

## Recent Trends in Births and Fertility Rates Through June 2012

by Brady E. Hamilton, Ph.D., and Paul D. Sutton, Ph.D., Division of Vital Statistics

The provisional count of births in the United States for the 12-month period ending June 2012 was 3,942,000, which was 1% lower than the 3,981,000 births (provisional count) for the 12-month period ending June 2011 (1). The number of births has steadily declined from the historic high of 4,316,233 in 2007 (Figure) (2,3), but the rate of decline has slowed from 2010 through June 2012.

The provisional fertility rate in the United States for the 12-month period ending June 2012 declined 1% to 63.0 births per 1,000 women aged 15–44 from 63.8 for the 12-month period ending June 2011 (1). Like the number of births, the fertility rate has steadily declined from the recent high of 69.3 in 2007 (Figure) (2,3), although, again, the rate of decline has slowed from 2010 through June 2012.

### Data sources and methods

Provisional counts and rates are based on 12 months of provisional data ending with the specified month. Provisional counts are rounded to the nearest thousand. For further information about provisional data, see [Births, Marriages, Divorces, and Deaths: Provisional Data for 2009](#) (4). Data for 2005–2010 in the figure are final, data for 2011 are preliminary, and data for the 12 months ending June 2012 are provisional (1–3).
