BEVERLY HILLS REPRODUCTIVE FERTILITY CENTER CENTER FOR REPRODUCTION BEVERLY HILLS, CALIFORNIA

Comparison of success rates across clinics may not be meaningful. Patient medical characteristics and treatment approaches vary (see pages 11-20).

2013 ART CYCLE PROFILE				Data verified by Peyman Saadat, MD						
Type of ART and Procedural Factors ^a				Patient Diagnosis b						
IVF	>99%	With ICSI		Tubal factor	13%	Uterine factor	4%	Multiple Factors:		
Unstimulated	1%	Used PGD	7%	Ovulatory dysfunction	9%	Male factor	35%	Female factors only	8%	
Used gestational carrier	2%			Diminished ovarian reserve Endometriosis		Other factor Unknown factor	14% 5%	Female & male factors	19%	

	Endometriosis	5% U	Inknown fac	tor 5%	ó

CURRENT SERVICES & PROFILE Current Name: Beverly Hills Reproductive Fertility Center, Center for Reproduction

Donor eggs?	Yes	Gestational carriers?	Yes	Single women?	Yes	Verified lab accreditation?	Yes
Donor embryos?	Yes	Embryo cryopreservation?	Yes	SART member?	Yes	(See Appendix C for details.)	

a Reflects features of fresh nondonor cycles. If IVF is <100%, the remaining cycles are GIFT, ZIFT, or a combination of these procedures with IVF.

^b Total patient diagnosis percentages may be greater than 100% because more than one diagnosis can be reported for each ART cycle.

[°] Fractions are used for rates with denominators less than 20. Multiple-infant births (e.g., twins) with at least one live infant are counted as one live birth.

d Total cycle number includes those using frozen eggs. It excludes 0 cycle(s) evaluating new procedures. Both cycle types are excluded from ART success rates.

e In this report, births are defined as term if at least 37 full weeks gestation and normal birth weight if at least 2,500 grams (approximately 5 pounds, 8 ounces).

f All ages are reported together because previous data show that patient age does not materially affect success with donor eggs.
