ACTUARIAL TABLES

BASED ON UNITED STATES LIFE TABLES: 1959-61

This report contains certain tables used by actuaries in computing the present values of life annuities and survivor benefits payable on the death of an insured individual.¹

The actuarial functions included are based on the 1959-61 life tables for total males, total females, white males, white females, nonwhite males, and nonwhite females in the United States. The functions tabulated are the commutation columns *D*, *N*, and *M* and the whole life immediate annuity values (payments made at the end of

each successive year of life). For total males, total females, nonwhite males, and nonwhite females, these are given at interest rates of 2½, 3½, and 4½ percent. Values for white males and white females are given not only at the interest rates just mentioned but also at 3 and 4 percent. Tables have been calculated, however, for all six population subdivisions at each interest rate from 2½ to 6 percent inclusive at intervals of ½ percent. The unpublished tables are available on request from the Division of the Actuary, Social Security Administration, Washington, D.C.

The values were computed to more decimal places than are shown in the tables and were rounded by the computer. Therefore, there may be small discrepancies in the mathematical relationships that should hold among the various columns.

¹For explanation of the uses of these tables, see National Office of Vital Statistics, *United States Life Tables and Actuarial Tables, 1939-41*, by T. N. E. Greville, Public Health Service, Washington, U.S. Government Printing Office, 1947.
