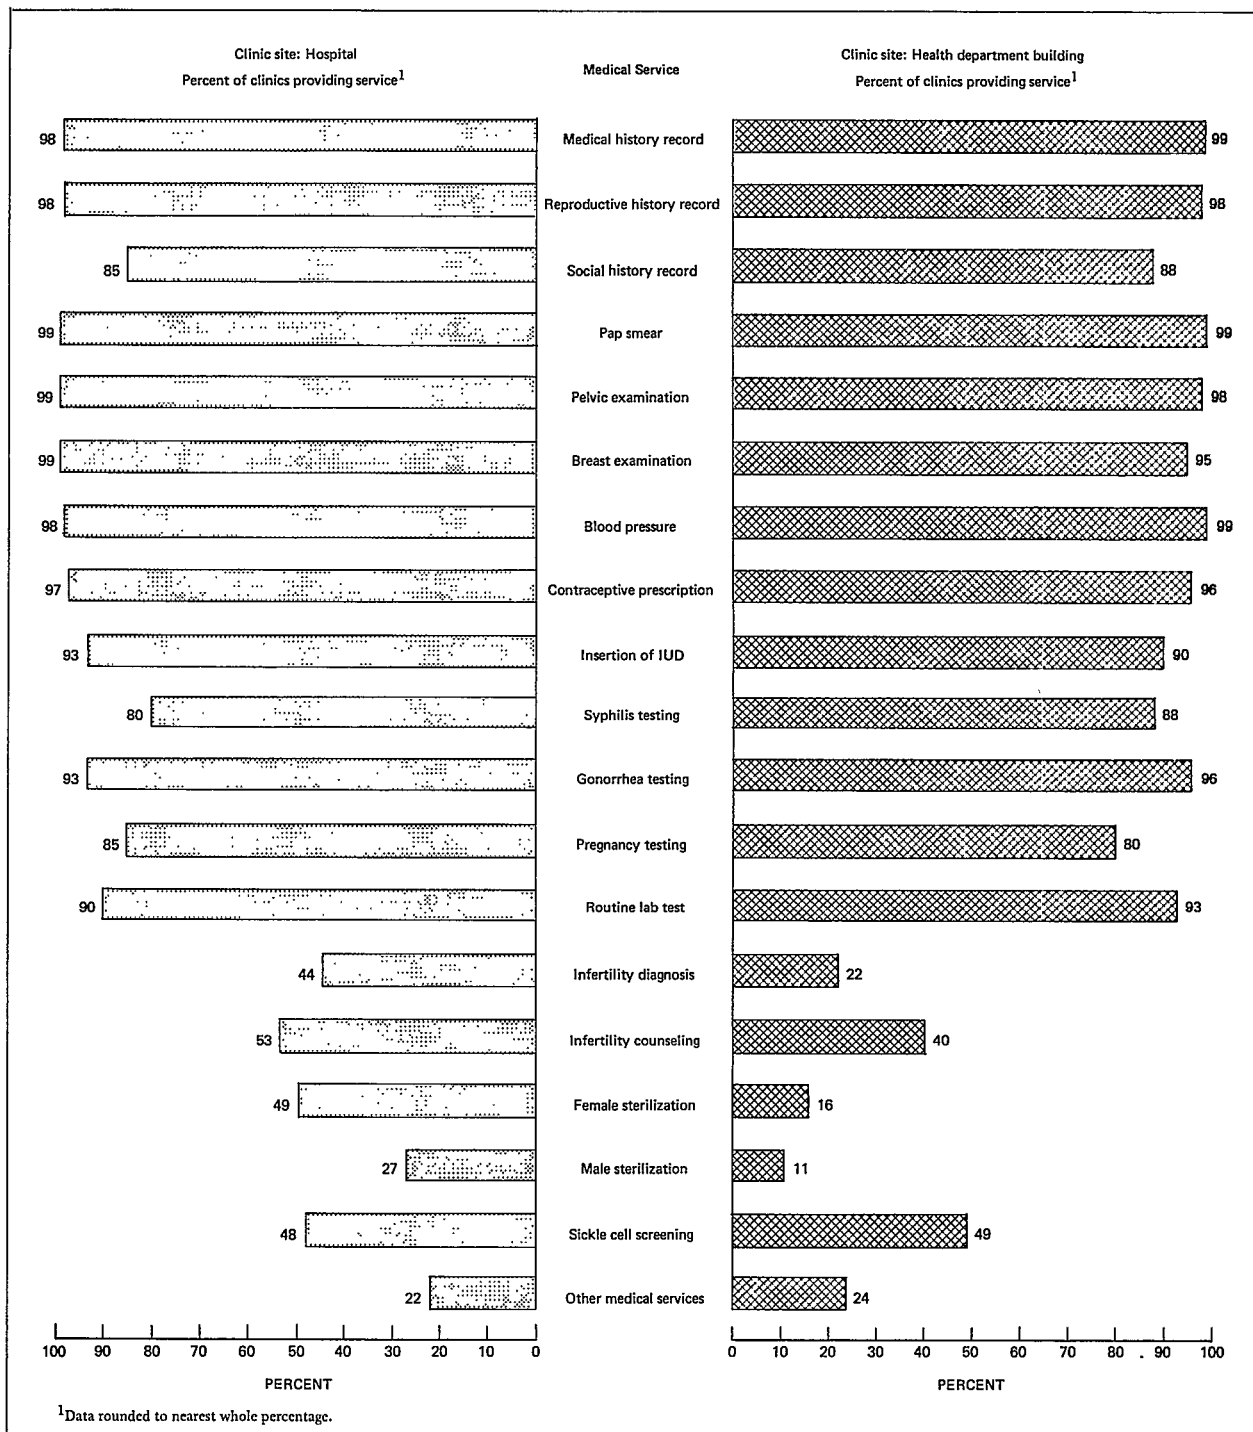

Figure 2. Relation of clinic site to provision of medical services, based on 2,068 clinics with service site in the health department building and 641 clinics with service site in a hospital: United States, 1974

Medical Services Provided

Medical services provided by the responding clinics are statistically described in tables 7 and 8. From an overall perspective the 19 medical

services ranked as follows in terms of the percentage of clinics that performed each service. (The double line is used to separate the services commonly provided by most clinics from those less commonly or rarely performed.)

Rank	Medical service	Percent of responding clinics that performed the service
1	Blood pressure-----	98.8
2	Pap smear-----	98.4
3	Medical history record-----	98.1
4	Pelvis examination-----	97.4
5	Reproductive history record-----	96.8
6	Breast examination-----	96.5
7	Contraceptive prescription-----	95.3
8	Gonorrhea testing-----	94.8
9	Routine lab tests-----	91.1
10	Insertion of IUD-----	87.6
11	Social history record-----	85.8
12	Syphilis testing-----	82.1
13	Pregnancy testing-----	80.8
<hr/>		
14	Sickle cell screening-----	41.5
15	Infertility counseling-----	38.5
16	Other medical service-----	24.7
17	Infertility diagnosis-----	22.4
18	Female sterilization-----	18.9
19	Male sterilization-----	14.4

The data in table 7 demonstrates that the tendency to perform a given service varies with the operating responsibility for the clinic. That it also varies with the clinic site may be observed in the Inventory findings expressed in table 8. Figure 2 compares the two most popular sites used by medical family planning clinics—the hospital and the health department building. The reader will note that the clinics at these two sites are roughly equivalent in their tendencies to provide the more frequently rendered medical services. Services such as infertility diagnosis and counseling, and sterilization (male and fe-

male), however, are more often rendered in the hospital environment.

Ancillary Services Provided

Only 4,410 of the 4,494 clinics gave usable responses to the Inventory question concerning ancillary services or functions. Statistics on these ancillary services appear in tables 7 and 8. From an overall perspective, the ancillary services ranked as follows in terms of percentage of clinics that provided each service.

Rank	Ancillary service	Percent of responding clinics that provided the service
1	Individual counseling about family planning-----	98.4
2	Referral to appropriate agency for social services-----	92.2
3	Referral to other clinic for family planning or medical services not provided at clinic site-----	91.6
4	Followup program (followup activities included contacting persons who had missed appointments and the scheduling of reappointments)-----	87.8
5	Outreach program (i.e., activities which informed prospective patients of family planning services and assisted them in availing themselves of the services)-----	72.9
6	Classroom or group sessions about family planning-----	60.7
7	Transportation to the clinic or service site (provided or subsidized)-----	39.7
8	Classroom or group sessions on sex education (in addition to family planning and contraceptive education)-----	35.4
9	Baby sitting (while patient was at clinic or service site)-----	29.2
10	Other ancillary service-----	4.6

The relationship between operating responsibility for the clinic and the clinic's tendency to provide ancillary services is explored in table 7. In general, the clinics operated by Planned Parenthood affiliates and other nongovernment corporations showed the most substantial degree of activity in providing ancillary services to their patients.

Contraceptive Methods Used

Survey findings about contraceptive methods employed by medical family planning clinics are presented in tables 7 and 8. Information was sought on the use of 11 specific methods of contraception. From an overall perspective, the 11 methods ranked as follows in terms of the percentage of clinics that employed each method. (As with the ranking for medical services, the double line is used to separate the methods commonly used by most clinics from those less commonly or rarely employed.)

Rank	Contraceptive method	Percent of responding clinics using the method
1	Oral (pill)-----	99.6
2	IUD-----	94.2
3	Foam-----	90.1
4	Condom-----	75.7
5	Diaphragm jelly-----	64.3
6	Sterilization (female)-----	34.4
7	Basal temperature method-----	24.0
8	Sterilization (male)---	23.7
9	Ovulation method-----	5.2
10	Morning-after pill----	4.7
11	Injection-----	3.8

The tendency to use a given method was found to vary—at times substantially—depending

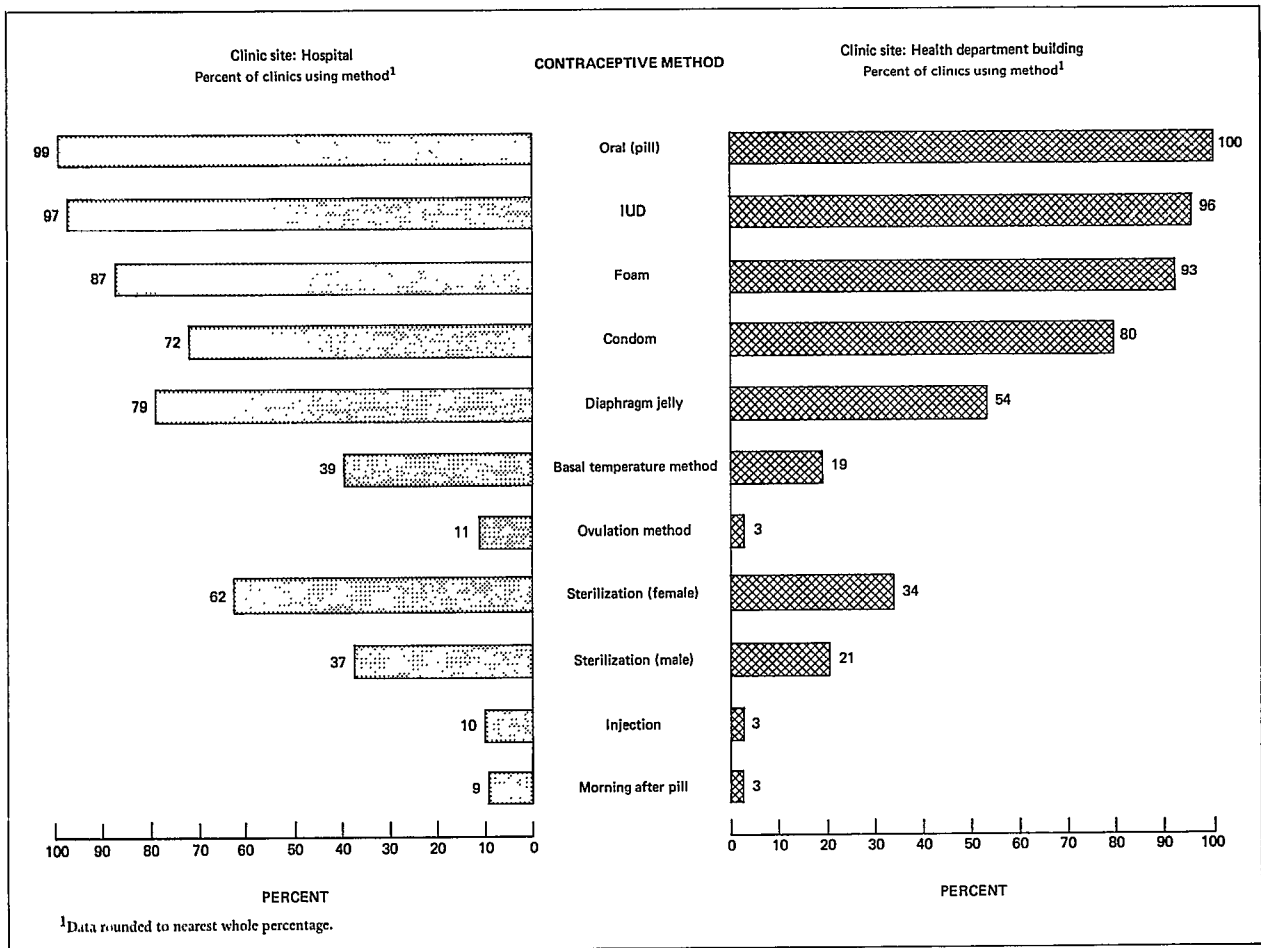

Figure 3. Relation of clinic site to utilization of 11 contraceptive methods, based on 2,068 clinics with service site in the health department building and 641 clinics with service site in a hospital: United States, 1974

on the clinic site. (See table 8.) Figure 3 graphically compares the hospital and the health department building—the two most popular sites used by medical family planning clinics—according to their respective tendencies to employ each of the 11 methods.

NONMEDICAL FAMILY PLANNING SERVICE SITES

From the nonmedical family planning site the Inventory sought only a limited amount of information—geographic and physical location,

agency responsible for its operation, and the types of nonmedical service it provided. Of the 4,062 nonmedical sites included in this survey (see appendix I for further details), 3,563 (about 88 percent) responded in whole or in part to the seven substantive items on the questionnaire that they were requested to complete. Tables 1 and 2 show a distribution of these 3,563 responding sites.

Services Provided

The most frequent service offered by nonmedical family planning service sites was referral, i.e., to another site for medical family planning services (table 9). About 98 percent of all nonmedical sites performed this service. In a relatively substantial proportion of cases (about 29 percent), the nonmedical service sites also rendered a family planning service by contracting or paying others for the provision of medical family planning services. In a minor proportion of cases (about 10 percent) nonmedical sites included in their services the providing of space, equipment, contraceptive supplies, and/or staff to others who rendered the medical family planning service.

Operating Responsibility and Physical Location

Table 9 also presents data about the agents responsible for the operation of nonmedical service sites. Very few of the nonmedical sites (about 10 percent) were operated by nongovernment agencies or projects. Nine out of every 10 were government-operated, about 92 percent of these functioning under the operating responsibility of State and county governments. With this degree and type of public sponsorship it is not surprising

that most nonmedical service sites operated out of public facilities. The largest proportion (slightly more than one-half) had their locus of service in the State and county welfare department building; the second largest proportion (about 31 percent) was in the State or local health department building.

ADDITIONAL SITES

The first annual survey of the National Inventory of Family Planning Services was intended to target family planning service sites which were known to be operational as of December 31, 1973, and which could be unambiguously categorized either as medical family planning clinics or as nonmedical family planning service sites, according to the criteria in the section "Family Planning Service Sites." The discussion in the preceding textual commentary as well as the supporting data in the detailed tables apply to this data base, numbering in total 8,057 responding sites.

An additional 113 sites are *not* included in the tabulations or analysis appearing in this report. These 113 sites are of two types—newly established clinics that could not provide the requested data, and special category sites. A brief description of both types is given below.

1974 "Newly Established" Sites

The survey discovered and gathered a limited amount of information about 89 additional clinics which began operation after December 31, 1973 and before the formal completion of data collection in midsummer 1974. For these 89 new additions data are available about the agency responsible for their operation and about their clinic sites, and are presented in the tabulation that follows.

Operating responsibility	Number of clinics
Total-----	89
Government-operated-----	54
State-----	20
County-----	22
City or metropolitan area-----	1
Health district-----	8
Indian Health Service-----	1
Other Federal Government-----	1
Other non-Federal government-----	1
Nongovernment-operated-----	35
Planned Parenthood affiliates-----	7
University-----	2
Hospital-----	4
Corporation-----	20
Other nongovernment-----	2
<u>Clinic site</u>	
Total-----	89
State or local health department building-----	38
Hospital-----	6
School or community building-----	22
Physician's office-----	4
Church-----	1
Mobile unit-----	3
Other site-----	15

Special Category Sites

As mentioned above, the data base also excludes 24 family planning sites which may have been operational prior to 1974 but which—from

their responses—did not permit clear-cut categorization either as medical or nonmedical providers. Their provision of medical services was at best a minimal effort. These 24 facilities

were, therefore, classified as "special category" sites. The following tabulated information con-

cerns the agency responsible for their operation and their physical locations.

Operating responsibility	Number
Total-----	24
Government-operated-----	16
State-----	14
County-----	2
Nongovernment-operated-----	7
Planned Parenthood affiliates-----	4
Corporation-----	3
Data lacking-----	1
<u>Physical locations</u>	
Total-----	24

² Refer patients to any other site for medical family planning services.

³ Provide space, equipment, contraceptive supplies, and/or staff to others who provide medical family planning services

⁴ Contract or pay others for the provision of medical family planning services.

APPENDIX I

METHODOLOGY

The first (1974) annual survey of the National Inventory of Family Planning Services was based on a mail survey directed to the providers of family planning services in the 50 States, the District of Columbia, and the territories of the Virgin Islands, American Samoa, Puerto Rico, Guam, and the Canal Zone.² The survey was designed to acquire information about demographic and institutional characteristics of the facilities that provide family planning services, and about their patients and staffing patterns. The present report centers its attention on the geographic location and institutional characteristics of such facilities.

Procedurally, the survey was divided into two phases: Phase 1—Development of the universe and pretest, and Phase 2—Conduct of the mail survey.

Phase 1—Development of the universe and pretest.—Prior to beginning the actual survey effort, the National Center for Health Statistics in 1972-73 developed a universe of family planning projects which is called the National Inventory of Family Planning Services. The universe was assembled from the following sources:

The National Reporting System on Family Planning Services (NRSFPS)
Planned Parenthood affiliates
Community Health Service
Regional Medical Programs
Health Maintenance Organizations
Approximately 3,000 colleges and universities
HUD Model Cities Program
Indian Health Service
Office of Economic Opportunity

Maternal and Child Health Service
O'Champus (Department of Defense Organizations)
County health and welfare departments
State health departments
Master Facility Inventory (maintained by the National Center for Health Statistics)
American Association of Medical Clinics
American Fertility Society
Association for Voluntary Sterilization
Twenty-five religious denominations

The forms, listings, directories, etc., received from all these sources were put on computer tape, matched and unduplicated, yielding an initial universe of 14,524 facilities. In conjunction with Planned Parenthood affiliates, the National Center for Health Statistics then conducted a pretest survey on a nationwide sample of 500 projects during the spring of 1973. Two questionnaires were utilized to complete the pretest effort:

1. Project Characteristic and Clinic Identification Record. This form was completed by each project, agency, or program operating any facilities which provided family planning services.
2. Clinic Record. This form was completed by each project, agency, or program for every location where they provided family planning services.

During the period of data collection for the pretest, further unduplication of the universe was performed. As a result of this and the analysis of the pretest findings, the universe was revised to then contain 10,577 facilities. The analysis of the pretest results also made possible the development of a new questionnaire which replaced the two former questionnaires. Upon completion

²There were no responses from the Virgin Islands and Guam.

of the pretest analysis, a national meeting was held in October 1973 attended by technical advisors from Federal, State, and local agencies. Based on the comments of this committee, the survey procedures and the questionnaire to be used were revised and finalized. (Appendix III presents a facsimile of the questionnaire in final form.)

The last step in finalizing the universe for this first annual survey was the use of a project letter. (See appendix III for a facsimile.) This letter was used to: (1) confirm the facility's address listing, (2) confirm that the facility did indeed participate in providing family planning services, and (3) provide the name and actual location of all family planning facilities for which the addressee was operationally responsible. These mailings produced a 95 percent response rate and resulted in the reduction of the universe to 10,321 facilities. Of these, 5,857 were treated as providers of *medical* family planning services and 4,464 were treated as nonmedical providers. (See definitions in appendix II.)

Phase 2 - Conduct of the mail survey; data collection and processing.—Phase 2 of the survey involved the actual conduct of the survey to include questionnaire mailings, followups, editing, coding, keypunching and verification, and production of data tapes and tabulations. The main data collection effort for the survey extended from April through August 1974. It consisted of an initial mailout of the questionnaire to the 10,321 presumed providers in the newly updated universe, of two followup mailings, and of final telephone followups to nonrespondents.

Responses resulted in deletions from the universe of facilities which proved to be non-providers, out-of-business, out-of-scope, duplicates, and postmaster returns. (Postmaster returns were minimal due to the use of the preliminary project letter.) Some additions were made to the list of medical providers from the ranks of presumed nonmedical facilities which proved, in fact, to be providing medical family planning services. The combined effect of these deletions and additions produced a revised universe of 9,781 facilities of which 5,719 were presumed medical and 4,062 were presumed nonmedical service sites.

Of the 5,719 presumed medical providers, 4,607 clinics responded in whole or in part to the questionnaire. (Medical providers were requested to complete all items on the questionnaire.) A total of 4,494 of these 4,607 clinics satisfied two basic requirements of the Inventory: (1) They were operational as of December 31, 1973. (2) They could be clearly and unambiguously categorized as *medical* providers. Responses were also received from 113 additional service sites. Eighty-nine of this number began operation in 1974 and were, therefore, unable to supply answers to most of the items on the questionnaire. Another 24 sites may have been operational prior to 1974 but their responses did not permit clear-cut categorization either as medical or nonmedical providers. Their provision of medical services was at best a minimal effort. In the present report we isolate these 113 sites from the main data base of 4,494 clinics and make them the subject of a special discussion at the end of the textual commentary. It is the data base of 4,494 responding clinics which forms the clinic universe in all of the detailed tables and most of the textual commentary of this report.

Of the 4,062 presumed *nonmedical* providers, 3,563 facilities responded in whole or in part to the limited number of items on the questionnaire that they were requested to complete. (Items 1-7.) This reflected a response rate of about 88 percent. It is these 3,563 nonmedical providers which form the nonmedical data base for the detailed tables and textual commentary of the present report.

Therefore, a total of 8,170 service sites—medical and nonmedical—responded in whole or in part to the survey and are described in the present report. This is about 84 percent of the 9,781 family planning service sites included in the universe.

The 1974 survey was the first annual survey to be conducted. No previous data are available on either the responding or nonresponding service sites and there was no contact at all with the nonrespondents. Having no information on these nonrespondents, it is not statistically valid to assume that the facility characteristics of the nonrespondents occur in the same proportions

as with the respondents. For this reason, the totals for medical and nonmedical providers that appear in this report are literal enumerations of actual respondents. No attempt has been made to inflate the figures statistically in order to compensate for total nonresponse by a facility and thus agree with the estimated universe of 9,781 sites.

Though no inflation to a total universe was attempted, a statistical adjustment was made for

nonresponses to specific items on the survey questionnaire. This was done in order to produce a uniform data base representative of the entire respondent population of family planning sites. The imputation procedure was usually a "hot decking" process, in which records were sorted by the responses to two or more key classification questions and the needed data was taken from the previous record in the sort sequence.

APPENDIX II INSTITUTIONAL TERMS AND CATEGORIES

GEOGRAPHIC CATEGORIES

Geographic Area

<i>Geographic Region and Division</i>	<i>States Included (Excludes Territories)</i>

Region IX (San Francisco)-----	Arizona, California, Hawaii, Nevada, Guam, American Samoa
Region X (Seattle)-----	Alaska, Idaho, Oregon, Washington

INSTITUTIONAL TERMS AND CATEGORIES

Composition of "Other" Categories

Other physical location and clinic sites.—State, county, or local welfare department or government building including courthouse, city hall; military base or dispensary; free standing clinic; dwelling, including house, apartment housing project, semiattached house; office building, including bank building, rented office; privately owned, leased, or rented building; miscellaneous sites, including visiting nurses association, adoption agency, Indian health office, medical center, maternity home, remodeled furniture store, bus station, health maintenance organization, YWCA, youth crisis center, rehabilitation center, model family practice unit, model cities facility, and Salvation Army home for girls.

Operating responsibility - other Federal Government.—Department of Defense (Army, Navy, Air Force, etc.), Veterans Administration, Public Health Service (not Indian Health Service), Urban League, NIMH, Agricultural Works Health Project, and Family Planning Council.

Operating responsibility - other non-Federal Government.—County Hospital Board.

Operating responsibility - other nongovernment.—Private mental health agency, nonprofit educational corporation, and students.

Other primary service or purpose.—General gynecologic services, abortion, thermo rhythm clinic, mental retardation care, and child comprehensive health.

Funding source - other Federal agencies.—Office of Economic Opportunity, Department of

Defense, Veterans Administration, HUD, and Migrant Project.

Funding source - special research grant.—Comprehensive ambulatory care grant, Sunnen Foundation, Map-Parke Davis, Mead Johnson and Co., and New Haven Foundation.

Funding source - other sources.—Patient fees; student fees; prepaid health plan; donations and contributions; nonprofit corporation including National Urban League, APHA, United Givers Fund, United Appeal, American College of OB-GYN; Population Council; church; university; hospital; personal resources; Hun and Co. (TX) Opportunities Center; Jobs for Progress; National Free Clinics; Munn Fund; and Planned Parenthood.

Other medical services provided.—Nutritional counseling, abortions, genetic counseling, sterilization counseling, prenatal care, vaginal infection, low hematocrit, physical exam, PPD, rubella treatment, immunizations, chest X-ray, mantoux, nonroutine lab tests, weight or diet counseling, TB screening, cautery, treatment of infections, WBC, hypertension, diabetes screening, mental health care, radiological, heart and lung exam, endometrial biopsy, menstrual induction, colposcopy, EKG, cervicitis, and rubella testing.

Other ancillary services.—Dental care and or referral, education on breast and cervical cancer, prenatal classes, RAP sessions, films and visual aids, translation for Spanish and Italian speaking patients, recreation and social services programs, consumers' advisory board, and training medical students.

Other contraceptive methods.—Withdrawal, suppositories, "The Navajoway."

Family Planning Terms

Family planning services.—Family planning services provide the means which enable individuals to meet their family planning objectives. These services are medical, social, and educational.

Medical family planning services refer to the following services provided by a physician, nurse-midwife, registered nurse, or other authorized personnel: medical history,

physical examination; laboratory testing; testing, consultation, and treatment including continuing medical supervision; issuance of drugs and contraceptive supplies; and appropriate medical referral when indicated.

Social and educational family planning services are such services as outreach, the provision of transportation, or babysitting, which are provided to enable a person to attend a family planning clinic or to otherwise obtain medical family planning services. (In the present report, these are grouped under "ancillary" services.)

Clinic site.—A place or facility at which any medical family planning services were provided on a regularly scheduled basis. It may be a hospital, health center, mobile unit, free-standing site, church, or store front. For mobile units each stop was considered a clinic location, physicians' offices were considered as clinic locations only when there was a formal relationship with some project or agency which was responsible for providing family planning services. Physicians, nurses, volunteers, etc., who made home visits for the purpose of delivering a family planning service reported their home base of operations as the clinic location.

Medical family planning clinic.—A family planning service site which performed medical family planning services as defined on page of this appendix.

Nonmedical family planning service site.—A family planning service site which did not directly provide any medical family planning services as defined on page of this appendix, but instead functioned to:

- Refer patients to any other site for medical family planning services.
- Provide space, equipment, contraceptive supplies, and/or staff to others who provided medical family planning services.
- Contract or pay others for the provision of medical family planning services.

Family planning patient.—A family planning patient is a client who met one of the following conditions during her/his visit:

- (1) The client was provided a method of contraception by the clinic.
- (2) The client received contraceptive, infertility, or sterilization counseling in conjunction with a medical service which was not V.D. or pregnancy testing.

Types of Clinic Session

A *specialized* session was one where only services related to medical family planning were provided.

A *combined* session was one where family planning services were offered in conjunction with other health services such as maternity, postpartum, maternal and child health, obstetrics and gynecology, comprehensive, or other health care.

A clinic classified as holding *mixed* sessions was one which conducted both specialized and combined sessions.

APPENDIX III PROJECT LETTER

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE
PUBLIC HEALTH SERVICE
HEALTH RESOURCES ADMINISTRATION
ROCKVILLE, MARYLAND 20852

NATIONAL CENTER FOR
HEALTH STATISTICS

October 1973

Dear Administrator:

The rapid increase of family planning programs across the nation over the last decade has highlighted the need for current and accurate information on the extent and nature of these services.

Therefore, the National Center for Health Statistics has planned an extensive National Family Planning Services Data Collection System. This system when fully operational will provide health planners at all levels of government with timely statistics not only on the number and characteristics of patients but also facility and staff characteristics and extent of services available at the many varied facilities -- both public and privately funded -- which provide family planning services nationally.

The Center is now in the process of verifying its listing of all facilities in the U.S. and its outlying territories which provide some type of Family Planning services. We are therefore asking your cooperation in completing the back page of this letter and returning it to us in the enclosed self-addressed postage-paid envelope within five (5) days. The information requested will assist us in insuring that all projects, agencies, or programs which participate in the provisions of family planning services are included in our listing.

We sincerely appreciate your support in this developmental period which is so important to the success of the full-scale National Family Planning Services Data Collection System.

Sincerely yours,

(Mrs.) Gloria Hollis
Chief
Health Facilities Statistics Branch
Division of Health Resources Statistics

In case we need to contact you, please enter your phone number

Area code Phone Number

For the purpose of this data collection system, *Family planning services are those medical, social and/or education services which are primarily concerned with the regulation of conception.*

CHECK ONE BOX ONLY

Addressee does *not* participate in the provision of family planning services.

Addressee maintains a clinic on site which provides family planning services. Our program is part of a more extensive system for delivering family planning which is coordinated/operated/funded by _____

agency name

whose address is _____

Addressee is an administrative unit which *does* participate in the provision of family planning services at the following locations:

HEALTH, EDUCATION, AND WELFARE
PUBLIC HEALTH SERVICE
Health Resources Administration
National Center for Health Statistics

NATIONAL INVENTORY OF FAMILY PLANNING SERVICES 1974 ANNUAL SURVEY	PROJECT NO. (NOTE: Clinic name and address label goes here)
--	---

Dear Director:

The rapid expansion of family planning services in the United States since the mid-sixties has brought to the forefront the need for accurate and current information on the extent to which these services are available nationally. On January 1, 1972, the National Center for Health Statistics implemented the National Reporting System for Family Planning Services to collect monthly data on family planning patients seen in public facilities and the services they receive. However, there is currently no comprehensive inventory available of all facilities providing family planning services in the United States and the services available through them.

The National Center for Health Statistics is therefore conducting this annual survey to obtain current information about each family planning clinic or service site such as name, location, caseload, services offered, and staff size. This National Inventory of Family Planning Services expands upon previous surveys of this nature conducted by Planned Parenthood-World Population.

The information from this survey will be used by the National Center for Health Statistics for statistical reports on the characteristics of facilities providing family planning services. In addition, the data will be made available to other agencies to compile directories of available clinics or service sites, to plan for needed additional facilities, and to plan for future manpower needs.

One of these questionnaires is to be completed for each clinic or service site at which your project, agency, or program provides family planning services.

Before completing this questionnaire, you should familiarize yourself with the definitions at the top of page 2. If this is one of a group of clinics or service sites administered or directed by a central agency, project, or program, please return the completed questionnaire to your Project so that the questionnaires for all clinics under the Project's direction can be returned together. All questionnaires should be returned within three weeks.

Thank you for your cooperation.

Sincerely,

Edward B. Perrin, Ph.D.
Director
National Center for Health Statistics

For this survey, the following definitions apply:

FAMILY PLANNING SERVICES

Family planning services provide the means which enable individuals to meet their family planning objectives. These services are medical, social, and educational.

Medical family planning services refer to the following services provided by a physician, nurse-midwife, registered nurse, or other authorized personnel: medical history; physical examination; laboratory testing; testing, consultation, and treatment including continuing medical supervision; issuance of drugs and contraceptive supplies; and appropriate medical referral when indicated.

Social and educational family planning services are such services as outreach, the provision of transportation, or babysitting, which are provided to enable a person to attend a family planning clinic or to otherwise obtain medical family planning services.

CLINIC SITE

A clinic site is a place or facility at which any family planning services are provided on a regularly scheduled basis. It may be a hospital, health center, mobile unit, free-standing site, church, or store front. For mobile units each stop is considered a clinic location; therefore, a separate questionnaire should be completed for each stop or location. Physicians' offices should be considered as clinic locations only when there is a formal relationship with some project or agency which is responsible for providing family planning services. Physicians, nurses, volunteers, etc., who make home visits for the purpose of delivering a family planning service should count their home base of operations as the clinic location.

FAMILY PLANNING PATIENT

A family planning patient is a client who meets one of the following conditions during her/his visit:

- (1) The client is provided a method of contraception by the clinic;
- (2) The client receives contraceptive, infertility, or sterilization counseling in conjunction with a medical service which is not V.D. or pregnancy testing.

1. WHAT IS YOUR AREA CODE AND TELEPHONE NUMBER?

6. DOES ANY OTHER AGENCY OR ORGANIZATION ALSO PROVIDE FAMILY PLANNING SERVICES AT THIS SITE?

31-1 No

-2 Yes

6a. WHAT IS THEIR NAME? _____

7. ARE MEDICAL FAMILY PLANNING SERVICES (AS DEFINED AT THE TOP OF PAGE 2) PROVIDED AT THIS CLINIC OR SERVICE SITE FOR WHICH YOU ARE REPORTING? IMPORTANT - THIS QUESTION DOES NOT PERTAIN TO THE AGENCY OR ORGANIZATION NAMED IN QUESTION 6b BUT TO YOUR OWN AGENCY OR ORGANIZATION.

17-2 Yes

a. WHAT IS YOUR PRIMARY SERVICE OR PURPOSE?

43-1 Medical family planning

-3 Sterilization

-3 V-D Testing

-1 Postpartum and/or Prenatal Care

-5 Comprehensive Health Care

- Other (Specify)

-1 No

b. DOES THIS CLINIC OR SERVICE SITE:

(1) REFER PATIENTS TO ANY OTHER SITE FOR MEDICAL FAMILY PLANNING SERVICES?

44-1 No -2 Yes

(a) WHAT IS THEIR NAME AND ADDRESS:

(Name) _____

(Street) _____

(City) _____ (Zip) _____

(2) PROVIDE SPACE, EQUIPMENT, CONTRACEPTIVE SUPPLIES, AND/OR STAFF TO OTHERS WHO PROVIDE MEDICAL FAMILY PLANNING SERVICES?

45-1 No -3 Yes

(a) WHAT IS THEIR NAME AND ADDRESS:

(Name) _____

(Street) _____

(City) _____ (Zip) _____

(3) CONTRACT OR PAY OTHERS FOR THE PROVISION OF MEDICAL FAMILY PLANNING SERVICES?

46-1 No -4 Yes

(a) WHAT IS THEIR NAME AND ADDRESS:

(Name) _____

(Street) _____

(City) _____ (Zip) _____

IF "YES" WAS MARKED IN 7 AND 7a ANSWERED, CONTINUE BELOW WITH QUESTION 8. IF "NO" WAS MARKED IN 7 AND 7b (1) - (3) ANSWERED, SKIP TO QUESTION 18 ON THE LAST PAGE.

8. DO YOU REPORT TO THE NATIONAL REPORTING SYSTEM FOR FAMILY PLANNING SERVICES?

17-1 No

-2 Yes

8a. WHAT IS YOUR CLINIC NUMBER? _____

17-42-61

9. WHEN DID THIS CLINIC OR SERVICE SITE FIRST BEGIN OFFERING MEDICAL FAMILY PLANNING SERVICES?

month / year
00 00, 00 54, 55

10. PLEASE ENTER BELOW THE NAME OF EACH COUNTY SERVED BY THIS CLINIC OR SERVICE SITE AND THE PERCENTAGE OF YOUR TOTAL PATIENTS FROM EACH COUNTY.

10-1
10-2

Name of County	% of patients	Name of County	% of patients
0011	0013	0028	0001
0016	0019	0074	0037
0021	0026	0080	0022

11. WHAT PERCENTAGE OF YOUR BUDGET FOR FAMILY PLANNING SERVICES WAS RECEIVED IN 1973 FROM THE FOLLOWING SOURCES? (THE PERCENTAGES SHOULD ADD TO 100 PERCENT.)

a. Department of Health, Education, and Welfare	_____	%	cc10

12. WE WOULD LIKE SOME INFORMATION ON YOUR FAMILY PLANNING CLINIC SESSIONS. THESE ARE REGULARLY SCHEDULED PERIODS OF TIME DURING WHICH MEDICAL FAMILY PLANNING SERVICES ARE PROVIDED AT THIS SITE.

In column (1), check the box to indicate the days of the week during which medical family planning services are provided.

In column (2), enter the time period during which medical family planning services are provided (e.g., 9-11 a.m.; 3-5 p.m.). If a split session is operated on any day, enter both time periods in the same box for that day. If this is a comprehensive health center or HMO where family planning is provided only on an "as needed" basis, check the "as needed" box in column (2).

In column (3), check the box which best describes the type of clinic session being held. For the purposes of this study, a clinic session may be specialized (S) (where only services related to medical family planning are provided) or combined (C) (where family planning services are offered in conjunction with other health services such as maternity, post-partum, maternal and child health, obstetrics and gynecology, comprehensive or other health care).

In column (4), check the box which describes the frequency of these sessions - W for weekly, B for bimonthly (e.g., every other week), M for monthly, or O for other.

VITAL AND HEALTH STATISTICS PUBLICATION SERIES

Originally Public Health Service Publication No. 1000

- Series 1. Programs and collection procedures.*—Reports which describe the general programs of the National Center for Health Statistics and its offices and divisions, data collection methods used, definitions, and other material necessary for understanding the data.
- Series 2. Data evaluation and methods research.*—Studies of new statistical methodology including: experimental tests of new survey methods, studies of vital statistics collection methods, new analytical techniques, objective evaluations of reliability of collected data, contributions to statistical theory.
- Series 3. Analytical studies.*—Reports presenting analytical or interpretive studies based on vital and health statistics, carrying the analysis further than the expository types of reports in the other series.
- Series 4. Documents and committee reports.*—Final reports of major committees concerned with vital and health statistics, and documents such as recommended model vital registration laws and revised birth and death certificates.
- Series 10. Data from the Health Interview Survey.*—Statistics on illness, accidental injuries, disability, use of hospital, medical, dental, and other services, and other health-related topics, based on data collected in a continuing national household interview survey.
- Series 11. Data from the Health Examination Survey.*—Data from direct examination, testing, and measurement of national samples of the civilian, noninstitutional population provide the basis for two types of reports: (1) estimates of the medically defined prevalence of specific diseases in the United States and the distributions of the population with respect to physical, physiological, and psychological characteristics; and (2) analysis of relationships among the various measurements without reference to an explicit finite universe of persons.
- Series 12. Data from the Institutional Population Surveys.*—Statistics relating to the health characteristics of persons in institutions, and their medical, nursing, and personal care received, based on national samples of establishments providing these services and samples of the residents or patients.
- Series 13. Data from the Hospital Discharge Survey.*—Statistics relating to discharged patients in short-stay hospitals, based on a sample of patient records in a national sample of hospitals.
- Series 14. Data on health resources: manpower and facilities.*—Statistics on the numbers, geographic distribution, and characteristics of health resources including physicians, dentists, nurses, other health occupations, hospitals, nursing homes, and outpatient facilities.
- Series 20. Data on mortality.*—Various statistics on mortality other than as included in regular annual or monthly reports—special analyses by cause of death, age, and other demographic variables, also geographic and time series analyses.
- Series 21. Data on natality, marriage, and divorce.*—Various statistics on natality, marriage, and divorce other than as included in regular annual or monthly reports—special analyses by demographic variables, also geographic and time series analyses, studies of fertility.
- Series 22. Data from the National Natality and Mortality Surveys.*—Statistics on characteristics of births and deaths not available from the vital records, based on sample surveys stemming from these records, including such topics as mortality by socioeconomic class, hospital experience in the last year of life, medical care during pregnancy, health insurance coverage, etc.
