

## **Good Laboratory Practices for Ensuring the Quality of Genetic Testing**

### **Contents**

- A. Summary** (purpose; intended use)
- B. Introduction** (need for this document; intent)
- C. Background**
  - 1. Rapid Growth of Genetic Testing
  - 2. Scope of Genetic Testing Nationwide
    - a. Number of laboratories performing genetic testing
    - b. Number of genetic tests performed nationwide
  - 3. CLIA Oversight for Laboratory Genetic Testing
  - 4. Concerns Related to Genetic Testing
    - a. Issues related to the preanalytic phase of genetic testing
    - b. Analytic errors
    - c. Proficiency testing
    - d. Issues related to the postanalytic phase of genetic
    - e. Concerns related to genetic testing personnel
    - f. Concerns related to clinical validity, benefits, and risks of genetic tests
    - g. Personnel qualifications and training
- D. Methods**
  - 1. Data Collection (sources of information referenced in the Background section)
  - 2. Development of CLIAC Recommendations
- E. Recommended Good Laboratory Practices for Genetic Testing**
  - 1. Definition of Genetic Tests
  - 2. Facility Requirements for Molecular Amplification Procedures (prevention and monitoring of cross-contamination)
  - 3. Preanalytic Phase of Testing
    - a. Individuals authorized to order tests
    - b. Informed consent
    - c. Test request
  - 4. Analytic Phase of Testing
    - a. Method validation
    - b. Control procedures
    - c. Proficiency testing and alternatives
  - 5. Postanalytic Phase of Testing
    - a. Test report
    - b. Retention of records and specimens
  - 6. Personnel Qualifications and Responsibilities
- F. Conclusions**
- G. References**
- H. Acknowledgements**
- I. Terms and Abbreviations**
- J. Continuing Education Questions**
