

Internal
Memorandum

Bendix Kansas City
Division

Date August 31, 1970 Letter No.
To [REDACTED] D-541
From [REDACTED] D-822
Subject HANDLING OF NICKEL 63 (NI 63) SOLUTIONS

FC6

This memo is in reference to our discussion the other day about safety and internal requirements involved in the use of Ni-63 solutions. The requirements, as I gathered from the discussion, are very limited and are as follows:

1. The solution will have to be properly identified in use.
2. The solution will have to be stored in proper containers and identified.
3. The solution will have to be eventually disposed of in a method prescribed for radioactive wastes.
4. There is no danger to our special requirements for an operator using the small volume plating bath except as apply to acid solutions.
5. No special handling is required for rinse waters.
6. No special handling of part except to identify radioactive part in packaging.
7. Maskants can be disposed of by normal procedures.

Requested monitoring before the decision.

If there are any areas that you feel need additional caution and/or clarification, or if there is any misinterpretation on my part will you please advise.
