Question ID: HHC.180_00.000   R03 RECODE   Instrument Variable Name:

Final Documentation Name: HISPAN_I

Please give me the number of the group that represents [your/ person's] Hispanic origin or ancestry.

Universe: AGE = All

Description: All persons

Sources: ORIGIN_I; HHC.180

Recodes: None

Keywords: ethnicity; national origin; ancestry

Notes: "Other-specify" responses were assigned to specific groups where possible. Respondents who selected the generic "Hispanic/Spanish" response category were assigned "09", and in cases where the respondent refused to answer Hispanic origin or didn't know it, this variable was assigned "10" and "11", respectively. When Hispanic origin was not ascertained, this variable was also assigned "11". In cases where "Other-specify" responses were determined to be non-Hispanic, this variable was assigned "12" for not Hispanic/Spanish origin, and ORIGIN_I was back coded to "2" or "No" (no group represented respondent's national origin). Respondents coded as "12" answered 2,7,8, or 9 in ORIGIN_I. Data came from HHC.170 & HHC.180.

Hispanic subgroup detail

00	Multiple Hispanic
01	Puerto Rico
02	Mexican
03	Mexican-American
04	Cuban/Cuban American
05	Dominican (Republic)
06	Central or South American
07	Other Latin American, type not specified
08	Other Spanish
09	Hispanic/Latino/Spanish, non-specific type
10	Hispanic/Latino/Spanish, type refused
11	Hispanic/Latino/Spanish, type not ascertained
12	Not Hispanic/Spanish origin

Question ID: HHC.200_01.000   R13 RECODE   Instrument Variable Name:

Final Documentation Name: RACERPI2

Recode of full detail race groups

Universe: AGE = All

Description: All persons

Sources: RACFULI2

Recodes: HRACERI2

Keywords: race; new OMB race standards

Notes: This recode contains detail for the 5 OMB race groups, and a multiple race group. This recode does not include information provided in HHC.220 for multiple race mentions (the "primary" race). "Other Race" and "Unspecified Multiple race" are no longer available as separate race responses. These response categories are treated as missing, and the race is imputed if these are the only race responses. * Data not releasable due to respondent confidentiality or for other reasons.

OMB groups w/multiple race

01	White only
02	Black/African American only
03	AIAN only
04	Asian only
05	Race group not releasable*
06	Multiple race

Question ID: HHC.200_01.000   R21 RECODE   Instrument Variable Name:

Final Documentation Name: MRACRPI2

Recode

Universe: AGE = All

Description: All persons

Sources: HHC.200; HHC.220

Recodes: None

Keywords: race; old OMB race standards

Notes: This variable identifies the primary or main race reported by the respondent. Data came from HHC.200 and HHC.220. "Other Race" and "Unspecified Multiple race" are no longer available as separate race responses. These response categories are treated as missing, and the race is imputed if these are the only race responses. If only one valid race was given, that answer was copied from RACE1 to here. If more than one race was given, the response was copied from MLTRAC (HHC.220). *Other Asian - this category includes Korean, Vietnamese, Japanese, and other Asian subgroups. ** Data not releasable due to respondent confidentiality or for other reasons.

Race coded to single/multiple race group

01	White
02	Black/African American
03	Indian (American), Alaska Native
09	Asian Indian
10	Chinese
11	Filipino
15	Other Asian*
16	Primary race not releasable**
17	Multiple race, no primary race selected

PUBLIC USE
Document Version Date: 09-Jun-15

Question ID: HHC.200_01.000   R22 RECODE   Instrument Variable Name:

Final Documentation Name: MRACBPI2

Recode

Universe:	AGE = All
Description:	All persons

Sources:	HHC.200; HHC.220
Recodes:	None
Keywords:	race; old OMB race standards; bridge variable
Notes:	MRACBPI2 creates a bridge between the old (MRACE_P in 1997 and 1998) and the new OMB race standards (MRACER_P in 1999, MRACRP_I in 2000, 2001 and 2002, and MRACRPI2 in 2003 and beyond). Data came from HHC.200 and HHC.220. If only one valid race was given, that answer was copied from RACE1 to here. If more than one race was given, the response was copied from MLTRAC (HHC.220). When comparing NHIS health measures across years by detailed race categories, MRACBPI2 should be used. For confidentiality reasons, it is not possible to create a bridge for the API (Asian and Pacific Islander) category. * Other race is included here for bridging purposes.

Race coded to single/multiple race group

01	White
02	Black/African American
03	Indian (American) (includes Eskimo, Aleut)
06	Chinese
07	Filipino
12	Asian Indian
16	Other race*
17	Multiple race, no primary race selected

Question ID: HHC.420_00.000   R01 RECODE   Instrument Variable Name:

Final Documentation Name: AGE_P

Recode

Universe:	AGE = All
Description:	All persons

Sources:	AGE
Recodes:	None
Keywords:	age
Notes:	In most cases, data on age came from HHC.120. Because age is an important variable for instrument check items and in developing the weights, all respondents must have data on age. A series of questions in the instrument from HHC.124 through HHC.165 attempted to collect data on age when age was not given in HHC.120.

Age

00	Under 1 year
01-84	1-84 years
85	85+ years

PUBLIC USE
Document Version Date: 09-Jun-15

Question ID: CHS.024_05.000   RECODE   Instrument Variable Name:

Final Documentation Name: BMI_SC

Universe:	CSTATFLG = 1 and AGE = 12-17
Description:	Sample children aged 12-17 years

Sources:	CHEIGHTN; CWGHTP_K
Recodes:	None
Keywords:	BMI; body mass index; overweight; obesity; underweight
Notes:	(1) BMI was calculated using the inhouse versions of the height and weight variables, which contain a greater range of height and weight values than are available on the public-use file. The range of possible BMI values listed (0001-9994) does not reflect actual calculated BMI values at the extremes of the range, but rather allows for the theoretical possibility of such unlikely values. (2) BMI = [Weight (kg)/[Height (m) squared]] rounded to 2 decimal places. Conversion factors 1 kg = 2.20462 pounds; 1 meter (m) = 39.37008 inches.

Body Mass Index (BMI)

0001-9994	00.01-99.94
9995	99.95+
9999	Unknown

Description: Sample children LE 17 years

Sources: None

Recodes: None

Keywords: cerebral palsy; developmental delay

Notes: Beginning in 2004 there has been a 10-fold increase in the number of sample children who were reported to have cerebral palsy in CHS.060_02.000, CONDL2. In 2003 there were 34 cases reported; in each year from 2004-2006 there were 311-353 cases reported. This increase is most likely caused by interviewer error due to operational differences between the CASES instrument used prior to 2004 and the Blaise instrument used beginning in 2004. A clarification of the survey instrument will be implemented in the 3rd quarter of 2007. See survey questionnaire for original question format. Question format modified in 2008.

Final Documentation Name: CHRWHIS1

*Read if necessary:

Without a hearing aid…

Can [fill: SC name] usually HEAR AND UNDERSTAND what a person says without seeing his or her face if that person WHISPERS to [fill: him/her] from across a QUIET room?

Universe: CSTATFLG = '1' and (AGE LE '017' and AGE NE ' ')

Description: Sample children <18

Sources: None

Recodes: None

Keywords: None

Notes: New 2014 Public Use File variable. Data quality testing found 266 sample children who, without the use of a hearing aid, were reported to have "Excellent" or "Good" hearing (CHEARST2 IN ('1', '2')), yet later in the interview were reported to be unable to hear whispers across a quiet room (CHRWHISP = '2'), talking in a normal voice across a quiet room (CHRTALK = '2'), shouting across a quiet room (CHRSHOUT = '2'), and speaking loudly into one's ear (CHRSPEAK = '2'). In these instances, the sample child was assigned a value of '8' (not ascertained) for all four variables, which in the public use data file are named: CHRWHIS1, CHRTALK1, CHRSHOU1, and CHRSPEA1.

Hear whispering from across quiet room

Question ID: CHS.251_00.040   RECODE   Instrument Variable Name:

Final Documentation Name: CHRTALK1

*Read if necessary:

Without a hearing aid…

Can [fill: SC name] usually HEAR AND UNDERSTAND what a person says without seeing his or her face if that person TALKS IN A NORMAL VOICE to [fill: him/her] from across a QUIET room?

Universe: CSTATFLG = '1' and (AGE LE '017' and AGE NE ' ') and CHRWHIS1 IN('2','7','8','9')

Description: Sample children <18 who cannot hear whispers across a quiet room or REF/DK that question

---

Sources: None

Recodes: None

Keywords: None

Notes: New 2014 Public Use File variable. Data quality testing found 266 sample children who, without the use of a hearing aid, were reported to have "Excellent" or "Good" hearing (CHEARST2 IN ('1', '2')), yet later in the interview were reported to be unable to hear whispers across a quiet room (CHRWHISP = '2'), talking in a normal voice across a quiet room (CHRTALK = '2'), shouting across a quiet room (CHRSHOUT = '2'), and speaking loudly into one's ear (CHRSPEAK = '2'). In these instances, the sample child was assigned a value of '8' (not ascertained) for all four variables, which in the public use data file are named: CHRWHIS1, CHRTALK1, CHRSHOU1, and CHRSPEA1.

Hear talking in normal voice from across quiet room

1	Yes
2	No

About how often did [fill: SC name] wear hearing protection, such as ear plugs or ear muffs when exposed to VERY LOUD sounds or noise at work or while doing chores? Would you say…

*Read categories below.

Universe: CSTATFLG = '1' and (AGE GE '006' and AGE NE ' ') and CHRWKVLN='1'

Description: Sample children 6-17 who have had job/chores that exposed them to very loud noise 4 or more hours a day, several days a week

Sources:	None
Recodes:	None
Keywords:	None
Notes:	None

How often used hearing protection when very loud explosive noises occurred

1	Always
2	Usually
3	About half the time
4	Seldom
5	Never
7	Refused
8	Not ascertained
9	Don't know

Question ID: CHS.254_00.080

Instrument Variable Name: CHRLESNS

Final Documentation Name: CHRLESNS

[fill: Outside of working on a job or doing chores, has/Has] [fill: SC name] ever been exposed to VERY LOUD sounds or noise 10 or more times a year? This includes noise from extremely loud toys, gunfire, fireworks, power tools or machinery, very loud music, sporting events, recreational vehicles, racing or speedways, some household appliances, or other things?]

*Read if necessary.

VERY LOUD means so loud that one must shout in order to be understood by a person standing 3 feet (arm's length) away.

Universe: CSTATFLG = '1' and (AGE LE '017' and AGE NE ' ')

Description: Sample children <18

PUBLIC USE
Document Version Date: 09-Jun-15

Question ID: CMB.020_01.000   R01 RECODE   Instrument Variable Name:

Final Documentation Name: RSCL2_C2

I am going to read a list of items that describe children. For each item, please tell me if it has been NOT TRUE, SOMEWHAT TRUE, or CERTAINLY TRUE for {S.C. name} DURING THE PAST 6 MONTHS. {HE/SHE}...is generally well behaved, usually does what adults request.

Universe: CSTATFLG = '1' and ('004' <= AGE <= '017')

Description: Sample children 4-17 years

Sources: None

Recodes: None

Keywords: cooperative; well-behaved; obedient

Notes: This question is a part of the short version of the Strengths and Difficulties Questionnaire Extended (SDQ), and is copyrighted by Dr. Robert Goodman, Ph. D. of the Psychiatric Institute of London, England. State and local agencies may use these questions without charge or permission providing the wording is not modified, all questions are retained, and copyright is acknowledged. See questionnaire for original question format. For more information about the background and scoring of this scale, see the CMB Appendix.

In 2004 this variable was located in the CMH section; in 2005 it was moved to the CMB section and given a new question number. In 2006-2007 it remained in CMB. The question wording and answer codes in the final files have remained the same. In 2008-2009 most SDQ questions were removed from the NHIS because of lack of funding. In 2010-2013 the SDQ questions fielded in 2007 were returned to NHIS because of NIMH funding.

During the past 12 months, several kinds of flu vaccines have been available. I will ask you about {S.C. name's} most recent flu vaccinations.

DURING THE PAST 12 MONTHS, has {SC name} had a flu vaccination? A flu vaccination is usually given in the fall and protects against influenza for the flu season.

*Read if necessary: {fill: SC name}'s most recent flu vaccination could have been the new 2010-2011 flu vaccine available starting last fall, or either of the two types available last season, one called "seasonal" and the other called "H1N1" or "swine" flu vaccine.

CHS Appendix

A Preliminary Evaluation and Recommendations for use
of the Mental Health Indicator (MHI) in the NHIS
for children ages 2 to 3

This is based on a report by Thomas M.Achenbach, Ph.D., which was submitted to the Division of Health Interview Statistics on May 10, 1999.

Introduction

The NHIS mental health indicators, MHIBOY2 and MHIGRL2 are located in the Child Health Status (CHS) section of the survey, and are based on items from the Child Behavior Checklist (CBCL) that were identified by Dr. Thomas Achenbach as providing the best discrimination between demographically similar children referred for mental health services versus nonreferred (Achenbach and Edelbrock, 1983). To take account of gender and age differences in the discriminative power of particular items, the items were selected separately for each gender and age group. From the original ten items identified in Dr. Achenbach's 1995 analyses, the 1997 NHIS elected to include only 4 items (per gender). These include whether male sample children (aged 2-3 years) had been uncooperative, had trouble sleeping, had speech problems, or been unhappy or depressed in the past 2 months, and whether female sample children (aged 2-3 years) had temper tantrums, had speech problems, had been nervous or high-strung, or been unhappy or depressed in the past 2 months. Response categories included "Not true", "Sometimes true", or "Often true" (as well as "Refused" and "Don't know"). These items are also located in the CHS section (see CHS.321_01-04.000 and CHS.361_01-04.000).

It is essential to note that such a small set of items cannot be used to evaluate individual children for clinical or other purposes. Even for use as a mental health indicator in large surveys such as the NHIS, very small sets of items can serve only as approximate indicators of needs for mental health services. Multiple items tapping each of several specific areas of functioning would be needed to identify specific disorders, such as Attention Deficit Hyperactivity Disorder (ADHD), Depression, Conduct Disorder, and Somatization Disorder. (Note: The items for children ages 4 to 17 were replaced in the 2001 NHIS with a different instrument, the Strengths and Difficulties Questionnaire (SDQ)).

It should also be noted that different cutpoints on the distributions of item scores may be needed for different purposes. For example, a very low cutpoint may be useful if the goal is to identify every possible case for which mental health services might be considered. However, very low cutpoints result in relatively high false positive rates, i.e., the inclusion of substantial numbers of healthy individuals among those identified as potentially needing services. Conversely, higher cutpoints may yield greater overall accuracy in classifying potential cases versus noncases, but at the cost of missing more cases potentially needing services.

Data Analyses

Dr. Achenbach specified and reviewed data analyses that were done at NCHS. These included tabulations of specific responses to each behavioral/emotional problem item; tabulations of relations between total problem scores and classification of children as deviant versus nondeviant on the basis of external criteria (e.g., parents ever being told by health professionals that their child had ADHD, mental retardation, other developmental delay, autism, down syndrome, or a learning disability; parents having talked to mental health professionals about their child in the preceding 12 months; or parents needing mental health services for their child but unable to afford it); and Relative Operating Characteristic (ROC) analyses of cutpoints on the total problem scores. Because each behavioral/emotional problem item was scored "0" (not true of the child), "1" (somewhat or sometimes true), or "2" (very true or often true), total scores across the 4 items for each gender/age group could range from "0" to "8". Dr. Achenbach examined the results and recommended changes and additions to the analyses.

Based on the analyses to date, Dr. Achenbach makes the following recommendations for boys and girls ages 2-3. Total scores on the 8 problem items are useful for quantitative analyses in relation to other variables. However, categorical mental health indicators should not be derived from specific cutpoints on the total scores for the 4 behavioral/emotional problem items on the basis of 1997 NHIS data for ages 2-3 for the following reasons:

The total number of children, 44 boys and 27 girls, classified as deviant according to external criteria (e.g., parents being told their child had ADHD; talking to mental health professionals about their child) was too small to provide a sound basis for establishing cutpoints;

Many disorders relevant to defining criterion groups (e.g., ADHD) are not identified as early as age 2-3;

The rates of referral for mental health services and other possible indicators of deviance are much lower at ages 2-3 than at older ages.

CMB Appendix

The Short Strengths and Difficulties Questionnaire (SDQ)

In the NHIS questions CMB.020_01.000 to CMB.030_00.000 make up a brief version of the SDQ. The questions are derived from the parent version of the long Strengths and Difficulties Questionnaire Extended (SDQ), developed and copyrighted by Dr. Robert Goodman, Institute of Psychiatry, London, England. Questions from the SDQ are used in the NHIS with Dr. Goodman's permission. The short SDQ, constructed to save time and space in the questionnaire, was added for children aged 4-17 years as a part of a collaborative agreement between NCHS and the National Institute of Mental Health (NIMH) of the National Institutes of Health (NIH). The long SDQ consists of 25 scale items. Detailed information on the SDQ can be found in Appendix 5 of the Dataset Documentation for the 2004 NHIS and on the SDQ web site at **http://www.sdqinfo.org**.

The items in the short SDQ correlate to the subscales in the long SDQ as follows:

CMB.020_01.000 *Generally obedient,* correlates 0.69 with the long SDQ conduct score.
CMB.020_02.000 *Many worries*…, correlates 0.71 with the long SDQ emotion score.
CMB.020_03.000 *Often unhappy*…, correlates 0.64 with the long SDQ emotion score.
CMB.020_04.000 *Gets along better*…, correlates 0.69 with the long SDQ peer problems score.
CMB.020_05.000 *Sees tasks through*, correlates 0.72 with the long SDQ hyperactivity-inattention score.

In order to score the short SDQ the response for each item in CMB.020 is assigned a value from 0 – 2 based on the scale below, then all values are summed to produce a total score. A total score from 1 to 5 correlates 0.84 with the long SDQ total difficulties score.

Scoring of the Short SDQ

Response	Not true	Somewhat true	Definitely true
Value for CMB.020_02, CMB.020_03 and CMB.020_04	0	1	2
Value for CMB.020_01 and CMB.020_05	2	1	0

CMB.030 is taken from a set of SDQ extended or impact questions which measure the impact of the child's difficulty on various aspects of his/her life. CMB.030 correlates 0.62 with the SDQ impact score from the extended SDQ questions. (See Appendix V of the Dataset Documentation for the 2004 NHIS and/or the SDQ Web site at **http://www.sdqinfo.org**)
