# **Healthy People 2010 Operational Definition**

# 14-27. Increase routine vaccine coverage levels for adolescents.

# 14-27a. 3 or more doses of hepatitis B.

National Data Source National Health Interview Survey (NHIS), CDC,

NCHS.

State Data Source Not identified.

Healthy People 2000

Objective

Measure

Adapted from 20.11 (Immunization and Infectious

Diseases).

Changes since the

2000 Publication

Percent.

None.

**Baseline (Year)** 48 (1997)

Target 90

**Target-Setting Method** Consistent with Childhood Immunization Initiative.

For a discussion of target-setting methods, see Part

A, section 4.

**Numerator** Number of persons aged 13 to 15 years reported to

be vaccinated with three or more doses of the

hepatitis B antigens.

**Denominator** Number of persons aged 13 to 15 years.

**Population Targeted** U.S. civilian, noninstitutionalized population.

Questions Used To Obtain the National Baseline Data From the 1997 National Health Interview Survey:

- Are shot records available for (Child's name)?
- Are all the immunizations the (Child's name) ever received included in this shot record?
- Are there any OTHER immunizations listed on the shot record that I have NOT asked you about? [If yes:]
  - What are the names of OTHER immunizations listed on the shot record that I have NOT asked you about?

Influenza

Pneumococcal Hepatitis A Other immunizations

 Has (Child's name) ever received an additional Hepatitis B shot?

[If yes:]

 How many additional Hepatitis B shots has (Child's name) ever received?

[If no shot record (or incomplete):]

 Has (Child's name) ever received an immunization (that is a shot or drops)?

[If yes:]

 Has (Child's name) ever received a Hepatitis B shot?

[If yes:]

 How many Hepatitis B shots did (Child's name) ever receive?

# **Expected Periodicity**

Annual.

#### **Comments**

Between 1997 and 2003 the National Health Interview Survey was the only national source of immunization information for adolescents. Vaccination coverage estimates for these years are based on parental recall. There was no national data source for adolescent immunization information in 2004 and 2005. The NIS-Teen was implemented in 2006 and will be the source for annual national adolescent vaccination coverage levels. Vaccination coverage estimates from the NIS-Teen are based on provider-reported information. Differences in coverage estimates between 2003 and 2006 are due primarily to survey methodology. Because parental recall has been shown to be inaccurate, 1, 2 provider-reported data is considered to be the gold standard.

Objective 14-27 is a modification of Healthy People 2000 objective 20.11, which tracked immunization coverage for selected antigens (three or more doses of DTP, three or more doses of polio, one or more doses of measles-containing, three or more doses of Haemophilus influenzae type B, and three or more doses of hepatitis B) among children aged 19 to 35 months. Objective 14-27 tracks selected antigens (two or more doses of MMR, three or more doses of hepatitis B, one or more doses of varicella if indicated, and one or more doses of tetanus-

Operational Definition: Objective 14-27a

diphtheria booster) among adolescents aged 13 to 15 years.

For some measures, data do not meet the criteria for statistical reliability, data quality, or confidentiality and have been suppressed. Information on suppression of data for the major Healthy People 2010 data systems has been published in a *Healthy People Statistical Note*.<sup>3</sup>

See Part C for a description of NHIS and Appendix A for focus area contact information.
