**MMDS0831 Update Instructions**

MMDS0831 provides the update to SuperMICAR to fix the Spellchecker bug found in the MMDS0830 version.

To run the installation, do the following:

1 Make sure SuperMICAR is closed.

2. Double-click on MMDS0831.exe

3. Click on Unzip button when the self-extract box appears.

4. Click OK then Close when the extraction is done.

This will copy the SuperMICAR Update to both the MMDS2008 and MMDS2007 folders. If you have a non-standard setup you will need to copy the new supermicar.exe file to the proper folders.
