CENSUS REPORTS

VOLUME III

TWELFTH CENSUS OF THE UNITED STATES,
TAKEN IN THE YEAR 1900

WILLIAM R. MERRIAM, DIRECTOR

VITAL STATISTICS

PART I

ANALYSIS AND RATIO TABLES

PREPARED UNDER THE SUPERVISION OF WILLIAM A. KING,
CHIEF STATISTICIAN FOR VITAL STATISTICS

WASHINGTON
UNITED STATES CENSUS OFFICE
1902

TABLE OF CONTENTS.

Letter of transmittal of the Chief Statistician for Vital Statistics to the Director of the Census ..... Page ix

PARTS.

Part I. Analysis of the general returns, tables of ratios and death rates for the census year, with maps and diagrams, and an appendix describing the various areas for which data are presented in the report ..... 1009 pages

Part II. General tables of deaths for the census year in various relations ..... 1055 pages

CONTENTS OF PARTS.

ANALYSIS.

	Part.	Section.	Page.
Introductory	1	I	xi
Enumerators' returns	1	I	xi
Registration records	1	I	xi
Classification of returns	1	I	xxxviii
Classification of causes	1	I	xxxviii
Future reports	1	I	xxxix
Population	1	II	xl
Births	1	III	xlix
Excess of births, 1890 to 1900	1	III	xlix
Births in the census year	1	III	liii
General death rates	1	IV	lvi
Sex	1	V	lxiv
Color and race, nativity and parent nativity	1	VI	lxix
Age	1	VII	lxxix
Average age	1	VII	lxxxiv
Infantile mortality	1	VII	lxxxvii
Corrected death rates	1	VIII	lxxxix
Conjugal condition	1	IX	xcii
Months	1	X	xcvi
Locality	1	XI	xcix
Causes of death	1	XII	cxi
Generally	1	XII	cxi
General diseases—A	1	XII	cxv
Measles	1	XII	cxix
Scarlet fever	1	XII	cxxiii
Diphtheria and croup	1	XII	cxxvii
Diphtheria	1	XII	cxxxi
Whooping cough	1	XII	cxxxii
Malarial fever	1	XII	cxxxvi
Influenza	1	XII	cxli
Typhoid fever	1	XII	cxliv
Diarrheal diseases	1	XII	cxlviii
Cerebro-spinal fever	1	XII	cliii
Smallpox	1	XII	clvii
Erysipelas	1	XII	clvii
Venereal diseases	1	XII	clx
Alcoholism	1	XII	clxi
Old age	1	XII	clxiv
Diabetes	1	XII	clxviii
Scrofula and tabes	1	XII	clxx
Hydrocephalus	1	XII	clxxiii
Consumption	1	XII	clxxvi
Cancer and tumor	1	XII	clxxxi
Cancer	1	XII	clxxxv
Diseases of the nervous system	1	XII	cxci
Apoplexy and paralysis	1	XII	cxcvi
Tetanus and trismus nascentium	1	XII	cxcviii
Convulsions	1	XII	cci
Diseases of the circulatory system	1	XII	ccii
Heart disease and dropsy	1	XII	ccvi
Angina pectoris	1	XII	ccx
Aneurism	1	XII	ccxii
Diseases of the respiratory system	1	XII	ccxiii
Pneumonia	1	XII	ccxvii
Bronchitis	1	XII	ccxxi

TABLE OF CONTENTS.

ANALYSIS—Continued.

Causes of death—Continued.	Part.	Section.	Page.
Diseases of the digestive system	1	XII	ccxxiv
Diseases of the stomach	1	XII	ccxxvii
Obstruction of the bowels	1	XII	ccxxix
Appendicitis	1	XII	ccxxxi
Hernia	1	XII	ccxxxii
Diseases of the liver	1	XII	ccxxxiv
Peritonitis	1	XII	ccxxxviii
Diseases of the urinary system	1	XII	ccxl
Bright's disease	1	XII	ccxliii
Diseases of the kidneys	1	XII	ccxlv
Diseases of the female organs of generation	1	XII	ccxlv
Affections connected with pregnancy	1	XII	ccxlvii
Diseases of the bones and joints	1	XII	ccl
Accidents and injuries	1	XII	cclii
Suicide	1	XII	cclv
Occupations	1	XIII	cclix
Description of areas for which data are given	1	Append.	cccii

TABLES.

AGE AND SEX:	Part.	No.	Page.
Deaths in the United States, the registration area and its subdivisions, and the nonregistration area, from certain diseases and classes of diseases, by conjugal condition, color, age, and birthplaces of mothers, with distinction of sex.	1	1	1–73
Deaths in the United States, the registration area and its subdivisions, and the nonregistration area, of males engaged in each occupation and class of occupations, by color, age, and birthplaces of mothers.	1	2	75–111
Deaths in the United States, the registration area and its subdivisions, and the nonregistration area, at the specified ages, of white males engaged in each occupation, and class of occupations.	1	3	113–122
Deaths in the United States, the registration area and its subdivisions, and the nonregistration area, at the specified ages, of colored males engaged in each occupation, and class of occupations.	1	4	123–132
Deaths in the United States, the registration area and its subdivisions, and the nonregistration area, of females engaged in each specified occupation, by color, age, and birthplaces of mothers.	1	5	133–143
Deaths in the United States, the registration area and its subdivisions, and the nonregistration area, at the specified ages, of white females engaged in each specified occupation.	1	6	145–148
Deaths in the United States, the registration area and its subdivisions, and the nonregistration area, at the specified ages, of colored females engaged in each specified occupation.	1	7	149–152
Deaths in the United States, the registration area and its subdivisions, and the nonregistration area, from each specified disease, and class of diseases, of males engaged in each occupation, and class of occupations.	1	8	153–189
Deaths in the United States, the registration area and its subdivisions, and the nonregistration area, from each specified disease and class of diseases, of white males engaged in each occupation, and class of occupations.	1	9	191–207
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of colored males engaged in each occupation, and class of occupations.	1	10	209–225
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of females engaged in each occupation.	1	11	227–237
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of white females engaged in each occupation.	1	12	239–243
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of colored females engaged in each occupation.	1	13	245–249
Deaths from cancer in the United States, the registration area and its subdivisions and the nonregistration area, by color, general nativity, parent nativity, and birthplaces of mothers, with distinction of sex and age.	1	14	251–256
Deaths from cancer, in the registration area, of the single, married, widowed, and divorced, by color, general nativity, parent nativity, and birthplaces of mothers, with distinction of sex and age.	1	15	257–260
Deaths from cancer of certain specified organs, in the registration area, by color, general nativity, parent nativity, and birthplaces of mothers, with distinction of sex and age.	1	16	261–273
Deaths from cancer in the United States, and in the registration and nonregistration areas, at each age, of males engaged in each occupation and class of occupations.	1	17	275–279
Deaths from cancer in the United States, and in the registration and nonregistration areas, at each age, of females engaged in each occupation.	1	18	281–283
Population, births, deaths, and death rates at certain ages, and deaths from certain principal causes in the United States, each state and city, and each group and county in the registration states, by sex, color, general nativity, and parent nativity.	1	19	285–555
Number of deaths, and the death rate per 100,000 of population, from each cause, in the registration area and its subdivisions, by sex	1	20	559–564
Death rates from each cause per 100,000 of population, in the registration states, in the aggregate, and for the cities and the rural districts, by sex.	1	21	565–573
Number of deaths at each age per 1,000 deaths, at known ages, in the United States, the registration area and its subdivisions, and in each registration state, by sex, color, general nativity, and birthplaces of mothers.	1	23	583–601
Number of deaths at each age per 1,000 deaths at known ages from each cause, in the United States, the registration area, and the registration cities, by sex.	1	24	603–627
Number of deaths from each cause per 1,000 deaths from known causes, in the United States, the registration area, and the registration cities, by age and sex.	1	25	629–653
Number of deaths from each cause per 1,000 deaths from known causes, in the United States, and each grand group, in the aggregate, and for the cities and rural districts, by sex.	1	26	655–679
Proportions of the aggregate population of the United States at each specified age, per 100,000 population of known ages, by sex, color, general nativity, and parent nativity.	1	27	683–687
Proportions of the aggregate, the white, and the colored populations of the United States, and of each state and territory, at each specified age, per 100,000 population of known ages.	1	28	689–695
Deaths in each state and territory, by sex, at each census: 1870 to 1900	2	2	3–4
Deaths in the United States, each state and territory, and each registration city, by color, general nativity, parent nativity, and sex	2	4	7–19
Deaths in the United States, each state and territory, and each registration city, at each age, by sex	2	5	21–53
Deaths in the United States, the registration area and its subdivisions, and in each state and territory, at each age, by sex, color, general nativity, parent nativity, and birthplaces of mothers.	2	6	55–113
Deaths in the United States, the registration area and its subdivisions, and in each state and territory, from each specified disease and class of diseases, by sex and age.	2	8	227–667
Deaths in the United States from each specified disease and class of diseases, by color and race	2	9	669–701
Deaths in the registration area, from each specified disease and class of diseases, by color and race	2	10	703–727
Deaths of white persons in the registration area, from each specified disease and class of diseases, by birthplaces of mothers	2	11	729–841
Deaths in each registration state, from each specified disease and class of diseases, by birthplaces of mothers	2	12	843–879
Deaths in the United States, the registration area and its subdivisions and in each grand group, at certain ages and from certain specified diseases and classes of diseases, by months.	2	13	881–1055

TABLES—Continued.

	Part.	No.	Page.
COLOR AND RACE:			
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from certain diseases and classes of diseases, by conjugal condition, color, age, and birthplaces of mothers, with distinction of sex.	1	1	1–73
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, of males engaged in each occupation and class of occupations, by color, age, and birthplaces of mothers.	1	2	75–111
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, at the specified ages, of white males engaged in each occupation and class of occupations.	1	3	113–122
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, at the specified ages, of colored males engaged in each occupation and class of occupations.	1	4	123–132
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, of females engaged in each specified occupation by color, age, and birthplaces of mothers.	1	5	133–143
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, at the specified ages, of white females engaged in each specified occupation.	1	6	145–148
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, at the specified ages, of colored females engaged in each specified occupation.	1	7	149–152
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of white males engaged in each occupation and class of occupations.	1	9	191–207
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of colored males engaged in each occupation and class of occupations.	1	10	209–225
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of white females engaged in each occupation.	1	12	239–243
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of colored females engaged in each occupation.	1	13	245–249
Deaths from cancer in the United States, the registration area and its subdivisions and the nonregistration area, by color, general nativity, parent nativity, and birthplaces of mothers, with distinction of sex and age.	1	14	251–256
Deaths from cancer in the registration area, of the single, married, widowed, and divorced, by color, general nativity, parent nativity, and birthplaces of mothers, with distinction of sex and age.	1	15	257–260
Deaths from cancer of certain specified organs, in the registration area, by color, general nativity, parent nativity, and birthplaces of mothers, with distinction of sex and age.	1	16	261–273
Population, births, deaths, and death rates at certain ages, and deaths from certain principal causes in the United States, each state and city, and each group and county in the registration states, by sex, color, general nativity, and parent nativity.	1	19	285–555
Number of deaths at each age per 1,000 deaths at known ages, in the United States, the registration area, and its subdivisions, and in each registration state, by sex, color, general nativity, and birthplaces of mothers.	1	23	583–601
Proportions of the aggregate population of the United States at each specified age, per 100,000 population of known ages, by sex, color, general nativity, and parent nativity.	1	27	683–687
Proportions of the aggregate, the white, and the colored populations of the United States and of each state and territory, at each specified age, per 100,000 population of known ages.	1	28	689–695
Deaths in each state and territory, by color and race	2	3	5–6
Deaths in the United States, each state and territory and each registration city, by color, general nativity, parent nativity, and sex	2	4	7–19
Deaths in the United States, the registration area and its subdivisions, and in each state and territory, at each age, by sex, color, general nativity, and parent nativity, and birthplaces of mothers.	2	6	55–113
Deaths in the United States, from each specified disease and class of diseases, by color and race	2	9	669–701
Deaths in the registration area, from each specified disease and class of diseases, by color and race	2	10	703–727
GENERAL NATIVITY AND PARENT NATIVITY:			
Deaths from cancer in the United States, the registration area and its subdivisions and the nonregistration area, by color, general nativity, parent nativity, and birthplaces of mothers, with distinction of sex and age.	1	14	251–256
Deaths from cancer, in the registration area, of the single, married, widowed, and divorced, by color, general nativity, parent nativity, and birthplaces of mothers, with distinction of sex and age.	1	15	257–260
Deaths from cancer of certain specified organs, in the registration area, by color, general nativity, parent nativity, and birthplaces of mothers, with distinction of sex and age.	1	16	261–273
Population, births, deaths, and death rates at certain ages, and deaths from certain principal causes in the United States, each state and city, and each group and county in the registration states, by sex, color, general nativity, and parent nativity.	1	19	285–555
Number of deaths at each age, per 1,000 deaths at known ages, in the United States, the registration area and its subdivisions, and in each registration state, by sex, color, general nativity, parent nativity, and birthplaces of mothers.	1	23	583–601
Proportions of the aggregate population of the United States at each specified age, per 100,000 population of known ages, by sex, color, general nativity, and parent nativity.	1	27	683–687
Deaths in the United States, each state and territory and each registration city, by color, general nativity, parent nativity, and sex	2	4	7–19
Deaths in the United States, the registration area and its subdivisions, and in each state and territory, at each age, by sex, color, general nativity, parent nativity, and birthplaces of mothers.	2	6	55–113
BIRTHPLACES OF MOTHERS:			
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from certain diseases and classes of diseases, by conjugal condition, color, age, and birthplaces of mothers, with distinction of sex.	1	1	1–73
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, of males engaged in each occupation and class of occupations, by color, age, and birthplaces of mothers.	1	2	75–111
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, of females engaged in each specified occupation, by color, age, and birthplaces of mothers.	1	5	133–143
Deaths from cancer in the United States, the registration area and its subdivisions and the nonregistration area, by color, general nativity, parent nativity, and birthplaces of mothers, with distinction of sex and age.	1	14	251–256
Deaths from cancer, in the registration area, of the single, married, widowed, and divorced, by color, general nativity, parent nativity, and birthplaces of mothers, with distinction of sex and age.	1	15	257–260
Deaths from cancer of certain specified organs, in the registration area, by color, general nativity, parent nativity, and birthplaces of mothers, with distinction of sex and age.	1	16	261–273
Number of deaths at each age, per 1,000 deaths at known ages, in the United States, the registration area and its subdivisions, and in each registration state, by sex, color, general nativity, parent nativity, and birthplaces of mothers.	1	23	583–601
Deaths in the United States, the registration area and its subdivisions, and in each state and territory, at each age, by sex, color, general nativity, parent nativity, and birthplaces of mothers.	2	6	55–113
Deaths of white persons in the registration area, from each specified disease and class of diseases, by birthplaces of mothers	2	11	729–841
Deaths in each registration state, from each specified disease and class of diseases, by birthplaces of mothers	2	12	843–879
CAUSES OF DEATH:			
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from certain diseases and classes of diseases, by conjugal condition, color, age, and birthplaces of mothers, with distinction of sex.	1	1	1–73
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of males engaged in each occupation and class of occupations.	1	8	153–189
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of white males engaged in each occupation and class of occupations.	1	9	191–207

TABLE OF CONTENTS.

TABLES—Continued.

	Part.	No.	Page.
CAUSES OF DEATH—Continued.			
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of colored males engaged in each occupation and class of occupations.	1	10	209–225
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of females engaged in each occupation.	1	11	227–237
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of white females engaged in each occupation.	1	12	239–243
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of colored females engaged in each occupation.	1	13	245–249
Deaths from cancer in the United States, the registration area and its subdivisions and the nonregistration area, by color, general nativity, parent nativity, and birthplaces of mothers, with distinction of sex and age.	1	14	251–256
Deaths from cancer, in the registration area, of the single, married, widowed, and divorced, by color, general nativity, parent nativity, and birthplaces of mothers, with distinction of sex and age.	1	15	257–260
Deaths from cancer of certain specified organs, in the registration area, by color, general nativity, parent nativity, and birthplaces of mothers, with distinction of sex and age.	1	16	261–273
Deaths from cancer in the United States, and in the registration and nonregistration areas, at each age, of males engaged in each occupation and class of occupations.	1	17	275–279
Deaths from cancer in the United States, and in the registration and nonregistration areas, at each age, of females engaged in each occupation.	1	18	281–283
Population, births, deaths, and death rates at certain ages, and deaths from certain principal causes in the United States, each state and city, and each group and county in the registration states, by sex, color, general nativity and parent nativity.	1	19	285–555
Number of deaths and the death rate per 100,000 of population, from each cause, in the registration area and its subdivisions, by sex	1	20	559–564
Death rates from each cause, per 100,000 of population, in the registration states, in the aggregate and for the cities and the rural districts, by sex.	1	21	565–573
Death rates from certain causes per 100,000 of population in each county in the registration states	1	22	575–581
Number of deaths at each age, per 1,000 deaths at known ages from each cause, in the United States, the registration area and the registration cities, by sex.	1	24	603–627
Number of deaths from each cause, per 1,000 deaths from known causes, in the United States, the registration area and the registration cities, by age and sex.	1	25	629–653
Number of deaths from each cause per 1,000 deaths from known causes, in the United States and each grand group, in the aggregate and for the cities and rural districts, by sex.	1	26	655–679
Deaths in the United States, each state, state group and registration city, from each reported cause	2	7	115–226
Deaths in the United States, the registration area and its subdivisions, and in each state and territory, from each specified disease and class of diseases, by sex and age.	2	8	227–667
Deaths in the United States, from each specified disease and class of diseases, by color and race	2	9	669–701
Deaths in the registration area, from each specified disease and class of diseases, by color and race	2	10	703–727
Deaths of white persons in the registration area, from each specified disease and class of diseases, by birthplaces of mothers	2	11	729–841
Deaths in each registration state, from each specified disease and class of diseases, by birthplaces of mothers	2	12	843–879
Deaths in the United States, the registration area and its subdivisions and in each grand group, at certain ages, and from certain specified diseases and classes of diseases, by months.	2	13	881–1055
CONJUGAL CONDITION:			
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from certain diseases and classes of diseases, by conjugal condition, color, age, and birthplaces of mothers, with distinction of sex.	1	1	1–73
Deaths from cancer, in the registration area, of the single, married, widowed, and divorced, by color, general nativity, parent nativity, and birthplaces of mothers, with distinction of sex and age.	1	15	257–260
MONTH OR SEASON:			
Deaths in the United States, the registration area and its subdivisions and in each grand group, at certain ages and from certain specified diseases and classes of diseases, by months.	2	13	881–1055
OCCUPATION:			
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, of males engaged in each occupation and class of occupations, by color, age, and birthplaces of mothers.	1	2	75–111
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, at the specified ages, of white males engaged in each occupation and class of occupations.	1	3	113–122
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, at the specified ages, of colored males engaged in each occupation and class of occupations.	1	4	123–132
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, of females engaged in each specified occupation, by color, age, and birthplaces of mothers.	1	5	133–143
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, at the specified ages, of white females engaged in each specified occupation.	1	6	145–148
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, at the specified ages, of colored females engaged in each specified occupation.	1	7	149–152
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of males engaged in each occupation and class of occupations.	1	8	153–189
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of white males engaged in each occupation and class of occupations.	1	9	191–207
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of colored males engaged in each occupation and class of occupations.	1	10	209–225
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of females engaged in each occupation.	1	11	227–237
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of white females engaged in each occupation.	1	12	239–243
Deaths in the United States, the registration area and its subdivisions and the nonregistration area, from each specified disease and class of diseases, of colored females engaged in each occupation.	1	13	245–249
Deaths from cancer in the United States, and in the registration and nonregistration areas, at each age, of males engaged in each occupation and class of occupations.	1	17	275–279
Deaths from cancer in the United States, and in the registration and nonregistration areas, at each age, of females engaged in each occupation.	1	18	281–283
DEATH RATES AND RATIOS:			
Population, births, deaths, and death rates at certain ages, and deaths from certain principal causes in the United States, each state and city, and each group and county in the registration states, by sex, color, general nativity, and parent nativity.	1	19	285–555
Number of deaths, and the death rate per 100,000 of population, from each cause, in the registration area and its subdivisions, by sex	1	20	559–564
Death rates from each cause, per 100,000 of population, in the registration states, in the aggregate and for the cities and the rural districts, by sex	1	21	565–573
Death rates from certain causes per 100,000 of population in each county in the registration states	1	22	575–581
Number of deaths at each age, per 1,000 deaths at known ages, in the United States, the registration area and its subdivisions, and in each registration state, by sex, color, general nativity, parent nativity, and birthplaces of mothers	1	23	583–601

TABLES—Continued.

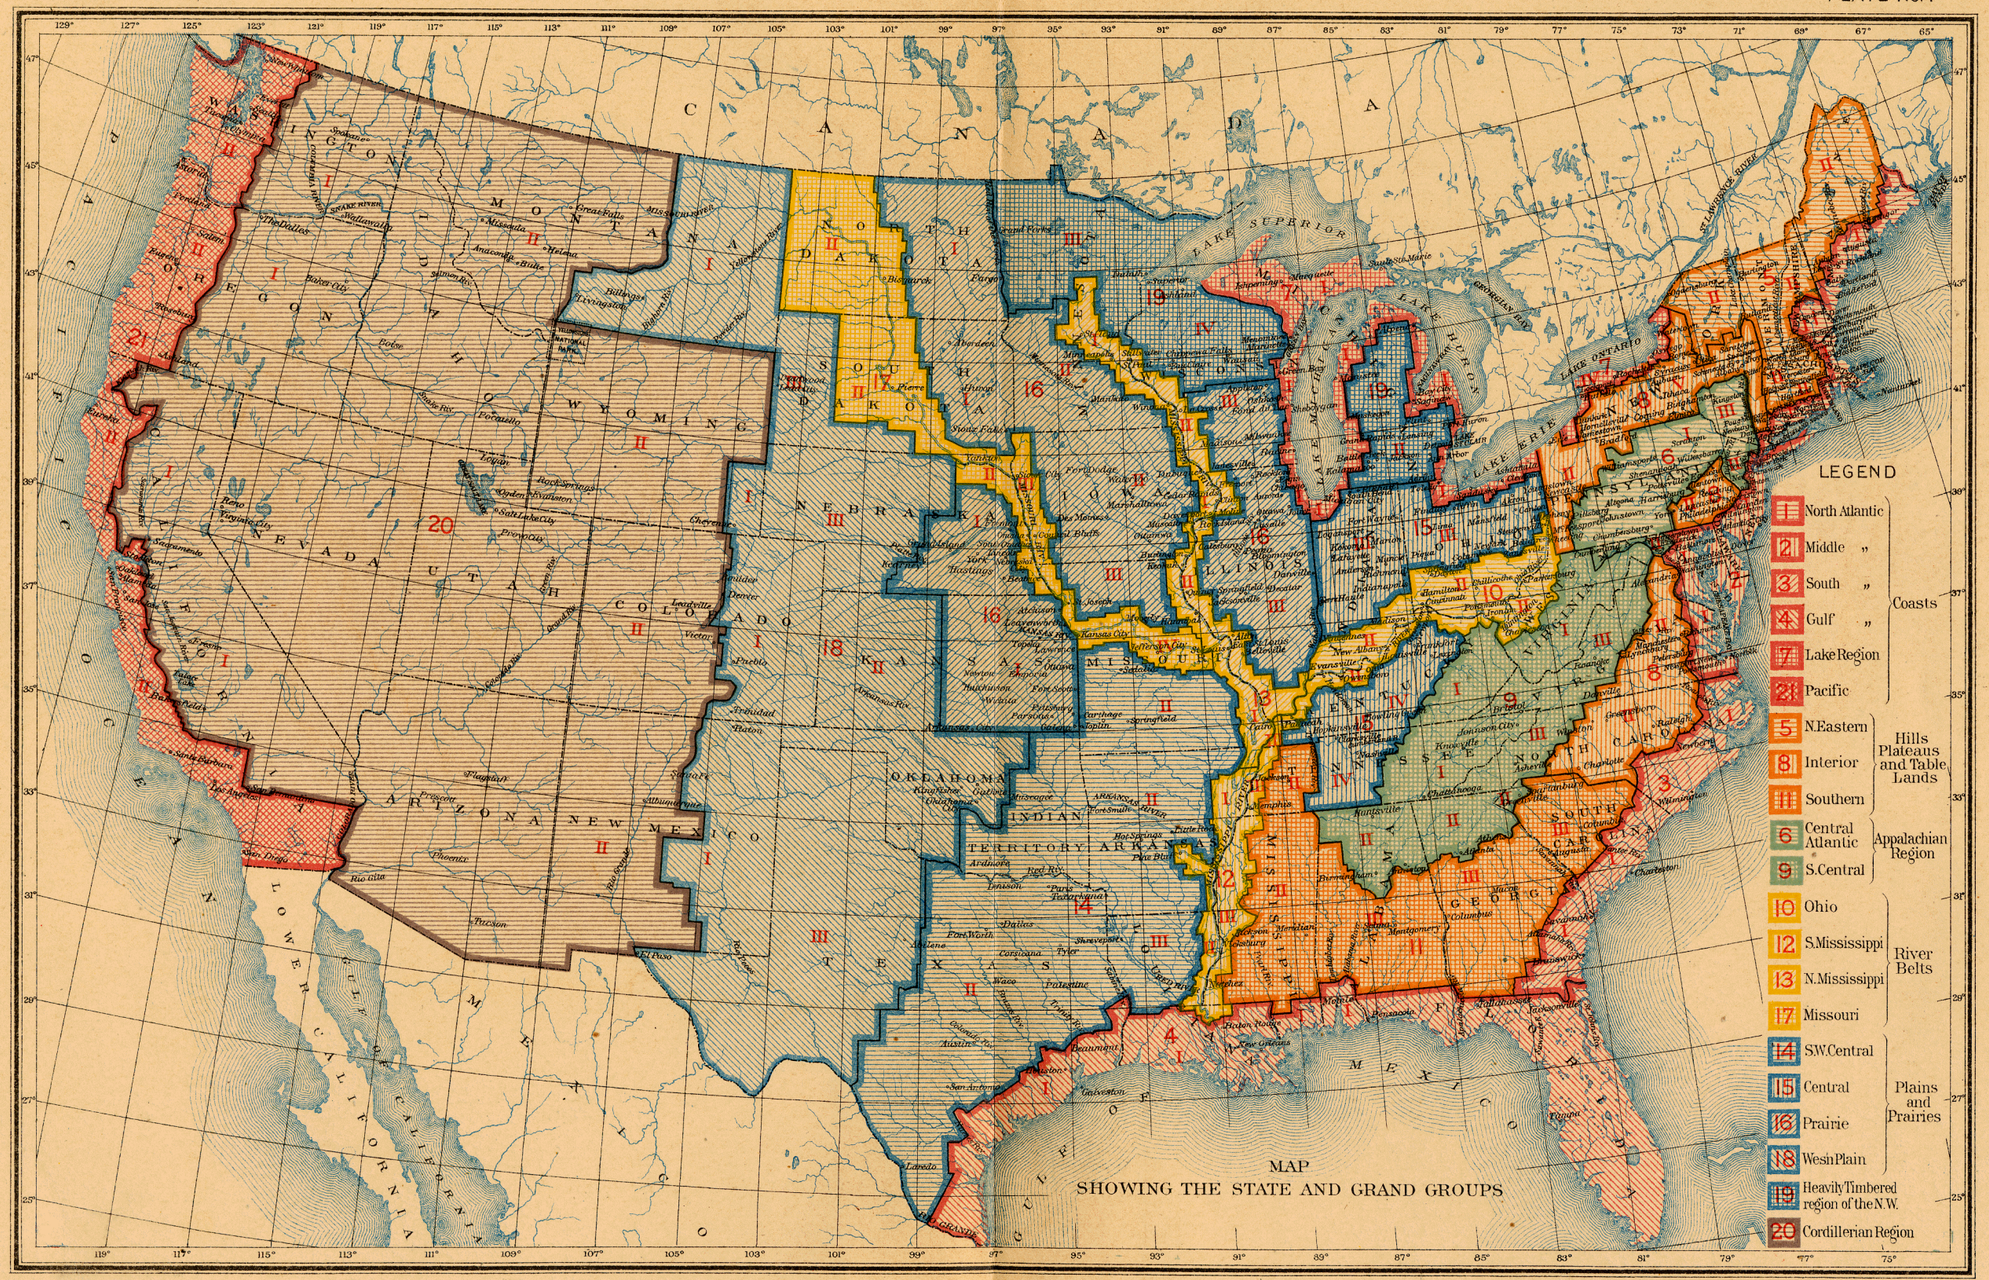
Twelfth Census of the United States
William R. Merriam, Director.

PLATE No. 1



MAP
SHOWING THE STATE AND GRAND GROUPS

JULIUS BIEN & CO. LITH. N.Y.

LETTER OF TRANSMITTAL.

DEPARTMENT OF THE INTERIOR,
CENSUS OFFICE,
WASHINGTON, D. C., *June 14, 1902.*

SIR:

I have the honor to transmit for publication Part I of the Report on Vital Statistics.

This volume constitutes Volume III of the Census Reports, and contains the general tables giving the statistics of deaths by conjugal condition and occupation in relation to causes of death, with the analysis of the results, and the ratio tables.

Part II, which constitutes Volume IV of the Census Reports, contains the general tables giving the statistics of deaths by cause, sex, and age, in relation to color, general nativity, parent nativity, birthplaces of mothers, and month of death in various combinations.

This division has been greatly handicapped in the preparation of the analytical matter by the necessity of waiting for population details involved in the computations. A comprehensive analysis of the mortality and vital statistics requires complete population data, with all the details of age, color, nativity, parent nativity, conjugal condition, occupation, etc., for the same areas as the deaths, and the limitation in time of publication imposed by the census act did not permit them to be supplied in time to carry the analysis as far as desired, or to make a complete investigation and test of the data.

The reduction in space allowed for the vital statistics from four to two volumes has compelled the omission of detail tables that were presented in the corresponding report for 1890, but this has been largely offset by recasting or changing certain tables so as to present the most important facts in every case, and the analysis has been made as complete as possible within the limited period allowed.

Notwithstanding these limitations, it is believed that the very early publication of this report will more than compensate for the decrease in volume of matter as compared with 1890.

In submitting this report I wish to express my high appreciation of the very valuable assistance rendered by Mr. Whitman Osgood, expert chief of division until his resignation, and Mr. Richard C. Lappin, the present expert chief of division. Their untiring efforts and those of an exceptionally efficient force of clerks have made it possible to complete the statistics in an unprecedented time. With such capable assistance the prosecution of this arduous work has been a pleasure.

Very respectfully,

WILLIAM A. KING,
Chief Statistician for Vital Statistics.

Hon. WILLIAM R. MERRIAM,
Director of the Census.

VITAL STATISTICS.

SECTION I.

INTRODUCTORY.

The statistics contained in this report relate to the census year ending May 31, 1900, the year preceding the date of the population enumeration, namely, June 1, 1900.

The data were obtained in part through the census enumerators and in part from the registration records of various states and cities. These two classes of returns do not possess the same value for statistical purposes, and their characteristics are explained below.

ENUMERATORS' RETURNS.

The enumerators made their return of deaths by inquiry of the families enumerated, and as this inquiry was not made until after the close of the year for which the deaths were to be reported it was inevitable that even with the most careful inquiry many deaths would be omitted. The failure of many enumerators to make any return of deaths upon the mortality schedule shows, also, that they frequently neglected to make the inquiry at all. This neglect of the enumerators to inquire concerning deaths, and the failure of families to report all deaths when the inquiry was made, have been experienced at all censuses where information was sought in this way, and in previous reports the deficiencies in the return of deaths by enumeration have always been pointed out and such cautionary statements made as were considered necessary to prevent improper use of the results obtained from this source. These precautions, however, were not always heeded, and misuse of the statistics based solely upon the returns of the enumerators has led to errors, which, if the data had been properly considered, would not have occurred.

Although the enumerators' returns of deaths are too incomplete to afford any reliable conclusions as to the death rates in relation to population, they nevertheless have a certain value in indicating the relative frequency of deaths from different causes, and, as they constitute the only means of securing information in many parts of the country, they must be included in any report which purports to cover the entire area of the United States as representing the best information on the subject that can be obtained under present conditions. The remedy for the defects referred to can be supplied only by the adoption of an accurate system of registration in all areas where the only data now obtainable is by enumeration.

The value of any statistics for comparative purposes is best shown by the reduction of the original tables to rates and ratios having a uniform numerical basis, and in all tables and statements of this character in the present report, rates, and ratios in relation to population are given only for registration areas in which the results are fairly comparable; for the nonregistration (enumeration) areas the insufficiency of the data is indicated by an asterisk (*). This character is also used for the same purpose in the registration areas when the numbers involved in the production of the rates are so small that the results have no significance. This characteristic mark is also explained by footnotes whenever it is used. Its purpose is to prevent improper use of the data, such as the comparison of death rates in nonregistration areas with those in registration areas, or of abnormal rates due only to the smallness of the factors, with other rates in which the numbers are sufficiently large to indicate approximate correctness in the figures. It gives warning that the data are not regarded as sufficient for the computation of reliable rates.

There is also another respect in which the returns of the enumerators, although incomplete, are of great value, in that they furnish the only check upon the accuracy of registration and the only means of completing imperfect records. This is explained under the head of "Registration Records" below.

REGISTRATION RECORDS.

The record of deaths obtained from registration sources supplied the only data presented in this report that are sufficiently complete for the preparation of reliable mortality statistics; nevertheless, it was far more

complicated and less satisfactory in certain particulars than that secured through the enumerators. This is due to the fact that while the enumerators' returns were incomplete in a quantitative sense, they were all made in the same form and under the same instructions as to the facts to be reported and the distinctions to be observed, whereas the defects in the registration records were qualitative, occasioned by the fact that they were recorded under local laws and ordinances that differed materially as to the items of information required to be reported and were entirely silent concerning certain important distinctions necessary in order to make the data comparable with the census statistics of population.

The defects referred to have been partly corrected at the suggestion of the Census Office, and further improvement is promised as the result of measures since taken; but as these records must continue to be the source of information from which the most valuable statistics can be compiled it is desirable to explain at some length the difficulties experienced in dealing with them, the results accomplished, and the defects still existing in order that registration officials and others interested may have all the information accessible to aid them in perfecting their system and records.

The census utilization of registration records as a source of information commenced with the Tenth Census (1880), when copies of the records of two states, Massachusetts and New Jersey, were secured and used as the basis of the statistics for those states.

At the Eleventh Census (1890) the registration area was extended to include 7 other states in addition to Massachusetts and New Jersey, namely: Connecticut, Rhode Island, New Hampshire, Vermont, New York, Delaware, and the District of Columbia, with the cities therein and 83 cities in other states.

In preparing for the present statistics it was decided that copies should be obtained of all available registration records, and that they should be used as the basis of the statistics wherever they were sufficiently complete and satisfactory, the census act vesting in the Director the discretion to determine when the records were sufficiently complete, in point of numbers, and satisfactory as to the details furnished.

The preliminary work was, therefore, to ascertain the status of registration and the data available therefrom in every section of the country. To this end correspondence was initiated with the officials of every state, and of every city having a population of 5,000 or more, and information secured as to the laws and ordinances governing registration, the forms and methods employed, the details required concerning each death, and the number of deaths registered in past years, with expressions of opinion as to the local observance of the laws as indicated by the probable percentage of deaths reported, and the estimated death rate in each locality.

Aside from the question of the completeness of the record in accounting for all deaths that occurred, the principal defects were found to be:

First. The omission from the recorded data of certain details required for the census compilations. The details most frequently omitted were: Conjugal condition, nativity and parent nativity, and occupation.

Second. The fact that in many places the certificates filed were copied in books which did not provide for or contain all of the information afforded by the original certificate, which, after being copied, was either destroyed or inaccessible. Where this condition existed it frequently happened that the statement of data available—made from the form of certificate used—would be entirely satisfactory, while the transcript actually furnished would be made from the abbreviated book record and be comparatively valueless.

A complete view of the subject of registration was thus obtained, and although it was too late to effect any improvement in the data available for the present statistics, the information was immediately utilized for the benefit of future statistics by preparing a circular reciting the conditions found and giving the complete details desired for statistical purposes, with an explanation of the use, application, and necessity for each, together with a form for a certificate which provided for all of them.

This circular was sent to all registration officials and the request made that they modify the form of certificate in use so as to include such of the specified details as were lacking. It was urged that this be done and the amended forms put into use by January 1, 1900.

The results accomplished by this step were very encouraging, and showed that the registration officials generally appreciated the desirability for uniformity of data and the advantage in securing, through the census compilations, thoroughly comparable statistics for all areas. In accordance with the suggestions, the forms of certificates were amended so as to supply the necessary information in the states and cities specified below.

Of the states which have general registration laws under which the forms in use are prescribed or furnished by the state authorities, the suggested form of certificate was adopted in full in California, Kansas, Minnesota, and North Dakota, and the forms in use were amended so as to include the necessary details in Connecticut, District of Columbia, Maine, Michigan, New Hampshire, New York, and Rhode Island. It was also approved, but for various reasons not adopted in Delaware, Indiana,[1] Maryland, Massachusetts, New Jersey, Vermont, and Wisconsin.

Of the states in which the authority of the state registration or board of health officials was more limited, the suggested form was adopted in full in Arkansas, Colorado,[1] North Carolina, Ohio, South Carolina, and

[1] In Colorado, Indiana, and Illinois new laws have since been passed providing for general registration, and improved forms have been adopted.

Washington. Modifications were made in the forms in use in Pennsylvania, and the suggestions were approved, without further action, in Iowa, Louisiana, and Utah.

Of the 703 cities of 5,000 or more population with which correspondence on this point was conducted, about one-half were in states in which the forms used were either furnished or prescribed by the state authorities. Of the remainder the following either adopted the form suggested in full, or so modified their own form as to supply all the details, in connection with others, in—

Akron, Ohio.
Alameda, Cal.
Allegheny, Pa.
Allentown, Pa.
Alliance, Ohio.
Altoona, Pa.
Ashtabula, Ohio.
Atlanta, Ga.

Winston, N. C.

As stated above, the correspondence requested a statement of the number of deaths registered in each year, and an examination of the figures supplied showed that in many cases there were actually fewer deaths recorded in the later years of the decade 1890–1900 than were recorded in 1890, notwithstanding large increases in population. Although some decrease in the general death rate was anticipated, the falling off in the number of deaths was so remarkable as to raise the question whether it was not due in part to a decline in the efficiency of registration. This doubt, together with the knowledge that registration was undoubtedly (and admittedly) defective in some states and cities, led to the decision to have the enumerators make inquiry and return deaths in all areas where any doubt of the sufficiency of registration existed, in order to use the information as a check upon the accuracy of registration, and to supplement and complete the registration returns if found defective in numbers or in details.

The registration record was accepted as sufficiently complete and satisfactory in Massachusetts, Connecticut, Rhode Island, and New Hampshire; certain counties and cities in the state of New York, namely, counties: Broome, Columbia, Dutchess, Franklin, Greene, Madison, Nassau, Onondaga, Orange, Orleans, Otsego, Putnam, Rensselaer, Rockland, Saratoga, Schenectady, Suffolk, Sullivan, Ulster, Washington, and Westchester; cities: Albany, Cohoes, New York (Greater), Ogdensburg, Utica, Watertown, and Watervliet, and certain counties and cities in the state of New Jersey, namely, counties: Atlantic, Camden, Hudson, Mercer, Ocean, and Warren; cities: Burlington, Bridgeton, Newark, Orange, New Brunswick, Perth Amboy, Passaic, Paterson, Salem, Elizabeth, Plainfield, and Rahway.

In these areas the mortality schedule was withdrawn from the enumerators. In all others they were directed to report deaths, and their returns were carded and compared with the registration records. The result of the comparisons, which were made as thorough as possible, indicated that registration was defective in many places where it was supposed to be perfect, a considerable percentage of the deaths reported by the enumerators not being found in the registration record. As the enumerators did not report more than 50 or 60 per cent of the deaths, the presumption is strong that the omissions in the registration record were even greater than indicated.

The tabulated result of the comparison of the two sets of returns, showing the number of deaths reported from each source, the number added to the registration record from the enumerators' returns, the percentage of

[1] State laws have since been enacted providing for more complete forms.

the enumerators' returns thus added, and the per cent which the original registration record formed of the total thus found, is given below. The number of deaths stated as obtained from registration records includes stillbirths, cases outside the census year, nonresidents, etc., that were subsequently excluded before the statistics were compiled; hence the totals do not agree in all cases with those given in the general tables.

COMPARISON OF ENUMERATORS' AND REGISTRATION RETURNS. ADDITIONS TO THE REGISTRATION RECORD.

COUNTIES AND CITIES (CITIES INDENTED).	Enumerators' returns. (E. R.)	Registration records. (R. R.)[1]	Added from E. R.	Total.[2]	PERCENTAGE— Of E. R. added.	PERCENTAGE— R. R. forms of total.

[1] Exclusive of duplicates, cases outside the census year, etc.

[2] Inclusive of stillborn, nonresidents, etc., eliminated before tabulation.

In considering the relation and use of these two sets of returns it should be remembered that both were necessarily regarded as possessing the same degree of authenticity as to time and place. In the absence of registration records the enumerators' returns were, of necessity, regarded as the closest approximation to correctness, and where the mortality schedule was withdrawn from the enumerators the registration records were, perforce, accepted as correct. When cases appeared upon one but not on the other they could be treated only as omissions.

It should also be remembered that the canvass of the enumerators constituted an entirely independent but collateral inquiry covering the same facts, the same time, and the same areas, and therefore furnished the only possible, if not entirely adequate, means of gauging the accuracy of registration.

It is equally probable that similar deficiencies exist, although perhaps to a less extent, in the areas where the schedules were withdrawn from the enumerators. This probability is sufficiently strong to indicate that in future censuses the enumeration of deaths should cover the entire country, and that every means should be used to determine the accuracy or the deficiency of local registration. This is the first step toward improvement.

It being the fixed purpose of the Census Office to assist local officials in every feasible way to raise the standard of registration, the information gained by comparison of the returns was placed at their command by the offer to furnish, without cost, a complete record of the cases added from the enumerators' returns for investigation as to the fact and cause of the apparent omissions. If this be thoroughly made, they will thereby be enabled to locate the sources of omission, to establish the responsibility for the same, and to take precautions to prevent such occurrences in the future.

The existence of further defects in registration records is shown by the following statement, which specifies the number of cases in which certain details, omitted or reported as "unknown" in these records, were supplied from the return made by the enumerators of the same cases. The numbers are given only where the registration forms call for and the returns purport to supply the details specified. When the registration laws or forms did not require any of these details to be stated, the fact is indicated by an "x" in the corresponding columns.

The fact that so many items of important information were omitted in the return of cases where the form of certificate employed called specifically for their statement indicates a lamentable carelessness on the part of local registrars in accepting incomplete certificates offered for record. Each of these was presented by the physician or undertaker in the case, or by some other person equally responsible for and capable of ascertaining all of the facts. The enumerators had no difficulty in obtaining the information. Registrars should carefully examine each certificate presented and see that all of the information called for is supplied before accepting it.

Another grave defect which impairs the value of the statistics is found in the large number of cases in which the cause of death is given as "heart failure," "exhaustion," "debility," "collapse," "asthenia," "natural causes," "prostration," etc. Such returns are practically worthless.

In registration states, where the returns are forwarded to a central office, they should be critically examined to see that they are correct and complete, and if not, the registrars should be called upon to make them so. It is evident, however, that in many states there is little or no effort made at supervision in this direction.[1] An examination of the figures given above will show the extent to which the omissions mentioned exist in each state and city.

The results of the comparisons have been given thus fully because they show both the general and local

[1] In some of the registration states, where the records are kept and the transcripts obtained from a central office, deaths are only returned to the central office annually and sometimes several months are allowed after the close of the year for which reports are required for the local registrars to make their returns. This makes it difficult, if not impracticable, for the state officials to obtain corrections of imperfect returns. When monthly returns are required this difficulty is obviated, and when critical examination of the cases is made, with prompt measures to complete missing or unsatisfactory data, the results are greatly improved.

necessity for considerable improvement in administrative methods before the records can be utilized to their fullest extent for statistical purposes.

Referring again to the circular previously mentioned as issued by the Census Office, which was designed to promote uniformity in the statistical data recorded under local laws, a further effort in this direction has since been made, in conjunction with the committee on demography of the American Public Health Association, and a new circular prepared, including a paper by that committee upon the "Essential requirements of a law for the registration of deaths and the collection of mortality statistics," and containing, also, a standard form of certificate for reporting deaths, which has been approved by the committee, the Census Office, the Department of Labor, and other departments of the Government using or interested in mortality statistics, and by the principal registration authorities generally.

The principal purpose of this movement is to promote the extension of effective registration in new areas and upon uniform lines. The "Standard certificate" referred to differs considerably from the form recommended in the first circular issued (which was designed principally to secure more complete data for statistical purposes) in that it provides as well for a comprehensive statement of all the facts regarded as desirable to have established for legal and administrative purposes. It is not urged that officials who adopted the form of certificate first recommended by the Census Office shall now make another change, but the superiority of the "Standard certificate" for general purposes makes it desirable that it shall be substituted when such a change is practicable and convenient.

CLASSIFICATION OF THE RETURNS.

The deficiencies in the registration data noted above made it apparent that the returns for many of the areas, even when supplemented by those of the enumerators, would not afford reliable statistics; and, therefore, in order to establish a certain standard of accuracy, the rule was adopted that only those areas should be classed as "registration" where the deaths obtained from registration sources constituted 90, or more, per cent of the total (registration plus additions from enumerators), and the additions from the enumerators' returns did not exceed 20 per cent of the number reported by them.[1]

The standard so fixed was necessarily an arbitrary one, but it had a mathematical basis that could be applied equally in all cases. The alternative proposition of fixing a minimum death rate and excluding as unsatisfactory or unreasonable all areas in which the rate was less than the minimum would have been far more arbitrary.

In order to conform to the classification of "urban" population previously established by the population division, a number of cities of less than 8,000 population, from which registration records were obtained, were not classed as "registration" cities. In the registration states such cities were classed as rural; in the other states they were classed as nonregistration.

The term "cities" employed in this report is used in its broad sense, and includes all incorporated places, such as cities, towns, villages, and boroughs, as they are variously designated in the different states.

CLASSIFICATION OF CAUSES OF DEATH.

The classification of causes of death used in this report is the same as that in the reports of the Tenth (1880) and Eleventh (1890) censuses, but the list of causes has been considerably increased and detailed information is given separately for a number of causes which were previously included among the "others" of the classes in which they occurred.

At the time the work was commenced strong representations were made to induce the adoption of what is now known as the "International" or "Bertillon" classification, which had been adopted by many of the registration states and cities, but as it was then in a somewhat indefinite form, being subject to revision by a commission appointed to meet at Paris in 1900, and as the exigencies of the work required that the classification should be settled before the results of such revision could become known, it was decided to retain the previous classification in the present report. Another point influencing this decision was the desirability of making the statistics directly comparable with those of 1890 and with current reports of the Registrar-General of England.

Under the recent act of Congress establishing the Census Office upon a permanent basis, periodical reports relating to vital statistics in registration areas will be made, and for such future reports the international classification has been adopted. The first of the reports under the new classification will follow the present report so closely as to practically amount to a compilation of the statistics both ways.

The amount of space allowed for the publication of the vital statistics was limited to two volumes, or approximately, 2,000 pages, which is about one-half the amount covered by the corresponding report in 1890. This has compelled a reduction in the number of areas for which the most extensive tables were given, but the reduction has been confined, as far as possible, to the statement of results for the nonregistration areas. Other tables have been condensed or recast so as to present the most important details in all their principal relations and for all the principal areas.

[1] In case of very defective enumeration more than 20 per cent of the deaths enumerated were sometimes added to the registration record without reducing the percentage of registration in the total below 90. (See Shenandoah, Pa., page xxii.)

FUTURE REPORTS.

Under the act of March 6, 1902, establishing the Census Office upon a permanent basis, it is proposed to issue annual reports upon mortality statistics of registration areas. The Census Office will thus become the central bureau for the compilation of such statistics. It is also proposed to compile and publish these reports in less time than is now generally required for the preparation of such local statistics as are published.

The greater value of annual reports, containing uniform tables for all areas, as compared with the decennial reports heretofore published, hardly needs any comment, but such reports can not be compiled promptly, nor the statistics made complete and satisfactory, unless the records are available when required and are complete in every detail when available. These conditions rest with the local authorities. The reports will be made for calendar years and the records in registration states should be available in January of each year. This may be done by having the local registrars make their returns promptly. The completeness of the data can only be secured through the adoption of a proper form, followed by a vigilant scrutiny by local registrars of each certificate offered for record, and supplemented by similar vigilance and corrective measures by the state officials.

SECTION II.

POPULATION.

Accurate data concerning population constitute the essential basis of correct vital statistics. It is not only necessary that the gross population be correctly returned, but the details of age, sex, color, nativity, parent nativity, conjugal condition, and occupation must be stated with equal accuracy. These data are secured only through the census enumerations. Equally complete data concerning deaths and births are also essential to a proper study of these phenomena, but these can not be secured by enumeration, and depend, for their sufficiency, upon the efficiency of registration in the various states and cities.

Of the two factors in computing birth and death rates in various relations, the population is numerically the more important, and hence accuracy in population details is more essential to the production of correct rates. A small percentage of error in the population figures has a much greater effect upon the results than an equal percentage of error in the other data.

In all censuses certain defects in the age statistics of the population are apparent and of a uniform nature. Other defects are not so apparent, and can only be inferred from the inconsistency of certain classes of data with others, and with results obtained through registration of vital data. Some of the peculiarities which appear in the succeeding analysis of the data showing the relation of age, color, nativity, etc., to deaths are no doubt due to defects in the population statistics, the extent of which can not be determined. These are further referred to in the sections treating of births, and of deaths in various relations.

The population under 1 year of age is never accurately stated, owing, in part, to the failure of persons to report ages correctly—a defect common to all censuses in all countries. There are also other errors in the age statistics of the population above 1 year of age, as shown by the deficiency in the number in the other early years of life and the concentration upon the ages ending with "5" or "0" after the age of childhood is passed. It is also probable that such omissions as occur include a larger proportion of infants and children than of older persons.

The generally accepted theory concerning census enumerations is that duplications about balance omissions. If this were true, and both related to similar persons, they would not affect the general result, but it is probable that both omissions and duplications are much greater than they are supposed to be, and careful analysis of the available data indicates that the omissions largely exceed the duplications. And it is still more probable, that duplications generally relate to very different classes of persons from those omitted.

The protracted period allowed for the enumeration, and the shifting character of the population—which is particularly in evidence during the time of the enumeration—contribute greatly to the chances for such defects, and they undoubtedly affect different classes in different degrees. Omissions that are occasioned by the neglect of enumerators to canvass portions of their territory are generally due to physical reasons, and the omitted portions are most likely to be those containing the largest proportions of infants and children, such as alleys, tenements, and tracts inhabited by the poorest people,[1] while duplications will as certainly be largely limited to adult persons—such as those enumerated both at their homes and also in other places when absent from home, or those enumerated at their homes and also at their places of business in other districts. The result is a further derangement of the age statistics by diminishing the number of children and increasing the number of adults.

In the classification of the population by color, general nativity, and parent nativity, the "unknown" are mostly classed as native. The population classed as of "native" parentage really includes all those having both parents native, both parents unknown, or one parent unknown with the other native, while that classed as of "foreign" parentage includes those having both parents foreign, or one parent foreign with the other native or unknown. The actual distribution of the

[1] At the meeting of the International Institute of Statistics at St. Petersburg, in September, 1897, Dr. J. Bertillon gave the following statistics as to the births per 1,000 women, aged 15 to 50, per annum, in different quarters of Vienna, Berlin, London, and Paris:

CLASSIFICATION.	Average.	Vienna.	Berlin.	London.	Paris.
Very poor quarters	153	200	157	147	108
Poor quarters	132	164	129	140	95
Comfortable quarters	112	155	114	107	72
Very comfortable quarters	105	153	96	107	65
Rich quarters	78	107	63	87	53
Very rich quarters	51	71	47	63	34

population in 1900 by parent nativity is shown in the following table:

DISTRIBUTION OF THE POPULATION BY PARENT NATIVITY.

PARENT NATIVITY.	Total.	White.	Colored.
Both parents native[1]	49,147,929	40,338,004	8,809,925
foreign	21,074,679	20,839,260	235,419
unknown	648,384	505,561	142,823
Father native, mother foreign	1,698,759	1,686,965	11,794
unknown	108,442	89,137	19,305
Mother native, father foreign	3,425,501	3,402,237	23,264
unknown	199,693	129,624	70,069

[1] Includes 9,528 foreign born persons of native parentage, 8,909 of whom are white and 619 colored.

In comparing the death rates of different localities or the mortality from different diseases, the distribution of the population by color or race, and nativity and parent nativity, in relation to age must be considered, and the following tables, showing the number and proportions of the different classes of population in the registration area and its subdivisions on June 1, 1900, and the percentages of each class in certain age groups, are given for reference. The first of these shows the total population, by sex, color, general nativity, and parent nativity, of the areas for which the deaths were so reported that they could be similarly classified.

[1] Population excluded for areas not reporting deaths by nativity and parent nativity.

The population of the different classes in the several areas given in the preceding table represents only the reporting population; that is, the population of the states and cities for which similar details were reported for the deaths, and constitutes the population used in computing the rates and ratios for those areas and classes that are given in this report. In certain cities, containing an aggregate population of 189,838, neither nativity nor parent nativity of decedents was reported, and in one state (Vermont) and in certain cities in other states, with a total population of 5,267,344, the parent nativity of decedents was not stated.

For comparing the relative proportions of the different classes of population in the several areas the numbers are reduced to an equal basis of 1,000 population in each area in the following table:

NUMBER IN EACH CLASS OF POPULATION IN THE REGISTRATION AREAS, PER 1,000 OF TOTAL POPULATION.

CLASSES.	REGISTRATION RECORD.

SECTION III.

BIRTHS.

The data relating to births are the most incomplete and unsatisfactory of any treated in this report. Were it not considered desirable to give such results as bear upon the question for the information of students of the statistics, the subject might be dismissed with the statement that they are entirely inadequate to determine, directly, the general birth rate of the country, or, what is of equal practical importance, the relative birth rate of different classes of population.

Births were not returned by the enumerators, and it is not probable that a complete return could be secured in that way even if a special schedule were provided and the inquiry made in the most careful and thorough manner, and the registration record of births is almost equally defective. A number of the states and cities have laws requiring the registration of births, but it is doubtful if there is a single place in which births are registered as fully as deaths.

In the census reports of 1880 and 1890 the number of births in the census years was estimated by adding to the number of living children returned as under 1 year of age on June 1 of each census year the number who were born during the year but died before the date of the enumeration. If both of these factors could be correctly stated their addition would very closely approximate the true number of births, as the number of children under 1 year of age who are of foreign birth is insignificant. Unfortunately, both factors are erroneous to a certain indeterminate extent. In this case the effect of the deficiency in the return of living children under 1 year of age is much greater than a corresponding, or even a much larger, deficiency in the statement of the "born and died," derived from the return of deaths, as the population factor represents over 94 per cent of the births so calculated.

The method of estimating the number of births in the census year, by addition of the population under 1 year of age and the "born and died" has been followed, in part, for comparative purposes, at the present census, and the results are given in Table 19 of this volume. These results, however, do not afford any data for determining the relative birth rate, or fecundity, of the native and foreign born classes of the population, as the number of parents in these classes can not be stated in the same terms. The population classed as of "native" parentage includes all those having both parents native, both parents unknown, or one parent native with the other unknown, and that classed as of "foreign" parentage includes all those having both parents foreign, or one parent foreign with the other native or unknown. (See table showing the actual distribution of the population in 1900 by parentage, Section II, page xli. This table, however, shows only the descendants and not the parents.)

The only information concerning the birth rate of native and foreign parents that can be derived from the population figures consists in the increase, between 1890 and 1900, of the number classed (as described above) as of native or foreign parentage. This represents the "natural increase" or the excess of births over deaths in each class, and the result of the enumeration, in this direction, can be shown for the country as a whole and for each state and territory, by comparing the tables giving the "state of birth" of the native population in 1890 and 1900.

EXCESS OF BIRTHS OVER DEATHS, 1890–1900.

The total population within the boundaries of the United States as returned in 1890 was 62,947,714, and the natural increase between 1890 and 1900, due to excess of births over deaths, was 12,315,361.[1] The average annual rate of excess of births was 17.7 per 1,000 of mean population.

In the section relating to general death rates it is estimated that the death rate of the country for the census year 1900 was, approximately, 16.3 per 1,000 of population. Assuming that it was about 18 per 1,000 in 1890, as estimated in the Eleventh Census report, and taking the mean of these (17.4) as representing for this purpose the average annual death rate for the decade, there must necessarily have been an average annual birth rate of 35.1 per 1,000 of mean population to produce the increase in population actually enumerated.

Accepting the population figures showing the increase in native population by state of birth as correct, the only uncertain factor in estimating the birth rate for the United States is the assumed annual death rate, 17.4. This can be accepted as a sufficiently accurate

[1] Including Indian Territory, the population of which in 1890 is estimated.

approximation to indicate that the birth rate will not vary from the stated number (35.1) more than 2 per 1,000 in either direction, or from 33.1 to 37.1. This, however, applies only to the country as a whole.

The estimated annual excess of births over deaths in the United States per 1,000 of population, in comparison with that in certain other countries, is shown in the following table:

EXCESS OF BIRTH RATE OVER DEATH RATE.

COUNTRIES.	TEN YEARS, 1890-1899.		EXCESS OF BIRTHS OVER DEATHS.	
	Birth rate.	Death rate.	Annually, 1890-1899.	1899.

[1] June 1, 1890, to May 31, 1900.
* Data insufficient to afford rates.

The figures given for the foreign countries specified are based upon estimated populations for inter-censal and post-censal years, as calculated by their registration officials and published in the report of the Registrar-General of England for 1899. They may, however, be regarded as sufficiently accurate for comparative purposes. According to these figures the birth rate in the United States was greater than in any of the foreign countries except Hungary (40.5), Austria (37.2), Germany (36.2), and Italy (35.5), and the excess of the birth rate was considerably greater than in any of them.

The gross birth rate given above is a composite of the different birth rates of the native and foreign whites and the colored, and these vary so materially that it is desirable to separate the data to consider the relative birth rates of these classes. The vital rates of the two classes last mentioned are greater than those of the native whites and their geographical distribution is marked and well defined by state lines. In the succeeding tables the grouping of the states has been made with the view of preserving the distinctions that affect both the general birth and death rates as far as possible.

The following table shows the native population in 1890, by classes, and the per cent in each class, by states and territories:

NATIVE POPULATION AND PER CENT IN EACH CLASS.

STATES AND TERRITORIES.	NUMBER.			PER CENT IN EACH CLASS.		
	Native white.		Native colored.	Native white.		Native colored.
	Native parents.	Foreign parents.		Native parents.	Foreign parents.

[1] Inclusive of Indian Territory, not stated in detail.

This table shows very clearly the difference in the location of foreign and colored parents. In the Southern division the colored represented 35 per cent of the total, while the foreign were represented by only 4.3 per cent. In this division the colored were practically all negroes. In the Western division the 5.7 per cent of colored were practically all Indians.

In the Northeastern, Central and Northern, and Western divisions there was but little difference in the proportions of population of native white and foreign white parents. In a total population of 10,703,923 in the Northeastern states, 62 per cent of the native population were of native white parents, and 36.5 per cent of foreign white parents. In the Central and Northern division, which included 29,113,463 persons, or 46.3 per cent of the total population of the country, 67.8 per cent of the native population were of native white parents, and 29.5 per cent of foreign white parents. In the Western division 63.9 per cent were of native white parents and 30.4 per cent of foreign white parents.

The following table shows the increase in the number of native population of each class between 1890 and 1900, by the state of birth, and the average annual rate of excess of births over deaths per 1,000 of population in 1890:

INCREASE IN NATIVE POPULATION, 1890–1900, AND EXCESS OF BIRTHS PER 1,000 OF POPULATION, BY CLASSES.

[1] Decrease.

In this table the average annual increase by excess of births in the decade has been computed in the same way that increases are calculated in the population statistics; that is, as an increase over 1890, or as a product of the population of 1890. In a subsequent table the rate of increase per 1,000 of the mean population will be stated.

From these figures it appears that the average annual rate of increase by excess of births in the class born of native white parents was 19.5 per 1,000, while in those of foreign white parents it was 36.5 per 1,000. The rate for the colored was less than for those of native white parents (17.8 per 1,000).

Considered by groups of states the figures for these classes present some very remarkable peculiarities. In the Northeastern division the rate of annual increase of children of native white parents was but 3.8 per 1,000, while in those of foreign white parents it was more than ten times as great (39.6). Excluding New York from this group it appears that in the New England states

the annual death rate of the native whites of native parentage exceeded the birth rate by 1.5 per 1,000, while among those of foreign white parents the birth rate exceeded the death rate by 44.5 per 1,000. On the face these figures indicate that, notwithstanding the higher mortality of children of foreign white parents, the excess of births over deaths in this class was 4 per 1,000 more than the highest birth rate in the principal foreign countries (40.5 in Hungary. See page l.) A much higher birth rate for foreign parents in this country than in the countries from whence they came is naturally to be expected, since our foreign population contains a much larger proportion of adult persons of productive ages, but unfortunately the census figures do not afford data for determining the number of parents by which these results might be further analyzed. Such comparisons as can be made bear only indirectly upon the question.

The peculiar results noted seem to be confined to the New England states. In the remainder of the country the excess of births was 21.1 for those of native white parents, 35.7 for those of foreign white parents, and 17.9 for the colored. The nearest approach to equality in the rate of excess of births of native and foreign white parents was in the Southern division, where the proportion of foreign parents was least (native white parents, 24.1; foreign parents, 27.4). Examination of the rates in detail for the different states, however, shows great and apparently inconsistent variations in the relative rates of native and foreign parents, in contiguous states of generally similar populations.

As stated previously, the increases and rates given in the preceding table are based upon the population in 1890, and are treated as the product of that population. They are therefore somewhat too high, as the productive population in 1890 also increased to some extent by foreign immigration and by immigration from other states, but the difference only slightly affects the rates. In the New England states, taken together, the total population of 4,700,749 in 1890 was increased during the decade by 302,805 immigrants from foreign countries, and 139,686 immigrants from other states. Considering the total increase by immigration (442,491) as consisting entirely of productive population it amounts to less than 10 per cent of the population in 1890.

In the following table the mean population of the states and territories for the decade is given, with the total increase in native population by excess of births over deaths, and the gross annual rate of increase due to excess of births per 1,000 of the total mean population:

MEAN POPULATION AND INCREASE BY EXCESS OF BIRTHS.

STATES AND TERRITORIES.	Mean population 1890–1900.	Increase in native population by excess of births in each state.	Average annual increase by excess of births per 1,000 of mean population.
United States[1]	69,471,145	12,315,361	17.7

[1] Inclusive of Indian Territory, not stated in detail. [2] Decrease.

This table differs from those preceding it in that it gives the aggregate increase without distinction of color or parent nativity, and that the annual increase is computed upon the mean population.

Referring again to the previous table, showing the average annual excess of births by parentage, in which the rate of increase by excess of births in the population classed as of foreign white parents was stated as 36.5 per 1,000 of the population in 1890, and to the impossibility of determining the mean number of parents contributing the births during the decade, some further indication concerning the particular foreign elements instrumental in producing this increase may be found by comparing the increase between 1890 and 1900 in native white population whose mothers were of foreign birth with the total mean population of corresponding foreign nativity, which, however, can only be done for the United States as a whole.

The following table shows the total foreign population in 1890 and 1900 reported as born in the specified countries, and the mean population for the decade:

FOREIGN POPULATION BY COUNTRY OF BIRTH.

COUNTRIES.	1890	1900	Mean.
Ireland	1,871,509	1,618,567	1,745,038
Germany	2,784,894	2,666,990	2,725,942
England and Wales	1,009,171	935,760	972,465
Canada	980,938	1,181,255	1,081,096
Scandinavia	933,249	1,064,309	998,779
Scotland	242,231	233,977	238,104
Italy	182,580	484,207	333,394
France	113,174	104,341	108,758
Hungary	62,435	145,802	104,119
Bohemia	118,106	156,991	137,549
Russia	182,644	424,096	303,370

The figures given in the preceding table represent the total foreign population born in the specified countries and consequently include a small number of colored which can not be excluded. This number, however, is so very small that the stated populations may be assumed to be practically all white, for comparison with the increase in native white population as given below.

The following table shows the native white population in 1890 and 1900 having mothers born in the specified countries and the increase during the decade:

NATIVE WHITE POPULATION, BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	1890[1]	1900	Increase.
Ireland	2,631,750	2,826,625	194,875
Germany	3,535,852	4,159,499	623,647
England and Wales	827,091	1,133,214	306,123
Canada	570,584	1,012,689	442,105
Scandinavia	603,856	1,053,000	449,144
Scotland	192,369	307,388	115,019
Italy	61,173	224,271	163,098
France	91,203	129,652	38,449
Hungary	14,560	75,353	60,793
Bohemia	102,169	190,941	88,772
Russia	77,741	263,264	185,523

[1]Including 681,072 population of mixed foreign parents, distributed proportionally.

The following table shows the average annual rate of increase by excess of births, resulting from a division of the increase in the number of native white population having mothers born in specified countries by the mean population of corresponding nativity:

ANNUAL INCREASE BY EXCESS OF BIRTHS.

BIRTHPLACES OF MOTHERS.	Average annual excess of births per 1,000 of mean population.
Ireland	11.2
Germany	22.9
England and Wales	31.5
Canada	40.9
Scandinavia	45.0
Scotland	48.3
Italy	48.9
France	35.4
Hungary	58.4
Bohemia	64.5
Russia	61.2

The preceding table is faulty in several particulars owing to lack of precisely comparable data, and can only be considered as indicating, in a general way, the relative effect of certain foreign elements upon the birth rate. In this way it indicates that the rate of the combined increase of the Irish and German elements, which constitute more than 50 per cent of the total for the specified countries, is represented by an annual excess of births of 18.3 per 1,000, which is but little more than that of the native whites of native mothers (16). In a subsequent table the results given above will be compared with the birth rate and the excess of births for the census year.

BIRTHS IN THE CENSUS YEAR 1900.

The population reported as under 1 year of age, June 1, 1900, was 1,912,863, and the number of those who were born during the census year, but who died before the date of the enumeration, was 136,269. If these figures were correct, the number of births would be 2,049,132, and the birth rate per 1,000 of mean population would be 27.2. Of the stated number of births, the population under 1 year of age represents 93.3 per cent and the "born and died" represents 6.7 per cent. Owing to the incorrect return of population at this age, previously referred to, the number of births so computed is much too small. The deficiency arising from the incomplete return of deaths is comparatively insignificant.

Comparing the birth rate obtained in this way with the average annual rate previously stated as necessary to account for the increase in native population, namely, 35.1 per 1,000, the deficiency in the rate for the census year appears to be 7.9 per 1,000 of population, or 28.5 per cent.

If it be assumed that the general birth rate for the census year was about the same as the average annual rate found necessary to produce the increase in native

population enumerated (35.1 per 1,000 of mean population), the number of births in the year would be 2,644,512, an increase of 595,380, or 29 per cent.

To reconcile the discrepancy would require that there should have been a much higher birth rate or a much lower death rate, or a conjunction of the two during the years 1891 to 1899, or a birth rate for the census year very far below the normal. None of these conditions appears to have existed. There is, on the contrary, good reason to suppose that both the birth rate for the census year and the excess of survivors out of those born should be greater than the average for the decade. The death rate is known to have decreased, particularly from causes incident to infancy, which would favorably affect the number of survivors; and the general conditions of greater prosperity existing during the census year would tend to increase the birth rate. The economic conditions that adversely affected the birth rate during the decade occurred principally in the earlier years, such as the period of financial and industrial depression beginning in 1893.

While there is undoubtedly a large deficiency in the births, as calculated above for the census year, they may be compared with those obtained in the same way in 1890, and such a comparison is made in the following table:

BIRTHS AND BIRTH RATES 1890 AND 1900.

[Imperfect data.]

STATES AND TERRITORIES.	Population under 1 year of age, June 1, 1900.	Born and died in the census year 1900.	BIRTHS IN THE CENSUS YEAR.		BIRTH RATE PER 1,000 OF MEAN POPULATION.

Wyoming	2,101	104	2,205	1,315	24.2	21.7

The close correspondence of the results shown in this table, state by state, indicates that there was little difference in the accuracy of the enumeration of young children in 1890 and 1900. The total deficiency probably amounted to at least 25 or 30 per cent at each census. So far as the imperfect data furnish any indication of the comparative birth rates in the two years they show a slight increase in the rate of 1900 over that of 1890, amounting to 0.3 per 1,000 of the mean population in 1900.

The greatest increase occurred in the Northeastern division. Here it was 1.7 per 1,000. In every state in this division an increase is noted, as follows: Connecticut, 2.7; Maine, 3.5; Massachusetts, 2.5; New Hampshire, 3.3; New York, 0.9; Rhode Island, 2; Vermont, 3.

In the Northern and Central divisions the figures show a decrease of 0.9 per 1,000. Here the decrease was general, all of the states showing a falling off in the rate except New Jersey, Pennsylvania, and Wisconsin, in which the rates increased very slightly.

In the Southern division there was an increase in the rate of 1.4 per 1,000.

In the Western division there was a slight decrease, amounting to 0.1 per 1,000.

In the following table the birth rates for the census years 1900 and 1890, obtained by using the population

under 1 year of age and the "born and died," as previously described, are stated in comparison with the average annual excess of births over deaths, by states and territories:

BIRTH RATES IN THE CENSUS YEARS 1890 AND 1900, AND AVERAGE ANNUAL EXCESS OF BIRTHS, 1890–1900.

STATES AND TERRITORIES.	Birth rate, 1890.	Average annual excess of births over deaths per 1,000 of mean population, 1890–1900.	Birth rate, 1900.

Wyoming	21.7	21.0	24.2

[1] Inclusive of Indian Territory, not stated in detail. [2] Decrease.

A comparison of the average annual excess of births, based upon the actual increase of native population enumerated, with the birth rates in 1890 and 1900 as computed from the number of living population under 1 year of age and the "born and died," shows that the annual excess of births in certain states was very nearly equal to the birth rate, so calculated. (See Iowa, Minnesota, Wisconsin, Texas, and others.) As the rate of excess of births is the complement of the death rate, it is evident that these figures are inconsistent to a degree that can not wholly be accounted for by the deficiency in the population under 1 year of age, or by variations in the death rates.

In the following table a comparison is made of certain results for the census year 1900 with those previously given for the period 1890–1900. It shows the number of births and deaths during the census year by birthplaces of mothers for the specified countries, the foreign white population of corresponding nativity, the birth rate per 1,000 of population, and the excess of births, the latter in comparison with the average annual excess for the decade.

BIRTHS AND BIRTH RATES BY BIRTHPLACES OF MOTHERS.

COUNTRIES. Mothers	Foreign white population, June 1, 1900, by country of birth.	Births census year 1900. Mothers born in specified countries.	Deaths under 1 year of age census year 1900. Mothers born in specified countries.	Births per 1,000 of population of corresponding nativity.	EXCESS OF BIRTHS. 1900	EXCESS OF BIRTHS. Average annual, 1890–1900.

Other foreign	1,220,945	69,457	6,497	56.9	51.6	

The number of births in the census year 1900, as given in the preceding table, is much too low, owing, principally, to the inaccurate return of the population under 1 year of age, and this also affects the excess of births, which is correspondingly small. The whole number of births in the census year was previously estimated as about 29 per cent short of the average annual number required to sustain the increase in native population enumerated, but there are no means of determining what proportion of this deficiency occurred in the different classes of population.

The true birth rate of the country was probably higher than that determined by the natural increase (35.1 per 1,000), and the variations in the rates for the different classes of population are no doubt due, to some extent, to defects in the returns from which the population was classified by nativity and parentage.

SECTION IV.

GENERAL DEATH RATES.

In this section the general or gross death rates are given, as this is the usual method of comparing the relative mortality of different areas, and in many cases only the gross death rates are available for such comparisons. These would afford a satisfactory index of the mortality if the respective populations were similarly constituted, but this is seldom the case. In this country, in particular, there are such marked differences in the composition of the population of different states and cities that certain primary characteristics of the population must be taken into consideration in comparing the general death rates with each other or with those of foreign countries or cities.

The elemental divisions of population made for the census statistics are native white, foreign white, and colored, and the death rates of these classes vary so considerably that the proportions in which they exist in any given locality are controlling factors in the general or gross rate. This may be seen from the fact that in the registration area, as a whole, the death rate of the native white is about 3 per 1,000 less than that of the foreign white, notwithstanding the much greater proportion of infants and children in the former class; and the death rate of the native white is about 13 per 1,000, and that of the foreign white about 10 per 1,000 less than that of the colored. These classes are represented in such numbers in the various states and cities as to affect the general death rate most materially. The relative proportions of the different classes of population are shown, for the principal areas, in Section VI, relating to color and nativity.

Other factors influencing the general death rates are those concerning the distribution of the population by age and sex, and these vary also for the classes mentioned. The distribution by sex is shown in Section V, and that by age in Section VII.

Corrected death rates, based upon the proportions of the different classes of population represented, reduced to a general standard of distribution by age, are given for the registration areas and principal cities in Section VIII.

The only areas in which the death rates for the census year ending May 31, 1900, are fairly reliable and comparable are those in which the statistics are based upon registration records. In this report death rates are given only for such areas. In all other areas the insufficiency of the data to afford any reliable indication of the death rate is indicated by the asterisk (*), which has this fixed significance in all tables in which the death rates in relation to population are presented.

The total number of deaths reported in the United States for the census year was 1,039,094. In 1890 the corresponding number was 841,419. These numbers are exclusive of stillbirths, which are not included in any of the tables given herein.

The increase in the number of deaths reported over 1890 is 197,675, or 23.5 per cent. As the percentage of increase in the number of deaths is greater than the percentage of increase in the population for the same period (20.7), it indicates a more complete return of deaths than in 1890. The gain in point of completeness is actually much greater than indicated by these figures, because the general death rate has decreased very materially.

In 1890 the registration area included Connecticut, Delaware, District of Columbia, Massachusetts, New Hampshire, New Jersey, New York, Rhode Island, and Vermont, with the cities therein, and 83 cities of 5,000 or more population in other states, the gross population represented being 19,659,440.

In the present statistics the registration area includes the same states (with the exception of Delaware[1]), also Maine and Michigan, and 153 cities of 8,000 or more population in other states. The population comprehended in this area is 28,807,269, or about 38 per cent of the entire population of the United States.

The population and deaths in the United States and in the registration and nonregistration areas in 1900, in comparison with 1890, are shown in the following table, the death rates per 1,000 of population being also given for the registration areas:

POPULATION, DEATHS, AND DEATH RATES.

AREAS.	1900			1890		
	Population.	Deaths.	Rate.	Population.	Deaths.	Rate.
United States[2]	75,994,575	1,039,094	(*)	62,947,714	841,419	(*)
Registration	28,807,269	512,669	17.8	19,659,440	386,212	19.6
Nonregistration	47,187,306	526,425	(*)	43,288,274	455,207	(*)

[1] Registration in Delaware was too defective to permit its inclusion in this class. Outside of the city of Wilmington the number of deaths registered was less than the number reported by the enumerators.

[2] Including Indian Territory and Indians on reservations, but excluding persons in the military and naval service abroad.

* Data insufficient to afford correct rates.

The number of deaths per 1,000 of population in the nonregistration areas was slightly greater in 1900 than in 1890, but this is due to the more complete return of deaths. It does not indicate any actual increase in the death rate. On the other hand, while the return of deaths in the registration area was also more complete than in 1890, there was a remarkable and most satisfactory decrease in the death rate, which declined from 19.6 per 1,000 in 1890 to 17.8 per 1,000 in 1900.

The population of the United States, and of the registration area distinguished as urban and rural, with the percentage of each, and the percentage of each class comprehended in the registration area, is shown in the following table:

TOTAL POPULATION AND NUMBER AND PERCENTAGE CLASSED AS REGISTRATION.

DIVISIONS.	UNITED STATES.		REGISTRATION.		Per cent classed as registration.
	Population.	Pr. ct.	Population.	Pr. ct.	
Total	75,994,575	100.0	28,807,269	100.0	37.9
Cities over 8,000	24,992,199	32.9	21,660,631	75.2	86.7
Rural	51,002,376	67.1	7,146,638	24.8	14.0

These figures show that 86.7 per cent of the total urban population of the United States living in cities of 8,000 population or more is embraced in the registration record, and that the urban population of the registration area amounts to 75.2 per cent of its total. The rural population constitutes 24.8 per cent of the population of the registration area, and 14 per cent of the total rural population of the United States.

The comparative population, deaths, and death rates in the registration area and its subdivisions in 1900 and 1890 are shown in the following statement:

POPULATION, DEATHS, AND DEATH RATES IN REGISTRATION STATES.

AREAS.	1900			1890		
	Population.	Deaths.	Rate.	Population.	Deaths.	Rate.
Registration	28,807,269	512,669	17.8	19,659,440	386,212	19.6
Cities	21,660,631	402,666	18.6	14,958,254	314,119	21.0
States, total	17,444,280	301,670	17.3	11,881,330	231,130	19.5
Cities	10,297,642	191,667	18.6	7,180,144	159,037	22.1
Rural	7,146,638	110,003	15.4	4,701,186	72,093	15.3
Cities in other states	11,362,989	210,999	18.6	7,778,110	155,082	19.9

The death rate for the United States can not be accurately determined, but as the registration area with its death rate of 17.8 per 1,000 is very largely urban, and the nonregistration area is almost wholly rural in character, it is probable that the death rate in the latter more nearly approximates the death rate in the rural part of the registration states (15.4 per 1,000). This would fix the general death rate of the country somewhere between 15.4 and 17.8 per 1,000. If it be assumed that the death rate in the rural part of the registration states fairly represents the rate in the rural part of the nonregistration states, the general death rate would be about 16.3 per 1,000. It probably did not vary much from this number.

The death rates in the registration area of the United States, in comparison with the rates in certain foreign countries, are shown in the following table. The rates for the countries specified are based upon estimated populations for intercensal and postcensal years, as calculated by the registration officials of each country and furnished to the registrar-general of England, from whose report for 1899 the figures are taken.

COMPARATIVE DEATH RATES OF CERTAIN COUNTRIES.

COUNTRIES.	1890	Ten years, 1890–1899.	1899
Registration area of the United States	[1] 19.6	.....	[2] 17.8
England and Wales	19.5	18.4	18.3
Scotland	19.7	18.8	18.6
Ireland	18.2	18.1	17.6
Denmark	19.0	17.7	17.5
Norway	17.9	16.5	16.8
Sweden	17.1	16.4	17.6
Austria	29.4	27.1	25.4
Hungary	32.4	30.3	27.0
German Empire	24.4	22.5	21.5
Prussia	24.0	22.1	21.4
Netherlands	20.5	18.6	17.1
Belgium	20.6	19.2	18.8
France	22.8	21.6	21.1
Italy	26.4	24.6	22.1
Switzerland	20.8	19.0	17.3

[1] Census year ending May 31, 1890.
[2] Census year ending May 31, 1900.

The rate given for the registration area of the United States (17.8) is based upon a population that is 75 per cent urban, but it is still less than that of most of the foreign countries, particularly of those having the largest populations. As the rate for the United States as a whole is undoubtedly less than in the registration area, it is probably somewhat less than in any of the countries specified. The figures also show that the decrease in the death rate in the United States during the decade agrees closely with the decrease in other countries.

The decrease in the death rates in the registration areas is shown in the following statement:

DECREASE IN DEATH RATES BETWEEN 1890 AND 1900.

AREAS.	DEATH RATE PER 1,000 OF POPULATION.		Decrease.
	1900	1890	
Registration record	17.8	19.6	1.8
Cities	18.6	21.0	2.4
States, total	17.3	19.5	2.2
Cities	18.6	22.1	3.5
Rural	15.4	15.3	[1] 0.1
Cities in other states	18.6	19.9	1.3

[1] Increase.

The death rates given for 1890 are based upon registration records only, while those for 1900 are based upon the same records supplemented by additions from the enumerators' returns, and when it is considered that these returns for 1900 are undoubtedly more complete than in 1890, the general decrease in the death rates shown is most significant.

The decrease is naturally greatest (2.4 per 1,000 of population) in the cities, as the necessity of protecting the public health by sanitary improvements and regulations is first recognized in places where the population is most dense and personal contact most close and frequent.

In the cities in the registration states, embracing a population of 10,297,642, the decrease in the rate was 3.5 per 1,000, being considerably greater than in the cities in the nonregistration states, which embraced a population of 11,362,989. In these the decrease in the rate was 1.3 per 1,000. Aside from sanitary conditions, this is partly due to differences in locality and in the composition of the population comprehended. The registration states are confined to the Northeastern and northern Middle states, and, with the cities located therein, include a large proportion of adult white persons of both native and foreign birth, while the cities in the nonregistration states include all of the Southern registration cities and practically all of those in which the colored population is numerically sufficient to be an important factor.

In the rural part of the registration states there appears to have been a slight increase (0.1 per 1,000) in the death rate, but this is probably due to a deficiency in the record of deaths in this part of the registration area in 1890.

The figures for the registration states are given in the following table:

POPULATION, DEATHS, AND DEATH RATES IN REGISTRATION STATES.

REGISTRATION STATES.	1900		DEATH RATE.	
	Population.	Deaths.	1900	1890
Connecticut	908,420	15,422	17.0	18.6
Delaware	(1)	(1)	(1)	18.2
District of Columbia	278,718	6,364	22.8	23.7
Maine	694,466	12,148	17.5	(2)
Massachusetts	2,805,346	49,756	17.7	19.3
Michigan	2,420,982	33,572	13.9	(2)
New Hampshire	411,588	7,400	18.0	18.2
New Jersey	1,883,669	32,735	17.4	19.7
New York	7,268,894	130,268	17.9	19.6
Rhode Island	428,556	8,176	19.1	20.9
Vermont	343,641	5,829	17.0	15.8

[1] Nonregistration for 1900. [2] Nonregistration for 1890.

The effect of the advances made in medical science and sanitation, and in the preventive and restrictive measures enforced by local health authorities, which is indicated by the preceding tables, may be further studied in the following statement, which gives the population, deaths, and death rate per 1,000 of population in 1900, with the corresponding rate in 1890, for each city classed as registration at that time.

Reference was made in the introductory section to the decrease in the number of deaths registered in certain cities in each year since 1890, and to the correspondence with local health authorities concerning the general and local causes operating to reduce the number of deaths. The facts developed are so important and instructive, and the possibilities in this direction through improved sanitary conditions and effective health regulations are so apparent that the figures are given for some of the principal cities below.

DEATHS REGISTERED IN CERTAIN CITIES: 1890–1900.

CITIES.	DEATH RATES, CENSUS YEAR.		NUMBER OF DEATHS REGISTERED IN EACH YEAR, AS REPORTED BY LOCAL REGISTERS.

[1] Data not furnished.

The death rates given in the first and second columns of this table are for the census years 1890 and 1900, and are based upon the deaths as returned at the Eleventh and Twelfth censuses. The deaths for the years 1891 to 1899 represent the number reported by the local officials as registered in each of those years.

In reply to the request for a statement of the local causes operating to diminish the death rate some of the officers have supplied elaborate and careful analyses of the data, giving details of age, month, etc., that show conclusively the incidence and effect of improved methods of sanitation and health regulations upon the number of deaths recorded. These can not be given in full, but an abstract of the essential features of the causes assigned is appended.

ALBANY, N. Y.—The death rate in Albany for the census year 1890 was 25.5 per 1,000 of population. In 1900 it was 19.3. Among the causes which are assigned for the decrease in the death rate are the following: The general improvement of the city from extensive laying of new pavements and cleaning of streets; the thoroughness with which contagious diseases are regulated and infected premises fumigated and cleaned; and the introduction of a filtered water supply.

AUBURN, N. Y.—The death rate in Auburn in 1890 was 22.1; in 1900 it was 17.2. The decrease is reported as due in part to the extension of water mains and the discontinuance of the use of wells; the great extension of the sewer system and the intelligent application of methods of modern sanitation.

BOSTON, MASS.—The death rate in the census year 1890 in Boston was 23.4; in 1900 it was 20.1. Causes assigned: Improved water supply; improved sewerage (main drainage and intercepting sewer around seaboard); abolition of the old vault system and the substitution of water-closets; additional public parks and improved health regulations.

BROCKTON, MASS.—Death rate in 1890, 15.2; in 1900, 13.2. The principal cause assigned for the decrease in the number of deaths and the death rate is the extension and improvement of the system of sewerage.

BROOKLYN, N. Y.—The death rate in 1890 was 24; in 1900 it was 19.9. The decrease is attributed in part to the purification of the water supply, particularly in the care given to prevent contamination of the watersheds; the removal or drainage of stagnant ponds; and supervision of the milk supply by which the poorer people were supplied with sterilized or pasteurized milk.

BUFFALO, N. Y.—The death rate in 1890 was 18.4; in 1900 it was 14.8. A very complete analysis of the death rate in Buffalo during the ten years, with tables showing the deaths in each year by ages and from certain causes, was supplied by Dr. Wende, health commissioner. From this it appears that the greatest decrease in deaths occurred in children under 5 years

of age, the largest percentage of decrease being in those under 1 year. This is attributed to preventive and remedial agencies, summarized as follows: Control of the milk supply by licensing and supervision of milk dealers; inspection of outside dairies supplying milk, and exclusion of the product of dairies in unsanitary condition; the enforcement of strict regulations requiring the immediate reporting of contagious diseases (among which tuberculosis is included), inspection of infected premises, and strict quarantine of the same during continuance of the disease, with complete disinfection after its termination.

One means of reducing the infant mortality is stated as consisting of a circular of instructions concerning the care of infants that was mailed to each mother in the case of every birth registered.

Vaccination of school children is obligatory. Free public baths are provided for bathing and laundry purposes; tenement and lodging houses are repeatedly inspected and made to comply with sanitary regulations. The discontinuance of privy vaults or any other than sanitary closets, and the condemnation and abandonment of all public and private wells had also a certain effect. Buffalo was given a practical object lesson in the influence of an impure water supply upon typhoid fever in 1894, when the board of public works, without knowledge of the health department, reopened an abandoned water inlet to relieve a scarcity of water. Within two months the entire water supply of the city was contaminated, and before its effects had been counteracted nearly 700 cases of typhoid fever were reported. The water was then drawn from the reservoirs, which were cleaned and thoroughly disinfected, the abandoned water inlet was sealed up, so as to render its further use impossible, and the strictest precautions were adopted to guard against further contamination.

Improvement in the system of sewerage, the extension of paved streets, and the regular cleaning of the same also contributed to the general result.

CHELSEA, MASS.—The death rate in 1890 was 20.2; in 1900, 18.7. The principal cause assigned is the great improvement in the system of sewerage.

CINCINNATI, OHIO.—The death rate in 1890 was 21 per 1,000; in 1900 it was 19.1. The decrease in the rate is attributed to improved sanitation and modern methods of isolating and treating cases of contagious disease.

CLEVELAND, OHIO.—Death rate in 1890, 20.2; in 1900, 17.1. The causes which have operated to reduce the death rate are stated as the rapid extension of a system of good water supply, the extension of the sewers, and the rapid connection made by property owners; and the thorough disinfecting by the health department, not only of the premises in which contagious diseases have occurred, but also of houses from and to which people move.

HARTFORD, CONN.—The death rate in 1890 was 24.4, and in 1900, 19.4. The decrease is attributed to improvement in the general sanitary conditions of the city, produced by the increased efficiency in the enforcement of proper health regulations.

JERSEY CITY, N. J.—Death rate in 1890, 25.6; in 1900, 20.7. The very notable decrease in the death rate of Jersey City in 1897 was coincident with the introduction of pure water supply from the Pequanac River. Introduction of an extensive system of sewerage was initiated about 1890, and has been carried on since that time.

LAWRENCE, MASS.—Death rate in 1890, 27.8; in 1900, 20.2. The principal reason assigned for the decrease in the rate is the substitution of pure filtered water for the polluted river water which was used prior to 1893. The effect of this is clearly seen in the immediate decrease in the number of deaths reported, beginning in 1894.

LOWELL, MASS.—Death rate in 1890, 25.9; in 1900, 19.8. Causes assigned: Improvement in system of water supply by substitution of pure water from a driven well, instead of the previous sources, thus materially lessening the mortality from typhoid fever; improvement of sewers, and almost entire freedom from vaults.

NEWARK, N. J.—The death rate of Newark in 1890 was 27.4; in 1900, it was 19.8. A very complete report upon the mortality in Newark during the decade is submitted by the health officer, including an analysis by Mr. F. L. Hoffman giving the mortality by ages and causes. The great decrease in the death rate is attributed generally to the advanced policy of the board of health along the line of preventive measures. In connection with this was the rapid increase in the number of miles of streets paved, and of miles of sewers constructed. As the sewers were extended, connection with adjoining houses was made compulsory. A complete system of house to house inspection by sanitary officers was conducted yearly, and plans made of every house and yard, showing the system of plumbing, location of sinks and cesspools, and their relation to the sewer system. Wells were abolished.

In 1892 the source of water supply was changed from the Passaic River by the introduction of water from the Pequanac watershed, and an immediate decrease is noted in the number of deaths, beginning with 1893. This decrease is particularly noticeable in the case of deaths from typhoid fever.

NEW HAVEN, CONN.—Death rate in 1890, 18.8; in 1900, 17.2. The decrease is attributed to the general improvement in the sanitary condition of the city and greater attention given to hygiene by the people.

NEW YORK CITY (OLD CITY), N. Y.—Death rate in 1890, 26.7; in 1900, 21.3. The decrease is attributed to the advance made in medical and surgical knowledge,

especially in the line of preventive medicine; improved sanitary surroundings and cleaner streets; and the stricter inspection of milk and food.

NORTH ADAMS, MASS.—The death rate in 1890 was 20.3; in 1900 it was 13.8. The causes assigned for this discrease in the death rate are the great improvement in the sanitary condition of the city; compulsory connection of houses with public sewers; improved regulations concerning the milk supply; and the rigid enforcement of the regulations of the board of health.

ROCHESTER, N. Y.—Death rate in 1890, 17.3; in 1900, 15. The decrease is reported as most marked in cases of diphtheria, typhoid fever, scarlet fever, and other diseases of children, and is attributed to the efforts of the health department in controlling infectious diseases, increased watchfulness of the milk supply, and the maintenance of a good supply of pure water by preventing pollution at its source.

SCHENECTADY, N. Y.—Death rate in 1890, 22.2; in 1900, 15.1. Causes assigned: Introduction of new system of water supply; extension of paved streets; sanitary inspection of buildings; and abandonment of vaults and wells.

TAUNTON, MASS.—Death rate in 1890, 21.7; in 1900, 19.8. Causes assigned: Increased observance of sanitary precautions by the people; advances in sanitary plumbing; and enforcement by the health authorities of regulations looking to the public health.

WASHINGTON, D. C.—The death rate in 1890 was 23.7; in 1900, it was 22.8. The decrease in the death rate is attributed to improved sanitary conditions, such as the extension of the sewer system and compulsory sewer connection; closing of wells; improved milk supply; and better observance of sanitary requirements by the people.

YONKERS, N. Y.—Death rate in 1890, 17.1; in 1900, 16.3. Causes assigned: Extension of the sewer system and connection of dwellings; reconstruction of streets; extension of asphalt and granite pavements, with a thorough cleaning of the same; the elimination of vaults and cesspools; and control of the milk supply.

SECTION V.

SEX IN RELATION TO DEATHS.

The total population enumerated within the boundaries of the United States on June 1, 1900, was 75,994,575. Of this number 38,816,451 were males, and 37,178,124 were females, the proportion of males to each 1,000 females being 1,044.

Of the 1,039,094 deaths reported 551,611 were males and 487,483 were females. This gives a proportion of 1,132 males to 1,000 females. In 1890 the proportion was 1,119 males to 1,000 females.

In England and Wales 581,799 deaths were registered during the year 1899, the division by sex being 299,472 males and 282,327 females, giving the proportion of 1,061 males to 1,000 females.

In the registration area of the United States 512,669 deaths were reported, 272,819 of which were males and 239,850 were females. The relative proportions of deaths of males to 1,000 deaths of females in each class, in this area, are shown in comparison with 1890 in the following table:

PROPORTION OF MALES PER 1,000 FEMALES.

CLASSES.	1900	1890
All classes	1,138	1,116
White	1,141	1,121
Native	1,126	1,095
Both parents native	1,061	1,026
One or both parents foreign	1,183	1,128
Foreign	1,146	1,170
Colored	1,092	1,081

The proportions of males per 1,000 females were greater than in 1890 in each class except the foreign white. The excess of deaths of males was least for the native white of native parents in both 1890 and 1900. It was greatest for the foreign white in 1890, and for the native white of foreign parents in 1900.

The proportions in the registration area and in the United States, as a whole, do not differ materially.

The following table shows the comparative death rates of males and females in the registration area and its subdivisions, and in each registration state, in 1890 and 1900:

DEATH RATES PER 1,000 OF POPULATION, BY SEX.

AREA,	DEATH RATE PER 1,000 OF POPULATION.			
	Males.		Females.	
	1900	1890	1900	1890
Registration record	19.0	20.8	16.6	18.5
Cities	20.0	22.4	17.2	19.6
States, total	18.1	20.4	16.5	18.5
Cities	19.8	23.7	17.5	20.7
Rural	15.8	15.7	15.0	15.0
Cities in other states	20.2	21.3	16.9	18.6
Registration states:				
Connecticut	17.4	19.4	16.6	17.7
Delaware	(*)	19.1	(*)	17.3
District of Columbia	24.8	26.2	21.1	21.3
Maine	17.9	(*)	17.0	(*)
Massachusetts	18.5	19.8	17.0	18.7
Michigan	14.5	(*)	13.2	(*)
New Hampshire	17.8	18.4	18.1	18.0
New Jersey	18.5	20.7	16.2	18.6
New York	19.0	20.9	16.9	18.4
Rhode Island	19.6	21.6	18.5	20.3
Vermont	16.8	15.2	17.2	16.5

* Nonregistration; data insufficient for rates.

These figures show that in each subdivision of the registration area the death rate of males was greater than that of females, the excess in the entire registration area being 2.4 per 1,000. The greatest excess (3.3 per 1,000) occurred in the cities in the nonregistration states.

The death rate of males also exceeded that of females in each registration state except Vermont, where the excess in the death rate of females was 0.4 per 1,000, and New Hampshire, where the excess in the death rate of females was 0.3 per 1,000.

In comparison with 1890 the death rates of both sexes show a decided decrease in all of the areas except in the rural part of the registration states, where the death rate of females (15.0) was exactly the same, and that of males (15.8) was 0.1 per 1,000 higher, and in New Hampshire and Vermont. In New Hampshire the death rate of females (18.1) was 0.1 per 1,000 higher

than in 1890, and in Vermont the death rate of males (16.8) was 1.6 per 1,000 higher and that of females (17.2) was 0.7 per 1,000 higher than in 1890. These apparent increases in the death rates in New Hampshire and Vermont are probably due to a deficiency in the returns in 1890 and not to any actual increase in the mortality of either sex.

In the following table the death rates of males and females in 1890 and 1900 are given for each registration city:

*Nonregistration; data insufficient for rates.

In comparing the death rates of different cities given in the preceding table, the difference in the distribution of the population and the relative proportions of colored and of native and foreign whites in each should be taken into consideration. The percentage of each of these classes of population in the registration cities is given in Section VI, relating to color and race.

The following table shows, for the registration area, the proportions of deaths of males to 1,000 deaths of females, from each of certain specified causes, at all ages and under 5 years, in 1890 and 1900:

NUMBER OF DEATHS OF MALES TO 1,000 DEATHS OF FEMALES FROM CERTAIN CAUSES.

CAUSES.	1900		1890	
	All ages.	Under 5.	All ages.	Under 5.
Alcoholism	4,601	.....	3,640	.....
Suicide	3,416	.....	3,535	.....
Accidents and injuries	3,172	1,278	3,238	1,379
Tetanus and trismus	2,207	1,535	1,554	1,391
Appendicitis	1,679	1,379	.....	.....
Diseases of the liver	1,463	1,422	1,388	1,565
Typhoid fever	1,361	950	1,352	1,254
Erysipelas	1,347	1,088	1,101	878
Angina pectoris	1,346	.....	1,319	.....
Diseases of the bones and joints	1,333	1,424	1,430	1,491
Pleurisy	1,277	1,447	1,489	1,490

NUMBER OF DEATHS OF MALES TO 1,000 DEATHS OF FEMALES FROM CERTAIN CAUSES—Continued.

CAUSES.	1900		1890	
	All ages.	Under 5.	All ages.	Under 5.

Consumption	1,179	1,195	1,087	1,105
Pneumonia	1,177	1,214	1,220	1,168
Diseases of the spinal cord	1,172	1,511	1,380	1,163
Croup	1,172	1,238	1,168	1,193
Asthma	1,117	1,240	1,100	1,400
Paralysis	1,114	1,124	959	1,025
Diarrheal diseases	1,110	1,184	1,077	1,140
Diabetes	1,089	1,044	1,312	.....
Heart disease	1,088	1,231	1,071	1,241
Malarial fever	1,065	975	1,029	1,052
Apoplexy	1,048	1,243	1,058	980
Diseases of the digestive system	1,039	1,247	1,047	1,231
Scarlet fever	1,030	1,061	919	932
Rheumatism	981	900	1,072	1,121
Measles	971	1,031	991	1,029
Bronchitis	970	1,217	971	1,107
Diphtheria	970	1,058	968	1,069
Dropsy	920	1,571	868	1,442
Scrofula and tabes	894	1,217	989	1,113
Whooping cough	881	902	804	824
Influenza	750	1,069	.....	.....

NUMBER OF DEATHS OF MALES TO 1,000 DEATHS OF FEMALES FROM CERTAIN CAUSES—Continued.

CAUSES.	1900		1890	
	All ages.	Under 5.	All ages.	Under 5.
Tumor	713	1,116	808	1,360
Cancer	586	1,375	529	1,625
Peritonitis	576	1,254	710	1,324

The greatest proportions of deaths of males in 1900, occurred from alcoholism (4,601), suicide (3,416), accidents and injuries (3,172), tetanus and trismus nascentium (2,207), appendicitis (1,679), diseases of the liver (1,463), typhoid fever (1,361), erysipelas (1,347), angina pectoris (1,346), diseases of the bones and joints (1,333), pleurisy (1,277), inflammation of the brain and meningitis (1,271), and venereal diseases (1,266).

The proportions of deaths of males were least from croup (1,172), asthma (1,117), diarrheal diseases (1,110), diabetes (1,089), heart disease (1,088), malarial fever (1,065), apoplexy (1,048), diseases of the digestive system (1,039), and scarlet fever (1,030).

In addition to those causes of death peculiar to females, excessive proportions of deaths of females occurred from rheumatism, measles, bronchitis, diphtheria, dropsy, scrofula and tabes, whooping cough, influenza, cancer, tumor, and peritonitis.

The relative proportions in 1890 and 1900 do not differ materially either in the aggregate or under 5 years.

SECTION VI.

COLOR AND RACE IN RELATION TO DEATHS.

The distribution of the population in the registration area and its subdivisions by color, race, and birthplaces of mothers, and the comparative proportions of each class in certain principal age groups are given in section 1, relating to population.

Table 6, Part II, gives the deaths in the United States, the registration area and its subdivisions, and in each state and territory at each age, by sex, color, general nativity, parent nativity, and birthplaces of mothers.

Table 19, Part 1, gives the population and deaths at all ages, under 1, and under 5 years, and the number of deaths from certain principal causes, in the United States, the registration areas, each state and territory, each state group of the registration states, and certain principal cities, by color, general nativity, and parent nativity.

The term "colored" as used in this discussion and in the tabular statistics includes all persons of negro descent, Indians, Chinese, and Japanese.

The term "race" as used in this connection includes nationality, as indicated by the country of birth. To show the relation of nationality to deaths the birthplace of the mothers of decedents is used as best indicating the influence of national characteristics or inherited tendencies. The birthplaces of the decedents themselves would be of comparatively little value for this purpose, because most of those of foreign nationality would be adult persons, and their children would generally be classed as Americans.

Of 28,807,269 population in the entire registration area on June 1, 1900, 27,555,800 were white, 1,180,546 were negroes, 14,010 were Indians, 48,565 were Chinese, and 8,348 were Japanese. The 512,669 deaths in this area during the census year were distributed as follows: White, 475,640; negro, 35,710; Indian, 319; Chinese, 914; Japanese, 86.

The population, deaths, and death rates of the abovementioned races, in the registration area and its subdivisions, are shown in the following table:

POPULATION, DEATHS, AND DEATH RATES, BY RACE.

AREAS.	White.	Negro.	Indian.	Chinese.	Japanese.
Registration record:					
Population	27,555,800	1,180,546	14,010	48,565	8,348
Deaths	475,640	35,710	319	914	86
Death rate	17.3	30.2	22.8	18.8	10.3
Registration cities:					
Population	20,503,666	1,100,501	1,198	46,996	8,270
Deaths	367,430	34,178	60	912	86
Death rate	17.9	31.1	50.1	19.4	10.4
Registration states:					
Population	17,086,319	330,693	13,296	13,461	511
Deaths	292,618	8,650	270	129	3
Death rate	17.1	26.2	20.3	9.6	5.9
Cities in registration states:					
Population	10,034,185	250,648	484	11,892	433
Deaths	184,408	7,118	11	127	3
Death rate	18.4	28.4	22.7	10.7	6.9
Rural part of registration states:					
Population	7,052,134	80,045	12,812	1,569	78
Deaths	108,210	1,532	259	2	.....
Death rate	15.3	19.1	20.2	1.3	.....
Registration cities in other states:					
Population	10,469,481	849,853	714	35,104	7,837
Deaths	183,022	27,060	49	785	83
Death rate	17.5	31.8	68.6	22.4	10.6

It will be seen from the preceding table that the large majority of the negro, Chinese, and Japanese population was in the registration cities in the nonregistration states, and that the large majority of Indian population was in the rural districts of the registration states. Taking the primary areas in which each race is represented in greatest numbers, it will be seen that the death rate of negroes was 31.8; of Indians, 20.2; of Chinese, 22.4; and of Japanese, 10.6. The Indian population in the registration area is not large enough to afford a reliable indication of the ordinary death rate among Indians, but about 54 per cent of the entire Chinese population, and 34 per cent of the Japanese population was located in this area. The low death rates of the Chinese and Japanese noted are due to the fact that the population consists principally of adult males.

The following table shows, for the registration area, the death rates during the census year of whites, negroes, Indians, Chinese, and Japanese from certain diseases and classes of diseases, per 100,000 of corresponding population:

DEATH RATES FROM CERTAIN CAUSES, BY RACE.

CAUSES.	REGISTRATION RECORD.				
	White.	Negro.	Indian.	Chinese.	Japanese.
Measles	13.1	15.2	64.2	.....	.....
Scarlet fever	12.0	2.6	7.1	.....	.....
Diphtheria and croup	45.9	32.0	7.1	6.2	.....
Whooping cough	12.1	28.6	.....	6.2	.....
Malarial fever	6.5	63.2	.....	2.1	12.0
Influenza	23.6	32.0	50.0	.....	.....
Typhoid fever	32.4	67.5	28.6	22.7	107.8
Diarrheal diseases	129.5	214.0	171.3	43.2	47.9
Consumption	173.5	485.4	506.8	656.8	239.6
Cancer and tumor	66.7	48.0	28.6	49.4	24.0
Heart disease and dropsy	137.4	221.1	92.8	175.0	35.9
Pneumonia	184.8	355.3	228.4	282.1	59.9
Diseases of the liver	22.8	20.9	7.1	51.5	12.0
Diseases of the nervous system	213.7	308.0	135.6	57.6	47.9
Diseases of the urinary organs	99.8	157.3	78.5	142.1	35.9
Old age	53.5	66.7	50.0	16.5	.....

This table shows that the death rates of negroes in the registration area, in comparison with those of the whites, were excessively high from malarial fever (white, 6.5; negro, 63.2), typhoid fever (white, 32.4; negro, 67.5), diarrheal diseases (white, 129.5; negro, 214), consumption (white, 173.5; negro, 484.5), heart disease and dropsy (white, 137.4; negro, 221.1), pneumonia (white, 184.8; negro, 355.3), diseases of the nervous system (white, 213.7; negro, 308), and diseases of the urinary organs (white, 99.8; negro, 157.3).

The death rates of negroes were less than those of whites from scarlet fever (white, 12; negro, 2.6), cancer and tumor (white, 66.7; negro, 48), and diseases of the liver (white, 22.8; negro, 20.9).

Among the Indians in the registration area the death rates were highest from consumption (506.8), pneumonia (228.4), and diarrheal diseases (171.3).

The death rate of the Chinese from consumption (656.8) was very much higher than that of the Indians (506.8) or the negroes (485.4) and was nearly three times as high as the death rate of the Japanese from this disease (239.6).

Among the Japanese the death rate from typhoid fever (107.8) was excessively high. For the other diseases most frequent in adults the death rate of the Japanese was generally less than that of any of the other races.

The following table shows, for the registration area and its subdivisions, the death rates per 1,000 of population, by color, general nativity, and parent nativity, in comparison with 1890:

DEATH RATES BY COLOR AND NATIVITY.

AREAS.		Aggregate.	WHITE					Colored.
			Total.	Native.[1]			Foreign.[1]	
				Total.	Both parents native.[1]	One or both parents foreign.[1]		
Registration area	1900	17.8	17.3	16.6	16.6	16.6	19.4	29.6
	1890	19.6	19.1	19.0	17.3	21.5	19.4	29.9
Cities	1900	18.6	17.9	17.3	17.4	17.9	19.7	30.5
	1890	21.0	20.4	20.6	19.0	23.3	19.9	31.0
States	1900	17.3	17.1	16.7	16.4	17.1	18.3	25.3
	1890	19.5	19.3	19.1	17.4	21.9	19.8	27.4
Cities	1900	18.6	18.4	18.3	17.5	19.0	18.5	27.6
	1890	22.1	21.9	22.4	20.0	24.7	20.9	31.5
Rural	1900	15.4	15.3	14.9	15.6	12.7	17.8	19.0
	1890	15.3	15.3	15.1	15.4	14.1	16.4	18.1
Cities in other states	1900	18.6	17.5	16.3	17.6	14.5	21.3	31.3
	1890	19.9	18.9	18.9	16.9	20.1	18.7	30.9

[1] Unknown nativity and parent nativity distributed.

Taking the registration area as a whole, it will be seen from the table above that there was a decrease in the death rate of each class except the foreign white, for which class the rate (19.4) was the same in both years. It appears from these figures that the decrease was greatest in the class having one or both parents foreign (21.5 in 1890 and 16.6 in 1900), but the difference in the aggregate rate for this class, and also the stationary rate for the foreign white, is probably due to some extent to the inclusion of new areas in 1900, in which these classes are represented in different proportions, such as the additional cities in the nonregistration states. In these the proportions of native white population of native parents and of colored are much greater than in the cities included in this area in 1890, and the proportions of foreign white population and native white population having one or both parents foreign are much less, and it will be seen by reference to the table above that in these cities there was an increase in the death rate of the foreign whites and the colored, while that of the native whites having one or both parents foreign decreased to a much greater extent than in the cities in the registration states.

In the cities in the registration states there was a decided decrease in the death rate of all classes amounting to 12.5 per cent for the native white of native parents; 23.1 per cent for the native white having one or both parents foreign; 11.5 per cent for the foreign white; and 12.4 per cent for the colored.

In the registration states there was a decrease in the

aggregate death rate of 11.3 per cent, as compared with the rate in 1890.

The following table shows, for the registration area and its subdivisions, the death rates of white persons having mothers born in the specified countries per 1,000 of corresponding population:

DEATH RATE OF WHITES, BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	14.6	15.2	14.8	15.9	13.9	13.8
Ireland	21.3	22.2	21.5	22.5	17.7	20.3
Germany	15.5	15.9	15.6	16.2	13.8	15.3
England and Wales	15.5	15.9	15.6	16.0	14.7	15.3
Canada	13.8	14.8	14.0	15.3	12.4	10.4
Scandinavia	12.4	12.8	13.4	14.7	11.1	10.6
Scotland	15.8	15.9	16.0	16.3	15.4	14.7
Italy	20.4	22.1	20.5	22.3	11.2	20.3
France	17.1	18.2	16.4	17.8	13.1	18.9
Hungary and Bohemia	12.9	13.2	12.2	12.7	9.1	14.0
Russia and Poland	12.0	12.3	11.2	11.5	9.6	15.3
Other foreign	17.4	18.3	17.0	18.0	14.5	19.7

This table shows that for white persons having mothers born in the specified countries the death rates were highest among those whose mothers were born in Ireland (21.3), Italy (20.4), and France (17.1), and were lowest among those whose mothers were born in Russia and Poland (12), Scandinavia (12.4), and Hungary and Bohemia (12.9). The death rate for white persons whose mothers were born in the United States (14.6) was less than for those whose mothers were born in Ireland (21.3), Italy (20.4), France (17.1), Scotland (15.8), Germany (15.5), or England and Wales (15.5).

The rates given in this table are the gross rates, without regard to the age distribution of the population contributing the deaths, and the high death rate for white persons having mothers born in the United States, in comparison with those having mothers born in some of the foreign countries, is due to the much greater proportion of children in the former class. They should be studied in connection with the table given in Section VII, which shows for the registration area the death rates of the same classes by age periods.

As previously stated, the distribution of the population by color, general nativity, and parent nativity, which constitute the primary divisions of the population, has a most important influence on the mortality in different areas. The aggregate or gross death rate is a composite of the low death rate of the whites and the high death rate of the colored; the death rate of the whites is in turn a composite of the low death rate of native whites and the higher death rate of the foreign whites, and finally the death rate of the native whites is again a composite of the varying death rates of those of native parents and those having one or both parents of foreign birth.

The following table shows, for the registration area and its subdivisions and for each registration state and city, the per cent of population in each of the above-mentioned classes:

PER CENT OF POPULATION IN EACH CLASS.

STATES AND CITIES.	CLASSES BY COMBINATION.		PRIMARY CLASSES.			
	White.	Native white.	Native white.		Foreign white.	Colored.
			Both parents native.	One or both parents foreign.

[1] Deaths not reported by nativity or parent nativity.

The proportional distribution of the population by classes, as indicated in the preceding table, should be taken into consideration in comparing the general or gross death rates of any areas.

The following table shows, for the same areas as those given in the preceding table, the relative death rates of the specified classes per 1,000 of population:

DEATH RATES BY COLOR, GENERAL NATIVITY, AND PARENT NATIVITY.

STATES AND CITIES.	CLASSES BY COMBINATON.		PRIMARY CLASSES.			
			Native white			
	White.	Native white.	Both parents native.	One or both parents foreign.	Foreign white.	*Colored.

*Rates not stated where colored population is less than 500.
[1] Deaths not reported by nativity or parent nativit7.

*Rate not stated where colored population is less than 500.
[1] Deaths not reported by nativity or parent nativity.

In Section VIII, corrected death rates are given for the native whites of native parents, native whites of foreign parents, and colored, in the registration area and its subdivisions, each registration state and some of the principal cities, the correction being made for differences in the age distribution of certain classes of population.

The following table shows, for the registration area, the death rates of white persons having mothers born in the specified countries, from certain diseases and classes of diseases, per 100,000 of population:

DEATH RATE OF WHITES FROM CERTAIN DISEASES, BY BIRTHPLACES OF MOTHERS.

CAUSE OF DEATH.	United States.	Ireland.	Germany.	England and Wales.	Canada.	Scandinavia.	Scotland.	Italy.	France.	Hungary and Bohemia.	Russia and Poland.	Other foreign.

The relation of birthplace of mother to the death rates from individual causes of death, in the aggregate and by age periods, is shown in greater detail in Section XII.

SECTION VII.

RELATION OF AGE TO DEATHS.

This section treats of the relation of age to the general or gross death rates. The age distribution of the population furnishing the deaths is a most important factor to be considered in studying the gross rates of different localities, or the mortality from different diseases in different areas. The differences in the age distribution of the population are, however, largely due to the presence of different classes of population in the various areas, and the proportions of such classes as well as the differences in their distribution by age should be kept constantly in view. The population of the registration area and its subdivisons, by classes, and the proportions and age distribution of each class are given in Section II.

In Section VI, which treats of the relations of color and race, the percentage of each of the primary classes of population in each registration state and city is given in full, with a corresponding table showing the death rates of each class.

Table 1, Part I, gives the number of deaths in the United States and the registration area from certain diseases and classes of diseases by age periods in relation to conjugal condition.

Tables 8, 9, 10, 11, and 12, Part II, give the number of deaths from each disease and class of diseases by sex and age for various areas.

Table 25, Part I, gives the number of deaths from each cause per 1,000 deaths from known causes in the United States, the registration area, and the registration cities, by age and sex.

Table 24, Part I, gives the number of deaths at each age, per 1,000 deaths at known ages from each cause, in the United States, the registration area and the registration cities, by sex.

The following table shows, for the registration area, the death rates at each age per 1,000 of population in 1890 and 1900, and the decreases and increases in the rates:

DEATH RATES AT EACH AGE.

AGE.	DEATH RATE.		DECREASE OR INCREASE IN DEATH RATE.	
	1900	1890	Decrease.	Increase.
Under 1 year	165.4	205.8	40.4	.....
1 year	46.6	84.9	38.3	.....
2 years	20.5	23.8	3.3	.....
3 years	13.2	16.8	3.6	.....
4 years	9.4	13.0	3.6	.....
Under 5 years	52.1	66.8	14.7	.....
5 to 9 years	5.2	7.3	2.1	.....
10 to 14 years	3.3	3.8	0.5	.....
15 to 19 years	5.2	6.0	0.8	.....
20 to 24 years	7.5	8.4	0.9	.....
25 to 29 years	8.6	9.9	1.3	.....
30 to 34 years	9.4	10.6	1.2	.....
35 to 39 years	11.0	12.5	1.5	.....
40 to 44 years	12.2	13.5	1.3	.....
45 to 49 years	15.2	16.5	1.3	.....
50 to 54 years	19.1	19.2	0.1	.....
55 to 59 years	26.3	26.5	0.2	.....
60 to 64 years	35.1	32.8	.....	2.3
65 to 69 years	52.2	49.0	.....	3.2
70 to 74 years	75.2	64.5	.....	10.7
75 to 79 years	110.5	103.2	.....	7.3
80 to 84 years	165.8	144.6	.....	21.2
85 to 89 years	241.3	215.5	.....	25.8
90 to 94 years	339.2	260.0	.....	79.2
95 years and over	418.9	347.1	.....	71.8

This table shows that in comparison with 1890 there was a very regular decrease in the death rates at each age up to 60 years, and an increase in the rates at each age above 60 years.

In Section XII, the death rates at certain ages for each disease and class of diseases in the different areas are given in full, and comparisons are made with the corresponding rates in 1890, which show the causes to which decreased or increased rates are due, and the ages at which they occurred.

The following table shows for the registration area and its subdivisions, the death rates during the census year in each of eight age groups by sex:

DEATH RATES AT CERTAIN AGES IN REGISTRATION AREAS, BY SEX.

REGISTRATION AREAS.	AGES.							
	Under 1.	Under 5.	5 to 14.	15 to 24.	25 to 34.	35 to 44.	45 to 64.	65 and over.
Total	165.4	52.1	4.3	6.4	9.0	11.5	22.1	86.6
Males	183.7	56.7	4.4	6.7	9.5	12.4	24.1	91.1
Females	146.8	47.5	4.2	6.1	8.5	10.5	20.1	82.6
Cities	179.9	57.6	4.7	6.7	9.6	12.6	24.8	93.3
Males	199.6	62.6	4.8	7.2	10.3	13.8	27.7	99.6
Females	159.9	52.6	4.6	6.3	8.8	11.2	22.0	88.1
States	159.3	49.9	3.8	5.7	8.3	10.5	20.3	82.8
Males	177.2	54.4	3.9	5.8	8.5	11.0	21.4	85.9
Females	141.1	45.4	3.8	5.5	8.1	10.0	19.2	80.0
Cities	184.7	59.7	4.3	5.9	9.1	12.1	24.3	90.9
Males	205.3	65.0	4.3	6.3	9.8	13.1	26.3	95.2
Females	163.7	54.4	4.2	5.6	8.5	11.0	22.3	87.6
Rural	117.4	34.4	3.2	5.3	6.8	8.0	15.7	76.8
Males	131.0	37.6	3.2	5.2	6.4	7.8	16.0	80.0
Females	103.6	31.2	3.2	5.3	7.3	8.2	15.4	73.6
Cities in other states	175.2	55.6	5.1	7.5	9.9	13.0	25.3	95.6
Males	194.0	60.4	5.2	8.1	10.8	14.4	28.9	103.8
Females	156.0	50.8	4.9	6.9	9.1	11.4	21.6	88.7

This table shows that for infants under 1, and children under 5 years of age, the death rates were higher in the cities in the registration states than in those in the nonregistration states, and also that at all ages above 5 years, the death rates were highest in the cities in the nonregistration states; but by reference to Section XII, showing the relation of age to causes of death, it will be seen that in comparison with 1890 the decrease in the death rate of infants and young children was much more marked in the cities in the registration states than in those in the nonregistration states.

The following table shows, for each registration state and city, the death rates during the census year in each of eight age groups:

DEATH RATES AT CERTAIN AGES IN REGISTRATION STATES AND CITIES.

AREAS.	AGES.							
	Under 1.	Under 5.	5 to 14.	15 to 24.	25 to 34.	35 to 44.	45 to 64.	65 and over.
Registration states:								
Connecticut	156.8	46.4	3.6	5.4	7.4	9.5	19.8	83.8
District of Columbia	274.5	81.0	7.0	9.7	11.2	13.0	27.3	103.3
Maine	144.1	41.9	3.5	6.5	7.9	8.7	17.0	78.1
Massachusetts	177.8	54.4	3.8	5.6	7.8	9.7	20.7	86.3
Michigan	121.3	36.0	3.2	5.3	7.0	8.0	15.6	74.5
New Hampshire	172.0	51.8	3.9	5.4	6.3	8.2	16.1	79.2
New Jersey	167.4	52.7	4.2	5.5	8.3	10.9	21.0	85.5
New York	159.8	52.3	3.9	5.6	9.1	11.8	22.1	83.6
Rhode Island	197.9	63.3	4.0	5.9	8.0	10.6	22.5	91.7
Vermont	122.1	34.4	3.4	6.0	7.4	9.5	16.6	80.4

In the preceding table the deaths of unknown nativity and parent nativity have been distributed proportionately.

In the registration area taken as a whole, this table shows that in infants under 1 year of age the death rate of the whites (158) was less than half that of the colored (371.5), and that the death rate of the native whites of native parents (148.8) was less than that of the native whites having one or both parents foreign (164.4) or the foreign whites (149).

For all children under 5 years of age the rate of the colored (118.5) was more than twice as high as that of the whites (49.7). In this age group the death rate of native whites of native parents (45) was less than that of the native whites having one or both parents foreign (53.3), but was greater than that of the foreign whites (34.7).

At 5 to 14 years of age the death rate of the whites was 4.1, and that of the colored was 9.8. For native whites of native parents it was the same as for those having one or both parents foreign (3.9), and both were slightly higher than that for the foreign whites (3.8).

In the age group 15 to 24 years the death rate of the colored (15.6) was nearly three times as high as that of the whites (5.9). For the native whites of native parents it was 5.5, and was less than for the foreign whites (5.6) or the native whites having one or both parents foreign (6.1).

In the age groups from 25 years upward the death rates of the native whites of native parents were all less than those of the foreign whites, or the native whites having one or both parents foreign, and at 45 to 64 years, and 65 years and over, the death rate of the foreign white was higher than that of the native white having one or both parents foreign.

At 25 to 34 years the death rate of the colored (16.9) was very much higher than that of the whites (8.6), and that of the native whites having one or both parents

foreign (10.4) was higher than that of the foreign whites (8.2) or the native whites of native parents (7.1).

In the age group 35 to 44 years the death rate of the whites (11.1) was about half that of the colored (21). In this age group the death rate of the native whites having one or both parents foreign (12.6) was higher than that of the foreign whites (11.6) and was nearly 50 per cent higher than that of the native whites of native parents (8.7).

At 45 to 64 years the death rate of the colored was 36.7, and that of the whites was 21.5. Among the whites the death rate at these ages was much higher in the foreign born (25.8) than in the native born (18.4), and the rate of the native whites having one or both parents foreign (18.8) was higher than that of the native whites of native parents (17.4).

At 65 years of age and over the greatest mortality occurred among the colored (108.6), and next to this, among the foreign whites (90.3). For the native whites of native parents the death rate (80.4) was considerably less than that of the native whites having one or both parents foreign (87.6).

In the aggregate, the death rate of males was higher than that of females in every age group.

In Section VIII, corrected death rates for the registration area and its subdivisions; the registration states, and some of the principal cities are given for certain classes of population, the correction being made for differences in the age distribution of the different classes.

The following table shows for the registration area the death rates per 1,000 of white population in each of 8 age groups, by birthplaces of mothers:

DEATH RATES AT CERTAIN AGES, BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	AGES.							
	Under 1.	Under 5.	5 to 14.	15 to 24.	25 to 34.	35 to 44.	45 to 64.	65 and over.
United States	141.8	43.0	3.7	5.0	6.4	7.5	14.6	65.9
Ireland	169.5	56.1	4.5	7.5	12.2	15.0	30.6	96.9
Germany	159.0	47.6	3.7	4.8	7.4	9.6	20.3	81.8
England and Wales	149.3	44.2	3.6	4.6	6.6	8.8	18.3	81.1
Canada	183.7	54.9	3.6	5.4	6.8	8.5	15.7	68.4
Scandinavia	113.6	37.0	3.7	5.7	7.4	9.0	16.9	67.3
Scotland	120.2	37.0	3.3	4.5	6.5	9.4	18.8	84.6
Italy	189.2	80.7	4.9	6.6	7.1	9.2	17.2	66.1
France	244.9	67.7	3.3	4.5	7.2	10.3	19.2	74.4
Hungary	113.4	41.1	2.4	3.8	5.8	8.6	16.0	56.2
Bohemia	142.5	44.5	3.3	4.7	8.1	10.5	18.8	72.7
Russia	133.7	47.0	3.0	4.0	5.6	8.5	20.2	92.0
Poland	111.7	36.7	2.0	2.7	3.5	5.0	9.7	40.9
Other foreign	183.0	62.7	4.0	5.9	7.6	10.7	21.0	82.8

This table shows that in infants under 1 year of age the death rates were highest among those whose mothers were born in France (244.9), in Italy (189.2), and in Canada (183.7); and were lowest among those whose mothers were born in Poland (111.7), in Hungary (113.4), and in Scandinavia (113.6). The rate was lower in those of native mothers (141.8) than in those whose mothers were born in Ireland (169.5), in Germany (159), or in England and Wales (149.3).

For all children under 5 years of age the death rates were highest in those whose mothers were born in Italy (80.7), in France (67.7), and in "Other foreign" countries (62.7). It was lower for children of native mothers (43) than for those whose mothers were born in Ireland (56.1), in Germany (47.6), in England and Wales (44.2), or in Canada (54.9).

At 5 to 14 years the highest death rate occurred in those whose mothers were born in Italy (4.9), and the lowest in those whose mothers were born in Poland (2).

At 15 to 24 years the death rates were highest in those whose mothers were born in Ireland (7.5), and in Italy (6.6); and were lowest in those whose mothers were born in Poland (2.7), and in Hungary (3.8).

In the age group 25 to 34 years it was highest in those whose mothers were born in Ireland (12.2), and was lowest in those whose mothers were born in Poland (3.5).

At 35 to 44 years the death rates were highest in those whose mothers were born in Ireland (15), in "Other foreign" countries (10.7), and in Bohemia (10.5); and were lowest in those whose mothers were born in Poland (5), and in the United States (7.5).

At 45 to 64 years the highest rates occurred among those whose mothers were born in Ireland (30.6), in "Other foreign" countries (21), and in Germany (20.3); and the lowest among those whose mothers were born in Poland (9.7), in the United States (14.6), and in Canada (15.7).

For white persons 65 years of age and over the death rates were highest in those whose mothers were born in Ireland (96.9), in Russia (92), and in Scotland (84.6); and were lowest in those whose mothers were born in Poland (40.9), in the United States (65.9), and in Hungary (56.2).

AVERAGE AGE AT DEATH.

The following table shows, for the registration area and its subdivisions, the average age at death during the census year for all persons, and for those dying at 15 years of age and upward, by sex, color, general nativity, and parent nativity:

AVERAGE AGE AT DEATH BY COLOR AND NATIVITY.

COLOR AND GENERAL NATIVITY.	REGISTRATION RECORD.		REGISTRATION CITIES.		REGISTRATION STATES.		CITIES IN REGISTRATION STATES.		RURAL PART OF REGISTRATION STATES.		CITIES IN OTHER STATES.	
	All ages.	15 years and over.	All ages.	15 years and over.	All ages.	15 years and over.	All ages.	15 years and over.	All ages.	15 years and over.	All ages.	15 years and over.
Aggregate	35.2	52.8	32.6	50.6	36.8	54.8	32.4	51.5	44.7	59.5	32.8	49.8
Males	34.5	52.2	31.8	49.8	35.8	54.3	31.0	50.5	44.3	59.8	32.6	49.2

Males	34.9	57.1	27.6	52.6	37.2	58.6	29.1	54.6	44.2	61.1	24.3	48.1
Females	37.3	57.3	31.1	54.4	39.6	58.8	33.3	57.0	45.1	60.0	26.1	48.0
One or both parents foreign	15.0	38.5	13.9	37.2	14.6	38.6	13.0	36.9	20.1	43.0	17.2	37.9
Males	14.6	38.3	13.5	36.9	14.2	38.5	12.7	36.6	19.5	43.3	17.0	37.9
Females	15.5	38.6	14.2	37.4	15.1	38.8	13.4	37.2	20.8	42.6	17.4	38.0
Foreign	55.7	56.7	54.8	55.8	55.2	56.4	53.4	54.7	60.2	61.4	56.5	57.1
Males	55.0	56.0	53.9	54.9	54.7	56.0	52.6	53.9	60.5	61.6	55.4	55.9
Females	56.5	57.6	55.9	56.9	55.6	56.9	54.3	55.6	59.8	61.1	58.1	58.8
Colored	28.0	44.1	27.8	43.7	27.6	46.3	26.6	45.1	31.4	51.0	28.2	43.4
Males	27.8	43.7	27.6	43.3	27.5	46.5	26.3	44.9	32.3	52.9	27.9	42.9
Females	28.2	44.5	28.1	44.2	27.6	46.1	26.9	45.3	30.6	49.1	28.4	44.0

Considering the average age at death of all decedents, the figures in the preceding table show that the average age of native whites of native parents in the entire registration area was 36 years (males, 34.9; females, 37.3), and that it was more than twice as great as the average age of native whites having one or both parents foreign (15). The average age of the colored was 28 years, and that of the foreign whites was 55.7 years. The average age for this class is greatly raised by the small proportion of infants and children subject to death.

The average age was highest for all classes in the rural districts of the registration states. In all classes the average age of females was slightly greater than that of males, except for the foreign whites and the colored in the rural districts of the registration states.

For those dying at 15 years of age and over, the average age was also greatest in the aggregate for the native whites of native parents (57.2 years). For the native whites having one or both parents foreign it was 38.5 years; for the colored, 44.1 years; and for the foreign whites, 56.7 years. For the last-mentioned class the average at 15 years and over was but 1 year more than the average at all ages, which shows the effect of the small number of deaths in this class below 15 years.

Further information as to the comparative longevity, in this country, of white persons of different nationalities is contained in the following table, which shows, for the registration area and its subdivisions, the average age, for all persons, and for those dying at 15 years of age and upward, by sex and birthplaces of mothers:

AVERAGE AGE AT DEATH, BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS (WHITES ONLY).	REGISTRATION RECORD.		REGISTRATION CITIES.		REGISTRATION STATES.		CITIES IN REGISTRATION STATES.		RURAL PART OF REGISTRATION STATES.		CITIES IN OTHER STATES.

Taking the deaths at all ages in the entire registration area, the average ages at death of white persons having mothers born in the specified countries were as follows: Scotland, 48.6; France, 45.7; England and Wales, 45.1; Ireland, 42.8; Germany, 41.1; United States, 34.2; Bohemia, 26.7; Scandinavia, 26.1; "Other foreign" countries, 24.9; Canada, 24.7; Russia, 17.4; Hungary, 17.4; Poland, 14.5; and Italy, 13.9.

For those dying at 15 years of age and over, the average ages at death of white persons having mothers born in the specified countries, stated in the order of their magnitude, were as follows: Scotland, 57.7; England and Wales, 56.9; United States, 56.4; France, 56.4; Germany, 54.2; Ireland, 51.7; Bohemia, 48.2; "Other foreign" countries, 48.1; Canada, 46.8; Poland, 44.8; Scandinavia, 44.6; Russia, 44; Italy, 41.5; and Hungary, 41.4.

The following table shows, for each specified disease and class of diseases, the average ages at death in the registration area during the census years 1890 and 1900, for all persons, and for those dying at 15 years of age and over:

AVERAGE AGE AT DEATH, 1900 AND 1890, BY CAUSES.

CAUSE OF DEATH.	ALL AGES.		15 YEARS AND OVER.	
	1900	1890	1900	1890
All causes	35.2	31.1	52.8	50.7
General diseases—A	18.5	13.7	49.6	43.2

Cancer and tumor	57.2	56.1	57.8	56.9
Diseases of the nervous system	39.9	31.7	60.2	58.9
Apoplexy and paralysis	63.2	62.5	64.5	64.3
Tetanus and trismus nascentium	11.7	5.6	36.8	38.9
Convulsions	2.5	2.5	40.0	41.3
Diseases of the circulatory system	53.6	50.5	58.9	57.1
Heart disease and dropsy	54.3	52.7	58.8	57.4
Angina pectoris	59.5	58 2	59.8	58.9
Aneurism	49.2	48.5	49.8	48.9
Diseases of the respiratory system	30.7	30.0	55.2	52.9
Pneumonia	31.5	33.6	53.2	50.2
Bronchitis	28.9	27.3	65.9	61.7
Diseases of the digestive system	37.8	35.3	49.7	50.5
Diseases of the stomach	44.1	40.9	56.2	54.4
Obstruction of the bowels	39.7	37.1	52.1	50.3
Hernia	52.8	52.3	58.8	58.5
Diseases of the liver	48.2	47.9	54.6	53.7
Peritonitis	31.8	33.2	38.3	39.6
Diseases of the urinary system, exclusive of Bright's disease	50.5	49.7	59.8	55.9
Bright's disease	53.7	51.5	55.1	52.5
Diseases of the female organs of generation	39.1	41.8	39.5	42.0
Affections connected with pregnancy	29.9	29.6	29.9	29.6
Diseases of the bones and joints	32.3	27.5	44.7	41.8
Accidents and injuries	34.8	34.1	42.5	42.3
Suicides	43.6	44.1	43.6	44.2
Other accidents and injuries	33.5	32.9	42.3	42.0

These figures show an increase for the decade of 4.1 years in the average age at death in the entire registration area. This, however, should not be taken to mean an absolute increase of 4.1 years in the "expectation of life," as it is termed, although a decrease in the general death rate, and an increase in the average age at death, undoubtedly indicate an increase in the expectation of life, the extent of which can be determined only by the construction of accurate life tables, the data for which are insufficient. The figures given simply mean that of the number of decedents reported at both censuses, those dying in 1900 were, upon the average, 4.1 years older at death.

Concerning the general increase in the expectation of life in recent years that is indicated by the general decrease in the death rate in the principal countries, the following figures relating to the increase in expectation of life in England, and are based upon the English Life Tables for 1838–1854, 1871–1880, and 1881–1890, are cited from Newsholme's "Vital Statistics."[1]

INCREASE IN EXPECTATION OF LIFE (ENGLAND).

AGE.	MALES.		FEMALES.	
	1871–1880 compared with 1838–1854.	1881–1890 compared with 1871–1880.	1871–1880 compared with 1838–1854.	1881–1890 compared with 1871–1880.
0	1.44	2.31	2.77	2.56
5	1.16	1.88	2.75	1.84
10	0.55	1.40	2.09	1.34
15	0.23	1.06	1.73	0.92
20	.....	0.87	1.37	0.76
25	.....	0.60	0.94	0.52
30	.....	0.42	0.60	0.35
35	.....	0.27	0.31	0.26
40	.....	0.12	0.12	0.14

Above the last age noted in each column the expectation of life decreased slightly. Taking the mean of the figures given for males and females, there is also shown an increase in the expectation of life, at birth, of 2.11 years for all persons in the second period over the first, 2.44 years in the third period over the second, and 4.54 years in the third period over the first. It also appears that the increase in the expectation of life in the period 1881–1890 as compared with 1838–1854 extended from birth to 25 years of age for males, and to 40 years for females.

[1] Vital Statistics, A. Newsholme, 1899, page 307.

Referring to the table on page lxxix, giving the death rates at each age in the registration area of the United States in 1900 and 1890, with the decreases and increases in the rates, it will be noted that the decrease in the rates in the registration area since 1890 extends to 60 years.

INFANTILE MORTALITY.

The death rates of children under 1 year furnish an important means of estimating the healthfulness and sanitary condition of different localities or of different classes of population. The data for consideration in this connection consist of the population, the deaths under 1 year of age, and the births, during the census year.

Owing to the deficiency in the population reported as under 1 year of age, the death rates of infants, computed upon the population at this age, are much too high, and the birth rates are much too low, but the defects in this direction in 1890 and 1900, as remarked in the section relating to births, appear to have been very similar in extent, and the results are fairly comparable.

The following table shows, for the registration area and its subdivisions, the death rate under 1 year of age during the census year, by color, general nativity, and parent nativity, per 1,000 of population under 1 year of age:

DEATHS UNDER 1 YEAR OF AGE PER 1,000 OF POPULATION.

COLOR, GENERAL NATIVITY, AND PARENT NATIVITY.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
Aggregate	165.4	179.9	159.3	184.7	117.4	175.2
White	158.0	171.1	156.0	180.4	116.0	161.4
Native[1]	158.0	171.2	156.0	180.5	116.0	161.4
Both parents native[1]	148.8	175.1	144.8	181.5	110.1	165.9
One or both parents foreign[1]	164.4	175.0	166.2	180.0	126.2	153.0
Foreign[1]	149.0	159.9	152.9	168.8	114.6	132.0
Colored	371.5	387.0	343.8	397.2	218.9	383.8

[1] Deaths of unknown nativity and parent nativity distributed.

These figures show that the death rate was highest in the cities in the registration states (184.7), and lowest in the rural districts of the same states (117.4).

By classes, the death rate was least among white infants of native parents (148.8), and greatest among the colored (371.5). The rate for the native white infants of foreign parents was 164.4.

The table following gives, for the same areas and classes, the number of deaths of infants under 1 year of age per 1,000 births during the census year.

Comparing this table with the one preceding, there appears to be but little difference in the ratios of the deaths of infants to the population under 1 year of age and to the number of births. In both cases the ratios are too high, owing to the deficiency in the population under 1 year of age, which constitutes the principal factor in estimating the births.[1]

[1] See Section III, relating to births.

DEATHS UNDER 1 YEAR OF AGE PER 1,000 BIRTHS.

[1] Deaths of unknown nativity and parent nativity distributed.

SECTION VIII.

CORRECTED DEATH RATES.

In Section IV general death rates resulting from the division of the deaths by the aggregate population were given for the registration areas, and mention was made of the fact that such rates were very largely dependent upon the proportions of certain classes of population represented.

The generally accepted proposition that the difference in the gross death rates is due principally to differences in the age distribution of the population, is true only so far as it applies to places having populations that are naturally subject to an approximately similar mortality. Where different races or classes of population that have widely different rates of mortality, under normal conditions as to age distribution, are present in large numbers, any correction of the aggregate death rate that is based solely upon an accepted standard of age distribution as applied to the total population is inadequate.

In the Eleventh Census report upon vital and social statistics, corrected death rates were given for certain cities. These were calculated as recommended by the International Institute of Statistics, at the meeting at Berne in 1895, by using the age distribution of the population of Sweden, in 5 groups, as the standard, which was applied to the aggregate population of the cities for which such rates were computed.

Discussing the results it was then said, "In the large cities of the United States a correction of gross death rates for peculiarities of race distribution of the population of each city would be much more important than the above corrections for age distribution, but it seems hardly worth while to indicate the relative healthfulness of different cities by rates for the total population only."[1]

In order to compare death rates in different localities in this country, with each other, and with those of other countries, two distinct standards are necessary. For internal comparison of the death rates of native classes, the plan has been adopted of using the age distribution of the native whites of native parentage in the whole registration area as the standard. In applying this method the total population in the locality of each of the three elemental classes (native white of native parentage, native white of foreign parentage, and colored) is multiplied successively by the standard percentages representing the five age groups, and the standard population at each age, in each class, is thus found. The standard population thus distributed is then multiplied by the actual death rate of each class at the given age, and a corrected number of deaths obtained representing the number that would have occurred in each class at the given rate if the age distribution of the population agreed with the standard fixed.

The age groups used for this purpose, and the percentages of native white population of native parents in each age group in the entire registration area, are as follows:

	AGES.				
	Under 5.	5 to 19.	20 to 39.	40 to 59.	60 and over.
Per cent of population	11.4	30.3	31.2	18.3	8.8

The process described gives the data for comparing the death rates of the native classes in the several areas.

No correction for age distribution can be made that will give an accurate indication of the relative death rates of native and foreign whites, as the period of highest mortality for the latter class occurred previous to their arrival in this country, and deaths of infants and young children, which raise the death rates of the native classes, are not represented in the case of the foreign born at all. If a correction is sought upon the basis of the age distribution of the native whites of native parents, a large foreign population will be thrown into the age group under 5 years, which has its death rate diminished by the absence of deaths of infants and young children, and this would give an entirely erroneous and much too small number of deaths of foreign whites in this age group, with a corresponding decrease in the general death rate for this class, so obtained.

The fairest comparison of these classes is obtained by using as the standard the age distribution of the foreign whites in the registration area, which is as follows:

	AGES.				
	Under 5.	5 to 19.	20 to 39.	40 to 59.	60 and over.
Per cent of population	0.5	10.6	45.0	30.9	13.0

[1] Eleventh Census, Vital Statistics, Part 2, page 30.

The computations described above have been made for the registration area and its subdivisions, the registration states, and each city of 50,000 or more population in which nativity and parent nativity were reported for the deaths, and the results are given in the following table:

CORRECTED DEATH RATES OF EACH CLASS, BASED UPON A STANDARD DISTRIBUTION AS TO AGE.

AREAS.	NATIVE WHITE AND COLORED.						NATIVE WHITE OF NATIVE PARENTS, AND FOREIGN WHITE.			
	Uncorrected rates.			Corrected rates—on basis of the age distribution of the native white of native parents.			Uncorrected rates.		Corrected rates—on basis of the age distribution of the foreign white.	
	Native white.		Colored.	Native white.		Colored.	Native white of native parents.	Foreign white.	Native white of native parents.	Foreign white.
	Both parents native.	One or both parents foreign.		Both parents native.	One or both parents foreign.

[1] Coextensive with District of Columbia.

The preceding table shows that when the death rates of the native classes are computed upon the age distribution of the native whites of native parents in the entire registration area, the rate for the native whites having one or both parents foreign (18.7) is considerably higher than for those with both parents native (16.4), and is increased by 2.1 per 1,000 over the uncorrected rate (16.6). The rate for the colored (34.7) is also increased over the uncorrected rate (29.6), and is more than twice the rate for the native whites of native parents.

Making the proper corrections for the age distribution of the foreign whites, the corrected death rate of the native whites of native parents (15.9) is 0.7 per 1,000 less than the uncorrected rate (16.6), and is 3.7 per 1,000 less than that of the foreign whites. As previously stated and explained, this does not adequately show the actual difference in the death rates of these two classes. The death rate of the foreign whites is higher at each age, except in the age group under 5 years, in which group it is only apparently lower on account of the absence of deaths of infants and young children. Omitting deaths under 5 years of age, the death rate of native whites of native parents is 13.3, and that of foreign whites is 19.4, per 1,000.

SECTION IX.

CONJUGAL CONDITION IN RELATION TO DEATHS.

Table 1, Part I, shows deaths in the United States and the registration area and its subdivisions during the census year ending May 31, 1900, from certain diseases and classes of diseases, by conjugal condition, color, age, and birthplaces of mothers, with distinction of sex.

Of 1,036,863 persons dying in the United States during the census year, for whom the conjugal condition was reported, 378,124 were persons under 15 years of age, and 7,415 of unknown age. Of those 15 years of age and over whose ages are known, 144,607 were reported as single, 324,913 as married, 138,948 as widowed, 1,840 as divorced, and 41,016 as of unknown conjugal condition.

In the registration area, of the 510,438 decedents for whom the conjugal condition was reported, 176,545 were persons under 15 years of age, and 1,839 of unknown age. Of those 15 years of age and over whose ages are known, 75,402 were reported as single, 164,050 as married, 82,387 as widowed, 892 as divorced, and 9,323 as of unknown conjugal condition.

The following table shows, for the registration area and its subdivisions, the death rates of the single, the married, and the widowed, by color and sex.

DEATH RATES BY CONJUGAL CONDITION, COLOR, AND SEX.

CONJUGAL CONDITION.	COLOR.			
	White.		Colored.	
	Males.	Females.	Males.	Females.
Registration record:				
Single	16.6	13.7	32.7	29.6
Married	16.4	13.1	23.8	20.3
Widowed	62.6	43.6	49.1	34.4
Registration cities:				
Single	18.1	14.6	34.1	30.5
Married	16.7	13.4	24.5	20.7
Widowed	63.1	41.5	49.7	34.4
Registration states:				
Single	16.1	13.6	27.7	26.7

Widowed	64.5	47.5	51.7	36.4
Cities in registration states:				
Single	18.9	15.2	31.9	29.3
Married	16.1	13.3	20.9	17.5
Widowed	67.3	45.9	56.4	37.2
Rural part of registration states:				
Single	11.9	10.9	17.6	19.4
Married	15.7	12.3	15.2	15.3
Widowed	61.6	49.9	42.2	33.3
Registration cities in other states:				
Single	17.4	13.9	34.7	30.9
Married	17.3	13.4	25.6	21.7
Widowed	58.8	37.0	48.1	33.7

The following table shows, for the registration area and its subdivisions, the death rates of the single, the married, and the widowed in each of 4 age groups, per 1,000 of corresponding population, by sex:

DEATH RATES AT CERTAIN AGES, BY CONJUGAL CONDITION AND SEX.

CONJUGAL CONDITION.	AGE.							
	15 years and over.		15 to 44 years.		45 to 64 years.		65 years and over.	
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.
Registration record:								
Single	11.6	8.2	9.4	6.2	33.3	21.8	107.8	88.7
Married	16.7	13.4	8.1	9.1	20.4	17.4	75.0	65.5
Widowed	61.9	43.0	19.6	12.2	37.6	24.8	116.4	88.7
Registration cities:								
Single	12.4	8.2	10.3	6.3	38.6	22.9	119.9	95.3
Married	17.1	13.7	8.9	9.6	23.1	19.2	82.3	75.6
Widowed	62.2	40.9	21.6	12.7	43.3	26.2	123.2	90.5
Registration states:								
Single	10.4	8.1	8.4	5.7	28.3	21.2	96.1	84.4
Married	16.0	12.9	7.3	8.7	18.3	16.1	70.1	58.1
Widowed	65.2	47.2	20.3	12.8	36.2	25.9	114.8	90.1
Cities in registration states:								
Single	11.5	7.9	9.6	5.8	35.7	22.7	104.7	91.3
Married	16.3	13.4	8.4	9.5	22.0	18.6	77.2	65.7
Widowed	67.0	45.6	25.4	14.2	46.6	29.4	126.2	95.3
Rural part of registration states:								
Single	8.8	8.4	6.6	5.6	20.1	18.9	90.6	77.6
Married	15.7	12.3	5.5	7.4	14.2	13.6	65.9	53.4
Widowed	61.3	49.6	12.2	8.9	23.2	19.5	106.7	85.2
Registration cities in other states:								
Single	13.2	8.5	10.8	6.9	41.0	23.2	132.5	101.0
Married	17.9	14.0	9.4	9.7	24.1	19.8	87.2	85.8
Widowed	57.7	36.6	18.6	11.6	40.0	23.2	120.2	85.7

This table shows that in persons 15 to 44 years of age the death rate of single males (9.4) was higher than that of married males (8.1) or of single females (6.2). At these ages the death rate of married females (9.1) was higher than that of married males (8.1), but was less than that of single males (9.4).

In the age groups above 45 years, the death rates of the single were higher than those of the married, in both sexes, and the death rates of the males were higher than those of the females of each condition.

The following table shows, for the registration area, the death rates of the single, the married, and the widowed, from certain diseases and classes of diseases per 100,000 of population, by color and sex.

DEATH RATES FROM CERTAIN DISEASES, BY COLOR AND SEX.

COLOR AND CAUSE OF DEATH.	SINGLE.		MARRIED.		WIDOWED.	
	Males.	Females.	Males.	Females.	Males.	Females.

In considering the figures given in this table, it must be borne in mind that the married and the widowed classes include persons of more advanced ages than the single class, and that the death rates from those diseases to which persons beyond middle age are specially liable will be less among the single than among the married or the widowed.

The following table shows, for the registration area, the death rates of the single, the married, and the widowed, in each of four age groups, from certain diseases and classes of diseases, per 100,000 of population, by sex:

DEATH RATES FROM CERTAIN CAUSES, BY AGE AND SEX.

CAUSE OF DEATH AND CONJUGAL CONDITION.	REGISTRATION RECORD.							
	15 years and over.		15 to 44 years.		45 to 64 years.		65 years and over.	
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.
Consumption:								
Single	309.8	225.2	292.2	223.4	565.3	235.6	604.1	296.0
Married	215.5	216.4	208.3	237.6	223.1	158.7	244.2	236.1

Widowed	665.1	300.6	123.7	100.7	440.4	250.2	1,263.8	506.6
Diseases of the female organs of generation:								
Single	.....	9.8	.....	8.5	.....	28.9	.....	14.6
Married	.....	21.4	.....	22.7	.....	18.7	.....	16.8
Widowed	.....	19.9	.....	30.2	.....	15.9	.....	18.1
Suicides:								
Single	18.0	7.2	15.2	7.0	56.0	10.7	77.3	12.5
Married	25.2	7.1	18.2	7.4	35.5	6.2	40.8	7.7
Widowed	64.3	7.8	51.5	7.8	67.6	6.9	68.5	9.1

Death rates in relation to population can not be computed for the United States as a whole, owing to the incompleteness in the return of deaths, and the only comparisons that can be made between the registration area and the United States are such as may be derived from the relative proportions of deaths in the two areas to the total number of deaths.

The following table shows, for the United States, and the registration area, the number of deaths of the single, the married, and the widowed, at certain ages, from certain diseases and classes of diseases, per 1,000 deaths from known causes, of persons of corresponding age and conjugal condition, by sex:

PROPORTIONS OF DEATHS FROM CERTAIN CAUSES PER 1,000 DEATHS FROM KNOWN CAUSES.

CAUSE OF DEATH AND CONJUGAL CONDITION.	UNITED STATES.						REGISTRATION RECORD.					
	15 to 44 years.		45 to 64 years.		65 years and over.		15 to 44 years.		45 to 64 years.		65 years and over.

The relation of conjugal condition to individual causes of death is discussed in Section XII.

SECTION X.

MONTH OR SEASON IN RELATION TO DEATHS.

Table 13, Part II, shows deaths in the United States, the registration area and its subdivisions, and in each grand group, during the census year ending May 31, 1900, at certain ages and from certain specified diseases, and classes of diseases, by months.

The following table shows, for the registration area, the death rates in each month, at all ages, and in each of three age groups, per 100,000 population of corresponding ages, by sex:

DEATH RATES AT CERTAIN AGES, BY MONTHS.

MONTHS.	ALL AGES.		UNDER 5.		5 TO 59 YEARS.		60 YEARS AND OVER.	
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.
June	140.8	121.6	447.8	380.2	74.9	63.4	481.9	417.1
July	168.3	142.8	675.9	570.5	78.6	64.3	496.4	430.2
August	158.0	138.4	583.7	512.5	76.6	64.9	507.1	444.6
September	144.6	123.9	486.6	411.6	73.5	61.9	497.5	420.0
October	139.9	120.9	380.6	309.4	78.2	67.5	531.7	459.4
November	134.2	116.7	334.9	290.3	77.4	64.8	526.6	457.2
December	148.1	130.0	383.1	329.3	82.9	69.6	590.7	532.8
January	164.3	144.3	447.3	366.2	89.4	76.6	655.8	597.2
February	155.9	141.0	451.7	375.2	82.8	74.1	604.2	568.6
March	192.5	173.3	528.3	429.2	100.8	87.7	810.9	778.6
April	185.5	167.3	500.3	405.5	98.4	85.6	778.3	757.2
May	163.1	143.5	449.9	371.2	89.6	77.8	631.1	566.5

This table shows that at all ages the death rates of both males and females were highest in March (males, 192.5; females, 173.3) and in April (males, 185.5; females, 167.3), and were lowest in October (males, 139.9; females, 120.9) and in November (males, 134.2; females, 116.7).

In the age group under 5 years the death rates of both males and females were highest in July (males, 675.9; females, 570.5) and in August (males, 583.7; females, 512.5), and were lowest in October (males, 380.6; females, 309.4) and in November (males, 334.9; females, 290.3).

At 5 to 59 years the rates for both males and females were highest in March (males, 100.8; females, 87.7) and in April (males, 98.4; females, 85.6), and were lowest in June (males, 74.9; females, 63.4) and in September (males, 73.5; females, 61.9).

For those 60 years of age and over the highest death rates of both males and females occurred in the same months as at 5 to 59 years, but the difference in the mortality in the different months is much more marked, the highest rates being as follows: In March (males, 810.9; females, 778.6) and in April (males, 778.3; females, 757.2). The lowest rates were in June (males, 481.9; females, 417.1) and in September (males, 497.5; females, 420.0).

The following table shows, for the registration states, with distinction of cities and rural districts, the death rates in each month, at all ages, in each of three age groups, per 100,000 population of corresponding ages:

DEATH RATES AT CERTAIN AGES, BY MONTHS.

MONTHS.	REGISTRATION STATES.				CITIES IN REGISTRATION STATES.				RURAL PART OF REGISTRATION STATES.			
	All ages.	Under 5.	5 to 59.	60 and over.	All ages.	Under 5.	5 to 59.	60 and over.	All ages.	Under 5.	5 to 59.	60 and over.
June	123.2	369.5	62.3	428.0	135.5	461.4	69.6	467.1	105.6	224.3	51.2	396.3
July	150.8	611.2	64.4	438.8	174.0	787.9	72.5	486.0	117.3	382.0	52.2	400.6
August	145.7	552.2	64.3	451.4	153.6	629.8	69.3	470.3	134.3	429.7	56.7	436.1
September	132.0	455.3	60.8	441.5	137.9	504.9	67.1	462.9	123.4	376.9	51.3	424.1
October	125.0	330.0	65.5	467.3	132.7	392.7	72.9	496.0	113.8	231.1	54.4	444.1
November	121.1	297.0	64.6	470.5	130.4	361.5	72.5	517.7	107.8	195.0	52.8	432.2
December	134.5	335.4	70.3	532.1	145.1	405.8	79.9	581.7	119.2	224.0	55.7	491.9
January	146.8	378.9	74.9	580.4	157.9	452.8	85.3	635.9	130.7	262.2	59.3	535.5
February	143.6	389.3	72.4	554 2	157.2	467.8	82.8	633.0	123.9	265.2	56.8	490.3
March	183.9	461.5	90.0	786.8	199.8	552.0	102.5	917.5	161.1	318.5	71.1	681.0
April	174.5	431.9	86.5	741.7	182.5	510.4	96.8	783.2	163.0	307.7	71.0	708.0
May	148.0	378.6	77.1	574.9	154.7	443.4	84.9	606.2	138.4	276.1	65.5	549.6
Unknown	0.3	0.3	0.1	0.9	0.1	0.2	.....	0.2	0.6	0.6	0.2	1.6

It will be seen from this table that in the aggregate the death rate was highest in the cities in March (199.8), and in the rural districts in April (163). It was lowest in the cities in November (130.4), and in the rural districts in June (105.6).

For those under 5 years of age it was highest in the cities in July (787.9), and in the rural districts in August (429.7), and was lowest in both cities and rural districts in November (cities, 361.5; rural districts, 195).

At 5 to 59 years it was highest in both cities and rural districts in March (cities, 102.5; rural districts, 71.1), and was lowest in the cities in September (67.1), and in the rural districts in June (51.2).

At 60 years and over it was highest in the cities in March (917.5), and in the rural districts in April (708); and was lowest in the cities in September (462.9), and in the rural districts in June (396.3).

The following table shows the proportions of deaths in each month at certain ages, per 1,000 deaths in known months at the same ages, in the United States, and in the registration area.

NUMBER OF DEATHS IN EACH MONTH PER 1,000 IN KNOWN MONTHS.

MONTHS.	ALL AGES.		UNDER 5.		5 TO 59 YEARS.		60 YEARS AND OVER.	
	United States.	Registration record.	United States.	Registration record.	United States.	Registration record.	United States.	Registration record.
June	67.0	73.7	72.4	79.5	66.8	74.3	60.6	66.4
July	79.5	87.3	101.9	119.7	72.3	76.6	64.9	68.4
August	82.9	83.3	104.1	105.4	76.6	76.0	68.2	70.3
September	76.5	75.4	89.1	86.2	73.7	72.8	65.8	67.6

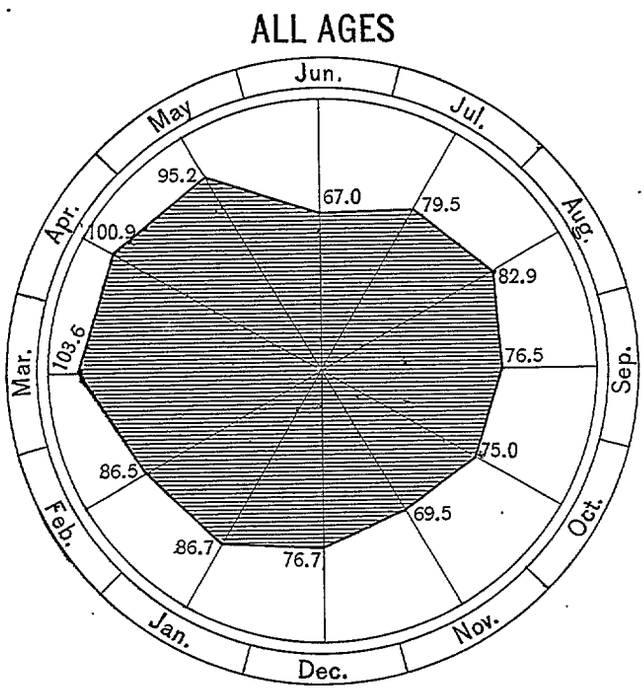
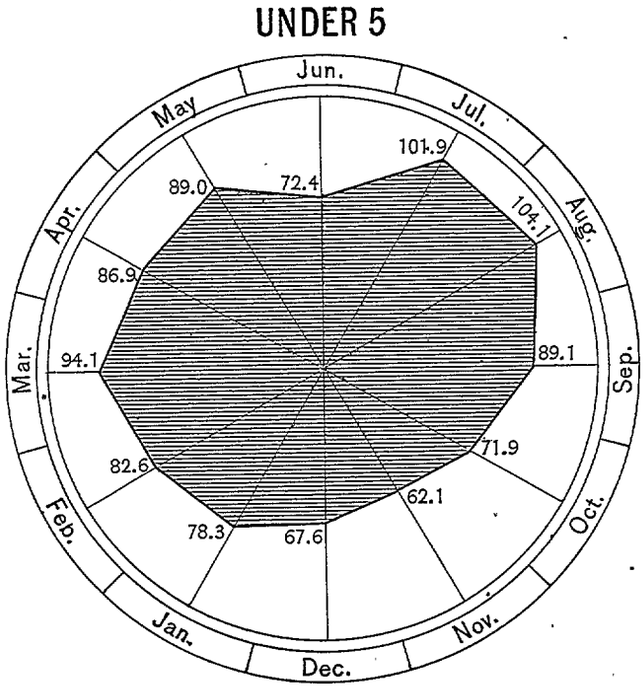
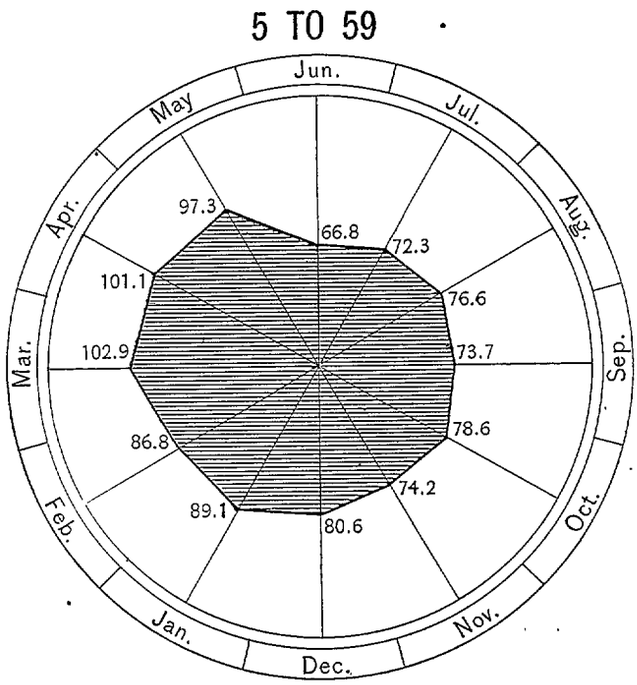
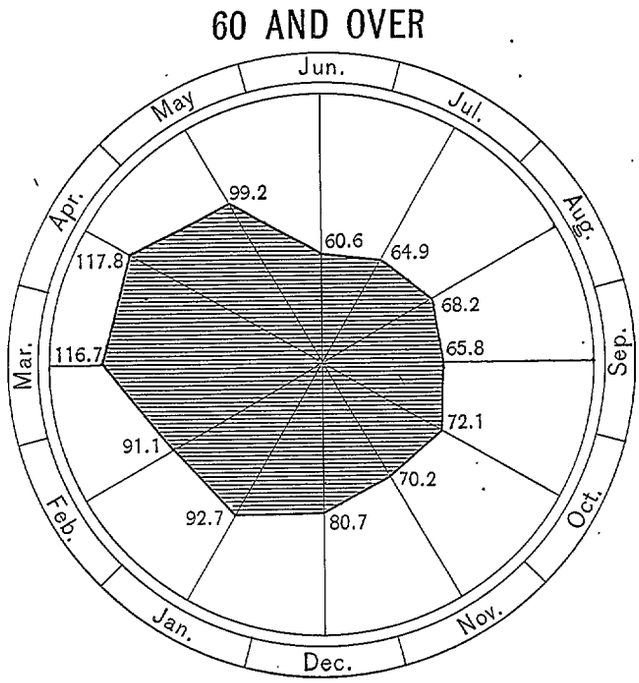
November	69.5	70.5	62.1	60.1	74.2	76.3	70.2	72.5
December	76.7	78.1	67.6	68.4	80.6	81.9	80.7	83.0
January	86.7	86.7	78.3	78.0	89.1	89.1	92.7	92.5
February	86.5	83.5	82.6	79.3	86.8	84.4	91.1	86.7
March	103.6	102.8	94.1	91.8	102.9	101.3	116.7	117.5
April	100.9	99.3	86.9	86.8	101.1	99.0	117.8	113.6
May	95.2	86.2	89.0	78.7	97.3	90.0	99.2	88.4

The proportions of deaths in each month, and the relative proportions at the different ages, in the United States, given in the preceding table are shown graphically in the following diagrams:









The relation of month or season to locality is shown very fully in Section XI.

The following table shows, for the registration states, the death rates due to certain diseases and classes of diseases in each month, per 100,000 of population.

The relation of month or season to causes of death is shown very fully in the discussion concerning each cause, in Section XII.

DEATH RATES FROM CERTAIN DISEASES, BY MONTHS.

SECTION XI.

LOCALITY IN RELATION TO DEATHS.

Differences in climate, occasioned by meteorological conditions, latitude, altitude, and topography, have a marked influence on the mortality in different localities, which is also affected by the density and distribution of the population, by color or race, age, sex, and occupation, as well as by the liability to certain diseases in epidemic form.

In the previous sections the relations of sex, age, and color or race to the death rates, in the registration states and cities, have been presented very fully. States, however, are political divisions only, and their boundaries are not fixed with reference to any of the agencies affecting the health of the population. The peculiar physical characteristics of different sections of the country which influence the mortality are, therefore, best shown by taking the county as the unit and grouping together the counties in each state having similar characteristics, forming what are specified as "state groups," for which statistics are presented in various relations.

The subdivision of the country into state and grand groups is shown in Plate No. 1 (Frontispiece).

State groups of generally similar physical characteristics are then grouped together, forming "grand groups." The composition of the state and grand groups is given in detail in the appendix to this report, being the same as at the Tenth Census (1880) and the Eleventh Census (1890). The division into groups was made by Mr. Henry Gannett, geographer of the Tenth, Eleventh, and Twelfth censuses, and his description of the principal characteristics of the grand groups—21 in number—is given below.

Following the principle stated in the introductory section of this discussion, death rates in relation to population are only given for registration areas. Of the 21 grand groups, 1 and 5 consist wholly of registration counties, and 7, 8, and 19 are partly of registration counties. In the other grand groups the only registration areas included are the registration cities located therein. These are specified in the descriptive matter given for each grand group.

In the nonregistration localities the only comparable data are those derivable from the incomplete returns of deaths, made by the enumerators. These consist of the proportions of deaths from different causes to the total deaths from all causes, the proportion at each age to the total at all ages, etc., which are not so valuable as death rates in relation to population, but are given as the best approximation to the relative frequency of certain fatal diseases in the different localities, obtainable from the data. They are at least as accurate as death rates based upon the same imperfect returns would be, and by using them instead of the latter the erroneous use of defective death rates is prevented to that extent.

The number of deaths from each tabulated cause in each state, state group, and registration city is given in Table 7, Part II.

The number of deaths from each disease and class of diseases, by sex and age, in each state, and each state group of the registration states, is given in Table 8, Part II.

The number of deaths at all ages, under 1 and under 5 years, with the deaths from certain principal causes, by color, general nativity, and parent nativity, in each state, each group in the registration states, and in each registration city, is given in Table 19 of this volume. This table also gives, for registration areas, the death rates at all ages, under 1 and under 5 years, per 1,000 of corresponding population.

The proportions of deaths from each disease and class of diseases in each grand group, in the aggregate, and for the cities and rural districts, with distinction of sex, are given in Table 26 of this volume.

In the following remarks concerning the several grand groups the proportions of deaths due to the principal causes are compared with the average proportions from the same causes in the United States, as a whole.

Grand Group 1.—North Atlantic Coast Region.

This group includes a strip of land from 50 to 75 miles wide along the coast of Maine, New Hampshire, Massachusetts, Rhode Island, and Connecticut. The surface is mainly undulating and hilly, becoming less varied toward the south. The coast is bold and rocky in Maine, but mostly sandy and low in Massachusetts, Rhode Island, and Connecticut. There is comparatively little swamp or undrained land. The mean annual temperature is 40° to 50° F. The mean annual rainfall is from 40 to 50 inches. The elevation ranges up to 500 feet, sloping toward the shore.

In this group the entire area is classed as "registration" and the death rates from certain principal causes in each county are given in Table 22 of this volume.

The registration cities in this group are the following: Amesbury town, Mass.; Ansonia town, Conn.; Arlington town and Attleboro town, Mass.; Augusta and Bath, Me.; Beverly, Mass.; Biddeford, Me.; Boston, Mass.; Bridgeport, Conn.; Brockton, Brookline town, and Cambridge, Mass.; Central Falls, R. I.; Chelsea, Mass.; Concord, N. H.; Danbury town, Conn.; Danvers town, Mass.; Dover, N. H.; Everett, Fall River, Framingham town, and Gloucester, Mass.; Greenwich town, Conn.; Haverhill and Hyde Park town, Mass.; Laconia, N. H.; Lawrence, Lowell, Lynn, and Malden, Mass.; Manchester, N. H.; Marlboro, Medford, and Melrose, Mass.; Meriden town and Middletown town, Conn.; Nashua, N. H.; Natick town, Mass.; Naugatuck town, Conn.; New Bedford and Newburyport, Mass.; New Haven town and New London, Conn.; Newport, R. I.; Newton, Mass.; Norwalk town and Norwich town, Conn.; Pawtucket, R. I.; Peabody town and Plymouth town, Mass.; Portland, Me.; Portsmouth, N. H.; Providence, R. I.; Quincy and Revere town, Mass.; Rochester, N. H.; Rockland, Me.; Salem and Somerville, Mass.; Stamford town and Stonington town, Conn.; Taunton and Wakefield town, Mass.; Wallingford town, Conn.; Waltham, Mass.; Waterbury town, Conn.; Watertown town, Weymouth town, and Woburn, Mass.; and Woonsocket, R. I.

The total population was 3,824,576, of which 2,642,750, or more than two-thirds, were found in the cities of 8,000 inhabitants and upward, specified above. The area was 19,280 square miles, and the density of population was 198.4 persons to the square mile, an increase of 32.6 persons per square mile over 1890.

Females were in excess in this group, the population being divided into 51.1 per cent females and 48.9 per cent males.

The colored population was insignificant, only 1.4 per cent being found in this class.

The principal causes in which the proportions of deaths were higher than the average for the United States, in both cities and rural districts, were heart disease, cancer, apoplexy, bronchitis, influenza, and diabetes. Diarrheal diseases, paralysis, inflammation of the brain and meningitis, measles, whooping cough, and cerebro-spinal fever caused more than the average proportions of deaths in the cities, but less than the average in the rural districts. The proportions of deaths due to Bright's disease, peritonitis, and suicide were above the average for the United States in the rural districts, but were below the average in the cities.

In both cities and rural districts the proportions of deaths due to consumption, pneumonia, typhoid fever, diphtheria, croup, malarial fever, diseases of the brain, rheumatism, diseases of the kidneys, and childbirth were less than the average proportions in the whole country.

Grand Group 2.—Middle Atlantic Coast Region.

This group includes a strip of land comprising the coast counties of New York, New Jersey, Delaware, Maryland, the District of Columbia, and Virginia. The climate is somewhat milder than that of Grand Group 1. The surface is low and sandy, and along the New Jersey coast are characteristic sand reefs, shoreward from which are lagoons, succeeded by extensive areas of swamp. Farther inland the country is low, nowhere rising more than 100 feet above the level of the sea. The mean annual temperature is from 45° to 50° F. in the northern portion, and from 55° to 60° in the southern portion. The mean annual rainfall is from 45 to 55 inches.

The registration cities in this group are the following: Annapolis, Md.; Atlantic City, N. J.; Baltimore, Md.; Bayonne, Bridgeton, Camden, Elizabeth, Harrison town, Hoboken, Jersey City, Millville, and Montclair town, N. J.; Mt. Vernon, N. Y.; Newark and New Brunswick, N. J.; New Rochelle and New York city, N. Y.; Norfolk, Va.; Orange, N. J.; Peekskill, N. Y.; Perth Amboy, Plainfield, and town of Union, N. J.; Washington, D. C.;[1] Wilmington, Del., and Yonkers, N. Y.

The total population of this group was 7,139,889, of which 5,292,719 were contained in the cities specified above. The area was 23,817 square miles, and the density of population was 299.8 persons to the square mile, an increase of 63.7 persons per square mile since 1890.

The distribution of the population by classes was as follows: Native white, 65 per cent; foreign white, 25.2 per cent; and colored, 9.8 per cent. The foreign white element was greatest in New York (35.3 per cent) and New Jersey (22.9 per cent). In the other states less than 10 per cent of the population was of this class. The colored element was less than 5 per cent in New York and New Jersey. It was greatest in Maryland (22.1 per cent), District of Columbia (31.3 per cent), and Virginia (51 per cent).

Females were slightly in excess in this group, the percentage being 50.2, to 49.8 per cent of males.

In both cities and rural districts in this group the proportions of deaths were above the average proportions in the United States from consumption, pneumonia, diarrheal diseases, Bright's disease, apoplexy, bronchitis, diphtheria, and hydrocephalus. The proportions due to measles, whooping cough, scarlet fever, diseases of the kidneys, and cerebro-spinal fever were greater than the average in the cities, but were less

[1] Coextensive with District of Columbia.

than the average in the rural districts, while those due to heart disease, paralysis, convulsions, and peritonitis were above the average in the rural districts but below the average in the cities.

The proportions of deaths in both cities and rural districts were less than the average from the following causes: typhoid fever, cancer, old age, inflammation of the brain and meningitis, influenza, malarial fever, croup, diseases of the brain, suicide, rheumatism, diabetes, and childbirth.

Grand Group 3.—South Atlantic Coast Region.

This group includes the coast counties of North Carolina, South Carolina, and Georgia, with extensive reefs inclosing large bays and sounds. A large proportion of the area is low and swampy. It includes those portions of the states above mentioned which lie below what is called the "fall line," that is, the line which forms the boundary of the metamorphic region. The mean annual temperature is from 60° to 65° F. The mean annual rainfall is from 50 to 60 inches. The average elevation above the sea is less than 100 feet.

The only registration cities in this group are Charleston, S. C., Savannah, Ga., and Wilmington, N. C.

The total population was 1,193,697, and the population of the cities was 131,027. The area was 41,111 square miles, and the density of population was 29 persons to the square mile, the increase in density over 1890 being 3.9 persons to the square mile.

The colored element predominated in this group, representing 53 per cent of the entire population. In the coast counties of South Carolina, contained in this group, the percentage of colored in the population was 66.2.

As in the two preceding groups there was a slight excess of females, these constituting 50.3 per cent of the population, against 49.7 per cent of males.

More than the average proportions of deaths, in both cities and rural districts were occasioned by diarrheal diseases, typhoid fever, influenza, malarial fever, whooping cough, and childbirth. The proportions were also above the average in the cities from consumption, Bright's disease, diseases of the brain, and diseases of the kidneys, but the proportions due to these causes were below the average in the rural districts.

In both cities and rural districts there were less than the average proportions of deaths from pneumonia, heart disease, cancer, old age, apoplexy, bronchitis, diphtheria, croup, convulsions, measles, scarlet fever, suicide, rheumatism, diabetes, hydrocephalus, and cerebrospinal fever.

Grand Group 4.—Gulf Coast Region.

This region includes the entire state of Florida and the coast counties of Alabama, Mississippi, Louisiana, and Texas. In Florida and Louisiana a large portion is uninhabited swamp land. The mean annual temperature is from 70° to 75° F.; the mean annual rainfall is over 55 inches. The elevation above the sea is less than 100 feet, with the exception of a small part of the interior of northern Florida, where it is from 100 to 500 feet.

The registration cities in this group are Jacksonville and Key West, Fla.; Mobile, Ala.; and New Orleans, Louisiana.

The total population of the group was 1,767,487, and that of the cities was 371,116. The area was 107,385 square miles, and the density of population was 16.5 persons to the square mile, an increase of 4.2 persons per square mile over 1890.

The colored element in this group represented 38.6 per cent of the total population, and varied but little in the state groups of which it is composed. The foreign white element was less than 6 per cent of the whole, being greater than this only in the coast counties of Texas, where it reached 11.2 per cent.

There was a slight excess of males in this group, the percentage by sex being, males, 50.9; females, 49.1.

The proportions of deaths from the principal causes in this group were generally below the average proportions in the United States. The proportions due to diarrheal diseases, typhoid fever, malarial fever, and diseases of the brain were above the average in both cities and rural districts, and those due to consumption, heart disease, Bright's disease, old age, and cerebrospinal fever were above the average in the cities but below the average in the rural districts.

Influenza, whooping cough, scarlet fever, and childbirth caused more than the average proportions of deaths in the rural districts, but less than the average proportions in the cities. For all other principal diseases the proportions were below the average in both cities and rural districts.

Grand Group 5.—Northeastern Hills and Plateaus.

Grand Groups 5, 6, and 9 include the area of highlands stretching from northeast to southwest which has generally received the name of the Appalachian region. It comprises the broken, hilly country of Maine, the White Mountains of New Hampshire and the Green Mountains of Vermont, the hills of central Massachusetts and of northern Connecticut, the Adirondacks and Catskills of New York, and the multitudinous ridges and ranges of Pennsylvania, Maryland, New Jersey, Virginia, West Virginia, the Carolinas, Tennessee, Kentucky, Georgia, and Alabama.

The Northeastern Appalachian region, or Grand Group 5, includes all that portion of Maine, New Hampshire, Massachusetts, and Connecticut not comprised in the coast strip, with all of Vermont and the northern portion (including the Adirondacks) of New York. The area is by no means all strictly mountainous country,

but includes also a large amount of hilly, broken country. It was originally covered with dense forests, which, in the settled portions, have been largely cut away. The climate is severe, being affected comparatively little by the sea, and the mean annual temperature over most of this area is less than 45° F. In some parts, although not the most thickly settled ones, it falls below 40° F. The annual rainfall is from 35 to 45 inches. The elevation is mostly above 500 feet, and in extensive areas rises to mountains from 3,000 to 5,000 and even 6,000 feet in height.

The following-named registration cities are located in this group: Adams town, Mass.; Bangor, Me.; Barre, and Bennington town, Vt.; Berlin, N. H.; Bristol town, Conn.; Burlington, Vt.; Chicopee, Clinton town, Fitchburg, and Gardner town, Mass.; Glens Falls, N. Y.; Hartford, Conn.; Holyoke, Mass.; Keene, N. H.; Leominster town, Mass.; Manchester town, Conn.; Milford town, Mass.; New Britain town, Conn.; North Adams and Northampton, Mass.; Ogdensburg, N. Y.; Pittsfield, Mass.; Rutland, Vt.; Southbridge town and Springfield, Mass.; Torrington town and Vernon town, Conn.; Ware town, Webster town, and Westfield town, Mass.; Windham town, Conn.; and Worcester, Mass.

The entire area covered by this grand group is classed as "registration," and the death rates for certain principal causes are given for each county in Table 22 of this volume.

The total population was 2,063,453, and the population of the cities was 711,419. The area was 54,163 square miles, and the density of population was 38.1 persons to the square mile, an increase over 1890 of 4.7 persons per square mile.

The foreign white population represented 20.3 per cent, in this group, and the native white population 79. The colored element was so small as to be insignificant.

The sexes were represented by 50.5 per cent of males, and 49.5 per cent of females.

The proportions of deaths reported as due to heart disease, cancer, old age, apoplexy, influenza, peritonitis, diabetes, hydrocephalus, and cerebro-spinal fever were greater than the average proportions from these causes in the United States, in both cities and rural districts. In the cities the proportions due to diarrheal diseases, inflammation of the brain and meningitis, paralysis, measles, whooping cough, scarlet fever, and rheumatism were also above the average proportions from these causes, but in the rural districts the proportions from these causes were below the average. In the rural districts the proportions from Bright's disease, bronchitis, diseases of the brain, suicide, and appendicitis were above the average, while in the cities they were below the average.

In both cities and rural districts the proportions due to consumption, pneumonia, typhoid fever, diphtheria, croup, malarial fever, diseases of the kidneys, and childbirth were lower than the average.

Grand Group 6.—The Central Appalachian Region.

This group includes the Catskill region of southeastern New York, the central portion of Pennsylvania, and the western part of New Jersey and Maryland, and consists chiefly of narrow parallel ridges, with singularly uniform crests, broken by few gaps, and rising from 1,000 to 2,000 feet above the narrow valleys separating them, which, in their turn, are from 500 to 1,000 feet above the sea. The mean annual temperature is from 40° to 45° F. The mean annual rainfall is from 35 to 40 inches.

The registration cities in this group are as follows: Altoona, Carbondale, Carlisle, and Dubois, Pa.; Frederick, Md.; Harrisburg, Hazelton, and Johnstown, Pa.; Kingston, N. Y.; Lebanon and Mahanoy City, Pa.; Middletown, N. Y.; Morristown, N. J.; Mt. Carmel, Pa.; Newburg, N. Y.; Passaic, Paterson, and Phillipsburg, N. J.; Pittston, and Plymouth, Pa.; Port Jervis, N. Y.; Pottsville, Scranton, and Steelton, Pa.; Trenton, N. J.; and Wilkesbarre and Williamsport, Pa.

The total population was 3,249,040. The population of the registration cities specified was 762,914. The area was 36,491 square miles, and the density of population was 89 persons to the square mile. The increase in density over 1890 was 11.7 persons per square mile.

The predominating element in the population was the native white, which represented 84.2 per cent of the total. The colored element was inconsiderable, being only 1.7 per cent.

In this group the causes to which were attributed more than the average proportions of deaths, in both cities and rural districts, were apoplexy, paralysis, diphtheria, convulsions, scarlet fever, diseases of the kidneys, and peritonitis. The proportions were above the average, in the cities, for inflammation of the brain and meningitis, croup, whooping cough, and cerebro-spinal fever; but in the rural districts the proportions from these causes were below the average. On the other hand, the proportions from pneumonia, heart disease, Bright's disease, cancer, bronchitis, rheumatism, and diabetes were above the average in the rural districts, but below the average in the cities.

For the following causes the proportions were below the average in both cities and rural districts: Consumption, typhoid fever, old age, influenza, malarial fever, measles, diseases of the brain, suicide, appendicitis, and hydrocephalus.

Grand Group 7.—Region of the Great Northern Lakes.

This group includes those parts of New York, Ohio, Indiana, Illinois, Michigan, and Wisconsin which border on the Great Lakes, and it partakes to a certain extent of the characteristics of the Atlantic coast region. These large bodies of fresh water undoubtedly exert

considerable influence upon the climate in moderating its extremes. The mean annual temperature in the southern part of this region is from 45° to 50°, and in the northern portion from 40° to 45° F. The mean annual rainfall is from 30 to 40 inches, except in northern Michigan, where it is only from 20 to 25 inches. The elevation is nowhere above 500 feet.

The registration cities in this group are the following: Ashtabula, Ohio; Bay City, Mich.; Buffalo, N. Y.; Chicago, Ill.; Cleveland, Ohio; Detroit, Mich.; Dunkirk, N. Y.; Escanaba, Mich.; Green Bay, Wis.; Iron Mountain, Ironwood, and Ishpeming, Mich.; Jamestown and Lockport, N. Y.; Manitowoc, Wis.; Marquette and Menominee, Mich.; Michigan City, Ind.; Milwaukee, Wis.; Muskegon, Mich.; Niagara Falls, N. Y.; Port Huron, Mich.; Rochester, N. Y.; Saginaw and Sault Ste. Marie, Mich.; Toledo, Ohio; Traverse City, Mich.; Watertown, N. Y.; and West Bay City, Michigan.

The total population of this group was 5,910,100, of which 3,656,330, or more than 60 per cent, were located in the cities specified. The area was 51,488 square miles, and the density of population was 114.8 persons to the square mile. The increase in density since 1890 was 27.7 persons per square mile, due chiefly to the great increase in the population of the cities.

The colored population was small, the percentage of this class being only 1.1 per cent. The foreign white element constituted 28.3 per cent of the whole population, being highest in Illinois (33.7 per cent), and lowest in Indiana (20.9 per cent). There was a small excess of males in this group, the percentage by sex being, males, 50.9; females, 49.1.

The causes to which more than the average proportions of deaths in both cities and rural districts were due were the following: Diarrheal diseases, cancer, bronchitis, diphtheria, convulsions, scarlet fever, peritonitis, suicide, and appendicitis. The proportions were also above the average in the cities from inflammation of the brain and meningitis, measles, and childbirth, but they were below the average for these causes in the rural districts. In the latter, heart disease, Bright's disease, old age, apoplexy, diabetes, hydrocephalus, and cerebro-spinal fever caused more than the average proportions of deaths, while the proportions from the same causes in the cities were less than the average.

In both cities and rural districts less than the average proportions of deaths occurred from consumption, pneumonia, typhoid fever, paralysis, influenza, malarial fever, croup, diseases of the brain, and whooping cough.

Grand Group 8.—The Interior Plateau.

This group includes that portion of the plain stretching from the base of the Appalachians, eastward, which includes parts of Pennsylvania, Virginia, and North Carolina, and also, on the west side of the Appalachians, the plateau country of central New York and western Pennsylvania. It consists of three regions, which are not contiguous, namely, (1) the western parts of New York and Pennsylvania, (2) the southeastern corner of Pennsylvania, and (3) the central portions of Virginia and North Carolina. The characteristics of the second of these regions, so far as returns of deaths are concerned, are largely due to the fact that it contains the cities of Philadelphia and Reading. These regions have little that is characteristic in climate or surface; lying, as they do, between the Appalachians and the Atlantic coast region on one hand and the lake region on the other, they partake to a certain extent of the climate of both. The surface is broken and hilly, but nowhere rises into mountains. The group is an upland country originally covered with forests, which have been in great part cut away. It contains comparatively little water surface or swamp land. The mean annual temperature is from 45° to 50° F. The annual rainfall is from 40 to 45 inches in that part east of the Appalachians; from 30 to 35 in the northern portion.

The registration cities in this group are the following: Albany, N. Y.; Alexandria, Va.; Allegheny and Allentown, Pa.; Amsterdam, Auburn, Binghamton, and Cohoes, N. Y.; Columbia, Pa.; Corning and Cortland, N. Y.; Easton, Pa.; Elmira, N. Y.; Erie, Pa.; Geneva, Gloversville, Hudson, Ithaca, and Johnstown, N. Y.; Lancaster, Pa.; Lansingburg, N. Y.; Lynchburg, Va.; McKeesport, Meadville, Newcastle, Norristown, and Oil City, Pa.; Olean, N. Y.; Petersburg, Va.; Philadelphia, Phoenixville, Pittsburg, and Pottstown, Pa.; Poughkeepsie, N. Y.; Raleigh, N. C.; Reading, Pa.; Richmond, Va.; Rome, Saratoga Springs, and Schenectady, N. Y.; South Bethlehem, Pa.; Syracuse, Troy, Utica, and Watervliet, N. Y.

The total population of this group was 7,488,008. In the cities named above the population was 2,961,327. The area was 75,354 square miles, and the density of population was 99.4 persons to the square mile. The increase in density over 1890 was 13.5 persons per square mile.

The native white element predominated largely in the population, this class being represented by 76.7 per cent. The remainder was about equally divided between the foreign white (12.2 per cent), and the colored (11.1 per cent).

The distribution by sex was exactly even.

The causes to which more than the average proportions of deaths were attributed, in both cities and rural districts, were heart disease, old age, apoplexy, paralysis, rheumatism, peritonitis, diphtheria, and convulsions. In the cities the proportions were above the average from typhoid fever, measles, croup, and childbirth, and in the rural districts the proportions from the same causes were below the average. In the rural districts the proportions were above the average from

pneumonia, Bright's disease, cancer, bronchitis, influenza, and diabetes, and they were also higher than the proportions from the same causes in the cities.

Less than the average proportions occurred in both cities and rural districts from consumption, diarrheal diseases, malarial fever, whooping cough, scarlet fever, suicide, appendicitis, hydrocephalus, and cerebro-spinal fever.

Grand Group 9.—Southern Central Appalachian Region.

This region is a continuation of Grand Groups 5 and 6, extending to the southwest. It includes portions of Virginia, West Virginia, the Carolinas, Kentucky, Tennessee, Georgia, and Alabama. In Virginia and West Virginia the character of the country is very similar to that of Grand Group 6, but as we proceed southward there is a gradual rise in the ridges, and a tendency to break up into peaks, which in North Carolina develops to the highest degree, presenting in the western part of that state a complex of mountains, rising without much apparent system to heights of from 6,000 to 6,700 feet. In Virginia and farther southward the feature which was outlined in Pennsylvania becomes very characteristic, namely, the great valley occupied in northern Virginia by the Shenandoah, farther south by the branches of the New River and the heads of the Tennessee, and in Tennessee by the river of that name. This forms a great depression, which, throughout the whole region, is traversed by numberless minor ranges and ridges, while it is limited on either side by higher ranges, represented in North Carolina by the mountains of the western part of that state, while the western boundary of the belt is the Cumberland range or plateau. In Georgia and Alabama these ranges gradually fade out and disappear. The mountains of this region rise from 1,000 to 6,700 feet above the sea, and the valleys are at elevations of from 500 to 2,000 feet.

The temperature of the habitable portions of this region varies with the altitude and the latitude, but nowhere is the mean annual temperature much higher than 55° F., and it falls below 40° in the higher country. This region is covered with heavy forests of pine and hard wood. The mean annual rainfall is from 35 to 45 inches in the northern half, and from 50 to 60 inches in the southern half.

Atlanta, Ga., is the only registration city in this group.

The total population was 4,031,150, and the area was 103,416 square miles, giving a density of 39 persons to the square mile, an increase in density since 1890 of 6.7 persons per square mile.

The foreign white element was very small in this group, being less than 1 per cent. The native white constituted 84.7 per cent and the colored 14.4 per cent of the entire population.

Males were slightly in excess in this group, the percentage being, males, 50.7; females, 49.3.

Of the principal causes of death those to which more than the average proportions were attributed, in both cities and rural districts, were consumption, diarrheal diseases, typhoid fever, influenza, croup, and rheumatism. In the cities there were more than the average proportions of deaths from paralysis, malarial fever; diseases of the brain, peritonitis, and childbirth, but in the rural districts the proportions from these causes were below the average. In the rural districts more than the average proportions of deaths occurred from inflammation of the brain and meningitis, bronchitis, measles, and whooping cough, while in the cities the proportions due to these causes were below the average.

The causes to which less than the average proportions of deaths were due, in both cities and rural districts, were pneumonia, heart disease, Bright's disease, cancer, old age, apoplexy, diphtheria, convulsions, scarlet fever, cerebro-spinal fever, suicide, appendicitis, diabetes, and diseases of the kidneys.

Grand Group 10.—The Ohio River Belt.

This group includes those parts of Ohio, Indiana, Kentucky, and West Virginia which border on the Ohio River. It is an area of broken country becoming more and more diversified along the upper part of the river. For the most part the rivers flow in deep, narrow valleys bordered by high bluffs and broken hills. The area of bottom land is limited. The mean annual temperature is from 45° to 55° F. The annual rainfall is from 45 to 50 inches. The elevation is less than 500 feet between the mouth of the Ohio River and Cincinnati, and above this point it is from 500 to 1,000 feet.

The following registration cities are located in this group: Bellaire, Chillicothe, and Cincinnati, Ohio; Covington, Ky.; Dayton, Ohio; Evansville, Ind.; Hamilton and Ironton, Ohio; Jeffersonville, Ind.; Louisville, Ky.; Marietta and Middletown, Ohio; Newport and Paducah, Ky.; Portsmouth, Ohio; and Wheeling, West Virginia.

The population was 3,018,359, of which 914,413 were located in the cities named. The area was 35,201 square miles, and the density of population was 85.7 persons to the square mile. The increase in density over 1890 was 8.4 persons per square mile.

The predominating element in the population was the native white class, which represented 87.8 per cent. The remainder was about equally divided between foreign white (6.5 per cent) and colored (5.7 per cent).

The percentage by sex was, males, 50.4; females, 49.6.

The causes to which more than the average proportions of deaths were due, in both the cities and rural districts, were consumption, typhoid fever, cancer,

inflammation of the brain and meningitis, paralysis, peritonitis, and cerebro-spinal fever. In the cities the proportions of deaths due to old age, bronchitis, convulsions, malarial fever, diseases of the brain, suicide, and diabetes were also above the average proportions from these causes, but in the rural districts the proportions from the same causes were below the average. In the rural districts heart disease, Bright's disease, croup, rheumatism, diseases of the kidneys, and hydrocephalus caused more than the average proportions of deaths, while in the cities the proportions from these causes were less than the average.

The causes producing less than the average proportions of deaths in both cities and rural districts of this group were the following: Pneumonia, diarrheal diseases, apoplexy, influenza, appendicitis, childbirth, diphtheria, measles, whooping cough, and scarlet fever.

GRAND GROUP 11.—SOUTHERN INTERIOR PLATEAU.

This group includes the section of the Atlantic plain which extends across South Carolina and Georgia, with the region in central Alabama, Mississippi, and Tennessee lying between the Appalachian region and the Gulf Coast belt. It is for the most part level and timbered, principally with pine, a large extent of the surface being what is popularly known as "pine barrens." It has a warm climate, and during the summer the temperature rises much higher than on the coast. The mean annual temperature is from 60° to 70° F. The annual rainfall is heavy, being from 50 to 60 inches. The elevation is for the most part below 1,000 feet.

There are no registration cities in this group.

The total population of the group was 4,812,414, and the area was 127,688 square miles, giving a density of 37.7 persons to the square mile. The increase in density over 1890 was 5.9 persons per square mile.

The colored element predominated in the population, 53.4 per cent of the total being of this class. The remainder was almost entirely native white (46.3 per cent), as the foreign white population was but 0.3 per cent of the total.

The distribution by sex was as follows: Males, 49.8 per cent; females, 50.2 per cent.

The causes of death in this group to which more than the average proportions were due were consumption, pneumonia, diarrheal diseases, typhoid fever, influenza, malarial fever, measles, croup, diseases of the brain, and childbirth.

The proportions of deaths due to heart disease, Bright's disease, cancer, old age, apoplexy, paralysis, bronchitis, diphtheria, convulsions, scarlet fever, cerebro-spinal fever, hydrocephalus, suicide, rheumatism, diabetes, and diseases of the kidneys were below the average proportions for the United States.

GRAND GROUP 12.—SOUTH MISSISSIPPI RIVER BELT.

Along the Mississippi and Missouri rivers lie narrow belts characterized by a considerable extent of low bottom land with rich, deep, moist soil. All this region that borders the lower Mississippi from the neighborhood of the coast to the mouth of the Ohio is included in this group, and has very characteristic features. It includes the river counties of Kentucky, Tennessee, Arkansas, Mississippi, and Louisiana. It is an alluvial bottom land, lying very low with relation to the river, and subject to overflow. The drainage is poor, and there are large areas of swamp land and stagnant water. Vegetation is very rank, being almost tropical in its luxuriance. The mean annual temperature is from 60° to 70° F. The annual rainfall is from 50 to 55 inches. The elevation is between 100 and 500 feet.

This group contains but 2 registration cities, namely, Memphis, Tenn., and Natchez, Miss.

The total population of the group was 1,090,623. Of this number 114,530 were found in the cities named. The area was 27,357 square miles, and the density of population was 39.9 persons to the square mile. In 1890 the density was 33.6, the increase being 6.3 persons per square mile.

The colored element largely predominated in the population, the percentage of this class being 65.9. Only 1.2 per cent were foreign white, the remainder (32.9 per cent) being native white.

Males were in excess in this group, the percentages by sex being, males, 51.4; females, 48.6.

The causes of death to which more than the average proportions were due, in both cities and rural districts in this group, were consumption, pneumonia, typhoid fever, influenza, malarial fever, measles, diseases of the brain, rheumatism, and childbirth. The proportions of deaths due to diarrheal diseases and peritonitis were above the average in the cities but below the average in the rural districts, and in the latter the proportion due to whooping cough was above the average, while the proportion due to the same cause in the cities was below the average.

The causes to which less than the average proportions of deaths were due in both cities and rural districts were heart disease, Bright's disease, cancer, old age, apoplexy, paralysis, bronchitis, diphtheria, croup, convulsions, scarlet fever, hydrocephalus, cerebro-spinal fever, suicide, diabetes, and diseases of the kidneys.

GRAND GROUP 13.—NORTH MISSISSIPPI RIVER BELT.

This group extends from the mouth of the Ohio to the head of the Mississippi River, including portions of Missouri, Iowa, and Minnesota on the western, and of Illinois and Wisconsin on the eastern bank. The mean

annual temperature is from 40° to 45° F. in the northern portion and 50° to 55° F. in the southern portion. The annual rainfall is from 30 to 40 inches in the northern part and from 40 to 50 inches in the southern part. The elevation in the southern portion is less than 500 feet, and rises toward the north to points from 500 to 1,000 feet.

The following-named registration cities are in this group: Belleville, Ill.; Burlington, Davenport, and Keokuk, Iowa; Minneapolis, Minn.; Muscatine, Iowa; Quincy, Ill.; St. Louis, Mo.; St. Paul and Winona, Minnesota.

The population was 2,872,624. Nearly 40 per cent of this number (1,101,640) were located in the cities named. The area was 42,166 square miles, and the population density was 68.1 persons to the square mile, an increase over 1890 of 9.6 persons per square mile.

The colored population represented only 3.5 per cent of the total, the predominating element being native white, with 79.2 per cent. The foreign white constituted 17.3 per cent.

The percentage by sex was as follows: Males, 51.3; females, 48.7.

The causes of death in this group to which more than the average proportions of deaths were due in both cities and rural districts were cancer, old age, convulsions, cerebro-spinal fever, malarial fever, diseases of the brain, suicide, and appendicitis. In the cities the proportions due to consumption, typhoid fever, Bright's disease, and peritonitis were also above the average, but the proportions from these causes in the rural districts were below the average. In the rural districts pneumonia, paralysis, bronchitis, dipththeria, rheumatism, diabetes, diseases of the kidneys, and childbirth caused more than the average proportions of deaths from these causes, while in the cities the proportions from the same causes were below the average.

The causes to which less than the average proportions were due in both cities and rural districts were diarrheal diseases, heart disease, apoplexy, influenza, measles, whooping cough, scarlet fever, and hydrocephalus.

Grand Group 14.—Southwest Central Region.

This group includes the northwestern part of Louisiana, the southern part of Missouri, all of Arkansas (except such portions of these states as belong to the south Mississippi River belt), Indian Territory, and central Texas. It is mainly upland, and, with the exception of parts of Texas, is heavily timbered. In Louisiana it is traversed by a narrow strip of bottom land along the Red River. A considerable part of this region in Missouri and Arkansas is occupied by the Ozark hills, which rise 2,500 feet or more above the sea level, or 2,000 feet above the surrounding country. The mean annual temperature is from 60° to 70° F. The annual rainfall is from 35 to 50 inches. The elevation is from 100 to 500 feet, with some peaks rising above 2,500 feet.

There are but 2 registration cities in this group—San Antonio, Tex., and Shreveport, La.

The population was 5,424,490, less than 2 per cent (69,334) of which was located in the cities named. The area was 247,349 square miles and the density of population was 21.9 persons to the square mile, an increase over 1890 of 4.7 persons per square mile.

The population was principally native white and colored, the former predominating with 76.7 per cent, and the latter representing 20.2 per cent. The foreign white class constituted only 3.1 per cent of the total. The greatest percentage of colored population was in the Louisiana counties (54.2 per cent), and the least percentage of this class was in Missouri (colored, 2 per cent; native white, 95.6 per cent).

The distribution by sex was, males, 51.6 per cent; females, 48.4 per cent.

The causes to which more than the average proportions of deaths were due in both the cities and rural districts in this group were diarrheal diseases, typhoid fever, malarial fever, measles, diseases of the brain, scarlet fever, and childbirth.

The causes to which less than the average proportions of deaths were due, in both cities and rural districts, were heart disease, Bright's disease, cancer, apoplexy, paralysis, bronchitis, influenza, diphtheria, convulsions, suicide, appendicitis, diabetes, and hydrocephalus.

Grand Group 15.—Central Region, Plains, and Prairies.

This group includes the plateau running across the northern part of Ohio and Indiana, and the central portions of Kentucky and Tennessee, and is essentially what is left of the eastern portion of the Mississippi Valley after taking from it other characteristic regions. The surface is for the most part undulating, presenting neither the dead level of the prairies on the one hand, nor the broken character marking the western foothills of the Appalachians on the other. The timber which originally covered it has been largely cut away. The mean annual temperature is from 50° to 60° F. The mean annual rainfall is from 40 to 50 inches. The elevation is from 500 to 1,000 feet.

The following registration cities are located in this group: Canton, Ohio; Columbus, Ind.; Columbus and Findlay, Ohio; Indianapolis and Lafayette, Ind.; Lima and Massillon, Ohio; Muncie, Ind.; Nashville, Tenn.; Newark, Ohio; Peru, Richmond, and Terre Haute, Ind.; Tiffin, Ohio; Vincennes, Ind.; Warren and Youngstown, Ohio.

The population of this group was 5,458,379. In the cities the population was 660,895. The area was 83,937 square miles, and the density of population was 65 per-

sons to the square mile. In 1890 the density was 57.9 to the square mile; the increase in density was therefore 7.1 persons per square mile.

The native white element largely predominated in the population, representing 87.8 per cent of the total. The percentage of foreign white was everywhere small, the average being 4.4. In Tennessee the percentage of colored was 26.7, and in Kentucky it was 17.5, but in the other states there was less than 2 per cent of this class.

By sex, the distribution was, males, 50.9 per cent; females, 49.1 per cent.

The causes of death which produced more than the average proportions, in both cities and rural districts in this group, were consumption, typhoid fever, cancer, inflammation of the brain, and meningitis, paralysis, diseases of the brain, peritonitis, suicide, rheumatism, and diseases of the kidneys. In the cities the proportions due to old age, influenza, malarial fever, and croup were also greater than the average proportions, while in the rural districts the proportions from the same causes were less than the average.

The causes of death to which less than the average proportions were due, in both cities and rural districts were pneumonia, diarrheal diseases, heart disease, apoplexy, bronchitis, diphtheria, convulsions, measles, whooping cough, scarlet fever, appendicitis, and childbirth.

Grand Group 16.—The Prairie Region.

This group includes most of the state of Illinois, the southern part of Wisconsin, nearly all of Iowa, southern Minnesota, the northern part of Missouri, the eastern half of Kansas, and a considerable portion of Nebraska, with that part of the Dakotas lying east of the Missouri belt. Though not entirely treeless, forests cover but a small portion of the area, and these are distributed along the water courses, on the faces of bluffs, and the tops of knolls. The surface is nearly level, except where cut or scored by streams. The soil is deep, extremely fertile, and generally very retentive of moisture. Originally there were larger areas of swamp land and standing water than at present. The mean annual temperature is from 50° to 55° F. in the southern part, and 40° to 45° in the northern part. The mean annual rainfall is from 35 to 40 inches in the eastern part, and from 20 to 25 inches in the western part. The elevation is from 500 to 1,000 feet in the eastern portion, gradually rising from 2,000 to 3,000 feet in the west.

The following are the registration cities in this group: Aurora, Ill.; Beloit, Wis.; Danville, Decatur, and Galesburg, Ill.; Hutchinson, Kans.; Jacksonville, Ill.; Lawrence and Leavenworth, Kans.; Lincoln, Nebr.; Madison, Wis.; Mankato, Minn.; Marshalltown and Oskaloosa, Iowa; Ottawa, Ill.; Ottumwa, Iowa; Springfield, Ill., and Wichita, Kans.

The total population of this group was 8,133,937. The population of the cities was 324,655. The area of the group was 265,946 square miles, and the density of population was 30.6 persons to the square mile, an increase in density over 1890 of 4.1 persons per square mile.

The colored element in the population was very small, being less than 2 per cent. The native white element predominated, with a percentage of 84.4, the percentage of foreign white being 14.3. The foreign white element was greatest in Minnesota (25.8 per cent) and North Dakota (35.1 per cent).

Males were in excess in this group by 2 per cent, the percentage of females being 48.

Of the principal causes of deaths in this group, those to which more than the average proportions were due in both cities and rural districts, were heart disease, cancer, old age, paralysis, peritonitis, suicide, appendicitis, rheumatism, diabetes, diseases of the kidneys, and cerebro-spinal fever. In the cities the proportions from typhoid fever, croup, whooping cough, and childbirth were also above the average, but in the rural districts the proportions due to these causes were below the average. In the rural districts Bright's disease, diphtheria, convulsions, and hydrocephalus caused more than the average proportions, while in the cities the proportions from these causes were less than the average.

The causes to which less than the average proportions were due in both cities and rural districts were consumption, pneumonia, diarrheal diseases, apoplexy, bronchitis, influenza, malarial fever, and measles.

Grand Group 17.—The Missouri River Belt.

This group includes a narrow strip across Missouri, with portions of eastern Nebraska, western Iowa, the western part of North Dakota, and the central part of South Dakota, including in the main a broad area of bottom land of deep, rich soil, subject to overflow in the southern portion. Higher up the river, in the Dakotas, we enter the subhumid section of the country, the atmosphere being drier and the rainfall less. The mean annual temperature is from 40° to 45° F. in the northern part, and from 50° to 55° in the southern part. The mean annual rainfall is from 10 to 20 inches in the northern part, and from 30 to 40 in the southern part. The elevation is from 500 to 1,000 feet in the southern and central portions, 1,500 feet in South Dakota, and 2,000 feet in North Dakota.

The registration cities in this group are Kansas City and St. Joseph, Mo.; Omaha, Nebr.; and Sioux City, Iowa.

The total population of this group was 1,446,643, and that of the cities was 402,397. The area was 87,480 square miles, and the density of population was 16.5 persons to the square mile. There was a slight decrease in the population of this group since 1890, the decrease in density amounting to 1.7 persons per square mile.

The native white population constituted the predominating element in this group, with a percentage of 81.6 of the total population. The percentage of foreign white was 12.5, and that of the colored 5.9.

By sex, the distribution was, males, 52.7; females, 47.3 per cent.

The causes to which more than the average proportions of deaths in this group were due, in both cities and rural districts, were old age, paralysis, peritonitis, appendicitis, rheumatism, diseases of the kidneys, and cerebro-spinal fever. In the cities the proportions were also above the average from heart disease, typhoid fever, malarial fever, croup, and diseases of the brain, but in the rural districts the proportions due to these causes were below the average. In the rural districts consumption, pneumonia, diphtheria, convulsions, whooping cough, scarlet fever, and suicide caused more than the average proportions of deaths, while in the cities the proportions due to these causes were less than the average. The causes for which the proportions of deaths in this group were below the average in both cities and rural districts were diarrheal diseases, Bright's disease, cancer, apoplexy, bronchitis, influenza, measles, diabetes, and hydrocephalus.

Grand Group 18.—Region of the Western Plains.

This group extends westward from the border of the prairie region, including parts of Texas, Kansas, Nebraska, Colorado, Wyoming, South Dakota, Montana, and New Mexico, and all of Oklahoma. The characteristics of the prairie region are here intensified in every particular. Timber is scarce, being found only along the water courses. The surface is a monotonous rolling expanse, covered only with sparse clumps of bunch grass, cactus, yucca, and other plants characteristic of a dry climate. The mean annual temperature varies from 65° to 70° F. in the southern part, and from 40° to 45° F. in the northern portion. The mean annual rainfall is from 10 to 20 inches. Indeed, the isohyetal line of 20 inches may be taken in general terms as the boundary line between this and the prairie region, although in the north the cooler climate and small evaporation tend to throw the boundary westward, while the reverse condition in the south tends to throw it eastward. The extremes of temperature in this region are great, being exceeded only in the still more arid region farther west. The elevation is 1,500 feet in the eastern portions, rising to 4,000, 5,000, and 6,000 feet in the west.

There are but two registration cities in this group—Denver and Pueblo, Colo.

The total population of this group was 1,442,684, of which but little over 1 per cent (162,016) were found in the cities named. The area was 429,328 square miles, and the density of the population was 3.4 persons to the square mile. In 1890 the density of population in this group was 2.1 persons per square mile, and the increase in density was therefore 1.3 persons per square mile.

The colored element in the population of this group consisted principally of Indians, and amounted to 4.4 per cent of the total population. The highest percentage of this class was in Montana (14.8) and South Dakota (23.8). The foreign white element represented 10.2 per cent, and the native white element largely predominated, with 85.4 per cent of the total population.

By sex, the distribution was 53.9 per cent males and 46.1 per cent females.

In this group the causes to which more than the average proportions of deaths were due, in both cities and rural districts, were typhoid fever, inflammation of the brain and meningitis, whooping cough, and appendicitis. In the cities the proportions due to consumption, paralysis, diseases of the brain, peritonitis, rheumatism, and diabetes were also above the average, but in the rural districts the proportions due to these causes were below the average. In the rural districts pneumonia, diarrheal diseases, diphtheria, measles, scarlet fever, suicide, diseases of the kidneys, and cerebro-spinal fever caused more than the average proportions of deaths, while in the cities the proportions due to these causes were below the average.

The causes of death to which less than the average proportions of deaths in this group were attributed, in both cities and rural districts, were heart disease, Bright's disease, cancer, old age, apoplexy, bronchitis, influenza, convulsions, malarial fever, croup, and hydrocephalus.

Grand Group 19.—Heavily Timbered Region of the Northwest.

This group includes parts of Minnesota, Wisconsin, and Michigan. It is heavily timbered and well watered, containing large numbers of small lakes and considerable areas of swamp, especially in Wisconsin and Minnesota. This large water surface, together with the dense forests, tends to give to this region a moist atmosphere, although the rainfall is not great. The mean annual temperature is from 40° to 50° F., and below 40° in northern Wisconsin and Minnesota. The mean annual rainfall is from 30 to 40 inches. The elevation is from 1,000 to 1,500 feet.

The registration cities in this group are Ann Arbor, Mich.; Appleton, Wis.; Battle Creek, Mich.; Chippewa Falls, Wis.; Duluth, Minn.; Eau Claire, Wis.; Flint, Grand Rapids, Jackson, Kalamazoo, and Lansing, Mich.; Marinette, Wis.; Owosso and Pontiac, Mich.; and Superior, Wis.

The population of this group was 1,990,622, of which 359,225 were located in the registration cities named. The area was 98,210 square miles, and the density of population was 20.3 persons to the square mile, an increase over 1890 of 4.3 persons per square mile.

The colored population in this group was insignificant, amounting to but 1.3 per cent of the total. Of the remainder, 76.6 per cent were native white, and

22.1 per cent foreign white. The largest percentage of foreign white was in Minnesota (36.5).

The proportions of deaths from the principal causes were generally higher in this group than the average. In both cities and rural districts the proportions due to heart disease, cancer, old age, paralysis, peritonitis, suicide, appendicitis, rheumatism, diabetes, diseases of the kidneys, and cerebro-spinal fever were above the average, and in the rural districts, which constitute the greater portion of the area, the proportions due to Bright's disease, apoplexy, bronchitis, diphtheria, convulsions, and hydrocephalus were also above the average.

The causes to which less than the average proportions of deaths were due in both cities and rural districts were consumption, pneumonia, diarrheal diseases, influenza, malarial fever, and scarlet fever.

Grand Group 20.—The Cordilleran Region.

This group includes the region westward from the east base of the Rocky Mountains to the Cascades and Sierra Nevada, consisting mainly of a high plateau crowned by a succession of mountain ranges forming systems of a greater or less degree of complexity. It comprises Arizona, Idaho, Utah, Nevada, and portions of Colorado, Montana, Wyoming, New Mexico, California, Oregon, and Washington. The climate is arid, the rainfall is small, except on the mountains, and the extremes of temperature are great between summer and winter and day and night. As a general thing, the mountains only are timbered, the valleys and level country being covered with herbaceous plants characteristic of an arid climate. The slopes are everywhere amply sufficient to insure good drainage, and therefore swamps and stagnant water are rare. The mean annual temperature is from 40° to 50° F. in the northern and central portions, and from 60° to 65° in the southern portion. The mean annual rainfall is below 10 inches in the central and southwestern portions, and somewhat greater in the eastern and northern portions. The elevation is from 4,000 to 10,000 feet and over.

The registration cities in this group are Fresno and Sacramento, Cal.; Helena, Mont.; Leadville, Colo.; Salt Lake City, Utah; and Spokane, Wash.

The total population of this group was 1,965,065. The population of the registration cities was 155,356. The area was 908,342 square miles, and the density of population was 2.2 persons to the square mile, an increase in this sparsely settled area of 0.6 persons per square mile since 1890.

The colored element in this group, represented by 6.4 per cent of the total population, consisted principally of Indians. The greatest percentage of colored was in Arizona, with 24.4 per cent; Nevada, with 16.4 per cent; and New Mexico, with 11 per cent. The native white element of the population was 76.8 per cent, and the foreign white was 16.8 per cent. The least percentage of foreign white was in New Mexico (8), followed closely by Oregon (8.2). In other states the percentages of foreign white did not vary greatly from the total for the group.

In this group there was the greatest excess of males, the percentage being 57.5 to 42.5 per cent of females.

In this group the causes to which more than the average proportions of deaths were due, in both cities and rural districts, were pneumonia, cancer, whooping cough, peritonitis, scarlet fever, suicide, appendicitis, rheumatism, childbirth, and cerebro-spinal fever. In the cities, heart disease, typhoid fever, old age, inflammation of the brain and meningitis, paralysis, malarial fever, diabetes, and diseases of the kidneys also caused more than the average proportions of deaths, but in the rural districts the proportions due to these causes were below the average.

In both cities and rural districts the proportions due to consumption, diarrheal diseases, Bright's disease, apoplexy, bronchitis, influenza, convulsions, measles, croup, and diseases of the brain were below the average proportions from these causes in the United States.

Grand Group 21.—Pacific Coast Region.

This group includes the coast portions of Washington, Oregon, and California, lying between the ranges of the Cascades and Sierra Nevada and the Pacific coast. It has a well-defined wet and dry season, the former corresponding to the winter in the eastern portion of the country and the latter to the summer. The northern part receives much more rain than the southern part. The surface consists of a complex range of mountains known as the Coast range, running parallel to the coast, east of which is a great valley extending from Puget Sound to the southern part of California. This is occupied in Oregon by the Willamette and other rivers, and in California by the Sacramento and the San Joaquin. East of this valley is a great uplift, represented in Washington and Oregon by the Cascade range, and in California by the Sierra Nevada. The mean annual temperature is from 55° to 65° F. in the southern portion, and from 45° to 55° in the northern portion. The mean annual rainfall is above 60 inches in the north, and below 20 inches in the south. The elevation varies from the coast line to 5,000 feet.

The registration cities in this group are Alameda, Los Angeles, and Oakland, Cal.; Portland, Oreg.; San Diego, San Francisco, and San Jose, Cal.; and Seattle and Tacoma, Wash.

The total population of this group was 1,671,335, of which nearly 50 per cent (776,696) were in the registration cities named. The area was 104,721 square miles,

and the density of population was 16 persons to the square mile. The increase in density in this group over 1890 amounted to 3.6 persons per square mile.

The native white element of the population predominated, with 73.7 per cent. The percentage of foreign white was 21.7, and that of the colored, mainly Indian, Chinese, and Japanese, was 4.6. The percentage of the different classes was very uniform in all of the states represented in this group.

The males were largely in excess in this group, the percentage being 55.1, to 44.9 per cent of females.

The causes to which more than the average proportions of deaths in this group were due, in both cities and rural districts, were consumption, heart disease, cancer, apoplexy, diseases of the brain, peritonitis, suicide, appendicitis, diabetes, hydrocephalus, cerebrospinal fever, and gunshot wounds. The proportion due to typhoid fever in the cities was also considerably greater than the average proportion from this cause, although in the rural districts the proportion was less than the average.

The causes to which less than the average proportions of deaths in both cities and rural districts were due were pneumonia, diarrheal diseases, bronchitis, influenza, malarial fever, diphtheria, croup, convulsions, whooping cough, scarlet fever, rheumatism, and childbirth.

SECTION XII.
CAUSES OF DEATH.

Table 7, Part II, gives the number of deaths in the United States, and in each state, state group, and registration city, during the census year, from each reported cause. The causes of death in this table are arranged in alphabetical order and given more fully than in any other table.

Table 8, Part II, gives the number of deaths reported in the United States, the registration area and its subdivisions, and in each state and territory, during the census year, from each specified disease and class of diseases, by sex and age.

Table 9, Part II, gives the same data for the United States, by color and race.

Table 10, Part II, gives the same data for the registration area, by color and race.

Table 11, Part II, gives the same data for white persons in the registration area, by birthplaces of mothers.

Table 12, Part II, gives the number of deaths reported in each registration state during the census year, from each specified disease and class of diseases, by birthplaces of mothers.

Table 13, Part II, gives the number of deaths in the United States, the registration area and its subdivisions, and in each grand group, during the census year, at certain ages, and from certain specified diseases and classes of diseases, by months.

Of 1,039,094 deaths reported as occurring in the United States during the census year, 40,539, or 39 per 1,000, were reported as due to unknown cause. In 1890 the proportion reported as due to unknown cause was 40.7 per 1,000, and in 1880 it was 49 per 1,000. In the registration area the proportion reported as due to unknown cause in the census year 1900 was 9.5 per 1,000, being slightly less than the proportion in 1890 (9.7 per 1,000).

These figures show some slight improvement in the accuracy with which the cause of death is reported, but leave much to be desired in this respect. In addition to the deaths necessarily classified under "cause unknown," a large number of cases in which the cause of death is reported as inanition, debility, atrophy, dropsy, heart failure, and other indefinite or symptomatic terms can not be properly classified except as unknown or ill defined. This is true even in the registration area where the record of deaths is fairly complete in number.

The nomenclature and classification of diseases used in the tables are the same as those employed in the Tenth and Eleventh censuses, but the list of titles for which detailed information is presented has been increased by the addition of a number of diseases.

The following table shows the principal reported causes of deaths in the ~~United~~ States in the census years 1900 and 1890, in the order of their frequency, with the proportion from each cause per 100,000 from all causes:

DEATHS FROM CERTAIN CAUSES, AND PROPORTION FROM EACH CAUSE, PER 100,000 FROM ALL CAUSES.

CAUSES OF DEATH.	1900		1890	
	Number.	Proportion.	Number.	Proportion.
Consumption[1]	111,059	10,688	102,199	12,146
Pneumonia	105,971	10,198	76,496	9,091
Heart disease[2]	69,315	6,671	44,959	5,343
Diarrheal diseases[3]	46,907	4,514	47,201	5,610
Unknown cause	40,539	3,901	34,286	4,074
Diseases of the kidney[4]	36,724	3,534	19,457	2,312
Typhoid fever	35,379	3,405	27,058	3,216
Cancer	29,475	2,837	18,536	2,203
Old age	29,222	2,812	16,591	1,972
Apoplexy	26,901	2,589	14,999	1,783
Inflammation of the brain and meningitis	25,664	2,470	17,775	2,113
Cholera infantum	25,576	2,461	27,510	3,269
Paralysis[5]	23,865	2,297	16,570	1,969
Bronchitis	20,223	1,946	21,422	2,546
Debility and atrophy	17,282	1,663	25,536	3,035
Influenza	16,645	1,602	12,957	1,540
Diphtheria	16,475	1,586	27,815	3,306
Convulsions	15,505	1,492	16,598	1,973
Malarial fever	14,874	1,431	18,594	2,210
Premature birth	14,720	1,417	7,636	908
Diseases of the stomach[6]	13,484	1,298	8,080	960
Measles	12,866	1,238	9,256	1,100
Croup	12,484	1,201	13,862	1,647
Diseases of the liver[7]	12,249	1,179	9,460	1,124
Diseases of the brain	11,469	1,104	12,322	1,464
Inanition	11,382	1,095	6,995	831
Dropsy	11,264	1,084	10,070	1,197
Whooping cough	9,958	958	8,432	1,002
Peritonitis	7,501	722	4,995	594
Railroad accidents	6,930	667	5,756	684
Septicemia	6,776	652	3,748	445
Burns and scalds	6,772	652	3,850	458
Scarlet fever	6,333	609	5,969	709
Suicide	5,498	529	3,932	467
Drowning	5,387	518	5,104	607
Appendicitis	5,111	492	.....	.....
Rheumatism	5,067	488	4,508	536
Diabetes	4,672	450	2,407	286
Hydrocephalus	4,302	414	4,338	516
Cerebro-spinal fever	4,174	402	3,333	396
Gunshot wounds	4,060	391	2,552	303

[1] Including general tuberculosis.
[2] Including pericarditis.
[3] Including cholera morbus, colitis, diarrhea, dysentery, and enteritis.
[4] Including Bright's disease.
[5] Including general paralysis of the insane.
[6] Including gastritis.
[7] Including jaundice, and inflammation and abscess of the liver.

This table serves only to indicate the relative frequency of deaths from the specified causes, as reported. It should be compared with the next table giving the death rates from the same causes in the registration area. On the face of the returns the figures given indicate an increase over 1890 in the proportions of deaths due to pneumonia, heart disease, diseases of the kidney, typhoid fever, cancer, old age, apoplexy, paralysis, diseases of the stomach, diseases of the liver, suicide, and diabetes; and a decrease in the proportions due to consumption, diarrheal diseases and cholera infantum, debility and atrophy, diphtheria, convulsions, croup, whooping cough, scarlet fever, and hydrocephalus.

The following table shows, for the registration area, in 1900 and 1890, the number of deaths from the same causes as those presented in the preceding table, with the death rates per 100,000 of population:

DEATHS FROM CERTAIN CAUSES IN THE REGISTRATION AREA, AND DEATH RATES DUE TO EACH CAUSE, PER 100,000 OF POPULATION.

CAUSES OF DEATH.	1900		1890	
	Number.	Rate.	Number.	Rate.
Pneumonia	55,296	191.9	36,752	186.9
Consumption[1]	54,898	190.5	48,286	245.4
Heart disease[2]	38,608	134.0	23,939	121.8
Diarrheal diseases[3]	24,509	85.1	20,457	104.1
Diseases of the kidney[4]	24,124	83.7	11,736	59.7
Apoplexy	19,173	66.6	9,631	49.0
Cancer	17,296	60.0	9,410	47.9
Old age	15,558	54.0	8,823	44.9
Bronchitis	13,903	48.3	14,632	74.4
Cholera infantum	13,758	47.8	15,659	79.7
Debility and atrophy	13,108	45.5	17,427	88.6
Inflammation of the brain and meningitis	12,026	41.8	9,666	49.1
Diphtheria	10,201	35.4	13,786	70.1
Typhoid fever	9,749	33.8	9,097	46.3
Premature birth	9,690	33.7	4,948	25.2
Convulsions	9,522	33.1	11,050	56.3
Paralysis[5]	9,450	32.8	6,980	35.5
Inanition	7,859	27.3	5,445	27.7
Influenza	6,882	23.9	1,215	6.2
Diseases of the liver[6]	6,544	22.7	4,742	24.2
Diseases of the stomach[7]	5,743	20.0	3,565	18.1

[1] Including general tuberculosis.
[2] Including pericarditis.
[3] Including cholera morbus, colitis, diarrhea, dysentery, and enteritis.
[4] Including Bright's disease.
[5] Including general paralysis of the insane.
[6] Including jaundice, and inflammation and abscess of the liver.
[7] Including gastritis.

DEATHS FROM CERTAIN CAUSES IN THE REGISTRATION AREA, AND DEATH RATES DUE TO EACH CAUSE, PER 100,000 OF POPULATION—Continued.

CAUSES OF DEATH.	1900		1890	
	Number.	Rate.	Number.	Rate.
Diseases of the brain	5,357	18.6	6,055	30.9
Peritonitis	5,028	17.5	3,419	17.4
Unknown cause	4,849	16.8	4,827	24.6
Measles	3,801	13.2	2,662	13.5
Railroad accidents	3,792	13.2	2,761	14.0
Whooping cough	3,669	12.7	3,098	15.8
Suicide	3,400	11.8	2,027	10.3
Scarlet fever	3,327	11.5	2,682	13.6
Hydrocephalus	3,173	11.0	3,033	15.4
Drowning	3,152	11.0	2,543	12.9
Septicemia	2,867	10.0	1,517	7.7
Appendicitis	2,858	9.9	.....	.....
Croup	2,830	9.8	5,432	27.6
Diabetes	2,693	9.4	1,089	5.5
Burns and scalds	2,545	8.8	1,081	5.5
Malarial fever	2,526	8.8	3,773	19.2
Cerebro-spinal fever	2,039	7.1	1,241	6.3
Dropsy	1,979	6.9	2,034	10.3
Rheumatism	1,951	6.8	1,587	8.1
Gunshot wounds	1,103	3.8	479	2.4

It will be seen from this table that the increase in the death rates in the registration area was confined to the following causes: Pneumonia, heart disease, diseases of the kidney, apoplexy, cancer, old age, influenza, diseases of the stomach, peritonitis, suicide, septicemia, diabetes, burns and scalds, cerebro-spinal fever, and gunshot wounds. For all other of the specified causes the death rates decreased.

Comparing this table with the one preceding, it will be seen that there was a very close correspondence in the relative proportions of deaths from these causes in the United States as a whole, and the death rates from the same causes in the registration area. They both indicate an increase in the relative mortality from diseases most frequent in adult life and advanced age, and a decided decrease in mortality from diseases incident to infancy and youth. This is further shown in the two succeeding tables.

The following table gives the death rate due to each disease and class of diseases in the registration area and its subdivisions per 100,000 of population in 1900, in comparison with 1890:

DEATH RATES FROM EACH DISEASE AND CLASS OF DISEASES.

CAUSES.	REGISTRATION RECORD.		REGISTRATION CITIES.		REGISTRATION STATES.						REGISTRATION CITIES IN OTHER STATES.	
					Total.		Cities.		Rural.			
	1900	1890	1900	1890	1900	1890	1900	1890	1900	1890	1900	1890
All causes	1,779.7	1,964.5	1,859.0	2,100.0	1,729.3	1,945.3	1,861.3	2,215.0	1,539.2	1,533.5	1,856.9	1,993.8

[1] Death rates from Bright's disease and diseases of the kidney should be considered together.

The death rates from the causes specified in the preceding table, and the comparative rates in 1890 and 1900, in the various areas, are shown more fully in the discussion of the individual causes which follows.

In the following table the decreases and increases in the death rates, between 1890 and 1900, due to certain principal causes given in the table preceding are brought together for comparison:

DECREASES AND INCREASES IN DEATH RATES FROM CERTAIN CAUSES.

CAUSES.	Total.	Cities.	STATES.			Cities in other states.
			Total.	Cities.	Rural.	
Decreases:						
Consumption	54.9	57.4	69.6	84.8	43.9	32.2

Diseases of the kidney	24.0	24.8	19.3	17.8	22.5	31.3

[1] Increase. [2] Decrease.

The greatest decreases in the death rates in the registration area during the decade occurred in consumption (54.9), diphtheria and croup (52.5), debility, atrophy and inanition (43.5), cholera infantum (31.9), bronchitis (26.1), convulsions (23.2), diarrheal diseases (19), typhoid fever (12.5), diseases of the brain (12.3), and malarial fever (10.4). The decrease in the mortality from these causes was most marked in the cities in the registration states, and least marked in the rural districts of the same states.

The greatest increases in the rates occurred in diseases of the kidney (24), influenza (17.7), apoplexy (17.6), heart disease (12.2), cancer (12.1), and old age (9.1). In the registration states the increase in the rates from these diseases was greater in the rural districts than in the cities.

GENERAL DISEASES—A.

This group includes the following diseases: Measles, scarlet fever, diphtheria, whooping cough, malarial fever, influenza, typhoid fever, cholera morbus, colitis, diarrhea, dysentery, enteritis, cholera infantum, fever (unspecified), cerebro-spinal fever, smallpox, erysipelas, septicemia, venereal diseases, and other minor diseases of this class.

The total number of deaths reported as due to this group of diseases in the United States during the census year was 209,819, of which 107,704 were males and 102,115 were females, and the proportion of deaths from these diseases in 1,000 deaths from all known causes was 210.1. In 1890 the corresponding proportion was 224.4.

In the registration area the number of deaths reported as due to this group of diseases was 88,227, of which 45,525 were males and 42,702 were females, giving a proportion of 173.7 deaths from these diseases in 1,000 deaths from all known causes, and a death rate of 306.3 per 100,000 of population. In 1890 the death rate was 392.1.

The following table shows, for the registration states, in the aggregate, and for the cities and the rural districts, the death rates from this group of diseases in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES.

[1] Nonregistration in 1890.

This table shows that there was a great decrease in the death rates due to these diseases between 1890 and 1900, amounting in the aggregate to 74.5 per 100,000 of population. The decrease was greatest in the cities (113.7). In the rural districts of the registration states there was comparatively little change, the rate being 236.3 in 1900 and 247.4 in 1890. The death rate from these diseases was highest in the District of Columbia (455.7), owing to the large proportion of colored population, and was lowest in the rural districts in Vermont (202.3).

In the New England states the rate was higher among females than among males, except in Maine and Massachusetts; but in New York, New Jersey, and Michigan it was higher among males than females.

The following table shows, for the registration area and its subdivisions, the death rates from "General diseases—A" among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	277.2	319.4	273.6	332.8	224.5	292.8
Ireland	275.0	291.0	279.8	299.8	209.5	236.3

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
Germany	230.3	237.6	235.5	248.5	195.9	218.2
England and Wales	225.6	243.3	226.5	250.5	181.7	221.0
Canada	317.4	354.8	327.1	376.6	264.7	164.1

Russia and Poland	295.2	303.1	269.4	275.8	221.4	409.7
Other foreign	382.5	416.2	380.0	421.3	279.3	395.9

This table shows that the mortality from this group of diseases was greatest among those having mothers born in Italy (471.8), in Canada (317.4), and in Russia and Poland (295.2); and was least among those having mothers born in Scotland (203.9), in England and Wales (225.6), and in Germany (230.3). The greatest mortality occurred in the cities in the registration states, among the children of mothers born in Italy (520.8).

The following table shows, for the registration area and its subdivisions, the death rates from "General diseases—A" during the census year, in each of six age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

Cities in other states	4,486.3	5,999.3	1,699.0	2,289.6	182.2	261.1	125.1	154.7	193.6	197.1	705.4	600.3
Males	4,799.7	6,271.2	1,773.5	2,357.2	173.2	242.1	137.1	169.0	208.9	214.1	708.4	628.9
Females	4,166.5	5,720.0	1,623.7	2,220.4	191.1	280.1	113.0	140.1	177.6	179.4	702.9	575.8

It will be seen from this table that the greatest mortality from this group of diseases occurred in infants under 1 year of age. At this age it was higher among males (5,105.7) than among females (4,370.7), and was higher in the cities in the registration states (5,803.9) than in the cities in the nonregistration states (4,486.3), or in the rural districts of the same states (3,411.5).

The death rate from these diseases was lowest in persons 15 to 44 years of age (95.5), and in this age group it was less in the cities in the registration states (73.5) than in the rural districts (77.5).

The death rate from these diseases at 45 to 64 years of age (157.8) was but little higher than that at 5 to 14 years (150), the rates in these two age groups bearing much the same proportions in all of the areas.

At 65 years of age and upward the death rate from these diseases (742.3) was more than four times as high as the rate at 45 to 64, and nearly twice the rate between 5 and 65.

As this group of diseases includes most of the specific infectious or communicable diseases, a comparison of the death rates, by ages, with those in 1890, particularly in the cities, will afford some valuable information. It will be observed that there was a great decrease in the death rates at all ages up to 45 years, a very similar rate for those 45 to 64 years, and a large increase in the rate for persons 65 years of age and over.

The decrease in the death rate per 100,000 of population was greatest in infants under 1 year old, and at this age the decrease, stated in whole numbers, was greater in the cities in the registration states (2,483) than in the cities in the nonregistration states (1,513). It was least in the rural districts of the registration states (615).

For all children under 5 years of age the decrease in the rate per 100,000 of population was 919 in the cities in the registration states, 591 in the cities in the nonregistration states, and 125 in the rural districts of the registration states.

At 5 to 14 years of age the decrease was 119 in the cities in the registration states, 79 in the cities in the nonregistration states, and 74 in the rural districts of the registration states.

For those 15 to 44 years of age the decrease was 33 in the cities in the registration states, 30 in the cities in the nonregistration states, and 13 in the rural districts of the registration states.

At 65 years of age and over the increase in the death rate was 261 per 100,000 in the cities in the registration states, 105 in the cities in the nonregistration states, and 312 in the rural districts of the registration states.

Taking all of the registration cities together, these figures show that where 7,067 infants died of these diseases in 1890 as against 5,143 in 1900. In all children under 5 years old there were 2,594 deaths in 1890 to 1,860 in 1900. At 5 to 14 years there were 262 deaths in 1890 to 165 in 1900. For those 15 to 44 years of age there were 132 deaths in 1890 to 101 in 1900, and at 45 to 64 years there were 177 deaths in 1890 to 176 in 1900. Above 65 years there were 761 deaths in 1900 to 577 in 1890.

The ratio of change in the death rate from these diseases in the rural districts between 1890 and 1900 was not so satisfactory, and the figures given illustrate forcibly the great benefit accruing from improved sanitary conditions and health regulations in many of the cities.

The combined relations of age and race to the death

rates from these diseases are indicated in the following table, for the registration area, giving the death rates during the census year in each of six age groups, per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 1.	Under 5.	5 to 14.	15 to 44.	45 to 64.	65 and over.
White	4,605.1	1,633.4	144.5	88.4	149.4	786.0
Colored	8,540.1	3,036.9	291.5	231.5	363.7	969.8
Mothers born in—						
United States	3,960.8	1,360.5	129.2	79.1	105.0	607.4
Ireland	5,249.3	1,991.9	143.5	86.0	228.5	942.0
Germany	5,320.9	1,701.3	131.9	69.8	124.6	608.4
England and Wales	4,482.1	1,497.3	121.5	76.3	126.6	758.4
Canada	6,714.4	2,052.6	119.4	74.5	105.4	596.3
Scandinavia	3,564.9	1,276.7	157.2	97.2	98.1	518.3
Scotland	3,380.5	1,208.8	155.0	59.8	113.2	891.5
Italy	5,607.5	2,407.6	137.7	68.6	110.5	454.7
France	10,706.2	2,787.8	57.7	79.1	145.6	605.5
Hungary	3,573.7	1,331.8	77.8	65.0	125.1	280.9
Bohemia	4,359.6	1,435.1	112.4	63.7	83.2	403.8
Russia	4,268.4	1,565.2	70.9	42.7	110.6	405.2
Poland	3,411.1	1,283.7	67.7	41.6	73.1	263.5
Other foreign	6,174.6	2,187.9	120.5	99.9	122.4	616.1

This table shows that the death rate of the colored from this group of diseases was nearly twice as high as that of the whites in each age group up to 65 years. At 65 years of age and over, the rate for the colored was much higher than that for the whites, but the difference is not so great as at the lower ages.

In white infants under 1 year of age, among whom the mortality was greatest, the death rates were highest in those whose mothers were born in France (10,706.2), in Canada (6,714.4), in "Other foreign" countries (6,174.6), and in Italy (5,607.5); and were lowest among those whose mothers were born in Scotland (3,380.5), in Poland (3,411.1), and in Scandinavia (3,564.9). The rate for white infants whose mothers were born in the United States (3,960.8) was lower than for those whose mothers were born in England and Wales (4,482.1), in Ireland (5,249.3), or in Germany (5,320.9).

The following table shows, for the registration area, the proportions of deaths from this group of diseases at each age, per 1,000 deaths at known ages from these diseases, in 1900 and 1890, by sex.

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	350.4	314.1	365.2	342.7
1 year	112.6	111.9	117.0	118.3
2 years	51.6	54.5	56.1	58.2
3 years	36.2	38.3	41.8	43.0

40 to 44 years	20.9	18.3	17.1	14.8
45 to 49 years	19.8	16.2	16.1	14.0
50 to 54 years	19.2	17.2	14.4	13.7
55 to 59 years	18.6	19.2	14.4	14.3
60 to 64 years	20.3	23.7	13.9	16.2
65 to 69 years	22.4	27.9	14.7	15.7
70 to 74 years	23.3	28.6	12.7	14.5
75 to 79 years	20.2	27.2	11.0	12.7
80 to 84 years	16.1	21.6	7.4	9.9
85 to 89 years	8.3	11.0	4.0	5.2
90 to 94 years	2.1	4.1	0.8	1.7
95 years and over	0.7	1.1	0.4	0.7

This table shows that at each census, and in both sexes, more than half the deaths from these diseases occurred among children under 5 years of age.

The average age at death from diseases of this class in the registration area in 1900 was 18.5 years. In 1890 it was 13.7 years. For those dying at 15 years of age and over the average age was 49.6 years. In 1890 it was 43.2.

The following table shows for each grand group in the United States the proportion of deaths from "General diseases—A," during the census year, per 1,000 deaths from known causes, in the aggregate and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	178.3	147.1	156.3	185.1	194.6
2. Middle Atlantic Coast region	183.1	189.7	196.7	176.3	185.9
3. South Atlantic Coast region	291.9	320.6	318.6	226.7	222.0
4. Gulf Coast region	289.6	331.8	344.0	222.7	229.2
5. Northeastern hills and plateaus	170.1	155.3	159.2	194.6	193.0
6. Central Appalachian region	183.7	175.7	193.9	176.8	190.7
7. Region of the Great Northern Lakes	179.1	159.6	179.6	177.3	192.6
8. Interior plateau	179.1	179.7	193.5	169.6	176.5
9. Southern Central Appalachian region	273.2	272.8	278.4	225.9	234.0
10. Ohio River belt	174.5	186.2	201.5	144.2	152.2
11. Southern Interior plateau	309.3	315.8	303.0	.....	.....
12. South Mississippi River belt	336.0	347.1	350.8	265.0	295.5
13. North Mississippi River belt	177.3	192.2	211.2	142.3	158.8
14. Southwest Central region	353.3	346.1	365.6	284.9	292.7
15. Central region, plains and prairies	199.8	201.3	209.6	169.0	177.5
16. Prairie region	182.8	175.4	193.8	154.7	186.9
17. Missouri River belt	196.4	203.0	230.3	153.5	180.8
18. Region of the Western plains	257.9	277.9	312.0	125.0	165.6
19. Heavily timbered region of the Northwest	168.6	164.6	176.0	159.6	169.7
20. Cordilleran region	207.8	181.9	272.3	133.5	184.3
21. Pacific Coast region	121.7	125.0	156.2	105.1	121.8

The proportions of deaths from this group of diseases were greatest in the Southwest Central region (353.3), the South Mississippi River belt (336), the Southern Interior plateau (309.3), the South Atlantic Coast region (291.9), and the Gulf Coast region (289.6); and were least in the Pacific Coast region (121.7) and the heavily timbered region of the Northwest (168.6).

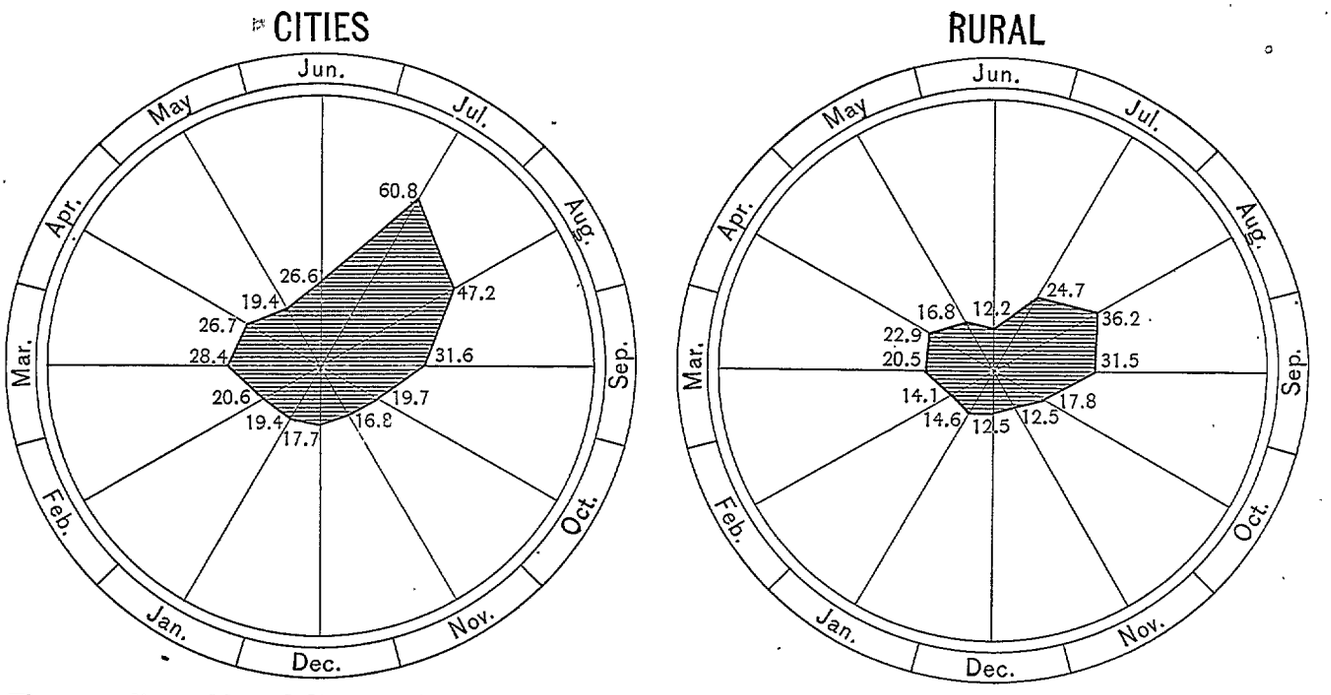
It will be seen from the table that the proportions of deaths from this group of diseases were greatest in the southern and southwestern sections of the country, where the proportion of colored population is greatest; and were least on the Pacific coast and in the northeastern section.

The following table shows, for the registration states, the death rate from "General diseases—A" in each month of the census year, in the aggregate, and for the cities and rural districts:

DEATH RATES BY MONTHS.

MONTHS.	Total.	Cities.	Rural.
January	17.5	19.4	14.6
February	17.9	20.6	14.1
March	25.2	28.4	20.5
April	25.1	26.7	22.9
May	18.3	19.4	16.8
June	20.7	26.6	12.2
July	46.1	60.8	24.7
August	42.7	47.2	36.2
September	31.5	31.6	31.5
October	18.9	19.7	17.8
November	15.0	16.8	12.5
December	15.6	17.7	12.5

The death rate from this group of diseases in each month, in the cities and the rural districts, and the relative difference in the rates in the two areas is shown in the following diagram:



The preceding table and diagram show that the death rates from this group of diseases in the registration states were highest, in both cities and rural districts, in July (cities, 60.8; rural, 24.7), August (cities, 47.2; rural, 36.2), and September (cities, 31.6; rural, 31.5).

The following table shows the comparative proportions of the deaths from "General diseases—A" in each month during the census year per 1,000 deaths in known months in the United States, as a whole, and in the registration states:

COMPARATIVE PROPORTION OF DEATHS IN EACH MONTH.

MONTHS.	United States.	Registration states.
January	63.8	59.3
February	64.9	60.8
March	80.1	85.4
April	82.8	85.3
May	82.2	62.3
June	71.4	70.4
July	117.3	156.3
August	128.7	145.1
September	106.3	107.1
October	82.1	64.2
November	62.7	51.0
December	57.7	52.8

COMPARATIVE PROPORTION OF DEATHS IN EACH MONTH—Con.

MEASLES.

The total number of deaths reported as due to measles in the United States during the census year was 12,866, of which 6,231 were of males and 6,635 were of females; and the proportion of deaths from this disease in 1,000

deaths from all known causes was 12.9. In 1890 the corresponding proportion was 11.1.

In the registration area the number of deaths reported as due to this disease was 3,801, of which 1,872 were of males and 1,929 were of females, giving a proportion of 7.5 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 13.2 per 100,000 of population. In 1890 the death rate was 13.5.

In England and Wales the death rate from measles during the year 1899 was 31.5 per 100,000 of population, and this was the lowest rate from this disease since 1881.

The following table shows, for the registration area and its subdivisions, the death rate from measles in the census years 1900 and 1890, by sex, color, general nativity, and parent nativity:

DEATH RATES, BY COLOR AND NATIVITY.

AREAS.	Aggregate.	WHITE.							COLORED.		
		Total.	Males.	Females.	Native.			Foreign.	Total.	Males.	Females.
					Total.	Both parents native.	One or both parents foreign.				
Registration area.....1900..	13.2	13.1	13.0	13.3	16.8	12.1	24.6	1.9	15.0	14.1	15.9

Cities.....1900..	14.3	14.3	14.4	14.1	19.0	14.4	27.2	1.8	14.6	13.6	15.6
1890..	15.6	15.3	15.5	15.2	20.9	15.9	27.7	2.6	20.1	20.6	19.5
States .....1900..	14.8	14.7	14.6	14.9	18.8	12.2	28.3	2.6	19.0	17.0	20.9
1890..	10.7	10.7	10.8	10.7	13.4	8.7	20.9	3.0	10.7	11.3	10.0
Cities.....1900..	18.2	18.2	18.7	17.7	25.3	15.9	33.3	2.7	18.6	15.8	21.2
1890..	13.1	13.3	13.7	12.8	18.1	12.1	23.9	3.1	9.0	10.0	8.0
Rural.....1900..	9.9	9.8	9.0	10.7	11.2	9.2	17.1	2.5	20.1	20.3	19.9
1890..	7.0	6.9	6.4	7.3	7.6	6.1	12.9	2.9	14.6	14.1	15.2
Cities in other states .....1900..	10.7	10.5	10.3	10.6	13.5	11.5	10.5	0.6	13.4	13.0	13.9
1890..	17.9	17.4	17.1	17.6	23.4	24.0	36.4	2.1	23.1	23.4	22.9

The highest death rate from measles was in the cities in the registration states (18.2), and the lowest in the rural districts of the same states (9.9). In both cities and rural districts of the registration states there was an increase in the death rate from this disease over 1890, the increase being greatest in the cities (5.1). In the cities in the nonregistration states the rate was 10.7 in 1900 and 17.9 in 1890, a decrease of 7.2.

By classes, the death rate from measles was highest in native white children having one or both parents foreign (24.6), and lowest in the foreign whites (1.9), owing to the small proportion of children in this class. The death rate of native whites of native parents (12.1) was about half as high as the rate for those having one or both parents foreign (24.6), and was also less than the death rate of the colored from this disease (15). In both white and colored the rate was slightly higher for females than for males.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rate from measles in the census year per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.	AGGREGATE.			MALES.			FEMALES.

[1] Nonregistration in 1890.

The preceding table shows that the highest death rate from measles in the registration states was in Rhode Island (47.6), and the lowest in Vermont (6.1). In the cities the rate from this disease was also highest in Rhode Island (48.4), and was lowest in Maine (4.2). In the rural districts the death rate in Rhode Island (46.1) was more than twice as high as the rate in any other state.

The following table shows, for the registration area and its subdivisions, the death rate from measles among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	11.9	13.8	12.3	15.7	9.4	10.0
Ireland	10.4	11.9	11.1	13.0	4.2	4.8
Germany	8.9	9.0	10.8	11.7	8.2	4.3
England and Wales	7.9	8.9	8.1	9.6	5.3	6.8
Canada	17.3	17.5	18.3	19.4	16.8	1.3

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
Scandinavia	13.4	13.1	17.9	19.8	14.4	5.6
Scotland	5.8	7.4	6.0	8.1	1.3	4.8
Italy	62.6	69.6	67.0	75.6	23.1	17.2
France	2.0	2.5	2.7	3.9	.....	.....
Hungary and Bohemia	8.8	9.2	12.2	13.3	5.3	2.8
Russia and Poland	13.5	13.1	13.7	13.1	13.0	13.0
Other foreign	23.6	26.5	24.9	29.2	14.4	16.1

This table shows that the death rates from measles were highest among the children of mothers born in Italy (62.6), in "other foreign" countries (23.6), and in Canada (17.3), the rate for children of mothers born in Italy being nearly three times that of any other class.

The following table shows, for the registration area and its subdivisions, the death rates from measles during the census year, in each of the four age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex.

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 1.		UNDER 5.		5 TO 14.		15 AND OVER.	
	1900	1890	1900	1890	1900	1890	1900	1890
Total	152.8	168.1	106.5	112.5	7.4	6.5	1.3	1.2
Males	159.8	172.7	107.5	113.0	6.5	6.5	1.0	0.8
Females	145.6	163.4	105.6	112.0	8.3	6.5	1.5	1.5
Cities	162.9	186.2	119.9	128.6	7.1	7.2	0.7	0.9
Males	170.1	186.8	121.5	128.6	6.3	7.5	0.5	0.7
Females	155.6	185.6	118.3	128.6	7.9	6.9	0.8	1.1
States	173.4	147.2	117.2	91.8	8.5	4.5	1.6	1.3
Males	183.3	155.1	119.0	92.3	7.4	4.9	1.2	0.9
Females	163.4	139.2	115.3	91.3	9.5	4.2	2.0	1.6
Cities	206.3	174.7	151.2	114.5	8.6	4.8	0.6	0.8
Males	218.4	175.9	154.9	114.0	7.4	5.9	0.3	0.7
Females	194.0	173.6	147.5	114.9	9.7	3.6	0.9	0.9
Rural	119.3	95.9	63.4	53.0	8.3	4.2	3.1	2.0
Males	125.7	116.5	62.6	55.5	7.3	3.3	2.4	1.2
Females	112.7	74.7	64.3	50.4	9.3	5.1	3.7	2.7
Cities in other states	119.8	196.2	89.9	140.8	5.8	9.3	0.7	1.0
Males	122.3	196.4	89.4	141.1	5.3	8.8	0.7	0.7
Females	117.2	196.0	90.3	140.5	6.4	9.8	0.8	1.3

The preceding table shows that the mortality from measles was greatest in infants under 1 year of age, and at this age it was highest in the cities in the registration states (206.3). In these cities the death rate from measles at each age in 1900 was higher than in 1890, but in the other areas there was generally a decrease in the rate as compared with 1890.

The death rate of children under 5 years of age in the registration area from this disease (106.5) was very much less than the corresponding death rate in England and Wales for the year 1899, which was 239.7.

The combined relations of age and race to the death rates from measles are indicated in the following table for the registration area, giving the death rates during the census year in each of four age groups, per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 1.	Under 5.	5 to 14.	15 and over.
White	150.4	105.3	7.1	1.2
Colored	219.6	141.6	14.2	1.4
Mothers born in:				
United States	119.1	74.4	6.9	2.2
Ireland	208.8	151.5	9.1	0.5
Germany	167.4	106.6	5.7	0.6
England and Wales	136.9	111.2	3.8	0.3
Canada	179.1	127.8	10.8	1.3
Scandinavia	86.9	86.1	12.8	.....
Scotland	153.7	61.7	16.9	.....
Italy	379.2	374.2	7.3	0.3
France	113.9	45.0	.....	.....
Hungary	107.0	61.2	.....	.....
Bohemia	134.8	55.9	.....	.....
Russia	117.2	72.7	2.1	.....
Poland	100.5	72.0	6.9	.....
Other foreign	214.4	164.5	10.4	1.3

The preceding table shows that the death rates from measles in white infants under 1 year of age were highest among those whose mothers were born in Italy (379.2), in "Other foreign" countries (214.4), and in Ireland (208.8); and were lowest among those whose mothers were born in Scandinavia (86.9), in Poland (100.5), and in Hungary (107).

For all children under 5 years of age they were highest in those whose mothers were born in Italy (374.2), in "Other foreign" countries (164.5), and in Ireland (151.5); and were lowest among those whose mothers were born in France (45), in Bohemia (55.9), and in Hungary (61.2). The rate was lower for the children of native mothers (74.4) than for those whose mothers were born in Germany (106.6), in England and Wales (111.2), or in Canada (127.8).

The following table shows, for the registration area, the proportions of deaths from measles at each specified age, per 1,000 deaths at known ages from this disease, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE, PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	266.0	231.6	279.3	253.6
1 year	331.2	317.8	331.6	308.9
2 years	145.3	145.4	150.6	157.8
3 years	66.3	67.5	65.1	73.3
4 years	42.2	40.0	38.6	37.4
Under 5 years	851.0	802.3	865.2	831.0
5 to 9 years	76.4	91.9	78.7	73.3

45 to 49 years	1.1	5.2	0.8	5.2
50 to 54 years	4.3	1.0	.....	2.2
55 to 59 years	0.5	3.6	.....	2.2
60 to 64 years	1.1	.....	.....	0.8
65 to 69 years	1.1	1.0	.....	.....
70 to 74 years	0.5	0.5	2.3	0.8
75 to 79 years	1.6	0.5	.....	.....
80 to 84 years	.....	1.0	1.5	.....
85 years and over	.....	0.5	0.7	.....

This table shows that in both census years more than 80 per cent of the deaths caused by measles in the registration area occurred in children under 5 years of age.

The average age at death from this disease in the registration area in 1900 was 4.4 years. In 1890 it was 4 years.

The following table shows, for each grand group in the United States, the proportions of deaths from measles during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	8.3	5.6	7.2	9.1	9.2
2. Middle Atlantic Coast region	8.8	4.6	6.1	8.9	10.5
3. South Atlantic Coast region	9.8	13.4	12.4	1.8	2.4
4. Gulf Coast region	13.3	16.0	19.0	6.8	8.8
5. Northeastern hills and plateaus	6.7	5.4	6.2	9.4	7.3
6. Central Appalachian region	9.0	9.6	11.5	5.6	6.7
7. Region of the Great Northern Lakes	8.6	6.7	8.9	7.9	10.3
8. Interior plateau	8.4	8.7	8.9	8.1	8.1
9. Southern Central Appalachian region	20.4	20.8	21.8	3.2	4.5
10. Ohio River belt	6.3	6.5	8.7	4.2	4.7
11. Southern Interior plateau	22.7	22.8	22.5	.....	.....
12. South Mississippi River belt	40.7	40.9	51.9	14.1	19.9
13. North Mississippi River belt	7.1	11.0	12.6	1.1	2.2
14. Southwest Central region	51.7	47.7	58.9	7.3	11.1
15. Central region—plains and prairies	8.8	8.5	11.4	3.6	3.0
16. Prairie region	6.5	5.6	7.9	6.0	3.0
17. Missouri River belt	7.1	8.8	10.0	2.6	4.4
18. Region of the Western plains	18.5	22.6	21.7	5.0	7.7
19. Heavily timbered region of the Northwest	8.4	7.4	10.0	5.6	10.7
20. Cordilleran region	12.2	10.4	19.0	1.3	4.8
21. Pacific Coast region	2.1	2.3	3.9	1.6	1.4

This table indicates that the greatest proportions of deaths from measles occurred in the Southwest Central region (51.7), the South Mississippi River belt (40.7), and the Southern Interior plateau (22.7); and the least in the Pacific Coast region (2.1), the Ohio River belt (6.3), and the Prairie region (6.5).

The geographical distribution of deaths from measles by state groups is shown by plate No. 2.

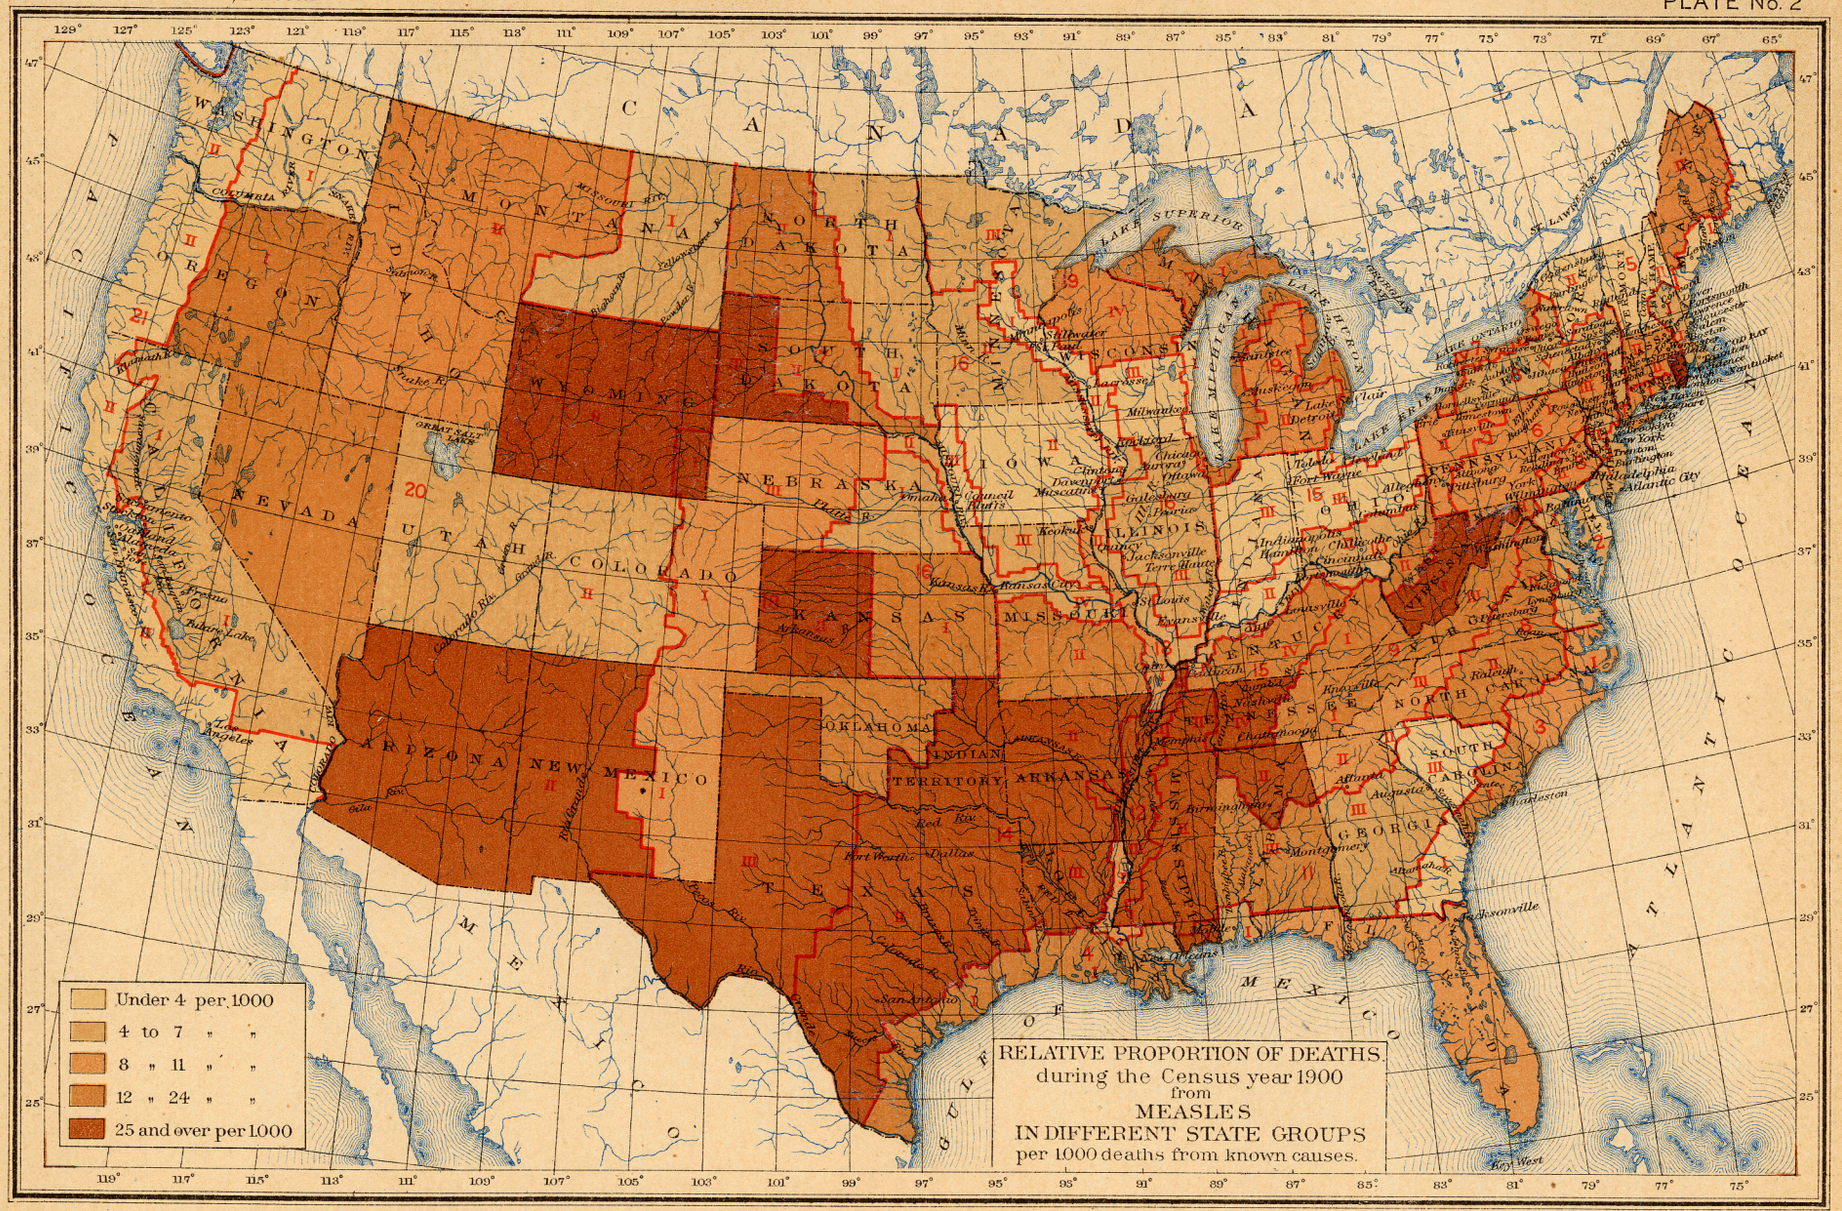
The following table shows, for the registration states, the death rate from measles in each month of the census year, in the aggregate, and for the cities and rural districts:

DEATH RATES BY MONTHS.

MONTHS.	Total.	Cities.	Rural.
January	1.7	2.3	0.9
February	2.1	2.4	1.5
March	2.3	2.7	1.8
April	2.1	2.5	1.5
May	2.0	2.2	1.7
June	1.1	1.4	0.7
July	0.8	1.0	0.4
August	0.4	0.6	0.2
September	0.3	0.5	0.1
October	0.3	0.4	0.2
November	0.7	0.8	0.4
December	1.0	1.4	0.5

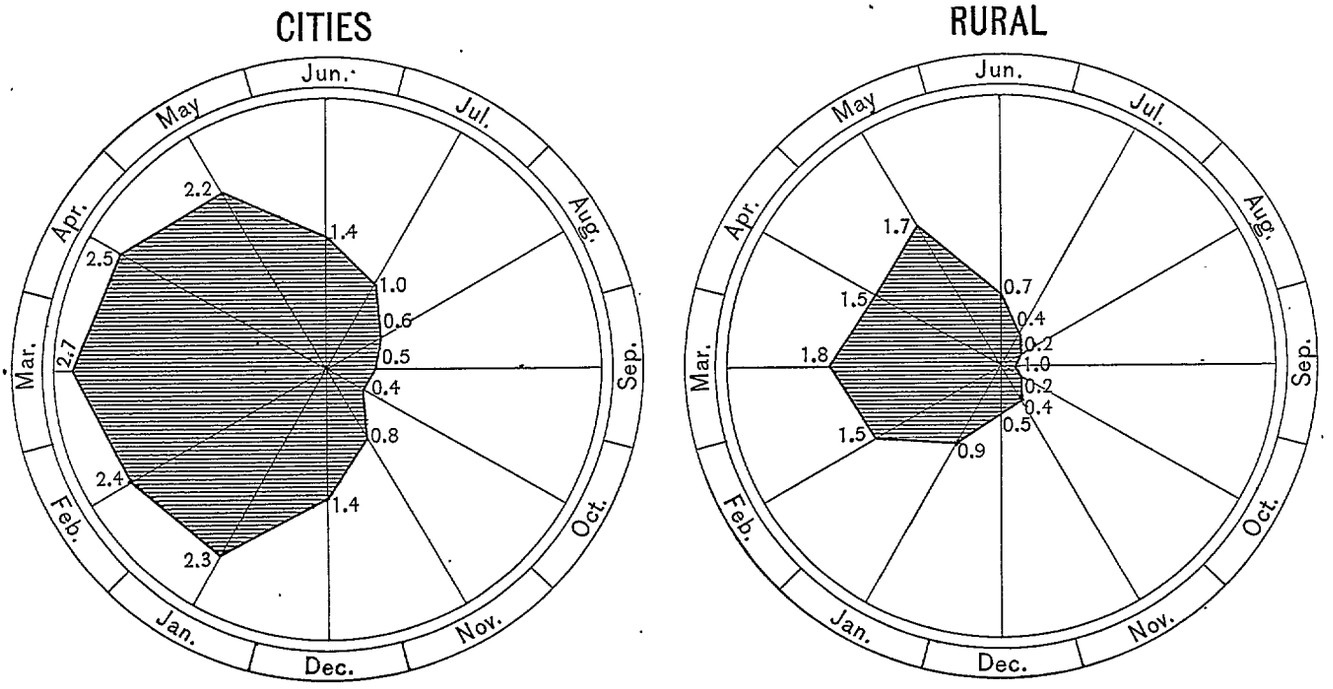
Twelfth Census of the United States
William R. Merriam, Director.

PLATE No. 2



JULIUS BIEN & CO. LITH. N.Y.

The death rate from measles in each month in the cities and the rural districts, and the relative difference in the rates in the two areas are shown in the following diagram:



The preceding table and diagram show that in the cities in the registration states the death rates from measles were highest in February, March, and April. In the rural districts the highest rates occurred in March, April, and May.

The following table shows the comparative proportions of deaths from measles in each month during the census year, per 1,000 deaths in known months, in the United States, as a whole, and the registration states:

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH.

MONTHS.	United States.	Registration states.
January	95.0	118.1
February	150.1	139.4
March	176.0	159.5
April	146.8	139.4
May	130.3	134.3
June	66.4	76.3
July	48.5	50.7
August	43.6	28.3
September	34.7	21.3
October	25.5	19.7
November	34.6	44.1
December	48.5	68.9

SCARLET FEVER.

The total number of deaths reported as due to scarlet fever in the United States during the census year was 6,333, of which 3,135 were of males and 3,198 were of females, and the proportion of deaths from this disease in 1,000 deaths from all known causes was 6.3. In 1890 the corresponding proportion was 7.1.

In the registration area the number of deaths reported as due to this disease was 3,327, of which 1,688 were of males and 1,639 were of females, giving a proportion of 6.6 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 11.6 per 100,000 of population. In 1890 the death rate was 13.6.

In England and Wales the death rate from this disease during the year 1899 was 11.7.

The following table shows, for the registration area and its subdivisions, the death rate from scarlet fever in the census years 1900 and 1890, by sex, color, general nativity, and parent nativity:

DEATH RATES BY COLOR AND NATIVITY.

AREAS.	Aggregate.	WHITE.							COLORED.		
		Total.	Males.	Females.	Native.			Foreign.	Total.	Males.	Females.
					Total.	Both parents native.	One or both parents foreign.				
Registration area.....1900..	11.6	12.0	12.1	11.8	15.3	10.3	18.9	1.7	2.6	2.6	2.5
1890..	13.6	14.2	13.6	14.8	18.4	14.2	22.3	2.8	2.7	2.6	2.9
Cities.....1900..	12.9	13.5	13.8	13.2	17.9	13.3	20.3	1.8	2.6	2.7	2.5
1890..	15.3	16.0	15.7	16.3	21.7	19.3	24.1	3.0	2.6	2.3	2.9
States.....1900..	10.7	10.8	11.2	10.4	13.9	10.0	19.7	1.8	3.6	4.5	2.8
1890..	13.1	13.2	12.7	13.7	16.9	13.2	22.9	2.8	5.2	4.5	5.7
Cities.....1900..	13.0	13.2	14.0	12.5	18.4	14.2	22.0	2.0	4.2	5.5	2.9
1890..	16.0	16.3	16.4	16.2	22.5	19.4	25.7	3.2	5.8	4.5	7.0
Rural.....1900..	7.4	7.5	7.6	7.4	8.7	6.8	14.2	1.1	2.1	2.0	2.2
1890..	8.5	8.6	7.3	10.0	10.0	8.4	15.2	1.4	3.7	4.7	2.5
Cities in other states .....1900..	12.9	13.8	13.6	14.0	17.5	11.8	15.8	1.6	2.1	1.8	2.4
1890..	14.6	15.8	15.1	16.5	20.9	19.2	20.4	2.7	1.8	1.8	1.7

It will be seen from this table that the death rate from scarlet fever was much higher in the cities in the registration states (13) than in the rural districts (7.4), and that it was much higher among the whites (12) than among the colored (2.6). Among the native whites of native parents the rate (10.3) was much less than among those having one or both parents foreign born (18.9). The low death rate of the foreign born whites from this disease (1.7) was due to the small proportion of children in this class. In comparison with 1890 the figures show a decrease in the death rates from this disease in all areas and for all classes.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from scarlet fever in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.	AGGREGATE.			MALES.			FEMALES.		
	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.

[1] Nonregistration in 1890.

This table shows that in the registration states the highest death rates from scarlet fever in the census year occurred in the cities in New Jersey (15.9) and Massachusetts (14.9), and the lowest rates in the rural districts in Vermont (3.4) and New York (5.4).

In comparison with 1890 there was an increase in the death rates from this disease in the District of Columbia, Massachusetts, and New Hampshire; and a decrease in the other states. The greatest decrease in the rates occurred in the cities in New York (6.2 per 1,000).

The following table shows, for the registration area and its subdivisions, the death rates from scarlet fever among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	11.0	13.8	10.8	14.9	7.4	11.7
Ireland	9.6	10.6	9.8	11.1	5.3	7.7
Germany	7.6	8.2	7.3	8.0	5.0	8.5
England and Wales	8.3	9.4	8.4	9.9	5.6	8.1

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
Canada	11.5	10.8	11.5	10.9	12.3	10.0
Scandinavia	13.6	13.1	16.6	17.3	15.3	8.4
Scotland	9.4	10.4	9.8	11.3	6.6	7.2
Italy	15.5	16.7	16.5	18.1	8.7	4.9
France	3.0	2.5	2.7	1.9	4.7	3.7
Hungary and Bohemia	13.8	14.6	17.5	19.5	5.3	6.9
Russia and Poland	18.4	19.8	17.3	18.8	5.5	23.8
Other foreign	12.0	12.5	12.6	13.3	10.8	9.2

The preceding table shows that the death rates due to scarlet fever were highest among the children of mothers born in Russia and Poland (18.4), in Italy (15.5), and in Hungary and Bohemia (13.8); and were lowest among the children of mothers born in France (3), in Germany (7.6), and in England and Wales (8.3).

The following table shows, for the registration area and its subdivisions, the death rates from scarlet fever during the census year in each of four age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 1.		UNDER 5.		5 TO 14.		15 AND OVER.	
	1900	1890	1900	1890	1900	1890	1900	1890
Total	29.8	42.2	70.0	88.4	19.7	20.8	0.9	0.9
Males	35.6	40.2	71.7	84.5	19.6	19.5	0.9	0.9

Cities	32.5	42.7	79.3	98.5	21.4	22.0	0.9	0.9
Males	39.3	39.8	81.0	94.5	21.4	21.7	0.8	1.0
Females	25.5	45.6	77.6	102.5	21.4	22.3	0.9	0.9
States	29.7	50.5	64.9	87.4	17.6	20.4	1.0	1.0
Males	35.5	44.9	68.0	82.4	17.6	19.3	1.0	1.0
Females	23.9	56.2	61.8	92.5	17.6	21.6	1.0	1.0
Cities	35.1	55.9	80.6	108.4	19.7	22.8	1.0	1.0
Males	42.8	46.5	84.8	102.8	20.0	23.7	1.0	1.2
Females	27.2	65.6	76.5	114.1	19.3	21.8	1.0	0.9
Rural	20.9	40.3	40.0	51.4	14.7	16.9	1.0	1.0
Males	23.5	41.9	41.5	47.6	14.3	12.8	1.1	0.7
Females	18.3	38.5	38.5	55.2	15.0	21.1	1.0	1.3
Cities in other states	29.8	31.1	78.1	89.8	22.8	21.3	0.8	0.8
Males	35.8	34.0	77.5	87.4	22.5	19.9	0.7	0.8
Females	23.8	28.2	78.7	92.4	23.2	22.7	0.9	0.8

The preceding table shows that the death rate from scarlet fever was highest in children under 5 years of age (70), and that at this age, and also in infants under 1 year old, the death rate of males was higher than that of females. In the age group 5 to 14 years the death rate of females (19.8) was slightly higher than that of males (19.6). At 15 years of age and over the death rate of both sexes was even (0.9). The greatest mortality from this disease in children under 5 years of age was in the cities in the registration states (80.6), where it was twice as high as the rate in the rural districts (40), and slightly higher than in the cities in the nonregistration states (78.1).

In comparison with 1890 there was a large decrease in the death rates from this disease, particularly in the cities in the registration states, where the rate for those under 5 years of age declined from 108.4 in 1890 to 80.6 in 1900. The decrease at this age in the nonregistra-

tion states was less marked, the rates being 89.8 in 1890 and 78.1 in 1900.

The death rate of children under 5 years of age from scarlet fever in the registration area (70) was higher than the corresponding rate from this disease in England and Wales in 1899 (59.6).

The combined relations of age and race to the death rates from scarlet fever are indicated, for the registration area, in the following table giving the death rates during the census year in each of the 4 age groups, per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 1.	Under 5.	5 to 14.	15 and over.
White	30.8	72.0	20.4	0.9
Colored	.....	16.6	2.9	1.0
Mothers born in—				
United States	21.6	53.3	17.9	1.0
Ireland	40.6	105.0	24.2	0.8
Germany	8.2	66.1	16.7	0.5
England and Wales	25.7	80.8	15.9	1.1
Canada	48.0	70.7	14.6	0.8
Scandinavia	23.7	48.7	31.4	1.5
Scotland	61.5	55.5	36.6	1.8
Italy	37.4	68.8	18.8	0.7
France	.....	67.4	.....	.....
Hungary	42.8	56.1	20.5	1.3
Bohemia	.....	65.2	15.3	1.9
Russia	62.1	109.8	16.4	0.4
Poland	28.7	49.6	17.2	1.0
Other foreign	30.6	73.1	10.4	1.3

It will be seen from this table that in white children under 5 years of age the death rates from scarlet fever were highest in those whose mothers were born in Russia (109.8), in Ireland (105), and in England and Wales (80.8); and were lowest in those whose mothers were born in Scandinavia (48.7), in Poland (49.6), and in the United States (53.3).

The following table shows, for the registration area, the proportions of deaths from scarlet fever at each specified age, per 1,000 deaths at known ages from this disease, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	65.8	44.6	67.1	66.0
1 year	128.0	116.6	156.8	149.2
2 years	158.9	157.5	159.9	170.0
3 years	170.7	158.7	158.3	150.6
4 years	106.1	133.7	124.8	122.0
Under 5 years	629.5	611.1	666.9	657.8
5 to 9 years	270.9	283.3	250.4	248.2
10 to 14 years	46.8	48.2	35.1	45.9
15 to 19 years	17.2	21.4	21.8	15.8
20 to 24 years	11.9	12.2	4.7	7.9
25 to 29 years	8.3	7.9	6.2	7.2
30 to 34 years	6.5	4.9	4.7	7.2
35 to 39 years	3.6	4.9	2.3	3.6
40 to 44 years	2.9	3.1	1.6	1.5
45 to 49 years	0.6	0.6	1.6	.....
50 to 54 years	.....	0.6	0.8	.....
55 to 59 years	.....	.....	2.3	1.4
60 years and over	1.8	1.8	1.6	3.5

This table shows that of the total deaths from this disease at known ages in the registration area, about 65 per cent occurred under 5 years of age.

The average age at death from this disease in the registration area was 5.9 years. In 1890 it was 5.5 years.

The following table shows, for each grand group in the United States, the proportion of deaths from scarlet fever during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities, and rural districts.

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	6.0	4.1	3.1	6.8	7.2
2. Middle Atlantic Coast region	6.3	2.5	3.9	7.2	7.0
3. South Atlantic Coast region	2.1	2.8	1.9	0.4	2.9
4. Gulf Coast region	7.0	11.6	12.5	0.3	0.4
5. Northeastern hills and plateaus	6.0	5.4	5.4	6.8	7.4
6. Central Appalachian region	11.4	9.3	10.8	12.2	16.4
7. Region of the Great Northern Lakes	10.9	8.4	9.8	11.2	12.7
8. Interior plateau	5.5	5.0	5.1	5.5	6.5
9. Southern Central Appalachian region	3.6	3.4	3.6	3.1	3.6
10. Ohio River belt	3.2	2.6	4.8	2.4	2.7
11. Southern Interior plateau	1.1	1.2	1.0	.....	.....
12. South Mississippi River belt	1.7	1.4	2.2	0.6	1.5
13. North Mississippi River belt	4.9	5.0	4.9	4.2	5.5
14. Southwest Central region	11.5	9.5	14.0	5.4	12.3
15. Central region, plains and prairies	4.6	4.5	5.1	3.6	4.3
16. Prairie region	5.9	5.3	6.7	6.3	5.5
17. Missouri River belt	4.6	5.5	6.6	2.6	2.0
18. Region of the Western plains	9.1	9.2	10.7	3.9	10.8
19. Heavily timbered region of the Northwest	4.2	4.2	4.3	3.7	4.6
20. Cordilleran region	12.5	10.6	16.9	8.3	11.4
21. Pacific Coast region	3.7	2.9	5.4	3.1	4.5

This table shows that the proportions of deaths from scarlet fever, per 1,000 deaths from known causes, were greatest in the Cordilleran region (12.5), the Southwest Central region (11.5), and the Central Appalachian region (11.4); and were least in the Southern Interior plateau (1.1) and the South Mississippi River belt (1.7).

The geographical distribution of deaths from scarlet fever, by state groups, is shown by plate No. 3.

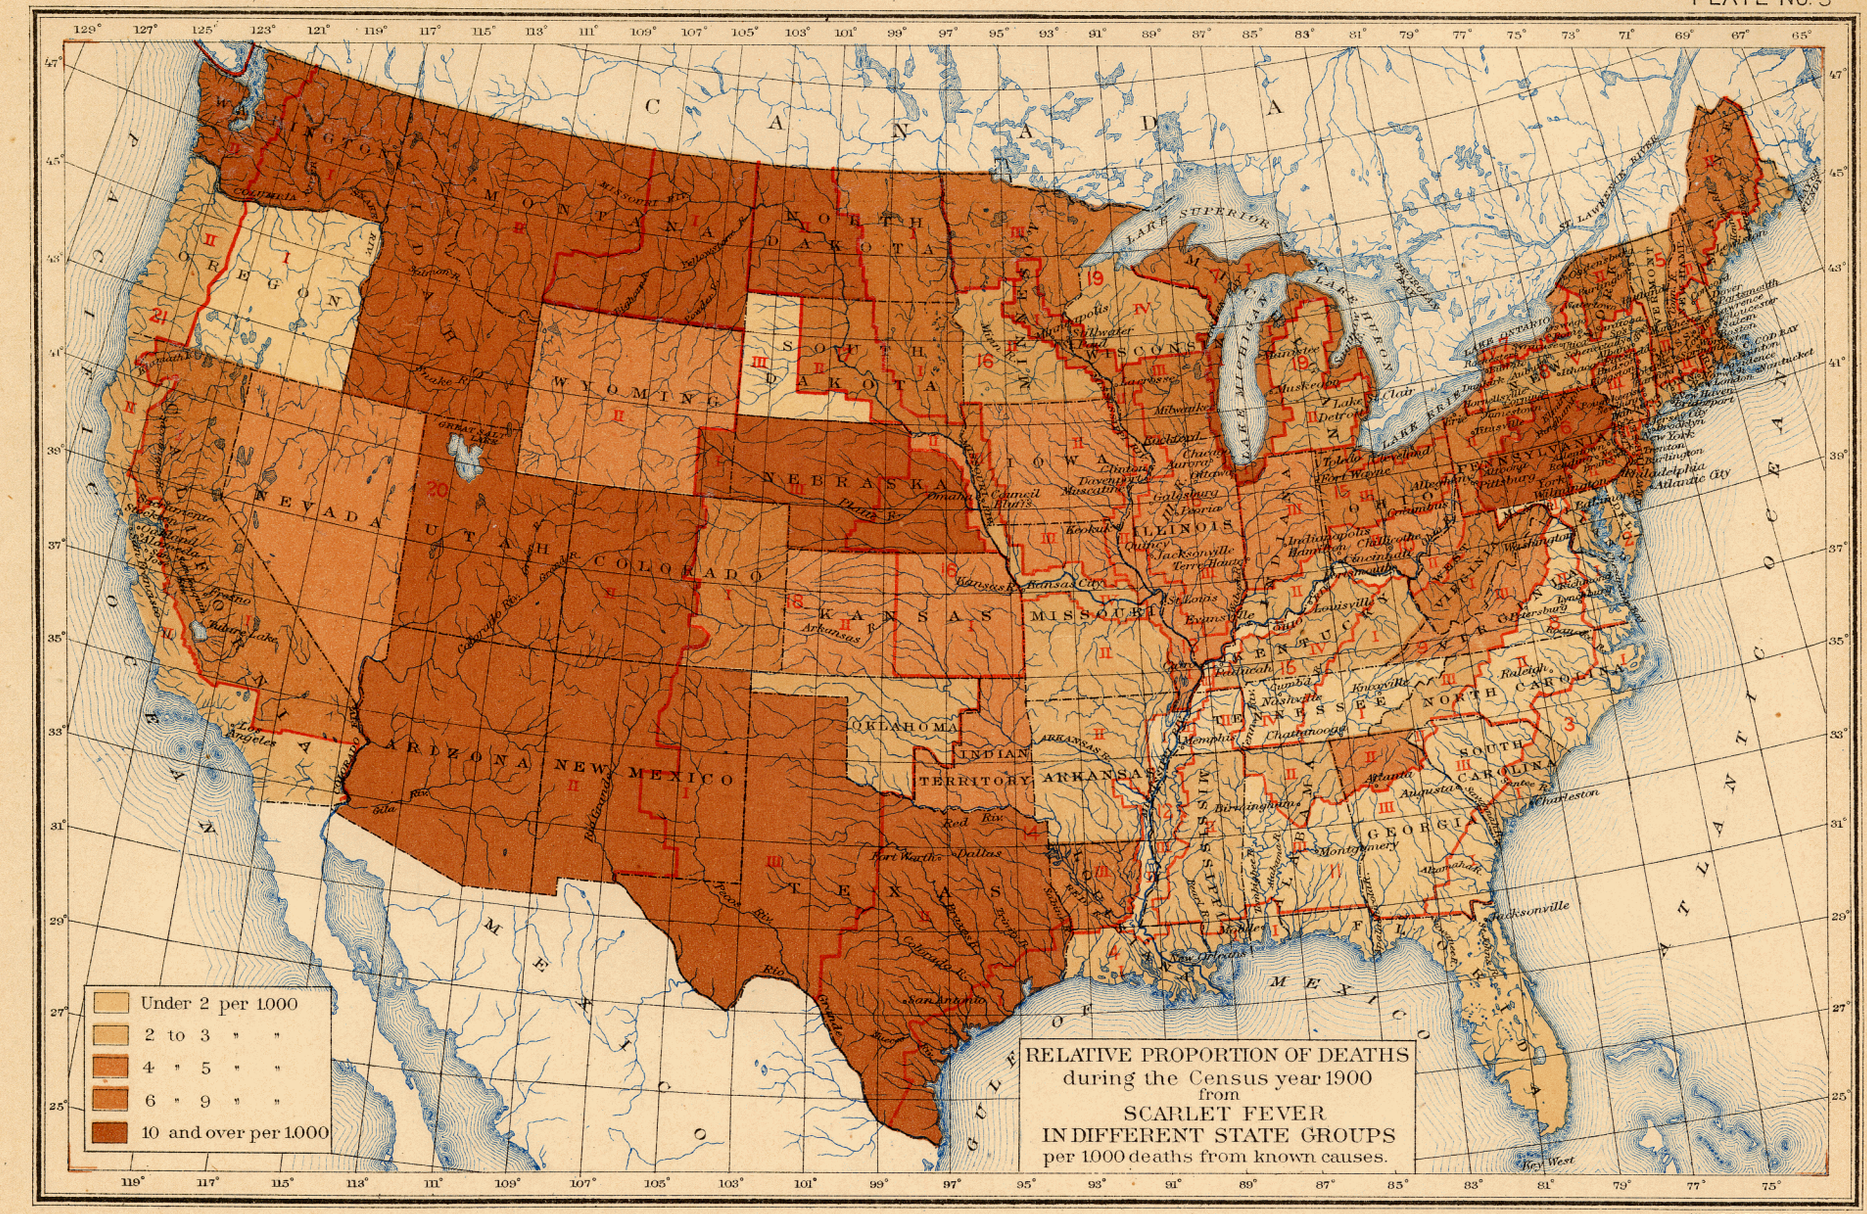
The following table shows, for the registration states, the death rate from scarlet fever in each month of the census year, in the aggregate, and for the cities and rural districts:

DEATH RATES BY MONTHS.

MONTHS.	Total.	Cities.	Rural.
January	1.2	1.6	0.8
February	1.4	1.8	0.9
March	1.2	1.5	0.9
April	1.2	1.4	0.8
May	1.1	1.4	0.7
June	0.8	1.0	0.4
July	0.5	0.6	0.3
August	0.4	0.5	0.3
September	0.4	0.4	0.3
October	0.6	0.8	0.4
November	0.8	0.8	0.8
December	1.1	1.2	0.8

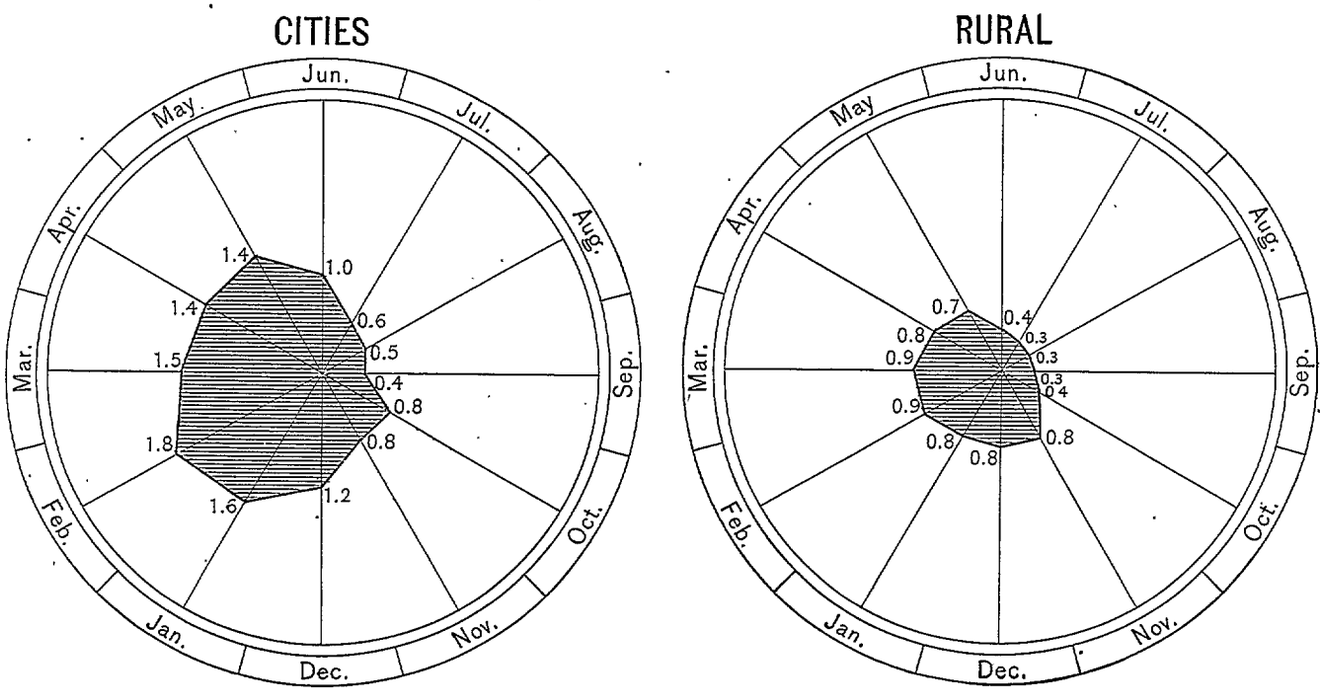
Twelfth Census of the United States
William R. Merriam, Director.

PLATE No. 3



JULIUS BIEN & CO. LITH. N.Y.

The death rate from scarlet fever in each month in the cities and the rural districts, and the relative difference in the rates in the two areas, is shown in the following diagram:



The preceding table and diagram show that in the cities in the registration states the death rates from scarlet fever were highest in January and February. In the rural districts the highest rates occurred in February and March.

The following table shows the comparative proportions of deaths from scarlet fever in each month during the census year, per 1,000 deaths in known months, in the United States, as a whole, and in the registration states:

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH.

MONTHS.	United States.	Registration states.
January	118.3	115.8
February	112.8	134.5
March	106.8	115.2
April	105.7	110.9
May	98.4	100.8
June	56.0	72.9
July	46.3	48.2
August	50.3	36.4
September	52.5	34.8
October	69.4	59.0
November	84.8	73.4
December	98.7	98.1

DIPHTHERIA AND CROUP.

In this discussion these diseases will first be considered together. The deaths from each are stated separately in the general tables giving the relation of sex and age to causes of death. The number from each in the United States and the registration area, by sex, was as follows:

CAUSE.	UNITED STATES.		REGISTRATION AREA.	
	Males.	Females.	Males.	Females.
Diphtheria	8,070	8,405	5,022	5,179
Croup	6,808	5,676	1,527	1,303

The total number of deaths reported as due to diphtheria and croup in the United States during the census year was 28,959, of which 14,878 were males and 14,081 were females, and the proportion of deaths from these diseases in 1,000 deaths from all known causes was 29. In 1890 the corresponding proportion was 49.7.

In the registration area the number of deaths reported as due to diphtheria and croup was 13,031, of which 6,549 were males and 6,482 were females, giving a proportion of 25.7 deaths from these diseases in 1,000 deaths from all known causes, and a death rate of 45.2 per 100,000 of population. In 1890 the death rate was 97.8.

In England and Wales the death rate from diphtheria and croup for the year 1899 was 32.5 per 100,000 of population.

The following table shows, for the registration area and its subdivisions, the death rates from diphtheria and croup in the census years 1900 and 1890, by sex, color, general nativity, and parent nativity:

DEATH RATES BY COLOR AND NATIVITY.

AREAS.	Aggregate.	WHITE.							COLORED.		
		Total.	Males.	Females.	Native.			Foreign.	Total.	Males.	Females.
					Total.	Both parents native.	One or both parents foreign.				
Registration area 1900	45.2	45.9	46.1	45.7	59.1	39.6	69.0	4.9	30.5	31.7	29.4
1890	97.8	100.4	101.7	99.0	130.1	89.4	193.0	18.6	46.9	45.5	48.2
Cities 1900	52.8	54.0	54.6	53.5	72.5	55.7	78.3	5.1	31.5	33.2	30.0
1890	111.2	115.2	117.4	113.0	156.8	124.0	216.0	19.3	47.2	45.6	48.7
States 1900	40.3	40.3	40.9	39.8	52.2	37.8	73.2	5.3	37.7	37.5	37.9
1890	95.4	96.0	99.2	92.9	122.5	85.7	183.4	19.7	70.2	69.6	70.8
Cities 1900	52.8	53.0	54.6	51.5	74.8	59.5	87.8	5.9	44.8	46.5	43.2
1890	122.0	123.0	129.6	116.8	171.7	131.5	212.8	21.4	81.6	81.4	81.8
Rural 1900	22.3	22.3	22.2	22.4	25.9	21.1	39.6	3.8	18.0	14.2	22.1
1890	54.9	55.1	54.7	55.6	62.7	50.7	104.1	14.2	43.8	44.7	42.9
Cities in other states 1900	52.8	55.0	54.6	55.4	70.4	48.5	52.5	4.1	27.6	29.4	26.0
1890	101.3	107.4	105.8	109.1	143.0	107.8	223.3	16.9	37.6	36.1	39.1

The highest death rate from diphtheria and croup was in the cities (52.8), being the same in the cities in the registration states and those in the nonregistration states, and more than twice the rate in the rural districts (22.3).

By classes, the rate from these diseases was much higher for the whites (45.9) than for the colored (30.5). It was also much higher for the native whites having one or both parents foreign (69) than for those of native parents (39.6). For both white and colored the rate was slightly higher in males than in females.

In comparison with 1890 the figures show a great decrease in the death rates from diphtheria and croup, in all areas and all classes.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from diphtheria and croup in the census year, per 1,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.	AGGREGATE.			MALES.			FEMALES.		
	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total 1900	40.3	52.8	22.2	40.9	54.3	22.2	39.7	51.3	22.5

[1] Nonregistration in 1890.

It will be seen from this table that the death rate from diphtheria and croup in the registration states was highest in the District of Columbia (75.4) and lowest in Vermont (18.3). It was more than twice as high in the cities as in the rural districts.

In comparison with 1890 there was a great decrease in the death rates from these diseases in both cities and rural districts.

The following table shows, for the registration area and its subdivisions, the death rates from diphtheria and croup among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	40.7	55.9	39.7	61.5	21.6	44.7
Ireland	32.8	37.4	35.0	41.0	14.0	15.3
Germany	37.7	40.7	39.0	44.2	22.8	34.6
England and Wales	25.4	28.7	26.3	31.1	17.3	21.1
Canada	40.9	47.2	41.8	49.6	32.2	26.1
Scandinavia	44.6	50.4	53.1	68.9	24.3	29.7
Scotland	23.1	23.8	25.0	26.9	21.1	11.9
Italy	67.4	70.3	69.9	73.6	50.4	41.8
France	11.0	12.7	15.1	19.4	4.7	.....
Hungary and Bohemia	49.2	50.4	43.4	44.4	37.2	59.9
Russia and Poland	49.7	50.8	50.5	52.0	38.7	46.1
Other foreign	44.1	51.4	45.1	54.6	21.6	39.2

This table shows that the death rates due to diphtheria and croup in the registration area were highest among the children of mothers born in Italy (67.4), in Russia and Poland (49.7), and in Hungary and Bohemia (49.2); and lowest among those whose mothers were born in England and Wales (25.4), in Scotland (23.1), and in France (11). The rate was lower among the children of native mothers (40.7) than among those whose mothers were born in Canada (40.9) or in Scandinavia (44.6).

The following table shows, for the registration area and its subdivisions, the death rates from diphtheria and croup during the census year in each of four age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 1.		UNDER 5.		5 TO 14.		15 AND OVER.	
	1900	1890	1900	1890	1900	1890	1900	1890
Total	161.5	337.4	285.7	607.3	75.1	166.5	2.5	5.8
Males	184.2	384.2	297.8	632.8	70.1	156.4	2.1	5.2
Females	138.5	389.4	273.4	581.2	80.1	176.6	2.8	6.4
Cities	180.4	362.3	335.6	693.6	85.4	180.5	2.4	5.1
Males	206.0	407.6	348.7	724.1	80.4	169.4	2.0	4.6

States	150.0	344.1	258.8	613.7	62.8	165.7	2.6	6.6
Males	169.8	404.8	267.9	649.7	60.2	156.4	2.4	5.9
Females	130.0	281.7	249.7	577.0	65.5	175.2	2.8	7.2
Cities	180.9	400.9	343.8	803.7	76.5	195.3	2.5	5.7
Males	205.0	466.0	352.8	857.2	75.2	184.1	2.2	5.1
Females	156.6	334.3	334.7	749.6	77.7	206.4	2.8	6.2
Rural	99.0	238.0	124.6	287.8	43.5	121.6	2.7	8.0
Males	111.9	291.2	134.3	296.9	39.2	115.8	2.6	7.1
Females	86.0	183.0	114.7	278.4	47.9	127.5	2.8	8.9
Cities in other states	179.9	328.5	327.8	598.5	93.2	167.6	2.3	4.6
Males	207.1	356.5	344.7	609.8	84.9	156.5	1.8	4.1
Females	152.0	299.7	310.7	586.9	101.5	178.7	2.8	5.0

The preceding table shows that the greatest mortality from these diseases occurred in children under 5 years of age (285.7), the rate at 5 to 14 years being 75.1, and that at 15 years and over, 2.5. For infants under 1 year of age the death rate was 161.5.

In the age period under 5 years of age the death rate from these diseases was highest in the cities of the registration states (343.8), and was lowest in the rural districts of the same states (124.6). In the cities of the nonregistration states it was 327.8.

In England and Wales the death rate from diphtheria and croup in children under 5 years of age during the year 1899 was 169.3.

In comparison with 1890 the figures show a great decrease in the death rate due to these diseases in each age group, the decrease being greatest in the cities in the registration states. In the age group under 5 years the death rate from these diseases decreased from 803.7 in 1890 to 343.8 in 1900, the decrease amounting to about 57 per cent.

The combined relations of age and race to the death rates from diphtheria and croup, are indicated for the registration area, in the following table, giving the death rates during the census year in each of four age groups, per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 1.	Under 5.	5 to 14.	15 and over.
White	154.9	287.6	75.6	2.5
Colored	345.7	234.4	62.6	1.5
Mothers born in—				
United States	109.4	208.2	63.3	2.7
Ireland	145.0	389.3	71.8	2.0
Germany	189.3	337.5	78.1	2.2
England and Wales	145.4	257.7	53.9	1.5
Canada	172.7	250.1	55.2	2.6
Scandinavia	150.2	232.3	70.7	1.2
Scotland	92.2	265.2	53.6	0.9
Italy	240.3	354.3	40.7	2.1
France	113.9	157.4	19.2	2.3
Hungary	64.2	229.6	36.9	.....
Bohemia	134.8	242.3	97.1	1.9
Russia	262.0	320.5	27.7	2.1
Poland	86.2	158.5	29.9	0.5
Other foreign	183.8	253.1	58.8	1.8

The preceding table shows that the death rates due to diphtheria and croup in white children under 5 years of age were highest in those whose mothers were born in Italy (354.3), in Ireland (389.3), and in Germany (337.5); the lowest among those whose mothers were born in Poland (158.5), in France (157.4), and in the United States (208.2).

The following table shows, for the registration area, the proportions of deaths from diphtheria and croup at each specified age, per 1,000 deaths at known ages from these diseases in 1900 and 1890, by sex:

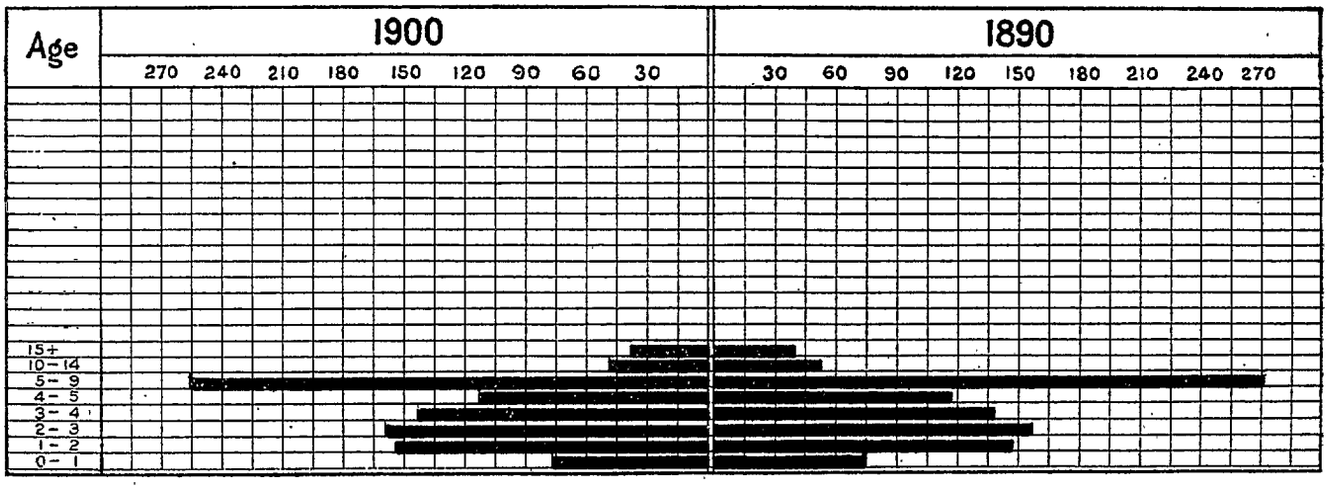
NUMBER OF DEATHS AT EACH AGE, PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	87.7	65.4	84.7	63.4
1 year	162.4	147.6	152.6	141.1
2 years	168.8	149.7	164.1	151.9
3 years	142.7	140.9	141.6	134.5
4 years	112.6	114.1	117.8	115.9
Under 5 years	674.2	617.7	660.8	606.8
5 to 9 years	249.6	283.5	256.1	285.8
10 to 14 years	43.1	54.8	46.4	60.4
15 to 19 years	11.3	15.7	14.0	16.3
20 to 24 years	6.6	8.5	7.3	10.0
25 to 29 years	4.0	5.1	3.4	4.0
30 to 34 years	3.8	3.8	2.3	4.0
35 years and over	7.4	10.9	9.7	12.7

This table shows that in both census years more than 60 per cent of the deaths caused by diphtheria and croup in the registration area occurred in children under 5 years of age, and more than 90 per cent in children under 15 years of age.

The average age at death from these diseases in the registration area in 1900 was 5.4 years. In 1890 it was 5.6 years.

The comparative proportions of deaths from diphtheria and croup at each age in the registration area in 1900 and 1890 are shown in the following diagram:



THE DEATH RATE DUE TO DIPHTHERIA AND CROUP per 100,000 of population 1900

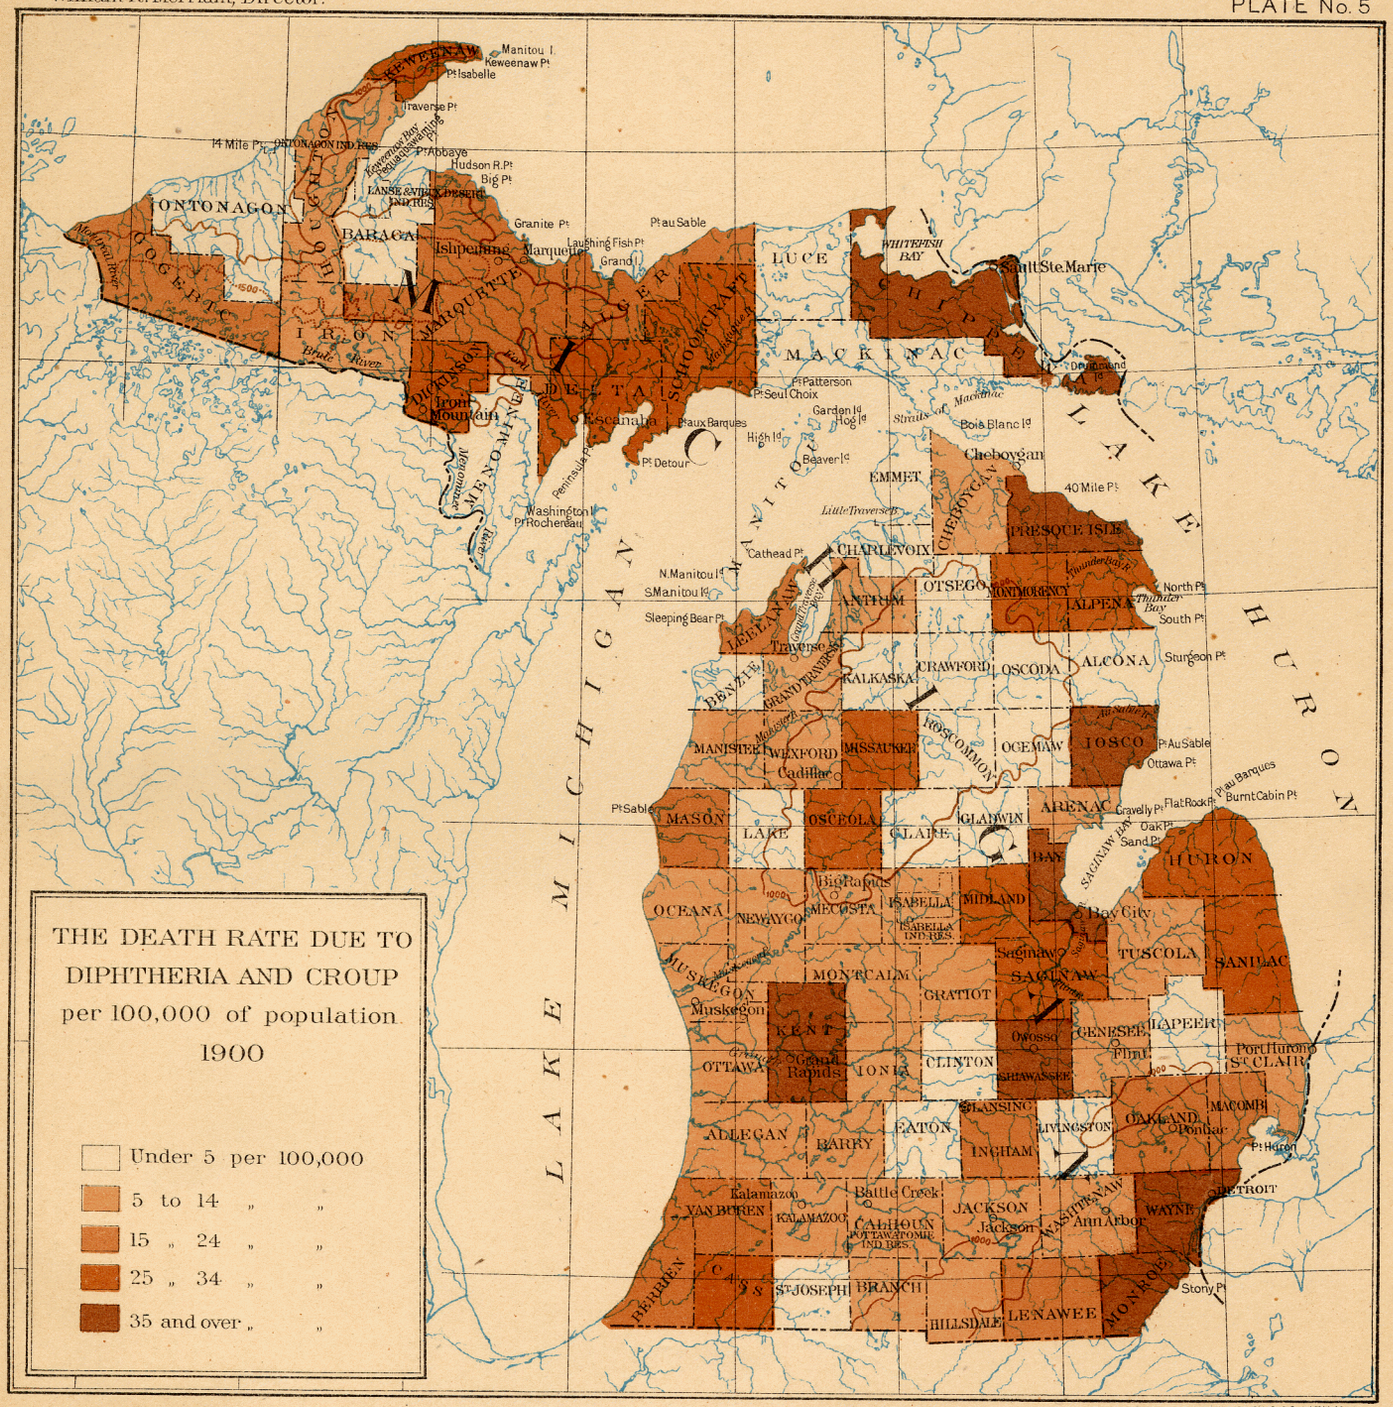
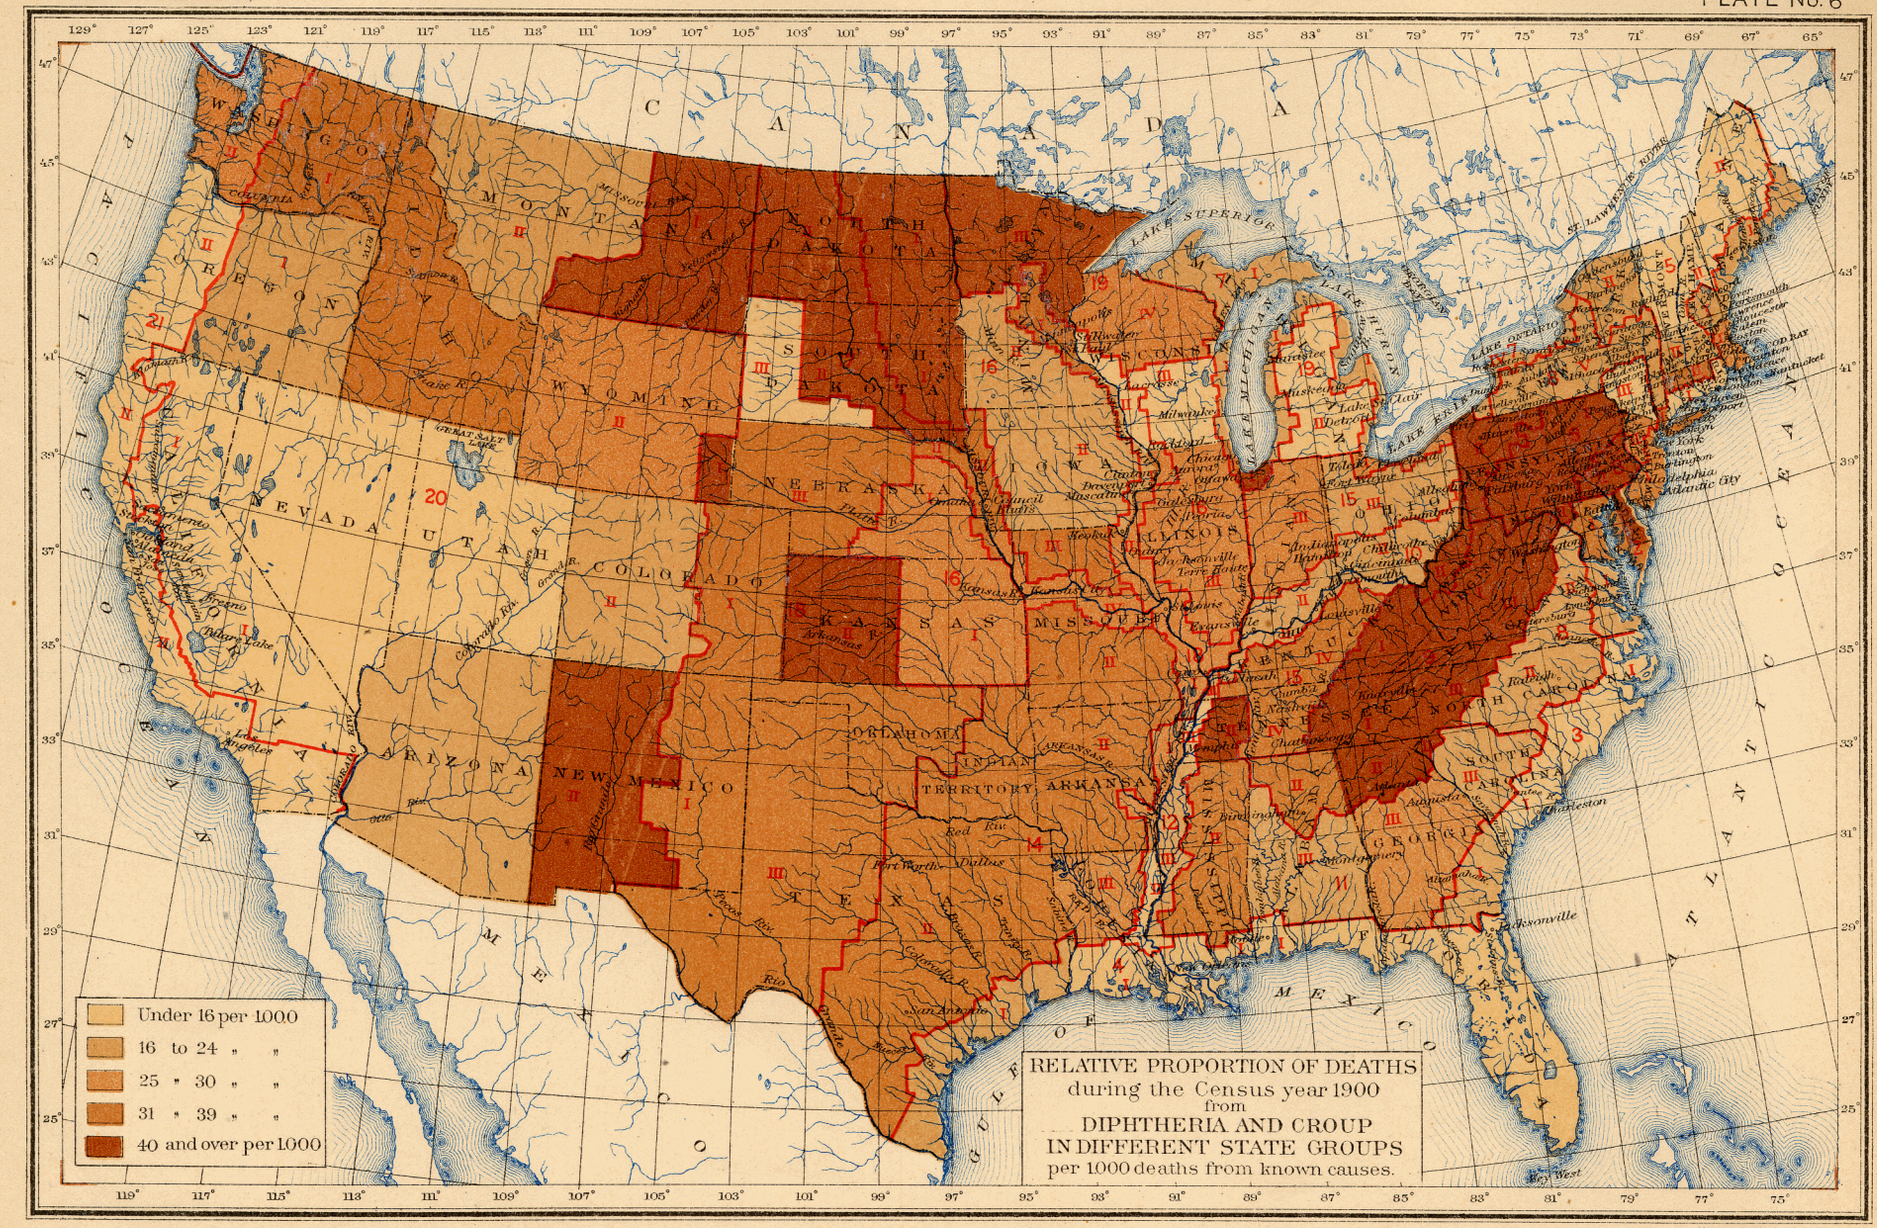
Twelfth Census of the United States
William R. Merriam, Director.

PLATE No. 5



Twelfth Census of the United States
William R. Merriam, Director.

PLATE No. 6



JULIUS BIEN & CO. LITH. N.Y.

The following table shows, for each grand group in the United States, the proportions of deaths from diphtheria and croup during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	21.7	13.1	14.5	24.3	26.0
2. Middle Atlantic Coast region	31.1	24.9	27.5	31.0	33.8
3. South Atlantic Coast region	12.0	14.1	16.7	3.5	4.4
4. Gulf Coast region	12.7	20.1	17.8	4.3	4.7
5. Northeastern hills and plateaus	19.3	14.3	14.7	28.0	28.5
6. Central Appalachian region	41.5	36.2	45.1	42.8	45.8
7. Region of the Great Northern Lakes	28.5	16.5	18.9	30.5	37.9
8. Interior plateau	31.4	25.8	27.2	34.9	36.5
9. Southern Central Appalachian region	58.4	64.2	57.0	12.9	21.6
10. Ohio River belt	24.3	30.3	31.7	13.5	16.8
11. Southern Interior plateau	28.7	29.5	28.0	.....	.....
12. South Mississippi River belt	17.6	21.3	17.7	5.0	13.0
13. North Mississippi River belt	28.1	28.3	29.0	25.8	29.5
14. Southwest Central region	33.7	36.4	32.4	11.8	8.6
15. Central region—plains and prairies	26.1	26.8	26.7	21.5	24.4
16. Prairie region	27.1	26.8	28.5	17.7	24.7
17. Missouri River belt	32.2	35.0	36.1	21.9	33.3
18. Region of the Western plains	38.3	39.7	49.4	16.1	24.6
19. Heavily timbered region of the Northwest	20.9	20.8	21.7	18.6	20.9
20. Cordilleran region	23.7	19.2	35.3	11.2	17.2
21. Pacific Coast region	15.6	16.1	20.0	11.3	18.9

This table indicates that diphtheria and croup caused the greatest proportions of deaths in the Southern Central Appalachian region (58.4), the Central Appalachian region (41.5), and the region of the Western plains (38.3). The proportions for these diseases were least in the South Atlantic Coast region (12) and the Gulf Coast region (12.7).

The comparative death rates from these diseases in the counties in the registration states are shown by plates Nos. 4 and 5.

The geographical distribution of deaths from diphtheria and croup, by state groups, is shown by plate No. 6.

DIPHTHERIA.

The total number of deaths reported as due to diphtheria alone in the United States during the census year was 16,475, of which 8,070 were males and 8,405 were females.

In the registration area the number of deaths reported as due to this disease was 10,201, of which 5,022 were males and 5,179 were females, giving a proportion of 20.1 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 35.4 per 100,000 of population. In 1890 the death rate was 70.1.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from diphtheria in the census year, per 100,000 of population:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.	AGGREGATE.			MALES.			FEMALES.		
	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	31.7	43.1	15.2	31.6	43.7	14.8	31.8	42.6	15.7
Connecticut	27.9	30.5	22.9	26.6	29.0	22.3	29.1	32.1	23.5
District of Columbia	69.3	69.3	.....	75.0	75.0	.....	64.1	64.1	.....
Maine	14.8	22.8	13.2	15.7	26.6	13.6	14.0	19.4	12.8
Massachusetts	38.2	44.4	18.4	37.7	44.2	17.6	38.7	44.7	19.2
Michigan	15.6	27.7	10.6	13.4	22.8	9.7	18.0	32.5	11.6
New Hampshire	15.8	25.2	9.9	14.6	23.6	9.3	17.0	26.6	10.5
New Jersey	36.0	43.2	26.5	37.6	46.1	26.5	34.4	40.3	26.5
New York	36.8	47.4	14.7	37.4	48.7	14.5	36.2	46.2	14.8
Rhode Island	17.0	18.4	14.4	16.2	18.2	12.3	17.9	18.5	16.6
Vermont	12.2	36.5	8.4	12.0	35.5	8.5	12.5	37.4	8.3

The following table shows, for the registration states, the death rates from diphtheria in each month of the census year, in the aggregate, and for the cities and rural districts:

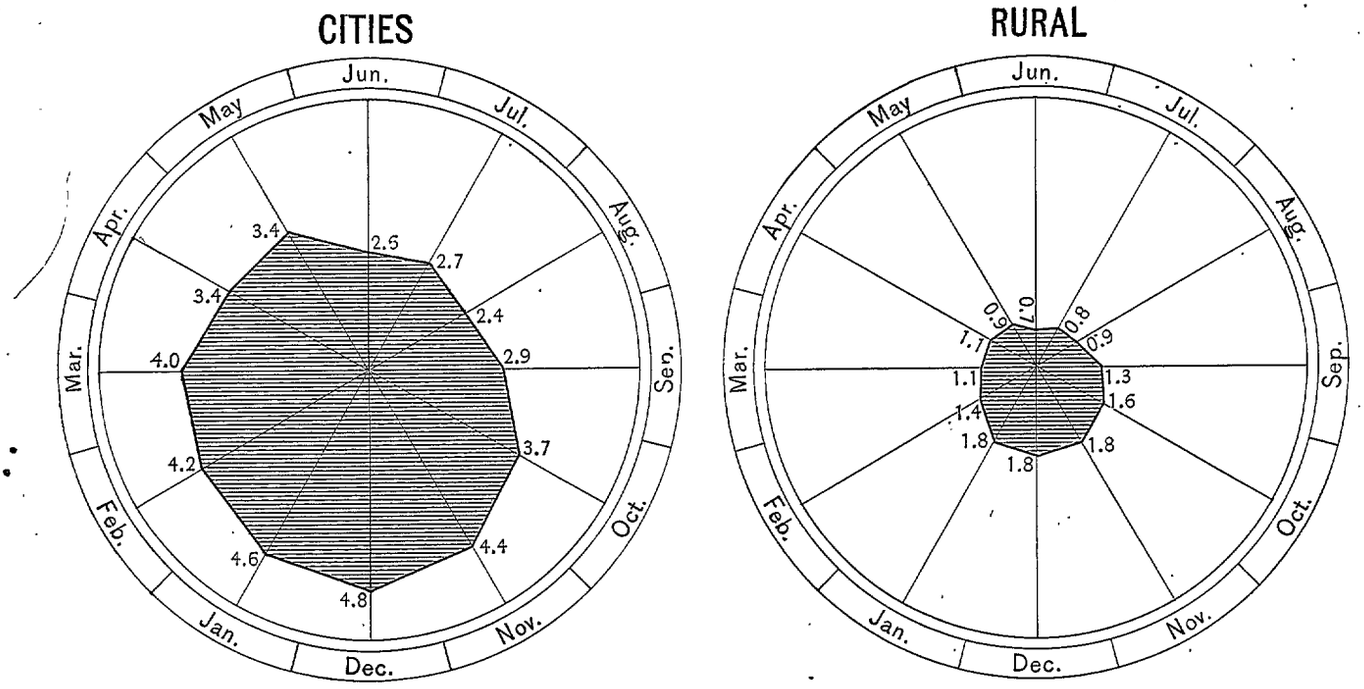
DEATH RATES BY MONTHS.

MONTHS.	Total.	Cities.	Rural.
January	3.4	4.6	1.8
February	3.1	4.2	1.4
March	2.8	4.0	1.1

DEATH RATES BY MONTHS—Continued.

MONTHS.	Total.	Cities.	Rural.
April	2.5	3.4	1.1
May	2.4	3.4	0.9
June	1.8	2.6	0.7
July	1.9	2.7	0.8
August	1.8	2.4	0.9
September	2.3	2.9	1.3
October	2.8	3.7	1.6
November	3.3	4.4	1.8
December	3.6	4.8	1.8

The death rates from diphtheria in each month, in the cities and the rural districts, and the relative differences in the rates in the two areas, are shown in the following diagram:



The preceding table and diagram show that in both cities and rural districts of the registration states the death rates from diphtheria were highest in November, December, and January, and were lowest in June, July, and August.

The following table shows the comparative proportions of deaths from diphtheria in each month during the census year, per 1,000 deaths in known months, in the United States, as a whole, and in the registration states:

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH.

MONTHS.	United States.	Registration states.
January	112.0	108.1
February	90.9	96.7
March	85.7	89.3
April	70.2	77.6
May	65.7	76.3
June	48.3	56.6
July	50.2	61.1
August	54.5	55.0
September	85.2	72.0
October	105.6	89.0
November	116.1	105.3
December	115.6	113.0

WHOOPING COUGH.

The total number of deaths reported as due to whooping cough in the United States during the census year was 9,958, of which 4,601 were males and 5,357 were females, and the proportion of deaths from this disease in 1,000 deaths from all known causes was 10. In 1890 the corresponding proportion was 10.1.

In the registration area the number of deaths reported as due to this disease was 3,669, of which 1,718 were males and 1,951 were females, giving a proportion of 7.2 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 12.7 per 100,000 of population. In 1890 the death rate was 15.8.

In England and Wales the death rate from whooping cough for the year 1899 was 31.9 per 100,000 of population.

The following table shows, for the registration area and its subdivisions, the death rates from whooping cough in the census years 1900 and 1890, by sex, color, general nativity, and parent nativity:

DEATH RATES BY COLOR AND NATIVITY.

AREAS.	Aggregate:	WHITE.							COLORED.		
		Total.	Males.	Females.	Native.			Foreign.	Total.	Males.	Females.
					Total.	Both parents native.	One or both parents foreign.				
Registration area 1900	12.7	12.1	11.4	12.8	15.8	13.8	21.0	0.7	27.2	24.7	29.7
1890	15.8	15.4	13.7	17.0	20.5	15.8	32.1	1.4	23.4	21.1	25.6
Cities 1900	13.4	12.7	11.9	13.4	17.2	16.8	22.4	0.7	26.9	24.9	28.8
1890	17.3	17.0	15.2	18.8	23.8	21.1	35.3	1.4	22.8	20.6	24.9
States 1900	14.0	13.7	12.8	14.6	18.0	14.0	23.6	0.9	31.3	28.9	33.6
1890	18.2	17.8	16.1	19.5	23.4	15.9	36.0	1.5	33.8	29.5	37.9
Cities 1900	16.4	16.0	15.0	17.0	23.0	18.9	26.6	0.9	31.1	31.5	30.7
1890	23.0	22.7	20.7	24.6	32.8	23.7	42.0	1.6	35.8	31.2	39.9
Rural 1900	10.6	10.3	9.7	10.9	12.1	10.2	16.7	1.0	31.8	22.3	42.1
1890	10.7	10.4	9.3	11.5	12.1	9.9	19.6	1.3	29.2	25.9	32.8
Cities in other states 1900	10.7	9.5	9.1	9.9	12.3	12.9	11.0	0.3	25.6	23.0	28.2
1890	12.1	11.4	10.0	12.8	15.4	15.3	19.9	1.2	19.2	17.8	20.6

This table shows that the death rate from whooping cough was more than twice as high among the colored (27.2) as among the white (12.1), and that it was much higher in the whites having one or both parents foreign (21) than in those of native parents (13.8). The low death rate for the foreign whites (0.7) has no significance as it is due to the very small proportion of children in this class.

The highest death rate from this disease was in the cities in the registration states (16.4). In the cities in the nonregistration states the rate (10.7) was about the same as that in the rural districts of the registration states (10.6).

In comparison with 1890 the death rates for whooping cough show a general decrease in all areas, but principally in the cities.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from whooping cough in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.	AGGREGATE.			MALES.			FEMALES.		
	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.

1890	4.8	10.6	4.3	3.0	7.4	2.6	6.7	13.6	6.1

[1] Nonregistration in 1890.

As in the case of measles, the highest death rate from whooping cough in the registration states during the census year 1900 was in Rhode Island (25.9), where it was highest in both the cities (29.3) and the rural districts (19.3). The lowest rate in the aggregate was in Michigan (11.3).

The following table shows, for the registration area and its subdivisions, the death rates from whooping cough among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	14.0	16.9	14.5	19.4	10.4	11.8
Ireland	10.9	12.4	11.5	13.4	4.7	6.1
Germany	6.9	7.1	7.7	8.2	6.3	5.9
England and Wales	10.1	12.0	10.4	13.1	5.3	8.7
Canada	16.0	16.3	16.8	17.7	15.6	3.7
Scandinavia	16.1	14.5	21.4	21.3	21.6	6.7
Scotland	6.5	6.5	7.2	7.5	6.6	2.4

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states,
			Total.	Cities.	Rural.	
Italy	20.9	22.3	22.2	24.0	13.0	7.4
France	6.0	6.4	8.2	9.7	4.7	.....
Hungary and Bohemia	8.4	8.7	10.6	11.5	5.3	4.2
Russia and Poland	11.7	11.9	12.5	12.9	9.7	7.9
Other foreign	19.5	21.4	20.1	22.7	13.7	16.1

The preceding table shows that the death rates due to whooping cough were highest among those whose mothers were born in Italy (20.9), in "Other foreign" countries (19.5), and in Scandinavia (16.1); and lowest among those whose mothers were born in France (6), in Germany (6.9), and in Scotland (6.5).

The following table shows, for the registration area and its subdivisions, the death rates from whooping cough during the census year in each of four age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 1.		UNDER 5.		5 TO 14.		15 AND OVER.	
	1900	1890	1900	1890	1900	1890	1900	1890
Total	322.0	411.9	118.6	147.1	2.3	3.4	0.2	0.1

Cities	367.3	583.3	147.9	217.3	2.2	4.2	0.2	0.2
Males	359.5	574.1	137.0	194.0	1.5	3.0	0.2	.....
Females	375.2	592.8	158.9	240.9	2.9	5.4	0.3	0.3
Rural	332.0	347.0	100.9	109.8	2.4	3.0	0.3	0.2
Males	338.4	337.8	97.3	99.4	1.2	2.2	0.3	0.1
Females	325.5	356.4	104.6	120.4	3.8	3.9	0.2	0.2
Cities in other states	271.0	292.4	101.1	105.3	2.2	2.8	0.1	0.1
Males	276.2	262.2	96.4	94.4	1.5	1.7	0.1	0.1
Females	265.8	323.4	105.9	116.5	3.0	3.8	0.2	.....

The preceding table shows that the greatest mortality from whooping cough occurred in infants under 1 year of age, being 322 per 100,000 of population of this age. For children under 5 years of age, the death rate from this disease was 118.6; above 5 years of age, the death rates were insignificant.

The death rate from this disease in infants under 1 year of age was highest in the cities in the registration states (367.3), and was lowest in the cities in the non-registration states (271). In the rural districts of the registration states it was 332.

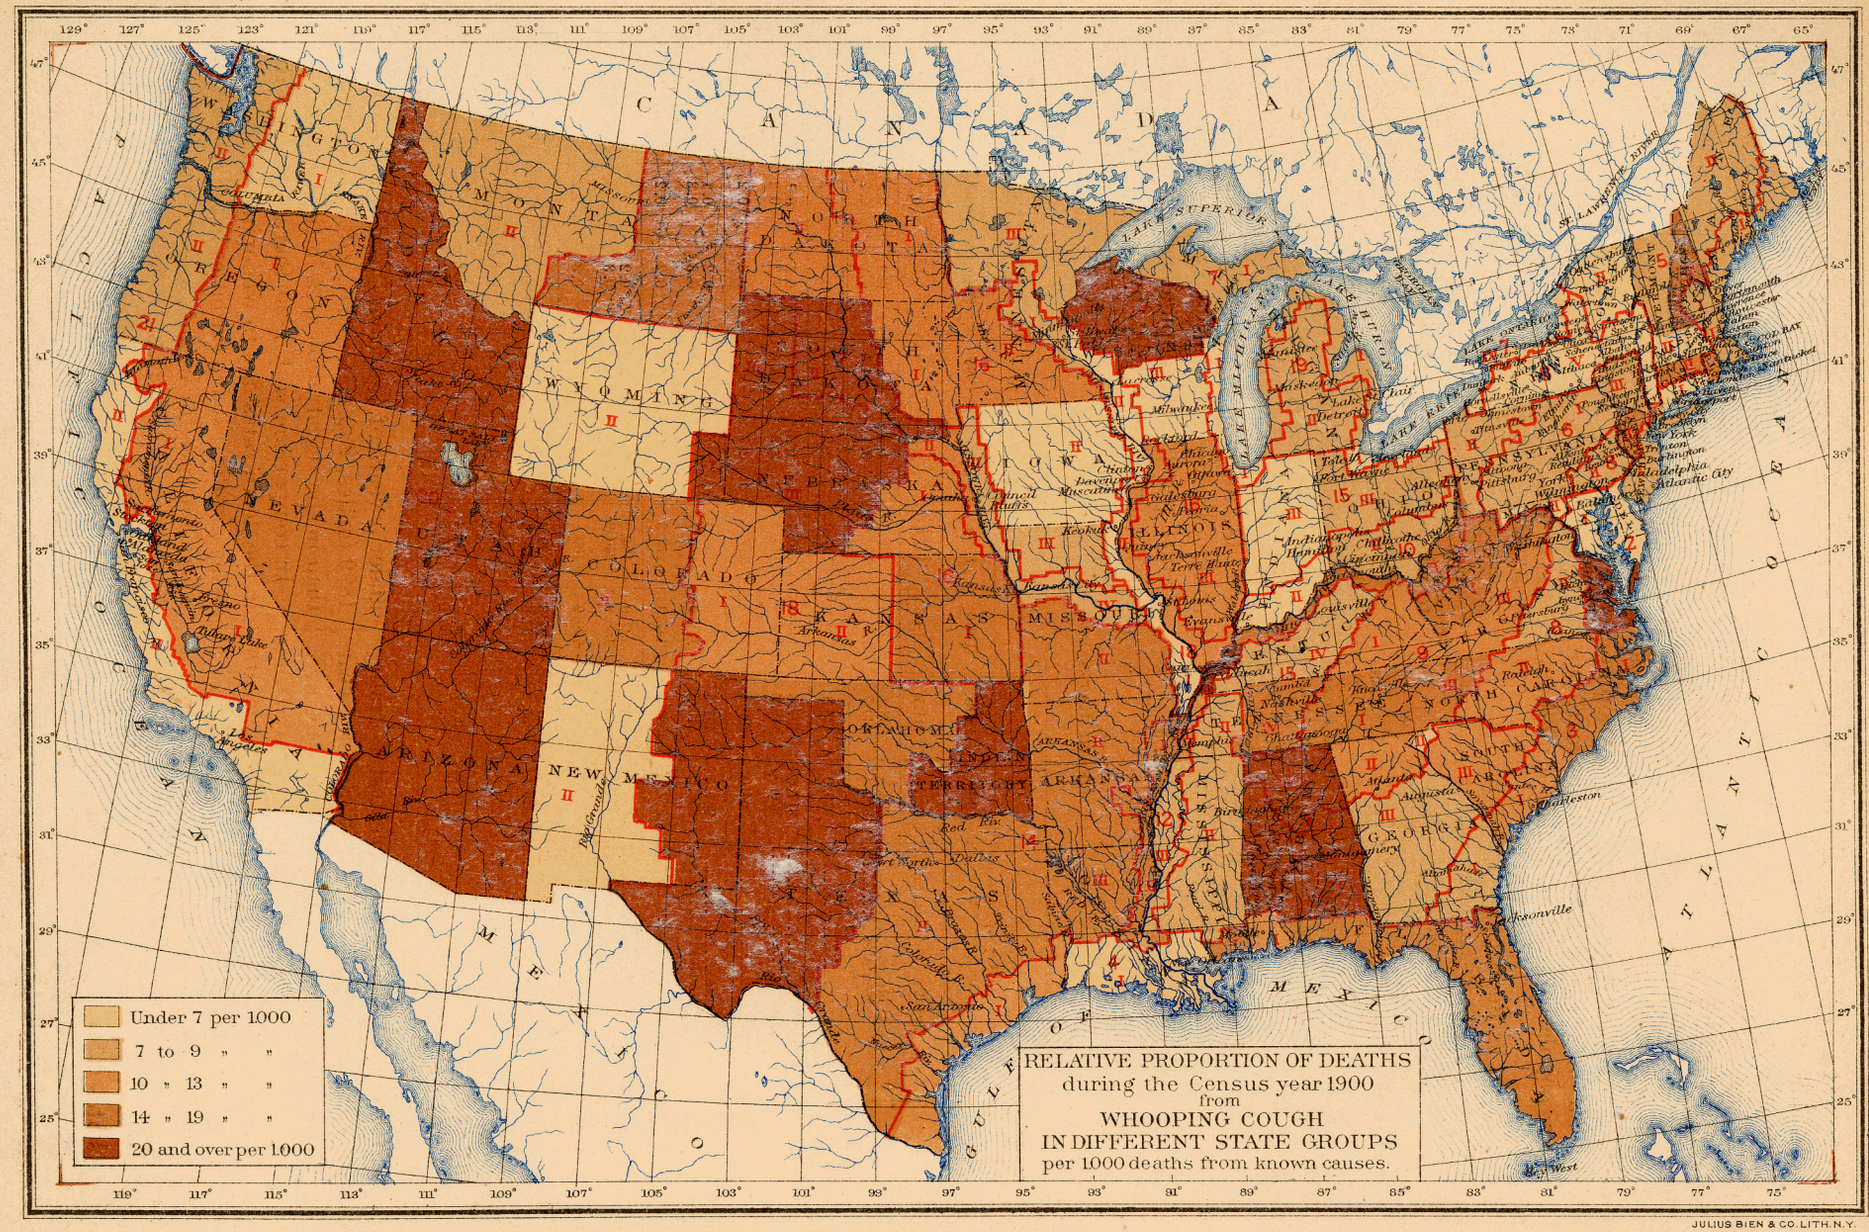
In England and Wales the death rates of children under 5 years of age from this disease, during the year 1899 (males, 233.4; females, 273.6), were much higher than in the registration area in this country.

In comparison with 1890 there was a great decrease in the death rates due to whooping cough, the decrease being most marked in the cities in the registration states, where the rate for infants under 1 year of age declined from 583.3 in 1890 to 367.3 in 1900.

The combined relations of age and race to the death rates from whooping cough are indicated for the registration area in the following table, giving the death rates during the census year in each of four age groups,

Twelfth Census of the United States
William R. Merriam, Director.

PLATE No. 7



JULIUS BIEN & CO. LITH. N.Y.

per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 1.	Under 5.	5 to 14.	15 and over.
White	310.0	111.5	2.0	0.2
Colored	658.7	313.5	8.3	0.2
Mothers born in—				
United States	322.9	111.3	2.2	0.2
Ireland	426.3	175.0	3.1	0.1
Germany	252.5	91.2	1.4	0.3
England and Wales	419.1	146.5	3.8	.....
Canada	444.6	137.3	1.7	0.6
Scandinavia	339.9	120.2	4.9	.....
Scotland	215.1	111.0	.....	.....
Italy	251.0	126.9	1.0	.....
France	341.7	134.9	.....	.....
Hungary	85.6	45.9	.....	.....
Bohemia	179.8	74.6	.....	.....
Russia	186.2	86.0	3.1	.....
Poland	107.7	43.2	.....	.....
Other foreign	324.7	151.9	1.9	.....

The preceding table shows that the death rates from whooping cough in white infants under 1 year of age were highest in those whose mothers were born in Canada (444.6), in Ireland (426.3), and in England and Wales (419.1); and lowest among those whose mothers were born in Hungary (85.6), in Poland (107.7), and in Bohemia (179.8).

The following table shows, for the registration area, the proportions of deaths from whooping cough at each specified age, per 1,000 deaths at known ages from this disease, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	586.7	506.7	609.4	524.0
1 year	233.5	241.8	223.2	235.1
2 years	86.9	108.5	85.5	107.0
3 years	42.0	57.6	30.4	52.6
4 years	17.5	29.8	16.7	26.3
Under 5 years	966.6	944.4	965.2	945.0
5 to 9 years	21.0	39.6	27.6	39.7
10 years and over	12.4	16.0	7.2	15.3

This table shows that in each census year more than half of the deaths caused by whooping cough occurred in those under 1 year of age, and more than 90 per cent in those under 5 years.

The average age at death from this disease in the registration area in 1900 was 1.8 years. In 1890 it was 1.6 years.

The following table shows, for each grand group in the United States, the proportions of deaths from whooping cough during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	8.6	4.6	8.2	7.9	11.3
2. Middle Atlantic Coast region	9.2	10.0	10.6	7.8	10.2
3. South Atlantic Coast region	12.5	13.4	15.1	7.9	8.2
4. Gulf Coast region	9.3	12.3	16.6	2.6	2.7
5. Northeastern hills and plateaus	7.7	7.1	8.0	7.2	8.6
6. Central Appalachian region	9.2	8.1	12.0	7.0	8.7
7. Region of the Great Northern Lakes	5.9	6.9	8.4	4.5	5.7
8. Interior plateau	7.2	7.8	8.8	5.6	7.0
9. Southern Central Appalachian region	16.3	15.7	18.0	4.9	9.0
10. Ohio River belt	9.7	8.9	14.2	7.1	7.2
11. Southern Interior plateau	11.8	11.7	11.9	.....	.....
12. South Mississippi River belt	12.8	11.8	16.5	3.1	12.3
13. North Mississippi River belt	7.9	8.6	12.6	4.6	5.3
14. Southwest Central region	18.2	10.0	21.8	0.9	2.5
15. Central region—plains and prairies	9.0	8.4	10.6	6.0	7.6
16. Prairie region	10.5	8.6	12.7	9.2	11.1
17. Missouri River belt	10.3	10.0	15.1	4.9	9.7
18. Region of the Western plains	17.4	17.2	22.8	7.2	13.1
19. Heavily timbered region of the Northwest	11.3	9.0	14.0	11.2	11.6
20. Cordilleran region	13.8	10.7	20.5	7.5	13.3
21. Pacific Coast region	5.8	6.7	13.0	3.4	3.9

This table indicates that the proportions of deaths from whooping cough were greatest in the Southwest Central region (18.2), the region of the Western plains (17.4), and the Southern Central Appalachian region (16.3); and least in the Pacific Coast region (5.8), the region of the Great Northern Lakes (5.9), and the Interior plateau (7.2).

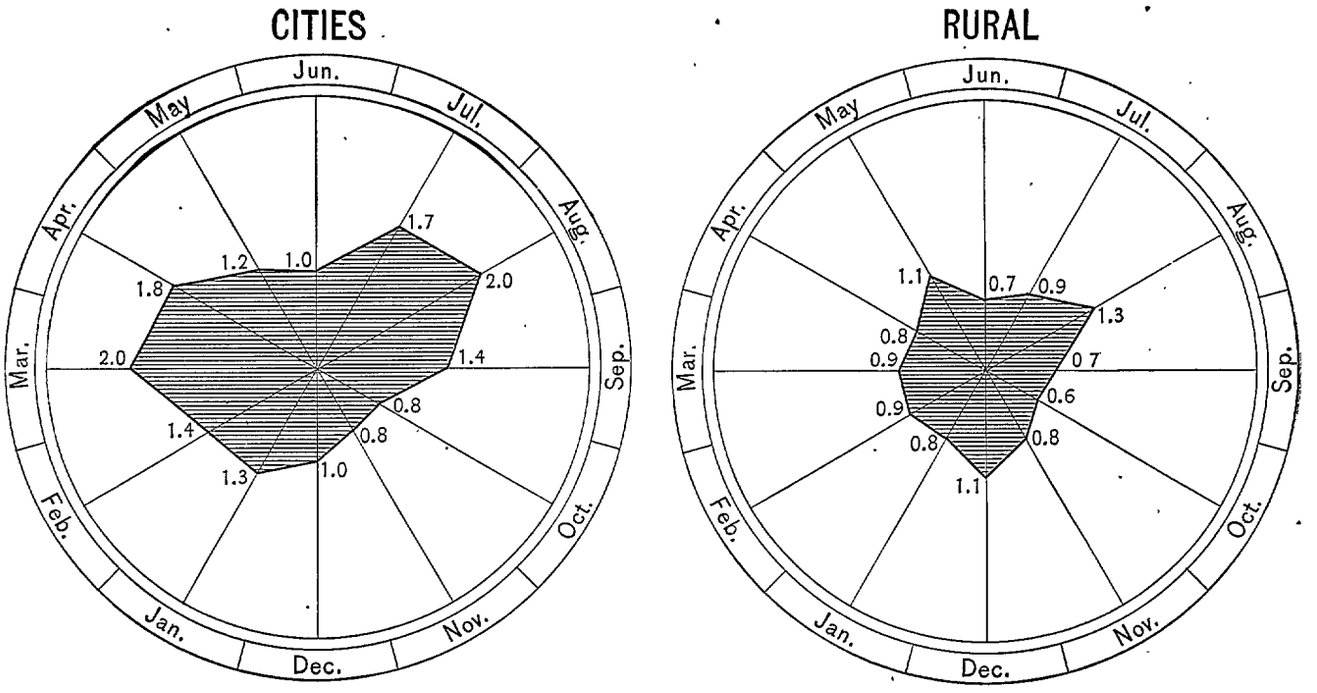
The geographical distribution of deaths from whooping cough, by state groups, is shown by plate No. 7.

The following table shows, for the registration states, the death rates from whooping cough in each month of the census year, in the aggregate, and for the cities and rural districts:

DEATH RATES BY MONTHS.

Months.	Total.	Cities.	Rural.
January	1.1	1.3	0.8
February	1.1	1.4	0.9
March	1.5	2.0	0.9
April	1.4	1.8	0.8
May	1.2	1.2	1.1
June	0.9	1.0	0.7
July	1.4	1.7	0.9
August	1.7	2.0	1.3
September	1.1	1.4	0.7
October	0.7	.8	0.6
November	0.8	.8	0.8
December	1.1	1.0	1.1

The death rates from whooping cough in each month in the cities and the rural districts, and the relative differences in the rates in the two areas are shown in the following diagram:



According to the preceding table and diagram the death rates from whooping cough in the cities in the registration states were highest in March, April, and August; and lowest in November and October. In the rural districts the highest rates occurred in May, August, and December; and the lowest in June, September, and October.

The following table shows the comparative proportions of deaths from whooping cough in each month during the census year, per 1,000 deaths in known months, in the United States, as a whole, and in the registration states:

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH.

MONTHS.	United States.	Registration states.
January	72.4	75.2
February	81.0	82.1
March	107.3	110.7
April	113.9	100.5
May	129.7	82.9
June	66.3	64.9
July	84.6	97.6
August	91.0	121.3
September	79.8	80.9

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH—Con.

MONTHS.	United States.	Registration states.
October	60.6	51.9
November	54.9	56.0
December	58.5	76.0

MALARIAL FEVER.

The total number of deaths reported as due to malarial fever in the United States during the census year was 14,874, of which 7,497 were males and 7,377 were females, and the proportion of deaths from this disease in 1,000 deaths from all known causes was 14.9. In 1890 the corresponding proportion was 22.1.

In the registration area the number of deaths reported as due to this disease was 2,526, of which 1,303 were males and 1,223 were females, giving a proportion of 5 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 8.8 per 100,000 of population. In 1890 the death rate was 19.2.

The following table shows, for the registration area and its subdivisions, the death rates from malarial fever in the census years 1900 and 1890, by sex, color, general nativity, and parent nativity:

DEATH RATES BY COLOR AND NATIVITY.

AREAS.	Aggregate.	WHITE.							COLORED.		
		Total.	Males.	Females.	Native.			Foreign.	Total.	Males.	Females.
					Total.	Both parents native.	One or both parents foreign.

1890..	19.2	16.5	16.8	16.2	16.0	14.3	13.7	18.0	72.1	73.0	71.1
Cities.....1900..	9.9	6.8	7.3	6.4	6.8	6.9	4.9	6.8	64.2	65.0	63.5
1890..	21.4	18.0	18.5	17.5	17.6	16.5	14.3	18.8	76.5	77.9	75.2
States.....1900..	5.1	5.0	4.9	5.1	4.9	5.2	4.6	5.2	12.0	9.6	14.3
1890..	14.8	14.2	14.1	14.3	13.6	13.3	14.1	15.8	39.7	38.6	40.8
Cities.....1900..	4.9	4.7	4.5	4.8	4.6	5.0	4.3	4.8	14.4	10.2	18.3
1890..	16.5	15.7	15.5	15.8	15.2	15.2	15.1	16.7	46.3	45.7	46.9
Rural.....1900..	5.4	5.4	5.3	5.5	5.3	5.4	5.3	6.2	5.3	8.1	2.2
1890..	12.1	11.9	11.9	11.9	11.7	11.8	11.4	12.9	24.4	23.5	25.3
Cities in other states.....1900..	14.4	8.8	9.8	7.8	8.7	11.0	5.9	9.4	78.9	80.9	77.0
1890..	26.0	20.3	21.3	19.3	20.0	19.4	12.5	21.2	84.9	86.5	83.4

This table shows that for the census year 1900 the death rate from malarial fever was nearly ten times as high among the colored (59.8) as it was among the whites (6.5); that it was about the same in males (white, 6.8; colored, 60.5) as it was in females (white, 6.1; colored, 59.1); and that it was somewhat higher in the native whites of native parents (6.2) than in those having one or both parents foreign (5).

The highest rate from this disease was in the cities in the nonregistration states (14.4), which include the cities in the Southern states. The decrease in the rate from this disease in these cities, however, was the same as in the cities in the registration states, 11.6 per 100,000 of population.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from malarial fever in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

[1] Nonregistration in 1890.

This table shows that the death rate from malarial fever in the registration states was much higher in the District of Columbia (22.6) than in any of the other registration states. The lowest rate from this disease was in Maine (2.3). There were no deaths from this disease in the cities in Maine and Vermont.

In comparison with 1890 there was a great decrease in the death rates from malarial fever in both cities and rural districts in the registration states.

The following table shows, for the registration area and its subdivisions, the death rates from malarial fever among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	5.2	5.4	4.8	4.6	5.0	7.0
Ireland	5.8	5.5	5.7	5.3	6.9	6.7
Germany	5.5	5.4	5.0	4.8	5.6	6.5
England and Wales	4.7	5.2	4.4	5.0	3.4	5.6
Canada	3.8	2.9	3.8	2.8	5.0	3.7

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
Scandinavia	1.8	1.6	2.2	2.0	2.7	1.1
Scotland	6.8	6.0	6.0	4.4	9.2	11.9
Italy	7.3	8.6	5.2	6.2	.....	29.5
France	12.0	11.4	6.9	3.9	14.1	25.7
Hungary and Bohemia	1.5	1.6	2.3	2.7	.....	.....
Russia and Poland	1.7	1.5	1.9	1.7	4.2	0.7
Other foreign	5.5	5.2	5.4	5.0	6.5	5.8

This table shows that the death rates from malarial fever were highest among those whose mothers were born in France (12), in Scotland (6.8), and in Italy (7.3). The rate was lower among the children of native mothers (5.2) than among those whose mothers were born in Ireland (5.8) or in Germany (5.5).

The following table shows, for the registration area and its subdivisions, the death rates from malarial fever during the census year in each of six age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

Females	6.7	21.9	4.4	12.1	4.2	9.4	3.0	9.9	3.6	6.6	10.2	18.1
Cities in other states	31.8	50.4	16.7	29.4	11.6	21.5	10.0	17.0	9.7	22.8	22.1	38.2
Males	30.2	51.2	16.2	29.6	12.8	24.3	10.7	17.7	11.6	25.4	24.8	38.0
Females	33.5	49.5	17.2	29.3	10.6	19.0	9.2	16.2	7.5	19.8	19.4	38.4

The preceding table shows that the mortality from malarial fever was greatest in children under 5 years of age, and that the death rate at this age was highest in the cities in the nonregistration states (31.8).

At 45 years and over, the death rate from this disease was highest in the cities in the nonregistration states (22.1), and was higher in the rural districts of the registration states (10.4) than in the cities in the same states (10).

In comparison with 1890, the figures show a general decrease in the death rate from this disease for children under 5 years of age in each area, amounting in the aggregate to about 50 per cent.

The combined relations of age and race to the death rates from malarial fever are indicated, for the registration area, in the following table, giving the death rates during the census year in each of six age groups, per

100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 5.	Under 15.	15 to 24.	25 to 34.	35 to 44.	45 and over.
White	12.8	6.3	4.6	4.4	4.2	11.9
Colored	180.6	97.8	48.7	32.6	34.3	77.4
Mothers born in—						
United States	11.1	5.7	4.2	3.2	3.0	8.2
Ireland	9.1	3.9	4.3	3.2	2.4	13.3
Germany	9.1	4.3	4.7	3.6	3.6	10.5

Scotland	6.2	3.9	4.7	5.7	3.8	12.7
Italy	18.5	11.1	3.7	5.4	1.5	12.0
France	.....	.....	6.6	5.1	15.5	22.7
Hungary	.....	.....	4.0	.....	.....	.....
Bohemia	18.6	6.6	.....	.....	.....	.....
Russia	1.5	1.2	.....	4.0	2.1	.....
Poland	6.4	2.7	1.5	1.6	.....	3.2
Other foreign	15.5	6.2	4.4	2.6	5.1	10.3

This table shows that the death rates from malarial fever in white children under 5 years of age were highest in those whose mothers were born in Bohemia (18.6), in Italy (18.5), and in "Other foreign" countries (15.5); and lowest among those whose mothers were born in Russia (1.5), and in Scandinavia (1.6).

In persons 45 years of age and over, the death rates were highest in those whose mothers were born in France (22.7), in Ireland (13.3), and in Scotland (12.7).

The following table shows, for the registration area, the proportions of deaths from malarial fever at each specified age, per 1,000 deaths at known ages from this disease, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	90.4	81.3	76.7	57.5
1 year	44.8	50.9	41.0	47.1
2 years	23.2	46.8	31.5	32.0

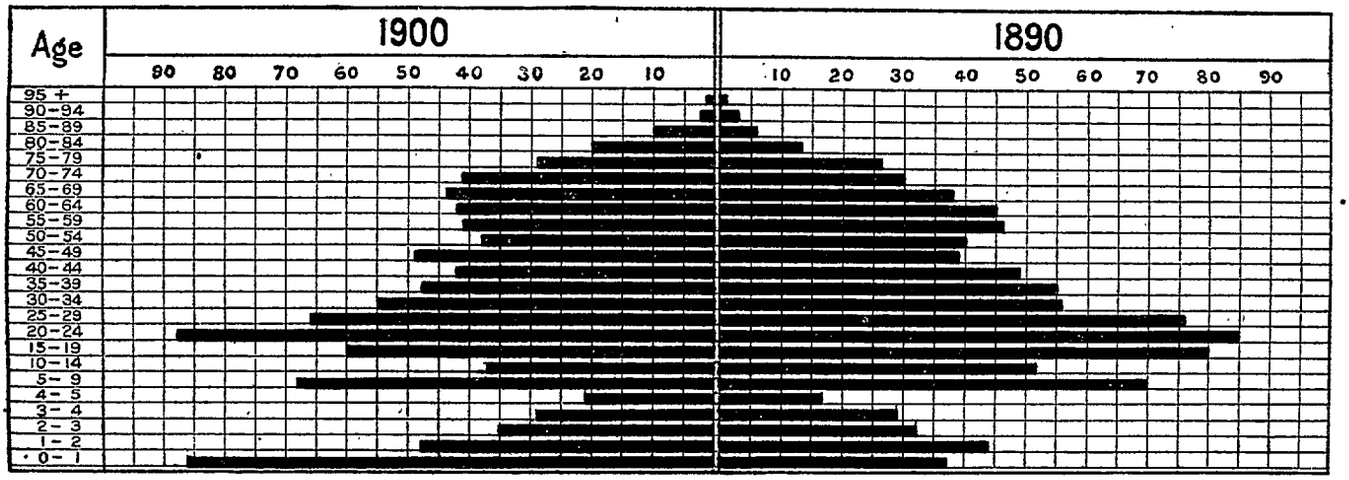
35 to 39 years	54.1	41.1	57.2	53.1
40 to 44 years	49.5	34.5	54.1	44.4
45 to 49 years	58.7	39.4	42.5	35.2
50 to 54 years	44.0	32.0	43.1	37.4
55 to 59 years	42.5	40.2	44.1	47.1
60 to 64 years	39.4	44.3	41.0	49.9
65 to 69 years	41.7	46.8	37.3	39.6
70 to 74 years	37.9	43.5	22.6	36.9
75 to 79 years	34.0	24.6	25.2	26.0
80 to 84 years	17.0	23.8	14.7	11.4
85 to 89 years	9.3	10.7	4.2	7.6
90 to 94 years	2.3	0.8	3.1	2.7
95 years and over	.....	1.6	1.0	1.6

The average age at death from malarial fever in the registration area in 1900 was 31.9 years. In 1890 it was 31.1 years.

The comparative proportions of deaths from malarial fever at each age, in the registration area in 1900 and 1890, are shown in the following diagram:



The following table shows, for each grand group in the United States, the proportions of deaths from malarial fever during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	2.3	2.4	2.3	1.8	2.7
2. Middle Atlantic Coast region	5.2	11.6	11.6	3.2	4.1
3. South Atlantic Coast region	61.7	67.0	71.6	49.1	36.7
4. Gulf Coast region	47.9	61.3	63.7	27.0	30.5
5. Northeastern hills and plateaus	2.8	3.1	2.1	3.4	3.0
6. Central Appalachian region	2.6	3.0	2.6	2.4	1.7
7. Region of the Great Northern Lakes	2.2	3.3	4.3	1.6	1.3
8. Interior plateau	5.1	6.9	9.7	2.2	2.4
9. Southern Central Appalachian region	15.2	14.4	15.9	14.6	18.9
10. Ohio River belt	7.6	8.3	8.4	6.0	7.2
11. Southern Interior plateau	43.8	43.6	43.9	.....	.....
12. South Mississippi River belt	88.8	83.0	91.8	90.0	104.4
13. North Mississippi River belt	15.9	21.3	23.2	8.9	7.9
14. Southwest Central region	57.9	57.8	58.8	40.8	54.1
15. Central region—plains and prairies	10.6	10.6	12.1	6.5	7.8
16. Prairie region	8.6	8.3	9.8	1.8	7.3
17. Missouri River belt	11.9	12.4	19.3	5.9	6.4
18. Region of the Western plains	14.9	19.3	18.6	2.2	.....
19. Heavily timbered region of the Northwest	4.4	3.7	5.7	4.5	2.8
20. Cordilleran region	11.0	9.0	16.4	5.0	6.6
21. Pacific Coast region	2.9	2.9	4.8	3.0	1.6

This table indicates that the proportion of deaths due to malarial fever was very high in the South and Southwest. The proportions were greatest in the South Mississippi River belt (88.8), South Atlantic Coast region (61.7), Southwest Central region (57.9), Gulf Coast region (47.9), and the Southern Interior plateau (43.8); and least in the region of the Great Northern Lakes (2.2), the North Atlantic Coast region (2.3), and the Central Appalachian region (2.6).

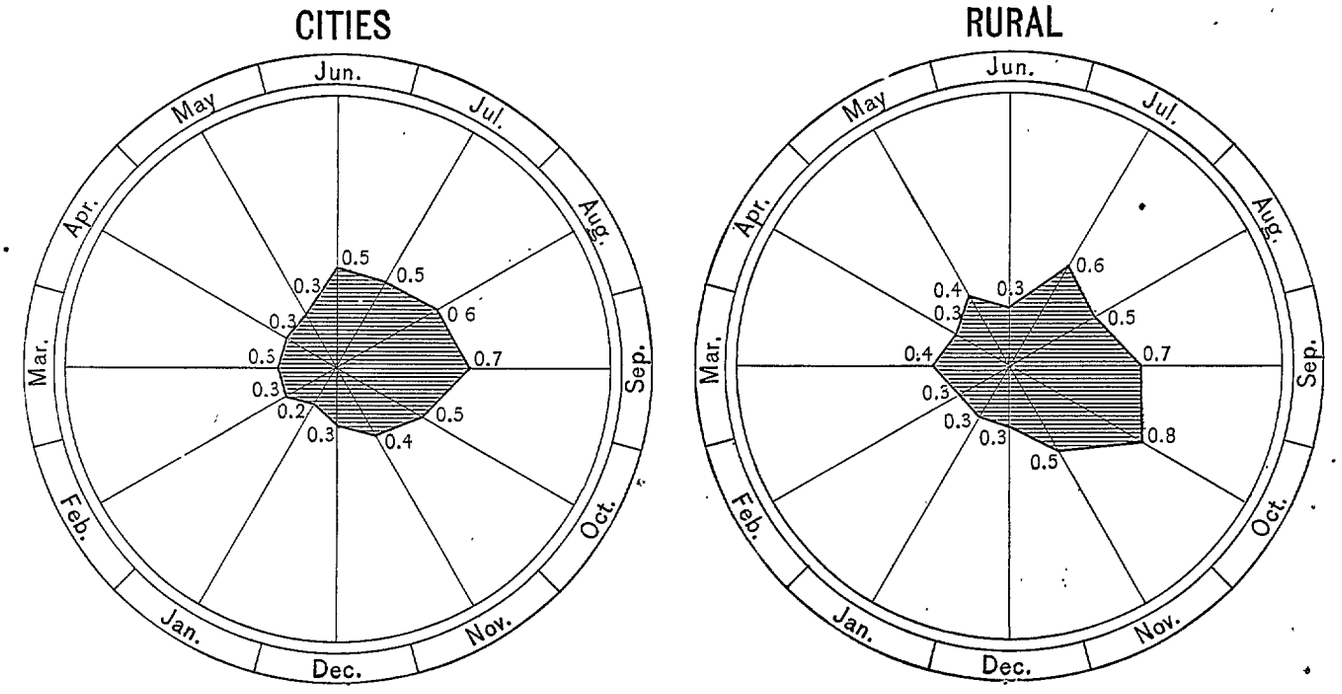
The geographical distribution of deaths from malarial fever, by state groups, is shown by plate No. 8.

The following table shows, for the registration states, the death rates from malarial fever in each month of the census year, in the aggregate, and for the cities and rural districts:

DEATH RATES BY MONTHS.

MONTHS.	Total.	Cities.	Rural.
January	0.3	0.2	0.3
February	0.3	0.3	0.3
March	0.3	0.3	0.4
April	0.3	0.3	0.3
May	0.4	0.3	0.4
June	0.4	0.5	0.3
July	0.6	0.5	0.6
August	0.5	0.6	0.5
September	0.7	0.7	0.7
October	0.6	0.5	0.8
November	0.4	0.4	0.5
December	0.3	0.3	0.3

The death rates from malarial fever in each month, in the cities and the rural districts, and the relative differences in the rates in the two areas, are shown in the following diagram:



Twelfth Census of the United States

The following table shows the comparative proportions of deaths from malarial fever in each month during the census year, per 1,000 deaths in known months, in the United States, as a whole, and in the registration states:

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH.

MONTHS.	United States.	Registration states.
January	45.0	50.2
February	42.5	52.5
March	49.9	68.1
April	56.8	59.2
May	75.8	71.4
June	65.2	72.5
July	108.9	110.5
August	166.3	108.3
September	146.7	135.1
October	116.7	120.5
November	72.8	85.9
December	53.4	65.8

INFLUENZA.

The total number of deaths reported as due to influenza in the United States during the census year was 16,645, of which 7,718 were males and 8,927 were females, and the proportion of deaths from this disease in 1,000 deaths from all known causes was 16.7. In 1890 deaths from this disease were not separately compiled.

In the registration area the number of deaths reported as due to this disease was 6,882, of which 2,950 were males and 3,932 were females, giving a proportion of 13.5 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 23.9 per 100,000 of population.

In England and Wales the death rate from influenza for the year 1899 was 39.1 per 100,000 of population, being slightly higher for males (39.6) than for females (38.7).

The following table shows, for the registration area and its subdivisions, the death rates from influenza in the census year 1900, by sex, color, general nativity, and parent nativity:

DEATH RATES BY COLOR AND NATIVITY.

AREAS.	Aggregate.	WHITE.							COLORED.		
		Total.	Males.	Females.	Native.			Foreign.	Total.	Males.	Females.
					Total.	Both parents native.	One or both parents foreign.				
Registration area	23.9	23.6	20.2	27.0	21.0	32.3	12.6	31.8	30.8	27.3	34.1
Cities	20.4	19.8	16.8	22.8	16.2	26.0	11.5	29.6	30.7	27.4	33.8
States	29.1	29.1	24.4	33.7	26.4	35.5	13.9	36.8	31.0	23.3	38.5
Cities	25.3	25.2	20.4	29.8	20.7	30.1	13.1	34.7	30.7	22.1	38.8
Rural	34.6	34.6	29.9	39.5	33.1	39.7	15.7	42.4	31.8	26.4	37.6
Cities in other states	15.9	14.6	13.4	15.9	12.3	18.0	7.4	22.6	30.7	28.9	32.3

This table shows that the death rate from influenza for the census year 1900 was higher in the colored (30.8) than in the whites (23.6) and much higher in the native whites of native parents (32.3) than in those having one or both parents foreign (12.6). For the foreign whites it was 31.8, which was considerably higher than the rate for the native whites (21).

The highest rate for this disease was in the rural districts in the registration states (34.6). In the cities in the nonregistration states it was 15.9, being much less in these cities than in those in the registration states (25.3).

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from influenza in the census year, per 100,000 of population:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.	AGGREGATE.			MALES.			FEMALES.		
	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	29.1	25.3	34.6	24.4	20.4	29.8	33.8	30.0	39.5
Connecticut	70.9	56.7	97.1	61.9	51.9	79.8	79.9	61.4	114.7
District of Columbia	41.3	41.3	.....	31.0	31.0	.....	50.4	50.4	.....
Maine	35.3	24.5	37.5	33.0	19.5	35.7	37.5	29.1	39.5
Massachusetts	39.9	37.3	48.3	30.1	26.2	41.9	49.3	47.7	54.6
Michigan	17.3	11.1	19.9	16.3	11.7	18.2	18.3	10.5	21.8
New Hampshire	45.0	30.2	54.2	38.5	34.1	41.1	51.4	26.6	68.0
New Jersey	23.5	19.4	29.0	21.1	17.9	25.3	25.9	20.8	32.7
New York	20.0	15.6	29.1	16.7	12.6	25.1	23.2	18.6	33.2
Rhode Island	75.6	79.1	68.8	62.2	62.6	61.6	88.5	94.7	76.1
Vermont	37.5	17.2	40.7	30.3	13.3	32.8	45.1	20.7	49.1

This table shows that in the registration states the death rates from influenza were highest in Rhode Island (75.6) and Connecticut (70.9), and lowest in Michigan (17.3) and New York (20). The rate was higher in the rural districts (34.6) than in the cities (25.3), being highest in the rural districts in Connecticut (97.1). The lowest rate was in the cities in Michigan (11.1).

In both cities and rural districts the death rates from this disease were much higher among females than among males.

The comparative death rates from influenza, in the counties in the registration states, are shown in plates Nos. 9 and 10.

The following table shows, for the registration area and its subdivisions, the death rates from influenza among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	26.3	21.1	29.2	24.6	32.9	14.0
Ireland	38.7	36.7	40.4	38.6	46.7	24.9
Germany	15.0	13.6	16.2	14.4	21.6	12.3
England and Wales	28.6	27.8	30.8	31.0	30.5	18.0
Canada	17.7	20.6	18.3	22.1	13.6	7.5
Scandinavia	9.4	9.2	11.5	12.4	9.9	5.6
Scotland	28.1	21.3	31.4	24.4	46.0	9.6
Italy	11.8	11.9	10.6	10.4	11.5	24.6
France	15.9	15.2	17.8	17.4	18.7	11.0
Hungary and Bohemia	3.4	3.8	5.3	6.2	.....	.....
Russia and Poland	4.5	4.0	4.6	3.9	9.7	4.3
Other foreign	13.5	10.6	14.7	11.5	22.3	6.9

This table shows that the death rates from influenza were greatest among the persons whose mothers were born in Ireland (38.7), in England and Wales (28.6), and in Scotland (28.1); and least among those whose mothers were born in Hungary and Bohemia (3.4), in Russia and Poland (4.5), and in Scandinavia (9.4).

The following table shows, for the registration area and its subdivisions, the death rates from influenza during the census year in each of five age groups, per 100,000 population of corresponding ages, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREA.	Under 5.	5 to 14.	15 to 44.	45 to 64.	65 and over.
Total	24.6	2.6	6.8	34.0	278.5
Males	25.2	2.4	6.5	28.0	237.2
Females	23.9	2.8	7.1	40.1	315.3
Cities	22.5	2.2	6.8	34.9	260.7
Males	22.9	2.0	6.7	28.2	220.3
Females	22.1	2.3	6.9	41.6	293.6
States	26.8	2.9	7.4	37.7	315.4
Males	26.7	2.6	6.8	30.8	262.8
Females	26.9	3.3	7.9	44.7	363.2
Cities	24.0	2.2	7.7	42.9	330.1
Males	23.0	1.9	7.5	33.9	268.5
Females	25.0	2.5	8.0	51.6	378.1

DEATH RATES AT CERTAIN AGES—Continued.

REGISTRATION AREA.	Under 5.	5 to 14.	15 to 44.	45 to 64.	65 and over.
Rural	31.3	4.0	6.7	31.8	304.6
Males	32.7	3.5	5.6	27.4	259.3
Females	29.8	4.5	7.9	36.5	350.8
Cities in other states	21.1	2.1	6.0	27.4	191.6
Males	22.9	2.2	6.1	23.1	174.6
Females	19.3	2.1	5.9	31.8	206.0

The preceding table shows that the mortality from influenza was greatest under 5 and above 45 years of age. For those under 5 years the death rate was 24.6; at 5 to 14 it was 2.6; from 15 to 44 it was 6.8; at 45 to 64 it was 34; and at 65 and over it was 278.5. In children under 5 years of age the death rate of males was greater than that of females, but in the age groups above 5 the mortality of females exceeded that of males, the death rates at 45 to 64 being 40.1 for females and 28 for males, and in the age group 65 years of age and over, 315.3 for females and 237.2 for males. Below 15 years of age the mortality from influenza was greatest in the rural districts in the registration states, but in the age groups above 15 it was greatest in the cities in the same states.

The combined relations of age and race to the death rates from influenza are indicated for the registration area, in the following table, giving the death rates during the census year in each of the five age groups, per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 5.	5 to 14.	15 to 44.	45 to 64.	65 and over.
White	22.6	2.3	6.5	32.9	278.9
Colored	80.1	9.8	12.5	60.9	261.0
Mothers born in—					
United States	26.2	2.6	6.1	29.0	277.9
Ireland	19.9	2.8	12.4	67.5	341.8
Germany	10.7	2.2	4.5	20.0	161.9
England and Wales	23.6	0.8	7.4	26.7	290.3
Canada	42.1	3.8	6.5	25.7	234.1
Scandinavia	21.1	2.0	4.9	11.5	135.2
Scotland	18.5	2.8	2.7	27.9	300.9
Italy	35.7	3.1	4.5	17.7	103.3
France	22.5	.....	.....	12.5	177.2
Hungary	.....	4.1	.....	11.4	.....
Bohemia	.....	.....	.....	20.8	151.4
Russia	8.9	2.1	1.0	3.5	93.5
Poland	12.8	2.3	1.2	11.5	101.3
Other foreign	19.7	0.9	6.5	22.0	191.2

The preceding table shows that the death rates from influenza of white persons 45 to 64 years of age were highest in those whose mothers were born in Ireland (67.5), in Scotland (27.9), and in the United States (29); and lowest among those whose mothers were born in Russia (3.5) and in Hungary (11.4).

For persons 65 years of age and over they were highest in those whose mothers were born in Ireland

THE DEATH RATE DUE TO INFLUENZA per 100,000 of population 1900

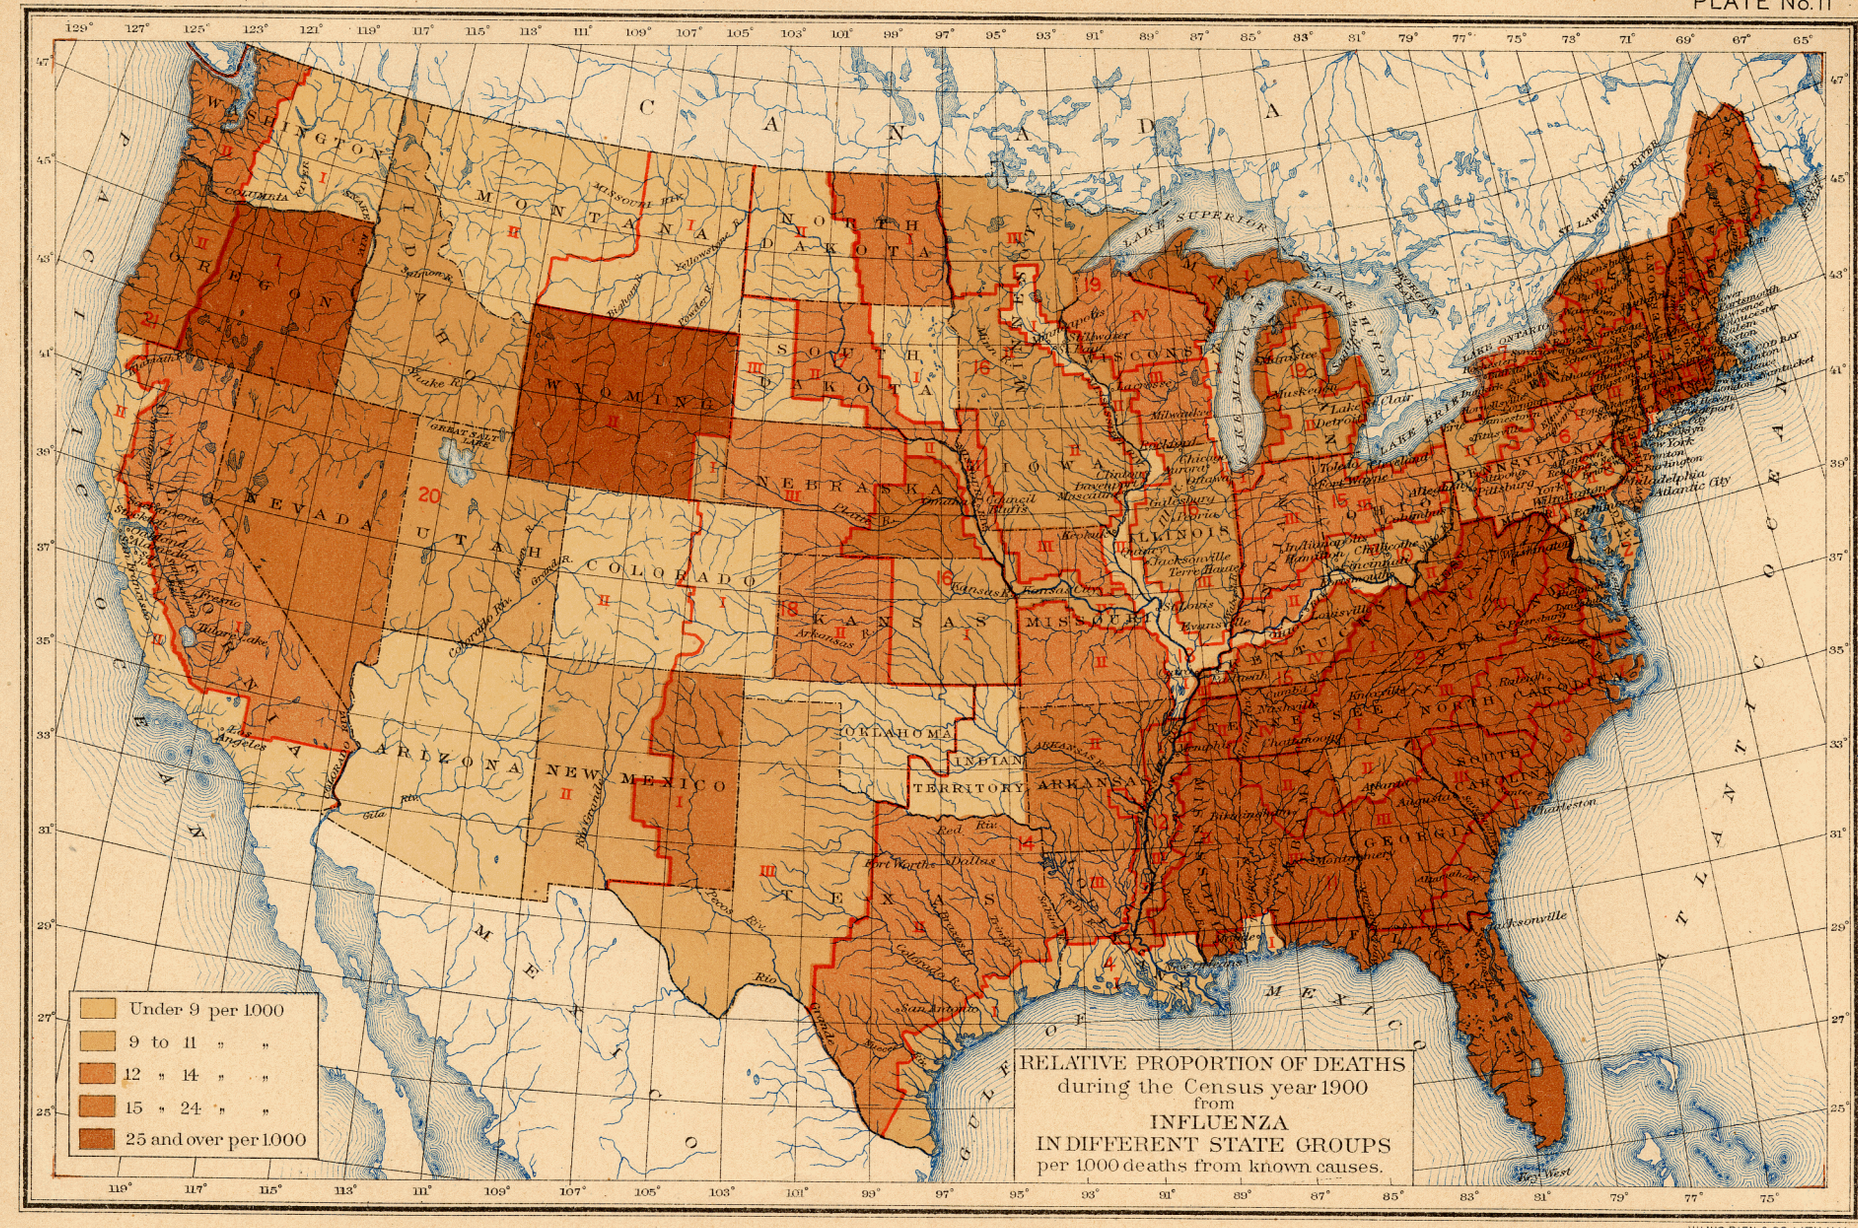
PLATE No. 11



JULIUS BIEN & CO. LITH. N.Y.

(341.8), in Scotland (300.9), and in England and Wales (290.3); and lowest among those whose mothers were born in Russia (93.5) and in Poland (101.3).

The following table shows, for each grand group in the United States, the proportions of deaths from influenza during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	26.9	27.1	37.4	18.5	31.1
2. Middle Atlantic Coast region	10.3	14.1	17.3	7.2	11.0
3. South Atlantic Coast region	36.3	39.0	40.5	23.7	32.3
4. Gulf Coast region	17.2	23.7	26.7	5.7	7.6
5. Northeastern hills and plateaus	25.8	23.5	33.2	17.0	25.7
6. Central Appalachian region	14.1	13.2	18.8	8.4	13.5
7. Region of the Great Northern Lakes	8.7	12.9	17.6	4.6	6.7
8. Interior plateau	16.1	18.6	26.0	9.0	13.0
9. Southern Central Appalachian region	38.9	36.5	43.9	13.0	17.1
10. Ohio River belt	11.1	11.9	15.2	7.3	8.4
11. Southern Interior plateau	33.8	34.7	33.0	.....	.....
12. South Mississippi River belt	20.0	23.0	20.7	9.8	13.0
13. North Mississippi River belt	8.1	10.1	11.2	4.6	5.7
14. Southwest Central region	13.3	13.5	13.4	8.2	7.4
15. Central region—plains and prairies	17.4	16.0	20.1	13.1	16.0
16. Prairie region	11.4	10.4	13.0	6.4	12.8
17. Missouri River belt	10.7	12.2	14.4	4.6	9.3
18. Region of the Western plains	8.6	9.2	10.4	3.9	6.2
19. Heavily timbered region of the Northwest	14.4	14.0	17.6	8.2	11.2
20. Cordilleran region	12.2	11.8	15.8	2.5	7.6
21. Pacific Coast region	10.1	16.2	16.0	4.3	8.6

The preceding table indicates that the proportions of deaths due to influenza were greatest in the Southern Central Appalachian region (38.9), the South Atlantic Coast region (36.3), and the Southern Interior plateau (33.8); and least in the Northern Mississippi River belt (8.1), the region of the Western plains (8.6), and the region of the Great Northern Lakes (8.7).

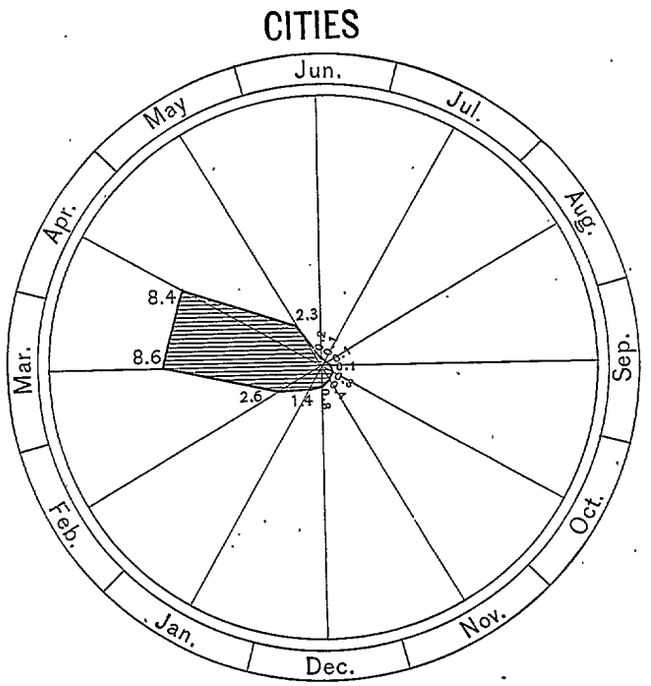
The geographical distribution of deaths from influenza, by state groups, is shown by plate No. 11.

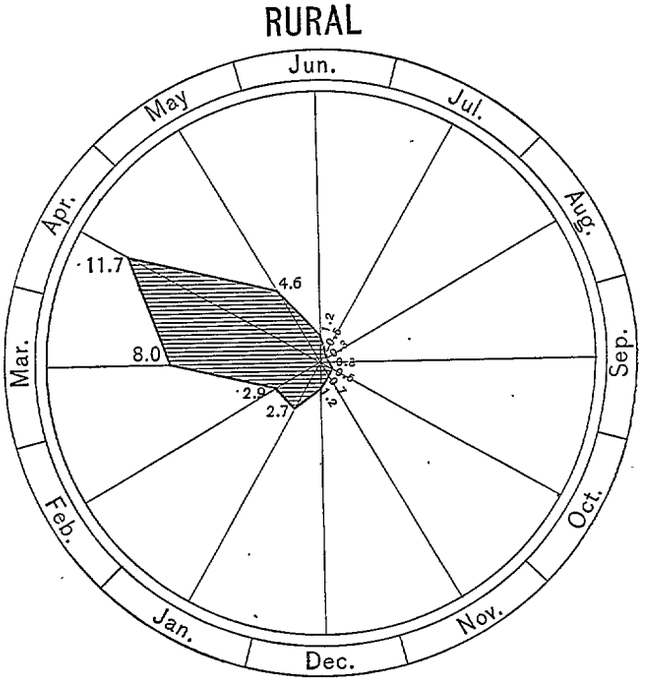
The following table shows, for the registration states, the death rates from influenza in each month of the census year, in the aggregate, and for the cities and rural districts:

DEATH RATES BY MONTHS.

Months.	Total.	Cities.	Rural.
January	1.9	1.4	2.7
February	2.7	2.6	2.9
March	8.4	8.6	8.0
April	9.7	8.4	11.7
May	3.2	2.3	4.6
June	0.6	0.2	1.2
July	0.3	0.1	0.5
August	0.2	0.1	0.3
September	0.2	0.1	0.3
October	0.4	0.3	0.5
November	0.5	0.4	0.7
December	1.0	0.8	1.2

The death rates from influenza in each month, in the cities and the rural districts, and the relative differences in the rates in the two areas, are shown in the following diagram:





The preceding table and diagram show that in both cities and rural districts in the registration states the death rates from influenza were highest in March and April, and were lowest in August and September.

The following table shows the comparative proportions of deaths per 1,000 from influenza in each month, in the United States, as a whole, and in the registration states:

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH.

MONTHS.	United States.	Registration states.
January	78.3	65.4
February	109.4	92.4
March	229.2	287.2
April	285.6	333.7
May	142.1	110.9
June	22.2	21.9
July	15.2	9.7
August	14.2	7.3
September	16.1	7.5
October	19.6	13.0
November	25.2	17.9
December	42.9	33.1

TYPHOID FEVER.

The total number of deaths reported as due to typhoid fever in the United States during the census year was 35,379, of which 18,881 were males, and 16,498 were females, and the proportion of deaths from this disease in 1,000 deaths from all known causes was 35.4. In 1890 the corresponding proportion was 32.1.

In the registration area the number of deaths reported as due to this disease was 9,749, of which 5,620 were males and 4,129 were females, giving a proportion of 19.2 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 33.8 per 100,000 of population. In 1890 the death rate was 46.3.

In England and Wales the death rate due to typhoid fever for the year 1899 was 19.9 per 100,000 of population (males, 23.2; females, 16.8).

The following table shows, for the registration area and its subdivisions, the death rates from typhoid fever in the census years 1900 and 1890, by sex, color, general nativity, and parent nativity:

DEATH RATES BY COLOR AND NATIVITY.

AREAS.	Aggregate.	WHITE.							COLORED.		
		Total.	Males.	Females.	Native.			Foreign.	Total.	Males.	Females.
					Total.	Both parents native.	One or both parents foreign.				
Registration area 1900	33.9	32.4	37.4	27.4	31.6	32.3	26.4	34.4	65.6	75.3	56.3
Registration area 1890	46.3	45.2	52.4	38.1	40.4	35.2	36.8	58.4	67.2	72.6	62.1
Cities 1900	36.6	34.8	40.8	28.8	34.1	36.9	28.1	36.0	68.8	80.1	58.0
Cities 1890	51.0	49.8	58.1	41.5	44.3	40.0	37.6	62.4	70.0	75.6	64.7
States 1900	25.4	24.9	28.8	21.1	24.6	26.7	21.4	26.0	47.8	52.2	43.4
States 1890	36.0	35.2	40.5	30.1	32.5	32.0	33.0	43.0	67.3	68.8	65.8
Cities 1900	25.3	24.5	29.4	19.8	23.9	26.8	21.4	25.9	55.4	64.6	46.9
Cities 1890	39.0	37.9	44.1	31.9	34.1	35.0	32.8	45.6	80.0	81.4	78.8
Rural 1900	25.5	25.5	27.9	23.0	25.4	26.5	21.9	26.3	26.5	20.3	33.2
Rural 1890	31.4	31.2	35.1	27.3	30.6	29.7	33.5	34.9	37.7	42.3	32.8
Cities in other states 1900	46.8	44.6	51.4	37.7	43.0	57.3	45.6	49.7	72.7	84.5	61.4
Cities in other states 1890	62.0	61.5	71.5	51.4	53.7	50.9	48.7	81.4	67.2	74.1	60.5

This table shows that the death rate from typhoid fever was much higher in the cities in the nonregistration states (46.8) than in the cities in the registration states (25.3); that it was higher among males (white, 37.4; colored, 75.3) than among females (white, 27.4; colored, 56.3), and higher among native whites of native parents (32.3) than among native whites of foreign parents (26.4). It was slightly higher for the foreign white (34.4) than for the native white (31.6).

In comparison with 1890 there was a decided decrease in the death rates from this disease in all areas, the decrease being most marked in the cities in the nonregistration states, where it amounted to about 25 per cent.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from typhoid fever in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES.		
		Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	1900	25.4	25.3	25.5	29.3	30.3	27.8	21.5	20.5	23.1

[1] Nonregistration in 1890.

It will be seen from this table that the death rate from typhoid fever in the registration states was highest in the District of Columbia (80.7) and lowest in New Hampshire (16.8). It was slightly higher in the rural districts (25.5) than in the cities (25.3), which is the reverse of the case in 1890, when the rate in the cities was 39, and that in the rural districts 31.4.

Excluding the District of Columbia, which is mostly urban in character, the death rate for this disease was highest in the cities in Maine (44.7). In both cities and rural districts there was a marked decrease in the death rate from typhoid fever in comparison with 1890.

The following table shows, for the registration area and its subdivisions, the death rates from typhoid fever among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total	Cities.	Rural.	
United States	28.4	31.4	24.4	24.0	24.8	46.2
Ireland	27.1	27.7	24.1	23.9	24.5	51.1
Germany	27.6	28.3	22.2	21.7	23.9	40.1

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
England and Wales	30.5	33.4	24.1	24.5	23.3	60.8
Canada	27.5	29.4	26.8	28.4	24.9	38.5
Scandinavia	41.9	46.3	33.2	36.7	27.1	57.1
Scotland	19.8	19.8	19.5	19.4	19.7	21.5
Italy	20.9	23.0	16.5	18.1	8.6	66.3
France	30.9	35.5	20.6	23.3	14.1	58.7
Hungary and Bohemia	24.6	26.0	7.6	7.1	10.7	55.7
Russia and Poland	17.3	17.2	10.4	9.4	18.0	47.6
Other foreign	37.9	44.2	24.5	26.9	18.7	111.6

The preceding table shows that the death rates due to typhoid fever were highest among those whose mothers were born in Scandinavia (41.9), in "Other foreign" countries (37.9), and in France (30.9); and lowest among those whose mothers were born in Russia and Poland (17.3), in Scotland (19.8), and in Italy (20.9).

The following table shows, for the registration area and its subdivisions, the death rates from typhoid fever during the census year in each of five age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 15.		15 TO 24.		25 TO 34.		35 TO 44.		45 AND OVER.	
	1900	1890	1900	1890	1900	1890	1900	1890	1900	1890
Total	20.2	26.8	53.0	78.7	43.9	60.4	33.1	39.1	26.8	32.1

States	13.7	19.5	38.9	62.1	35.0	46.4	25.8	30.7	21.4	27.4
Males	12.8	18.5	45.8	74.3	43.7	57.3	30.8	36.3	24.8	30.3
Females	14.6	20.6	32.5	50.9	26.2	35.6	20.4	25.0	18.0	24.7
Cities	13.3	21.7	36.6	66.6	35.6	49.2	25.4	34.4	21.9	26.9
Males	12.7	21.1	44.8	81.0	45.6	61.0	30.9	41.5	27.9	29.6
Females	13.8	22.4	29.5	54.1	25.9	37.8	19.8	27.4	16.4	24.5
Rural	14.4	16.1	42.4	54.4	33.7	41.0	26.2	24.6	20.8	28.0
Males	12.9	14.5	47.2	63.7	40.3	50.6	30.8	28.0	21.8	31.0
Females	15.9	17.7	37.5	45.0	26.8	31.3	21.3	21.2	19.7	24.9
Cities in other states	29.9	37.1	73.5	102.6	56.5	79.7	43.8	52.1	37.0	41.6
Males	28.5	37.6	87.1	123.5	74.0	97.6	51.9	62.4	41.7	46.4
Females	31.4	36.6	61.4	88.7	38.5	59.9	34.6	40.3	32.2	36.8

The preceding table shows that the death rate due to typhoid fever was highest among persons 15 to 24 years of age (53), and that in this age group it was highest in the cities in the nonregistration states (73.5), and lowest in the cities in the registration states (36.6). In the age group under 15 years it was higher among females (21.3) than among males (19), but in the age groups above 15 years, the mortality of males exceeded that of the females.

The combined relations of age and race to the death rates from typhoid fever are indicated for the registration area, in the following table, giving the death rates during the census year in each of five age groups, per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 15.	15 to 24.	25 to 34.	35 to 44.	45 and over.
White	18.3	50.3	43.1	32.4	26.3
Colored	69.1	104.2	58.0	45.8	38.0
Mothers born in—					
United States	17.5	48.1	38.0	29.1	20.6
Ireland	11.6	35.0	37.9	25.3	23.2
Germany	16.0	40.1	35.7	24.9	24.0
England and Wales	19.4	42.8	50.4	26.3	20.3
Canada	17.0	45.3	34.4	23.7	17.6
Scandinavia	16.5	75.1	66.8	41.0	23.0
Scotland	11.6	40.3	20.8	17.3	15.3
Italy	13.4	40.3	23.8	19.2	12.0
France	26.9	46.1	20.2	30.9	32.5
Hungary	6.8	59.3	28.0	25.3	10.1
Bohemia	6.6	35.9	50.2	29.6	17.3
Russia	6.1	13.4	26.9	19.1	15.6
Poland	10.0	46.4	25.6	16.9	19.4
Other foreign	15.9	56.9	58.1	44.9	21.8

It will be seen from the preceding table that the death rates from typhoid fever of white persons 15 to 24 years of age were highest in those whose mothers were born in Scandinavia (75.1), in Hungary (59.3), and in "Other foreign" countries (56.9); and lowest in those whose mothers were born in Russia (13.4) and in Ireland (35).

At 25 to 34 years they were highest in those whose mothers were born in Scandinavia (66.8), in "Other foreign" countries (58.1), in England and Wales (50.4), and in Bohemia (50.2); and lowest in those whose mothers were born in France (20.2), in Scotland (20.8), and in Italy (23.8).

The following table shows, for the registration area, the proportions of deaths from typhoid fever at each specified age, per 1,000 deaths at known ages from this disease, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	8.0	10.2	12.1	13.5
1 year	6.4	11.4	7.5	9.1

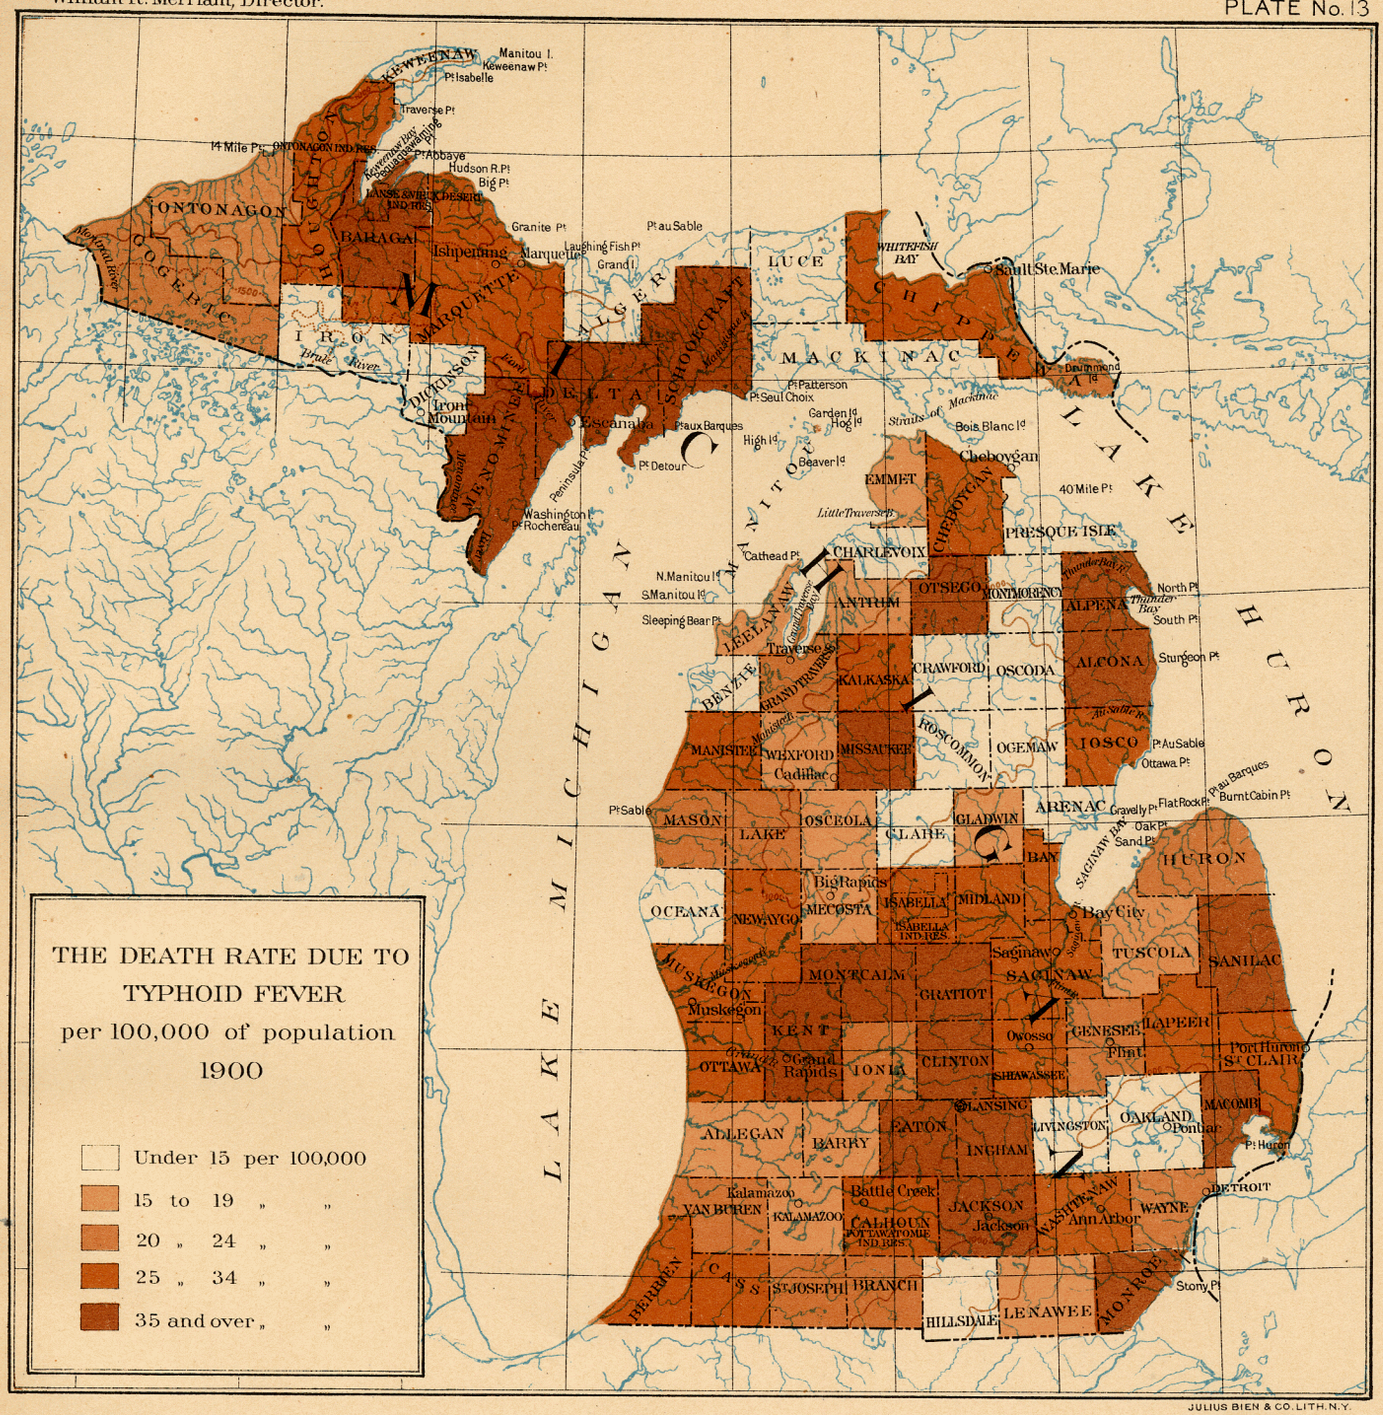
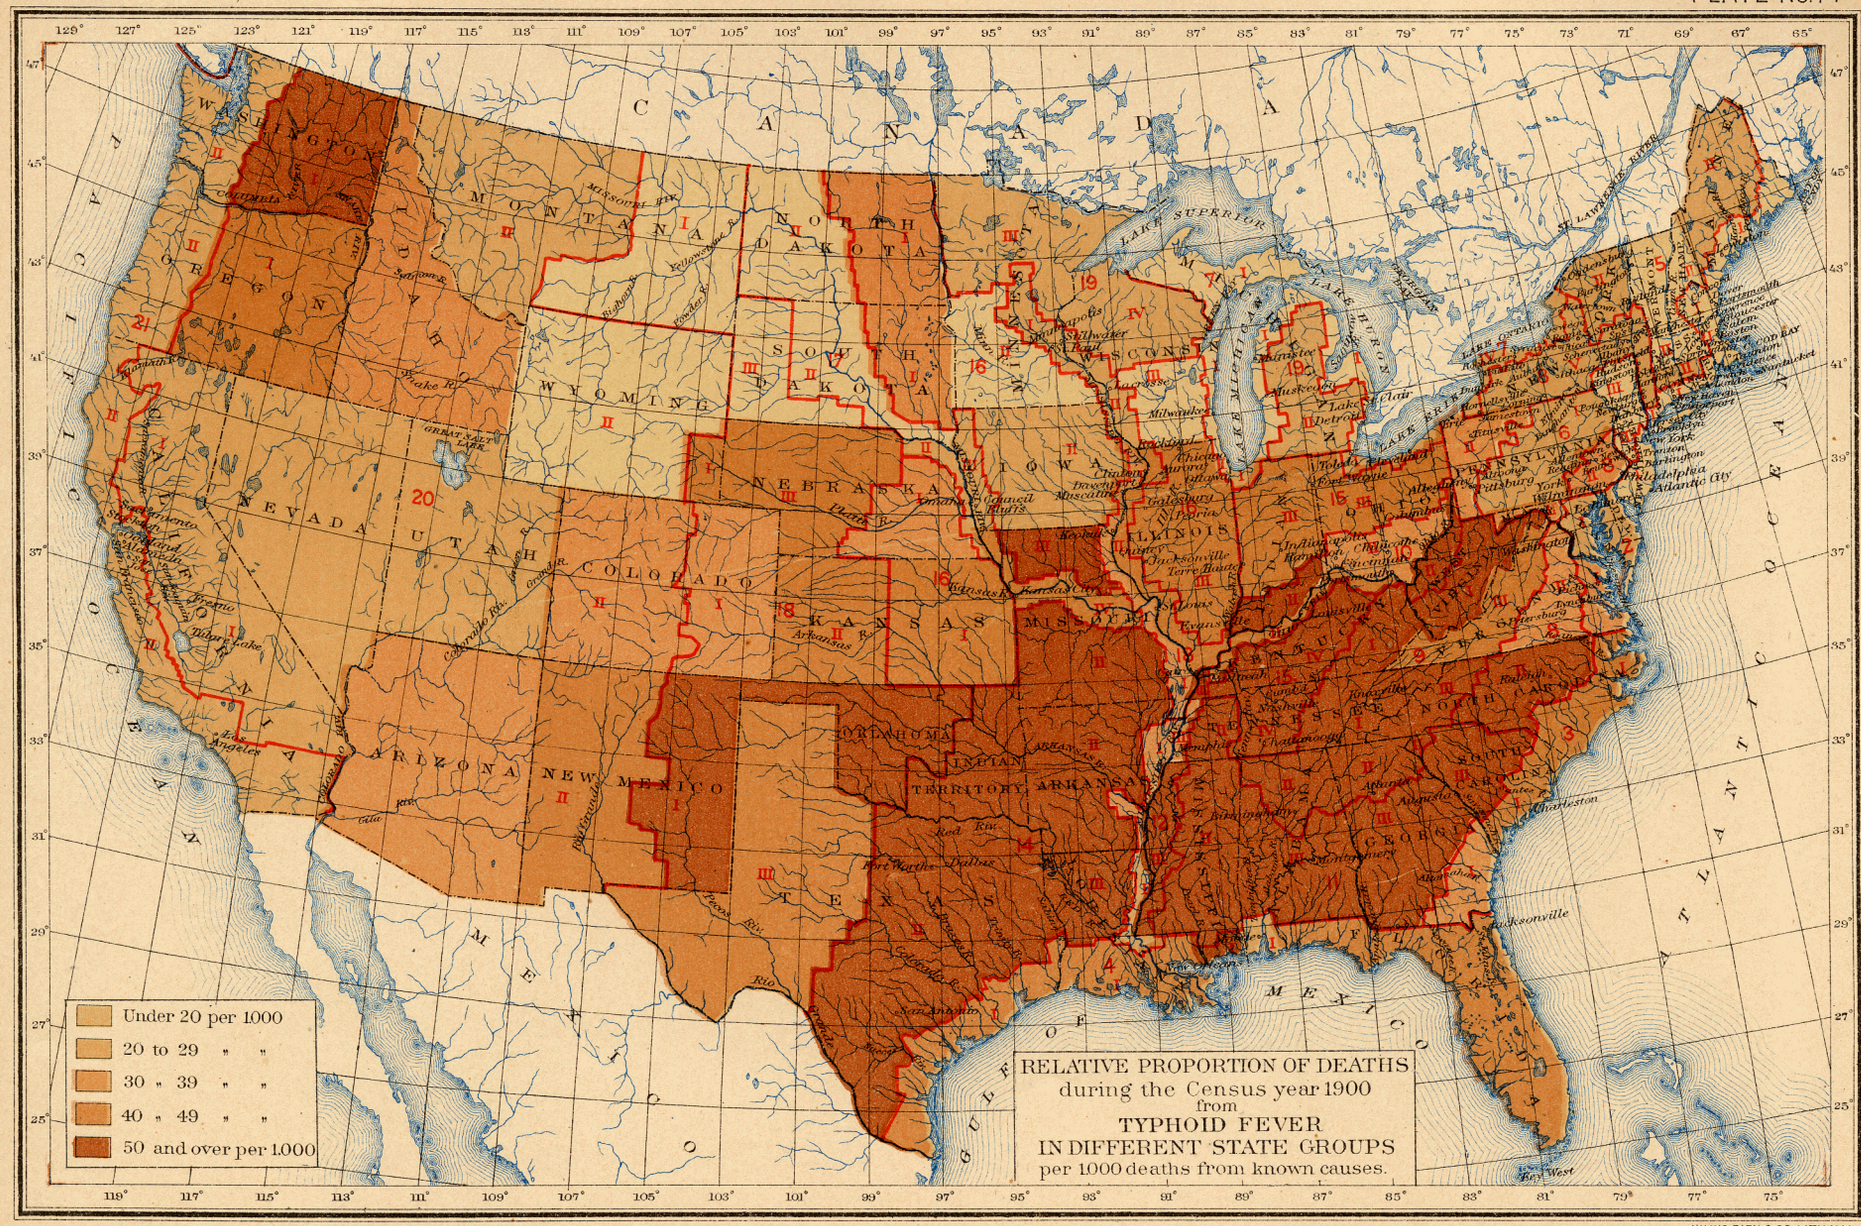
PLATE No. 13



JULIUS BIEN & CO. LITH. N.Y.

Twelfth Census of the United States
William R. Merriam, Director.

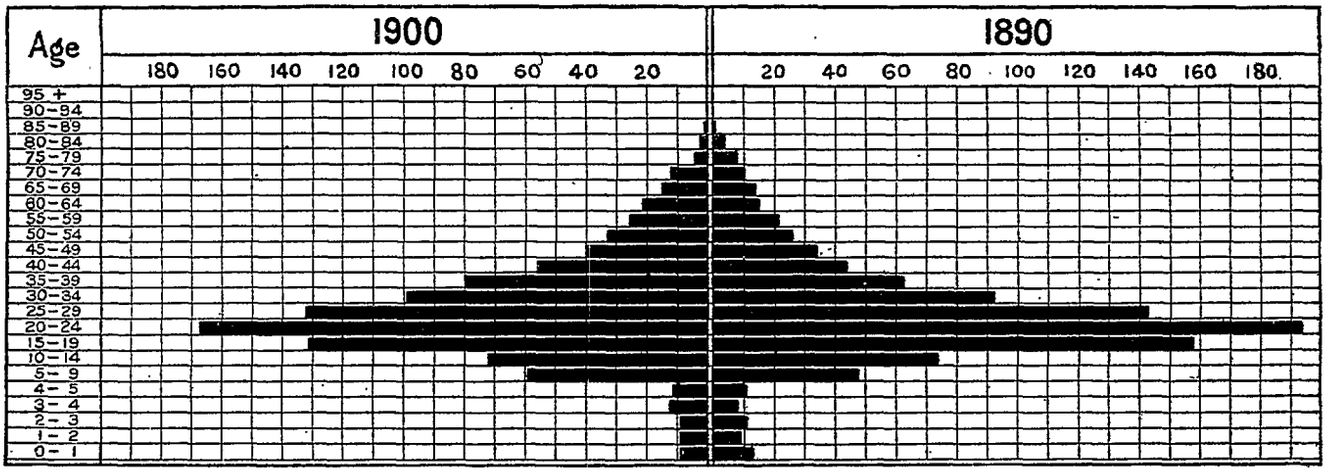
PLATE No. 14



JULIUS BIEN & CO. LITH. N.Y.

The average age at death from typhoid fever in the registration area in 1900 was 28.8 years. In 1890 it was 27.6 years.

The comparative proportions of deaths from typhoid fever at each, age in the registration area, in 1900 and 1890, are shown in the following diagram:



The following table shows, for each grand group in the United States, the proportions of deaths from typhoid fever during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	12.6	14.2	9.2	15.3	10.6
2. Middle Atlantic Coast region	14.2	25.8	24.9	12.4	10.5
3. South Atlantic Coast region	41.8	51.3	47.7	25.9	20.3
4. Gulf Coast region	45.2	58.4	64.8	21.6	25.9
5. Northeastern hills and plateaus	18.1	19.7	16.4	20.4	15.7
6. Central Appalachian region	23.7	27.3	24.1	21.9	16.4
7. Region of the Great Northern Lakes	19.7	20.6	21.5	20.2	17.7
8. Interior plateau	34.4	41.4	39.4	32.2	25.5
9. Southern Central Appalachian region	63.3	66.3	62.6	44.5	38.7
10. Ohio River belt	43.6	52.6	55.1	30.0	28.6
11. Southern Interior plateau	76.1	74.0	78.1	-------	-------
12. South Mississippi River belt	47.0	50.7	54.2	26.3	19.2
13. North Mississippi River belt	33.3	39.6	42.7	25.2	23.0
14. Southwest Central region	69.5	68.4	72.8	38.1	39.3
15. Central region—plains and prairies	52.1	55.5	56.5	37.1	29.2
16. Prairie region	35.7	35.4	36.4	33.2	33.7
17. Missouri River belt	37.9	43.8	44.2	31.1	25.3
18. Region of the Western plains	43.4	50.1	45.3	28.3	28.5
19. Heavily timbered region of the Northwest	23.8	23.7	19.2	36.1	26.0
20. Cordilleran region	31.8	30.4	37.1	27.6	20.0
21. Pacific Coast region	24.1	26.0	33.5	23.2	17.4

The preceding table indicates that the proportions of deaths due to typhoid fever were greatest in the Southern Interior plateau (76.1), the Southwest Central region (69.5), and the Southern Central Appalachian region (63.3), and least in the North Atlantic Coast region (12.6), Middle Atlantic Coast region (14.2), and the Northeastern hills and plateaus (18.1).

The geographical distribution of deaths from typhoid fever, by state groups, is shown by plate No. 14.

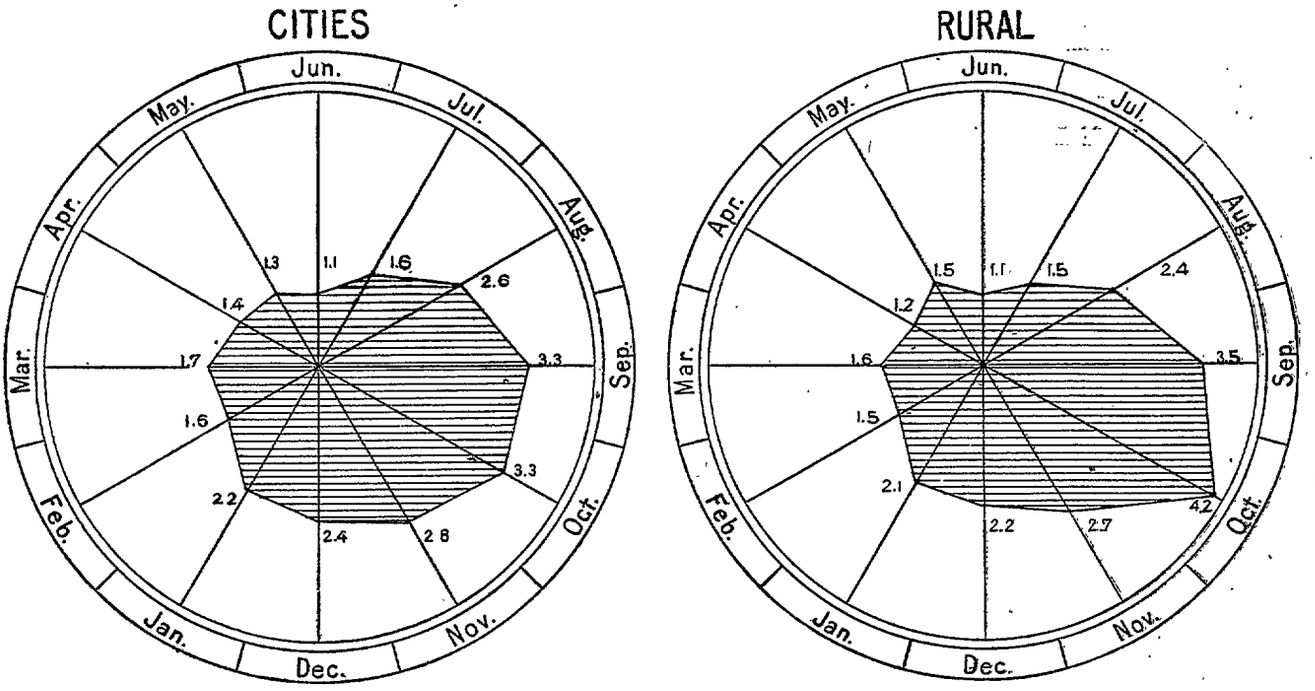
The death rates from typhoid fever in the counties in the registration states are shown by plates Nos. 12 and 13.

The following table shows, for the registration states, the death rates from typhoid fever in each month of the census year, in the aggregate, and for the cities and rural districts:

DEATH RATES BY MONTHS.

MONTHS.	Total.	Cities.	Rural
January	2.1	2.2	2.1
February	1.6	1.6	1.5
March	1.7	1.7	1.6
April	1.3	1.4	1.2
May	1.4	1.3	1.5
June	1.1	1.1	1.1
July	1.6	1.6	1.5
August	2.5	2.6	2.4
September	3.3	3.3	3.5
October	3.7	3.3	4.2
November	2.8	2.8	2.7
December	2.3	2.4	2.2

The death rates from typhoid fever in each month in the cities and the rural districts, and the relative differences in the rates in the two areas are shown in the following diagram:



The preceding table and diagram show that in both cities and rural districts of the registration states the highest death rates from typhoid fever occurred in September and October, and the lowest in June.

The following table shows the comparative proportions of deaths from typhoid fever in each month during the census year, per 1,000 deaths in known months, in the United States, as a whole, and the registration states:

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH.

MONTHS.	United States.	Registration states.
January	67.8	84.4
February	53.0	61.9
March	53.9	66.6
April	52.7	52.6
May	55.6	55.3
June	47.7	44.0
July	78.1	61.9
August	121.9	99.3
September	134.4	131.6
October	142.6	143.5
November	106.3	108.8
December	86.0	90.1

DIARRHEAL DISEASES.

The diseases grouped under this title are cholera infantum, cholera morbus, colitis, diarrhea, dysentery, and enteritis. These diseases are stated separately in the general tables giving details of sex and age in relation to causes of death. The number of deaths from each, in the United States and the registration area, by sex, was as follows:

DIARRHEAL DISEASES.	UNITED STATES.		REGISTRATION AREA.	
	Males.	Females.	Males.	Females.
Cholera infantum	13,662	11,914	7,381	6,377
Cholera morbus	3,370	3,039	914	879
Colitis	770	651	483	433
Diarrhea	4,272	3,438	1,965	1,712
Dysentery	6,112	5,598	1,497	1,509
Enteritis	10,258	9,399	7,887	7,230

The total number of deaths reported as due to diarrheal diseases, as above, in the United States during the census year was 72,483, of which 38,444 were males and 34,039 were females, and the proportion of deaths from these diseases in 1,000 deaths from all known causes was 72.5. In 1890 the corresponding proportion was 88.8.

In the registration area the number of deaths reported as due to these diseases was 38,267, of which 20,127 were males and 18,140 were females, giving a proportion of 75.3 deaths from these diseases in 1,000 deaths from all known causes, and a death rate of 132.8 per 100,000 of population. In 1890 the death rate was 183.7.

In England and Wales the death rate due to diarrheal diseases was 97.5 per 100,000 of population (males, 105.2; females, 90.4).

The following table shows, for the registration area and its subdivisions, the death rates from diarrheal diseases in the census years 1900 and 1890, by sex, color, general nativity, and parent nativity:

DEATH RATES BY COLOR AND NATIVITY.

AREAS.		Aggregate.	WHITE.							COLORED.		
			Total.	Males.	Females.	Native.			Foreign.	Total.	Males.	Females.
						Total.	Both parents native.	One or both parents foreign.				
Registration area	1900	132.8	129.5	136.4	122.7	154.2	120.2	206.5	53.2	205.8	217.2	194.7
	1890	183.7	180.1	187.2	178.1	219.4	145.9	313.6	72.1	253.8	269.7	238.5
Cities	1900	144.6	140.8	149.5	132.2	173.9	144.6	226.6	52.9	211.9	225.1	199.1
	1890	206.4	202.6	211.1	194.2	258.8	181.8	350.7	73.3	268.3	286.9	250.5
States	1900	132.3	131.1	138.3	123.9	157.8	114.4	220.2	52.1	189.7	193.6	185.9
	1890	178.7	177.6	184.6	170.9	213.5	144.4	327.4	73.9	225.3	234.4	216.7
Cities	1900	156.6	155.2	166.8	144.1	203.5	144.3	253.2	51.0	210.7	219.9	202.1
	1890	222.8	221.3	231.9	211.2	290.5	194.9	385.6	76.8	279.5	299.8	261.4
Rural	1900	97.2	96.7	99.3	94.1	104.8	92.0	142.8	54.9	131.2	125.7	137.2
	1890	111.4	111.6	115.2	107.9	120.2	105.8	169.8	64.9	99.8	96.4	103.5
Cities in other states	1900	133.7	127.0	138.3	120.6	148.4	148.9	151.6	55.3	212.2	226.6	198.3
	1890	191.3	184.2	191.3	176.9	229.3	153.5	270.3	69.4	265.2	283.5	247.4

This table shows that the death rate from diarrheal diseases was highest in the cities in the registration states (156.6), and lowest in the rural districts of the same states (97.2). It was much higher for the colored (205.8) than the white (129.5), and was also much higher for the native white of foreign parents (206.5) than for those of native parents (120.2). By sex, the death rate from these diseases was higher among the males (white, 136.4; colored, 217.2) than among the females (white, 122.7; colored, 194.7). The low death rate of foreign whites for these diseases (53.2) is due to the small proportion of children in this class.

In comparison with 1890, the figures show that there was a great decrease in the death rates from diarrheal diseases in all areas, and for all classes, the greatest decrease being in the cities in the registration states, where it reached about 30 per cent.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from diarrheal diseases in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES.		
		Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	1900	132.3	156.7	97.2	139.3	168.2	99.7	125.1	145.6	94.6

[1] Nonregistration in 1890.

This table shows that the death rate from diarrheal diseases in the registration states was highest in Rhode Island (aggregate, 185.1; cities, 191.7; rural districts, 172). The lowest rate was in the rural districts in Vermont (65.6).

The death rate of males (139.3) was higher than that of females (125.1). The rates of the males were higher in all of the states except Connecticut and New Hampshire, in which states the death rates of females from these diseases exceeded those of males.

The following table shows, for the registration area and its subdivisions, the death rates from diarrheal diseases among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	120.3	143.6	118.6	151.3	91.4	128.3
Ireland	113.7	122.2	116.7	127.3	79.5	90.3
Germany	104.4	109.1	110.0	119.1	82.7	91.1
England and Wales	84.7	91.8	87.6	98.8	66.5	70.8
Canada	166.5	191.9	173.8	207.9	130.6	58.4

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
Scandinavia	107.2	110.9	127.3	145.1	94.6	72.2
Scotland	80.3	82.8	80.9	84.5	73.7	76.6
Italy	240.5	260.9	242.9	266.2	123.8	213.7
France	134.8	147.3	152.3	178.5	89.1	87.9
Hungary and Bohemia	153.4	155.6	159.7	164.3	132.9	142.0
Russia and Poland	167.8	172.7	146.1	149.3	121.8	264.1
Other foreign	205.7	224.8	211.2	237.7	146.8	174.9

The preceding table shows that the death rates due to diarrheal diseases in the registration area were highest among the children of mothers born in Italy (240.5), in "Other foreign" countries (205.7), and in Russia and Poland (167.8), and lowest among those whose mothers were born in Scotland (80.3), in England and Wales (84.7), and in Germany (104.4).

The following table shows, for the registration area and its subdivisions, the death rates from diarrheal diseases during the census year in each of six age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

Cities in other states	3,503.0	4,863.8	1,012.5	1,385.6	13.9	21.5	17.2	26.1	65.8	89.6	308.0	348.1
Males	3,759.0	5,132.6	1,082.2	1,460.9	14.4	20.7	17.4	25.4	66.5	95.8	294.1	343.9
Females	3,241.6	4,587.7	941.9	1,308.6	13.4	22.3	17.0	26.8	65.0	83.0	319.8	351.6

It will be seen from the preceding table that the greatest mortality from diarrheal diseases occurred in infants under 1 year of age, the decrease being 3,706.5 per 100,000 of population at this age. For children under 5 years of age the death rate was 1,018.7; at 5 to 14, it was 13.5; at 15 to 44, it was 12.8; at 45 to 64, it was 48.6 and at 65 years of age and over it was 274.5. Below 15 years of age the death rates of males from these diseases exceeded those of females, but in the age groups above 15 years of age the death rates of females were higher than those of males.

In England and Wales the death rate from these diseases in children under 5 years of age, during the year 1899, was 1,128.5.

The highest death rate from these diseases occurred in the cities in the registration states. In this area the death rate for infants under 1 year of age was 4,595.9, and for children under 5 it was 1,218. In the age groups 15 to 44 and 45 to 64 the death rates from these diseases were higher in the cities in the nonregistration states than in the cities in the registration states.

In comparison with 1890 the figures show a great decrease in the death rates from these diseases, that for infants under 1 year of age declining from 5,279.9 to 3,706.5. For those under 5 years of age the decrease was less marked, the rate being 1,428.4 in 1890 and 1,018.7 in 1900.

The combined relations of age and race to the death rates from diarrheal diseases are indicated, for the registration area, in the following table, giving the death rates during the census year in each of six age groups, per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 1.	Under 5.	5 to 14	15 to 44.	45 to 64.	65 and over.
White	3,613.0	987.1	12.8	11.7	45.8	271.9
Colored	6,311.6	1,895.4	31.3	32.9	117.7	370.7
Mothers born in—						
United States	3,059.2	837.5	12.0	7.5	24.3	182.3
Ireland	4,083.4	1,105.2	16.1	16.7	85.5	414.4
Germany	4,453.8	1,091.3	11.9	10.1	35.0	289.8
England and Wales	3,378.7	852.2	13.7	9.3	37.1	255.8
Canada	5,550.0	1,387.9	10.8	8.5	27.6	184.2
Scandinavia	2,703.3	734.2	9.8	8.3	36.5	247.9
Scotland	2,642.9	678.4	19.7	7.5	37.7	403.2
Italy	4,154.9	1,360.5	31.3	9.5	53.1	227.4
France	9,567.2	2,180.8	.....	20.2	49.9	221.5
Hungary	3,102.9	918.5	8.2	4.5	56.9	187.3
Bohemia	3,865.2	1,015.7	5.1	7.3	31.2	151.4
Russia	3,303.0	906.5	4.1	7.4	38.0	311.7
Poland	2,994.6	942.8	6.9	1.8	34.6	81.1
Other foreign	5,127.1	1,476.4	12.3	11.6	31.4	290.3

The preceding table shows that the death rates due to diarrheal diseases in white infants under 1 year of age were highest in those whose mothers were born in France (9,567.2), in Canada (5,550), and in "Other foreign" countries (5,127.1), and lowest in those whose mothers were born in Scandinavia (2,703.3), in Scotland (2,642.9), in Poland (2,994.6), and in the United States (3,059.2).

At 65 years of age and over the death rates from these diseases were highest for those whose mothers were born in Ireland (414.4), in Scotland (403.2), and in Russia (311.7), and lowest for those whose mothers were born in Poland (81.1), in Bohemia (151.4), and in the United States (182.3).

The following table shows, for the registration area, the proportions of deaths from diarrheal diseases at each specified age, per 1,000 deaths at known ages from these diseases, in 1900 and 1890, by sex:

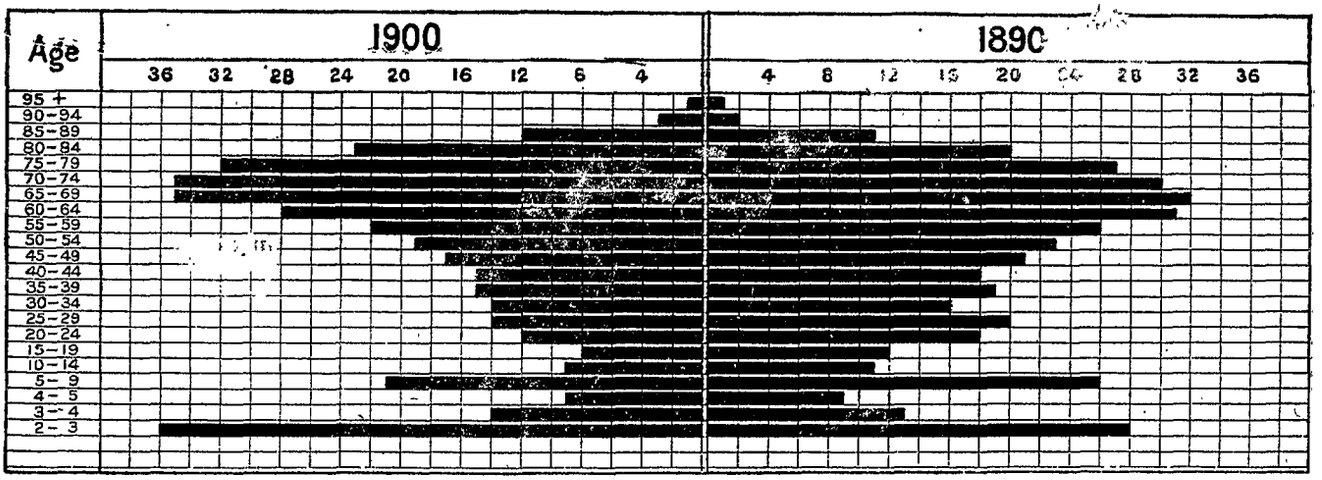
NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	623.1	573.4	685.8	598.9
1 year	135.5	135.2	136.8	134.7
2 years	31.5	31.1	25.1	24.1
3 years	12.4	11.7	10.9	8.7
4 years	7.4	6.8	7.3	4.8
Under 5 years	809.9	758.2	815.9	771.2
5 to 9 years	14.0	13.4	14.5	15.4
10 to 14 years	5.5	5.8	5.5	6.5
15 to 19 years	4.7	5.1	5.7	7.5
20 to 24 years	7.5	7.9	8.5	12.2
25 to 29 years	7.8	10.2	11.1	11.8
30 to 34 years	7.3	10.4	7.8	10.8
35 to 39 years	8.5	10.7	10.2	11.4
40 to 44 years	8.9	10.4	9.9	10.8
45 to 49 years	10.5	11.7	12.3	11.9
50 to 54 years	11.9	12.8	12.4	13.1
55 to 59 years	13.1	14.7	14.0	15.0
60 to 64 years	16.1	19.3	14.4	20.4
65 to 69 years	18.7	26.8	16.2	19.6
70 to 74 years	18.9	26.4	14.7	19.0
75 to 79 years	16.4	24.8	12.7	17.9
80 to 84 years	12.0	17.9	8.5	14.6
85 to 89 years	6.2	9.7	4.9	7.7
90 to 94 years	1.3	2.9	0.4	2.4
95 years and over	0.8	0.9	0.4	0 8

This table shows that in both census years more than 80 per cent of the deaths of males and more than 75 per cent of the deaths of females from these diseases in the registration area occurred in children under 5 years of age.

The average age at death from these diseases in the registration area in 1900 was 12.3 years. In 1890 it was 11 years.

The comparative proportions of deaths from diarrheal diseases (excluding cholera infantum) at each age in the registration area in 1900 and 1890 are shown in the following diagram:



The following table shows, for each grand group in the United States, the proportions of deaths from diarrheal diseases during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	79.1	62.3	62.9	89.1	83.3
2. Middle Atlantic [illegible]on	86.6	79.4	82.2	87.2	89.1
3. South Atlantic Coast [illegible]	80.9	82.3	70.5	90.3	94.1
4. Gulf Coast region	89.9	92.3	86.8	85.6	95.6
5. Northeastern hills and plateau	69.9	60.3	59.6	91.9	84.9
6. Central Appalachian region	67.0	63.2	65.8	69.6	75.6
7. Region of the Great Northern Lakes	80.6	66.1	72.8	85.1	87.9
8. Interior plateau	61.8	57.7	57.4	64.1	66.9
9. Southern Central Appalachian region	79.7	79.4	74.8	124.8	124.2
10. Ohio River belt	60.7	62.6	58.4	61.1	61.3
11. Southern Interior plateau	75.8	80.2	71.7	.....	.....
12. South Mississippi River belt	65.6	61.6	58.8	88.1	92.1
13. North Mississippi River belt	59.9	61.8	60.5	56.5	61.3
14. Southwest Central region	88.7	90.7	88.4	130.7	134.0
15. Central region—plains and prairies	62.6	64.7	58.7	65.5	66.5
16. Prairie region	64.7	64.4	64.4	62.8	73.4
17. Missouri River belt	67.1	64.4	67.1	65.2	74.3
18. Region of the Western plains	79.4	85.7	94.6	41.2	51.7
19. Heavily timbered region of the Northwest	65.8	65.1	66.5	62.1	70.6
20. Cordilleran region	50.8	43.9	59.4	48.9	74.0
21. Pacific Coast region	41.3	38.9	44.9	40.8	42.6

This table indicates that the proportions of deaths due to diarrheal diseases were greatest in the Gulf Coast region (89.9), the Southwest Central region (88.7), and the Middle Atlantic Coast region (86.6), and least in the Pacific Coast region (41.3), the Cordilleran region (50.8), and the North Mississippi River belt (59.9).

The geographical distribution of deaths from diarrheal diseases, by state groups, is shown by plate No. 15.

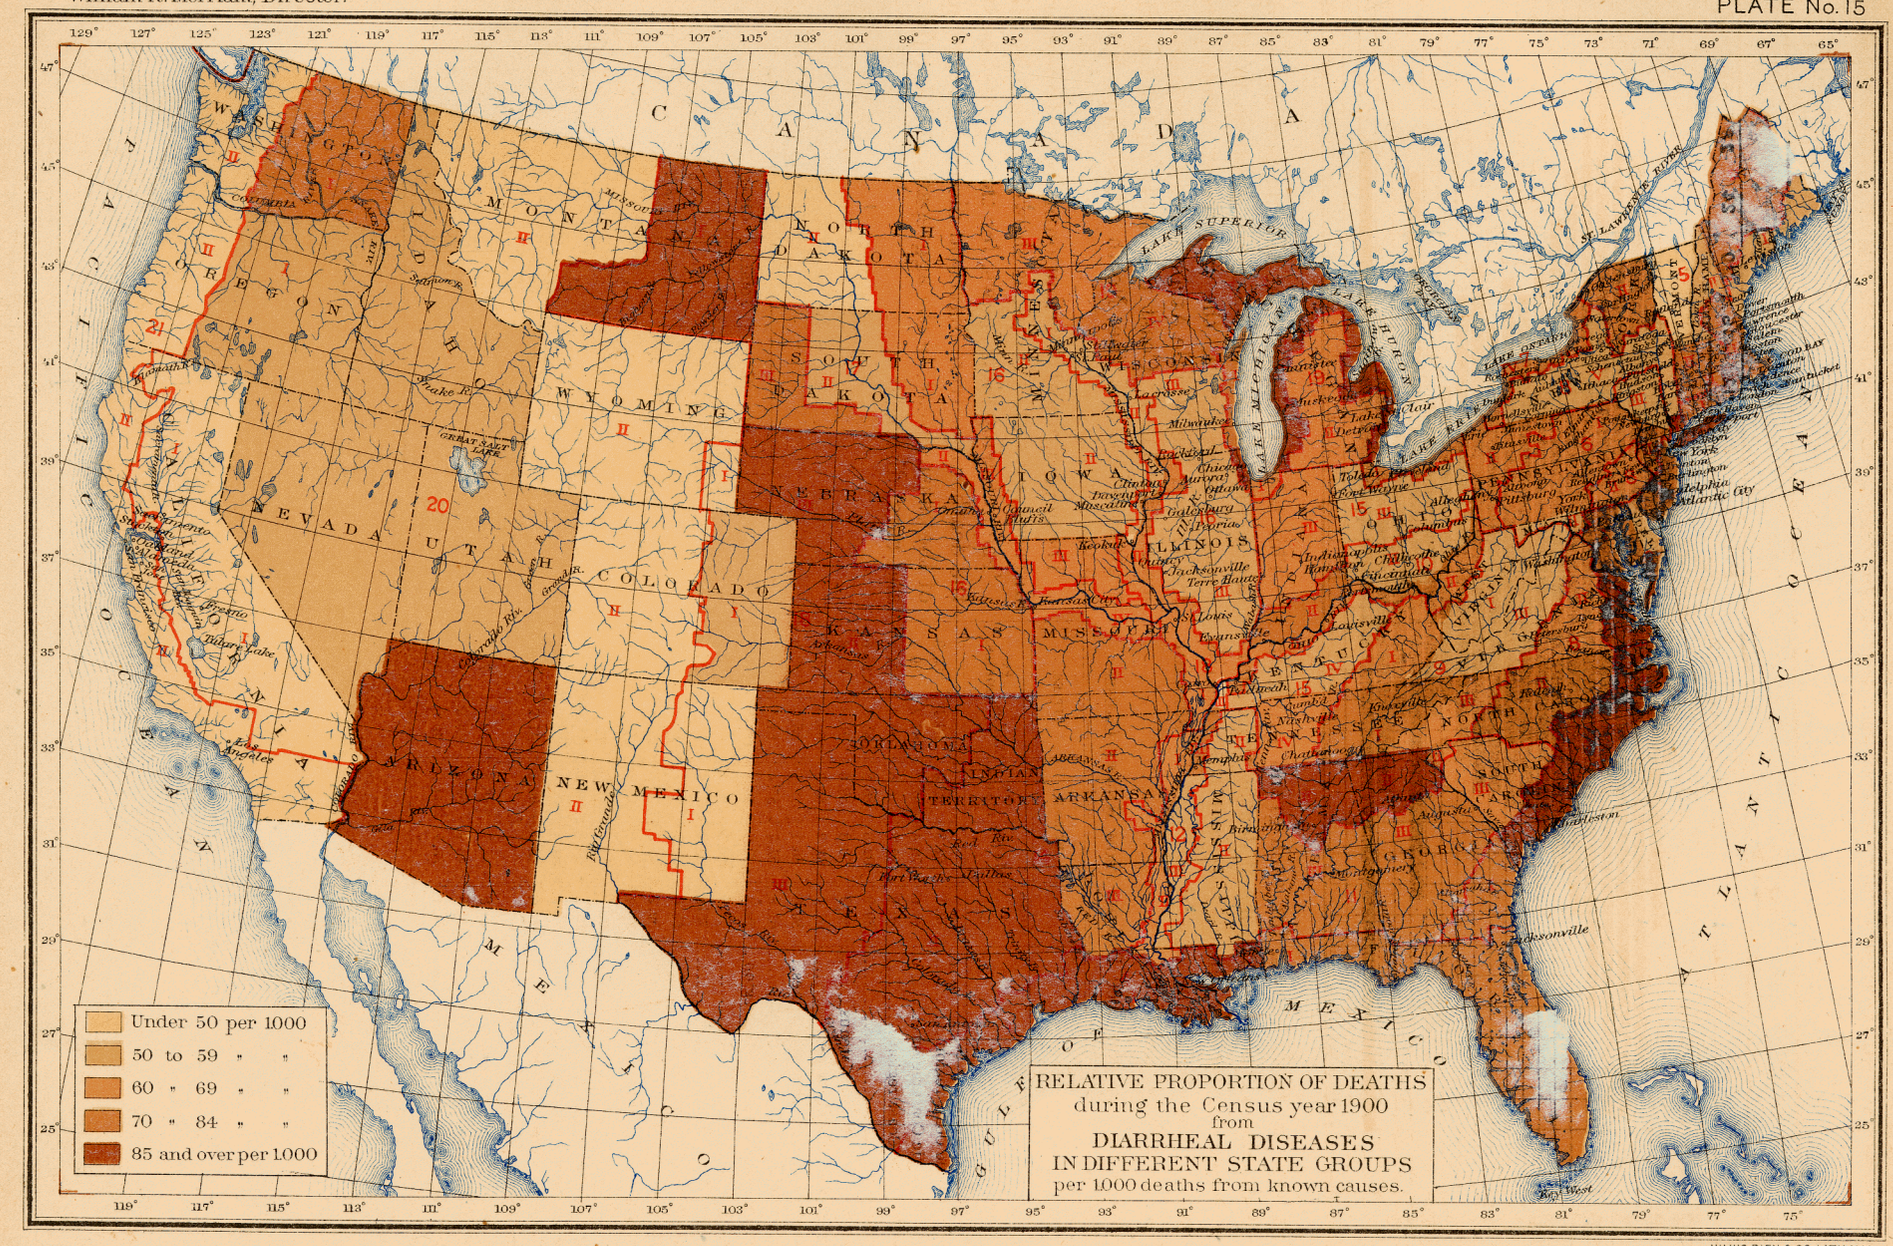
The following table shows, for the registration states, the death rates from diarrheal diseases in each month of the census year, in the aggregate, and for the cities and rural districts:

DEATH RATES BY MONTHS.

MONTHS.	Total.	Cities.	Rural.
January	3.1	3.5	2.5
February	2.8	3.2	2.3
March	3.3	3.8	2.6
April	3.3	3.8	2.6
May	3.7	4.2	3.0
June	11.1	15.9	4.2
July	36.5	49.8	17.4
August	32.7	36.2	27.7
September	21.2	20.4	22.2
October	7.9	8.1	7.5
November	3.7	4.3	2.9
December	3.0	3.4	2.3

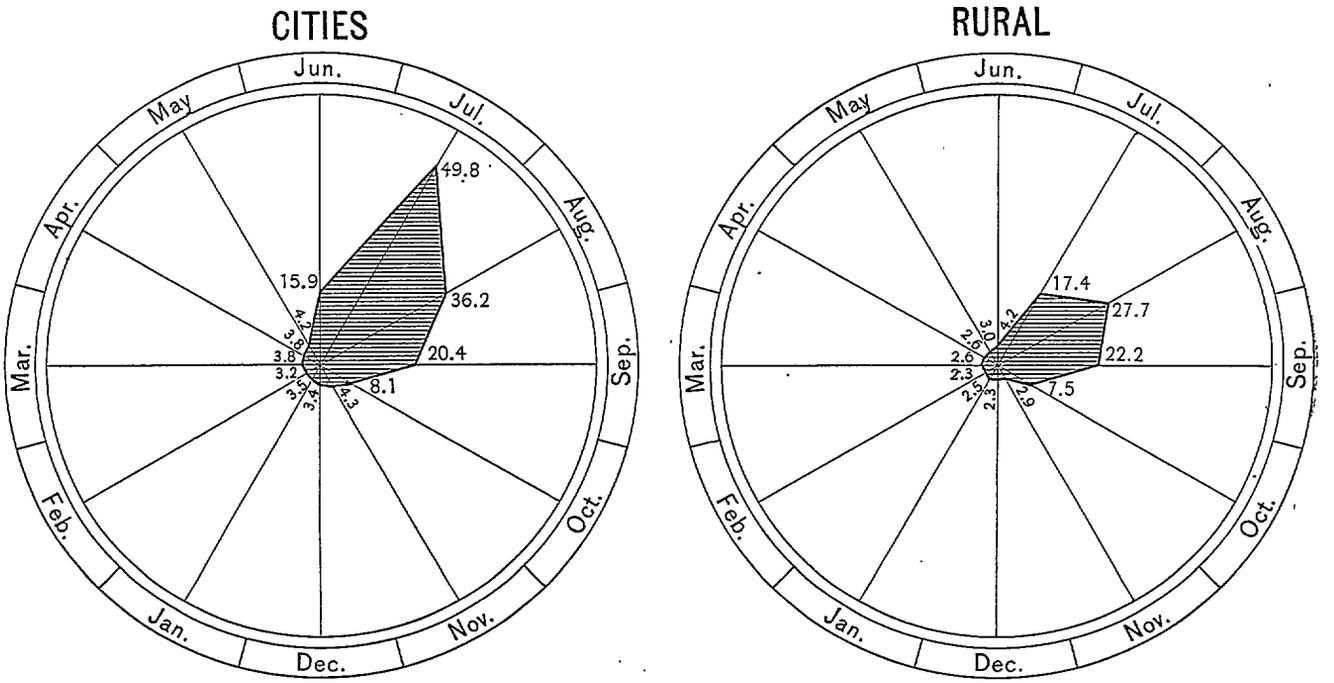
Twelfth Census of the United States
William R. Merriam, Director.

PLATE No. 15



JULIUS BIEN & CO. LITH. N.Y.

The death rates from diarrheal diseases in each month in the cities and the rural districts and the relative differences in the rates in the two areas are shown in the following diagram:



The preceding table and diagram show that in both cities and rural districts of the registration states the highest death rates from diarrheal diseases occurred in July, August, and September, and the lowest rates in December and February.

The following table shows the comparative proportions of deaths from diarrheal diseases in each month during the census year, per 1,000 deaths in known months, in the United States, as a whole, and the registration states:

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH.

MONTHS.	United States.	Registration states.
January	30.1	23.3
February	27.5	21.4
March	30.2	24.9
April	33.5	24.9
May	62.2	28.2
June	103.0	83.7

COMPARATIVE PROPORTION OF DEATHS IN EACH MONTH—Con.

MONTHS.	United States.	Registration states.
July	214.8	276.2
August	212.0	247.4
September	143.6	159.8
October	73.6	59.7
November	40.1	28.2
December	29.4	22.3

CEREBRO-SPINAL FEVER.

The total number of deaths reported as due to cerebro-spinal fever in the United States during the census year was 4,174, of which 2,322 were males and 1,852 were females, and the proportion of deaths from this disease in 1,000 deaths from all known causes was 4.2. In 1890 the corresponding proportion was 4.

In the registration area the number of deaths reported as due to this disease was 2,039, of which

1,127 were males and 912 were females, giving a proportion of 4 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 7.1 per 100,000 of population. In 1890 the death rate was 6.3.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from cerebro-spinal fever in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES.		
		Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.

[1] Nonregistration in 1890.

It will be seen from this table that the death rate from cerebro-spinal fever in the registration states was highest in Michigan in the aggregate (12.2), and also in the rural districts (12.4). In the cities the rate from this disease was highest in Vermont (12.9). There was but little difference in the rates in the cities and rural districts.

The following table shows, for the registration area and its subdivisions, the death rates from cerebro-spinal fever among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	8.6	9.4	8.7	9.9	7.7	8.3
Ireland	5.7	6.4	6.0	6.9	3.1	3.5
Germany	3.9	3.8	4.3	4.1	4.7	3.1
England and Wales	5.2	4.6	5.8	5.2	6.8	2.5
Canada	9.4	9.3	9.6	9.6	9.5	6.2
Scandinavia	8.4	6.1	9.3	5.4	16.2	6.7
Scotland	7.2	8.4	8.1	10.0	3.9	2.4

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
Italy	11.2	12.1	11.8	13.0	5.8	4.9
France	5.0	6.4	4.1	5.8	.....	7.3
Hungary and Bohemia	4.9	4.3	6.1	5.3	10.6	2.8
Russia and Poland	7.6	7.8	8.1	8.5	5.5	5.1
Other foreign	9.9	8.5	10.7	9.2	14.4	5.8

This table shows that the death rates due to cerebro-spinal fever in the registration area were highest among those whose mothers were born in Italy (11.2), in "Other foreign" countries (9.9), and in Canada (9.4), and lowest among those whose mothers were born in Germany (3.9), in Hungary and Bohemia (4.9), and in England and Wales (5.2).

The following table shows, for the registration area and its subdivisions, the death rates from cerebro-spinal fever during the census year in each of four age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 1.		UNDER 5.		5 TO 14.		15 AND OVER.	
	1900	1890	1900	1890	1900	1890	1900	1890
Total	84.8	79.7	39.3	37.4	7.4	6.1	2.3	1.9
Males	95.3	94.1	44.3	41.7	7.7	6.0	2.6	1.9
Females	74.1	64.9	34.3	33.1	7.1	6.2	2.1	1.9
Cities	84.1	83.0	38.7	39.6	7.3	6.6	2.2	1.9

Females	75.7	71.5	34.7	34.2	6.8	6.9	1.9	1.9
States	102.6	72.4	46.7	35.2	7.9	5.1	2.4	2.0
Males	117.5	89.8	53.8	39.2	7.9	5.4	2.7	1.8
Females	87.5	54.5	39.4	31.0	7.8	4.8	2.1	2.1
Cities	112.0	75.6	49.9	38.4	7.9	5.5	2.2	1.9
Males	125.2	87.9	56.4	44.6	8.4	5.6	2.7	1.7
Females	98.7	63.0	43.4	32.2	7.5	5.4	1.8	2.2
Rural	87.2	66.3	41.5	29.6	7.8	4.5	2.6	2.0
Males	105.0	93.2	49.8	30.1	7.3	5.1	2.6	2.0
Females	69.1	38.5	33.0	29.0	8.3	3.9	2.6	2.0
Cities in other states	56.3	89.5	27.9	40.5	6.7	7.5	2.2	1.8
Males	59.9	99.8	29.5	45.1	7.3	6.9	2.4	2.0
Females	52.7	78.9	26.3	35.9	6.1	8.1	2.1	1.6

The preceding table shows that the highest death rate from this disease occurred in infants under 1 year of age, and that the death rate above 5 years of age was very low. The death rate for those under 1 year of age was highest in the cities in the registration states (112), being 125.2 for males and 98.7 for females. The death rate at this age in the cities in the nonregistration states (56.3) was only half as high as that in the cities in the registration states, and it was also less than the rate in the rural districts of the registration states (87.2).

In comparison with 1890 the figures show an increase in the death rates from cerebro-spinal fever at all ages in both the cities and the rural districts in the registration states, while the rates from this disease in the cities in the nonregistration states show a decrease at each age except for those 15 years of age and over, where the increase was insignificant.

The combined relations of age and race to the death rates from cerebro-spinal fever are indicated, for the registration area, in the following table, giving the death rates during the census year in each of four age groups, per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 1.	Under 5.	5 to 14.	15 and over.
White	84.3	39.3	7.0	2.3
Colored	98.1	42.0	16.6	2.8
Mothers born in—				
United States	102.5	45.7	6.9	2.5
Ireland	110.2	54.9	9.4	1.7
Germany	68.6	30.4	3.3	1.6
England and Wales	77.0	33.7	7.6	2.5
Canada	108.8	57.1	6.6	2.5

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS—Con.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 1.	Under 5.	5 to 14.	15 and over.
Mothers born in—Continued.				
Scandinavia	102.8	39.0	9.8	2.1
Scotland	92.2	37.0	8.5	4.9
Italy	101.5	45.0	17.7	0.3
France	227.8	67.4	9.6	1.2
Hungary	42.8	25.5	8.2	1.3
Bohemia	.....	9.3	.....	1.9
Russia	110.3	49.0	10.3	2.5
Poland	21.5	11.2	1.1	.....
Other foreign	61.3	38.0	15.2	3.4

It will be seen from the preceding table that the death rates from cerebro-spinal fever in white infants under 1 year of age were highest in those whose mothers were born in France (227.8), in Russia (110.3), and in Ireland (110.2), and lowest in those whose mothers were born in Poland (21.5), in Hungary (42.8), and in "Other foreign" countries (61.3).

The following table shows, for the registration area, the proportions of deaths from cerebro-spinal fever at each specified age, per 1,000 deaths at known ages from this disease, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

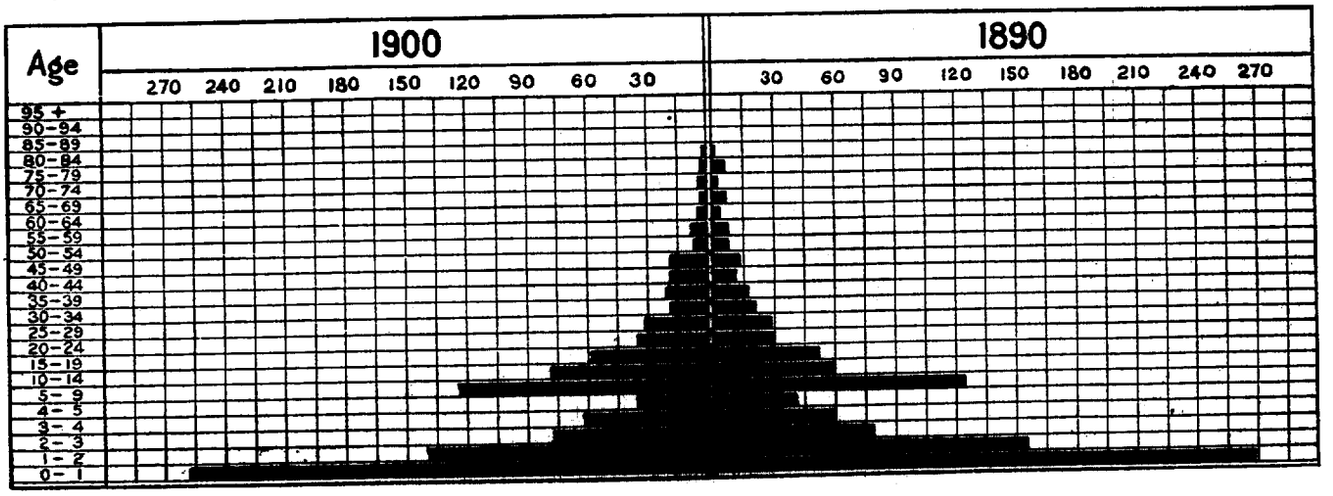
AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	263.8	249.2	303.6	234.4
1 year	155.4	122.9	170.7	138.9
2 years	72.8	79.0	75.5	83.3
3 years	57.7	63.7	51.4	67.7
4 years	33.7	36.2	36.3	45.1
Under 5 years	583.4	551.0	637.5	569.4
5 to 9 years	119.9	125.1	114.8	133.0
10 to 14 years	66.6	88.9	54.4	66.0
15 to 19 years	55.1	60.4	57.4	46.9

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.—Continued.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
20 to 24 years	39.9	29.6	19.6	39.9
25 to 29 years	32.0	30.7	22.7	34.7
30 to 34 years	16.0	22.0	15.1	26.0
35 to 39 years	21.3	19.8	13.6	20.8
40 to 44 years	16.0	22.0	12.1	12.2
45 to 49 years	16.9	20.8	15.1	12.2
50 to 54 years	8.9	5.5	9.1	6.9
55 to 59 years	8.0	7.7	10.6	5.2
60 to 64 years	5.3	4.4	6.0	1.8
65 to 69 years	4.4	2.2	3.0	10.4
70 to 74 years	3.6	4.4	3.0	3.5
75 to 79 years	1.8	3.3	3.0	10.4
80 to 84 years	0.9	1.1	3.0	.....
85 to 89 years	.....	.....	.....	.....
90 to 94 years	.....	1.1	.....	.....
95 years and over	.....	.....	.....	.....

The average age at death from this disease in the registration area in 1900 was 10.4 years. In 1890 it was 9.8 years.

The comparative proportions of deaths from cerebro-spinal fever at each age in the registration area in 1900 and 1890 are shown in the following diagram:



The following table shows, for each grand group in the United States, the proportions of deaths from cerebro-spinal fever during the census year, to 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	4.1	3.2	3.6	4.8	3.9
2. Middle Atlantic Coast region	3.9	3.4	3.4	4.5	3.6
3. South Atlantic Coast region	2.5	1.9	2.6	1.7	4.3
4. Gulf Coast region	3.4	2.7	1.7	4.8	5.3
5. Northeastern hills and plateaus	4.8	5.1	3.9	6.1	4.6
6. Central Appalachian region	4.2	4.4	3.5	4.9	4.3
7. Region of the Great Northern Lakes	3.8	6.4	5.8	2.9	2.3
8. Interior plateau	2.7	2.9	3.0	2.5	2.5
9. Southern Central Appalachian region	3.5	4.1	3.3	.....	0.9
10. Ohio River belt	5.4	5.6	5.8	4.9	5.0
11. Southern Interior plateau	1.8	2.2	1.4	.....	.....
12. South Mississippi River belt	3.6	4.6	2.7	1.8	4.6
13. North Mississippi River belt	5.4	4.4	7.8	3.7	6.3
14. Southwest Central region	6.6	7.4	6.0	3.6	3.7
15. Central region—plains and prairies	5.0	6.4	4.0	3.4	3.5
16. Prairie region	4.6	4.4	4.8	6.0	4.7
17. Missouri River belt	4.9	5.8	3.9	5.6	4.0
18. Region of the Western plains	4.7	4.9	6.7	1.1	2.3
19. Heavily timbered region of the Northwest	5.5	6.7	4.7	3.7	5.6
20. Cordilleran region	6.1	5.5	7.0	5.6	7.6
21. Pacific Coast region	4.5	4.5	5.4	3.4	5.5

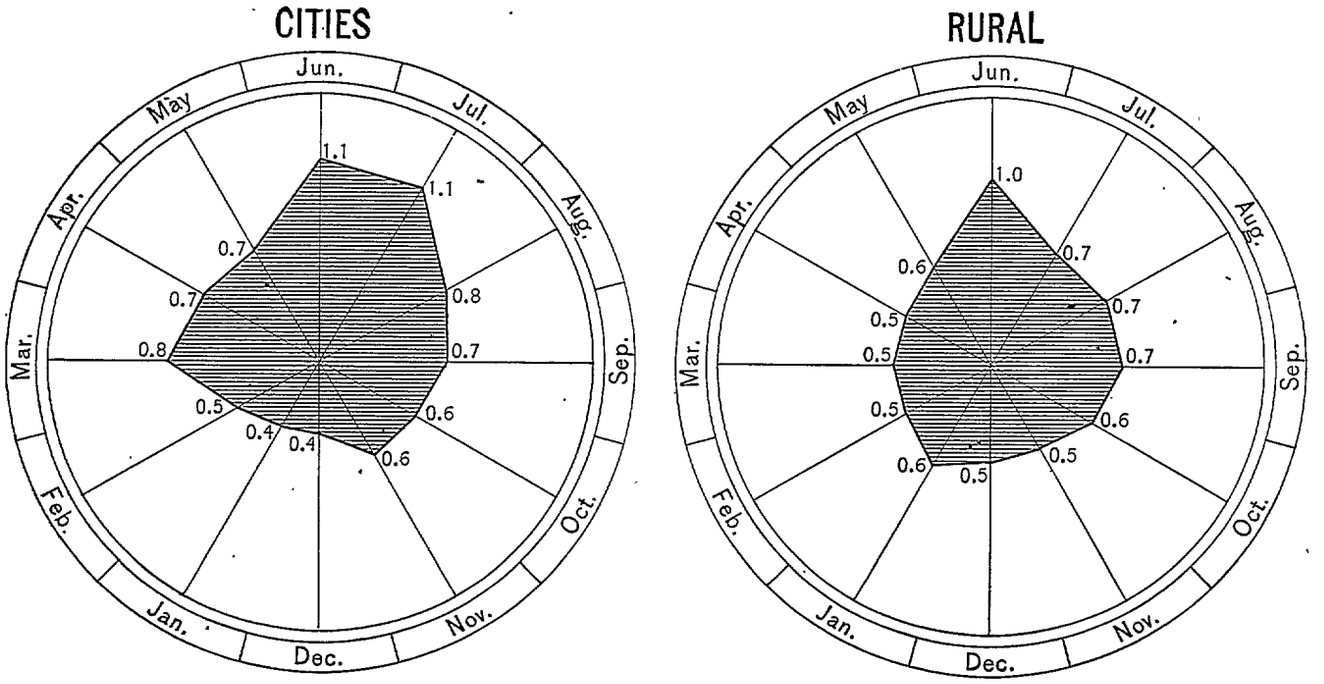
This table indicates that the proportions of deaths caused by cerebro-spinal fever were greatest in the Southwest Central region (6.6), the Cordilleran region (6.1), and the heavily timbered region of the Northwest (5.5), and least in the Southern Interior plateau (1.8), the South Atlantic Coast region (2.5), and the Interior plateau (2.7).

The following table shows, for the registration states, the death rates from cerebropinal fever in each months, of the census year, in the aggregate, and for the cities and rural districts:

DEATH RATES BY MONTHS.

MONTHS.	Total.	Cities.	Rural.
January	0.5	0.4	0.6
February	0.5	0.5	0.5
March	0.7	0.8	0.5
April	0.6	0.7	0.5
May	0.7	0.7	0.6
June	1.0	1.1	1.0
July	0.9	1.1	0.7
August	0.8	0.8	0.7
September	0.7	0.7	0.7
October	0.6	0.6	0.6
November	0.5	0.6	0.5
December	0.5	0.4	0.5

The death rates from cerebro-spinal fever in each month in the cities and the rural districts, and the relative differences in the rates in the two areas, are shown in the following diagram:



The following table shows the comparative proportions of deaths from cerebro-spinal fever in each month during the census year, per 1,000 deaths in known months, in the United States, as a whole, and in the registration states:

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH.

MONTHS.	United States.	Registration states.
January	75.6	65.4
February	72.0	64.0
March	89.7	88.4
April	87.8	79.8
May	88.3	83.4
June	119.5	125.8
July	104.8	116.5
August	94.3	99.2
September	80.9	85.6
October	71.7	69.0
November	59.0	66.1
December	56.4	56.8

SMALLPOX.

The total number of deaths reported as due to smallpox in the United States during the census year was 3,484, of which 2,116 were males and 1,368 were females, and the ratio of deaths from this disease per 1,000 deaths from all known causes was 3.5. In 1890 the number of deaths from this disease was 398 and the ratio was 0.5 to 1,000 deaths from all known causes.

In the registration area the number of deaths reported as due to this disease was 593, of which 363 were males and 230 were females, giving a death rate of 1.2 per 100,000 of population. In 1890 the number of deaths from this disease in the registration area was only 38.

These numbers are to small to afford rates of any value.

ERYSIPELAS.

The total number of deaths reported as due to erysipelas in the United States during the census year was 2,861, of which 1,582 were males and 1,279 were females.

In the registration area the number of deaths reported as due to this disease was 1,476, of which 847 were males and 629 were females, giving a death rate of 5.1 per 100,000 of population. In 1890 the death rate was 5.4.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from erysipelas in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

[1] Nonregistration in 1890.

This table shows that there was very little difference in the death rates from erysipelas in 1890 and 1900. The death rate in the registration states was higher in the cities than in the rural districts and higher in males than in females. The rate from this disease was highest in the cities in New Jersey (7.3) and lowest in the rural districts of New Hampshire (3.2).

The following table shows, for the registration area and its subdivisions, the death rates from erysipelas during the census year in each of five age groups, per 100,000 of population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 5.		5 TO 14.		15 TO 44.		45 TO 64.		65 AND OVER.	
	1900	1890	1900	1890	1900	1890	1900	1890	1900	1890

Females	13.3	20.6	0.3	.....	1.8	2.1	5.5	7.5	22.1	25.2

The preceding table shows that the death rates from erysipelas were highest in children under 5 years of age (16.3) and in persons 65 years of age and over (24.3). For children under 5 years of age the death rate from

this disease was highest in the cities in the registration states (23.6) and lowest in the rural districts of the same states (9.5). At 65 years of age and over the death rate from this disease in the cities in the registration states (29) was slightly higher than that in the cities in the nonregistration states (27), and considerably higher than that in the rural districts of the registration states (18.9).

In comparison with 1890 the figures show a slight decrease in the death rate due to erysipelas at each age, except at 45 to 64.

The combined relations of age and race to the death rates from erysipelas are indicated, for the registration area, in the following table, giving the death rates during the census year in each of 5 age groups, per 100,000 of population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 5.	5 to 14.	15 to 44.	45 to 64.	65 and over.

The average age at death from erysipelas in the registration area in 1900 was 36.1 years. In 1890 it was 34.8 years.

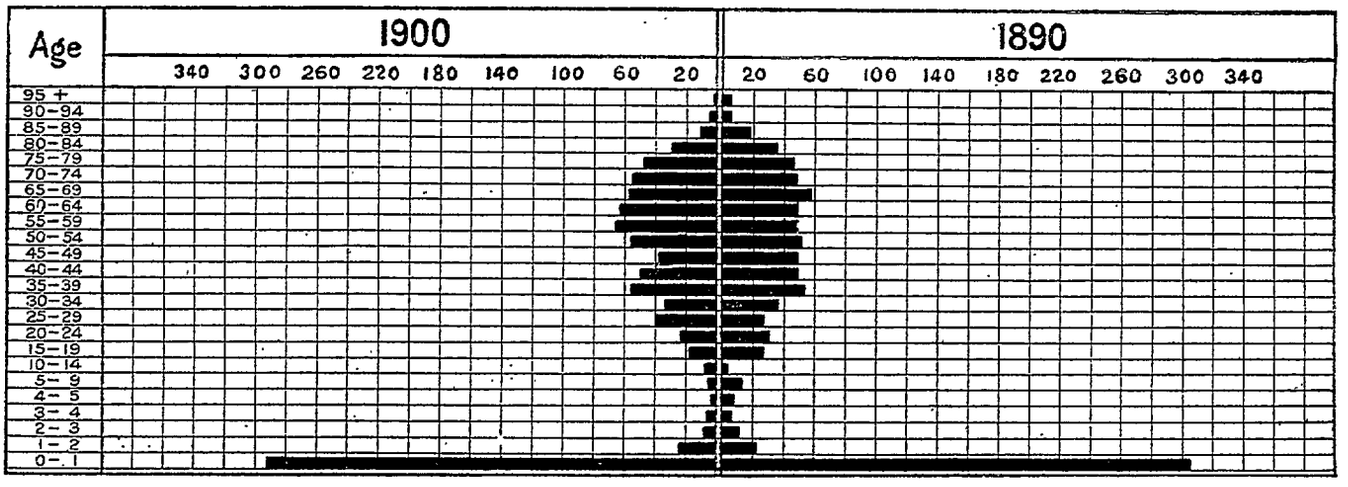
The preceding table shows that the death rates from erysipelas in white children under 5 years of age were highest for those whose mothers were born in Italy (56.9), in Russia (34.1), and in "Other foreign" countries (29.5). The rate was lower for those whose mothers were born in the United States (13.9) than for those whose mothers were born in Ireland (19.3), in Germany (18.1), or in England and Wales (18.5).

The following table shows, for the registration area, the proportions of deaths from erysipelas at each specified age, per 1,000 deaths at known ages from this disease, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	256.8	328.0	277.0	330.0
1 year	20.1	27.1	14.4	29.8
2 years	3.6	9.5	14.4	9.9
3 years	4.7	6.4	3.6	8.0
4 years	3.6	3.2	1.8	13.9
Under 5 years	288.8	374.2	311.2	391.6
5 to 9 years	5.9	4.8	19.8	6.0
10 to 14 years	8.3	6.4	1.8	4.0
15 to 19 years	20.1	15.9	21.6	29.8
20 to 24 years	20.1	28.7	36.0	25.8
25 to 29 years	41.4	38.2	34.2	19.9
30 to 34 years	48.5	19.1	28.8	41.8
35 to 39 years	47.3	65.3	70.2	37.8
40 to 44 years	65.1	35.0	57.6	39.8
45 to 49 years	48.5	30.3	57.6	39.8
50 to 54 years	63.9	47.8	54.0	47.7
55 to 59 years	75.8	55.7	50.4	43.7
60 to 64 years	56.8	70.1	61.2	33.8
65 to 69 years	63.9	50.9	59.4	55.7
70 to 74 years	54.5	55.7	48.6	45.7
75 to 79 years	47.3	49.4	43.2	49.7
80 to 84 years	28.4	33.4	25.2	47.7
85 to 89 years	9.5	12.7	12.6	25.8
90 to 94 years	4.7	4.8	3.0	7.9
95 years and over	1.2	1.6	3.6	6.0

The comparative proportions of deaths from erysipelas at each age in the registration area in 1900 and 1890 are shown in the following diagram:



The following table shows, for each grand group in the United States, the proportions of deaths from erysipelas during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	2.9	2.7	2.4	3.2	3.0
2. Middle Atlantic Coast region	3.3	3.0	1.9	3.7	3.2
3. South Atlantic Coast region	2.4	2.4	2.6	3.5	0.5
4. Gulf Coast region	1.6	2.3	2.0	1.6	0.2
5. Northeastern hills and plateaus	2.7	2.3	2.7	2.9	3.0
6. Central Appalachian region	3.5	3.7	3.3	4.3	2.2
7. Region of the Great Northern Lakes	2.7	3.4	1.7	3.0	2.3
8. Interior plateau	2.6	2.4	2.2	3.1	2.6
9. Southern Central Appalachian region	3.0	3.0	3.3	.....	0.9
10. Ohio River belt	2.9	3.2	3.1	2.9	2.0
11. Southern Interior plateau	1.9	1.9	1.8	.....	.....
12. South Mississippi River belt	2.6	2.5	2.9	1.2	3.1
13. North Mississippi River belt	3.1	2.9	3.7	2.9	3.2
14. Southwest Central region	3.3	3.5	3.2	2.7	.....
15. Central region—plains and prairies	2.8	2.5	3.3	2.9	1.7
16. Prairie region	3.1	3.1	3.1	2.1	3.8
17. Missouri River belt	3.4	3.1	4.2	2.0	4.4
18. Region of the Western plains	3.8	3.3	4.2	3.3	4.6
19. Heavily timbered region of the Northwest	3.1	3.4	2.2	3.7	4.2
20. Cordilleran region	2.9	3.0	2.7	3.8	1.9
21. Pacific Coast region	1.8	2.0	0.3	1.8	2.7

This table indicates that the proportions of deaths due to erysipelas were greatest in the region of the Western plains (3.8), and the Central Appalachian region (3.5), and least in the Gulf Coast region (1.6), and the Pacific Coast region (1.8).

VENEREAL DISEASES.

The total number of deaths reported as due to venereal diseases in the United States during the census year was 1,591, of which 934 were of males and 657 were of females, and the proportion of deaths from this disease in 1,000 deaths from all known causes was 1.6. In 1890 the corresponding proportion was 1.9.

In the registration area the number of deaths reported as due to this disease was 947, of which 529 were males and 418 were females, giving a proportion of 1.9 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 3.3 per 100,000 of population. In 1890 the death rate was 4 per 100,000.

The following table shows, for the registration area and its subdivisions, the death rates from venereal diseases during the census year in each of three age groups, per 100,000 of population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 15.	15 TO 44.		45 AND OVER.	
	1900	1900	1890	1900	1890
Total	7.5	1.3	2.4	2.0	2.4
Males	7.9	1.4	2.5	3.0	3.1
Females	7.0	1.2	2.3	1.1	4.5
Cities	9.4	1.5	2.8	2.5	3.2
Males	10.1	1.6	3.1	3.8	4.5
Females	8.7	1.4	2.6	1.3	1.9
States	6.0	0.8	1.6	1.2	1.8
Males	6.2	0.9	1.6	1.7	2.5
Females	5.8	0.7	1.7	0.6	1.2
Cities	9.1	0.9	2.1	1.4	2.7
Males	9.6	1.1	2.2	2.1	3.9
Females	8.7	0.8	2.0	0.6	1.6
Rural	1.4	0.7	0.8	0.9	0.8
Males	1.4	0.7	0.5	1.3	1.0
Females	1.4	0.7	1.1	0.6	0.7
Cities in other states	9.7	2.1	3.5	3.6	3.7
Males	10.6	2.1	3.9	5.3	5.2
Females	8.8	2.0	3.2	2.0	2.1

This table shows that the highest death rate from venereal diseases occurred in the age group under 15 years, and that in this age group it was slightly higher in the cities in the nonregistration states (9.7) than in cities in the registration states (9.1). It was very much higher in the cities than in the rural districts of the registration states.

The combined relations of age and race to the death rates from venereal diseases are indicated in the following table for the registration area, giving the death rates during the census year in each of three age groups, per 100,000 of population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 15.	15 to 44.	45 and over.
White	6.5	1.0	1.6
Colored	33.9	8.5	12.3
Mothers born in—			
United States	3.8	0.4	0.8
Ireland	4.3	1.2	1.1
Germany	2.1	0.7	0.8
England and Wales	4.7	0.4	2.8
Canada	3.9	0.6	1.1
Scandinavia	3.7	1.1	3.3
Scotland	1.9	1.4	2.5
Italy	16.9	1.7	2.0
France	13.5	.....	.....
Hungary	.....	1.5	.....
Bohemia	.....	.....	.....
Russia	4.9	.....	.....
Poland	0.7	.....	.....
Other foreign	6.2	1.3	1.3

The preceding table shows that the death rates due to venereal diseases in white persons under 15 years of age were highest among those whose mothers were born in Italy (16.9), in France (13.5), and in "Other foreign" countries (6.2). The rate was lower among those whose mothers were born in the United States (3.8) than among those whose mothers were born in Ireland (4.3), in England and Wales (4.7), or in Canada (3.9).

The following table shows, for the registration area, the proportions of deaths from venereal diseases at each specified age, per 1,000 deaths at known ages from these diseases, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	575.8	636.2	497.7	510.2
1 year	36.5	26.5	27.7	43.7
2 years	11.5	19.3	16.1	5.8
3 years	9.6	12.0	6.9	5.9
4 years	1.9	4.8	.....	.....
Under 5 years	635.3	698.8	548.4	565.6
5 to 9 years	3.8	2.4	11.5	14.6
10 to 14 years	3.8	4.8	4.6	.....
15 to 19 years	9.6	21.7	4.6	32.1
20 to 24 years	15.4	41.0	36.9	46.6
25 to 29 years	46.1	38.6	55.3	67.1
30 to 34 years	38.4	45.8	66.8	75.8
35 to 39 years	46.1	38.6	62.2	70.0
40 to 44 years	44.1	36.1	66.8	46.6
45 to 49 years	36.5	24.1	43.8	29.1
50 to 54 years	40.3	21.7	46.1	17.5
55 to 59 years	32.6	7.2	13.8	11.7
60 to 64 years	24.9	2.4	4.6	8.7
65 to 69 years	7.7	4.8	16.2	5.8
70 to 74 years	5.8	7.2	18.4	8.8
75 to 79 years	7.7	2.4	.....	.....
80 years and over	1.9	2.4	.....	.....

This table shows that more than half of the deaths from venereal diseases in the registration area, in both 1900 and 1890, occurred in children under 1 year of age, being due to congenital syphilis.

The average age at death from these diseases in the registration area in 1900 was 13.9 years. In 1890 it was 17 years. For those dying of these diseases at 15 years of age and over, the average age at death was 41.1 years in 1900 and 38.7 years in 1890.

The following table shows, for each grand group in the United States, the proportions of deaths from venereal diseases during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUPS.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	1.1	0.9	0.9	1.3	0.9
2. Middle Atlantic Coast region	2.0	0.7	0.7	2.2	2.5
3. South Atlantic Coast region	3.2	2.8	0.6	7.9	5.8
4. Gulf Coast region	2.2	1.5	1.8	3.3	2.3
5. Northeastern hills and plateaus	0.8	0.8	0.5	1.4	0.7
6. Central Appalachian region	0.5	0.5	0.4	0.9	.....
7. Region of the Great Northern Lakes	3.0	1.0	0.7	3.9	4.1
8. Interior plateau	1.0	0.8	0.6	1.4	1.0
9. Southern Central Appalachian region	1.7	1.9	1.4	4.0	2.7
10. Ohio River belt	1.7	2.1	1.0	2.2	1.8
11. Southern Interior plateau	3.2	3.7	2.7	.....	.....
12. South Mississippi River belt	3.0	3.6	1.6	5.5	3.1
13. North Mississippi River belt	1.6	0.7	0.3	3.2	2.4
14. Southwest Central region	1.1	1.2	0.7	7.3	2.5
15. Central region—plains and prairies	1.1	1.3	0.8	1.0	1.9
16. Prairie region	0.7	0.7	0.5	1.1	0.9
17. Missouri River belt	1.3	1.1	0.7	2.3	1.6
18. Region of the Western plains	2.0	2.3	0.4	4.4	3.1
19. Heavily timbered region of the Northwest	0.7	0.9	0.6	0.7	0.5
20. Cordilleran region	1.2	1.4	0.9	0.6	0.9
21. Pacific Coast region	1.8	0.7	1.2	2.1	2.7

This table indicates that the proportions of deaths from venereal diseases were greatest in the South Atlantic Coast region (3.2), Southern Interior plateau (3.2), South Mississippi River belt (3), and the region of the Great Northern Lakes (3), and least in the Central Appalachian region and the heavily timbered region of the Northwest.

ALCOHOLISM.

The total number of deaths reported as due to alcoholism in the United States during the census year was 2,811, of which 2,388 were males and 423 were females, and the proportion of deaths from this disease in 1,000 deaths from all known causes was 2.8. In 1890 the corresponding proportion was 3 per 1,000.

In the registration area the number of deaths reported as due to this disease was 2,061, of which 1,693 were males and 368 were females, giving a proportion of 4.1 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 7.2 per 100,000 of population. In 1890 the death rate was 8.1.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from alcoholism in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES.		
		Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.

[1] Nonregistration in 1890.

According to the preceding table the death rate from alcoholism in the registration states was highest in Rhode Island (10.5) and lowest in New Hampshire and Maine (2.2). In both cities and rural districts the death rates from this cause were considerably lower than in 1890.

The following table shows, for the registration area and its subdivisions, the death rates from alcoholism among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	2.4	3.1	2.3	3.4	1.5	2.5
Ireland	17.7	19.4	17.8	19.7	10.9	17.3
Germany	6.1	6.4	6.1	6.6	4.7	6.0
England and Wales	8.3	10.3	8.1	10.7	3.4	9.3
Canada	3.7	4.4	3.7	4.7	2.5	2.5
Scandinavia	5.5	6.0	5.7	6.9	3.6	5.0
Scotland	9.7	10.9	9.7	11.3	6.6	9.6
Italy	0.7	0.8	0.7	0.8	.....	.....
France	7.0	7.6	6.8	7.8	4.7	7.3
Hungary and Bohemia	3.9	4.3	3.8	4.4	.....	4.2
Russia and Poland	1.7	1.6	1.3	1.1	2.8	3.6
Other foreign	4.2	4.5	2.5	2.0	3.6	13.8

The preceding table shows that the death rates due to alcoholism in the registration area were highest among tnose whose mothers were born in Ireland (17.7), in Scotland (9.7), and in England and Wales (8.3), and were lowest among those whose mothers were born in Italy (0.7), in Russia and Poland (1.7), and in the United States (2.4).

The following table shows, for the registration area and its subdivisions, the death rates from alcoholism during the census year in each of two age groups, per 100,000 of population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	15 TO 44.		45 AND OVER.	
	1900	1890	1900	1890
Total	8.0	9.1	15.4	17.2
Males	12.8	13.8	26.4	28.9
Females	3.2	4.5	4.6	5.9
Cities	9.4	10.7	19.0	21.7
Males	15.1	16.1	33.0	36.1
Females	3.8	5.3	5.5	7.9
States	7.8	9.8	12.8	14.4
Males	12.1	14.9	21.4	24.4
Females	3.4	4.9	4.3	4.8
Cities	10.7	13.5	17.4	20.5
Males	16.8	20.5	30.0	34.5
Females	4.9	6.9	5.9	7.8
Rural	2.9	3.3	8.0	7.7
Males	4.9	5.5	13.1	13.9
Females	0.8	1.1	2.6	1.5
Cities in other states	8.2	8.1	20.4	23.0
Males	13.6	12.2	35.8	37.8
Females	2.8	3.8	5.1	8.1

The preceding table shows that the death rate from alcoholism was higher among those 45 years of age and over (15.4) than among those 15 to 44 years (8). At 45 years of age and over the death rate of males from alcoholism (26.4) was more than five times as high as the death rate of females (4.6). It was higher in the cities in the nonregistration states (20.4) than in the cities in the registration states (17.4), and was much higher than in the rural districts of the registration states (8).

In comparison with 1890 the figures show a decrease in the rate in both age groups.

The combined relations of age and race to the death rates from alcoholism are indicated in the following table for the registration area, giving the death rates during the census year in each of two age groups, per 100,000 of population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	15 to 44.	45 and over.
White	8.2	15.6
Colored	3.7	10.4
Mothers born in—		
United States	2.9	4.9
Ireland	18.8	27.9
Germany	6.2	12.1
England and Wales	8.4	14.6
Canada	4.4	8.0
Scandinavia	6.0	18.1

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS—Continued.

COLOR AND BIRTHPLACES OF MOTHERS.	15 to 44.	45 and over.
Mothers born in—Continued.		
Scotland	7.5	20.4
Italy	0.4	2.0
France	5.5	13.0
Hungary	3.0	20.3
Bohemia	4.9	17.3
Russia	1.0	6.2
Poland	2.9	12.9
Other foreign	2.6	19 3

This table shows that in white persons 15 to 44 years of age the death rates from alcoholism were highest in those whose mothers were born in Ireland (18.8), in England and Wales (8.4), and in Scotland (7.5). The rate was lower in those whose mothers were born in the United States (2.9) than for those whose mothers were born in Germany (6.2), in Canada (4.4), in Scandinavia (6), or in France (5.5).

At 45 years and over the death rates from this cause were highest in those whose mothers were born in Ireland (27.9), in Scotland (20.4), and in Hungary (20.3), and lowest in those whose mothers were born in Italy (2), in the United States (4.9), and in Russia (6.2).

The following table shows the death rates from alcoholism in the registration area during the census year, by conjugal condition in relation to color and age:

DEATH RATES BY CONJUGAL CONDITION, BY AGE.

CONJUGAL CONDITION.	AGE.							
	15 years and over.		15 to 44 years.		45 to 64 years.		65 years and over.	
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.
Single	17.4	1.4	13.0	1.1	81.1	5.1	91.6	4.2
Married	11.7	4.0	9.7	4.1	15.6	4.0	11.9	1.9
Widowed	37.9	6.0	45.9	8.2	47.0	7.2	22.5	2.7

It will be seen from this table that in persons 15 years of age and over the death rate of single males from alcoholism (17.4) was higher than that of married males (11.7), but that the death rate of married females from this cause (4) was higher than that of single females (1.4).

The following table shows, for the registration area, the proportions of deaths from alcoholism at each specified age, per 1,000 deaths at known ages from this cause, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 5 years	.....	2.7	4.0	2.9
5 to 9 years	0.6	.....	4.0	2.9
10 to 14 years	0.6	.....	1.6	.....
15 to 19 years	0.6	2.7	2.4	2.9
20 to 24 years	19.1	38.5	26.7	55.9
25 to 29 years	77.8	134.6	105.8	123.5
30 to 34 years	133.4	120.9	132.5	150.0
35 to 39 years	190.7	181.3	138.9	155.9
40 to 44 years	139.4	164.9	155.1	176.5
45 to 49 years	129.7	118.1	136.5	114.7
50 to 54 years	113.0	88.0	117.9	82.4
55 to 59 years	77.8	57.7	69.5	58.8
60 to 64 years	41.3	41.2	48.5	41.2
65 to 69 years	46.1	22.0	28.3	20.6
70 to 74 years	13.7	13.7	13.7	5.9
75 to 79 years	11.4	11.0	8.9	2.9
80 to 84 years	2.4	2.7	4.1	3.0
85 years and over	2.4	.....	1.6	.....

This table shows that the greatest proportion of deaths from alcoholism in the registration area in 1900 occurred among those from 35 to 39 years of age.

The average age at death from alcoholism in the registration area in 1900 was 44.1 years. In 1890 it was 42.9 years.

The following table shows, for each grand group in the United States, the proportions of deaths from alcoholism during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	3.7	3.7	1.6	6.1	2.2
2. Middle Atlantic Coast region	4.7	3.4	0.5	7.9	2.3
3. South Atlantic Coast region	1.7	2.4	0.2	4.8	0.5
4. Gulf Coast region	2.5	2.4	0.9	4.9	2.1
5. Northeastern hills and plateaus	2.5	3.1	0.3	6.6	1.5
6. Central Appalachian region	2.2	3.1	0.5	4.3	0.8

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES—Continued.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
7. Region of the Great Northern Lakes	4.1	3.8	0.7	8.0	1.4
8. Interior plateau	3.0	3.4	0.4	6.1	1.4
9. Southern Central Appalachian region	1.2	2.2	0.1	4.9	.....
10. Ohio River belt	2.1	2.2	.....	5.4	1.3
11. Southern Interior plateau	0.6	1.1	0.1	.....	.....
12. South Mississippi River belt	1.8	1.9	0.3	8.6	.....
13. North Mississippi River belt	1.9	2.3	0.1	4.5	0.4
14. Southwest Central region	0.7	1.3	.....	2.7	.....
15. Central region—plains and prairies	1.8	3.1	0.2	4.8	0.4
16. Prairie region	1.5	2.6	0.2	3.9	.....
17. Missouri River belt	2.4	1.6	0.2	7.5	1.2
18. Region of the Western plains	3.7	2.8	0.4	14.4	3.9
19. Heavily timbered region of the Northwest	1.8	2.5	.....	6.3	0.4
20. Cordilleran region	6.6	10.0	1.7	7.5	1.9
21. Pacific Coast region	8.1	6.7	0.6	13.2	6.4

The preceding table indicates that the proportions of deaths due to alcoholism were greatest in the Pacific Coast region (8.1), the Cordilleran region (6.6), and the Middle Atlantic Coast region (4.7), and lowest in the Southwest Central region, and the Southern Interior plateau.

OLD AGE.

The total number of deaths reported as due to old age in the United States during the census year was 29,222, of which 13,362 were males and 15,860 were females, and the proportion of deaths from this disease in 1,000 deaths from all known causes was 29.3. In 1890 the corresponding proportion was 19.9.

In the registration area the number of deaths reported as due to this disease was 15,558, of which 6,673 were males and 8,885 were females, giving a proportion of 30.6 deaths from this disease in 1,000 deaths from all known causes and a death rate of 54 per 100,000 of population. In 1890 the death rate was 44.9.

In England and Wales the death rate due to old age for the year 1899 was 99.2 per 100,000 of population (males, 87.9; females, 109.7).

The following table shows, for the registration area and its subdivisions, the death rates from old age in the census years 1900 and 1890, by sex, color, general nativity, and parent nativity:

DEATH RATES BY COLOR AND NATIVITY.

AREAS.		Aggregate.	WHITE.							COLORED.		
			Total.	Males.	Females.	Native.			Foreign.	Total.	Males.	Females.
						Total.	Both parents native.	One or both parents foreign.				
Registration area	1900	54.0	58.5	46.1	61.0	37.4	63.5	7.2	103.4	64.2	51.5	76.4
	1890	44.9	44.9	38.0	51.8	33.7	60.1	6.7	75.8	43.9	28.9	58.3
Cities	1900	47.3	46.3	37.8	54.6	26.7	46.9	5.0	98.0	65.3	52.3	77.8
	1890	37.3	37.0	29.5	44.3	21.8	43.3	5.5	71.8	43.3	28.1	57.9
States	1900	53.1	53.3	47.0	59.6	43.2	68.8	6.9	83.4	42.5	34.1	50.6
	1890	52.0	52.4	45.5	59.1	43.7	66.5	6.8	77.5	36.8	24.2	48.6
Cities	1900	38.4	38.3	30.5	45.8	25.2	51.0	3.7	66.5	39.9	30.7	48.3
	1890	41.0	41.2	33.3	48.8	27.3	50.5	5.1	70.4	31.1	17.8	42.9
Rural	1900	74.4	74.7	69.6	80.1	64.1	82.7	14.2	129.7	49.7	42.6	57.5
	1890	68.9	69.3	63.5	75.1	63.6	78.8	11.3	99.7	49.9	37.6	63.1
Cities in other states	1900	55.4	53.9	44.7	63.2	28.0	38.6	8.6	140.6	72.9	58.5	86.7
	1890	34.0	32.7	26.0	39.6	16.8	27.7	6.5	73.3	46.7	30.8	62.3

The death rate from old age was highest in the rural districts in the registration states (74.4) and lowest in the registration cities in the same states (38.4).

The death rate from old age was very much the highest for the foreign whites (103.4) on account of the large proportion of persons over 60 years of age in this class. The difference in the death rates of native whites of native parents (63.5) and those having one or both parents foreign (7.2) is also due to the much larger proportion of old persons in the former. The death rate of the colored from old age (64.2) was considerably higher than the rate for the whites (53.5).

For all classes and for both sexes the death rates from this cause were higher than in 1890, the increase in the aggregate rate being 9.1 per 100,000 of population.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from old age in the census year per 100,000 of population in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES.		
		Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	1900	53.1	38.4	74.4	46.8	30.5	69.2	59.5	45.9	79.8
	1890	52.0	41.0	68.9	45.0	32.9	63.0	58.9	48.7	74.9
Connecticut	1900	40.1	36.7	46.4	35.4	32.5	40.8	44.7	40.8	52.0
	1890	78.5	66.1	87.4	63.9	55.2	70.0	92.9	76.6	104.7
District of Columbia	1900	55.3	55.3	.....	58.3	58.3	.....	52.5	52.5	.....

Vermont	1900	101.0	81.5	104.0	79.9	66.5	81.9	122.9	95.5	127.4
	1890	88.4	70.7	90.1	75.6	66.4	76.4	101.8	74.6	104.5

[1] Nonregistration in 1890.

This table shows that in comparison with 1890 the death rates from old age in the registration states increased in the rural districts and decreased in the cities. The highest rates for this cause were in the cities and rural districts in Vermont (cities, 81.5; rural, 104), and the lowest rates were in the cities of New Jersey (23.7) and New York (32.8).

The following table shows, for the registration area and its subdivisions, the death rates from old age among the whites during the census year, per 100,000 of white population of all ages, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	45.6	31.6	50.4	34.9	63.1	25.0
Ireland	69.7	61.2	65.5	54.4	104.5	103.4
Germany	50.0	47.1	41.3	34.0	63.4	70.3
England and Wales	54.9	45.1	53.4	39.8	79.0	61.4
Canada	22.4	17.1	21.5	14.9	29.9	36.0
Scandinavia	20.8	18.1	19.8	14.4	29.8	22.4
Scotland	77.1	63.0	73.8	54.4	114.5	95.7
Italy	7.1	7.3	5.0	4.8	5.8	29.5
France	61.9	53.3	49.4	31.0	93.7	95.4
Hungary and Bohemia	17.7	18.4	11.4	11.5	10.6	29.2
Russia and Poland	10.8	10.6	9.6	9.2	12.5	15.9
Other foreign	26.9	25.4	21.6	17.4	31.7	56.4

The preceding table shows that in relation to the population of all ages the death rates due to old age in the registration area were highest among those whose mothers were born in Scotland (77.1), in Ireland (69.7), and in France (61.9), and were lowest among those whose mothers were born in Italy (7.1), in Russia and Poland (10.8), and in Hungary and Bohemia (17.7).

The following table shows, for the registration area and its subdivisions, the death rates from old age during the census year, at 60 years and over, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREA.	60 AND OVER.	
	1900	1890
Total	770.8	645.3
Males	693.6	563.9
Females	841.3	719.6
Cities	819.4	668.6
Males	721.6	568.1
Females	902.8	754.7
States	666.5	636.1
Males	610.4	567.8
Females	718.2	698.9
Cities	635.2	669.2
Males	552.8	581.2
Females	702.5	741.5
Rural	691.8	608.7
Males	652.0	557.9
Females	732.3	660.0
Cities in other states	1,002.0	667.9
Males	881.4	554.3
Females	1,109.3	770.0

It will be seen from this table that the death rate from old age was much higher among females (841.3) than among males (693.6), and was much higher in the cities in the nonregistration states (1,002) than in the cities in the registration states (635.2). It was higher in the rural districts of the registration states (691.8) than in the cities in the same states.

In comparison with 1890 the figures show an increase in the death rate from this cause.

The combined relations of age and race to the death rates from old age are indicated, for the registration area, in the following table, giving the death rates during the census year at 60 years of age and over per 100,000 population 60 years of age and over, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	60 and over.
White	752.4
Colored	1,406.8
Mothers born in—	
United States	541.5
Ireland	820.6
Germany	685.2
England and Wales	578.9
Canada	556.6
Scandinavia	666.4
Scotland	765.0
Italy	341.6
France	574.7
Hungary	325.4
Bohemia	858.8
Russia	459.9
Poland	618.8
Other foreign	631.9

The preceding table shows that the death rates due to old age in white persons 60 years of age and over were highest in those whose mothers were born in Bohemia (858.8), in Ireland (820.6), and in Scotland (765); and were lowest in those whose mothers were born in Hungary (325.4), in Italy (341.6), and in Russia (459.9).

The following table shows, for the registration area, the proportions of deaths from old age at each specified age, per 1,000 deaths at known ages from this cause, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 65 years	15.2	21.4	15.0	16.6
65 to 69 years	49.4	47.1	39.0	39.8
70 to 74 years	131.0	121.3	113.9	112.6
75 to 79 years	204.6	188.3	195.1	171.1
80 to 84 years	284.9	261.8	282.4	269.4
85 to 89 years	197.7	201.6	217.2	218.6
90 to 94 years	86.1	109.6	102.2	119.8
95 years and over	31.1	48.9	35.2	57.1

This table shows that at both censuses, and for both sexes, the greatest proportion of deaths from old age occured among those from 80 to 84 years of age.

The average age at death from old age in the registration area in 1900 was 81.8 years. In 1890 it was 82.5 years. The decrease in the average age of persons

reported as dying from "old age" is probably due to the tendency in certain registration areas to require a more specific statement in such cases, from which the deaths are differently classified.

The following table shows, for each grand group in the United States, the proportions of deaths from old age during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSSE.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	33.4	43.1	58.0	20.0	32.4
2. Middle Atlantic Coast region	19.0	25.7	37.7	11.0	21.7
3. South Atlantic Coast region	21.0	17.0	21.4	17.1	34.3
4. Gulf Coast region	28.9	21.4	28.7	24.6	46.5
5. Northeastern hills and plateaus	46.3	47.4	62.3	22.5	39.6
6. Central Appalachian region	28.9	29.7	33.9	17.5	30.6
7. Region of the Great Northern Lakes	32.4	46.4	55.3	18.4	30.0
8. Interior plateau	37.1	43.1	47.7	21.1	39.5
9. Southern Central Appalachian region	16.0	15.5	17.0	8.1	12.6
10. Ohio River belt	34.3	29.5	31.2	32.7	48.0
11. Southern Interior plateau	19.3	15.7	22.7	------	------
12. South Mississippi River belt	20.0	16.6	23.3	12.2	22.3
13. North Mississippi River belt	44.9	39.6	45.1	37.7	61.0
14. Southwest Central region	13.6	12.3	14.0	17.2	40.6
15. Central region—plains and prairies	31.2	28.4	33.0	27.1	40.9
16. Prairie region	39.0	35.4	42.4	39.9	49.9
17. Missouri River belt	30.1	27.9	37.6	24.6	28.5
18. Region of the Western plains	19.2	14.9	22.9	18.3	26.2
19. Heavily timbered region of the Northwest	42.3	41.3	50.2	27.5	35.3
20. Cordilleran region	29.7	28.4	29.7	30.1	43.7
21. Pacific Coast region	28.7	36.4	37.7	20.7	26.8

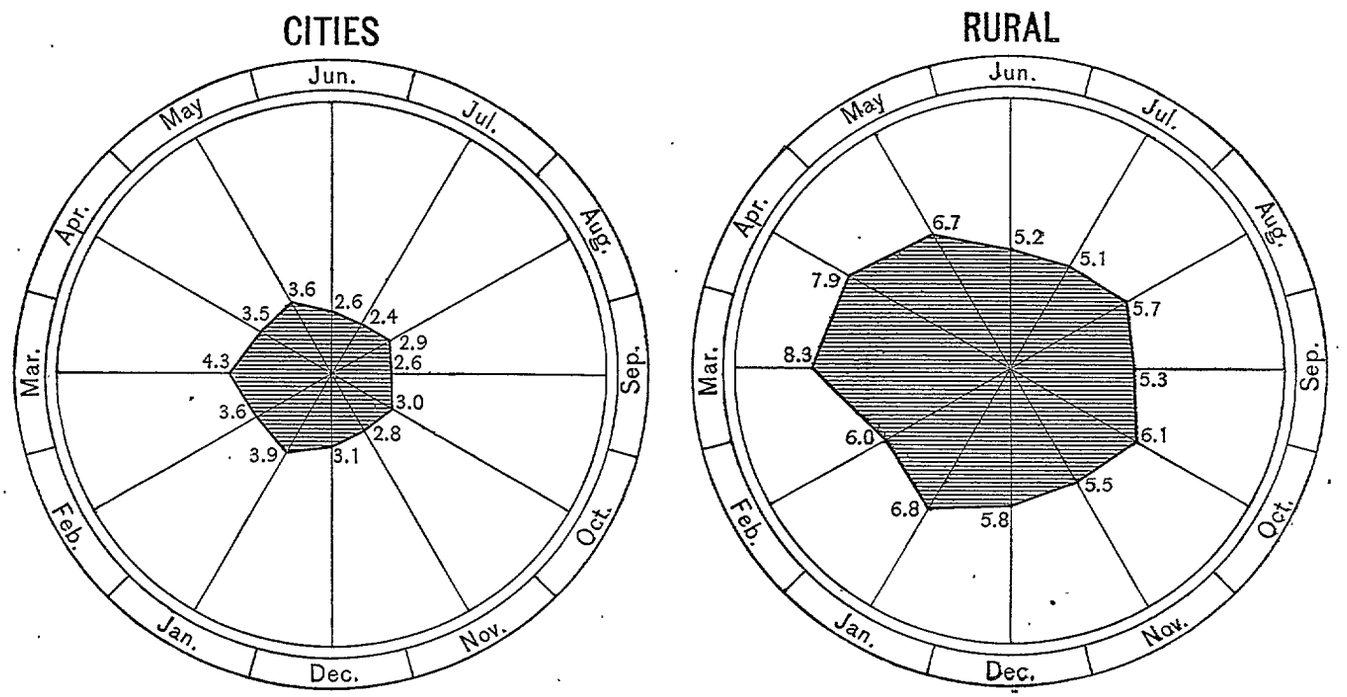
This table indicates that the proportions of deaths due to old age were greatest in the Northeastern hills and plateaus (46.3), North Mississippi River belt (44.9), and the Heavily timbered region of the Northwest (42.3), and were least in the Southwest Central region (13.6), Southern Appalachian region (16), and the Middle Atlantic Coast region (19).

The following table shows, for the registration states, the death rates from old age in each month of the census year, in the aggregate, and for the cities and rural districts:

DEATH RATES BY MONTHS.

MONTHS.	Total.	Cities.	Rural.
January	5.1	3.9	6.8
February	4.6	3.6	6.0
March	5.9	4.3	8.3
April	5.3	3.5	7.9
May	4.9	3.6	6.7
June	3.7	2.6	5.2
July	3.5	2.4	5.1
August	4.1	2.9	5.7
September	3.7	2.6	5.3
October	4.2	3.0	6.1
November	3.9	2.8	5.5
December	4.2	3.1	5.8

The death rates from old age in each month in the cities and the rural districts and the relative differences in the rates in the two areas are shown in the following diagram:



The following table shows the comparative proportions of deaths from old age in each month during the census year, per 1,000 deaths in known months, in the United States, as a whole, and in the registration states:

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH.

MONTHS.	United States.	Registration states.
January	96.7	96.6
February	89.9	85.9
March	112.1	111.9
April	105.9	99.4
May	95.8	92.2
June	61.3	69.0
July	66.1	65.5
August	72.4	76.7
September	69.9	70.1
October	76.8	80.0
November	72.0	73.7
December	81.6	79.0

DIABETES.

The total number of deaths reported as due to diabetes in the United States during the census year was 4,672, of which 2,650 were males and 2,022 were females, and the proportion of deaths from this disease in 1,000 deaths from all known causes was 4.7. In 1890 the corresponding proportion was 2.8.

In the registration area the number of deaths reported as due to this disease was 2,693, of which 1,404 were males and 1,289 were females, giving a proportion of 5.3 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 9.3 per 100,000 of population. In 1890 the death rate was 5.5.

In England and Wales the death rate from diabetes for the year 1899 was 8.6 per 100,000 of population.

The following table shows, for the registration states in the aggregate, and for the cities and rural districts, the death rates from diabetes in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES.		
		Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	1900	10.6	10.1	11.4	11.2	10.2	12.5	10.0	9.9	10.2
	1890	6.4	5.7	7.3	7.1	6.1	8.5	5.7	5.4	6.1

[1] Nonregistration in 1890.

It will be seen from this table that the death rates from diabetes in the registration states were highest in Maine (14.3), New Hampshire (13.4), and Connecticut (13.3), and were lowest in the District of Columbia (5.4), New Jersey (8.3), and Rhode Island (9.6). The rate was slightly higher in the rural districts (11.4) than in the cities (10.1), and was highest of all among females in the rural districts of Vermont (18).

The following table shows, for the registration area and its subdivisions, the death rates from diabetes among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	9.6	7.7	10.6	9.1	11.9	5.0
Ireland	10.4	10.6	10.6	10.9	9.4	8.6
Germany	12.2	12.6	14.1	15.4	10.1	7.8
England and Wales	12.1	10.6	12.6	10.9	15.8	9.9
Canada	6.3	6.2	6.1	5.8	6.4	10.0
Scandinavia	3.3	3.2	4.1	4.5	3.6	1.7
Scotland	12.3	11.9	12.3	11.9	13.2	12.0
Italy	2.6	2.5	2.6	2.5	2.9	2.5
France	12.9	12.7	13.7	13.6	14.1	11.0
Hungary and Bohemia	3.4	3.3	3.0	3.5	.....	4.2
Russia and Poland	3.3	3.5	3.7	4.1	1.4	1.4
Other foreign	7.8	7.8	8.6	8.8	7.9	3.5

This table shows that the death rates due to diabetes in the registration area were highest among those whose mothers were born in France (12.9), in Germany (12.2), and in Scotland (12.3), and were lowest among those whose mothers were born in Italy (2.6), in Russia and Poland (3.3), and in Scandinavia (3.3).

The following table shows, for the registration area and its subdivisions, the death rates from diabetes during the census year in each of two age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	15 TO 44.		45 AND OVER.	
	1900	1890	1900	1890
Total	4.6	3.0	32.3	18.4
Males	5.5	3.7	31.9	20.0
Females	3.7	2.3	32.8	16.9
Cities	4.2	2.7	34.0	18.6
Males	5.0	3.2	32.3	20.0
Females	3.4	2.2	35.6	17.3
States	4.8	3.2	34.8	20.0
Males	5.9	3.8	34.9	21.6
Females	3.8	2.5	34.7	18.5
Cities	4.1	2.6	40.6	21.9
Males	5.0	2.8	38.9	23.2
Females	3.2	2.4	42.1	20.7
Rural	6.0	4.1	28.8	18.0
Males	7.2	5.6	31.0	20.0
Females	4.7	2.7	26.6	16.1
Cities in other states	4.2	2.7	27.7	15.2
Males	4.9	3.5	26.4	16.8
Females	3.5	1.9	29.0	13.5

The preceding table shows that the death rate from diabetes at 45 years of age and over (32.3) was very much higher than at 15 to 45 years (4.6); that it was highest in the cities in the registration states (40.6), and was about the same in the cities in the nonregistration states (27.7) as in the rural districts in the registration states (28.8).

In comparison with 1890 the figures show an increase in the death rate from this disease at 45 years of age and over amounting to nearly 100 per cent for the females and to about 50 per cent for the males.

The combined relations of age and race to the death rates from diabetes are indicated, for the registration area, in the following table, giving the death rates during the census year in each of two age groups, per 100,000 population of corresponding ages, by color and birthplace of mothers.

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	15 to 44.	45 and over.
White	4.7	33.0
Colored	1.9	15.3
Mothers born in—		
United States	5.6	28.4
Ireland	3.9	32.0
Germany	4.3	42.7
England and Wales	4.5	35.7
Canada	3.3	23.4
Scandinavia	3.0	13.1
Scotland	5.4	26.7
Italy	1.7	12.0
France	3.7	35.7
Hungary	3.0	.....
Bohemia	4.9	8.6
Russia	2.0	49.8
Poland	0.6	9.7
Other foreign	2.6	41.1

The preceding table shows that the death rates due to diabetes in white persons 45 years of age and over were highest in those whose mothers were born in Russia (49.8), in Germany (42.7), and in "Other foreign" countries (41.1), and were lowest in those whose mothers were born in Bohemia (8.6), in Poland (9.7), and in Italy (12).

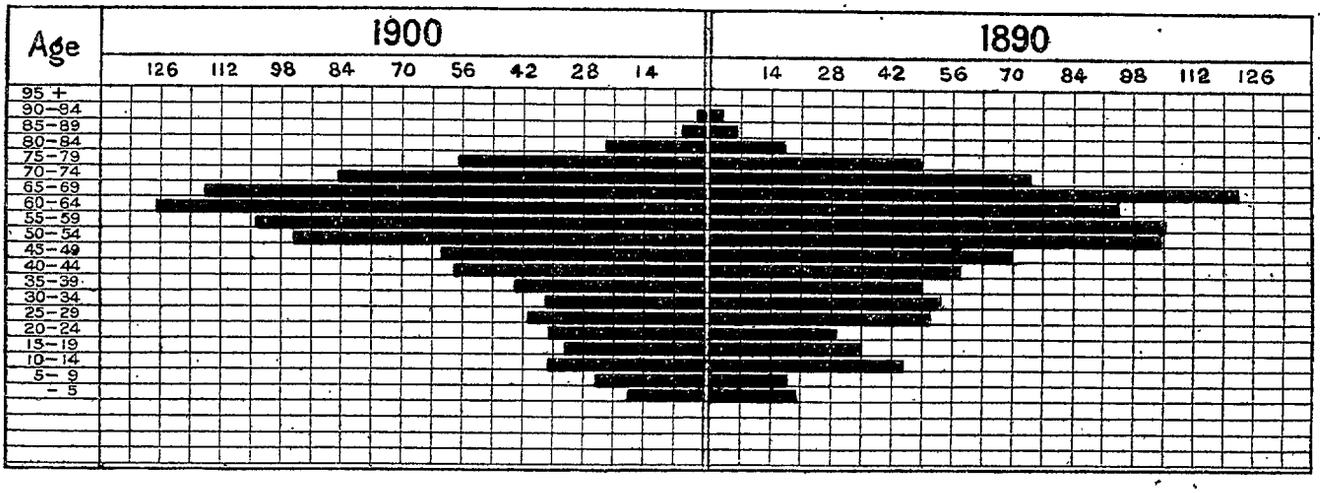
The following table shows, for the registration area, the proportions of deaths from diabetes at each specified age per 1,000 deaths at known ages from this disease in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 5 years	17.2	17.9	27.6	12.8
5 to 9 years	23.6	25.7	22.8	12.9
10 to 14 years	40.7	31.9	48.8	40.7
15 to 19 years	40.0	24.9	40.7	30.0
20 to 24 years	35.7	36.5	27.6	30.0
25 to 29 years	47.8	34.2	45.5	55.7
30 to 34 years	47.8	26.4	71.5	34.3
35 to 39 years	48.5	39.6	55.3	42.8
40 to 44 years	67.8	48.2	63.4	53.5
45 to 49 years	62.1	59.1	71.5	68.5
50 to 54 years	91.4	98.0	92.7	115.6
55 to 59 years	81.4	126.7	81.3	128.5
60 to 64 years	113.5	140.0	81.3	107.1
65 to 69 years	111.3	119.8	123.6	119.9
70 to 74 years	80.6	89.4	68.3	79.2
75 to 79 years	58.5	55.2	48.8	47.1
80 to 84 years	25.0	20.2	22.8	10.7
85 to 89 years	4.3	4.7	4.9	6.4
90 to 94 years	2.1	1.6	1.6	4.3
95 years and over	0.7	.....	.....	.....

The average age at death from diabetes in the registration area in 1900 was 51.1 years. In 1890 it was 49.4 years.

The comparative proportions of deaths from diabetes at each age in the registration area in 1900 and 1890 are shown in the following diagram:



The following table shows, for each grand group in the United States, the proportions of deaths from diabetes during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	6.8	8.6	9.7	5.5	6.2
2. Middle Atlantic Coast region	4.5	4.4	3.7	4.3	4.8
3. South Atlantic Coast region	2.2	1.3	3.4	1.7	1.4
4. Gulf Coast region	1.4	0.8	1.4	1.9	1.7
5. Northeastern hills and plateaus	6.8	7.7	5.6	7.3	6.6
6. Central Appalachian region	5.3	5.5	6.0	4.8	4.0
7. Region of the Great Northern Lakes	5.1	6.7	5.4	4.2	5.1
8. Interior plateau	4.9	6.3	4.7	3.8	4.8
9. Southern Central Appalachian region	2.7	3.7	1.7	5.7	0.9
10. Ohio River belt	4.5	4.6	3.0	5.1	5.8
11. Southern Interior plateau	1.5	2.1	1.0	.....	.....
12. South Mississippi River belt	0.7	0.7	.....	3.1	0.8
13. North Mississippi River belt	4.9	6.3	5.4	3.3	4.4
14. Southwest Central region	2.3	3.1	1.4	2.7	3.7
15. Central region—plains and prairies	4.7	6.0	3.7	4.0	3.3
16. Prairie region	7.2	8.6	5.9	4.6	5.1
17. Missouri River belt	3.6	4.2	3.4	2.9	3.6
18. Region of the Western plains	4.2	4.9	2.2	6.6	4.6
19. Heavily timbered region of the Northwest	8.4	10.4	7.1	7.8	5.1
20. Cordilleran region	4.7	4.6	3.5	6.9	9.5
21. Pacific Coast region	7.5	8.3	8.4	5.4	9.2

This table shows that the proportions of deaths due to diabetes were greatest in the Pacific Coast region, the Prairie region, and the Heavily timbered region of the Northwest, and were least in the South Mississippi River belt, Gulf Coast region, and the Southern Interior plateau.

SCROFULA AND TABES.

The total number of deaths reported as due to scrofula and tabes in the United States during the census year was 3,489, of which 1,707 were males and 1,782 were females, and the proportion of deaths from these diseases in 1,000 deaths from all known causes was 3.5. In 1890 the corresponding proportion was 4.9.

In the registration area the number of deaths reported as due to scrofula and tabes was 1,040, of which 491 were males and 549 were females, giving a proportion of 2 deaths from these diseases in 1,000 deaths from all known causes, and a death rate of 3.6 per 100,000 of population. In 1890 the death rate was 6.7.

The following table shows, for the registration states in the aggregate, and for the cities and rural districts, the death rates from scrofula and tabes in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES.		
		Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.

	1890	5.4	4.1	4.6	6.5	14.8	5.8	4.3	13.6	3.4

[1] Nonregistration in 1890.

This table shows that in the registration states the highest death rate from scrofula and tabes was in Maine (6.6) and the lowest in New Jersey (2.1). It was higher in the rural districts (3.9) than in the cities (2.6), being highest in the cities in New Hampshire (8.2).

The following table shows, for the registration area and its subdivisions, the death rates from scrofula and tabes among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	3.5	3.3	3.5	3.0	3.9	3.9
Ireland	2.1	1.9	1.8	1.6	2.7	3.8
Germany	1.7	1.6	1.7	1.6	2.0	1.6
England and Wales	2.4	1.7	2.4	1.4	4.1	2.5
Canada	4.5	4.1	4.7	4.4	5.0	1.2
Scandinavia	3.1	3.2	3.2	3.4	2.7	2.8

Italy	3.2	3.8	3.1	3.7	.....	4.9
France	4.0	5.1	4.1	5.8	.....	3.7

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
Hungary and Bohemia	0.5	0.5	0.8	0.9	.....	.....
Russia and Poland	0.7	0.6	0.7	0.6	1.4	0.7
Other foreign	2.8	2.1	3.2	2.4	5.0	1.2

This table shows that the death rates due to scrofula and tabes in the registration area were highest among those whose mothers were born in Canada (4.5), in France (4), and in the United States (3.5). The number of deaths from these diseases among those whose mothers were born in Hungary and Bohemia, and Russia and Poland were too small to afford reliable rates. For the other classes the rates were lowest among those whose mothers were born in Germany (1.7), in Scotland (2.2), and in Ireland (2.1).

The following table shows, for the registration area and its subdivisions, the death rates from scrofula and tabes during the census year in each of four age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 5.		5 TO 14.		15 TO 44.		45 AND OVER.	
	1900	1890	1900	1890	1900	1890	1900	1890
Total	11.4	31.8	1.2	3.3	2.6	3.4	4.6	5.5
Males	12.5	33.2	1.1	3.3	2.1	3.0	4.3	5.6
Females	10.4	30.5	1.4	3.3	3.0	3.7	4.8	5.5
Cities	12.1	36.6	1.3	3.6	2.4	3.6	4.3	5.1
Males	13.3	38.2	1.2	3.7	2.1	3.2	4.0	6.0
Females	10.9	35.1	1.4	3.4	2.6	4.0	4.6	4.2
States	11.1	28.1	0.8	2.4	2.1	2.4	3.8	4.9
Males	12.3	27.6	0.6	2.4	1.6	2.0	3.8	4.4
Females	9.9	28.6	0.9	2.5	2.5	2.8	3.9	5.5
Cities	12.2	36.2	0.5	2.4	1.4	2.3	2.6	3.5
Males	13.7	35.1	0.5	2.7	1.3	1.8	2.6	4.0
Females	10.6	37.4	0.5	2.1	1.4	2.8	2.7	3.1
Rural	9.3	14.1	1.1	2.5	3.2	2.6	5.1	6.4
Males	10.0	14.8	0.7	2.0	2.0	2.3	5.0	4.7
Females	8.7	13.3	1.5	3.0	4.4	2.9	5.1	8.1
Cities in other states	12.0	37.0	1.9	4.6	3.3	4.7	5.9	6.7
Males	12.8	40.9	1.8	4.6	2.8	4.4	5.3	7.9
Females	11.2	33.0	2.1	4.6	3.7	5.0	6.5	5.5

The preceding table shows that the death rate from scrofula and tabes was highest in children under 5 years of age; that it was about the same in the cities in the registration states (12.2) as in the cities in the nonregistration states (12), and was higher in both than in the rural districts of the registration states (9.3).

In comparison with 1890 the figures show a large decrease in the death rate due to these diseases in all of the areas.

The combined relations of age and race to the death rates from scrofula and tabes are indicated for the registration area, in the following table, giving the death rates during the census year in each of four age groups, per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 5.	5 to 14.	15 to 44.	45 and over.
White	10.7	0.8	2.3	4.3
Colored	31.2	13.2	6.8	10.4

England and Wales	8.4	0.8	1.6	3.2
Canada	21.7	1.0	3.1	1.6
Scandinavia	8.1	1.0	2.3	4.9
Scotland	.....	.....	1.4	5.1
Italy	13.2	3.1	0.8	.....
France	67.4	.....	1.8	.....
Hungary	.....	.....	.....	.....
Bohemia	.....	.....	2.4	.....
Russia	4.5	.....	.....	.....
Poland	.....	.....	1.2	.....
Other foreign	14.1	.....	1.0	3.9

There were no deaths from these diseases under 15 years of age in white persons whose mothers were born in Scotland, Hungary, Bohemia, or Poland. For the other countries, the death rate was highest in those whose mothers were born in France (67.4) and was lowest for those whose mothers were born in Russia (4.5).

The following table shows, for the registration area, the proportions of deaths from scrofula and tabes at each specified age, per 1,000 deaths at known ages from these diseases, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

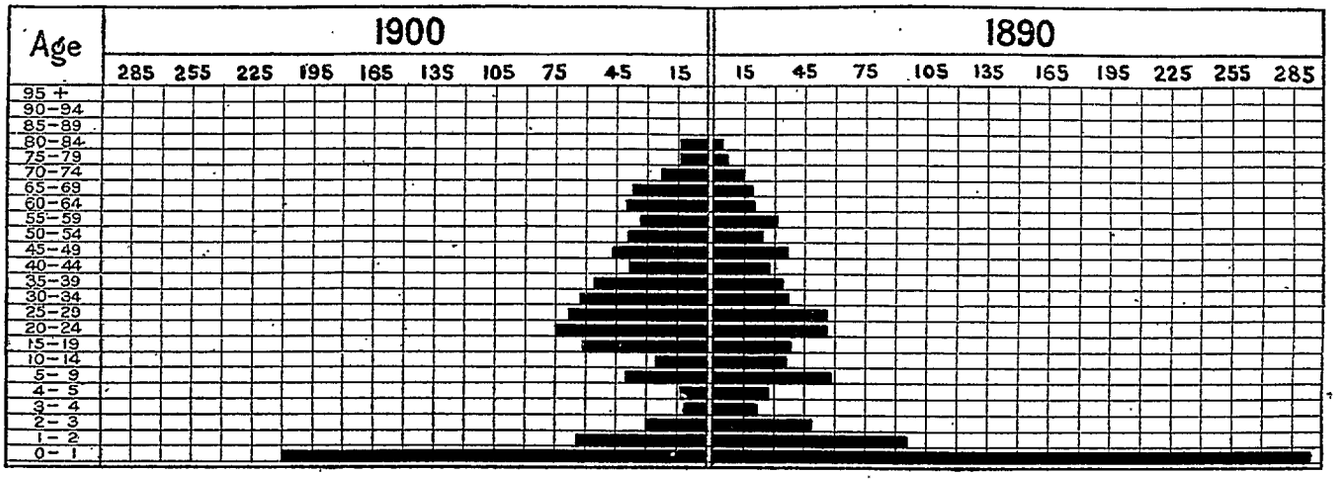
60 to 64 years	47.1	32.8	15.4	24.4
65 to 69 years	45.1	29.2	20.0	18.3
70 to 74 years	28.7	16.4	10.8	19.8
75 to 79 years	10.3	18.2	10.8	3.0
80 years and over	10.2	16.4	6.1	4.5

The average age at death from scrofula and tabes in the registration area in 1900 was 26.4 years. In 1890

it was 18.4. For those dying at 15 years of age and over the average age was 41.8 years in 1900 and 40.6 years in 1890.

The comparative proportions of deaths from scrofula and tabes at each age in the registration area in 1900 and 1890 are shown in the following diagram:



The following table shows, for each grand group in the United States, the proportions of deaths from scrofula and tabes during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	1.8	3.0	2.6	1.4	1.3
2. Middle Atlantic Coast region	1.5	2.2	2.6	1.4	1.2
3. South Atlantic Coast region	5.4	5.7	7.0	3.1	3.4
4. Gulf Coast region	3.2	3.3	3.3	2.1	4.0
5. Northeastern hills and plateaus	2.6	2.2	3.1	2.0	2.5
6. Central Appalachian region	1.5	1.3	2.1	1.2	0.9
7. Region of the Great Northern Lakes	2.4	1.3	4.3	2.0	2.5
8. Interior plateau	3.2	4.3	4.9	1.7	2.4
9. Southern Central Appalachian region	9.4	8.9	10.5	3.3	3.6
10. Ohio River belt	4.7	5.3	7.5	2.4	2.2
11. Southern Interior plateau	6.9	7.1	6.6	.....	.....
12. South Mississippi River belt	5.0	5.4	5.6	1.2	5.4
13. North Mississippi River belt	2.1	2.2	3.3	0.9	2.2
14. Southwest Central region	3.7	3.9	3.4	1.8	3.7
15. Central region—plains and prairies	6.7	6.9	7.9	3.6	3.7
16. Prairie region	3.2	3.1	3.1	3.9	4.7
17. Missouri River belt	3.7	4.4	3.2	2.3	5.2
18. Region of the Western plains	2.9	3.1	3.3	1.7	2.3
19. Heavily timbered region of the Northwest	3.0	2.5	2.7	3.3	6.1
20. Cordilleran region	2.9	2.8	4.3	.....	.....
21. Pacific Coast region	2.2	2.0	1.8	1.9	3.3

This table indicates that the proportions of deaths due to scrofula and tabes were greatest in the Southern Central Appalachian region (9.4), the Southern Interior plateau (6.9), and the Central region, plains and prairies (6.7), and were least in the Northern Atlantic and Middle Atlantic Coast regions and the Central Appalachian region.

HYDROCEPHALUS.

The total number of deaths reported as due to hydrocephalus in the United States during the census year was 4,302, of which 2,356 were males and 1,946 were females, and the proportion of deaths from this disease in 1,000 deaths from all known causes was 4.3. In 1890 the corresponding proportion was 5.1.

In the registration area the number of deaths reported as due to this disease was 3,173, of which 1,747 were males and 1,426 were females, giving a proportion of 6.3 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 11 per 100,000 of population. In 1890 the death rate was 15.4.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from hydrocephalus in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES		
		Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities	Rural

	1890	20.6	23.0	17.2	22.0	26.1	16.6	19.2	20.2	17.7
Vermont	1900	6.4	12.9	5.4	6.3	13.3	5.2	6.5	12.4	5.5
	1890	5.7	14.1	4.9	5.9	22.2	4.5	5.5	6.8	5.4

[1] Nonregistration in 1890.

It will be seen from this table that the death rates from hydrocephalus in the registration states were highest in Rhode Island (20) and Massachusetts (15.9), and lowest in Vermont (6.4) and Michigan (6.7). The rate was much higher in the cities (16.5) than in the rural districts (6.9), being highest in the cities in Rhode Island (24) and lowest in the rural districts in New York.

In comparison with 1890 the figures show a decrease in the death rates from this disease in all of the registration states except Vermont, where there was a slight increase.

The following table shows, for the registration area and its subdivisions, the death rates from hydrocephalus among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	11.7	15.6	12.4	19.1	6.8	8.4
Ireland	10.7	11.8	11.7	13.3	6.0	2.5
Germany	6.4	6.9	7.5	8.6	4.3	3.8

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
England and Wales	8.0	9.0	9.4	11.5	5.7	1.2
Canada	10.7	12.2	10.8	12.5	8.6	10.0
Scandinavia	15.5	16.8	17.9	21.8	10.8	11.2
Scotland	8.3	9.4	9.8	11.9	5.3	.....
Italy	20.5	22.5	22.4	25.1	8.6	.....
France	9.0	8.9	11.0	11.7	9.4	3.7
Hungary and Bohemia	14.3	15.2	20.5	23.1	5.3	2.8
Russia and Poland	15.1	16.2	17.1	18.6	5.5	6.5
Other foreign	16.7	19.0	18.6	22.4	9.4	5.7

The preceding table shows that the death rates due to hydrocephalus in the registration area were highest among those whose mothers were born in Italy (20.5), "Other foreign" countries (16.7), and in Scandinavia (15.5); and were lowest among those whose mothers were born in Germany (6.4), in England and Wales (8), and in Scotland (8.3).

The following table shows, for the registration area and its subdivisions, the death rates from hydrocephalus during the census year in each of four age groups, per 100,000 of population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 1.		UNDER 5.		5 TO 14.		15 AND OVER.	
	1900	1890	1900	1890	1900	1890	1900	1890
Total	182.7	315.1	81.5	125.1	7.1	8.5	1.9	1.4

Rural	135.3	203.7	53.0	74.8	4.0	4.4	1.3	0.9
Males	164.3	216.7	56.6	79.6	3.4	3.1	1.3	0.8
Females	105.7	190.3	49.2	70.0	4.7	5.7	1.3	1.0
Cities in other states	132.8	231.8	59.5	91.2	6.6	7.0	1.9	1.4
Males	151.4	274.2	64.1	102.8	7.8	8.6	2.4	1.6
Females	113.8	188.2	54.9	79.4	5.3	5.4	1.4	1.2

It will be seen from this table that the highest death rate from hydrocephalus occurred in infants under 1 year of age, and that the death rate above 15 years was insignificant. In infants under 1 year of age the death rate was higher in males (200.2) than in females (164.9) and was much higher in the cities in the registration states (261.6) than in the cities in the nonregistration states (132.8) or in the rural districts of the registration states (135.3).

In comparison with 1890 the figures show a decrease in the rate under 1 year of age amounting to over 40 per cent in each area.

The combined relations of age and race to the death rates from hydrocephalus are indicated for the registration area, in the following table, giving the death rates during the census year in each of four age groups, per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 1.	Under 5.	5 to 14.	15 and over.
White	178.7	80.2	7.0	1.8
Colored	294.3	118.2	10.3	3.1
Mothers born in—				
United States	177.3	78.3	5.9	1.5
Ireland	313.2	139.4	8.2	1.7
Germany	161.9	65.0	4.5	1.5
England and Wales	248.1	97.7	6.1	1.1

Italy	186.9	100.5	15.7	1.4
France	227.8	112.4	9.6	3.5
Hungary	149.8	97.0	4.1	.....
Bohemia	44.9	46.6	10.2	3.8
Russia	248.2	123.1	8.2	2.5
Poland	50.3	22.4	1.1	1.0
Other foreign	159.3	85.8	18.0	3.6

It will be seen from the preceding table that the death rates from hydrocephalus in white infants under 1 year of age were highest in those whose mothers were born, in Scotland (368.8), in Ireland (313.2), and in Russia (248.2); and were lowest in those whose mothers were born in Bohemia (44.9), in Poland (50.3), and in Hungary (149.8).

The following table shows, for the registration area, the proportions of deaths from hydrocephalus at each specified age, per 1,000 deaths at known ages from this disease, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	358 0	354 4	461.0	411.8
1 year	200 2	208.4	216.6	223.9

65 to 69 years	0.6	1.4	1.2	0.8
70 to 74 years	0 6	2.8	1.8	0.8
75 to 79 years	1.1	1.4	0.6	0.8
80 years and over	0.6	.....	0.6	2.3

The average age at death from hydrocephalus in the registration area in 1900 was 6 years. In 1890 it was 4.2 years. For those dying at 15 years of age and over the average age was 32.3 years in 1900, and 34.6 years in 1890.

The following table shows, for each grand group in the United States, the proportions of deaths from hydrocephalus during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	8.4	4.7	6.2	10.2	9.2
2. Middle Atlantic Coast region	8.4	3.9	3.0	10.0	9.2
3. South Atlantic Coast region	1.7	0.9	2.3	3.1	1.0
4. Gulf Coast region	1.7	0.8	2.4	2.1	1.9
5. Northeastern hills and plateaus	5.9	5.6	5.2	8.2	5.4
6. Central Appalachian region	2.9	2.5	2.5	3.5	3.9
7. Region of the Great Northern Lakes	4.6	3.5	3.5	5.4	4.7
8. Interior plateau	3.3	2.5	2.2	4.5	3.5
9. Southern Central Appalachian region	1.6	1.9	1.3	1.6	0.9
10. Ohio River belt	4.6	3.1	4.9	5.6	5.2
11. Southern Interior plateau	1.2	1.5	0.9	.....	.....
12. South Mississippi River belt	1.1	1.2	0.8	1.2	1.5
13. North Mississippi River belt	4.2	2.4	2.8	5.8	6.3
14. Southwest Central region	1.9	1.9	1.8	0.9	2.5
15. Central region—plains and prairies	3.5	3.4	3.2	4.3	4.3
16. Prairie region	2.9	3.1	2.7	3.9	2.1
17. Missouri River belt	2.7	2.2	1.7	3.6	4.0
18. Region of the Western plains	2.5	1.7	2.0	3.9	5.4
19. Heavily timbered region of the Northwest	3.9	3.3	4.2	5.2	4.2
20. Cordilleran region	3.1	2.9	2.7	5.6	4.8
21. Pacific Coast region	8.6	3.1	6.3	10.7	12.7

The preceding table indicates that the proportions of deaths due to hydrocephalus were greatest in the Pacific Coast region (8.6), and the North Atlantic and Middle Atlantic Coast regions, in both of which it was 8.4. The proportions of deaths from this disease were lowest in the South Mississippi River belt and the Southern Interior plateau.

CONSUMPTION.

The total number of deaths reported as due to consumption in the United States during the census year was 109,750, of which 53,626 were males and 56,124 were females, and the ratio of deaths from this disease to 1,000 deaths from all known causes was 109.9. In 1890 the corresponding ratio was 122.3.

In the registration area the number of deaths from this disease was 53,962, of which 29,192 were males, and 24,770 were females, giving a ratio of 106.3 deaths from this disease to 1,000 deaths from all known causes, and a death rate of 187.3 per 100,000 of population. In 1890 the death rate was 245.4.

In England and Wales the death rate from consumption for the year 1899 was 133.8 per 100,000 of population. In the ten years 1889–1898 the average rates, by sex, from this disease were males, 162.9; females, 128.9.

The following table shows, for the registration area and its subdivisions, the death rates from consumption in the census years 1900 and 1890, by sex, color, general nativity, and parent nativity:

DEATH RATES BY COLOR AND NATIVITY.

AREAS.	Aggregate.	WHITE.							COLORED.		
		Total.	Males.	Females.	Native.			Foreign.	Total.	Males.	Females.
					Total.	Both parents native.	One or both parents foreign.				
Registration area 1900	187.3	173.5	188.3	158.8	155.4	126.5	184.8	231.1	490.6	527.3	455.1
1890	245.4	230.0	240.1	220.0	200.1	167.7	259.8	312.3	546.1	578.3	515.0
Cities 1900	204.9	188.0	211.6	164.6	167.7	131.6	201.8	244.0	504.3	546.9	463.6
1890	265.6	247.2	265.0	229.5	212.9	177.0	274.2	325.9	563.1	599.5	528.2
States 1900	175.9	170.5	182.8	158.3	150.4	121.7	188.9	229.9	431.9	463.2	401.6
1890	249.0	242.4	250.1	234.9	209.2	165.4	280.7	338.4	529.2	589.8	471.9
Cities 1900	204.8	197.8	226.8	169.9	173.0	125.3	212.6	251.5	471.0	525.8	420.2
1890	293.5	285.1	308.1	263.2	243.4	176.1	309.1	372.2	600.1	696.7	513.7
Rural 1900	134.1	131.6	122.4	141.2	124.4	119.3	133.7	168.9	322.7	302.2	345.2
1890	181.0	177.7	165.1	190.6	167.7	157.2	203.9	231.8	365.2	364.4	366.1
Cities in other states 1900	204.9	178.5	197.4	159.5	163.5	150.1	167.8	232.8	514.2	553.0	476.6
1890	239.9	209.7	224.0	195.1	184.7	179.0	193.8	273.5	552.9	573.7	532.4

It will be seen from this table that the death rate from consumption was about the same in the cities in the registration states (204.8) as in the cities in the nonregistration states (204.9), in both of which it was much higher than in the rural districts of the registration states (134.1). The death rate of the colored from consumption (490.6) was nearly three times that of the whites (173.5), and that of the foreign whites (231.1) was much higher than that of the native whites (155.4). For the last-mentioned class the death rate for those having one or both parents foreign (184.8) was also much higher than for those of native parents (126.5). The death rates of males from this disease (white, 188.3; colored, 527.3) were considerably higher than those of females (white, 158.8; colored, 455.1).

[1] Nonregistration in 1890.

This table shows that the death rate from consumption in the registration states was highest in the District of Columbia (305.3), which was due mainly to the large proportion of colored population. The next highest rate in the registration states was in Rhode Island, where it was 195.3. The death rate from this disease was higher among males than among females in the cities, but lower in the rural districts. Excluding the District of Columbia, the highest occurred among males in the cities in New York (265.3) and the lowest also among males in the rural districts in Michigan.

The comparative death rates from consumption in the different counties of the registration states, per 100,000 of population, are shown by plates Nos. 16 and 17.

The following table shows, for the registration area and its subdivisions, the death rates from consumption among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	112 8	116.6	112.4	117.4	108.2	115.0
Ireland	339.6	364.3	351.1	383.0	238.5	248.3
Germany	167.0	174.7	169.4	182.2	130.5	161.4
England and Wales	135.1	147.0	141.9	161.2	105.7	103.1

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
Canada	143.1	158.1	144.9	163.1	122.0	114.3
Scandinavia	170.3	183.5	173.9	200.7	125.2	164.0
Scotland	172.5	191.9	180.2	208.3	121.0	129.1
Italy	118.6	122.5	112.3	121.9	63.3	127.7
France	184.7	210.6	175.6	211.4	89.0	209.0
Hungary and Bohemia	107.7	113.3	107.3	116.3	53.2	108.6
Russia and Poland	71.8	72.6	70.4	71.2	63.6	77.9
Other foreign	153.8	159.8	150.3	156.5	135.3	172.6

It will be seen from the preceding table that the death rates due to consumption in the registration area were highest among those whose mothers were born in Ireland (339.6), in France (184.7), and in Scotland (172.5); and were lowest among those whose mothers were born in Russia and Poland (71.8), in the United States (112.8), and in Hungary and Bohemia (107.7). The mortality from this disease among the children of Irish mothers in the cities in the registration states (383) was much higher than in the cities in other states (248.3) or in the rural districts of the registration states (238.5).

The following table shows, for the registration area and its subdivisions, the death rates from consumption during the census year in each of four age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 15.	15 TO 44.		45 TO 64.		65 AND OVER.	
	1900	1900	1890	1900	1890	1900	1890
Total	39.6	252.4	320.1	232.5	319.3	260.1	369.0
Males	36.6	265.3	324.5	290.7	384.5	293.9	410.0
Females	42.6	239.5	315.7	173.1	254.8	230.0	332.3
Cities	44.1	273.4	345.5	266.7	363.3	278.2	396.9
Males	41.4	297.3	360.0	347.1	446.6	344.3	474.2
Females	46.9	250.1	331.2	186.1	280.6	224.3	333.7
States	36.0	239.8	324.8	208.4	310.2	246.6	360.5
Males	33.1	251.5	327.0	253.1	372.1	269.0	381.1
Females	39.0	228.2	322.7	163.6	250.5	226.2	341.9
Cities	43.2	276.8	380.7	257.9	389.1	264.2	401.3
Males	40.9	311.2	404.5	337.2	487.1	333.5	458.8
Females	45.5	243.9	358.2	181.8	296.5	210.3	356.2
Rural	25.5	179.1	227.4	151.4	212.3	238.6	330.7
Males	21.7	158.1	197.1	160.6	232.5	228.0	331.3
Females	29.3	201.1	258.2	141.6	192.4	239.4	330.2
Cities in other states	45.0	270.5	313.2	275.0	336.5	292.1	391.9
Males	41.9	285.1	320.9	356.2	406.7	354.5	491.2
Females	48.1	255.8	305.3	190.3	263.2	238.9	307.0

It will be seen from this table that the death rates from consumption were higher among those 15 to 44 years of age (252.4) and those 65 years of age and over (260.1) than among those between 45 and 64 years of age (232.5). The rate was higher among males than among females in each age group above 15 years, the greatest difference being in the age group 45 to 64 years (males, 290.7; females, 173.1).

It was much higher in the cities than in the rural districts in every age group, being highest in the cities in the nonregistration states among those 65 years of age and over (292.1).

In comparison with 1890 the figures show a large decrease in the death rate at each age and in each area, amounting in the aggregate to 67.7 per 100,000 of those 15 to 44 years old; 86.6 for those 45 to 64 years old; and 108.9 for those 65 years of age and over.

The combined relations of age and race to the death rates from consumption are indicated for the registration area, in the following table, giving the death rates during the census year in each of 4 age groups, per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 15.	15 to 44.	45 to 64.	65 and over.
White	31.8	234.8	220.8	252.3
Colored	246.0	587.4	518.0	548.7
Mothers born in—				
United States	27.5	162.5	131.8	176.4
Ireland	42.2	428.0	340.9	324.7
Germany	26.6	205.9	207.5	235.3
England and Wales	27.2	151.4	173.1	234.0
Canada	34.5	199.7	163.8	237.3

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS—Continued.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 15.	15 to 44.	45 to 64.	65 and over.
Scandinavia	32.4	233.7	267.3	236.6
Scotland	32.9	201.1	201.8	238.5
Italy	50.7	149.9	157.0	144.7
France	47.1	220.6	195.5	162.5
Hungary	38.6	113.4	125.1	187.3
Bohemia	13.2	235.2	124.9	101.0
Russia	26.7	131.1	172.8	249.4
Poland	11.4	67.4	103.9	243.2
Other foreign	45.9	189.1	263.6	233.7

The preceding table shows that the death rates due to consumption in white persons under 15 years of age were highest in those whose mothers were born in Italy (50.7), in France (47.1), and in "Other foreign" countries (45.9); and were lowest in those whose mothers were born in Poland (11.4), in Bohemia (13.2), and in Germany (26.6).

At 15 to 44 years of age they were highest in those whose mothers were born in Ireland (428), in Bohemia (235.2), and in Scandinavia (233.7); and were lowest in those whose mothers were born in Poland (67.4), in Hungary (113.4), and in Russia (131.1).

At 45 to 64 years they were highest in those whose mothers were born in Ireland (340.9), in Scandinavia (267.3), and in "Other foreign" countries (263.6); and were lowest in those whose mothers were born in Poland (103.9), in Bohemia (124.9), in Hungary (125.1), and in the United States (131.8).

At 65 years of age and over the death rates were highest in those whose mothers were born in Ireland

(324.7), in Russia (249.4), and in Poland (243.2); and were lowest in those whose mothers were born in Bohemia (101), in Italy (144.7), and in France (162.5).

The following table shows the death rates from consumption in the registration area during the census year, by conjugal condition in relation to age:

DEATH RATES BY CONJUGAL CONDITION AND AGE.

CONJUGAL CONDITION.	AGE.							
	15 years and over.		15 to 44 years.		45 to 64 years.		65 years and over.	
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.
Single	309.8	225.2	292.2	223.4	565.3	235.6	604.1	296.0
Married	215.5	216.4	208.3	237.6	223.1	153.7	244.2	236.1
Widowed	465.0	235.1	667.0	356.7	487.4	189.3	312.0	213.2

It will be seen from this table that the death rates from consumption in persons 15 years of age and over were higher in the single (males, 309.8; females, 225.2) than in the married (males, 215.5; females, 216.4).

In the age group 15 to 44 years, the death rate of single males (292.2) was higher than that of married males (208.3), but for the married females (237.6) itwas higher than for the single females (223.4). It was highest of all in widowed males at these ages (667).

At 45 to 64 years the rates were higher for the single (males, 565.3; females, 235.6) than for the married (males, 223.1; females, 153.7), and in females the rate was higher for the single than for the widowed (189.3).

In the age group 65 years and over, it was highest in single males (604.1) and lowest in widowed females (213.2).

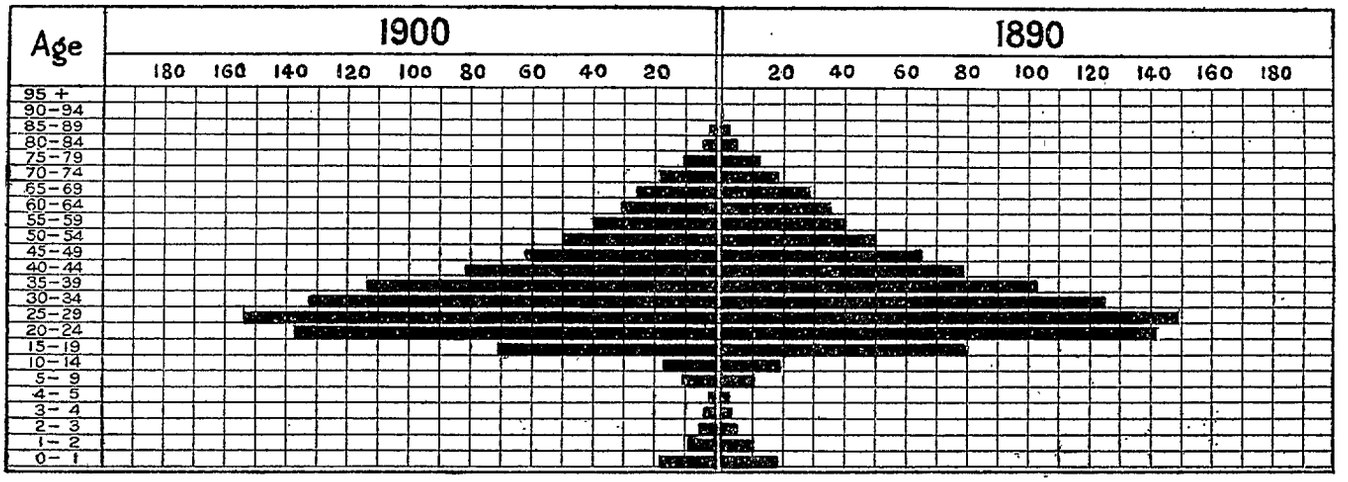
The following table shows, for the registration area, the proportions of deaths from consumption at each age, per 1,000 deaths at known ages from this disease, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	18.8	17.8	20.1	16.5
1 year	9.3	9.6	9.7	10.9
2 years	5.2	4.8	5.1	5.0
3 years	3.3	4.0	2.7	3.6
4 years	2.3	2.2	2.0	2.8
Under 5 years	38.9	38.4	39.6	38.8
5 to 9 years	8.1	13.2	8.1	11.7
10 to 14 years	9.5	24.7	10.7	27.2
15 to 19 years	52.1	89.2	57.0	100.4
20 to 24 years	119.7	153.7	132.9	151.5
25 to 29 years	142.2	165.3	143.8	154.2
30 to 34 years	135.7	129.8	126.9	122.6
35 to 39 years	123.5	103.7	108.7	96.4
40 to 44 years	93.8	70.2	85.6	72.0
45 to 49 years	75.7	48.4	75.5	55.3
50 to 54 years	60.3	39.7	59.2	41.6
55 to 59 years	45.7	33.4	46.5	33.8
60 to 64 years	34.7	28.1	39.8	29.7
65 to 69 years	26.7	24.9	29.5	26.1
70 to 74 years	17.7	17.4	17.8	17.6
75 to 79 years	10.6	11.9	12.0	11.9
80 to 84 years	3.8	5.1	4.5	5.9
85 to 89 years	1.0	2.3	1.5	2.5
90 to 94 years	0.2	0.4	0.2	0.6
95 years and over	0.1	0.2	0.2	0.2

The average age at death from consumption in the registration area in 1900 was 35.3 years, being the same as in 1890. For those dying at 15 years of age and over, the average was 37.4 years in 1900 and 37.5 years in 1890.

The comparative proportions of deaths from consumption at each age in the registration area, in 1900 and 1890, are shown in the following diagram:



The following table shows, for each grand group in the United States, the proportions of deaths from consumption during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	104.6	95.3	95.6	112.3	104.6
2. Middle Atlantic Coast region	117.3	108.8	131.0	130.5	102.9
3. South Atlantic Coast region	111.5	93.5	121.9	109.2	133.7
4. Gulf Coast region	106.1	84.9	93.2	128.6	130.0
5. Northeastern hills and plateaus	93.3	81.7	97.7	102.7	101.0
6. Central Appalachian region	81.4	73.4	94.3	70.3	87.9
7. Region of the Great Northern Lakes	96.1	84.7	105.2	99.9	94.1
8. Interior plateau	103.0	89.8	117.3	104.5	101.4
9. Southern Central Appalachian region	135.0	102.3	169.1	123.1	133.3
10. Ohio River belt	132.4	112.7	169.5	127.5	116.3
11. Southern Interior plateau	119.5	92.5	145.3	.....	.....
12. South Mississippi River belt	114.0	97.8	128.1	109.6	137.4
13. North Mississippi River belt	102.6	79.7	109.5	117.4	109.5
14. Southwest Central region	92.6	73.6	108.0	172.5	170.9
15. Central region—plains and prairies	138.0	111.2	171.7	116.4	134.0
16. Prairie region	104.4	84.4	127.8	91.5	123.3
17. Missouri River belt	113.6	96.8	145.9	91.0	118.9
18. Regions of the Western plains	117.2	93.7	111.0	195.5	134.9
19. Heavily timbered region of the Northwest	86.5	66.5	111.6	72.9	97.6
20. Cordilleran region	99.2	96.9	103.8	95.8	98.8
21. Pacific Coast region	153.0	138.0	181.5	161.2	138.1

The preceding table indicates that the proportions of deaths due to consumption were greatest in the Pacific Coast region (153), the Central region of plains and prairies (138), the Southern Central Appalachian region (135), and the Ohio River belt (132.4); and were lowest in the Central Appalachian region (81.4), the heavily timbered region of the Northwest (86.5), and the Southwest Central region (92.6).

The geographical distribution of deaths from consumption, by state groups, is shown by plate No. 18.

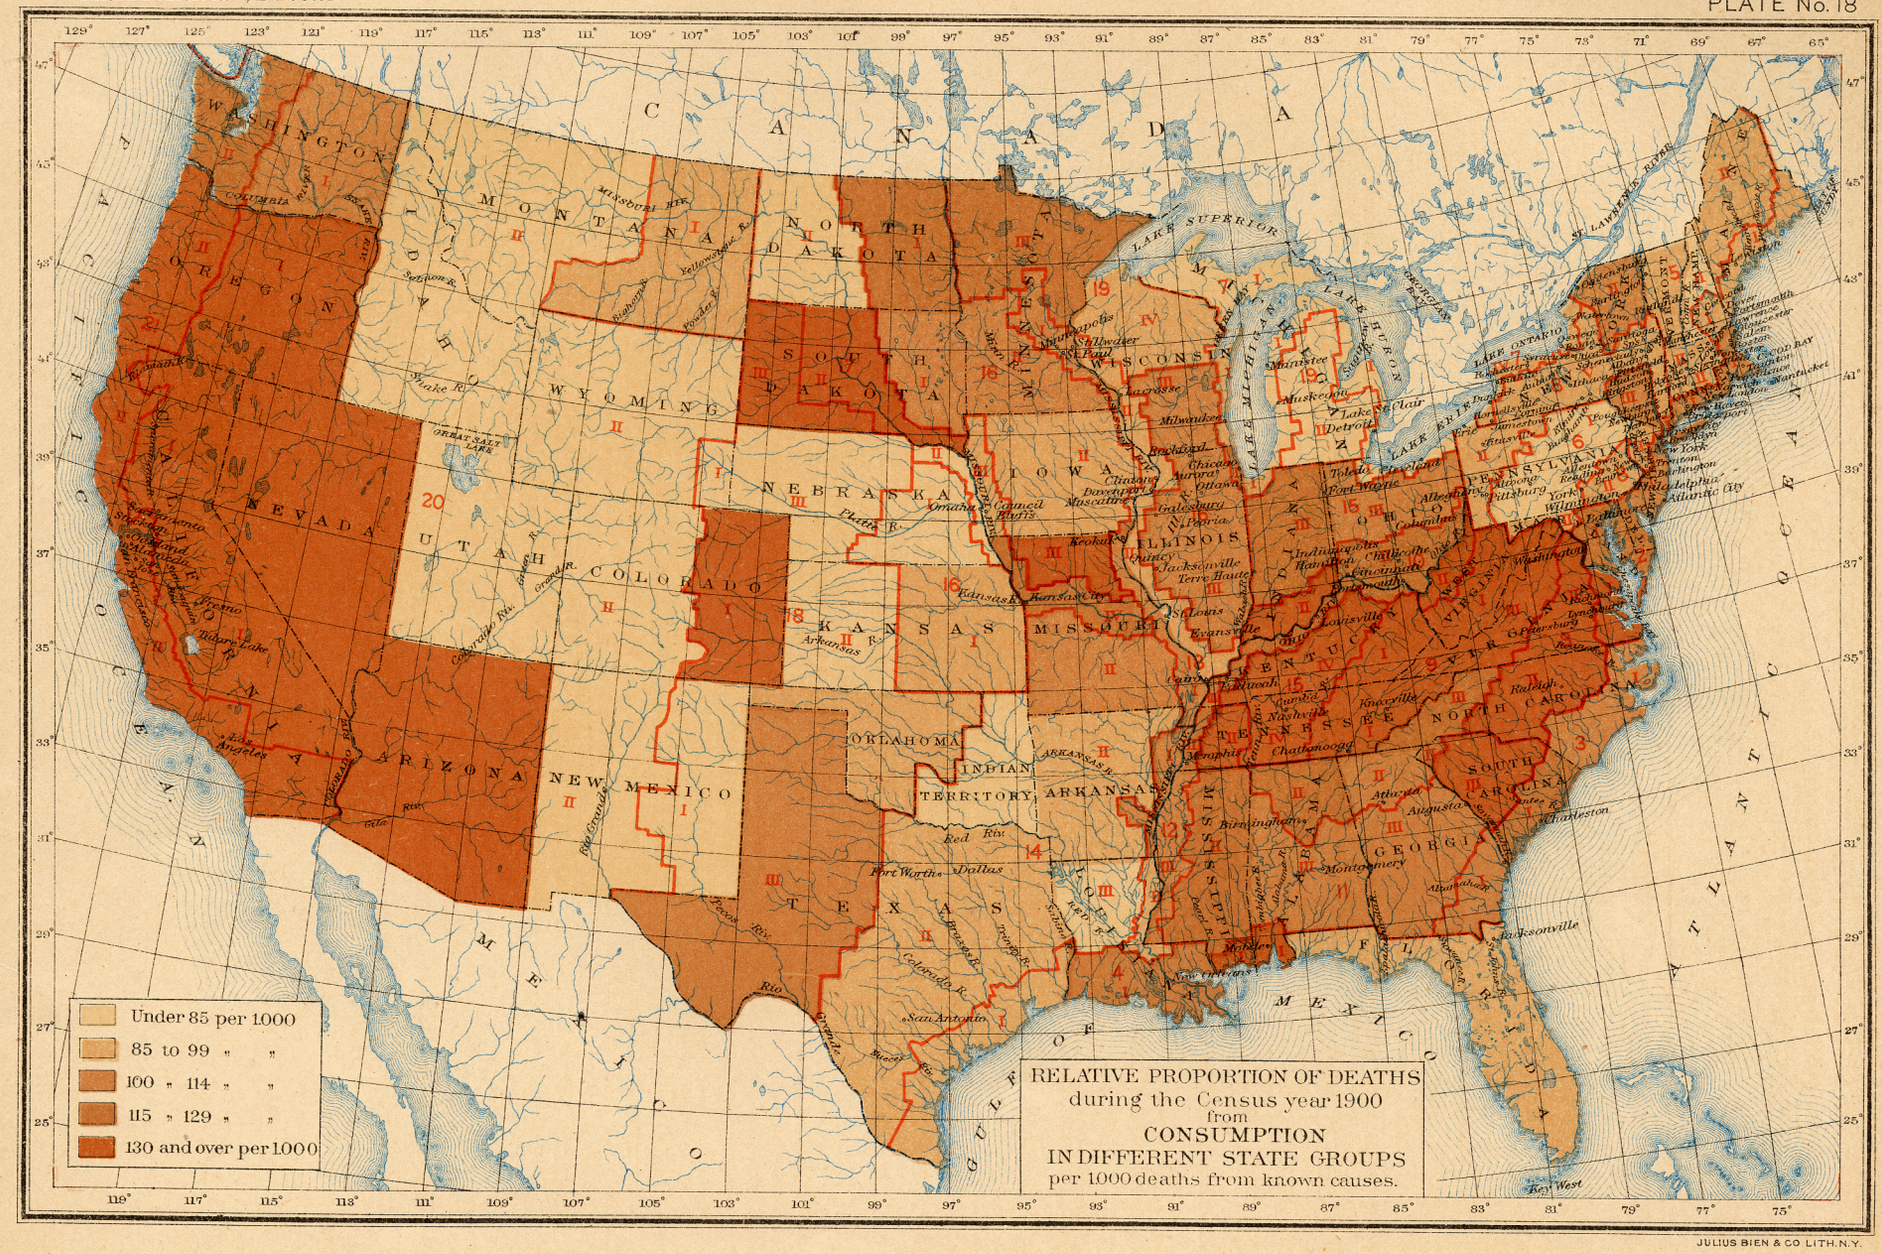
The following table shows, for the registration states, the death rates from consumption in each month of the census year, in the aggregate, and for the cities and rural districts:

DEATH RATES BY MONTHS.

MONTHS.	Total.	Cities.	Rural.
January	15.0	17.6	11.1
February	14.4	16.8	10.9
March	17.8	21.1	13.1
April	17.3	20.2	13.2
May	16.3	18.3	13.4
June	12.9	14.7	10.4
July	14.1	16.6	10.6
August	13.4	15.5	10.5
September	12.9	15.3	9.4
October	13.8	16.2	10.4
November	13.5	15.7	10.3
December	14.4	16.8	10.8

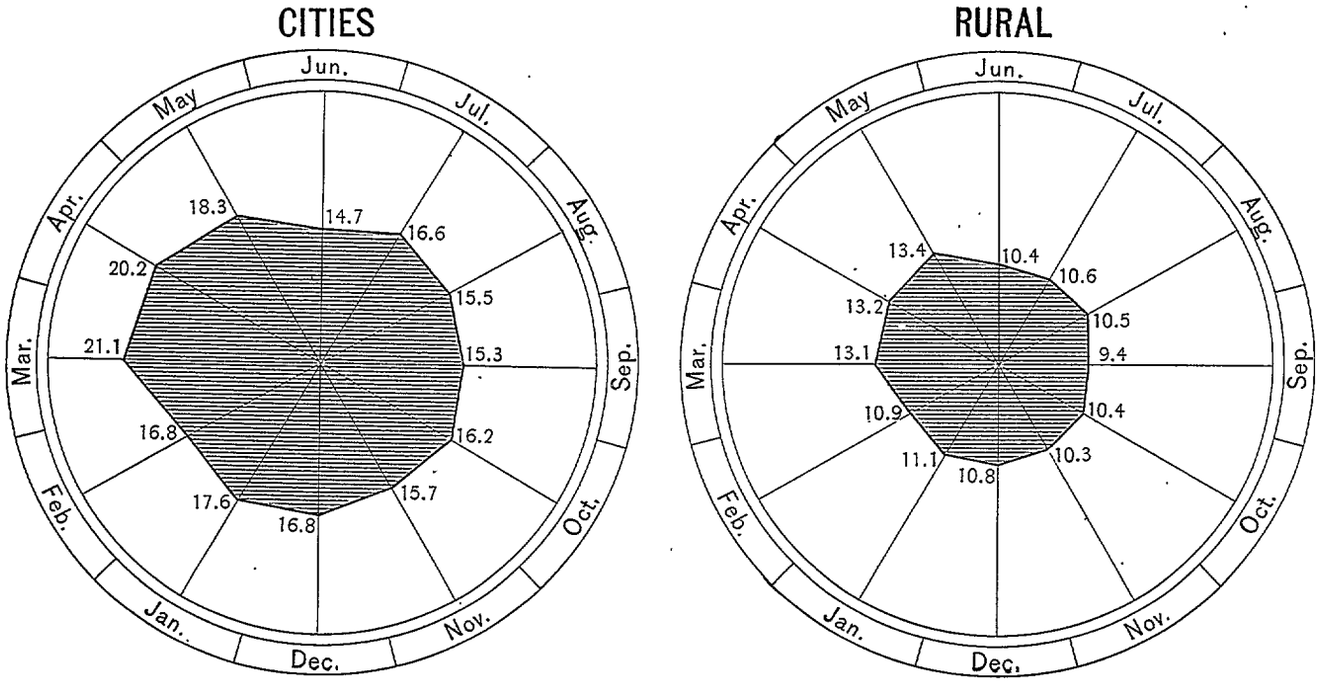
Twelfth Census of the United States
William R. Merriam, Director.

PLATE No. 18



JULIUS BIEN & CO LITH. N.Y.

The death rates from consumption in each month in the cities and the rural districts, and the relative differences in the rates in the two areas, are shown in the following diagram:



The preceding table and diagram show that in both cities and rural districts of the registration states the death rates from consumption were highest in March, April, and May, and were lowest in September.

The following table shows the comparative proportions of deaths from consumption in each month during the census year, per 1,000 deaths in known months in the United States, as a whole, and in the registration states:

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH.

MONTHS.	United States.	Registration states.
January	86.9	85.0
February	86.5	81.9
March	104.0	101.2
April	103.6	98.6
May	106.6	92.5
June	70.6	73.4
July	75.3	80.4
August	72.0	76.5
September	70.0	73.3
October	73.1	78.7
November	72.1	76.6
December	79.3	81.9

CANCER AND TUMOR.

Table 14, Part I, gives the number of deaths from cancer in the United States, the registration area and its subdivisions and the nonregistration area, during the census year ending May 31, 1900, by color, general nativity, parent nativity, and birthplaces of mothers, with distinction of sex and age.

Table 15, Part I, gives the number of deaths from cancer, in the registration area, of the single, married, widowed, and divorced, during the census year ending May 31, 1900, by color, general nativity, parent nativity, and birthplaces of mothers, with distinction of sex and age.

Table 16, Part I, gives the deaths from cancer of certain specified organs in the registration area, during the census year ending May 31, 1900, by color, general nativity, and birthplaces of mothers, with distinction of sex and age.

Table 17, Part I, gives the number of deaths from cancer in the United States, and in the registration and nonregistration areas during the census year ending May 31, 1900, at each age, of males engaged in each occupation and class of occupations.

Table 18, Part I, gives the number of deaths from cancer in the United States, and in the registration and nonregistration areas during the census year ending May 31, 1900, at each age, of females engaged in each occupation.

Table 19, Part I, gives the deaths from cancer and tumor in the United States, the registration area and its subdivisions, each state group in the registration states, and each principal city, by color, nativity, and parent nativity.

The deaths from cancer and tumor will first be considered together, as it is impossible accurately to distinguish them as they are commonly reported. They are stated separately in the general tables showing the rela-

tion of sex and age to causes of death. The number from each in the United States and the registration area, by sex, is stated below:

DISEASE.	UNITED STATES.		REGISTRATION AREA.	
	Males.	Females.	Males.	Females.
Cancer	11,436	18,039	6,388	10,908
Tumor	1,305	2,122	694	973

The total number of deaths reported as due to cancer and tumor in the United States during the census year was 32,902, of which 12,741 were males, and 20,161 were females, and the proportion of deaths from these diseases in 1,000 deaths from known causes was 32.9. In 1890 the corresponding proportion was 25.4.

In the registration area the number of deaths reported as due to cancer and tumor was 18,963, of which 7,082 were males, and 11,881 were females, giving a proportion of 37.4 deaths from these diseases in 1,000 deaths from all known causes, and a death rate of 65.8 per 100,000 of population. In 1890 the death rate was 53.1.

The following table shows, for the registration area and its subdivisions, the death rates from cancer and tumor, in the census years 1900 and 1890, by sex, color, general nativity, and parent nativity:

DEATH RATES BY COLOR AND NATIVITY.

AREAS.	Aggregate.	WHITE.							COLORED.		
		Total.	Males.	Females.	Native.			Foreign.	Total.	Males.	Females.
					Total.	Both parents native.	One or both parents foreign.				
Registration area 1900	65.8	66.7	50.1	83.2	48.0	66.9	25.7	124.6	47.7	28.6	66.2
1890	53.1	53.9	38.8	69.0	39.6	58.6	17.9	93.3	36.7	19.2	53.6
Cities 1900	64.0	64.8	49.3	80.1	42.0	59.5	24.9	125.9	49.2	30.2	67.3
1890	52.2	53.1	38.5	67.6	34.5	55.8	17.3	95.9	37.1	18.3	55.2
States 1900	67.7	68.1	49.2	87.0	51.9	70.4	25.5	116.2	45.0	23.3	66.0
1890	56.3	56.8	39.0	74.2	45.6	62.1	18.8	89.0	35.7	19.7	50.8
Cities 1900	65.1	65.5	46.8	83.4	42.5	64.7	24.1	115.1	50.5	28.4	71.0
1890	56.5	57.0	38.3	74.9	40.0	62.5	18.3	92.4	37.4	15.6	56.9
Rural 1900	71.4	71.9	52.4	92.3	62.9	74.6	29.8	118.6	29.6	10.1	50.9
1890	56.0	56.4	40.0	73.1	52.4	61.8	20.1	78.2	31.7	28.2	35.4
Cities in other states 1900	63.0	64.2	51.6	76.9	41.7	49.4	27.6	140.3	48.8	30.7	66.2
1890	48.2	49.3	38.6	60.2	29.4	41.4	14.9	99.8	37.1	19.0	54.8

This table shows that the death rate from cancer and tumor was highest in the rural districts of the registration states (71.4), and lowest in the cities in the nonregistration states (63). It was higher among the whites (66.7) than among the colored (47.7), much higher in the native whites of native parents (66.9) than in those of foreign parents (25.7), and highest of all for the foreign whites.

The relatively higher death rates of females (white, 83.2; colored, 66.2) than of males (white, 50.1; colored, 28.6) are due to the greater tendency of these diseases to attack the female mammary and generative organs.

In comparison with 1890 there was a decided increase in the death rates due to cancer and tumor, ranging from 15 per cent in the cities in the registration states to 27 per cent in the rural districts.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from cancer and tumor in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.	AGGREGATE.			MALES.			FEMALES.		
	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.

DEATH RATES IN CITIES AND RURAL DISTRICTS—Continued.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES.		
		Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
New Jersey	1900	56.4	55.5	57.8	42.5	42.0	43.1	70.4	68.7	72.6
	1890	47.6	48.4	46.5	31.9	30.6	33.6	63.1	65.8	59.6
New York	1900	66.7	65.1	70.2	48.3	47.5	49.8	85.1	82.2	91.1
	1890	53.1	56.1	48.4	37.6	39.5	34.6	68.5	72.0	62.5
Rhode Island	1900	66.7	60.3	79.1	39.8	36.4	46.5	92.7	83.0	112.0
	1890	63.1	63.0	63.3	43.5	42.8	44.4	81.7	81.6	81.9
Vermont	1900	90.2	77.2	92.3	61.7	57.7	62.3	119.9	95.6	124.0
	1890	75.8	53.0	77.9	57.3	44.3	58.4	95.0	61.0	98.4

This table shows that the death rates from cancer and tumor in the registration states were highest in Vermont (90.2) and Maine (88.5), and lowest in New Jersey (56.4) and Michigan (63.2). The rate was slightly higher in the rural districts (71.4) than in the cities (65.1), being highest in the rural districts in Vermont (92.3) and lowest in the registration cities in New Hampshire (55.4).

The following table shows, for the registration area and its subdivisions, the death rates from cancer and tumor among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	53.0	44.4	57.3	49.6	63.7	33.9
Ireland	83.9	82.6	83.7	82.0	89.8	86.2
Germany	84.4	85.8	85.5	88.3	77.0	81.6
England and Wales	78.3	77.9	78.0	77.2	79.4	80.1
Canada	44.0	41.5	44.2	41.5	47.6	41.0
Scandinavia	34.8	36.2	34.5	37.1	29.8	35.3
Scotland	89.7	84.3	94.5	90.1	103.9	62.2
Italy	24.7	25.6	23.3	24.0	20.1	39.2

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
France	97.8	100.2	89.1	89.2	89.1	121.0
Hungary and Bohemia	34.0	35.3	30.4	32.0	21.3	40.4
Russia and Poland	28.6	28.8	29.1	29.5	26.3	26.0
Other foreign	54.3	54.0	54.9	54.6	55.4	51.7

The preceding table shows that the death rates due to these diseases in the registration area were highest among those whose mothers were born in France (97.8), in Scotland (89.7), and in Germany (84.4); and were lowest among those whose mothers were born in Russia and Poland (28.6), in Italy (24.7), and in Hungary and Bohemia (34). The rate was lower among those whose mothers were born in the United States (53) than among those whose mothers were born in Ireland (83.9), or in England and Wales (78.3).

The following table shows, for the registration area and its subdivisions, the death rates from cancer and tumor during the census year in each of five age groups, per 100,000 of population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 5.		5 TO 14.		15 TO 44.		45 TO 64.		65 AND OVER	
	1900	1890	1900	1890	1900	1890	1900	1890	1900	1890
Total	4.4	5.0	1.8	1.6	24.1	21.4	208.9	171.3	483.9	367.9
Males	4.7	5.9	1.8	1.6	14.4	12.7	149.0	118.5	443.4	317.1
Females	4.0	4.1	1.8	1.5	33.8	30.0	269.9	223.6	520.1	413.2
Cities	4.2	5.3	2.1	1.8	25.2	23.0	227.7	186.8	513.2	404.6

States	4.3	4.8	1.6	1.1	22.9	20.7	196.2	164.2	477.3	364.1
Males	4.5	5.8	1.8	1.1	12.7	11.1	132.3	105.6	419.7	308.9
Females	4.1	3.8	1.4	1.1	33.0	30.0	260.5	220.6	529.7	414.1
Cities	3.9	5.3	2.1	1.3	24.4	23.8	223.8	188.8	526.8	427.6
Males	3.8	6.5	2.5	1.4	14.0	12.7	159.3	123.5	469.0	370.3
Females	4.0	4.1	1.8	1.2	34.4	34.3	285.7	250.5	571.9	472.6
Rural	5.0	4.0	0.8	0.8	20.3	15.2	164.5	133.7	441.0	317.6
Males	5.7	4.6	0.9	0.7	10.7	8.5	102.5	83.8	388.5	269.6
Females	4.3	3.3	0.8	0.9	30.5	22.2	230.0	182.7	494.5	366.0
Cities in other states	4.4	5.3	2.1	2.2	25.9	22.3	231.4	184.7	499.5	378.3
Males	5.0	6.1	1.7	2.4	16.8	14.8	178.2	141.6	501 0	340.1
Females	3.9	4.6	2.5	2.1	35.0	30.0	287.0	229.7	493.3	410.9

It will be seen from this table that the death rate from cancer and tumor under 15 years of age was comparatively insignificant, and that it increased rapidly with increasing age. At 15 to 44 years it was 24.1, at 45 to 64 it was 208.9, and at 65 years of age and over it was 483.9 per 100,000 of population. Above the age of 15 years the death rate from cancer and tumor was much higher among females than among males, but the difference in the death rate of the two sexes decreased with the increase in age. It was slightly higher in the cities than in the rural districts.

In comparison with 1890 there was a large increase in the death rate from cancer and tumor in each area, and at each age above 15.

The combined relations of age and race to the death rates from cancer and tumor are indicated, for the registration area, in the following table, giving the death rates during the census year in each of five age groups, per 100,000 of population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 5.	5 to 14.	15 to 44.	45 to 64.	65 and over.
White	4.3	1.8	23.8	211.0	489.2
Colored	5.9	1.0	30.0	159.1	290.6
Mothers born in—					
United States	4.3	1.6	17.2	155.3	374.9
Ireland	1.8	1.9	26.8	232.3	479.9
Germany	4.8	1.7	26.7	238.6	561.5

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS—Continued.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 5.	5 to 14.	15 to 44.	45 to 64.	65 and over.
Mothers born in—Continned.					
England and Wales	3.4	3.8	24.5	186.7	433.6
Canada	6.8	1.0	19.4	187.6	458.9
Scandinavia	1.6	1.0	18.8	165.4	371.8
Scotland	6.2	.....	29.9	167.4	579.2
Italy	1.3	1.0	16.5	119.4	392.7
France	.....	.....	25.7	220.4	457.8
Hungary	.....	.....	16.6	147.8	280.9
Bohemia	.....	.....	14.7	280.9	454.3
Russia	1.5	4.1	26.0	259.1	748.1
Poland	3.2	.....	11.1	92.3	263.5
Other foreign	.....	0.9	22.6	241.6	580.7

It will be seen from the preceding table that the death rates due to these diseases in white persons 65 years of age and over were highest in those whose mothers were born in Russia (748.1), in "Other foreign" countries (580.7), and in Scotland (579.2); and lowest in those whose mothers were born in Poland (263.5), in Hungary (280.9), and in Scandinavia (371.8). At this age the rate was lower for persons whose mothers were born in the United States (374.9) than for those whose mothers were born in Ireland (479.9), in England and Wales (433.6), in Canada (458.9), or in Germany (561.5).

The following table shows the death rates from cancer and tumor in the registration area during the census year, by conjugal condition in relation to age:

DEATH RATES BY CONJUGAL CONDITION AND AGE.

CONJUGAL CONDITION.	AGE.							
	15 years and over.		15 to 44 years.		45 to 64 years.		65 years and over.	
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.
Single	21.5	37.2	9.1	14.4	154.7	273.6	532.5	577.3
Married	83.9	116.4	18.8	45.1	136.4	254.1	413.3	533.3
Widowed	264.0	311.1	42.2	85.4	215.8	292.4	459.1	491.9

It will be seen from this table that in the age group 15 to 44 years the death rates from cancer and tumor were higher for the married (males, 18.8; females, 45.1) than for the single (males, 9.1; females, 14.4).

At 45 years and over the death rate of the single was higher than that of the married of both sexes, and in the age group 65 years of age and over, it was also higher than that of the widowed of both sexes.

The following table shows, for the registration area, the proportions of deaths from cancer and tumor at each specified age, per 1,000 deaths at known ages from these diseases, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES—Continued.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
15 to 19 years	5.7	3.4	6.5	4.5
20 to 24 years	10.9	7.1	11.1	8.8
25 to 29 years	13.7	15.3	20.8	17.5
30 to 34 years	22.8	33.2	31.4	40.8
35 to 39 years	36.8	61.8	47.0	60.1
40 to 44 years	59.8	89.8	55.7	96.3
45 to 49 years	85.6	113.7	86.8	114.1
50 to 54 years	114.6	120.1	109.8	130.5
55 to 59 years	127.5	130.2	124.4	119.4
60 to 64 years	130.7	122.4	138.9	120.6
65 to 69 years	134.7	110.5	135.7	98.1
70 to 74 years	109.0	81.8	95.4	76.2
75 to 79 years	77.0	57.7	64.1	54.4
80 to 84 years	35.9	30.1	31.6	29.3
85 to 89 years	13.4	10.8	11.9	13.5
90 to 94 years	4.4	2.4	4.3	4.0
95 years and over	0.7	0.5	0.3	1.6

The average age at death from cancer and tumor in the registration area in 1900 was 57.2 years. In 1890 it was 56.1 years. For those dying at 15 years of age and over, the average age was 57.8 years in 1900, and 56.9 years in 1890.

The following table shows, for each grand group in the United States, the proportions of deaths from cancer and tumor during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	41.5	34.3	67.9	23.4	52.3
2. Middle Atlantic Coast region	31.0	20.9	39.2	21.2	42.9
3. South Atlantic Coast region	18.7	10.2	25.2	10.5	32.3
4. Gulf Coast region	20.2	13.1	25.3	15.0	30.9
5. Northeastern hills and plateaus	44.5	33.8	65.1	24.4	47.9
6. Central Appalachian region	34.4	26.8	48.2	18.3	44.4
7. Region of the great Northern Lakes	41.6	37.3	57.1	30.6	49.7
8. Interior plateau	34.4	25.2	50.7	21.3	43.5
9. Southern Central Appalachian region	20.0	13.5	26.8	6.5	30.6
10. Ohio River belt	34.2	24.4	39.8	26.4	50.7
11. Southern Interior plateau	18.1	9.1	26.8	.....	.....
12. South Mississippi River belt	11.3	6.3	12.5	12.2	30.7
13. North Mississippi River belt	37.3	29.7	46.7	27.0	49.8
14. Southwest Central region	15.8	12.7	18.7	22.7	25.8
15. Central region—plains and prairies	34.1	25.1	42.9	22.9	49.9
16. Prairie region	43.0	36.4	50.3	33.2	60.2
17. Missouri River belt	31.0	27.2	37.3	24.2	35.8
18. Region of the Western plains	26.5	17.9	32.9	26.7	42.4
19. Heavily timbered region of the Northwest	46.8	34.4	58.8	39.9	64.6
20. Cordilleran region	32.1	25.7	41.5	31.3	40.8
21. Pacific Coast region	51.9	36.5	69.4	43.6	70.3

The preceding table indicates that the proportions of deaths due to cancer and tumor were greatest in the Pacific Coast region (51.9), the Northeastern hills and plateaus (44.5), the Prairie region (43), and the heavily timbered region of the Northwest (46.8); and least in the South Mississippi River belt (11.3), Southwest Central region (15.8), and the Southern Interior plateau (18.1).

The death rates from cancer and tumor in the counties in registration states are shown by plates Nos. 19 and 20.

The geographical distribution of deaths from cancer alone, by state groups, is shown by plate No. 21.

CANCER.

The total number of deaths reported as due to cancer alone in the United States during the census year was 29,475, of which 11,436 were males, and 18,039 were females, and the proportion of deaths from this disease in 1,000 deaths from all known causes was 29.5. In 1890 the corresponding ratio was 22.5.

In the registration area the number of deaths reported as due to this disease was 17,296, of which 6,388 were males, and 10,908 were females, giving a proportion of 34.1 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 60 per 100,000 of population. In 1890 the death rate was 47.9.

In England and Wales the death rate from cancer in the year 1899 was 82.9 (males, 67.2; females, 97.7). The increase in the English rate between 1890 and 1899 (15.3 per 100,000) was greater than the increase in the registration area of the United States between 1890 and 1900 (12.1).

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from cancer during the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.	AGGREGATE.			MALES.			FEMALES.		
	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	62.1	59.8	65.3	44.2	41.7	47.7	79.8	77.2	83.7
Connecticut	61.1	59.9	63.3	41.0	37.9	46.4	81.2	81.7	80.5
District of Columbia	71.8	71.8	.....	46.9	46.9	.....	94.1	94.1	.....
Maine	83.7	81.0	84.2	62.4	46.1	65.5	105.4	113.0	103.7
Massachusetts	66.4	62.4	79.4	44.2	40.9	54.4	87.6	82.5	103.9
Michigan	58.0	61.4	56.6	47.8	51.2	46.5	68.9	71.3	67.7
New Hampshire	66.8	48.5	78.4	39.9	31.5	44.9	93.6	64.2	113.3
New Jersey	50.4	49.1	52.1	37.2	35.6	39.2	63.6	62.4	65.2
New York	61.2	60.0	63.6	43.5	42.7	45.0	78.8	76.9	82.7
Rhode Island	62.3	56.1	74.3	37.0	34.2	42.4	86.7	76.8	106.5
Vermont	81.8	72.9	83.2	55.4	53.2	55.7	109.2	91.4	112.2

Of the deaths from cancer alone the rates in the registration states during the census year were highest in Maine (83.7) and Vermont (81.8), and lowest in New Jersey (50.4) and Michigan (58). The highest death rate from this disease occurred among the females in the rural districts in New Hampshire (113.3), and the lowest among the males in the cities in New Hampshire (31.5).

The following table shows, for the registration area and its subdivisions, the death rates from cancer among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	48.3	40.4	52.4	45.4	58.2	30.4
Ireland	76.4	75.0	76.4	74.7	82.5	76.6
Germany	78.2	79.7	79.6	82.6	70.5	74.7
England and Wales	72.0	70.9	71.4	69.6	74.9	75.1
Canada	40.3	37.8	40.6	38.0	43.8	36.0
Scandinavia	31.1	32.8	30.7	33.7	25.3	31.9
Scotland	81.8	76.4	87.3	83.2	96.0	50.2
Italy	22.8	23.3	21.7	22.0	20.1	34.3
France	92.8	96.4	83.6	85.3	79.7	117.3
Hungary and Bohemia	31.5	33.1	27.4	29.3	16.0	39.0
Russia and Poland	25.7	25.9	26.2	26.6	23.5	23.1
Other foreign	48.5	49.1	49.0	49.9	46.8	46.0

The preceding table shows that the death rates due to cancer were highest among those whose mothers were born in France (92.8), in Scotland (81.8), and in Germany (78.2), and were lowest among those whose mothers were born in Italy (22.8), in Russia and Poland (25.7), and in Scandinavia (31.1).

The following table shows, for the registration area and its subdivisions, the death rates from cancer during the census year in each of five age groups, per 100,000 population of corresponding ages, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	Under 5.	5 to 14.	15 to 44.	45 to 64.	65 and over.
Total	1.3	0.8	20.5	194.8	454.3
Males	1.5	0.7	11.5	137.6	417.0
Females	1.1	0.9	29.4	253.0	487.6
Cities	1.0	0.9	21.6	212.3	482.4
Males	1.0	0.7	12.4	155.6	456.5
Females	1.0	1.0	30.6	269.2	503.5
States	1.5	0.9	19.6	183.5	447.3
Males	1.8	0.9	10.2	122.9	394.0
Females	1.2	0.8	29.0	244.3	495.7
Cities	1.0	1.1	21.4	209.8	494.2
Males	0.9	1.2	11.3	147.3	439.2
Females	1.1	1.0	31.2	269.8	536.9
Rural	2.3	0.5	16.6	153.2	412.9
Males	3.1	0.6	8.5	96.1	365.3
Females	1.4	0.5	25.2	213.4	461.4
Cities in other states	1.0	0.7	21.8	214.8	470.7
Males	1.0	0.4	13.5	163.2	472.8
Females	0.9	1.0	30.1	268.7	468.9

The preceding table shows that the mortality from cancer was greatest in persons 65 years of age and over, and that at this age it was higher in females (487.6) than in males (417), and was higher in the cities (482.4) than in the rural districts of the registration states (412.9).

The combined relations of age and race to the death rates from cancer are indicated in the following table for the registration area, giving the death rates during the census year in each of five age groups, per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 5.	5 to 14.	15 to 44.	45 to 64.	65 and over.
White	1.2	0.8	20.3	196.6	459.2
Colored	3.9	1.0	25.4	149.6	272.9
Mothers born in—					
United States	1.1	0.8	14.7	145.1	349.4
Ireland	1.2	0.6	22.2	215.1	452.1
Germany	1.1	0.7	22.8	226.2	530.4
England and Wales	1.7	2.3	21.4	171.5	415.5
Canada	2.7	0.7	17.1	176.0	434.0
Scandinavia	.....	.....	16.1	148.1	371.8
Scotland	6.2	.....	27.2	151.0	533.8
Italy	.....	1.0	14.5	115.0	372.1

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS—Con.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 5.	5 to 14.	15 to 44.	45 to 64.	65 and over.
Mothers born in—Continued.					
France	.....	.....	23.9	212.1	428.3
Hungary	.....	.....	12.1	147.8	280.9
Bohemia	.....	.....	14.7	270.5	403.8
Russia	.....	4.1	21.6	245.3	654.6
Poland	1.6	.....	9.4	88.5	263.5
Other foreign	.....	.....	17.8	227.5	524.0

The preceding table shows that the death rates due to cancer in white persons 65 years of age and over were highest in those whose mothers were born in Russia (654.6), in Scotland (533.8), and in Germany (530.4), and lowest in those whose mothers were born in Poland (263.5), in Hungary (280.9), and in the United States (349.4).

The following table shows, for the registration area, the death rates from cancer of the single, the married, and the widowed in each of three age groups, by sex:

DEATH RATES AT CERTAIN AGES, BY CONJUGAL CONDITION.

SEX.	15 TO 44 YEARS.			45 TO 64 YEARS.			65 YEARS AND OVER.		
	Single.	Married.	Widowed.	Single.	Married.	Widowed.	Single.	Married.	Widowed.
Total	8.7	28.6	69.6	192.1	175.6	256.4	518.7	426.0	455.8
Males	6.5	15.7	40.3	142.1	125.8	200.8	512.5	388.0	433.7
Females	11.3	39.8	80.7	248.8	238.8	275.9	523.1	496.7	464.9

This table shows that at 15 to 44 years of age the death rate of the married of both sexes was higher than that of the single. Above 44 years the rate for the single was higher in both sexes, and at 65 years and over it was higher in the single of both sexes than in either the married or the widowed.

The following table shows, for the registration area, the number of deaths at certain ages from cancer of certain specified organs or parts, per 1,000 total deaths at the same ages, from cancer for which the organ or part is known, by sex:

PROPORTIONS OF DEATHS FROM CANCER OF CERTAIN ORGANS.

ORGAN OR REGION OF THE BODY.	ALL AGES.			20 TO 44 YEARS.			45 TO 64 YEARS.			65 YEARS AND OVER.		
	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.
Abdomen	82.8	92.4	76.9	78.6	118.9	62.6	79.2	92.2	71.5	88.4	83.3	92.4

Head, face, and neck	59.2	104.2	31.4	37.3	92.3	15.5	46.2	95.1	17.4	87.9	118.0	63.9
Larynx	4.9	10.8	1.3	4.0	7.8	2.5	5.4	13.1	1.0	4.8	9.2	1.2
Liver	133.4	145.6	125.9	112.3	159.6	93.6	133.7	151.4	123.3	143.2	132.4	151.9
Lower extremities	2.7	3.7	2.1	2.7	4.7	1.9	2.0	2.4	1.7	3.6	4.6	2.9
Lungs	5.5	6.1	5.1	4.9	6.3	4.3	7.4	8.6	6.7	2.9	3.1	2.9
Mouth, tongue, and throat	46.8	95.5	16.8	25.3	67.3	8.7	45.4	98.3	14.2	59.6	101.2	26.5
Ovaries	.....	.....	9.7	.....	.....	16.7	.....	.....	8.9	.....	.....	5.3
Penis	.....	3.9	.....	.....	4.7	.....	.....	3.7	.....	.....	3.6	.....
Rectum	42.9	54.9	35.5	54.2	79.8	44.0	39.8	50.6	33.5	42.6	53.7	33.8
Stomach	315.6	430.6	244.7	249.6	427.2	179.2	318.8	441.4	246.4	348.0	422.6	288.7
Testicle	.....	1.6	.....	.....	4.7	.....	.....	0.8	.....	.....	1.5	.....
Upper extremities	1.9	3.3	1.1	1.3	1.6	1.2	0.9	1.2	0.7	3.9	6.6	1.6
Uterus	.....	.....	276.8	.....	.....	399.9	.....	.....	304.2	.....	.....	151.9

The preceding table shows that in each 1,000 deaths of males at all ages from definitely located cancers, 430.6 were due to cancer of the stomach, 145.6 to cancer of the liver, 104.2 to cancer of the head, face, and neck, 95.5 to cancer of the mouth, tongue, and throat, 92.4 to cancer of the abdomen, and 54.9 to cancer of the rectum.

In females of all ages, 276.2 deaths from definitely located cancers were due to cancer of the uterus, 244.7 to cancer of the stomach, 157.8 to cancer of the breast, 125.9 to cancer of the liver, 76.9 to cancer of the abdomen, and 35.5 to cancer of the rectum.

The excess of deaths from cancer of the female generative and mammary organs reduces the proportions due to cancer of the other organs or parts, as compared with the proportions given for the males, but, as stated previously, when cancer of the generative and mammary organs are excluded the death *rate* of males from other forms of cancer exceeds that of the females.

The following table shows, for the registration area,

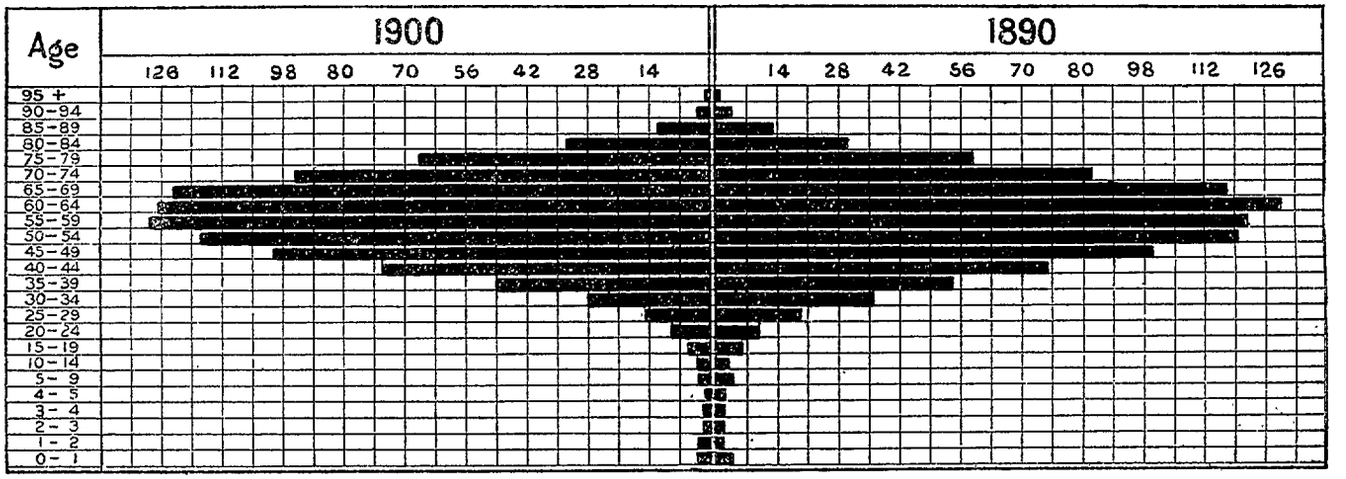
the proportions of deaths from cancer at each age, per 1,000 deaths at known ages from this disease, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	1.3	0.9	2.5	1.0
1 year	0.6	0.1	0.6	1.0
2 years	0.5	0.1	1.5	0.5
3 years	0.5	0.3	0.9	0.1
4 years	0.6	0.1	2.5	.....
Under 5 years	3.5	1.5	8.0	2.6
5 to 9 years	1.6	1.1	3.1	1.0
10 to 14 years	1.4	1.1	0.6	0.8
15 to 19 years	2.5	1.7	1.5	3.1
20 to 24 years	7.5	4.3	6.5	7.0
25 to 29 years	10.5	13.3	15.7	16.3
30 to 34 years	19.9	30.8	23.7	39.0
35 to 39 years	34.5	60.4	43.8	59.3
40 to 44 years	58.0	89.3	54.2	95.2
45 to 49 years	84.1	115.6	86.3	115.7
50 to 54 years	117.5	122.8	111.6	133.5
55 to 59 years	131.2	133.2	130.3	121.3
60 to 64 years	136.6	124.9	148.5	122.9
65 to 69 years	139.5	112.6	143.9	100.9
70 to 74 years	113.1	83.2	100.5	77.4
75 to 79 years	81.0	58.9	70.3	53.9
80 to 84 years	37.3	31.1	33.3	30.2
85 to 89 years	14.6	11.0	13.3	13.9
90 to 94 years	4.9	2.7	4.6	4.2
95 years and over	0.8	0.5	0.3	1.8

The average age at death from cancer in the registration area in 1900 was 58.1 years. In 1890 it was 57.2 years. For those dying at 15 years of age and over, the average age was 58.3 years in 1900 and 57.5 years in 1890.

The comparative proportions of deaths from cancer at each age in the registration area in 1900 and 1890 are shown in the following diagram:



Cancer of the Abdomen.—The total number of deaths reported as due to cancer of the abdomen, excluding cancer of the stomach, uterus, liver, bladder, and ovaries, in the registration area during the census year, was 1,107, of which 913 occurred in persons 45 years of age and over, 389 being males and 524 females. At 65 years of age and over, there were 390 deaths, 163 being males and 227 females.

At 45 to 64 years the death rates were 10.4 for males and 13.9 for females. At 65 years and over they were: males, 27.3; females, 33.9.

Cancer of the Bladder.—The total number of deaths reported as due to cancer of the bladder in the registration area during the census year was 180, of which 166 were persons 45 years of age and over, 124 being males and 42 females. Four of the males and 2 of the females were colored. In those 45 years of age and over the death rates of the whites were: males, 4.5; females, 1.5.

Cancer of the Brain.—The total number of deaths reported as due to cancer of the brain in the registration area during the census year was 27, of which 10 occurred in persons from 20 to 44 years of age, 3 being males and 7 females, while 13 occurred in persons 45 years of age and over, 8 being males and 5 females.

Cancer of the Breast.—The total number of deaths in the registration area during the census year reported as due to cancer of the breast was 1,344, of which 38 were males and 1,306 were females. Of these, 2 deaths occurred in persons under 20 years of age, 252 in persons 20 to 44 years of age, 674 in persons 45 to 64 years of age, and 411 in persons 65 years of age and over.

The following table shows, for the registration area, the death rates due to cancer of the breast, per 100,000

of population, at all ages, and in each of three age groups, by sex, color, general nativity, parent nativity, and birthplaces of mothers:

DEATH RATES AT CERTAIN AGES.

SEX, COLOR, NATIVITY, PARENTAL NATIVITY, AND BIRTHPLACES OF MOTHERS.	All ages.	20 to 44.	45 to 64.	65 and over.

Other foreign	2.8	1.9	9.4	35.4

This table shows that the death rate from cancer of the breast was much higher in females (9.1) than in males (0.3); that it was much higher for the age group 45 to 64 years (30.7) than at the lower ages, and was still higher in those 65 years of age and over (females, 59.6; males, 2.0).

The death rate from this cause at all ages was higher in white females (9.1) than in colored females (7.9). In colored females it was higher in the age group 20 to 44 (7.4) than in the white (3.9), while for those 45 years of age and over it was higher in the whites than in the colored. In white females from 45 to 64 years of age the death rate was about the same in the native born (30.3) and foreign born (30.9). At 65 years of age and over, the death rates for the same classes were higher (natives, 66.6; foreign born, 50.1). Among the whites of both sexes from 45 to 64 years of age the death rates from cancer of the breast were highest among those whose mothers were born in France (25.0) and in Ireland (18.9), and were lowest among those whose mothers were born in Poland (3.8) and in Russia (6.9). In those 65 years of age and over in both sexes the death rates from this cause were highest among those whose mothers were born in Italy (62.0) and in Ireland (42.0), and were lowest among those whose mothers were born in Scotland (11.4) and in Canada (21.9).

Cancer of the Extremities.—In the registration area during the census year 26 deaths were reported as due to cancer of the upper extremities and 36 due to cancer of the lower extremities, 17 of the former and 19 of the latter being males, and 9 of the former and 17 of the latter, females. In those 45 years of age and over, the death rates of the whites from cancer of the upper extremities were: males, 0.6; females, 0.3; and of the lower extremities: males, 0.5; females, 0.5.

Cancer of the Eye.—The total number of deaths reported as due to cancer of the eye in the registration area during the census year was 18, of which 13 occurred in persons 45 years of age and over, 10 of these being males and 3, females, while 5 occurred in children under 20 years of age, 2 being males and 3 females. This is one form of cancer which is likely to appear in children. No deaths from this form of cancer were reported among the colored people.

Cancer of the Genitals.—The total number of deaths reported as due to cancer of the genitals in the registration area during the census year was 101, of which 85 occurred in persons 45 years of age and over, 46 being males and 39, females. In those 45 years of age and over, the death rates per 100,000 of population for the whites were: males, 1.7; females, 1.4.

Cancer of the Head, Face, and Neck.—The total number of deaths from cancer of the head, face, and neck reported during the census year was 791, of which 531 were males and 260 were females. Ten occurred in persons under 20 years of age, 84 in persons 20 to 44, 305 in persons 45 to 64, and 388 in persons 65 years of age and over.

The death rate for this group of causes was much higher in males (3.7) than in females (1.8), and was highest in persons 65 years of age and over (males, 386; females, 23.5).

Cancer of the Kidneys.—The total number of deaths reported as due to cancer of the kidneys in the registration area during the census year was 90, of which 65 were persons 45 years of age and over, 29 being males and 36, females. One of the males and 2 of the females were colored. In white persons 45 years of age and over the death rate was: males, 1.1; females, 1.3.

Cancer of the Larynx.—The total number of deaths reported as due to cancer of the larynx in the registration area during the census year was 66, of which 57

occurred in persons 45 years of age and over, 50 being males and 7, females. The death rates of the whites 45 years of age and over from this cause were: males, 1.9; females, 0.3.

Cancer of the Liver.—The total number of deaths in the registration area during the census year reported as due to cancer of the liver was 1,784, giving a death rate of 6.2 per 100,000 of population. Of these deaths, 253 occurred in persons from 20 to 44 years of age, 883 in persons 45 to 64 years of age, and 632 in persons 65 years of age and over. The death rate from this cause for those 45 to 64 years of age was 20.5 (males, 17.1; females, 24); for those 65 years of age and over it was 49.9 (males, 43.3; females, 55.7).

The following table shows, for the registration area, the death rates due to cancer of the liver, per 100,000 of population, at all ages, and in each of three age groups, by sex, color, general nativity, parent nativity, and birthplaces of mothers:

DEATH RATES AT CERTAIN AGES.

SEX, COLOR, NATIVITY, PARENTAL NATIVITY, AND BIRTHPLACES OF MOTHERS.	All ages.	20 to 44.	45 to 64.	65 and over.
Total	6.2	2.1	20.5	49.9
Males	5.2	1.7	17.1	43.3
Females	7.2	2.5	24.0	55.7
White	6.3	2.1	20.8	50.7
Males	5.2	1.7	17.2	43.7
Females	7.4	2.5	24.5	57.1
Native	4.1	1.7	16.1	44.3
Males	3.1	1.3	12.6	35.2
Females	5.0	2.2	19.5	52.2
Both parents native	4.9	1.8	13.2	36.1
Males	3.8	1.1	10.2	28.2
Females	6.1	1.6	16.1	43.2
One or both parents foreign	1.6	1.5	13.0	29.7
Males	1.2	0.9	10.1	31.9
Females	2.0	2.0	15.7	27.8
Foreign	12.8	2.8	26.2	57.0
Males	11.2	2.5	22.3	53.3
Females	14.6	3.2	30.4	60.5
Colored	3.2	1.9	12.4	17.8
Males	3.6	1.6	13.6	27.7
Females	2.8	2.3	11.1	10.4
Birthplaces of mothers (white):				
United States	4.6	1.3	13.7	37.0
Ireland	8.9	2.7	28.1	44.1
Germany	9.3	2.1	25.8	77.2
England and Wales	7.5	2.2	20.4	34.5
Canada	3.7	1.0	16.7	53.1
Scandinavia	4.1	3.1	15.4	56.3
Scotland	7.2	1.6	13.1	56.8
Italy	2.8	3.4	11.1	20.7
France	8.0	4.2	16.6	29.5
Hungary	2.5	1.9	11.4	93.6
Bohemia	4.8	3.1	20.8	50.5
Russia	3.2	4.3	6.9	124.7
Poland	2.3	2.9	7.7	40.5
Other foreign	5.7	1.2	26.7	85.0

This table indicates that the death rate from cancer of the liver was higher in females (7.2) than in males (5.2), and this difference was especially marked in those from 45 to 64 years of age (females, 24; males, 17.1). In those 65 years of age and over it was higher among the foreign born in both males and females. In white persons 65 years of age and over, the rates were highest in those having mothers born in Russia (124.7) and in Hungary (93.6), and were lowest in those having mothers born in Italy (20.7) and in France (29.5).

Cancer of the Lungs.—The total number of deaths reported as due to cancer of the lungs in the registration area during the census year was 73, of which 62 were persons 45 years of age and over, 27 being males and 35 females. In white persons 45 years of age and over the death rates per 100,000 of population were: males, 1; females, 1.2.

Cancer of the Mouth, Tongue, and Throat.—The total number of deaths from cancer of the mouth, tongue, and throat reported in the registration area during the census year was 626, of which 487 were males and 139 females.

Of the total deaths from this group of cancers, 57 occurred at 20 to 44 years; 300, at 45 to 64 years; and 263 at 65 years of age and over.

The death rates for both males and females were highest in the age group 65 years and over (males, 33.1; females, 9.7).

Cancer of the Ovaries.—The total number of deaths reported as due to cancer of the ovaries in the registration area during the census year was 80, of which 27 were persons 20 to 44 years of age, and 50 were 45 years of age and over. In white females 20 to 44 years of age, the death rate was 0.4. At 45 years of age and over, it was 1.8.

Cancer of the Penis.—The total number of deaths reported as due to cancer of the penis in the registration area during the census year was 20, of which 16 were persons 45 years of age and over. No deaths from this form of cancer were reported among the colored. In those 45 years of age and over, 5 were native and 11 foreign. The death rates in those 45 years and over, were, native, 0.3; foreign, 1.

Cancer of the Rectum.—The total number of deaths reported as due to cancer of the rectum in the registration area during the census year was 574, of which 280 were males and 294 were females, giving a death rate, per 100,000 of population, of 1.9 for males, and 2, for females. Of the deaths from this cause, 122 occurred in persons 20 to 44 years of age (51 males and 71 females), and 451 in persons 45 years of age and over, 229 being males and 222 females.

By ages, the death rates were as follows: At 20 to 44 years, males, 0.8; females, 1.2; at 45 to 64 years, males, 5.7; females, 6.5; and at 65 years and over, males, 17.6; females, 12.4.

Cancer of the Stomach.—The total number of deaths reported in the registration area during the census year

as due to cancer of the stomach was 4,220, of which 2,195 were males and 2,025 females.

The following table shows, for the registration area, the death rates from cancer of the stomach, per 100,000 of population, at all ages, and in each of three age groups, by sex, color, general nativity, parent nativity, and birthplaces of mothers:

DEATH RATES AT CERTAIN AGES.

SEX, COLOR, NATIVITY, PARENTAL NATIVITY, AND BIRTHPLACES OF MOTHERS.	All ages.	20 to 44.	45 to 64.	65 and over.
Total	14.6	4.6	48.8	121.2
Males	15.3	4.5	49.8	138.3
Females	14.0	4.8	47.9	105.9
White	14.9	4.6	49.5	122.4
Males	15.5	4.4	50.6	139.7
Females	14.3	4.7	48.3	106.9
Native	8.3	3.5	31.9	96.6
Males	8.0	2.9	28.5	111.5
Females	8.6	4.0	35.2	83.5
Both parents native	10.0	3.0	25.8	75.6
Males	9.7	2.4	23.0	88.1
Females	10.3	3.7	28.5	64.6
One or both parents foreign	3.7	3.2	27.1	101.7
Males	3.6	3.2	22.6	132.0
Females	3.8	3.2	31.4	75.4
Foreign	34.4	6.9	71.6	153.2
Males	37.0	7.4	77.2	171.6
Females	31.6	6.2	65.7	136.1
Colored	9.3	5.2	33.7	77.1
Males	8.9	4.9	30.6	83.2
Females	9.6	5.5	37.1	72.5
Birthplaces of mothers (white):				
United States	9.6	3.0	26.8	80.2
Ireland	18.4	4.0	59.1	104.0
Germany	25.3	6.7	72.5	193.0
England and Wales	16.0	4.3	38.2	103.4
Canada	10.6	5.2	45.0	131.1
Scandinavia	11.4	4.8	61.5	146.5
Scotland	18.7	7.8	31.2	124.9
Italy	5.6	2.4	33.2	124.0
France	19.0	4.2	41.6	103.4
Hungary	7.5	1.9	68.2	187.3
Bohemia	18.1	6.3	93.6	201.9
Russia	10.0	4.9	100.2	93.5
Poland	6.8	3.6	42.3	141.9
Other foreign	17.2	5.8	84.7	198.3

It will be seen from this table that the death rate from cancer of the stomach was very low in persons under 45 years of age, and that it was more than twice as high in persons 65 years of age and over as in persons between 45 and 64 years of age.

In those 65 years of age and over it was higher in males (138.3) than in females (105.9); much higher in whites (122.4) than in the colored (77.1); and higher among the foreign born whites (153.2) than among the native born whites (96.6). The rates were highest in white persons whose mothers were born in Bohemia (201.9), in "Other foreign" countries (198.3), and in Germany (193); and were lowest in those whose mothers were born in the United States (80.2), in Russia (93.5), in England and Wales (103.4), and in France (103.4).

Cancer of the Uterus.—The total number of deaths in the registration area during the census year reported as due to cancer of the uterus was 2,291.

The following table shows, for the registration area, the death rates due to cancer of the uterus, per 100,000 of female population, at all ages, and in each of three age groups, by general nativity, parent nativity, and birthplaces of mothers:

DEATH RATES AT CERTAIN AGES.

COLOR, NATIVITY, PARENTAL NATIVITY, AND BIRTHPLACES OF MOTHERS.	All ages.	20 to 44.	45 to 64.	65 and over.
Total	15.9	10.7	59.1	55.7
White	15.7	10.5	58.3	54.9
Native	12.8	10.0	59.6	56.0
Both parents native	13.6	8.7	45.1	45.6
One or both parents foreign	6.1	7.3	46.2	35.7
Foreign	24.5	11.1	55.5	50.8
Colored	20.0	14.6	80.3	82.9
Birthplaces of mothers (white):				
United States	12.9	8.3	46.0	48.9
Ireland	17.1	10.2	50.8	40.7
Germany	16.7	9.1	59.1	50.9
England and Wales	16.3	7.8	51.4	37.0
Canada	12.4	9.7	63.6	49.9
Scandinavia	4.2	4.6	18.1	21.5
Scotland	13.8	11.0	24.1	55.7
Italy	10.8	12.4	54.1	132.8
France	26.6	8.4	90.8	32.1
Hungary	7.0	12.8	27.3	.....
Bohemia	7.1	6.1	.....	187.3
Russia	3.7	4.2	22.9	69.5
Poland	1.2	1.8	9.2	.....
Other foreign	8.5	9.1	36.8	30.5

It will be seen from this table that the death rate from cancer of the uterus was highest in women from 45 to 64 years of age (59.1), although it continued high in those 65 years of age and over (55.7) as compared with those 20 to 44 (10.7). It was much higher in the colored than in the whites in each group, and it was higher in the native white at 45 to 64 years of age (59.6) than in the foreign white (55.5). It was highest in the age group 45 to 64 years in those whose mothers were born in France (90.8), and was lowest in those having mothers born in Poland (9.2).

DISEASES OF THE NERVOUS SYSTEM.

The total number of deaths reported as due to diseases of the nervous system in the United States during the census year was 117,579, of which 64,189 were males and 53,390 were females, and the proportion of deaths from this class of diseases in 1,000 deaths from all known causes was 117.7. In 1890 the corresponding proportion was 107 per 1,000.

In the registration area the number of deaths reported

as due to this class of diseases was 62,563, of which 33,680 were males and 28,883 were females, giving a proportion of 123.2 deaths from these diseases in 1,000 deaths from all known causes, and a death rate of 217.2 per 100,000 of population. In 1890 the death rate was 247.4.

In England and Wales the death rate from diseases of the nervous system for the year 1899 was 207.7 per 100,000 of population (males, 221.5; females, 194.6).

The following table shows, for the registration area and its subdivisions, the death rate from diseases of the nervous system in the census years 1900 and 1890, by sex, color, general nativity, and parent nativity:

DEATH RATES BY COLOR AND NATIVITY.

AREAS.	Aggregate.	WHITE.							COLORED.		
		Total.	Males.	Females.	Native.			Foreign.	Total.	Males.	Females.
					Total.	Both parents native.	One or both parents foreign.				
Registration area.....1900..	217.2	213.7	230.7	196.6	211.0	241.5	175.1	221.5	294.6	307.5	282.1

Cities.....1900..	215.5	210.6	230.1	191.4	207.9	239.7	181.7	217.4	301.1	316.1	286.6
1890..	259.1	253.6	276.9	230.7	.....	.....	.....	.....	347.2	359.0	335.8
States .....1900..	214.0	213.1	224.9	201.2	211.3	239.9	172.0	218.3	260.6	267.9	253.6
1890..	240.3	239.2	252.7	226.0	.....	.....	.....	.....	287.0	294.9	279.6
Cities.....1900..	208.3	206.5	219.5	193.9	204.9	236.9	178.5	209.8	276.7	290.9	263.6
1890..	260.1	258.1	279.5	237.7	.....	.....	.....	.....	332.7	358.9	309.2
Rural.....1900..	222.3	222.4	232.4	212.1	218.9	243.5	154.3	241.0	215.9	208.9	223.5
1890..	210.0	210.5	213.3	207.8	.....	.....	.....	.....	181.4	159.9	204.5
Cities in other states .....1900..	222.0	214.7	240.1	189.0	210.6	247.4	188.8	227.1	308.2	323.4	293.5
1890..	258.2	249.2	274.3	223.5	.....	.....	.....	.....	351.2	359.0	343.6

This table shows that the death rate from diseases of the nervous system was higher in the rural districts of the registration states (222.3) than in the cities in the nonregistration states (222) or in the cities in the same states (208.3). It was higher for the foreign white (221.5) than the native white (211), and higher among the native whites of native parents (241.5) than for those having one or both parents foreign (175.1). The death rate of males from these diseases was considerably higher than that of females (white males, 230.7; colored males, 307.5; white females, 196.6; colored females, 282.1).

In comparison with 1890 there was a considerable decrease in the death rates from these diseases in the registration cities, but in the rural districts of the registration states the rates increased.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from diseases of the nervous system in the census year, per 100,000 of population:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.	AGGREGATE.			MALES.			FEMALES.		
	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	214.0	208.3	222.3	225.8	221.3	232.0	202.3	195.7	212.2
Connecticut	215.5	209.5	226.7	222.8	209.7	246.3	208.3	209.2	206.6
District of Columbia.....	282.0	282.0	.....	337.9	337.9	.....	231.8	231.8	.....
Maine	263.1	384.1	238.2	267.5	400.1	242.1	258.6	369.6	234.1
Massachusetts	219.4	210.6	247.4	229.5	220.6	257.1	209.8	201.2	237.7
Michigan	177.9	193.1	171.6	189.8	215.2	179.8	165.3	171.5	162.6
New Hampshire.....	258.0	258.6	257.7	255.1	260.8	251.8	260.9	256.6	263.8
New Jersey.....	254.9	261.3	246.4	271.8	270.4	273.7	237.9	252.4	218.6
New York	203.8	189.6	233.4	216.1	203.2	242.2	191.6	176.4	224.4
Rhode Island.....	191.8	173.4	227.8	203.3	179.7	247.8	180.7	167.4	207.5
Vermont	232.8	214.5	235.7	237.5	261.7	234.0	227.9	170.3	237.5

This table shows that the death rate from diseases of the nervous system in the registration states was highest in the District of Columbia (282) and lowest in Michigan (177.9). It was higher in the rural districts (222.3) than in the cities (208.3), and higher among males (225.8) than among females (202.3), being highest among males in the cities of Maine (400.1), and lowest among females in the rural districts in Michigan (162.6).

The following table shows, for the registration area and its subdivisions, the death rates from diseases of the nervous system among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	207.6	204.3	210.0	207.9	211.8	196.9
Ireland	227.1	227.0	227.1	227.1	227.3	226.3
Germany	178.8	179.7	178.4	178.2	174.3	191.5
England and Wales	211.3	206.0	213.3	207.4	224.3	201.7
Canada	146.2	151.8	148.6	156.8	138.3	108.1

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
Scandinavia	114.5	113.3	124.4	127.3	118.9	97.4
Scotland	205.7	193.4	214.5	203.3	238.1	155.5
Italy	165.9	176.6	161.6	172.7	105.1	211.3
France	221.6	229.6	203.0	207.5	192.2	271.4
Hungary and Bohemia	141.2	145.3	109.5	111.0	101.0	199.1
Russia and Poland	114.3	117.3	98.8	100.6	85.8	182.5
Other foreign	176.6	178.8	172.3	173.3	169.8	200.2

The preceding table shows that the death rates due to this class of diseases in the registration area were highest among those whose mothers were born in Ireland (227.1), in France (221.7), and in England and Wales (211.3); and lowest among those whose mothers were born in Russia and Poland (114.3), in Scandinavia (114.5), and in Hungary and Bohemia (141.2).

The following table shows for the registration area and its subdivisions the death rates from diseases of the nervous system during the census year in each of six age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 1.		UNDER 5.		5 TO 14.		15 TO 44.		45 TO 64.		65 AND OVER.	
	1900	1890	1900	1890	1900	1890	1900	1890	1900	1890	1900	1890

Females	1,611.4	2,920.1	545.6	1,002.0	37.0	55.3	46.8	53.1	326.7	310.2	1,489.3	1,413.7
Rural	1,402.7	1,595.1	433.0	524.7	36.1	39.2	49.5	46.6	252.8	212.9	1,454.8	1,225.9
Males	1,654.5	1,749.6	498.9	540.7	37.7	38.2	50.9	46.1	256.6	211.3	1,495.3	1,250.6
Females	1,145.7	1,435.3	365.8	508.2	34.5	40.2	48.0	47.1	248.8	214.4	1,413.4	1,200.9
Cities in other states	2,791.6	4,333.5	833.6	1,269.6	52.5	62.1	64.3	60.2	322.4	290.6	1,460.8	1,253.5
Males	3,156.8	4,880.3	930.8	1,398.0	59.3	65.3	75.8	66.6	355.5	324.7	1,633.3	1,373.7
Females	2,418.7	3,772.0	735.2	1,138.0	45.8	58.9	52.7	53.6	287.9	254.9	1,313.5	1,150.7

It will be seen from this table that the highest death rates from diseases of the nervous system occurred in infants under 1 year of age (2,122), and in persons 65 years of age and over (1,494.1). Among infants under 1 year of age the death rate from these diseases was higher in males (2,424.7) than in females (1,813.9), and was much higher in the cities in the nonregistration states (2,791.6) than in the cities in the registration states (1,884.3) or in the rural districts of the registration states (1,402.7). At 65 years of age and over, however, the mortality from these diseases was highest in the cities in the registration states (1,581.1), and was about the same in the cities in the nonregistration states (1,460.8) as in the rural districts of the registration states (1,454.8).

In comparison with 1890 the figures show a decrease in the mortality from this class of diseases in infants under 1 year of age and children under 5 years of age amounting, for the former, to 1,265.6 per 100,000, and to 386.9 per 100,000 of all children under 5. In the age groups 45 to 64 and 65 years of age and over, however, there was an increase in the mortality from diseases of the nervous system amounting to 22.7 per 100,000 of those 45 to 64 years old, and to 172.9 per 100,000 of those 65 years of age and over.

The combined relations of age and race to the death rates from diseases of the nervous system are indicated in the following table, for the registration area, giving the death rates during the census year in each of six

age groups, per 100,000 population of corresponding ages, by color, and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 1.	Under 5.	5 to 14.	15 to 44.	45 to 64.	65 and over.
White	2,002.1	625.3	42.6	55.3	302.3	1,493.3
Colored	5,461.3	1,538.0	84.6	87.2	455.9	1,521.4
Mothers born in—						
United States	1,795.8	562.3	40.8	47.4	243.1	1,309.1
Ireland	1,853.2	615.1	48.8	64.9	401.8	1,422.6
Germany	2,129.5	611.5	33.2	48.4	259.0	1,195.6
England and Wales	1,762.0	525.5	34.2	47.1	275.6	1,522.2
Canada	1,756.2	594.0	42.7	40.0	207.5	1,098.9
Scandinavia	1,414.9	448.3	28.6	35.6	176.9	833.8
Scotland	1,352.2	474.9	14.1	53.0	269.1	1,402.5
Italy	1,586.1	634.6	57.4	40.9	205.6	888.8
France	2,050.1	764.4	48.1	49.6	237.1	1,462.1
Hungary	1,326.8	428.6	16.4	25.7	159.2	1,404.5
Bohemia	2,606.7	754.8	30.7	61.2	260.1	656.2
Russia	1,310.2	419.9	23.6	32.9	186.6	1,589.8
Poland	1,529.6	433.8	23.0	26.9	100.0	364.8
Other foreign	2,082.7	698.6	38.0	38.1	273.0	1,182.6

It will be seen from this table that the rates due to this class of diseases in white infants under 1 year of age were highest in those whose mothers were born in Bohemia (2,606.7), in Germany (2,129.5), and in "Other foreign" countries (2,082.7); and lowest in those whose mothers were born in Russia (1,310.2), in Hungary (1,326.8), and in Scotland (1,352.2).

For all children under 5 years of age they were highest in those whose mothers were born in France (764.4), in Bohemia (754.8), and in "Other foreign" countries (698.8); and lowest in those whose mothers were born in Russia (419.9), in Hungary (428.6), and in Bohemia (433.8).

At 65 years of age and over, they were highest in those whose mothers were born in Russia (1,589.8), in England and Wales (1,522.2), and in France (1,462.1); and lowest in those whose mothers were born in Poland (364.8), in Bohemia (656.2), and in Scandinavia (833.8).

The following table shows the death rates from diseases of the nervous system in the registration area during the census year, by conjugal condition in relation to age:

DEATH RATES BY CONJUGAL CONDITION, AND AGE.

CONJUGAL CONDITION.	AGE.							
	15 years and over.		15 to 44 years.		45 to 64 years.		65 years and over.	
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.
Single	93.3	78.8	60.7	40.5	400.8	337.1	1,703.5	1,550.7
Married	224.6	142.8	61.0	51.3	285.7	243.8	1,367.9	1,175.7
Widowed	937.4	672.6	134.9	94.6	494.1	369.0	1,950.9	1,481.8

The preceding table shows that in persons 15 to 44 years of age the death rates of the married (males, 61; females, 51.3) were higher than that of the single (males, 60.7; females, 40.5), but at 45 years of age and over the rate was higher among the single than the married of both sexes.

The following table shows, for the registration area, the proportions of deaths from diseases of the nervous system at each age, per 1,000 deaths at known ages from this class of diseases, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	225.1	192.8	312.7	275.5
1 year	54.4	52.6	74.4	80.5
2 years	23.3	23.3	28.2	32.4
3 years	13.2	14.3	16.9	19.5
4 years	8.8	10.2	11.3	11.8
Under 5 years	324.8	293.2	443.5	419.7
5 to 9 years	24.5	24.0	28.1	29.7
10 to 14 years	14.9	14.0	13.7	14.3
15 to 19 years	14.4	14.2	13.7	14.5
20 to 24 years	15.2	16.0	16.2	17.1

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES—Con.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
25 to 29 years	19.7	19.9	18.9	18.6
30 to 34 years	24 3	20.5	22.9	18.7
35 to 39 years	32.0	27.2	27.7	23.4
40 to 44 years	35.4	29.0	28.0	24.9
45 to 49 years	40.9	40.2	34.7	33.3
50 to 54 years	49.1	48.2	39.2	41.4
55 to 59 years	56.4	55.6	43.2	41.8
60 to 64 years	64.9	71.1	54.1	52.7
65 to 69 years	74.8	80.0	58.2	61.2
70 to 74 years	77.1	83.8	58.8	60.7
75 to 79 years	67.6	77.2	50.7	57.0
80 to 84 years	43.1	51.9	33.2	41.9
85 to 89 years	16.0	24.0	12.4	21.5
90 to 94 years	3.9	8.0	2.3	6.4
95 years and over	1.0	2.0	0.5	1.2

The average age at death from diseases of the nervous system in the registration area in 1900 was 39.9 years. In 1890 it was 31.7 years. For those dying at 15 years of age and over, the average age was 60.2 years in 1900, and 58.9 years in 1890.

The following table shows, for each grand group in the United States, the proportions of deaths from diseases of the nervous system during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	126.7	145.6	143.7	119.4	118.5
2. Middle Atlantic Coast region	108.3	147.5	129.8	100.9	100.7
3. South Atlantic Coast region	91.9	79.3	86.1	119.3	108.6
4. Gulf Coast region	102.9	90.6	88.7	121.0	119.8
5. Northeastern hills and plateaus	136.8	144.9	139.1	124.6	129.8
6. Central Appalachian region	156.0	156.0	158.7	156.6	149.8
7. Region of the Great Northern Lakes	123.4	134.8	128.8	120.9	117.1
8. Interior plateaus	134.8	146.8	135.2	130.1	127.8
9. Southern Central Appalachian region	94.0	99.5	85.6	128.7	108.9
10. Ohio River belt	134.7	141.3	128.1	140.3	127.1
11. Southern Interior plateau	81.1	85.4	77.1	-------	-------
12. South Mississippi River belt	75.3	76.7	74.7	71.6	75.2
13. North Mississippi River belt	123.3	134.3	125.1	117.7	112.0
14. Southwest Central region	93.6	97.9	89.4	83.5	84.9
15. Central region—plains and prairies	126.9	133.3	118.0	143.7	118.7
16. Prairie region	130.1	135.3	125.0	131.1	113.0
17. Missouri River belt	118.0	123.1	109.6	124.7	114.5
18. Region of the Western plains	98.7	96.2	87.7	119.4	119.4
19. Heavily timbered region of the Northwest	127.7	130.7	125.5	126.5	124.6
20. Cordilleran region	99.6	102.3	94.4	102.8	99.7
21. Pacific Coast region	116.3	136.2	129.6	102.2	108.2

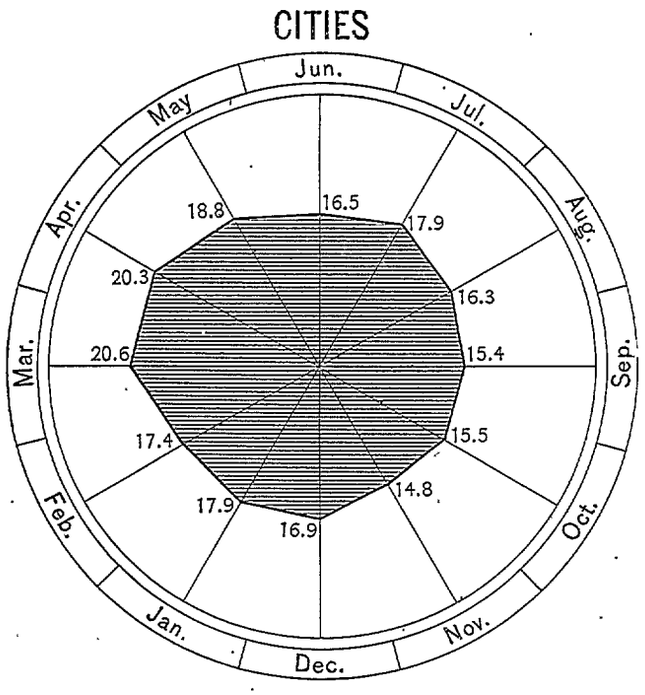
The preceding table indicates that the proportions of deaths due to diseases of the nervous system were greatest in the Central Appalachian region (156), the Interior plateau (134.8), the Ohio River belt (134.7), and the Northern hills and plateaus (136.8); and least in the South Mississippi River belt (75.3), the Southern Interior plateau (81.1), and the South Atlantic Coast region (91.9).

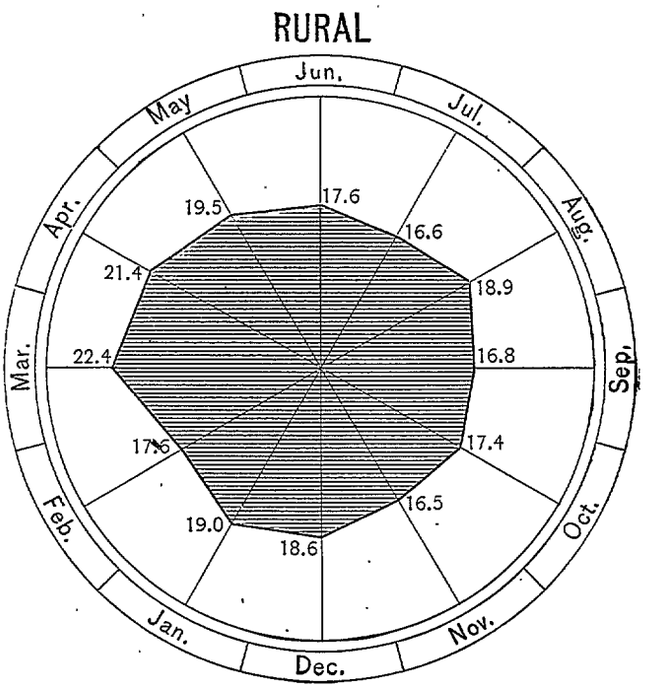
The following table shows, for the registration states, the death rates from diseases of the nervous system in each month of the census year, in the aggregate, and for the cities and rural districts:

DEATH RATES BY MONTHS.

MONTHS.	Total.	Cities.	Rural.
January	18.4	17.9	19.0
February	17.5	17.4	17.6
March	21.3	20.6	22.4
April	20.7	20.3	21.4
May	19.1	18.8	19.5
June	16.9	16.5	17.6
July	17.3	17.9	16.6
August	17.4	16.3	18.9
September	16.0	15.4	16.8
October	16.3	15.5	17.4
November	15.5	14.8	16.5
December	17.6	16.9	18.6

The death rates from diseases of the nervous system in each month in the cities and the rural districts, and the relative difference in the rates in the two areas are shown in the following diagram:





The preceding table and diagram show that in both cities and rural districts of the registration states the death rates due to diseases of the nervous system were highest in March and April, and were lowest in November.

The following table shows the comparative propor-

tions of deaths from diseases of the nervous system in each month during the census year, per 1,000 deaths in known months, in the United States, as a whole, and in the registration states:

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH.

MONTHS.	United States.	Registration states.
January	86.7	85.8
February	85.4	81.7
March	99.5	99.6
April	97.8	96.9
May	96.1	89.2
June	76.0	79.0
July	79.8	81.0
August	82.5	81.3
September	74.5	74.6
October	73.6	76.1
November	69.7	72.5
December	78.4	82.3

APOPLEXY AND PARALYSIS.

The total number of deaths reported as due to apoplexy and paralysis in the United States during the census year was 50,766, of which 27,059 were males and 23,707 were females, and the proportion of deaths from these diseases in 1,000 deaths from all known causes was 50.8. In 1890 the corresponding proportion was 37.6.

In the registration area the number of deaths reported as due to apoplexy and paralysis was 28,623, of which 14,788 were males and 13,835 were females, giving a proportion of 56.3 deaths from these diseases in 1,000 deaths from all known causes, and a death rate of 99.4 per 100,000 of population. In 1890 the death rate was 84.5.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts the death rates from apoplexy and paralysis in the census year, per 100,000 of population:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.	AGGREGATE.			MALES.			FEMALES.		
	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	110.0	98.0	127.5	111.6	98.7	129.5	108.6	97.4	125.3
Connecticut	116.1	106.4	134.1	115.4	99.7	143.6	116.9	113.0	124.2
District of Columbia	130.6	130.6	.....	150.8	150.8	.....	112.4	112.4	.....
Maine	141.6	168.8	135.9	139.2	177.1	132.1	143.9	161.4	140.0
Massachusetts	109.8	99.9	140.8	107.0	96.4	140.1	112.3	103.4	141.4
Michigan	89.2	86.3	90.5	91.5	92.5	91.0	87.2	80.2	90.2
New Hampshire	137.1	101.9	159.1	131.0	89.1	155.7	143.1	113.8	162.6
New Jersey	115.5	105.8	128.2	117.1	102.2	136.4	113.8	109.3	119.9
New York	109.1	93.0	142.7	112.6	96.1	145.6	105.6	89.8	139.5
Rhode Island	106.2	92.9	132.1	110.6	86.6	56.1	101.9	98.8	107.9
Vermont	126.8	83.7	133.6	125.0	84.3	131.0	128.8	83.1	136.4

It will be seen from this table that the death rates due to apoplexy and paralysis in the registration states were highest in Maine (141.6) and New Hampshire (137.1), and lowest in Michigan (89.2) and Rhode Island (106.2). The rate was much higher in the rural districts (127.5) than in the cities (98), and was slightly higher among males (111.6) than among females (108.6).

The following table shows, for the registration area and its subdivisions, the death rates from apoplexy and paralysis among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	95.0	74.8	105.0	86.7	120.1	50.8
Ireland	133.2	130.7	134.1	131.6	142.8	125.4
Germany	95.3	94.6	101.1	101.9	99.0	81.7
England and Wales	127.6	118.8	131.2	121.4	149.4	111.0
Canada	48.6	42.9	48.7	42.6	56.5	46.0
Scandinavia	34.4	32.6	38.5	37.1	40.5	27.4
Scotland	131.9	120.5	140.8	130.8	161.9	81.3
Italy	27.9	28.6	28.5	29.4	24.6	22.1
France	132.7	137.0	120.7	122.2	117.2	165.1
Hungary and Bohemia	38.4	40.7	35.8	39.1	15.9	43.1
Russia and Poland	21.7	23.2	22.4	24.2	8.3	19.5
Other foreign	55.5	52.7	56.5	53.4	64.0	49.5

The preceding table shows that the death rates due to these diseases in the registration area were highest among those whose mothers were born in Ireland (133.2), in France (132.7), and in Scotland (131.9); and lowest among those whose mothers were born in Russia and Poland (21.7), in Italy (27.9), and in Scandinavia (34.4).

The following table shows, for the registration area and its subdivisions, the death rates from apoplexy and paralysis during the census year in each of three age groups, per 100,000 of population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	15 TO 44.		45 TO 64.		65 AND OVER.	
	1900	1890	1900	1890	1900	1890
Total	20.1	18.9	215.2	187.7	1,189.1	1,024.8
Males	23.4	21.0	221.2	195.2	1,244.4	1,054.0
Females	16.8	16.8	209.1	180.3	1,139.7	998.7
Cities	21.0	20.0	231.6	206.0	1,209.2	1,065.5
Males	24.8	22.6	240.5	217.3	1,298.3	1,120.7
Females	17.3	17.4	222.7	194.7	1,136.6	1,020.4
States	19.4	19.3	216.0	188.8	1,208.4	1,046.6
Males	22.0	21.5	217.5	191.6	1,244.4	1,069.7
Females	16.9	17.1	214.4	186.1	1,175.7	1,025.7

DEATH RATES AT CERTAIN AGES—Continued.

REGISTRATION AREAS.	15 TO 44.		45 TO 64.		65 AND OVER.	
	1900	1890	1900	1890	1900	1890
States—Continued.						
Cities	20.8	21.8	250.3	225.7	1,275.1	1,152.7
Males	24.1	25.2	354.6	233.3	1,355.2	1,221.9
Females	17.7	18.5	246:1	218.5	1,212.8	1,098.4
Rural	17.1	14.9	176.4	143.1	1,159.6	969.0
Males	18.7	15.2	176.7	141.0	1,174.0	972.2
Females	15.4	14.6	176.0	145.1	1,144.9	965.9
Cities in other states	21.2	18.4	213.8	185.6	1,143.5	965.4
Males	25.5	20.3	227.6	201.6	1,244.4	1,009.9
Females	16.8	16.4	199.5	168.8	1,057.5	927.4

The preceding table shows that the mortality from apoplexy and paralysis was highest in persons 65 years of age and over (1,189.1), and that in this age group it was higher in the cities of the registration states (1,275.1) and in the rural districts of the registration states (1,159.6) than in the cities in the nonregistration states (1,143.5). It was higher in males than in females in each age group and in each area.

In comparison with 1890 the figures show an increase in the death rates due to apoplexy and paralysis amounting to 27.5 per 100,000 of those 45 to 64 years old, and to 164.3 per 100,000 of those 65 years of age and over.

The combined relations of age and race to the death rates from apoplexy and paralysis are indicated for the registration area, in the following table, giving the death rates during the census year in each of three age groups, per 100,000 of population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	15 to 44.	45 to 64.	65 and over.

Colored	32.2	328.8	1,275.3
Mothers born in—			
United States	16.0	169.6	1,043.2
Ireland	26.8	300.8	1,139.9
Germany	20.1	187.8	964.0
England and Wales	16.7	199.2	1,215.6
Canada	13.0	141.4	917.9
Scandinavia	12.0	125.0	664.8
Scotland	21.7	183.8	1,175.4
Italy	11.2	123.8	744.1

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS—Continued.

COLOR AND BIRTHPLACES OF MOTHERS.	15 to 44.	45 to 64.	65 and over.
Mothers born in—Continued.			
France	23.9	145.6	1,211.0
Hungary	10.6	136.4	1,123.6
Bohemia	22.0	197.7	504.8
Russia	11.8	134.8	1,402.7
Poland	8.2	61.5	222.9
Other foreign	12.0	197.7	913.5

The preceding table shows that the death rates due to apoplexy and paralysis in white persons 65 years of age and over, were highest in those whose mothers were born in Russia (1,402.7), in France (1,211), and in England and Wales (1,215.6); and lowest in those whose mothers were born in Poland (222.9), in Bohemia (504.8), and in Scandinavia (664.8).

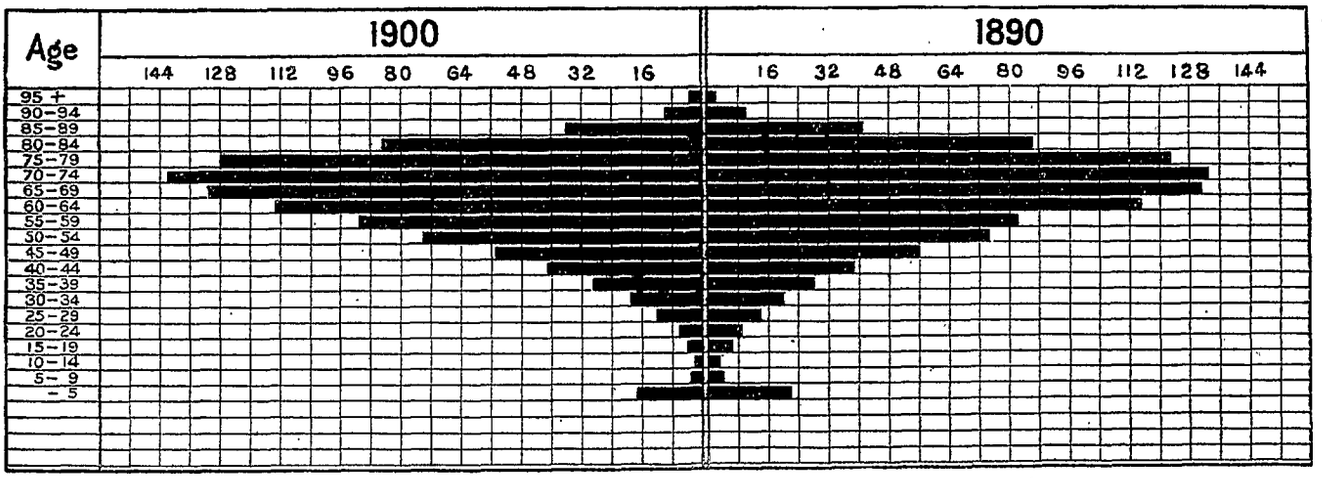
The following table shows, for the registration area, the proportions of deaths from apoplexy and paralysis at each specified age, per 1,000 deaths at known ages from these diseases, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 5 years	18.0	16.0	21.5	21.8
5 to 9 years	3.3	2.5	3.5	5.4
10 to 14 years	2.5	1.8	3.5	3.2
15 to 19 years	4.3	4.3	7.3	5.1
20 to 24 years	6.0	6.8	10.1	8.4
25 to 29 years	12.7	11.1	14.9	13.1
30 to 34 years	23.1	14.6	22.8	17.7
35 to 39 years	34.3	23.3	31.3	23.7
40 to 44 years	47.2	33.8	40.8	36.3
45 to 49 years	56.9	53.5	58.5	52.6
50 to 54 years	76.6	70.4	73.1	76.6
55 to 59 years	93.2	89.0	85.8	78.3
60 to 64 years	111.6	114.2	119.4	111.2
65 to 69 years	129.4	132.0	133.6	127.6
70 to 74 years	139.4	143.7	134.8	131.1
75 to 79 years	123.3	132.9	120.5	125.1
80 to 84 years	80.3	90.2	79.6	94.8
85 to 89 years	29.3	42.3	31.7	50.4
90 to 94 years	6.7	14.0	6.0	14.9
95 years and over	1.9	3.6	1.3	2.7

The average age at death from apoplexy and paralysis in the registration area in 1900 was 63.2 years. In 1890 it was 62.5 years.

The comparative proportions of deaths from apoplexy and paralysis at each age in the registration area in 1900 and 1890 are shown in the following diagram:



The following table shows, for each grand group in the United States, the proportions of deaths from apoplexy and paralysis during the census year per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	65.6	83.0	86.3	53.1	61.8
2. Middle Atlantic Coast region	51.9	76.2	68.3	45.2	48.7
3. South Atlantic Coast region	37.6	28.7	39.7	46.1	45.4
4. Gulf Coast region	31.1	27.8	28.6	32.3	38.4
5. Northeastern hills and plateaus	72.3	80.5	79.9	52.3	63.5
6. Central Appalachian region	71.0	74.5	80.8	54.4	63.0
7. Region of the Great Northern lakes	48.7	64.4	66.1	40.0	41.3
8. Interior plateau	64.8	77.1	75.9	51.9	57.5
9. Southern Central Appalachian region	33.2	32.5	31.5	64.8	42.3
10. Ohio River belt	53.8	58.3	57.0	48.3	48.4
11. Southern Interior plateau	30.8	32.6	29.3	.....	.....
12. South Mississippi River belt	15.8	14.3	14.4	26.3	17.7
13. North Mississippi River belt	46.7	55.4	47.3	42.2	38.9
14. Southwest Central region	20.9	22.1	19.0	26.3	28.2
15. Central region—plains and prairies	56.7	60.9	54.2	54.1	50.8
16. Prairie region	58.4	61.0	55.3	61.5	52.5
17. Missouri River belt	45.5	49.6	37.3	49.5	46.6
18. Region of the Western plains	31.3	29.4	26.7	43.9	37.7
19. Heavily timbered region of the Northwest	65.5	65.7	69.1	53.9	65.6
20. Cordilleran region	42.1	46.0	33.7	48.9	42.7
21. Pacific Coast region	57.8	70.4	62.4	50.2	52.8

The preceding table indicates that the proportions of deaths due to apoplexy and paralysis were greatest in the Northeastern hills and plateaus (72.3), the Central Appalachian region (71), the North Atlantic coast region (65.6), and the heavily timbered region of the Northwest (65.5); and least in the South Mississippi River belt (15.8), the Gulf Coast region (31.1), and the Southwest Central region (20.9).

TETANUS AND TRISMUS NASCENTIUM.

The total number of deaths reported as due to tetanus and trismus nascentium in the United States during the census year was 2,259, of which 1,516 were males and 743 were females, and the proportion of deaths from these diseases in 1,000 deaths from all known causes was 2.3. In 1890 the corresponding proportion was 2.4.

In the registration area the number of deaths reported as due to these diseases was 1,318, of which 907 were males and 411 were females, giving a proportion of 2.6 deaths from tetanus and trismus nascentium in 1,000 deaths from all known causes, and a death rate of 4.6 per 100,000 of population. In 1890 the death rate was 6.5.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from tetanus and trismus nascentium in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES.		
		Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.

	1890	.....	.....	.....	.....	.....	.....	.....	.....	.....

[1] Nonregistration in 1890.

It will be seen from this table that the death rate from tetanus and trismus nascentium in the registration states was much higher among males (3.6) than among females (1.2), higher in the cities (2.8) than in the rural districts (1.9), and highest of all among males in the cities of Vermont (8.9) and New Jersey (8.7).

The following table shows, for the registration area and its subdivisions, the death rates from tetanus and trismus nascentium among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	3.1	4.1	2.2	2.7	1.8	7.0
Ireland	2.5	2.5	2.5	2.5	2.4	2.6
Germany	2.6	2.5	2.4	2.3	3.0	2.9
England and Wales	2.0	2.1	2.0	2.2	1.5	1.9
Canada	1.0	1.1	1.0	1.1	0.9	1.2
Scandinavia	2.4	2.4	2.2	2.0	2.7	2.8
Scotland	0.7	1.0	0.8	1.2	.....	.....

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
Italy	6.4	6.8	4.7	4.8	4.3	24.5
France	3.0	2.5	2.7	1.9	4.7	3.7
Hungary and Bohemia	3.4	3.8	3.8	4.4	.....	2.8
Russia and Poland	4.9	5.2	3.9	4.1	2.8	9.4
Other foreign	3.2	4.0	2.7	3.5	0.7	5.7

The preceding table shows that the death rates due to these diseases in the registration area were highest among those whose mothers were born in Italy (6.4), in Russia and Poland (4.9), and in Hungary and Bohemia (3.4); and lowest among those whose mothers were born in Scotland (0.7), in Canada (1), and in England and Wales (2).

The following table shows, for the registration area and its subdivisions, the death rates from tetanus and trismus nascentium during the census year in each of five age groups, per 100,000 of population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 1.		UNDER 5.	5 TO 14.		15 TO 44.		45 AND OVER.	
	1900	1890	1900	1900	1890	1900	1890	1900	1890
Total	117.7	248.0	25.9	3.7	1.7	1.7	1.0	1.8	1.4
Males	139.6	284.1	31.2	6.8	2.8	2.5	1.4	2.7	2.2
Females	95.3	211.0	20.6	0.7	0.6	0.9	0.7	0.9	0.6
Cities	143.9	298.3	31.6	4.3	2.0	1.9	1.2	2.0	1.6
Males	170.9	342.0	38.0	7.8	3.4	2.9	1.6	2.9	2.6

States	44.5	99.7	10.3	2.8	1.0	1.1	0.7	1.4	1.2
Males	53.3	115.9	12.5	5.3	1.7	1.8	1.0	2.1	1.9
Females	35.5	83.0	8.1	0.4	0.2	0.4	0.4	0.7	0.5
Cities	52.8	127.7	12.1	3.4	1.1	1.2	0.8	1.4	1.3
Males	63.8	149.5	14.6	6.5	2.1	2.2	1.3	1.8	2.3
Females	41.7	105.4	9.5	0.3	.....	0.3	0.3	0.9	0.4
Rural	30.7	47.4	7.5	2.1	0.8	0.9	0.5	1.4	1.0
Males	35.9	53.6	9.1	3.7	1.1	1.1	0.5	2.3	1.5
Females	25.4	40.9	5.8	0.5	0.5	0.6	0.5	0.5	0.5
Cities in other states	234.5	447.4	50.4	5.0	2.9	2.5	1.6	2.6	2.0
Males	277.0	570.1	60.5	8.9	4.5	3.5	2.0	3.9	2.9
Females	191.1	383.1	40.2	1.2	1.3	1.6	1.2	1.3	0.8

The preceding table shows that the highest death rate from tetanus and trismus nascentium occurred in infants under 1 year of age. Above 5 years the death rate from these diseases was insignificant. In infants under 1 year of age the death rate in the cities in the non-registration states (234.5) was excessively high, being more than four times the rate in the cities in the registration states (52.8), and more than seven times the rate in the rural districts of the registration states (30.7).

In comparison with 1890 the death rate from these diseases under 1 year of age shows a great decrease, the aggregate in 1900 (117.7) being less than half the aggregate rate at this age in 1890 (248).

The combined relations of age and race to the death rates from tetanus and trismus nascentium are indicated, for the registration area, in the following table, giving the death rates during the census year in each of five age groups, per 100,000 of population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 1.	Under 5.	5 to 14.	15 to 44.	45 and over.
White	77.6	17.4	3.4	1.5	1.6
Colored	1,233.4	262.7	11.7	5.3	6.9
Mothers born in—					
United States	59.8	13.5	3.6	1.1	0.8
Ireland	49.3	10.9	5.7	1.6	0.9
Germany	85.1	17.6	2.2	1.2	1.7
England and Wales	34.2	6.7	3.0	1.4	1.2
Canada	6.4	2.0	0.7	0.8	1.6
Scandinavia	15.8	6.5	2.9	1.5	1.6
Scotland	30.7	6.2	.....	.....	1.3
Italy	58.7	17.2	5.2	2.9	10.0
France	113.9	22.5	.....	.....	6.5

Poland	86.2	20.8	2.3	2.3	.....
Other foreign	73.5	16.9	2.8	1.0	.....

The preceding table shows that the death rates due to tetanus and trismus nascentium in white infants under 1 year of age were highest in those whose mothers were born in France (113.9), in Russia (89.6), and in Poland (86.2), and lowest in those whose mothers were born in Canada (6.4), in Scandinavia (15.8), and in Scotland (30.7).

The following table shows, for the registration area, the proportions of deaths from tetanus and trismus nascentium at each specified age, per 1,000 deaths at known ages from these diseases, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	480.7	710.5	780.2	874.5
1 year	10.0	12.1	5.1	4.0
2 years	5.5	.....	2.6	.....
3 years	7.7	4.9	1.3	.....
4 years	6.6	4.9	1.3	2.0
Under 5 years	510.5	732.4	790.5	880.5
5 to 9 years	66.3	17.0	33.4	13.9
10 to 14 years	138.1	29.2	34.7	10.0
15 to 19 years	57.5	19.5	18.0	8.0
20 to 24 years	34.2	21.9	14.1	15.9
25 to 29 years	37.6	21.9	19.3	10.0
30 to 34 years	36.5	34.1	11.6	11.9
35 to 39 years	16.6	31.6	15.4	15.9
40 to 44 years	19.9	29.2	10.3	9.9
45 to 49 years	21.0	9.7	15.4	2.0
50 to 54 years	18.8	4.9	9.0	4.0
55 to 59 years	15.5	19.5	9.0	10.0
60 to 64 years	7.7	21.9	10.3	.....
65 to 69 years	7.7	2.4	7.7	.....
70 to 74 years	6.6	2.4	1.3	4.0
75 years and over	5.5	2.4	.....	4.0

The average age at death from tetanus and trismus nascentium in the registration area in 1900 was 11.7 years. In 1890 it was 5.6 years. For those dying at

15 years of age and over, the average age was 36.8 years in 1900, and 38.9 years in 1890.

CONVULSIONS.

The total number of deaths reported as due to convulsions in the United States during the census year was 15,505, of which 8,548 were males, and 6,957 were females, and the proportion of deaths from this disease in 1,000 deaths from all known causes was 15.5. In 1890 the corresponding proportion was 19.7.

In the registration area the number of deaths reported as due to convulsions was 9,522, of which 5,275 were males, and 4,247 were females, giving a proportion of 18.8 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 33.1 per 100,000 of population. In 1890 the death rate was 56.2.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from convulsions in the census year, per 100,000 of population:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.	AGGREGATE.			MALES.			FEMALES.		
	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities	Rural.
Total	24.5	28.4	18.9	27.4	32.0	21.0	21.7	24.9	16.8
Connecticut	22.0	27.2	12.5	24.9	32.8	10.5	19.1	21.6	14.6
District of Columbia	48.1	48.1	.....	56.0	56.0	.....	40.9	40.9	.....
Maine	16.6	20.3	15.8	19.1	23.0	18.3	14.0	17.8	13.1
Massachusetts	24.8	25.7	22.2	28.5	29.9	24.2	21.4	21.7	20.1
Michigan	23.5	36.0	18.3	25.8	39.6	20.4	21.0	32.5	15.9
New Hampshire	25.3	41.5	15.0	28.2	48.5	16.3	22.3	35.1	13.8
New Jersey	47.0	56.4	34.7	51.7	60.1	40.9	42.3	52.7	28.3
New York	20.1	22.2	15.9	22.1	24.7	16.9	18.1	19.7	14.9
Rhode Island	10.7	12.7	6.9	13.8	18.2	5.5	7.8	7.5	8.3
Vermont	19.5	23.6	18.8	25.1	35.5	23.6	13.7	12.4	13.8

This table shows that the death rates from convulsions in the registration states were highest in the District of Columbia (48.1) and New Jersey (47), and lowest in Rhode Island (10.7) and Maine (16.6). It was higher in the cities (28.4) than in the rural districts (18.9), being highest of all in the cities in New Jersey (56.4) and lowest in the rural districts in Rhode Island (6.9).

The following table shows, for the registration area and its subdivisions, the death rates from convulsions among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	29.3	38.0	24.8	32.4	18.5	49.2
Ireland	16.5	17.9	16.1	17.7	10.3	19.2
Germany	23.9	25.4	18.0	18.4	16.6	37.8
England and Wales	17.0	21.1	14.5	18.7	6.8	28.6
Canada	25.3	30.0	25.8	31.5	18.6	17.4
Scandinavia	26.1	25.2	25.9	24.3	28.9	26.3
Scotland	13.3	15.9	13.6	16.9	6.6	12.0
Italy	39.2	41.5	38.9	41.5	25.9	41.7
France	15.0	12.7	15.1	11.6	23.4	14.6

Other foreign	49.4	52.4	44.4	46.0	40.3	77.1

The preceding table shows that the death rates due to convulsions, in the registration area, were highest among those whose mothers were born in Hungary and Bohemia (57.1), "Other foreign" countries (49.4), and in Italy (39.2); and lowest among those whose mothers were born in Scotland (13.3), in France (15), and in Ireland (16.5).

The following table shows, for the registration area and its subdivisions, the death rates from convulsions during the census year in each of two age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 5.		5 AND OVER.	
	1900	1890	1900	1890
Total	301.7	513.9	2.3	4.0
Males	338.7	558.6	1.9	3.6
Females	264.3	468.2	2.8	4.4
Cities	340.3	587.1	2.5	4.0
Males	379.6	642.8	2.1	3.6
Females	300.6	530.3	2.9	4.3
States	221.4	392.8	1.9	3.5
Males	250.9	419.9	1.4	3.1
Females	191.4	365.3	2.3	3.8
Cities	249.4	480.0	1.9	3.1
Males	278.7	520.4	1.6	2.9
Females	219.7	439.1	2.2	3.2
Rural	177.1	243.2	1.8	4.0
Males	207.1	248.8	1.1	3.3
Females	146.6	237.4	2.5	4.7
Cities in other states	427.7	679.6	3.1	4.8
Males	476.4	747.8	2.6	4.3
Females	378.4	609.7	3.6	5.3

The preceding table shows that the death rate from convulsions was highest in children under 5 years of age, and that at this age it was nearly twice as high in the cities in the nonregistration states (427.7) as in the cities in the registration states (249.4). In the rural districts of the registration states it was 177.1.

In comparison with 1890, the death rate from convulsions was very much lower in all of the areas, the greatest decrease occurring in the cities in the registration states, where the rate under 5 years declined from 480 in 1890 to 249.4 in 1900.

The combined relations of age and race to the death rates from convulsions are indicated in the following table, for the registration area, giving the death rates during the census year in each of two age groups, per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 5.	5 and over.
White	282.9	2.2
Colored	823.2	4.9
Mothers born in—		
United States	230.2	1.9
Ireland	240.2	2.4
Germany	321.0	1.4
England and Wales	230.7	2.3
Canada	210.7	2.3
Scandinavia	194.9	1.9
Scotland	203.5	1.5
Italy	226.1	2.6
France	337.2	.....
Hungary	265.3	3.0
Bohemia	531.2	4.2
Russia	152.8	1.2
Poland	286.5	2.4
Other foreign	376.8	2.0

The preceding table shows that the death rates from convulsions in white children under 5 years of age were highest in those whose mothers were born in Bohemia (531.2), in "Other foreign" countries (376.8), and in France (337.2); and lowest in those whose mothers were born in Russia (152.8), in Scandinavia (194.9), and in Scotland (203.5).

The following table shows, for the registration area, the proportions of deaths from convulsions at each specified age, per 1,000 deaths at known ages from this disease, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	781.3	715.6	751.0	698.1
1 year	106.3	118.1	119.9	133.6
2 years	39.5	41.3	43.6	50.1
3 years	16.9	24.8	22.5	26.2
4 years	10.5	13.7	10.9	15.1
Under 5 years	954.5	913.5	947.9	923.1
5 to 9 years	15.4	20.5	18.9	21.9
10 years and over	30.1	66.0	33.2	55.0

This table shows that of the total deaths from convulsions in the registration area, more than 70 per cent occurred in children under 1 year of age, and more than 90 per cent in children under 5 years of age.

The average age at death from convulsions in the registration area in 1900 was 2.5 years, being the same as in 1890. For those dying at 15 years of age and over, the average age was 40 years in 1900, and 41.3 years in 1890.

The following table shows, for each grand group in the United States, the proportions of deaths from convulsions during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	12.9	10.7	9.7	16.0	12.1
2. Middle Atlantic Coast region	15.7	17.8	15.2	16.1	14.8
3. South Atlantic Coast region	13.6	11.2	12.1	19.3	17.9
4. Gulf Coast region	11.1	8.1	11.9	11.8	13.7
5. Northeastern hills and plateaus	11.4	11.1	8.3	16.8	11.8
6. Central Appalachian region	32.3	28.9	26.8	42.9	38.6
7. Region of the Great Northern lakes	27.1	20.2	18.6	31.3	30.1
8. Interior plateau	22.0	17.2	14.7	27.8	26.5
9. Southern Central Appalachian region	6.7	6.7	6.1	10.5	16.2
10. Ohio River belt	16.5	12.2	11.8	23.0	22.6
11. Southern Interior plateau	9.1	9.1	9.1	.....	.....
12. South Mississippi River belt	10.8	9.8	12.4	7.4	13.1
13. North Mississippi River belt	19.6	15.4	17.0	23.7	23.6
14. Southwest Central region	7.1	6.9	7.1	12.7	11.1
15. Central region—plains and prairies	11.6	11.5	9.3	19.6	14.9
16. Prairie region	13.7	14.1	13.0	14.8	14.1
17. Missouri River belt	13.6	13.1	11.7	13.7	17.3
18. Region of the Western plains	9.9	7.5	7.3	17.2	19.3
19. Heavily timbered region of the Northwest	13.8	14.6	11.8	16.4	14.4
20. Cordilleran region	9.5	8.8	8.7	13.8	16.2
21. Pacific Coast region	7.7	7.6	6.9	7.8	8.4

The preceding table indicates that the proportions of deaths due to convulsions were greatest in the Central Appalachian region, the region of the Great Northern lakes, and the interior plateau, and least in the Southwest Central region, Southern Central Appalachian region, and Pacific Coast region.

The geographical distribution of deaths from convulsions under 5 years of age, per 1,000 deaths from known causes under 5 years of age, by state groups, is shown by plate No. 22.

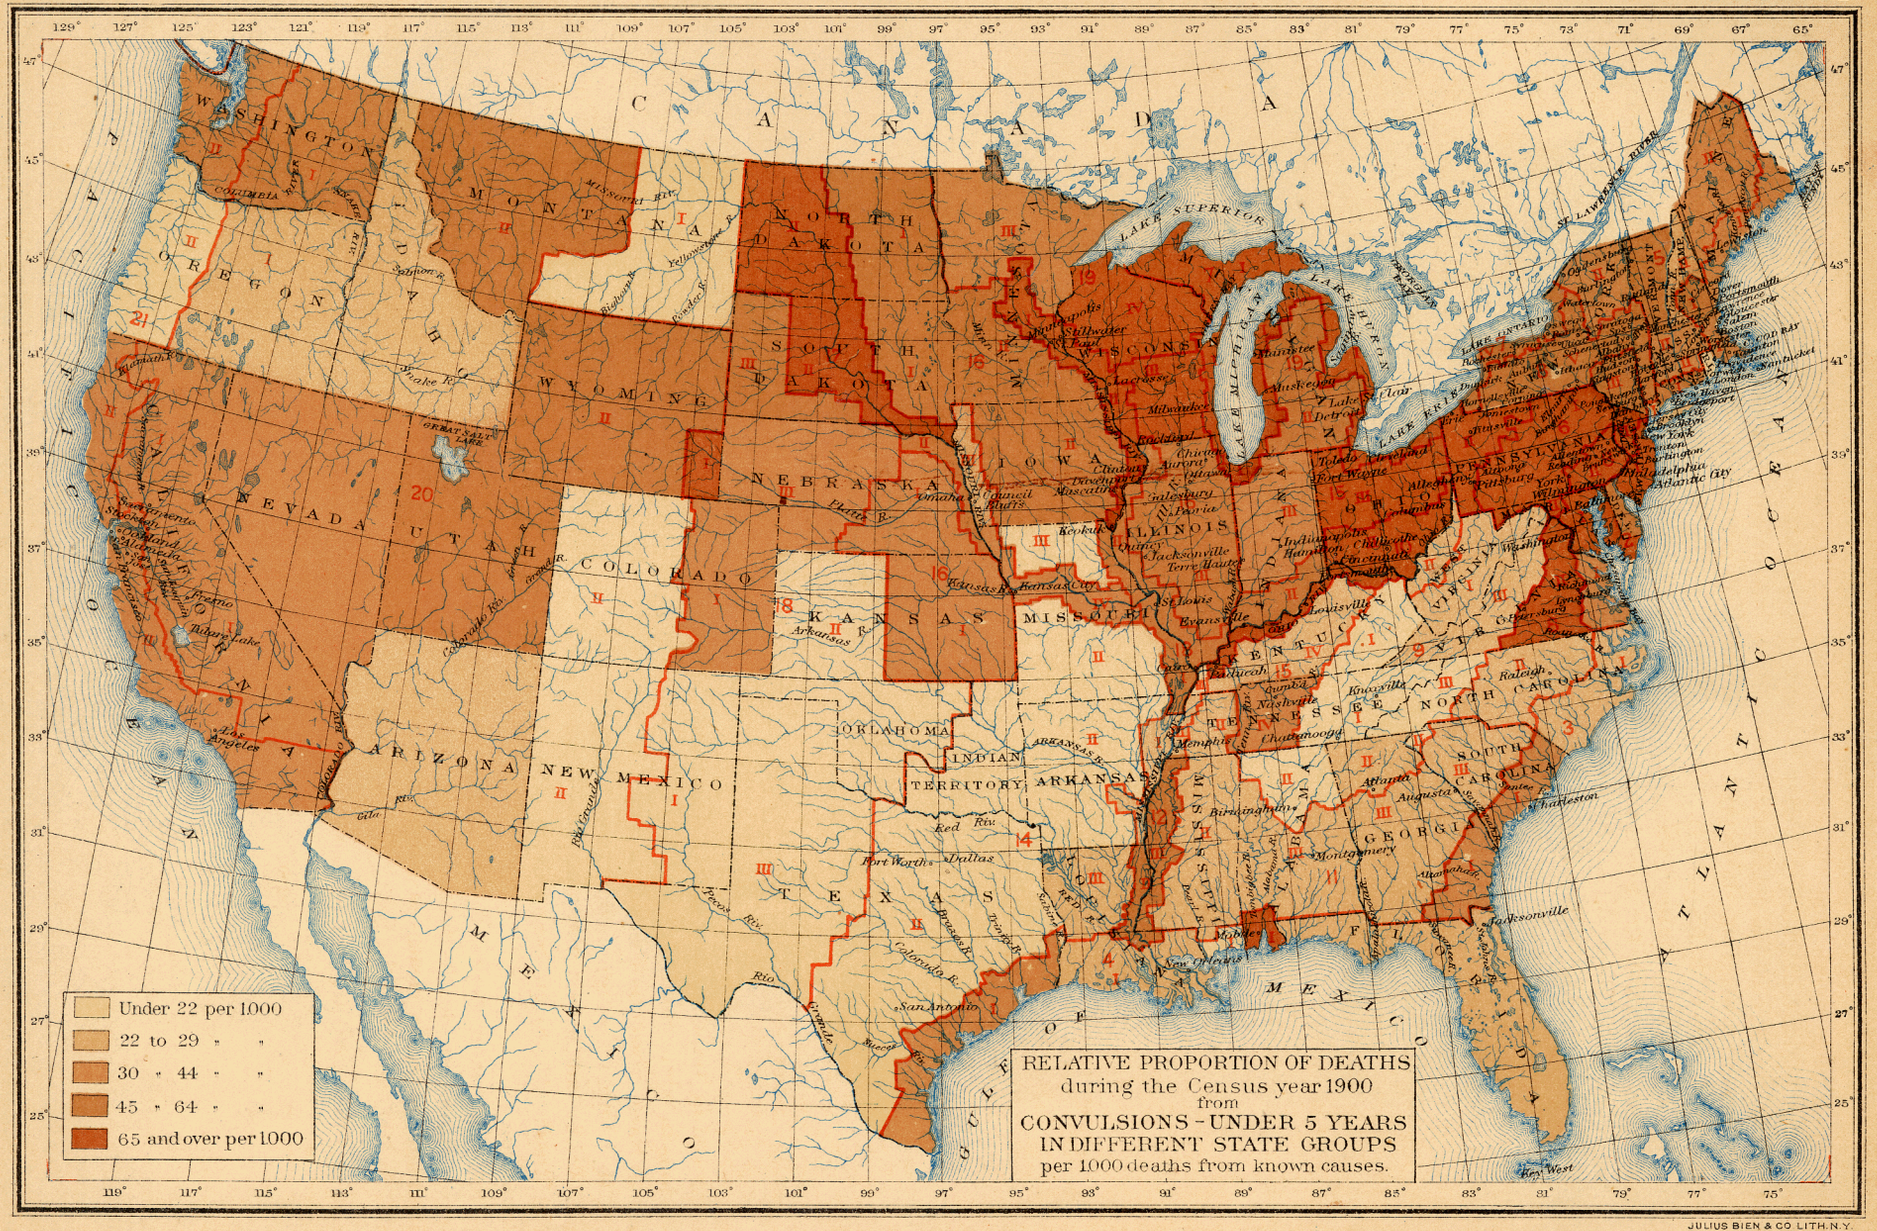
DISEASES OF THE CIRCULATORY SYSTEM.

The total number of deaths reported as due to diseases of this class in the United States during the census year was 75,791, of which 40,804 were males and 34,987 were females, and the proportion of deaths from this class of diseases in 1,000 deaths from all known causes was 75.9. In 1890 the corresponding proportion was 58.

In the registration area the number of deaths reported as due to this class of diseases was 43,233, of which

Twelfth Census of the United States
William R. Merriam, Director.

PLATE No. 22



JULIUS BIEN & CO LITH. N.Y.

22,884 were males and 20,349 were females, giving a proportion of 85.1 deaths from these diseases in 1,000 deaths from all known causes, and a death rate of 150.1 per 100,000 of population. In 1890 the death rate was 134.2.

In England and Wales the death rate due to diseases of the circulatory system for the year 1899 was 170.8 per 100,000 of population (males, 167.3; females, 173.1).

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from diseases of the circulatory system in the census year, per 100,000 of population:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.	AGGREGATE.			MALES.			FEMALES.		
	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	154.6	148.3	163.6	161.4	150.0	177.2	147.8	146.6	149.5
Connecticut	142.3	132.8	160.0	139.5	121.6	172.1	145.1	143.8	147.7
District of Columbia	216.7	216.7	.....	237.9	237.9	.....	197.7	197.7	.....
Maine	182.4	185.8	181.8	201.7	226.6	196.9	162.8	148.5	165.9
Massachusetts	170.5	160.3	202.9	177.4	160.2	230.8	164.0	160.5	175.4
Michigan	129.0	125.2	130.6	144.8	140.0	146.6	112.3	110.7	113.0
New Hampshire	194.1	165.5	212.1	211.3	180.9	229.3	177.0	151.3	194.2
New Jersey	149.2	140.7	160.4	152.2	142.0	165.3	146.3	139.5	155.4
New York	150.6	144.6	163.1	154.7	145.1	174.0	146.5	144.1	151.9
Rhode Island	152.1	145.5	165.1	152.5	143.3	169.8	151.8	147.5	160.5
Vermont	198.5	158.7	204.7	214.1	155.2	222.8	182.2	162.0	185.5

This table shows that the death rates from diseases of the circulatory system in the registration states were highest in the District of Columbia (216.7) and Vermont (198.5), and lowest in Michigan (129) and Connecticut (142.3). The rate was somewhat higher in the rural districts (163.6) than in the cities (148.3). Excluding the District of Columbia, the highest death rate from these diseases in the cities was in Maine (185.8) and the lowest, in Michigan (125.2). In the rural districts the highest death rate occurred in New Hampshire (212.1) and the lowest, in Michigan (130.6).

The following table shows, for the registration area and its subdivisions, the death rates from diseases of the circulatory system among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	126.8	109.4	135.5	119.8	148.5	88.4
Ireland	205.5	206.3	206.0	207.0	202.5	201.7
Germany	144.9	143.8	148.4	147.9	149.9	136.7

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
England and Wales	165.7	155.6	167.6	155.2	190.8	157.0
Canada	90.4	89.8	91.7	92.0	91.2	70.9
Scandinavia	68.8	72.5	70.6	78.8	55.9	65.5
Scotland	171.8	155.7	174.7	155.8	214.4	155.5
Italy	76.4	82.5	76.2	82.9	41.8	78.6
France	176.7	175.1	161.9	153.2	182.8	216.4
Hungary and Bohemia	66.4	71.5	59.3	66.6	15.9	79.4
Russia and Poland	55.4	56.3	57.5	58.9	47.0	46.2
Other foreign	102.7	107.6	97.2	101.0	87.8	133.5

The preceding table shows that the death rates due to diseases of the circulatory system in the registration area were highest among those whose mothers were born in Ireland (205.5), in France (176.7), and in Scotland (171.8); and lowest among those whose mothers were born in Russia and Poland (55.4), in Hungary and Bohemia (66.4), and in Scandinavia (68.8).

The following table shows, for the registration area and its subdivisions, the death rates from diseases of the circulatory system during the census year, in each of six age groups, per 100,000 of population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 1.		UNDER 5.		5 TO 14.		15 TO 44.		45 TO 64		65 AND OVER	
	1900	1890	1900	1890	1900	1890	1900	1890	1900	1890	1900	1890
Total	363.0	458.3	90.3	111.2	27.5	27.4	59.6	59.4	310.3	274.2	1,322.8	1,068.0
Males	415.2	511.5	102.6	124.2	23.2	25.0	59.3	60.8	336.0	294.5	1,502.1	1,184.1

Cities	344.1	526.1	88.6	129.0	33.1	33.6	63.8	68.2	336.6	320.8	1,387.6	1,205.0
Males	367.9	589.1	94.4	145.0	27.3	29.5	62.2	70.2	358.8	337.2	1,546.6	1,358.9
Females	319.9	461.6	82.8	112.7	39.0	37.7	65.3	66.4	315.4	305.3	1,263.8	1,084.1
Rural	402.5	400.3	93.0	92.9	15.0	17.8	39.7	39.0	233.5	201.5	1,264.2	967.1
Males	468.2	456.6	107.5	106.4	12.3	20.1	34.1	34.2	250.7	212.8	1,447.5	1,056.1
Females	335.4	342.0	78.2	79.0	17.7	15.4	45.6	43.8	215.4	190.5	1,077.2	877.4
Cities in other states	358.0	426.3	90.4	105.2	30.4	27.6	66.6	62.0	348.6	286.7	1,338.0	1,069.2
Males	430.1	469.5	107.4	115.4	26.4	24.0	71.0	66.5	385.8	318.7	1,541.4	1,211.3
Females	284.5	381.9	73.1	94.8	34.3	31.3	62.3	57.3	309.8	253.3	1,164.4	947.7

The preceding table shows that the death rates from this class of diseases were highest in infants under 1 year of age, and in persons 65 years of age and over. At 45 to 64 years the death rate (310.3) was somewhat less than the death rate under 1 year of age (363).

In the age group under 1 year the highest mortality from this class of diseases occurred in the rural districts in the registration states (402.5), and the lowest occurred in the cities in the same states (344.1).

At 45 to 64 years of age the death rate from these diseases was highest in the cities in the nonregistration states (348.6), and lowest in the rural portions of the registration states (233.5).

In the age group 65 years of age and over, it was highest in the cities in the registration states (1,387.6), and lowest in the rural districts of the same states (1,264.2).

In the age groups under 5 years and above 45 years, the death rate of males from this class of diseases exceeded that of females, but in the age groups between 5 and 45, the mortality of females was greater than that of males.

In comparison with 1890 the figures show a decrease in the death rate from these causes at each age up to 5 years, and an increase in the rates at each age above 5.

The combined relations of age and race to the death rates from diseases of the circulatory system are indicated for the registration area in the following table, giving the death rates during the census year in each of six age groups, per 100,000 of population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 1.	Under 5.	5 to 14.	15 to 44.	45 to 64.	65 and over.
White	364.6	90.1	27.5	56.2	299.1	1,311.8
Colored	317.7	96.7	28.4	124.3	585.4	1,726.1
Mothers born in—						
United States	401.0	95.4	23.2	40.3	213.7	1,071.1
Ireland	362.5	93.0	32.1	82.6	414.0	1,395.5
Germany	268.9	65.0	28.9	53.2	265.5	1,224.3
England and Wales	376.4	84.2	38.0	45.9	258.3	1,290.0
Canada	358.3	85.0	22.9	42.6	213.3	1,202.0
Scandinavia	213.4	55.2	26.5	33.8	209.6	856.3
Scotland	276.6	61.7	11.3	55.7	269.1	1,226.5
Italy	235.0	64.8	29.2	50.8	258.7	764.8
France	227.8	45.0	48.1	60.7	232.9	1,181.5
Hungary	235.4	61.2	20.5	36.3	193.3	936.3
Bohemia	89.9	46.6	20.4	41.6	187.3	1,161.0
Russia	193.1	65.3	31.8	50.1	269.5	1,184.5
Poland	114.9	33.6	8.0	22.3	115.4	547.2
Other foreign	251.1	68.9	27.5	52.0	265.2	1,211.0

The preceding table shows that the death rates due to diseases of the circulatory system in white children under 5 years of age were highest in those whose mothers were born in the United States (95.4), in Ireland (93), and in Canada (85), and lowest in those whose mothers were born in Poland (33.6), in France (45), and in Bohemia (46.6).

At 65 years of age and over they were highest in those whose mothers were born in Ireland (1,395.5), in England and Wales (1,290), and in Scotland (1,226.5); and lowest in those whose mothers were born in Poland (547.2), in Scandinavia (856.3), and in Italy (764.8).

The following table shows the death rates from diseases of the circulatory system in the registration area during the census year, by conjugal condition in relation to age:

DEATH RATES BY CONJUGAL CONDITION, AND AGE.

CONJUGAL CONDITION.	AGE.							
	15 years and over.		15 to 44 years.		45 to 64 years.		65 years and over.	
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.
Single	91.0	72.9	55.4	44.1	444.7	273.6	1,735.0	1,154.7
Married	216.3	147.3	56.5	67.5	282.9	245.8	1,302.1	979.1
Widowed	909.1	591.0	163.0	104.6	560.7	365.2	1,778.4	1,231.8

The preceding table shows that in persons 15 to 44 years of age the death rates of the married (males, 56.5; females, 67.5) were higher than that of the single (males, 55.4; females, 44.1). At 45 to 64 years they were higher in the single (males, 444.7; females, 273.6) than in the married (males, 282.9; females, 245.8). The rates were highest in persons 65 years of age and over, and in this group they were higher for the single (males, 1,735; females, 1,154.7) than for the married (males, 1,302.1; females, 979.1).

The following table shows, for the registration area, the proportions of deaths from diseases of the circulatory system at each age, per 1,000 deaths at known ages from these diseases, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	56.8	46.8	79.4	67.3
1 year	3.0	2.6	4.7	3.7

55 to 59 years	87.5	78.6	79.4	76.8
60 to 64 years	103.6	93.9	92.2	85.7
65 to 69 years	113.2	106.4	102.6	94.7
70 to 74 years	113.6	106.0	95.1	93.3
75 to 79 years	91.4	85.7	78.6	78.0
80 to 84 years	51.1	53.2	45.0	49.2
85 to 89 years	20.2	23.8	17.8	23.8
90 to 94 years	3.6	6.9	4.4	5.5
95 years and over	0.8	1.9	1.1	2.1

The average age at death from diseases of the circulatory system in the registration area in 1900 was 53.6 years; in 1890 it was 50.5 years. For those dying at 15 years and over, the average age was 58.9 years in 1900, and 57.1 years in 1890.

The following table shows, for each grand group in the United States, the proportions of deaths from diseases of the circulatory system during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	96.5	122.0	107.7	84.2	92.9
2. Middle Atlantic Coast region	75.7	85.5	85.6	69.7	77.4
3. South Atlantic Coast region	57.7	54.3	58.4	59.6	62.7
4. Gulf Coast region	68.6	58.5	60.8	78.8	82.9
5. Northeastern hills and plateaus	98.4	119.4	96.3	81.0	80.2
6. Central Appalachian region	84.0	90.0	88.1	68.3	79.8
7. Region of the Great Northern lakes	83.1	100.7	91.9	74.2	79.1
8. Interior plateau	84.6	91.2	84.4	81.7	81.4
9. Southern Central Appalachian region	50.7	50.6	48.9	65.6	68.4
10. Ohio River belt	79.6	89.2	71.7	74.3	81.8
11. Southern Interior plateau	53.3	50.7	55.8	.....	.....
12. South Mississippi River belt	41.2	33.0	44.2	52.6	55.2
13. North Mississippi River belt	73.3	75.6	68.8	74.4	73.9
14. Southwest Central region	39.6	38.6	39.1	66.3	55.3
15. Central region—plains and prairies	72.3	76.8	66.4	77.4	72.9
16. Prairie region	85.0	89.0	80.6	78.1	89.2
17. Missouri River belt	75.5	75.1	69.8	83.2	76.3
18. Region of the Western plains	61.0	65.7	52.4	65.0	64.7
19. Heavily timbered region of the Northwest	101.7	112.2	97.2	89.3	86.5
20. Cordilleran region	71.5	69.7	67.3	83.3	97.8
21. Pacific Coast region	109.9	111.5	81.1	117.5	115.0

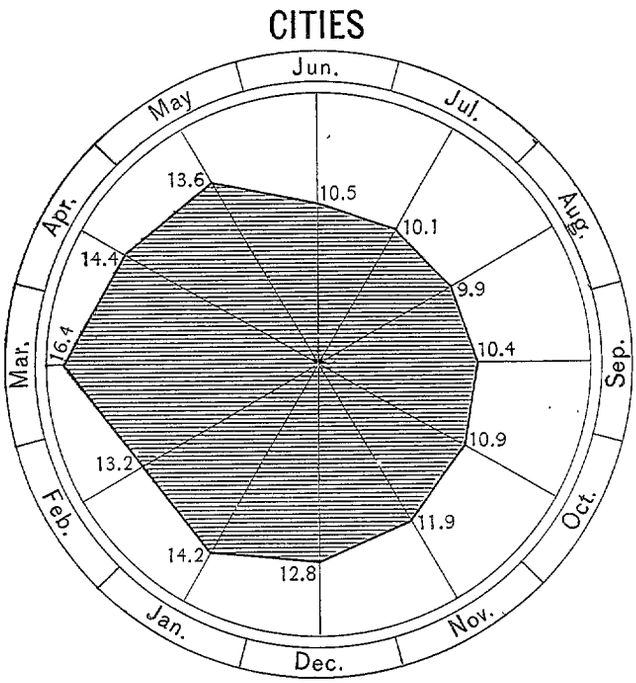
The preceding table indicates that the proportions of deaths due to diseases of the circulatory system were greatest in the Pacific Coast region (109.9), the Heavily timbered region of the Northwest (101.7), the Northeastern hills and plateaus (98.4), and the North Atlantic Coast region (96.5); and least in the Southwest Central region (39.6), South Mississippi River belt (41.2), and the Southern Central Appalachian region (50.7).

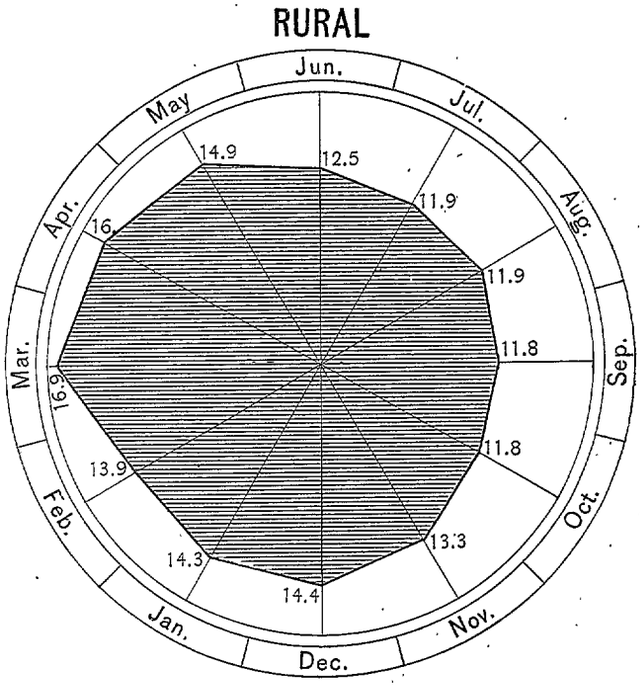
The following table shows, for the registration states, the death rates from diseases of the circulatory system in each month of the census year, in the aggregate, and for the cities and rural districts:

DEATH RATES BY MONTHS.

MONTHS.	Total.	Cities.	Rural.
January	14.3	14.2	14.3
February	13.5	13.2	13.9
March	16.6	16.4	16.9
April	15.1	14.4	16.0
May	14.1	13.6	14.9
June	11.3	10.5	12.5
July	10.9	10.1	11.9
August	10.7	9.9	11.9
September	10.9	10.4	11.8
October	11.2	10.9	11.8
November	12.5	11.9	13.3
December	13.4	12.8	14.4

The death rate from diseases of the circulatory system in each month in the cities and the rural districts, and the relative difference in the rates in the two areas are shown in the following diagram:





The preceding table and diagram show that in both cities and rural districts of the registration states the death rates due to diseases of the circulatory system were highest in March and April. The death rate from these diseases was lowest in the cities in August and in the rural districts in September and October.

The following table shows the comparative proportions of deaths from diseases of the circulatory system in each month during the census year, per 1,000 deaths in known months, in the United States, as a whole, and in the registration states:

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH.

MONTHS.	United States.	Registration states.
January	93.4	92.3
February	91.2	87.1
March	105.1	107.3
April	103.6	97.5
May	100.4	91.6
June	68.7	73.2
July	67.8	70.2
August	67.5	69.3
September	67.6	70.8
October	73.9	72.7
November	75.5	80.9
December	85.3	87.1

HEART DISEASE AND DROPSY.

For purposes of comparison this title includes deaths from pericarditis, organic diseases of the heart, and dropsy, as in the Eleventh Census. The deaths from each of these diseases are shown separately in the general tables, giving each disease and class of diseases in relation to sex and age.

The number, by sex, was as follows:

	UNITED STATES.		REGISTRATION RECORD.	
	Males.	Females.	Males.	Females.
Heart disease	36,500	31,939	19,783	18,161
Pericarditis	457	419	335	329
Dropsy	5,600	5,664	948	1,031

The total number of deaths reported as due to diseases of the heart and dropsy, combined, in the United States during the census year was 80,579, of which 42,557 were males and 38,022 were females, and the proportion of deaths from these diseases in 1,000 deaths from all known causes was 80.7. In 1890 the corresponding proportion was 65.5.

In the registration area the number of deaths reported as due to these diseases was 40,587, of which 21,066

were males and 19,521 were females, giving a proportion of 79.9 deaths from them in 1,000 deaths from all known causes and a death rate of 140.9 per 100,000 of population. In 1890 the death rate was 132.1.

The following table shows, for the registration area and its subdivisions, the death rates from heart disease and dropsy in the census years 1900 and 1890, by sex, color, general nativity, and parent nativity:

DEATH RATES BY COLOR AND NATIVITY.

AREAS.	Aggregate.	WHITE.							COLORED.		
		Total.	Males.	Females.	Native.			Foreign.	Total.	Males.	Females.
					Total.	Both parents native.	One or both parents foreign.				
Registration area 1900	140.9	137.4	142.8	132.0	110.3	145.6	72.5	222.0	216.6	225.0	208.6
Registration area 1890	132.1	128.4	132.3	124.7	105.3	139.0	69.2	192.2	204.0	209.2	198.9
Cities 1900	135.6	130.8	134.4	127.2	97.8	124.9	74.2	219.0	221.7	229.6	214.2
Cities 1890	127.7	122.6	126.0	119.4	93.0	123.8	69.4	190.9	209.8	217.2	202.7
States 1900	144.5	143.3	147.0	139.5	119.8	152.5	73.6	212.8	203.7	214.0	193.6
States 1890	140.6	139.8	143.3	136.5	119.4	147.5	72.7	199.0	173.8	166.3	180.9
Cities 1900	136.0	133.8	132.7	134.7	101.3	131.7	75.7	203.9	221.3	230.2	213.0
Cities 1890	137.0	135.6	137.8	133.6	105.4	136.5	74.3	198.7	187.4	183.9	190.5
Rural 1900	156.8	156.9	166.6	146.6	141.5	168.5	69.2	236.6	154.5	172.4	135.0
Rural 1890	146.1	146.2	151.2	141.1	136.3	156.0	68.4	199.8	142.4	129.3	156.5
Cities in other states 1900	135.3	127.9	136.0	119.8	94.9	112.7	69.6	239.1	221.8	229.4	214.5
Cities in other states 1890	119.1	109.8	114.7	104.8	81.5	96.4	58.0	182.0	216.0	226.0	206.3

It will be seen from this table that the death rate from heart disease and dropsy was highest in the rural districts in the registration states (156.8) and lowest in the cities in the nonregistration states (135.3). It was much higher in the colored (216.6) than in the whites (137.4) and was twice as high for the foreign whites (222) as for the native whites (110.3), but in the latter class it was twice as high among those of native parents (145.6) as among those of foreign parents (72.5), which is due to the greater proportion of persons of advanced age of native parentage.

In comparison with 1890 there was an increase in the death rates due to heart disease and dropsy in all the areas except the cities in the registration states where the rate decreased very slightly.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from heart disease and dropsy in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.	AGGREGATE.			MALES.			FEMALES.		
	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total 1900	144.5	136.1	156.8	148.4	135.2	166.7	140.7	136.7	146.5
Total 1890	140.6	137.0	146.1	143.8	139.0	150.8	137.5	135.1	141.3

[1] Nonregistration in 1890.

This table shows that the death rates from heart disease and dropsy in the registration states were highest in the District of Columbia (206.6) and New Hampshire (187.5) and lowest in Michigan (125.3) and Connecticut (130.3). The rate was higher in the rural districts (156.8) than in the cities (136.1), and, excluding the District of Columbia, it was highest of all in the rural districts of New Hampshire (202.2).

The following table shows, for the registration area and its subdivisions, the death rates from heart disease and dropsy among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	117.6	99.0	125.7	107.3	140.9	82.1
Ireland	194.1	194.0	193.8	193.6	194.7	196.6
Germany	140.2	138.2	140.9	138.0	150.0	138.6
England and Wales	154.1	142.7	155.7	141.3	182.5	147.1
Canada	86.2	83.7	87.5	85.9	89.5	64.7
Scandinavia	66.8	68.9	67.2	71.4	59.5	66.0
Scotland	160.6	141.4	164.5	142.1	211.8	138.7
Italy	69.3	74.9	68.7	74.8	37.4	76.0
France	160.7	157.3	148.2	137.7	173.4	194.4
Hungary and Bohemia	65.3	69.9	54.8	60.4	21.2	84.9
Russia and Poland	50.9	51.6	51.9	52.8	44.3	46.9
Other foreign	98.3	101.3	89.8	90.1	89.3	145.1

This table shows that the death rates due to heart disease and dropsy in the registration area were highest among those whose mothers were born in Ireland (194.1), in France (160.7), and in Scotland (160.6), and lowest among those whose mothers were born in Russia and Poland (50.9), in Hungary and Bohemia (65.3), and in Scandinavia (66.8). The rate was lower among those whose mothers were born in the United States (117.6) than in those whose mothers were born in Germany (140.2) or in England and Wales (154.1).

The following table shows, for the registration area and its subdivisions, the death rates from heart disease and dropsy during the census year in each of three age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREA.	15 TO 44.		45 TO 64.		65 AND OVER.	
	1900	1890	1900	1890	1900	1890
Total	57.2	59.8	293.9	278.7	1,259.4	1,111.3
Males	56.4	60.1	310.2	289.9	1,408.1	1,219.5
Females	57.9	59.5	277.3	267.5	1,126.6	1,014.7
Cities	62.8	64.9	323.8	305.8	1,276.9	1,174.2
Males	63.6	66.9	342.9	320.0	1,424.9	1,310.2
Females	62.0	62.9	304.6	291.7	1,156.3	1,063.0

DEATH RATES AT CERTAIN AGES—Continued.

REGISTRATION AREA.	15 TO 44.		45 TO 64.		65 AND OVER.	
	1900	1890	1900	1890	1900	1890
States	51.8	57.4	271.1	267.9	1,255.1	1,093.8
Males	48.0	55.9	282.7	273.2	1,397.7	1,193.7
Females	55.5	58.8	259.5	262.8	1,125.3	1,003.2
Cities	60.4	66.6	312.6	312.6	1,284.4	1,187.4
Males	57.9	67.9	326.3	320.2	1,416.0	1,326.8
Females	62.7	65.4	299.5	305.5	1,182.1	1,078.0
Rural	37.7	41.2	223.3	212.5	1,233.6	1,025.4
Males	32.3	35.8	234.8	216.2	1,386.2	1,108.3
Females	43.3	46.8	211.0	208.9	1,077.9	941.8
Cities in other states	65.0	63.3	334.3	298.7	1,269.5	1,158.9
Males	68.6	66.1	358.0	319.8	1,433.4	1,292.0
Females	61.4	60.5	309.6	276.7	1,129.6	1,045.1

This table shows that the greatest mortality from heart disease and dropsy occurred in persons 65 years of age and over (1,259.4), and that at this age it was highest in the cities in the registration states (1,284.4) and lowest in the rural districts of the same states (1,233.6).

At 45 to 64 years of age it was higher in the cities in the nonregistration states (334.3) than in the cities in the registration states (312.6) or in the rural districts of the same states (223.3).

In the age group 15 to 44 years of age the death rate of males (56.4) was lower than that of females (57.9), but above 45 years the death rate of males was considerably higher than that of females.

In comparison with 1890 the figures show a slight increase in the death rate due to these diseases at 45 years and over and a slight decrease in the rate under 45.

The combined relations of age and race to the death rates from heart disease and dropsy are indicated, for the registration area, in the following table, giving the death rates during the census year in each of three age groups, per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	15 to 44.	45 to 64.	65 and over.
White	53.6	281.5	1,246.2
Colored	126.3	598.5	1,740.9
Mothers born in—			
United States	38.4	199.3	1,016.1
Ireland	79.9	393.1	1,314.3
Germany	50.9	257.3	1,215.2
England and Wales	44.0	243.2	1,201.1
Canada	40.9	207.5	1,173.9
Scandinavia	32.6	202.0	890.1
Scotland	53.0	260.9	1,124.3
Italy	46.7	247.6	744.1
France	51.5	207.9	1,107.7
Hungary	33.3	170.6	749.1
Bohemia	41.6	218.5	1,312.5
Russia	47.1	252.2	1,059.9
Poland	21.7	115.4	567.5
Other foreign	50.1	257.3	1,232.2

It will be seen from this table that the death rates due to heart disease and dropsy in white persons 45 to 64 years of age were highest in those whose mothers were born in Ireland (393.1), in Scotland (260.9), and in Germany (257.3), and lowest in those whose mothers were born in Poland (115.4), in Hungary (170.6), and in the United States (199.3).

At 65 years of age and over, they were highest in those whose mothers were born in Ireland (1,314.3), in Bohemia (1,312.5), and in "Other foreign" countries (1,232.2); and lowest in those whose mothers were born in Poland (567.5), in Italy (744.1), and in Hungary (749.1).

The following table shows, for the registration area, the proportions of deaths from heart disease and dropsy at each age, per 1,000 deaths at known ages from these diseases, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	37.5	31.9	37.2	31.2
1 year	3.4	2.9	5.1	4.1
2 years	2.5	2.0	2.9	2.5
3 years	2.4	2.2	2.8	2.5
4 years	2.7	3.1	2.9	2.3
Under 5 years	48.5	42.1	50.9	42.6
5 to 9 years	16.1	19.9	18.8	21.5
10 to 14 years	15.3	25.9	19.0	25.2
15 to 19 years	18.7	23.1	23.9	26.0
20 to 24 years	22.4	29.6	27.7	33.6
25 to 29 years	27.1	30.8	31.9	39.7

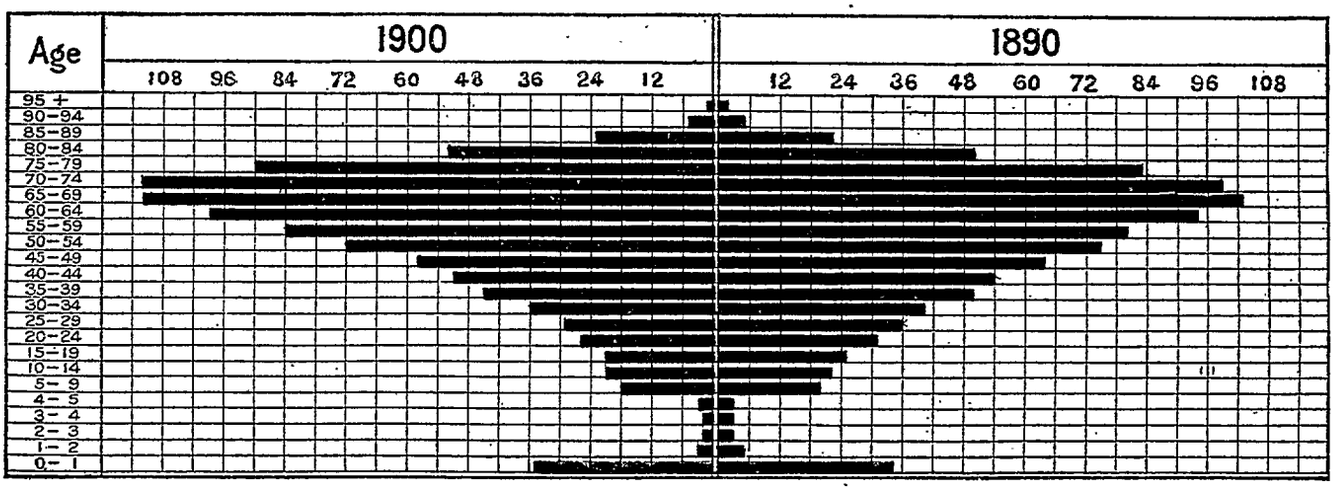
60 to 64 years	102.9	96.0	96.8	90.2
65 to 69 years	115.2	108.2	108.2	98.5
70 to 74 years	116.2	107.6	102.6	96.3
75 to 79 years	92.7	86.6	84.2	81.6
80 to 84 years	51.8	52.9	48.1	52.1
85 to 89 years	20.9	24.2	19.3	24.9
90 to 94 years	3.6	6.5	4.8	6.1
95 years and over	0.8	1.9	1.4	2.5

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES—Con.

The average age at death from heart disease and dropsy in the registration area in 1900 was 54.3 years. In 1890 it was 52.7 years. For those dying at 15 years of age and over, the average age was 58.8 years in 1900 and 57.4 years in 1890.

The comparative proportions of deaths from heart disease and dropsy at each age in the registration area in 1900 and 1890 are shown in the following diagram:



The following table shows, for each grand group in the United States, the proportions of deaths from heart disease and dropsy during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUPS.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	88.9	111.5	103.5	75.9	85.9
2. Middle Atlantic Coast region	71.1	89.8	91.2	61.7	71.7
3. South Atlantic Coast region	88.3	95.3	98.7	66.2	68.5
4. Gulf Coast region	76.9	76.6	77.6	72.9	80.7
5. Northeastern hills and plateaus	91.7	110.7	91.6	74.7	73.6
6. Central Appalachian region	91.5	100.4	101.7	64.6	81.3
7. Region of the Great Northern lakes	79.5	101.2	94.4	66.1	75.6
8. Interior plateau	87.4	101.5	98.7	74.8	77.5
9. Southern Central Appalachian region	70.6	69.5	71.0	72.9	79.2
10. Ohio River belt	84.8	99.8	83.8	68.4	80.9
11. Southern Interior plateau	78.6	75.6	81.4	.....	.....
12. South Mississippi River belt	65.2	58.6	73.3	61.2	67.5
13. North Mississippi River belt	77.6	87.5	82.7	68.1	68.8
14. Southwest Central region	52.8	52.0	52.8	69.9	55.3
15. Central region—plains and prairies	80.9	85.0	79.6	74.5	73.9
16. Prairie region	93.5	96.3	91.5	78.8	93.0
17. Missouri River belt	80.7	84.9	79.1	79.9	77.2
18. Region of the Western plains	68.6	74.8	64.8	61.1	64.7
19. Heavily timbered region of the Northwest	101.8	111.1	101.2	82.9	85.1
20. Cordilleran region	77.3	74.2	77.8	85.8	93.1
21. Pacific Coast region	104.9	112.4	87.2	104.9	108.5

The preceding table indicates that the proportions of deaths from heart disease and dropsy were greatest in the Pacific Coast region (104.9), the heavily timbered region of the Northwest (101.8), and the prairie region (93.5), and least in the Southwest Central region (52.8), South Mississippi River belt (65.2), and the region of the Western plains (68.6).

The geographical distribution of deaths from heart disease and dropsy, by state groups, is shown by plate No. 23.

ANGINA PECTORIS.

The total number of deaths reported as due to angina pectoris in the United States during the census year was 2,785, of which 1,595 were males and 1,190 were females, and the proportion of deaths from this disease in 1,000 deaths from all known causes was 2.8. In 1890 the corresponding proportion was 1.5.

In the registration area the number of deaths reported as due to this disease was 1,839, of which 1,055 were males and 784 were females, giving a proportion of 3.6 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 6.4 per 100,000 of population. In 1890 the rate was 3.4.

The following table shows, for the registration states in the aggregate, and for the cities and rural districts, the death rates from angina pectoris in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES.		
		Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.

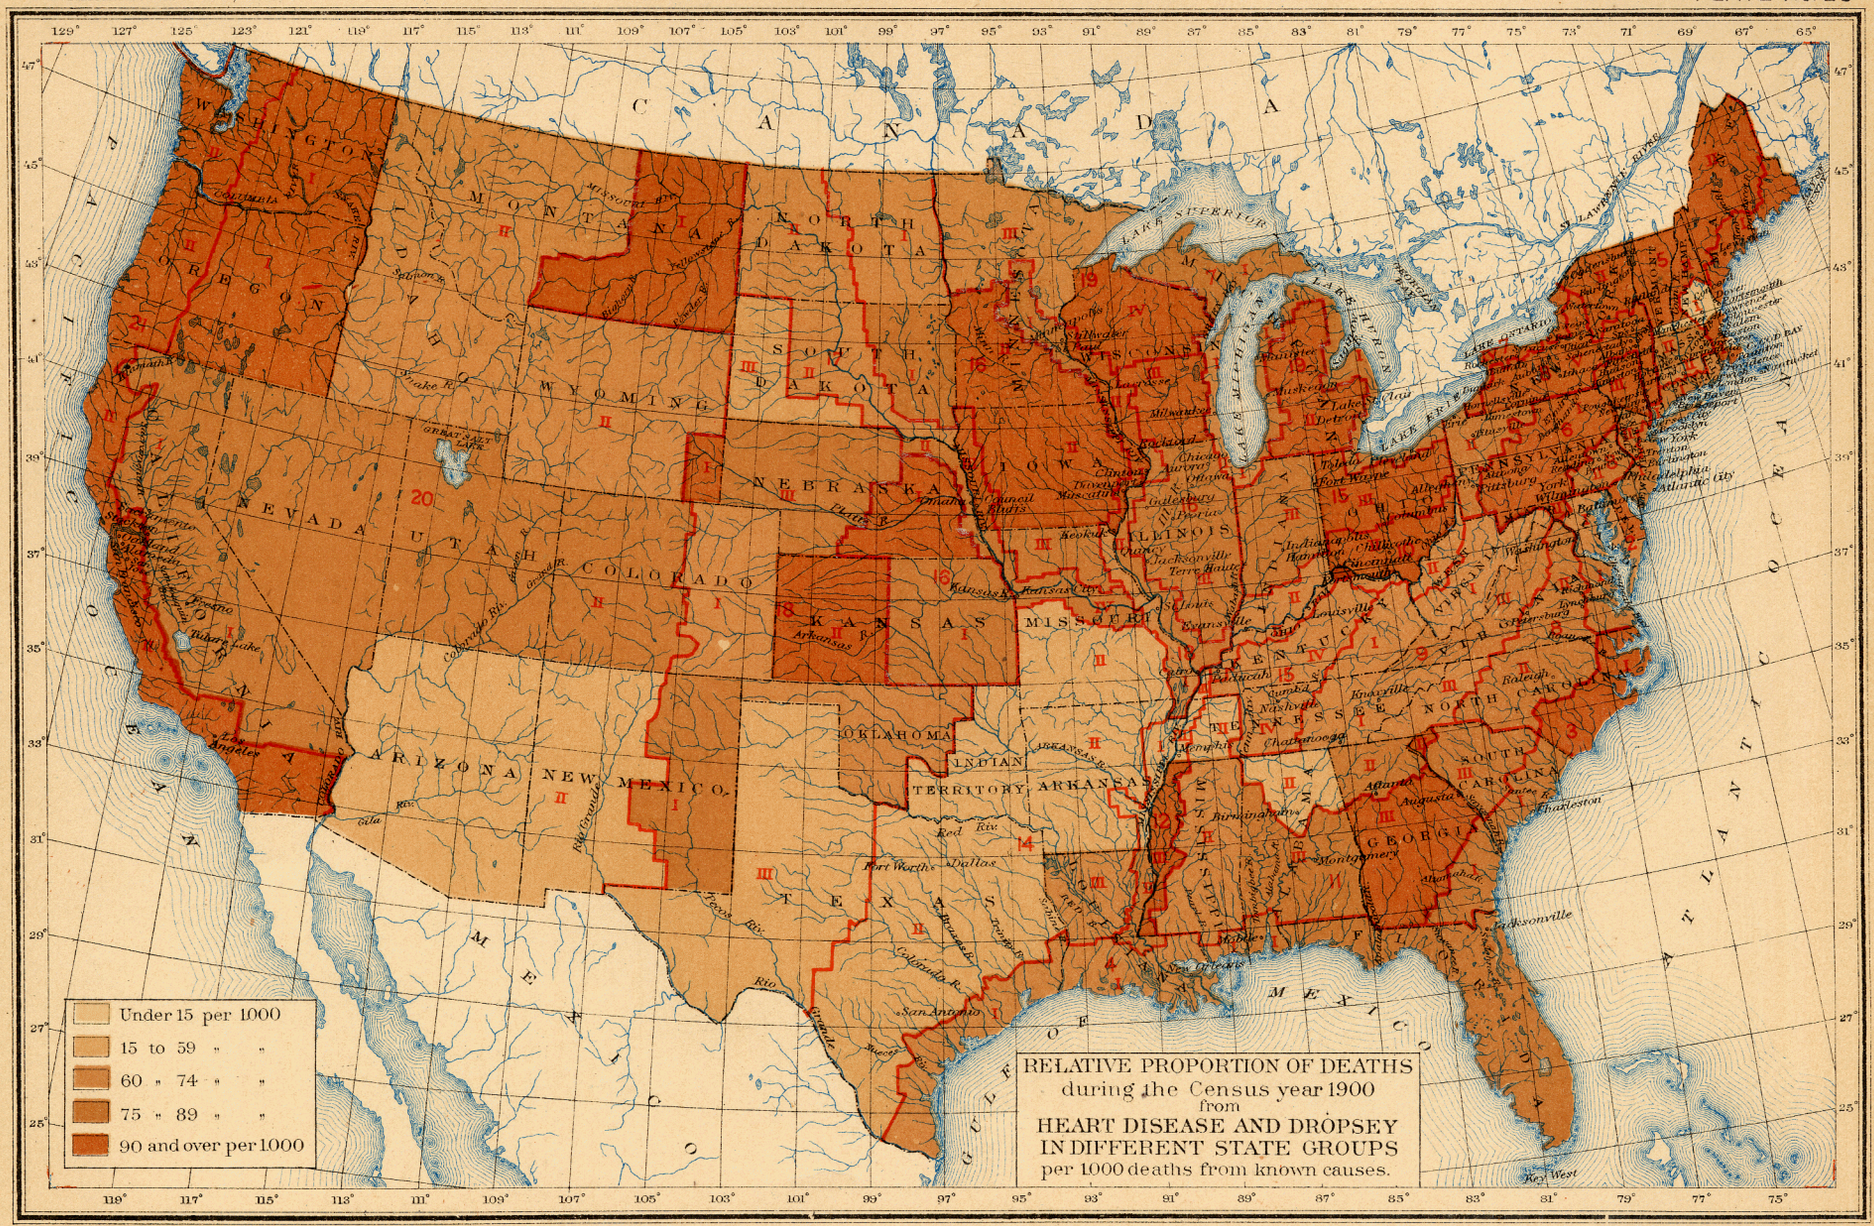
[1] Nonregistration in 1890.

Twelfth Census of the United States
William R. Merriam, Director.

PLATE No. 23



JULIUS BIEN & CO. LITH. N.Y.

According to this table the death rates from angina pectoris in the registration states were highest in Maine (11.5) and New Hampshire (9.7), and lowest in New York (6.1) and Massachusetts (6.4). The rate was higher in the rural districts (8.9) than in the cities (5.4), and higher among males (7.8) than among females (5.9). In the cities the highest death rate from this disease occurred in Maine (8.5), and in the rural districts of New Hampshire (12.6).

The following table shows, for the registration area and its subdivisions, the death rates from angina pectoris among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	7.0	5.4	7.6	6.1	8.8	4.2
Ireland	5.3	4.7	5.3	4.7	7.6	4.8
Germany	5.3	4.9	5.5	5.1	6.9	4.8
England and Wales	8.5	6.8	9.4	7.7	12.8	4.3
Canada	3.4	3.1	3.5	3.1	3.9	2.5
Scandinavia	1.0	0.8	0.9	0.5	1.8	1.1

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
Scotland	7.5	7.4	6.8	6.2	7.9	12.0
Italy	2.1	2.5	2.1	2.5	.....	2.5
France	6.0	6.4	5.5	5.8	4.7	7.3
Hungary and Bohemia	2.0	2.2	2.3	2.6	.....	1.4
Russia and Poland	1.6	1.5	1.6	1.5	2.7	1.5
Other foreign	4.8	5.4	5.5	6.5	2.9	1.2

This table shows that the death rates due to angina pectoris in the registration area were highest among those whose mothers were born in England and Wales (8.5), in Scotland (7.5), and in the United States (7), and lowest among those whose mothers were born in Scandinavia (1), in Russia and Poland (1.6), and in Hungary and Bohemia (2).

The following table shows, for the registration area and its subdivisions, the death rates from angina pectoris during the census year in each of four age groups, per 100,000 of population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 15.		15 TO 44.		45 TO 64.		65 AND OVER.	
	1900	1890	1900	1890	1900	1890	1900	1890
Total	0.1	0.2	2.2	1.3	17.0	9.0	60.2	32.3
Males	0.1	0.1	2.3	1.2	20.1	11.6	74.1	38.2
Females	0.2	0.2	2.2	1.4	13.7	6.5	47.8	27.0
Cities	0.1	0.1	2.3	1.3	17.0	9.3	55.8	31.8
Males	0.1	0.1	2.4	1.3	20.6	12.5	70.3	39.0
Females	0.2	0.2	2.1	1.4	13.4	6.1	44.0	25.9
States	0.1	0.2	2.1	1.1	16.5	9.1	61.1	34.8
Males	.....	0.1	2.1	0.9	19.3	11.6	73.4	40.7
Females	0.2	0.2	2.1	1.4	13.7	6.7	49.8	29.5
Cities	.....	0.2	2.1	1.2	16.2	9.7	53.4	37.4
Males	.....	.....	2.3	0.9	19.4	13.4	64.4	46.0
Females	0.1	0.3	1.9	1.4	13.2	6.2	44.9	30.6
Rural	0.2	0.2	2.1	1.1	16.9	8.3	66.6	32.9
Males	0.1	0.3	1.9	0.7	19.2	9.4	79.1	37.2
Females	0.3	0.2	2.4	1.4	14.5	7.3	53.9	28.5
Cities in other states	0.2	0.1	2.4	1.5	17.8	8.9	58.2	25.4
Males	0.1	0.1	2.5	1.6	21.7	11.5	75.8	31.4
Females	0.2	0.2	2.4	1.3	13.7	6.1	43.2	20.3

This table shows that the death rate from this disease was highest at 65 years of age and over (60.2). At 45 to 64 years it was 17. Below 45 years the death rate from this disease was insignificant. At 45 to 64 years the death rate from this disease was highest in the cities in the nonregistration states (17.8) and lowest in the cities in the registration states (16.2), but in the age group 65 years and over it was highest in the rural districts of the registration states (66.6), and lowest in the cities in the same states (53.4).

In comparison with 1890, the figures show that above 15 years of age there was an increase in the death rate in each age group amounting to nearly 50 per cent.

The following table shows, for the registration area,

the proportions of deaths from angina pectoris at each specified age, per 1,000 deaths at known ages from this disease, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 15 years	2.9	10.2	7.9	20.6
15 to 19 years	5.7	10.2	7.9	13.8
20 to 24 years	7.6	34.5	5.3	44.8
25 to 29 years	20.9	38.3	15.8	55.2
30 to 34 years	27.6	35.8	29.0	48.3
35 to 39 years	44.7	47.3	47.4	41.4
40 to 44 years	52.3	40.9	47.4	34.5
45 to 49 years	54.2	83.0	78.9	65.5
50 to 54 years	93.2	80.5	86.8	62.1
55 to 59 years	103.7	100.9	144.7	93.1
60 to 64 years	165.6	109.8	126.3	103.5
65 to 69 years	128.5	137.9	157.9	127.6
70 to 74 years	120.8	103.4	105.3	113.8
75 to 79 years	99.0	77.9	94.7	120.7
80 to 84 years	54.2	65.1	26.3	44.8
85 to 89 years	18.1	16.6	18.4	10.3
90 years and over	1.0	7.7	.....	.....

The average age at death from angina pectoris in the registration area in 1900 was 59.5 years. In 1890 it was 58.2 years.

ANEURISM.

The total number of deaths reported as due to aneurism in the United States during the census year was 754, of which 515 were males and 239 were females, and the proportion of deaths from this disease in 1,000 deaths from all known causes was 0.8. In 1890 the corresponding proportion was 0.6.

In the registration area the number of deaths reported as due to this disease was 488, of which 369 were males and 119 were females, giving a proportion of 1 death from this disease in 1,000 deaths from all known causes, and a death rate of 1.7 per 100,000 of population. In 1890 the death rate was 1.8.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from aneurism in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES.		
		Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.

[1] Nonregistration in 1890.

This table shows that the death rate due to aneurism in the registration states was highest in the District of Columbia (1.8) and lowest in New Hampshire (0.2).

The following table shows, for the registration area and its subdivisions, the death rates from aneurism during the census year in each of three age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	15 to 44.		45 to 64.		65 and over.	
	1900	1890	1900	1890	1900	1890
Total	1.4	1.5	4.7	5.1	6.1	6.1
Males	2.1	2.1	7.6	8.4	7.2	9.2
Females	0.6	0.8	1.8	1.9	5.1	3.3
Cities	1.6	1.8	5.9	6.5	7.6	7.3
Males	2.6	2.7	9.7	10.5	9.2	11.8
Females	0.6	0.9	2.1	2.5	6.3	3.7

DEATH RATES AT CERTAIN AGES—Continued.

REGISTRATION AREAS.	15 to 44.		45 to 63.		65 and over.	
	1900	1890	1900	1890	1900	1890
States	1.0	1.2	3.0	3.9	4.6	5.6
Males	1.5	1.7	4.6	6.7	5.2	8.1
Females	0.5	0.7	1.5	1.2	4.1	3.4
Cities	1.2	1.7	4.1	5.6	5.6	7.3
Males	2.0	2.6	6.4	9.5	6.1	11.3
Females	0.4	0.8	1.9	1.9	5.2	4.1
Rural	0.5	0.4	1.9	1.8	3.9	4.5
Males	0.5	0.2	2.7	3.4	4.6	6.1
Females	0.6	0.6	1.0	0.2	3.1	2.8
Cities in other states	.9	1.8	7.7	7.5	9.5	7.4
Males	3.1	2.7	12.7	11.5	12.1	12.4
Females	0.8	0.9	2.4	3.3	7.4	3.3

The preceding table shows that the highest death rate from this disease occurred in persons 65 years of age and over, among whom it was highest in the cities in the nonregistration states (9.5) and lowest in the rural districts of the registration states (3.9). In this age group the aggregate death rate in 1900 was the same as it was in 1890 (6.1).

The following table shows, for the registration area, the proportions of deaths from aneurism at each specified age, per 1,000 deaths at known ages from this disease, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 15 years	8.2	33.6	3.8	23.8
15 to 19 years	.....	8.4	11.3	47.6
20 to 24 years	21.8	8.4	26.3	35.7
25 to 29 years	49.0	84.1	52.6	35.7
30 to 34 years	65.4	67.2	56.4	59.5
35 to 39 years	147.1	67.2	120.3	142.9

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES—Continued.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
40 to 44 years	141.7	126.1	135.3	154.8
45 to 49 years	130.8	134.5	154.1	119.1
50 to 54 years	103.5	50.4	109.0	95.3
55 to 59 years	125.4	75.6	112.8	35.7
60 to 64 years	89.9	58.8	79.0	71.4
65 to 69 years	43.6	92.5	52.6	59.5
70 to 74 years	40.9	58.8	37.6	47.6
75 to 79 years	30.0	75.6	41.4	35.7
80 to 84 years	2.7	42.0	7.5	11.9
85 to 89 years	.....	8.4	.....	23.8
90 years and over	.....	8.4	.....	.....

The average age at death from aneurism in the registration area in 1900 was 49.2 years. In 1890 it was 48.5 years.

DISEASES OF THE RESPIRATORY SYSTEM.

The total number of deaths reported as due to this class of diseases in the United States during the census year was 154,035, of which 83,672 were males and 70,363 were females, and the proportion of deaths from these diseases in 1,000 deaths from all known causes was 154.3. In 1890 the corresponding proportion was 164.5.

In the registration area the number of deaths reported as due to this class of diseases was 80,504, of which 48,872 were males and 37,632 were females, giving a proportion of 158.5 deaths from these diseases in 1,000 deaths from all known causes, and a death rate of 279.5 per 100,000 of population. In 1890 the death rate was 330.3.

In England and Wales the death rate due to diseases of the respiratory system in 1899 was 324.1 per 100,000 of population (males, 353.1; females, 290.4).

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from diseases of the respiratory system in the census year, per 100,000 of population:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.	AGGREGATE.			MALES.			FEMALES.		
	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	279.3	335.1	199.0	290.9	356.6	200.0	267.8	314.4	198.0
Connecticut	243.5	260.2	212.6	248.5	272.3	205.5	238.5	248.4	219.9
District of Columbia	287.0	287.0	.....	293.9	293.9	.....	280.8	280.8	.....
Maine	230.9	267.6	223.4	227.9	288.6	216.3	234.1	248.5	230.9
Massachusetts	270.8	282.8	232.7	279.9	294.5	234.7	262.1	271.8	230.6
Michigan	172.7	218.1	153.7	182.3	237.7	160.7	162.4	199.0	146.1
New Hampshire	300.3	348.6	269.9	296.5	347.3	266.5	304.1	349.8	273.5
New Jersey	285.7	337.5	217.6	304.1	365.1	225.2	267.2	310.2	209.9
New York	323.5	388.5	188.3	340.2	415.7	187.7	307.0	362.0	189.1
Rhode Island	310.8	315.7	301.4	324.4	335.3	308.9	297.7	297.0	298.8
Vermont	253.5	313.2	244.1	249.0	306.0	240.5	258.2	319.9	247.9

It will be seen from the preceding table that the death rates from diseases of the respiratory system were highest in New York (323.5) and Rhode Island (310.8) and lowest in Michigan (172.7) and Maine (230.9). The rate was very much higher in the cities (335.1) than in the rural districts (199).

The following table shows, for the registration area and its subdivisions, the death rates from diseases of

the respiratory system among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	211.6	240.2	214.5	261.0	175.9	198.7
Ireland	365.3	394.5	368.3	403.0	246.1	341.5
Germany	245.7	261.0	257.8	285.7	172.8	217.2
England and Wales	228.7	244.3	226.7	246.2	190.0	238.4
Canada	209.4	231.2	214.7	243.2	178.7	125.5
Scandinavia	209.8	224.5	229.5	268.1	159.5	175.2
Scotland	221.1	249.5	223.4	260.3	146.0	208.1
Italy	705.5	786.0	733.9	829.2	247.6	410.3
France	208.6	229.6	229.1	269.5	131.2	154.0
Hungary and Bohemia	272.5	286.2	295.1	321.4	138.2	231.1
Russia and Poland	268.5	281.2	263.3	278.5	149.5	291.4
Other foreign	327.5	361.6	326.0	368.2	223.1	336.0

The preceding table shows that the death rates due to diseases of the respiratory system in the registration area were highest among those whose mothers were born in Italy (705.5), in Ireland (365.3), and in "other foreign" countries (327.5), and lowest among those whose mothers were born in France (208.6), in Canada (209.4), and in Scandinavia (209.8). The rate was lower for those whose mothers were born in the United States (211.6) than for those whose mothers were born in Germany (245.7), in England and Wales (228.7), or in Scotland (221.1). In all of the areas except the rural districts of the registration states, the death rate of those whose mothers were born in Italy was nearly twice as high as that of children of mothers born in any of the other countries.

The following table shows, for the registration area and its subdivisions, the death rates from diseases of the respiratory system during the census year in each of six age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	Under 1.		Under 5.		5 to 14.		15 to 44.		45 to 64.		65 and over.	
	1900	1890	1900	1890	1900	1890	1900	1890	1900	1890	1900	1890
Total	2,939.9	3,109.4	1,136.4	1,297.2	62.6	85.9	95.8	129.3	309.7	386.2	1,259.3	1,324.6

Females	3,241.6	3,619.6	1,335.8	1,587.9	67.0	97.0	86.3	127.1	361.7	464.9	1,607.4	1,731.7
Rural	1,784.2	1,746.6	620.9	649.7	44.1	52.0	65.2	85.8	189.8	237.5	910.7	1,108.5
Males	2,012.2	1,966.3	678.7	696.1	39.9	49.7	69.8	93.9	188.0	259.6	850.7	1,029.4
Females	1,551.5	1,519.6	561.9	601.9	48.5	54.5	60.3	77.6	191.7	215.8	972.0	1,188.0
Cities in other states	2,884.9	3,009.1	1,133.6	1,317.2	70.6	93.9	104.5	120.3	340.4	374.8	1,462.1	1,304.7
Males	3,294.9	3,339.1	1,250.1	1,396.2	72.1	92.4	127.8	146.7	392.5	435.7	1,451.2	1,307.2
Females	2,466.2	2,670.2	1,015.8	1,236.3	69.2	95.4	81.2	93.1	286.1	311.2	1,471.4	1,302.5

The preceding table shows that the death rate from diseases of the respiratory system was highest in infants under 1 year of age, and that among these it was higher in the cities in the registration states (3,695.5) than in the cities in the nonregistration states (2,884.9) or in the rural districts of the registration states (1,784.2). At the ages above 1 year the death rate from these diseases was highest in persons 65 years of age and over (1,259.3). For all children under 5 years of age it was 1,136.4; for persons 5 to 14, it was 62.6; for those 15 to 44, it was 95.8; and for those 45 to 64, it was 309.7.

The lowest death rates from these diseases at each age occurred in the rural districts of the registration states, and the highest in the cities in the registration states except for the age group 5 to 14 years, where the death rate in the cities in the nonregistration states (70.6) was slightly higher than that of the cities in the registration states (66.5). For children under 5 years of age, the death rate from these diseases was higher in males than in females, as was also the case in persons 15 to 64 years of age. For those 5 to 14 years and 65 years of age and over, the death rate of females exceeded that of males.

In comparison with 1890 the figures show a decrease in the death rate due to these diseases at each age.

The combined relations of age and race to the death rates from diseases of the respiratory system are indicated, for the registration area, in the following table,

giving the death rates during the census year in each of six age groups, per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 1.	Under 5.	5 to 14.	15 to 44.	45 to 64.	65 and over.
White	2,790.2	1,076.5	59.3	89.4	301.8	1,262.9
Colored	7,110.5	2,799.6	147.7	218.9	503.8	1,130.0
Mothers born in—						
United States	2,225.6	818.5	51.8	61.9	179.5	839.9
Ireland	3,251.1	1,280.9	72.7	147.0	565.8	1,765.0
Germany	3,007.6	1,115.9	58.8	81.0	260.1	1,384.7
England and Wales	2,335.1	869.1	51.6	79.6	251.0	1,188.4
Canada	2,866.2	1,067.1	56.2	63.8	217.2	867.9
Scandinavia	2,466.2	909.6	38.3	76.5	234.6	1,183.1
Scotland	1,598.0	666.1	25.4	73.4	272.4	1,266.3
Italy	7,049.4	3,458.8	113.7	123.5	371.4	1,777.6
France	3,872.4	1,304.0	48.1	84.6	199.6	768.0
Hungary	2,995.9	1,301.2	28.7	75.6	272.9	561.8
Bohemia	2,202.2	987.8	71.5	95.5	280.9	1,312.5
Russia	3,537.4	1,470.2	45.2	55.0	342.1	1,870.3
Poland	2,219.0	864.3	34.4	39.8	138.5	749.9
Other foreign	3,742.7	1,580.4	66.4	91.5	288.7	1,317.2

It will be seen from the preceding table that the death rates from this class of diseases in white infants under 1 year of age were highest in those whose mothers were born in Italy (7,049.4), in France (3,872.4), and in "Other foreign" countries (3,742.7), and lowest in those whose mothers were born in Scotland (1,598), in Bohemia (2,202.2), in Poland (2,219), and in the United States (2,225.6).

At 45 to 64 years of age they were highest in those whose mothers were born in Ireland (565.8), in Italy (371.4), and in Russia (342.1), and lowest in those whose mothers were born in Poland (138.5), in the United States (179.5), and in France (199.6).

At 65 years of age and over they were highest in those whose mothers were born in Italy (1,777.6), in Ireland (1,765), and in Russia (1,870.3), and lowest in those whose mothers were born in Hungary (561.8), in France (768), and in Poland (749.9).

The following table shows the death rates from diseases of the respiratory system in the registration area during the census year, by conjugal condition in relation to race:

DEATH RATES BY CONJUGAL CONDITION, AND AGE.

CONJUGAL CONDITION.	AGE.							
	15 years and over.		15 to 44 years.		45 to 64 years.		65 years and over.	
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.
Single	138.3	90.3	108.0	57.9	468.5	301.1	1,339.9	1,373.5
Married	223.4	159.6	109.1	89.4	280.3	227.2	958.5	1,016.1
Widowed	853.5	690.6	229.5	134.1	561.2	411.6	1,581.6	1,451.6

This table shows that the death rates from diseases of the respiratory system in persons 15 to 44 years of age were higher for the married (males, 109.1; females, 89.4) than for the single (males, 108; females, 57.9).

At 45 to 64 years of age they were higher in the single (males, 468.5; females, 301.1) than in the married (males, 280.3; females, 227.2), and at 65 years of age and over they were also higher in the single (males, 1,339.9; females, 1,373.5) than in the married (males, 958.5; females, 1,016.1).

The following table shows, for the registration area, the proportions of deaths from diseases of the respiratory system at each age, per 1,000 deaths at known ages from these diseases, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	242.0	208.1	210.8	193.5
1 year	104.9	101.2	95.8	99.8
2 years	45.6	47.6	49.4	53.7
3 years	23.9	27.0	29.6	31.8
4 years	14.2	17.0	17.9	21.2
Under 5 years	430.6	400.9	403.5	400.0
5 to 9 years	30.4	34.1	36.4	40.5
10 to 14 years	9.2	12.1	9.8	13.0
15 to 19 years	17.1	16.3	19.5	22.4
20 to 24 years	28.3	23.8	36.6	26.6
25 to 29 years	33.0	26.9	42.6	30.1
30 to 34 years	34.4	28.4	41.0	31.4

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES—Continued.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
35 to 39 years	41.8	31.1	45.0	31.8
40 to 44 years	39.8	28.0	42.5	31.6
45 to 49 years	40.4	29.5	47.1	34.6
50 to 54 years	42.8	36.5	44.8	40.0
55 to 59 years	42.7	42.7	42.7	41.3
60 to 64 years	43.8	53.5	44.8	48.1
65 to 69 years	45.9	60.3	40.8	53.5
70 to 74 years	44.8	60.6	37.1	50.9
75 to 79 years	36.4	51.6	31.9	44.4
80 to 84 years	23.9	37.7	21.0	32.2
85 to 89 years	11.2	17.9	9.5	18.7
90 to 94 years	2.8	6.2	2.7	6.6
95 years and over	0.7	1.9	0.7	2.3

The average age at death from diseases of the respiratory system in the registration area in 1900 was 30.7 years; in 1890 it was 30 years. For those dying at 15 years of age and over, the average age was 55.2 years in 1900 and 52.9 years in 1890.

The following table shows, for each grand group in the United States, the proportions of deaths from diseases of the respiratory system during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	155.3	137.5	143.9	162.3	160.8
2. Middle Atlantic Coast region	188.4	140.8	141.9	199.6	200.1
3. South Atlantic Coast region	122.2	149.3	108.3	114.9	96.5
4. Gulf Coast region	115.9	128.6	106.2	115.6	109.6
5. Northeastern hills and plateaus	141.6	134.2	142.4	147.3	148.5
6. Central Appalachian region	158.7	158.7	153.2	167.3	159.8
7. Region of the Great Northern lakes	155.9	122.4	124.9	172.5	170.5
8. Interior plateau	152.0	145.0	143.1	160.6	157.3
9. Southern Central Appalachian region	169.5	180.7	163.2	109.3	137.7

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES—Continued.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
10. Ohio River belt	137.7	136.8	137.8	138.6	137.8
11. Southern Interior plateau	156.4	172.2	141.3	.....	.....
12. South Mississippi River belt	178.1	197.9	157.7	193.4	152.7
13. North Mississippi River belt	156.5	165.4	152.4	157.2	147.7
14. Southwest Central region	162.4	178.7	150.1	88.9	70.1
15. Central region—plains and prairies	134.9	139.3	131.0	126.2	141.1
16. Prairie region	138.7	140.7	137.9	134.9	121.6
17. Missouri River belt	158.4	176.3	144.5	158.5	148.6
18. Region of the Western plains	149.7	158.9	141.1	145.0	144.8
19. Heavily timbered region of the Northwest	120.8	117.3	114.4	142.9	133.9
20. Cordilleran region	155.5	165.4	142.0	158.5	134.9
21. Pacific Coast region	117.6	103.6	97.7	130.4	126.0

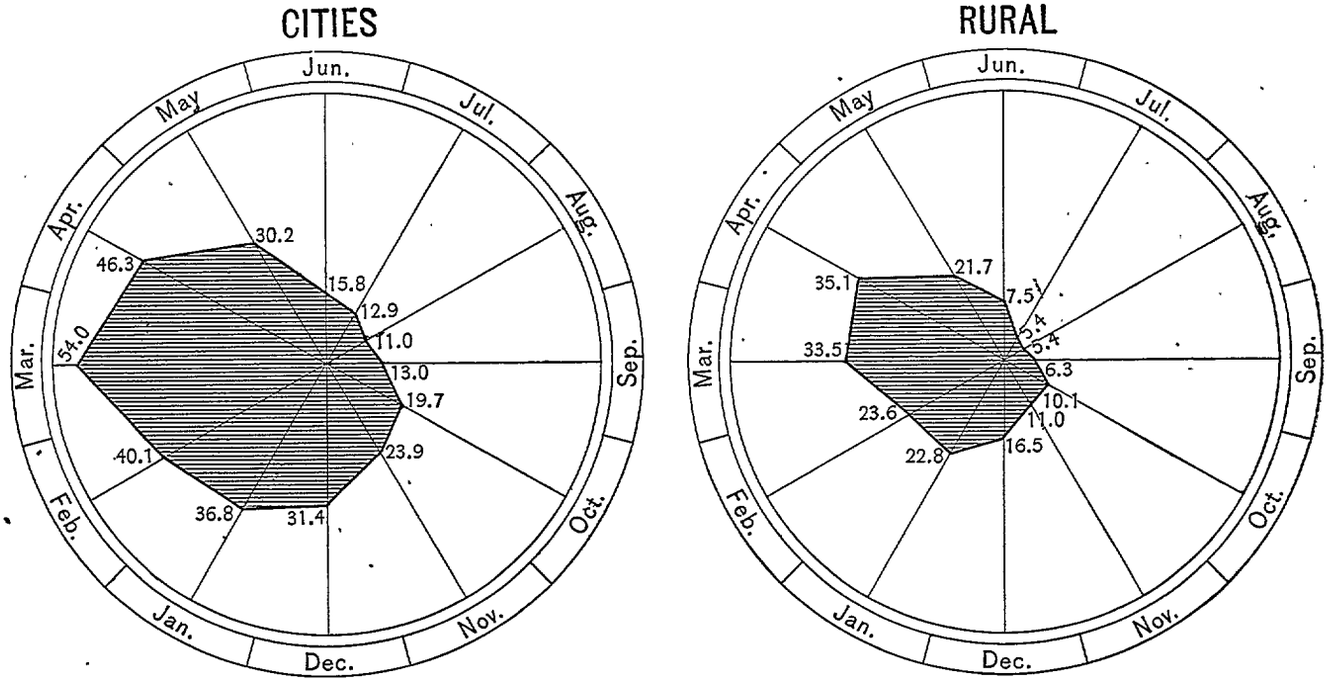
The preceding table indicates that the proportions of deaths due to diseases of the respiratory system were highest in the Southern Central Appalachian region (169.5), the south Mississippi River belt (178.1), and the Middle Atlantic Coast region (188.4), and lowest in the Gulf Coast region (115.9), the Pacific Coast region 117.6), and the South Atlantic Coast region (122.2).

The following table shows, for the registration states, the death rates from diseases of the respiratory system in each month of the census year, in the aggregate, and for the cities and rural districts:

DEATH RATES BY MONTHS.

MONTHS.	Total.	Cities.	Rural.
January	31.1	36.8	22.8
February	33.4	40.1	23.6
March	45.6	54.0	33.5
April	41.7	46.3	35.1
May	26.7	30.2	21.7
June	12.4	15.8	7.5
July	9.8	12.9	5.4
August	8.7	11.0	5.4
September	10.3	13.0	6.3
October	15.7	19.7	10.1
November	18.6	23.9	11.0
December	25.3	31.4	16.5

The death rates from diseases of the respiratory system in each month in the cities and the rural districts, and the relative differences in the rates in the two areas are shown in the following diagram:



The preceding table and diagram show that in both cities and rural districts of the registration states the death rates due to diseases of the respiratory system were highest in March and April, and lowest in July and August.

The following table shows the comparative proportions of deaths from diseases of the respiratory system in each month during the census year, per 1,000 deaths in known months, in the United States, as a whole, and the registration states:

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH.

MONTHS	United States.	Registration states.
January	120.0	111.2
February	128.5	119.5
March	162.5	163.3
April	148.7	149.2
May	94.4	95.6
June	37.0	44.4
July	31.2	35.2
August	31.0	31.2
September	37.2	36.8
October	56.4	56.4
November	63.6	66.7
December	89.5	90.5

PNEUMONIA.

The total number of deaths reported as due to pneumonia in the United States during the census year was 105,971, of which 58,340 were males and 47,631 were females, and the proportion of deaths from this disease in 1,000 deaths from all known causes was 106.1. In 1890 the corresponding proportion was 90.6.

In the registration area the number of deaths reported as due to this disease was 55,296, of which 29,898 were males and 25,398 were females, giving a proportion of 108.9 deaths from this disease in 1,000 deaths from all known causes and a death rate of 192 per 100,000 of population. In 1890 the death rate was 186.9.

In England and Wales the death rate from pneumonia in the year 1899 was 125.5 (males, 149.8; females, 102.7).

The following table shows, for the registration area and its subdivisions, the death rates from pneumonia in the census years 1900 and 1890, by sex, color, general nativity, and parent nativity:

DEATH RATES BY COLOR AND NATIVITY.

AREAS.	Aggregate.	WHITE.							COLORED.		
		Total.	Males.	Females.	Native.			Foreign.	Total.	Males.	Females.

This table shows that the death rate from pneumonia was highest in the cities in the registration states (233.1) and lowest in the rural districts of the same states (135.9). It was very much higher among the colored (349) than among the whites (184.8), higher for the foreign whites (209.8) than native whites (176.7), and also higher for the native whites having one or both parents foreign (212.2) than for those having native parents (155).

In comparison with 1890 there was a slight increase in the death rates due to pneumonia, occasioned by the increase in the cities. In the rural districts of the registration states the death rate from pneumonia decreased.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from pneumonia in the census year per 100,000 of population in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

[1] Nonregistration in 1890.

This table shows that the death rates due to pneumonia in the registration states were highest in New York (228.4) and New Hampshire (212.1), and lowest in Michigan (109.3) and Connecticut (161.7). The rate was very much higher in the cities (233.1) than in the rural districts (135.9) and shows but little variation in the aggregate rates in comparison with 1890.

The following table shows, for the registration area and its subdivisions, the death rates from pneumonia among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	142.8	160.9	145.5	175.7	120.3	131.2
Ireland	257.5	278.7	261.0	286.7	170.7	229.8
Germany	161.1	171.6	173.2	193.7	111.1	132.4
England and Wales	156.9	167.2	158.3	172.7	131.3	150.2
Canada	136.2	151.8	140.4	161.2	114.3	69.6
Scandinavia	148.3	159.8	160.5	188.8	109.0	127.1
Scotland	154.1	176.6	157.3	187.1	94.7	136.3
Italy	479.8	536.2	495.4	561.4	158.4	317.0
France	145.7	158.6	156.4	180.3	98.4	117.4
Hungary and Bohemia	206.6	216.8	232.7	253.9	106.3	158.7
Russia and Poland	197.6	207.8	197.4	210.2	101.0	198.4
Other foreign	226.5	252.6	226.1	258.6	146.8	229.0

The preceding table shows that the death rate due to pneumonia in the registration states was excessively high among those whose mothers were born in Italy (479.8), particularly in the cities in the registration states, where it was 561.4. Among those whose mothers were born in other countries, the rates were highest in those whose mothers were born in Ireland (257.5), in Hungary and Bohemia (206.6), and in "Other foreign" countries (226.5). The rate was lower for the children of mothers born in the United States (142.8) than in any other class except those whose mothers were born in Canada (136.2).

The following table shows, for the registration area and its subdivisions, the death rates from pneumonia during the census year in each of four age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 15.	15 TO 44.		45 TO 64.		65 AND OVER.	
	1900	1900	1890	1900	1890	1900	1890

Females	342.7	69.4	96.3	268.8	311.3	1,005.8	920.0

DEATH RATES AT CERTAIN AGES—Continued.

REGISTRATION AREAS.	UNDER 15.	15 TO 44.		45 TO 64.		65 AND OVER.	
	1900	1900	1890	1900	1890	1900	1890
States—Continued.							
Rural	139.1	53.1	64.5	146.6	167.8	624.3	662.6
Males	146.5	59.1	73.0	145.4	188.3	582.9	614.8
Females	131.5	46.8	55.9	147.9	147.7	666.5	710.7
Cities in other states	274.4	83.7	92.1	253.6	245.3	880.5	665.5
Males	301.7	104.5	114.6	297.4	289.2	888.8	684.0
Females	247.1	62.9	68.9	207.8	199.4	873.5	649.7

The preceding table shows that the death rates from pneumonia were highest among those under 15 years of age (277.1) and at 65 years of age and over (805.4). At each age under 65 years the mortality from this disease was higher in males than in females, but at 65 years and over the mortality of females exceeded that of males. In each age group the death rate was highest in the cities in the registration states and lowest in the rural districts of the same states.

In comparison with 1890 the figures show a decrease in the death rates under 65 years of age, and an increase in the rate at 65 years of age and over.

The combined relations of age and race to the death rates from pneumonia are indicated, for the registration area, in the following table, giving the death rates during the census year in each of four age groups, per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 15.	15 to 44.	45 to 64.	65 and over.
White	260.9	73.1	229.2	806.5
Colored	704.9	178.0	369.0	765.2
Mothers born in—				
United States	194.6	50.7	141.6	581.0
Ireland	305.6	121.7	416.3	1,095.0
Germany	235.6	66.6	193.0	758.2
England and Wales	184.2	66.8	189.3	742.0
Canada	242.1	49.4	155.5	543.2
Scandinavia	229.0	66.8	192.3	856.3
Scotland	137.4	58.4	205.1	829.0
Italy	1,039.9	105.7	302.9	1,095.5
France	249.1	69.9	145.6	531.7
Hungary	452.2	68.1	261.5	374.5
Bohemia	267.3	83.3	187.3	807.7
Russia	482.5	43.2	259.1	1,184.5
Poland	247.4	34.0	119.2	567.5
Other foreign	451.0	77.2	213.4	764.8

The preceding table shows that the death rates due to pneumonia in white persons 65 years of age and over were highest in those whose mothers were born in Russia (1,184.5), in Italy (1,095.5), and in Ireland (1,095), and lowest in those whose mothers were born in France (531.7), in Canada (543.2), and in Hungary (374.5).

In the age group under 15 years the death rates from

this disease were highest in those whose mothers were born in Italy (1,039.9), in Russia (482.5), and in Hungary (452.2), and lowest in those whose mothers were born in Scotland (137.4), in England and Wales (184.2), and in the United States (194.6).

The following table shows for the registration area the proportions of deaths from pneumonia at each age, per 1,000 deaths at known ages from this disease, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

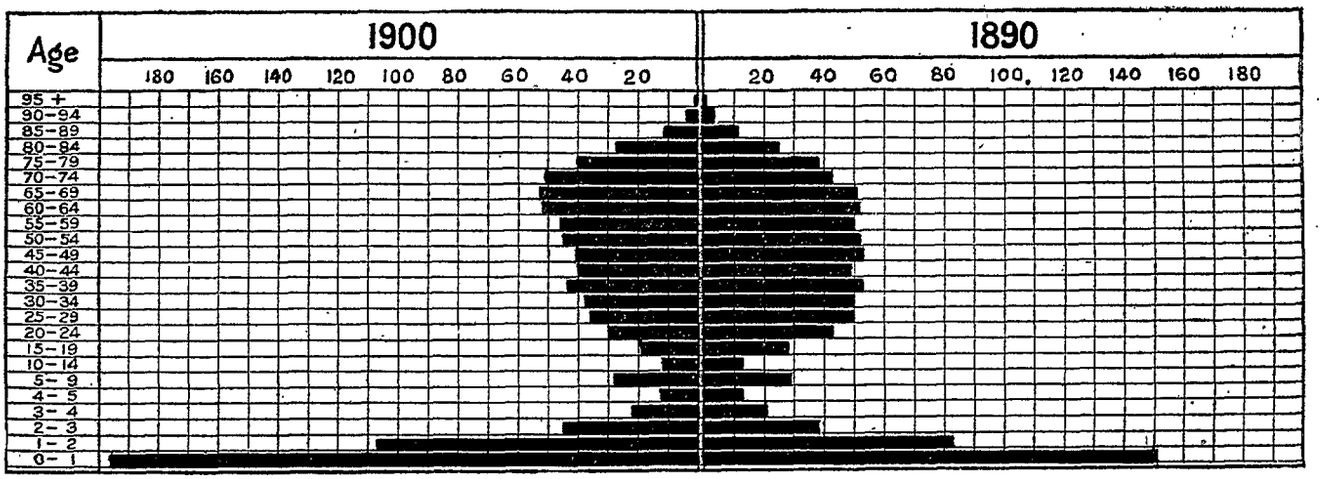
AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	207.3	185.0	155.0	146.4
1 year	106.6	106.4	79.4	85.6
2 years	42.6	47.0	35.2	40.5
3 years	20.6	23.6	18.7	23.0
4 years	11.5	14.6	10.0	15.6
Under 5 years	388.6	376.6	298.3	311.1
5 to 9 years	26.0	30.1	26.2	31.9
10 to 14 years	9.9	13.7	10.8	15.3
15 to 19 years	19.9	18.5	25.6	30.6
20 to 24 years	34.2	26.7	51.1	35.3
25 to 29 years	40.0	31.1	58.7	40.8
30 to 34 years	41.6	33.7	55.9	43.7
35 to 39 years	50.6	37.3	62.0	44.1

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES—Continued.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
40 to 44 years	47.4	32.8	56.7	41.7
45 to 49 years	47.8	33.5	60.9	45.6
50 to 54 years	48.9	40.6	54.7	49.1
55 to 59 years	44.7	47.3	50.6	48.5
60 to 64 years	46.0	57.1	48.7	55.0
65 to 69 years	45.4	60.5	43.9	57.1
70 to 74 years	43.0	58.0	35.6	51.2
75 to 79 years	33.2	47.6	30.3	45.6
80 to 84 years	20.7	33.7	19.4	30.4
85 to 89 years	9.3	14.9	7.7	15.5
90 to 94 years	2.2	4.9	2.4	5.9
95 years and over	0.6	1.4	0.5	1.6

The average age at death from pneumonia in the registration area in 1900 was 31.5 years. In 1890 it was 33.6 years. For those dying at 15 years of age and over, the average age was 53.2 years in 1900 and 50.2 years in 1890.

The comparative proportions of deaths from pneumonia at each age in the registration area in 1900 and 1890 are shown in the following diagram:



The following table shows, for each grand group in the United States, the proportions of deaths from pneumonia during the census year, per 1,000 deaths from known causes in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	106.9	95.5	98.6	112.1	110.2
2. Middle Atlantic Coast region	134.6	102.5	100.6	144.6	140.3
3. South Atlantic Coast region	87.3	112.2	76.1	78.9	61.8

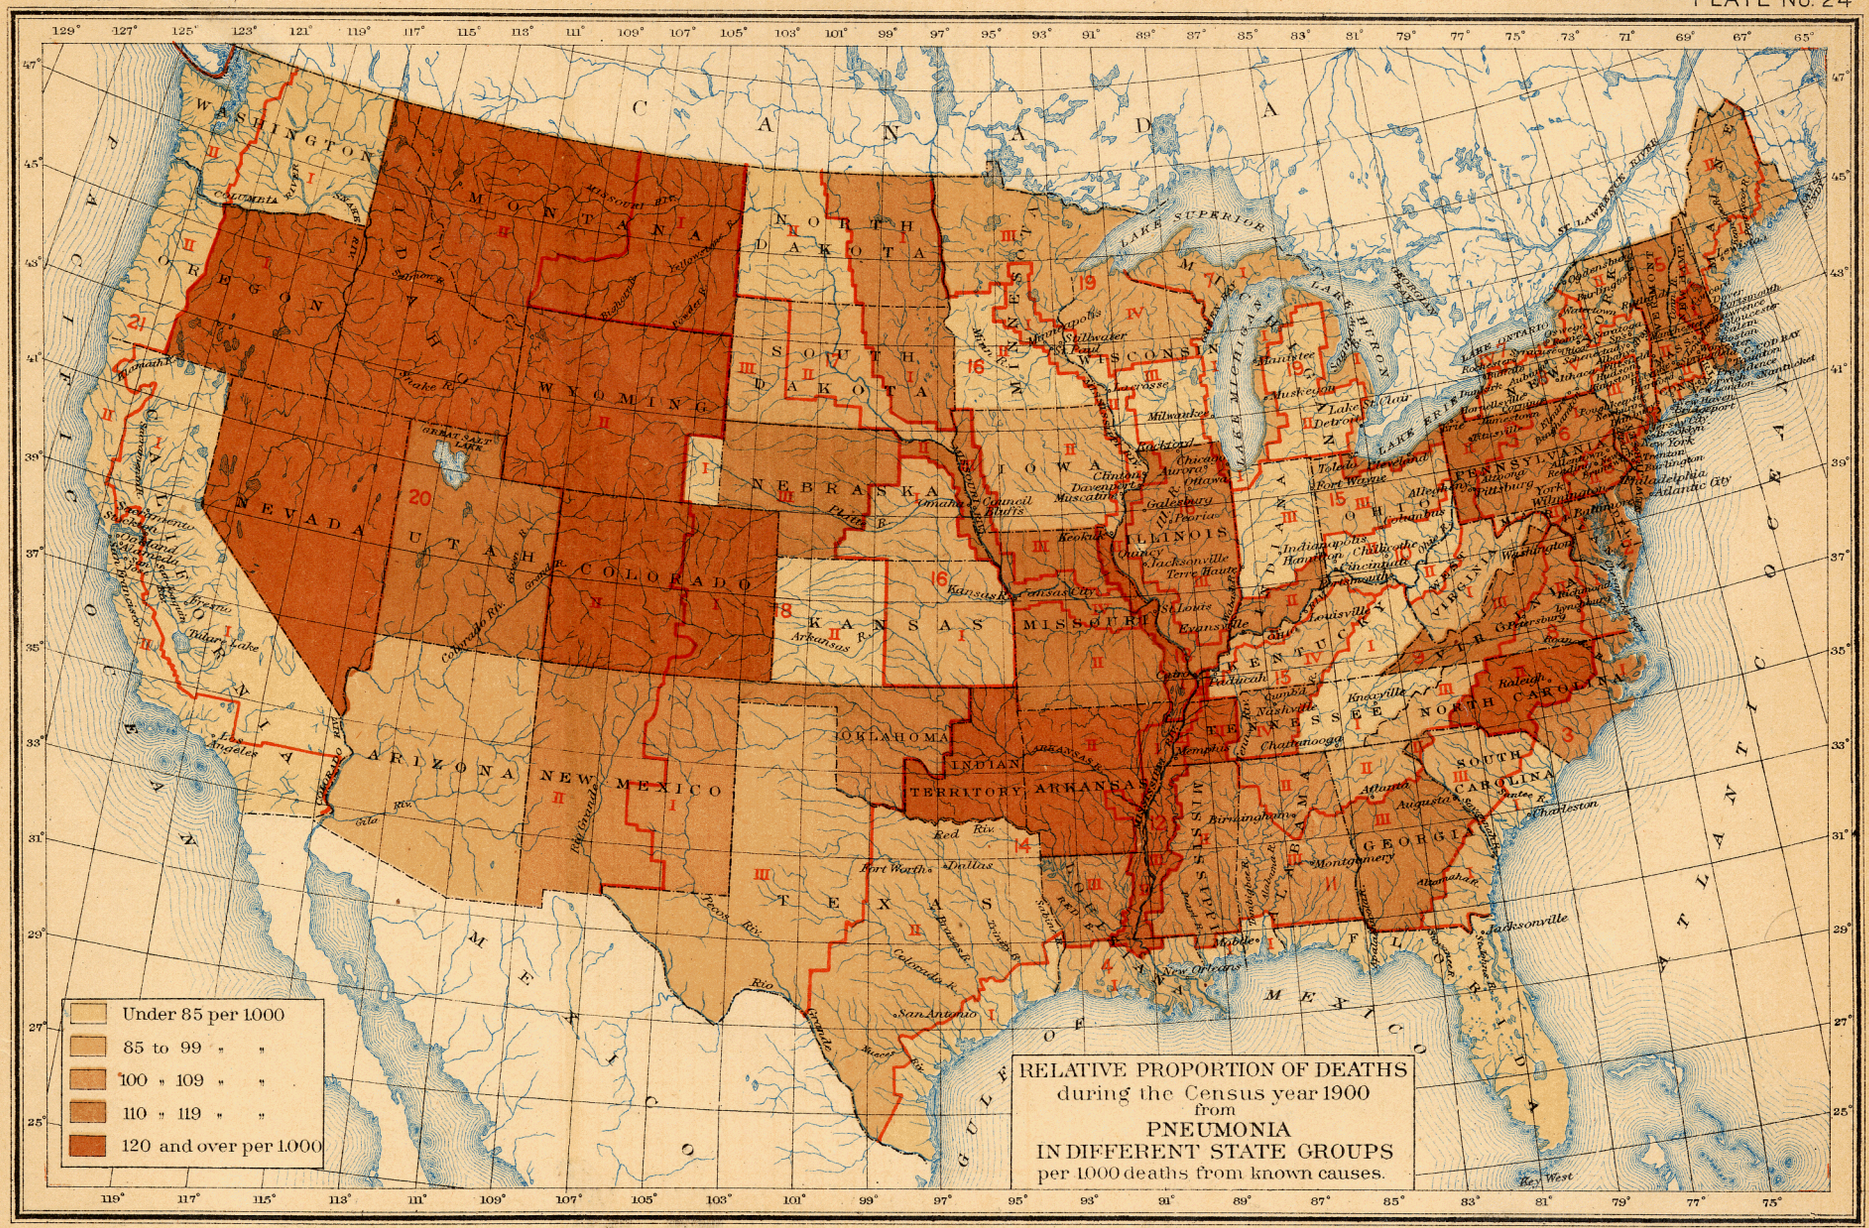
Twelfth Census of the United States
William R. Merriam, Director.

PLATE No. 24



JULIUS BIEN & CO. LITH. N.Y.

This table indicates that the proportions of deaths due to pneumonia were greatest in the South Mississippi River belt (142), the Middle Atlantic Coast region (134.6), and the Cordilleran region (118.7), and least in the Pacific Coast region (78.6), the heavily timbered region of the Northwest (79.4), and the Gulf Coast region (80.3).

The geographical distribution of deaths from pneumonia, by state groups, is shown by plate No. 24.

BRONCHITIS.

The total number of deaths reported as due to bronchitis in the United States during the census year was 20,223, of which 10,031 were males and 10,192 were females, and the proportion of deaths from this disease in 1,000 deaths from all known causes was 20.3. In 1890 the corresponding proportion was 25.6.

In the registration area the number of deaths reported as due to this disease was 13,903, of which 6,844 were males and 7,059 were females, giving a proportion of 273 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 48.3 per 100,000 of population. In 1890 the death rate was 74.4.

In England and Wales the death rate from brochitis in 1899 was 161.3 (males, 163.2; females, 159.6).

The following table shows, for the registration states, in the aggregate, and for the rural districts, the death rates from bronchitis in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

[1] Nonregistration in 1890.

This table shows that the death rates from bronchitis in the registration states were highest in Rhode Island (66.8) and New York (56) and lowest in Michigan (34.5) and Maine (32.8). The rate was much higher in the cities (61.4) than in the rural districts (32.7). The death rate from this disease in comparison with 1890 shows a decrease in all of the states except Vermont, where the rate in 1900 (40.5) was much higher than that of 1890 (22), and in New Hampshire (46.2 in 1890 and 51.8 in 1900).

The following table shows, for the registration area and its subdivisions, the death rates from bronchitis among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	35.7	41.8	36.3	46.0	28.2	33.3
Ireland	65.1	71.2	66.1	73.3	40.5	58.1
Germany	47.0	50.1	49.7	55.4	32.6	40.7
England and Wales	36.7	40.1	36.4	40.8	28.2	37.9
Canada	40.3	46.3	41.4	48.9	31.8	23.6
Scandinavia	33.0	33.1	33.0	41.1	32.5	24.1
Scotland	38.2	44.1	36.5	43.2	22.3	47.8
Italy	175.6	198.4	187.0	214.7	46.1	56.5
France	38.9	48.2	46.6	64.0	4.7	18.3
Hungary and Bohemia	33.5	34.7	35.8	38.1	21.3	29.2
Russia and Poland	40.8	42.2	37.3	38.6	27.7	56.3
Other foreign	57.9	64.4	57.8	65.8	38.1	58.7

It will be seen from this table that the death rates from bronchitis in the registration area were highest among those whose mothers were born in Italy (175.6), in Ireland (65.1), and in "Other foreign" countries (57.9), and lowest among those whose mothers were born in Scandinavia (33), in Hungary and Bohemia (33.5), and in the United States (35.7). In the cities in the registration states the mortality from this disease among those whose mothers were born in Italy was about three times as high as that of any other class.

The following table shows, for the registration area and its subdivisions, the death rates from bronchitis during the census year in each of six age groups, per 100,000 of population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 1.		UNDER 5.		5 TO 14.		15 TO 44.		45 TO 64.		65 AND OVER.

Males	916.7	1,247.2	275.5	409.9	6.7	9.1	5.9	9.7	34.7	56.9	310.8	333.5
Females	677.7	1,062.4	222.2	372.5	6.6	10.0	6.1	8.4	38.0	54.9	372.8	380.0

The preceding table shows that the highest death rates from bronchitis were in infants under 1 year of age (845.1), in children under 5 (259.7), and in persons 65 year of age and over (291.6). At 5 to 14 years and from 15 to 44 years the death rates were exactly the same (5.3). The highest death rates from this disease at each age occurred in the cities in the registration states, except in the age groups 5 to 14 and 15 to 44 years, in which it was higher in the cities in the nonregistration states. In each age group the death rate was less in the rural districts of the registration states than in the cities.

In comparison with 1890 the figures show a decrease of about 50 per cent in the death rates from this disease at each age.

The combined relations of age and race to the death rates from bronchitis are indicated in the following table, for the registration area, giving the death rates during the census year in each of six age groups, per 100,000 of population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 1.	Under 5.	5 to 14.	15 to 44.	45 to 64.	65 and over.
White	810.7	245.1	4.9	4.8	33.4	295.0
Colored	1,803.3	664.0	17.1	14.0	49.1	166.1
Mothers born in—						
United States	618.9	182.4	3.7	3.1	14.6	169.3
Ireland	1,067.3	321.1	6.6	9.9	85.5	470.6
Germany	924.8	252.2	6.0	4.8	28.9	419.2
England and Wales	744.2	203.8	3.0	3.7	21.4	281.2
Canada	873.3	269.1	4.2	4.6	25.7	187.3
Scandinavia	719.3	209.5	2.0	1.1	15.4	225.4
Scotland	461.0	141.9	5.6	2.0	36.1	318.0
Italy	2,616.8	990.3	8.3	8.3	28.7	537.4
France	1,936.2	494.6	9.6	5.5	16.6	132.9
Hungary	577.8	183.7	4.1	1.5	.....	93.6
Bohemia	494.4	177.1	5.1	4.9	31.2	201.9
Russia	710.2	192.9	1.0	2.5	38.0	374.1
Poland	675.0	204.9	6.9	2.3	11.5	141.9
Other foreign	1,059.7	343.1	1.9	3.2	29.8	368.2

The preceding table shows that the death rates from bronchitis in white children under 5 years of age were

highest in those whose mothers were born in Italy (990.3), in France (494.6), and in "Other foreign" countries (343.1) and lowest in those whose mothers were born in Bohemia (177.1), in the United States (182.4), and in Scotland (141.9).

At 65 years of age and over they were highest in those whose mothers were born in Italy (537.4), in Ireland (470.6), and in Germany (419.2) and lowest in those whose mothers were born Hungary (93.6), in France (132.9), and in Poland (141.9).

The following table shows, for the registration area, the proportions of deaths from bronchitis at each age, per 1,000 deaths at known ages from this disease, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	431.2	322.7	388.4	319.6
1 year	118.1	97.8	120.2	115.8
2 years	39.8	41.7	42.9	45.8
3 years	14.9	16.3	20.6	19.3
4 years	10.1	11.1	10.3	10.0
Under 5 years	614.1	489.6	582.4	510.5
5 to 9 years	15.9	16.2	17.1	16.6
10 to 14 years	5.4	4.6	4.6	8.2
15 to 19 years	5.7	8.8	7.6	9.9
20 to 24 years	7.9	10.9	12.6	13.5
25 to 29 years	9.4	10.9	15.6	14.2
30 to 34 years	7.3	10.8	14.6	14.0
35 to 39 years	10.4	8.9	16.5	13.4
40 to 44 years	11.8	9.5	21.7	15.7
45 to 49 years	13.9	16.5	24.3	19.1
50 to 54 years	18.9	21.0	34.8	29.7
55 to 59 years	32.0	31.2	31.4	35.2
60 to 64 years	31.5	46.0	37.2	45.8
65 to 69 years	42.3	65.0	41.6	56.2
70 to 74 years	53.8	73.7	46.0	59.9
75 to 79 years	51.5	70.3	40.5	53.1
80 to 84 years	40.2	56.2	29.9	44.3
85 to 89 years	20.5	32.9	15.6	28.5
90 to 94 years	5.9	12.6	4.8	9.6
95 years and over	1.6	4.4	1.2	2.6

The average age at death from bronchitis in the registration area in 1900 was 28.9 years. In 1890 it was 27.3 years. For those dying at 15 years and over, the average age was 65.9 years in 1900 and 61.7 years in 1890.

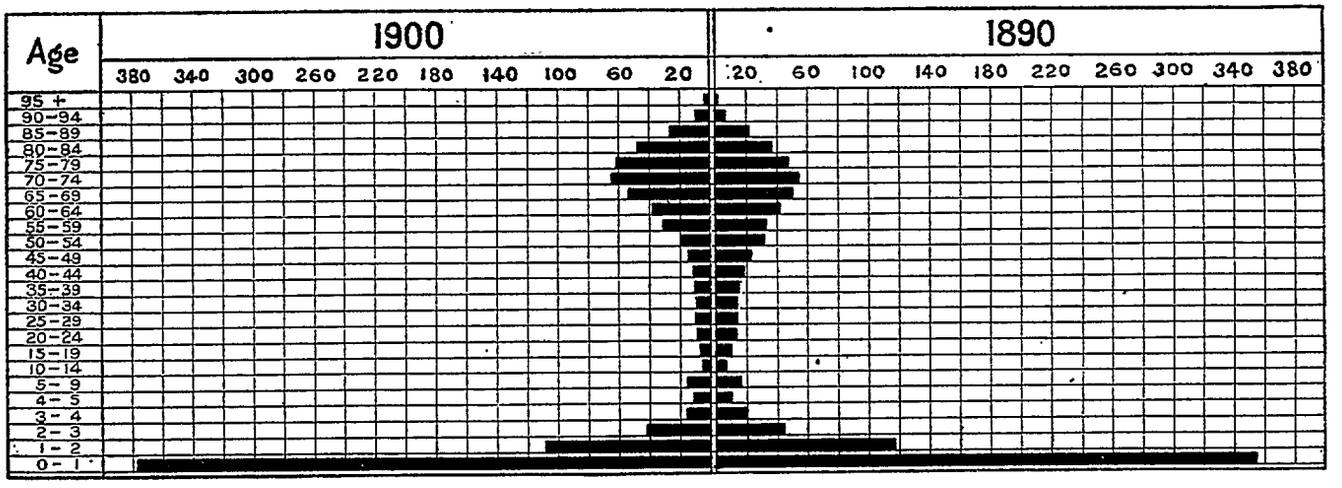
The comparative proportions of deaths from bronchitis, at each age, in the registration area in 1900 and 1890, are shown in the diagram at the bottom of this page.

The following table shows, for each grand group in the United States, the proportions of deaths from bronchitis during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	29.4	22.6	25.5	30.8	32.6
2. Middle Atlantic Coast region	31.2	14.8	19.0	31.8	37.9
3. South Atlantic Coast region	10.6	6.4	8.7	17.1	19.3
4. Gulf Coast region	16.2	10.0	10.3	21.9	26.9
5. Northeastern hills and plateaus	23.7	20.0	24.2	25.0	28.1
6. Central Appalachian region	19.1	15.7	17.8	23.4	25.0
7. Region of the Great Northern lakes	31.9	20.2	22.9	34.0	40.8
8. Interior plateau	17.9	13.3	15.9	19.7	22.4
9. Southern Central Appalachian region	14.9	13.8	15.9	11.4	19.8
10. Ohio River belt	20.1	10.2	14.7	28.1	34.4
11. Southern Interior plateau	10.5	10.6	10.3	.....	.....
12. South Mississippi River belt	10.8	8.1	12.2	10.4	19.2
13. North Mississippi River belt	21.4	15.2	18.3	25.5	29.1
14. Southwest Central region	14.1	14.8	13.1	13.6	24.6
15. Central region—plains and prairies	13.6	13.2	13.2	13.0	17.7
16. Prairie region	13.3	12.1	14.2	16.2	15.3
17. Missouri River belt	16.5	12.2	13.4	21.3	23.7
18. Region of the Western plains	10.0	8.5	10.4	10.6	13.8
19. Heavily timbered region of the Northwest	17.3	15.5	17.0	17.5	27.0
20. Cordilleran region	13.0	11.7	14.1	10.7	23.7
21. Pacific Coast region	17.4	8.1	13.0	20.8	25.0

The preceding table indicates that the proportions of deaths due to bronchitis were greatest in the region of



the Great Northern lakes (31.9), the Middle Atlantic Coast region (31.2), and the North Atlantic Coast region (29.4), and least in the region of the Western plains (10), the Southern Interior plateau (10.5), and the South Atlantic Coast region (10.6).

DISEASES OF THE DIGESTIVE SYSTEM.

The total number of deaths reported as due to this class of diseases in the United States during the census year was 60,229, of which 31,457 were males and 28,772 were females, and the proportion of deaths from these diseases in 1,000 deaths from all known causes was 60.3. In 1890 the corresponding proportion was 46.9.

In the registration area the number of deaths reported as due to this class of diseases was 28,379, of which 14,459 were males and 13,920 were females, giving a proportion of 55.9 deaths from these diseases in 1,000 deaths from all known causes, and a death rate of 98.5 per 100,000 of population. In 1890 the death rate was 91.5.

The following table shows, for the registration states in the aggregate, and for the cities and rural districts, the death rates from diseases of the digestive system in the census year, per 100,000 of population:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.	AGGREGATE.			MALES.			FEMALES.		
	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	93.0	94.6	90.6	93.4	96.0	89.9	92.5	93.2	91.3
Connecticut	89.9	92.9	84.5	87.2	90.9	80.5	92.7	94.8	88.7
District of Columbia	118.4	118.4	.....	124.2	124.2	.....	113.1	113.1	.....
Maine	84.7	87.0	84.2	80.1	99.2	76.4	89.4	75.8	92.4
Massachusetts	82.2	81.7	83.6	82.7	82.1	84.7	81.6	81.4	82.4
Michigan	100.5	106.0	98.2	104.1	113.0	100.6	96.6	99.1	95.5
New Hampshire	81.2	96.3	71.6	77.9	98.3	65.9	84.4	94.4	77.7
New Jersey	89.4	94.6	82.7	87.0	94.3	77.4	91.9	94.9	88.0
New York	96.1	97.1	94.1	96.9	98.1	94.4	95.3	96.0	93.7
Rhode Island	92.4	101.0	75.7	99.3	109.8	79.4	85.8	92.6	71.9
Vermont	100.1	105.1	99.3	96.5	84.3	98.3	103.9	124.6	100.4

This table shows that the death rates from diseases of the digestive system in the registration states were highest in the District of Columbia (118.4), Michigan (100.5), and Vermont (100.1), and lowest in New Hampshire (81.2), Massachusetts (82.2), and Maine (84.7). There was but little difference in the death rates due to these diseases in the cities and rural districts.

The following table shows, for the registration area and its subdivisions, the death rates from diseases of the digestive system among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	79.7	77.2	80.1	76.9	82.7	77.8
Ireland	116.6	120.8	114.2	118.4	99.5	136.0
Germany	100.4	100.0	99.0	98.0	102.0	103.4

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
England and Wales	99.1	98.7	96.7	94.9	100.1	110.5
Canada	72.1	73.7	71.1	72.0	69.9	88.2
Scandinavia	68.2	65.2	76.4	75.3	78.4	53.7
Scotland	89.3	88.3	85.6	82.6	92.1	110.0
Italy	75.3	81.0	68.2	73.1	43.2	149.9
France	132.8	143.3	115.2	124.1	93.8	179.7
Hungary and Bohemia	79.7	80.8	63.9	63.0	69.1	108.6
Prussia and Poland	61.6	60.7	57.0	55.2	70.6	82.2
Other foreign	94.1	98.0	91.3	95.1	82.0	109.3

It will be seen from this table that the death rates due to diseases of the digestive system in the registration area were highest among those whose mothers were born in France (132.8), in Ireland (116.6), and in Germany (100.4), and lowest among those whose mothers were born in Russia and Poland (61.6), in Scandinavia (68.2), and in Canada (72.1).

The following table shows, for the registration area and its subdivisions, the death rates from diseases of the digestive system during the census year in each of six age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

Males	801.1	1,057.5	234.1	317.6	36.9	21.7	66.5	51.7	208.4	200.6	510.7	455.1
Females	586.0	869.8	184.8	275.9	32.6	20.0	75.0	54.2	164.4	144.6	434.6	400.3

The preceding table shows that the highest death rates for this class of diseases occurred in infants under 1 year of age (639.2) and in persons 65 years of age and over (420.6). The rate was higher in males than in females except for those from 15 to 44 years, in which group the death rate of females was higher.

In each age group the highest death rate from these diseases occurred in the cities in the nonregistration states and the lowest in the rural districts of the registration states, except for the age group 5 to 14 years, where the death rate from these diseases in the cities in the registration states (28.2) was less than in the rural districts of the same states (29).

In comparison with 1890 the figures show a decrease in the death rate from these diseases in children under 5 years of age, and an increase in the rate for persons 5 years of age and over.

The combined relations of age and race to the death rates from diseases of the digestive system are indicated in the following table, for the registration area, giving the death rates during the census year in each of six age groups, per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 1.	Under 5.	5 to 14.	15 to 44.	45 to 64.	65 and over.
White	611.9	177.7	30.4	58.8	155.5	423.3
Colored	1,401.5	483.4	48.9	96.7	199.3	320.3
Mothers born in—						
United States	567.3	167.5	29.5	45.9	98.0	312.9
Ireland	626.4	176.3	28.3	66.8	213.4	471.3
Germany	713.5	191.4	23.7	55.1	170.6	470.7
England and Wales	641.5	175.2	19.0	55.9	140.7	442.7
Canada	537.4	167.9	28.8	49.5	102.8	371.5
Scandinavia	498.0	139.7	26.5	47.3	142.3	247.9
Scotland	307.3	86.3	25.4	46.9	141.1	397.5
Italy	587.4	185.1	20.9	44.6	148.1	310.0
France	1,025.1	292.3	57.7	80.9	178.8	398.8
Hungary	406.6	127.6	24.6	39.3	238.8	280.9
Bohemia	1,303.4	298.2	20.4	58.8	176.9	201.9
Russia	537.9	148.4	26.7	47.1	141.7	529.9
Poland	567.3	169.7	13.8	22.8	73.1	162.1
Other foreign	857.6	236.2	30.4	59.1	127.1	467.4

The preceding table shows that the death rates due to this class of diseases in white children under 5 years of age were highest in those whose mothers were born in Bohemia (298.2), in France (292.3), and in "Other foreign" countries (236.2), and lowest in those whose

mothers were born in Scotland (86.3), in Hungary (127.6), and in Scandinavia (139.7).

At 65 years of age and over they were highest in those whose mothers were born in Russia (529.9), in Ireland (471.3), and in Germany (470.7), and lowest in those whose mothers were born in Poland (162.1), in Bohemia (201.9), and in Scandinavia (247.9).

The following table shows, for the registration area, the proportions of deaths from diseases of the digestive system at each specified age, per 1,000 deaths at known ages from this class of diseases, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	157.0	121.5	203.2	167.4
1 year	30.9	29.6	57.1	55.3
2 years	12.1	11.3	14.9	11.9
3 years	6.9	8.4	8.2	7.9
4 years	6.5	7.2	6.9	4.7

5 to 9 years	29.5	29.5	25.4	22.0
10 to 14 years	33.2	27.8	19.9	20.0
15 to 19 years	36.9	39.1	27.1	28.9
20 to 24 years	42.8	57.1	31.4	45.5
25 to 29 years	47.5	66.3	44.1	58.4
30 to 34 years	46.2	60.2	41.6	54.4
35 to 39 years	51.9	64.6	48.0	56.9
40 to 44 years	63.2	57.8	55.2	51.9
45 to 49 years	63.2	51.9	60.3	58.3
50 to 54 years	61.3	56.2	61.5	59.6
55 to 59 years	66.3	56.5	63.6	57.7
60 to 64 years	63.8	58.5	71.2	58.5
65 to 69 years	60.4	62.2	60.2	62.9
70 to 74 years	51.5	55.0	44.8	47.6
75 to 79 years	39.3	41.7	32.4	34.5
80 to 84 years	18.7	23.3	14.1	22.2
85 to 89 years	7.8	10.7	7.8	9.4
90 to 94 years	2.2	3.1	1.1	3.1
95 years and over	0.4	0.5	.....	1.0

The average age at death from diseases of the digestive system in the registration area in 1900 was 37.8 years. In 1890 it was 35.3 years. For those dying at 15 years of age and over the average age was 49.7 years in 1900, and 50.5 years in 1890.

The following table shows, for each grand group in the United States, the proportions of deaths from diseases of the digestive system during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	47.6	42.5	50.1	47.0	49.5
2. Middle Atlantic Coast region	50.0	50.6	58.5	46.0	52.2
3. South Atlantic Coast region	62.3	70.2	64.0	50.9	50.2
4. Gulf Coast region	56.2	62.3	66.0	48.1	42.7
5. Northeastern hills and plateaus	52.6	53.6	55.2	46.8	51.8
6. Central Appalachian region	53.3	50.4	55.6	54.9	53.4
7. Region of the Great Northern lakes	62.5	69.0	70.4	57.8	60.4
8. Interior plateau	57.8	62.1	60.2	51.6	58.6
9. Southern Central Appalachian region	61.4	63.6	57.7	76.1	75.6
10. Ohio River belt	60.8	60.2	59.9	56.9	67.5
11. Southern Interior plateau	64.7	68.4	61.2	.....	.....
12. South Mississippi River belt	56.0	52.1	56.3	63.0	66.8
13. North Mississippi River belt	67.8	71.8	71.4	60.8	66.5
14. Southwest Central region	69.4	71.5	68.2	49.9	60.3
15. Central region—plains and prairies	64.7	64.2	64.4	63.2	70.2
16. Prairie region	73.2	73.7	74.0	58.6	73.4
17. Missouri River belt	69.6	68.9	69.3	68.8	72.7
18. Region of the Western plains	68.3	68.0	70.4	48.9	89.4
19. Heavily timbered region of the Northwest	74.6	76.2	74.4	66.6	78.6
20. Cordilleran region	61.3	56.0	63.8	72.1	82.6
21. Pacific Coast region	63.7	58.8	76.6	57.6	75.5

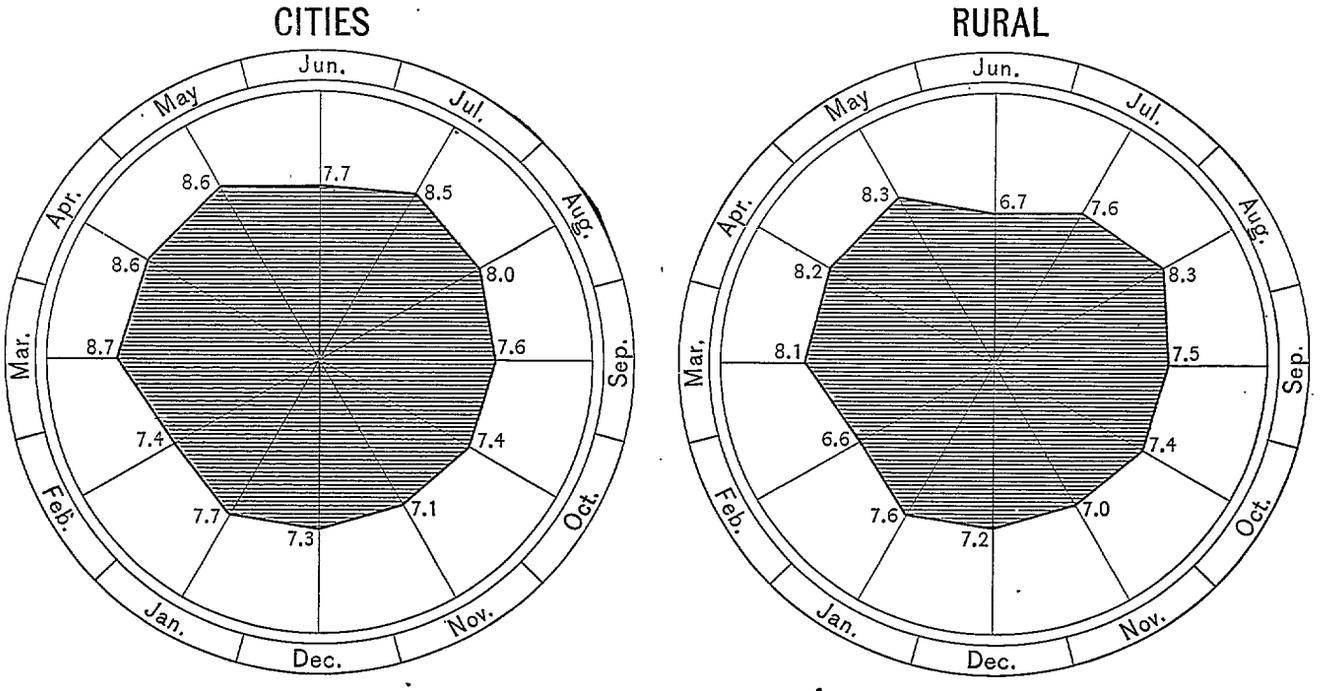
The preceding table indicates that the proportions of deaths due to diseases of the digestive system were greatest in the heavily timbered region of the Northwest (74.6), the Prairie region (73.2), and the Southwest Central region (69.4) and least in the North Atlantic Coast region (47.6), the Middle Atlantic Coast region (50), and the Northeastern hills and plateaus (52.6).

The following table shows, for the registration states, the death rates from diseases of the digestive system in each month of the census year, in the aggregate, and for the cities and rural districts:

DEATH RATES BY MONTHS.

MONTHS.	Total.	Cities.	Rural.
January	7.7	7.7	7.6
February	7.1	7.4	6.6
March	8.5	8.7	8.1
April	8.4	8.6	8.2
May	8.5	8.6	8.3
June	7.3	7.7	6.7
July	8.1	8.5	7.6
August	8.1	8.0	8.3
September	7.5	7.6	7.5
October	7.4	7.4	7.4
November	7.0	7.1	7.0
December	7.3	7.3	7.2

The death rates from diseases of the digestive system in each month in the cities and the rural districts, and the relative differences in the rates in the two areas are shown in the following diagram:



The preceding table and diagram show that there was little variation in the death rates due to these diseases in the different months in either cities or rural districts, and also little difference in the rates in the two areas for the same months.

The following table shows the comparative proportions of deaths from diseases of the digestive system in each month during the census year, per 1,000 deaths in known months in the United States, as a whole, and in the registration states:

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH.

MONTHS.	United States.	Registration states.	MONTHS.	United States.	Registration states.
January	79.9	82.7	July	85.5	87.5
February	75.3	76.5	August	91.7	87.2
March	88.1	90.9	September	86.9	81.1
April	87.4	90.3	October	85.4	79.9
May	99.0	91.0	November	73.8	75.4
June	73.6	78.8	December	73.4	78.2

DISEASES OF THE STOMACH.

The total number of deaths reported as due to diseases of the stomach (including gastritis) in the United States during the census year was 13,484, of which 6,751 were males and 6,733 were females, and the proportion of deaths from these diseases in 1,000 deaths from all known causes was 13.5. In 1890 the corresponding proportion was 9.6.

In the registration area the number of deaths reported as due to diseases of the stomach was 5,743, of which 2,815 were males and 2,928 were females, giving a proportion of 11.3 deaths from these diseases in 1,000 deaths from all known causes, and a death rate of 19.9 per 100,000 of population. In 1890 the death rate was 18.1.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from diseases of the stomach in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES.		
		Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.

[1] Nonregistration in 1890.

It will be seen from this table that the death rates from diseases of the stomach in the registration states were highest in the District of Columbia (28.7) and Vermont (24.4), and lowest in Rhode Island (13.8) and Massachusetts (15.1). The rate was slightly higher in the rural districts in these states (20.7) than in the cities (18.1).

The following table shows, for the registration area and its subdivisions, the death rates from diseases of the stomach among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	16.1	14.3	16.3	13.9	18.3	14.9
Ireland	30.1	31.1	28.3	29.0	25.8	44.4
Germany	17.7	16.6	17.5	15.7	23.1	18.0
England and Wales	22.9	21.8	22.0	20.1	25.6	27.3
Canada	11.6	11.4	11.4	11.0	11.8	14.9
Scandinavia	8.1	7.6	9.6	9.4	9.9	5.6
Scotland	19.8	17.4	18.2	14.4	26.3	28.7
Italy	13.1	13.7	10.6	10.7	10.1	39.3
France	17.0	20.3	11.0	13.6	4.7	33.0
Hungary and Bohemia	12.8	12.5	10.7	9.8	16.0	16.7
Russia and Poland	11.7	11.3	9.0	8.1	15.2	23.8
Other foreign	18.6	19.3	18.9	19.8	16.6	17.3

This table shows that the death rates from diseases of the stomach were highest among those whose mothers were born in Ireland (30.1), in England and Wales (22.9), and in Scotland (19.8), and lowest among those whose mothers were born in Scandinavia (8.1), in Canada (11.6), and in Russia and Poland (11.7).

The following table shows, for the registration area and its subdivisions, the death rates from diseases of the stomach during the census year in each of four age groups, per 100,000 of population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREA.	UNDER 5.		5 TO 14.		15 TO 44.		45 AND OVER.	
	1900	1890	1900	1890	1900	1890	1900	1890
Total	39.0	39.5	2.3	3.5	8.6	8.3	57.2	48.1
Males	41.3	41.3	2.2	3.0	7.4	7.0	57.4	48.0
Females	36.7	37.6	2.5	4.0	9.7	9.5	57.0	48.1
Cities	42.3	44.3	2.7	3.8	9.0	8.7	57.1	51.2
Males	45.7	47.3	2.3	3.1	7.8	7.7	58.2	51.6
Females	38.9	41.2	3.1	4.6	10.1	9.8	56.2	50.8
States	34.4	33.1	1.8	3.2	7.9	8.0	54.1	47.5
Males	35.6	34.4	1.8	2.7	6.7	6.5	52.2	45.7
Females	33.3	31.7	1.9	3.6	9.1	9.6	56.0	49.3
Cities	38.2	39.7	2.3	3.7	8.4	8.9	51.1	53.2
Males	40.9	43.3	1.9	2.7	7.1	7.7	48.6	50.6
Females	35.6	36.0	2.7	4.7	9.7	10.1	53.4	55.6
Rural	28.4	21.8	1.2	3.4	7.0	6.6	57.3	41.4
Males	27.3	19.4	1.6	2.7	6.0	4.5	55.7	40.6
Females	29.5	24.3	0.8	2.1	8.1	8.7	58.9	42.2
Cities in other states	46.2	48.2	3.1	3.9	9.5	8.6	62.9	49.1
Males	50.3	50.7	2.7	3.4	8.5	7.7	67.0	52.7
Females	42.1	45.7	3.4	4.5	10.5	9.5	58.9	45.6

This table shows that the death rates from diseases of the stomach were highest in children under 5 years of age (39) and in persons 45 years of age and over (57.2). In these age groups the death rates of males were higher than those of females, but in the age groups 5 to 45 years the death rates of females exceeded those of males. In the age group under 5 years of age the death rate from these diseases was highest in the cities in the nonregistration states (46.2) and lowest in the rural part of the registration states (28.4). Among those 45 years of age and over, the death rate from these diseases was also highest in the cities in the nonregistration states (62.9), but it was lower in the cities in the registration states (51.1) than in the rural districts of the same states (57.3).

In comparison with 1890 the figures show little difference in the death rates at the different ages up to 15 years, but at 15 years of age and over there was an increase in the rates.

The combined relations of age and race to the death rates from diseases of the stomach are indicated in the following table for the registration area, giving the death rates during the census year in each of four age groups, per 100,000 of population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 5.	5 to 14.	15 to 44.	45 and over.

Hungary	40.8	.....	7.6	20.3
Bohemia	37.3	.....	4.9	43.1
Russia	22.3	1.0	3.9	43.5
Poland	64.0	3.4	2.3	9.7
Other foreign	73.1	2.8	3.9	48.8

The preceding table shows that the death rates due to diseases of the stomach in white persons 45 years of age and over, were highest in those whose mothers were born in Ireland (83.5), in England and Wales (60.1), and in Germany (53.3); and lowest in those whose mothers were born in Poland (9.7), in Hungary (20.3), and in Scandinavia (24.6).

The following table shows, for the registration area, the proportions of deaths from diseases of the stomach at each age, per 1,000 deaths at known ages from these diseases, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	164.2	116.4	178.0	136.0
1 year	31.0	36.3	39.8	34.7
2 years	8.9	12.0	13.5	15.2
3 years	8.9	11.3	8.2	9.2
4 years	5.0	7.9	5.2	7.1
Under 5 years	218.0	183.9	244.7	202.2
5 to 9 years	13.9	16.8	22.8	30.3
10 to 14 years	7.1	6.8	9.9	9.8
15 to 19 years	11.0	17.1	15.2	21.1
20 to 24 years	16.0	36.6	21.1	42.3
25 to 29 years	30.6	46.2	33.4	50.4
30 to 34 years	36.0	44.2	40.4	52.6
35 to 39 years	47.4	57.9	41.6	53.7
40 to 44 years	53.4	42.8	54.5	42.8
45 to 49 years	68.8	50.7	69.7	52.6
50 to 54 years	68.4	64.0	58.0	62.9
55 to 59 years	80.9	61.0	81.4	61.2
60 to 64 years	76.6	75.4	73.8	61.8
65 to 69 years	83.7	75.0	74.9	65.6
70 to 74 years	74.1	85.3	70.8	62.9
75 to 79 years	62.0	62.7	51.5	62.3
80 to 84 years	32.4	46.2	22.3	37.4
85 to 89 years	15.0	19.5	11.7	18.4
90 to 94 years	3.6	7.2	2.3	6.5
95 years and over	1.1	0.7	.....	3.2

The average age at death from diseases of the stomach in the registration area in 1900 was 44.1 years. In 1890 it was 40.9 years.

OBSTRUCTION OF THE BOWELS.

The total number of deaths reported as due to obstruction of the bowels in the United States during the census year was 3,745, of which 1,894 were males and 1,851 were females, and the proportion of deaths from this disease in 1,000 deaths from all known causes was 3.8. In 1890 the corresponding proportion was 2.6.

In the registration area the number of deaths reported as due to this disease was 2,338, of which 1,130 were males and 1,208 were females, giving a proportion of 4.6 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 8.1 per 100,000 of population. In 1890 the death rate was 5.7.

The following table shows, for the registration states,

in the aggregate, and for the cities and rural districts, the death rates from obstruction of the bowels in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.	AGGREGATE.			MALES.			FEMALES.		
	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.

[1] Nonregistration in 1890.

This table indicates that there was little variation in the death rates from obstruction of the bowels in the registration states, the highest rate being that in the District of Columbia (9.7), and the lowest that in New Hampshire (6.8). There was also but little difference in the aggregate death rates from this disease in the cities (8.2) and the rural districts (7.3), or in the rates of males (7.6) and females (8.1).

The following table shows, for the registration area and its subdivisions, the death rates from obstruction of the bowels among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	6.7	6.7	7.0	7.3	6.7	5.5
Ireland	9.3	9.3	9.6	9.7	9.4	7.0

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
Germany	6.9	7.0	6.8	7.0	6.0	7.0
England and Wales	8.8	9.3	8.9	9.7	7.5	8.1
Canada	5.1	4.3	5.1	4.3	6.3	5.0
Scandinavia	5.7	5.8	6.4	6.9	5.4	4.5
Scotland	5.8	5.4	5.1	4.4	6.6	9.6
Italy	5.4	6.1	5.2	5.9	1.4	7.4
France	11.0	11.4	12.3	13.6	9.4	7.3
Hungary and Bohemia	5.9	6.5	4.6	5.3	.....	8.3
Russia and Poland	5.7	5.9	6.0	6.3	4.1	4.3
Other foreign	8.7	9.9	8.6	10.0	5.0	9.2

This table shows that the death rates due to this cause were highest among those whose mothers were born in France (11), in Ireland (9.3), and in England and Wales (8.8), and lowest among those whose mothers were born in Canada (5.1) and in Italy (5.4).

The following table shows, for the registration area and its subdivisions, the death rates from obstruction of the bowels during the census year in each of four age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 15.		15 TO 44.		45 TO 64.		65 AND OVER.	
	1900	1890	1900	1890	1900	1890	1900	1890
Total	7.0	5.4	4.4	3.3	12.9	9.1	42.5	24.7
Males	8.3	6.9	3.9	3.7	11.6	7.9	39.8	20.7
Females	5.6	4.0	4.9	2.9	14.2	10.3	44.8	28.3
Cities	7.2	5.9	4.9	3.7	14.6	10.1	46.4	31.2
Males	8.9	7.3	4.3	4.2	12.9	8.8	41.0	24.9
Females	5.5	4.4	5.4	3.2	16.2	11.4	50.8	36.3
States	7.1	4.6	3.6	2.8	11.8	8.0	40.8	22.1
Males	8.3	6.3	3.2	3.0	10.8	7.3	37.5	19.7
Females	5.9	2.8	4.0	2.7	12.9	8.7	43.8	24.3
Cities	7.8	4.9	4.2	3.4	14.2	9.1	46.5	30.5
Males	9.5	6.8	3.7	3.7	12.7	8.7	36.4	26.0
Females	6.0	3.0	4.6	3.1	15.7	9.5	54.4	34.1
Rural	6.2	4.0	2.7	1.8	9.1	6.6	36.6	15.9
Males	6.7	5.5	2.4	1.6	8.7	5.5	38.2	15.6
Females	5.6	2.5	3.0	2.0	9.5	7.6	35.0	16.2
Cities in other states	6.7	6.7	5.5	3.9	14.9	11.1	46.3	32.0
Males	8.3	7.8	4.8	4.6	13.1	9.0	45.4	23.8
Females	5.1	5.6	6.1	3.2	16.7	13.4	47.1	39.0

This table shows that the death rate from obstruction of the bowels was highest in persons 65 years and over, and that at this age it was about the same in the cities in the registration states (46.5) as in the cities in the nonregistration states (46.3), in both of which it was higher than in the rural portions of the registration states (36.6). Under 15 years of age the death rate from this cause was higher in males than in females, but in the age groups above 15 the death rates of females were higher than those for males.

In comparison with 1890 the figures show an increase in the death rates at each age.

The following table shows, for the registration area, the proportions of deaths from obstruction of the bowels at each age, per 1,000 deaths at known ages from this cause, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	193.6	107.7	209.0	117.1
1 year	17.8	12.5	12.1	22.3
2 years	14.2	9.2	22.5	5.6
3 years	6.2	14.2	13.8	9.3
4 years	9.8	6.7	10.4	5.6
Under 5 years	241.6	150.3	267.8	159.9
5 to 9 years	42.6	31.7	44.9	20.4
10 to 14 years	27.5	13.4	31.1	29.7
15 to 19 years	36.4	22.5	38.0	24.2
20 to 24 years	40.9	40.1	60.5	39.0

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES—Continued.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
25 to 29 years	55.9	61.8	57.0	46.5
30 to 34 years	46.2	48.4	50.1	35.3
35 to 39 years	39.1	55.9	57.0	78.1
40 to 44 years	33.7	71.8	55.3	53.9
45 to 49 years	55.9	65.9	27.6	57.6
50 to 54 years	59.5	54.3	65.6	78.1
55 to 59 years	63.1	72.6	53.5	61.3
60 to 64 years	46.2	60.9	48.4	79.9
65 to 69 years	60.4	84.3	53.5	89.2
70 to 74 years	63.9	66.8	36.3	65.1
75 to 79 years	57.7	50.1	27.6	44.6
80 to 84 years	15.1	29.2	8.6	20.5
85 to 89 years	10.7	17.5	15.5	7.4
90 to 94 years	3.6	0.8	1.7	7.4
95 years and over	.....	1.7	.....	1.9

The average age at death from obstruction of the bowels in the registration area in 1900 was 39.7 years. In 1890 it was 37.1 years. For those dying at 15 years of age and over, the average age was 52.1 years in 1900, and 50.3 years in 1890.

APPENDICITIS.

The total number of deaths reported as due to appendicitis in the United States during the census year was 5,111, of which 3,282 were males and 1,892 were females,

and the proportion of deaths from this disease in 1,000 deaths from all known causes was 5.1. In 1890 the deaths from this disease were not separately compiled.

In the registration area the number of deaths reported as due to this disease was 2,858, of which 1,791 were males and 1,067 were females, giving a ratio of 5.6 deaths from this disease to 1,000 deaths from all known causes, and a death rate of 9.9 per 100,000 of population.

The following table shows, for the registration states in the aggregate, and for the cities and rural districts, the death rates from appendicitis in the census year, per 100,000 of population:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.	AGGREGATE.			MALES.			FEMALES.		
	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	9.0	9.9	7.7	11.1	12.4	9.4	6.9	7.5	5.9
Connecticut	7.2	8.1	5.6	7.9	7.9	8.1	6.6	8.5	3.2
District of Columbia	9.0	9.0	.....	12.1	12.1	.....	6.1	6.1	.....
Maine	6.5	8.5	6.1	5.7	12.4	4.4	7.3	4.9	7.8
Massachusetts	8.2	8.6	6.8	12.2	13.0	9.9	4.3	4.5	3.8
Michigan	10.0	10.7	9.7	12.0	12.5	11.8	7.8	8.9	7.4
New Hampshire	5.1	5.7	4.7	5.4	6.6	4.6	4.8	4.8	4.9
New Jersey	6.8	7.2	6.4	6.9	8.5	4.9	6.8	5.9	8.0
New York	10.1	11.5	7.3	12.5	13.8	9.8	7.7	9.2	4.6
Rhode Island	8.2	8.5	7.6	12.3	11.6	13.7	4.1	5.5	1.4
Vermont	12.2	10.7	12.5	15.4	13.3	15.7	8.9	8.3	9.0

According to these figures the death rates from appendicitis in the registration states were highest in Vermont (12.2), New York (10.1), and Michigan (10); and lowest in New Hampshire (5.1), Maine (6.5), and New Jersey (6.8). The rate was slightly higher in the cities (9.9) than in the rural districts (7.7).

The following table shows, for the registration area and its subdivisions, the death rates from appendicitis among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	8.2	8.9	8.0	9.0	7.2	8.8
Ireland	8.1	8.4	8.1	8.5	6.9	7.3
Germany	9.7	9.9	9.9	10.3	8.6	9.4
England and Wales	8.0	8.9	7.6	8.6	5.6	9.9
Canada	9.1	10.2	8.3	8.8	7.7	22.4
Scandinavia	8.8	9.2	7.7	7.9	7.2	10.6
Scotland	10.4	10.9	10.2	10.6	9.2	11.9
Italy	5.4	6.1	5.0	5.7	1.4	9.8
France	11.0	12.7	12.3	15.5	4.7	7.3
Hungary and Bohemia	5.9	6.0	5.3	5.3	5.3	7.0
Russia and Poland	8.9	9.7	9.8	10.9	1.4	5.1
Other foreign	11.0	11.7	10.5	11.2	8.6	13.8

This table shows that the death rates due to appendicitis in the registration area were highest among those whose mothers were born in France (11), in "Other foreign" countries (11), and in Scotland (10.4), and lowest among those whose mothers were born in Italy (5.4), in Hungary and Bohemia (5.9), and in England and Wales (8).

The following table shows, for the registration area and its subdivisions, the death rates from appendicitis during the census year in each of four age groups, per 100,000 population of corresponding ages:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	Under 15.	15 to 44.	45 to 64.	65 and over.
Total	7.9	11.7	8.2	9.1
Males	9.2	15.1	10.7	10.5
Females	6.5	8.3	5.8	7.8
Cities	8.3	12.3	9.4	11.3
Males	9.5	16.1	12.3	14.2
Females	7.1	8.6	6.6	8.9
States	7.0	10.7	7.4	8.3
Males	8.3	13.8	9.1	9.0
Females	5.8	7.7	5.7	7.7
Cities	7.4	11.5	9.1	11.7
Males	8.4	15.1	10.9	14.0
Females	6.4	8.0	7.3	9.9
Rural	6.5	9.5	5.4	5.8
Males	8.1	11.7	7.0	5.8
Females	4.9	7.3	3.7	5.9
Cities in other states	9.1	13.1	9.8	10.8
Males	10.5	16.9	13.5	14.4
Females	7.7	9.2	5.9	7.8

The preceding table shows that the death rate from appendicitis was highest in persons 15 to 44 years of age, and that at this age it was higher in the cities in the nonregistration states (13.1) than in the cities in the registration states (11.5) or in the rural districts of the same states (9.5). It was higher among males than among females in all the age groups.

HERNIA.

The total number of deaths reported as due to hernia in the United States during the census year was 1,979, of which 1,157 were males and 822 were females, and the proportion of deaths from this disease in 1,000 deaths

from all known causes was 2. In 1890 the corresponding proportion was 1.7.

In the registration area the number of deaths reported as due to this disease was 1,071, of which 570 were males and 501 were females, giving a proportion of 2.1 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 3.7 per 100,000 of population. In 1890 the death rate was 3.3.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts the death rates from hernia in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES.		
		Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.

[1] Nonregistration in 1890.

This table indicates that there was little difference in the death rates due to hernia in the several registration states, the highest rate being that in Vermont (4.9), and the lowest that in Michigan (3.1).

The following table shows, for the registration area and its subdivisions, the death rates from hernia during the census year in each of four age groups, per 100,000 of population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 15.		15 TO 44.		45 TO 64.		65 AND OVER.	
	1900	1890	1900	1890	1900	1890	1900	1890
Total	1.3	1.2	1.4	1.1	8.5	8.7	30.1	25.6
Males	2.0	1.9	1.7	1.4	7.5	8.2	33.3	27.7
Females	0.7	0.5	1.1	0.9	9.6	9.2	27.3	23.6
Cities	1.3	1.3	1.6	1.1	9.7	9.9	32.4	31.0
Males	2.0	2.0	2.0	1.5	8.1	10.0	35.7	34.9
Females	0.6	0.5	1.3	0.8	11.2	9.8	29.6	27.8
States	1.2	1.3	1.2	0.9	8.3	8.6	29.3	22.7
Males	1.9	2.1	1.5	1.0	7.4	8.1	33.3	23.7
Females	0.6	0.5	1.0	0.9	9.3	9.0	25.8	21.8
Cities	1.1	1.5	1.6	0.8	10.6	10.9	32.7	29.0
Males	1.9	2.4	2.0	1.0	8.7	11.7	38.3	31.2
Females	0.3	0.5	1.2	0.7	12.4	10.1	28.4	27.2
Rural	1.4	1.0	0.7	1.1	5.8	5.7	26.9	18.1
Males	1.8	1.5	0.7	0.9	5.9	3.8	30.1	18.9
Females	1.0	0.5	0.7	1.3	5.6	7.6	23.6	17.4
Cities in other states	1.5	1.1	1.7	1.4	8.8	9.0	32.0	33.3
Males	2.2	1.7	2.0	1.9	7.6	8.4	33.3	39.0
Females	0.8	0.6	1.4	0.8	10.1	9.6	30.9	28.4

The preceding table shows that the death rate from this cause was highest in persons 65 years of age and over (30.1). Below 45 years of age the rates were insignificant. In the age group 65 years of age and over, it was slightly higher in the cities in the registration states (32.7) than in the cities in the nonregistra-

tion states (32), in both of which it was a little higher than in the rural portions of the registration states (26.9).

At this age the figures show an increase in the death rate from this cause in comparison with 1890, the increase being greatest in the rural districts of the registration states.

The following table shows, for the registration area, the proportions of deaths from hernia at each age, per 1,000 deaths at known ages from this cause, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	121.3	40.0	127.9	43.6
1 year	10.5	4.0	2.8	.....
2 years	.....	.....	2.8	.....
3 years	.....	.....	.....	.....
4 years	1.8	4.0	2.8	.....
Under 5 years	133.6	48.0	136.3	43.6
5 to 9 years	5.3	8.0	17.1	3.4
10 to 14 years	8.8	.....	2.8	3.4
15 to 19 years	26.4	6.0	8.5	.....
20 to 24 years	22.8	2.0	22.7	6.7
25 to 29 years	28.1	4.0	42.6	10.1
30 to 34 years	35.1	28.0	48.3	16.8
35 to 39 years	49.2	56.0	36.9	60.4
40 to 44 years	56.2	72.0	34.1	53.7
45 to 49 years	66.8	70.0	62.5	120.8
50 to 54 years	51.0	104.0	79.6	93.9
55 to 59 years	82.6	106.0	82.4	83.9
60 to 64 years	84.3	130.0	110.8	147.6
65 to 69 years	75.6	128.0	113.7	130.9
70 to 74 years	100.2	104.0	71.0	80.5
75 to 79 years	93.1	76.0	82.4	73.8
80 to 84 years	51.0	32.0	25.6	40.3
85 to 89 years	22.8	22.0	22.7	20.1
90 to 94 years	5.3	4.0	.....	3.4
95 years and over	1.8	.....	.....	6.7

The average age at death from hernia in the registration area in 1900 was 52.8 years. In 1890 it was 52.3 years.

DISEASES OF THE LIVER.

Included in this title are jaundice, inflammation and abscess of the liver, and other diseases of the liver for which details are given separately in the general tables showing the relations of sex and age to each disease and class of diseases. The number of deaths from each, by sex, in the United States and in the registration area, was as follows:

	UNITED STATES.		REGISTRATION AREA.	
	Males.	Females.	Males.	Females.
Jaundice	1,358	1,127	526	460
Inflammation and abscess of the liver	1,550	1,363	679	591
Other diseases of the liver	4,226	2,625	2,682	1,606

The total number of deaths reported as due to diseases of the liver in the United States during the census year was 12,249, of which 7,134 were males and 5,115 were females, and the proportion of deaths from these diseases in 1,000 deaths from all known causes was 12.3. In 1890 the corresponding proportion was 11.2.

In the registration area the number of deaths reported as due to these diseases was 6,544, of which 3,887 were males and 2,657 were females, giving a proportion of 13 deaths from these diseases in 1,000 deaths from all known causes, and a death rate of 22.7 per 100,000 of population. In 1890 the death rate was 24.1.

The following table shows, for the registration area and its subdivisions, the death rates from diseases of the liver in the census years 1900 and 1890, by sex, color, general nativity, and parent nativity:

DEATH RATES BY COLOR AND NATIVITY.

AREAS.	Aggregate.	WHITE.							COLORED.		
		Total	Males.	Females.	Native.			Foreign.	Total.	Males.	Females.
					Total.	Both parents native.	One or both parents foreign.				
Registration area 1900	22.7	22.8	26.9	18.6	17.0	18.5	14.8	40.5	21.9	29.9	14.1
Registration area 1890	24.1	24.1	27.9	20.3	16.7	19.3	12.0	44.6	24.3	31.9	16.9
Cities 1900	23.5	23.5	28.4	18.7	16.7	16.7	15.8	41.8	23.2	31.6	15.1
Cities 1890	26.0	26.0	31.1	21.1	16.8	20.0	12.7	47.4	25.6	33.9	17.5
States 1900	21.7	21.8	25.2	18.4	16.9	18.5	14.8	36.4	14.5	18.7	10.5
States 1890	23.2	23.3	26.0	21.7	16.7	19.5	12.1	42.6	15.8	19.7	12.2
Cities 1900	22.6	22.7	27.3	18.3	16.1	16.1	16.1	37.1	17.5	22.1	13.2
Cities 1890	26.5	26.7	29.5	24.0	16.9	20.8	13.2	47.2	17.9	23.4	13.0
Rural 1900	20.4	20.6	22.5	18.6	17.9	20.3	12.1	34.3	6.3	10.1	2.2
Rural 1890	18.1	18.3	18.4	18.1	16.4	18.5	9.1	28.2	11.0	11.8	10.1
Cities in other states 1900	24.3	24.3	29.5	19.0	17.3	18.1	15.0	48.1	24.8	34.4	15.6
Cities in other states 1890	25.6	25.4	32.6	18.0	16.7	18.3	11.6	47.6	27.7	36.7	18.8

This table shows that the death rate from diseases of the liver was highest in the cities in the nonregistration states (24.3), and lowest in the rural parts of the registration states (20.4). There was but little difference in the death rate of the whites (22.8) and the colored (21.9), but the rate of the foreign whites (40.5) was very much

higher than that of the native whites (17). The death rates of males from these diseases (white, 26.9; colored, 29.9) exceeded those of the females (white, 18.6; colored, 14.1), particularly among the colored.

In comparison with 1890 there was a small decrease in the death rates from diseases of the liver in most of the areas, the greatest being in the cities in the registration states.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from diseases of the liver in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES.		
		Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.

	1890	14.4	14.1	14.5	12.4	22.2	11.6	16.6	6.8	17.5

[1] Nonregistration in 1890.

The preceding table shows that the death rates from diseases of the liver in the registration states were highest in the District of Columbia (24.3) and New York (23.7), and lowest in New Hampshire (15.9) and Massachusetts (17.6). There was but little difference in the death rates from these diseases in the cities and rural districts. The death rate of males from diseases of the liver (25) was considerably higher than that of females (18.3) in all of the registration states.

The following table shows, for the registration area and its subdivisions, the death rates from diseases of the liver among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	15.6	13.8	16.0	13.9	17.7	13.5
Ireland	34.7	36.0	34.6	36.0	29.2	35.8
Germany	28.7	29.7	28.1	29.9	23.1	29.5
England and Wales	26.3	25.7	26.1	25.3	27.4	27.3
Canada	13.9	12.6	14.2	13.0	15.7	8.7
Scandinavia	12.4	12.3	15.6	17.4	12.6	6.7
Scotland	24.8	25.8	24.6	25.6	22.3	26.3
Italy	18.7	20.7	16.5	18.3	7.2	41.8
France	52.9	57.1	35.7	34.9	37.5	99.0
Hungary and Bohemia	21.6	23.3	17.5	19.5	5.3	29.3
Russia and Poland	9.8	9.8	9.6	9.4	11.1	10.8
Other foreign	17.2	16.7	16.5	15.7	18.7	20.6

The preceding table shows that the death rates due to diseases of the liver in the registration area were highest among those whose mothers were born in France (52.9), in Ireland (34.7), and in Germany (28.7), and lowest among those whose mothers were born in Russia and Poland (9.8), in Scandinavia (12.4), and in Canada (13.9).

The following table shows, for the registration area and its subdivisions, the death rates from diseases of the liver during the census year in each of five age groups, per 100,000 of population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 5.		UNDER 15.		15 TO 44.		45 TO 64.		65 AND OVER.	
	1900	1890	1900	1890	1900	1890	1900	1890	1900	1890
Total	23.8	23.6	9.4	9.2	11.2	12.1	57.5	67.2	127.0	122.0
Males	27.7	28.5	10.8	11.2	13.7	14.5	71.4	80.7	145.0	133.1
Females	19.7	18.7	8.0	7.3	8.8	9.6	43.2	53.8	111.0	112.1
Cities	24.9	25.8	9.8	10.1	12.5	13.6	65.5	80.3	137.2	143.5
Males	28.8	31.2	11.3	12.4	15.7	16.6	83.3	99.8	166.2	167.3
Females	21.0	20.3	8.4	7.8	9.4	10.7	47.7	61.0	113.6	124.1
States	20.2	20.0	8.2	8.0	10.5	10.9	50.9	59.7	117.4	113.6
Males	24.8	24.3	9.8	9.4	12.2	11.8	62.4	65.4	128.1	117.9
Females	15.7	15.7	6.5	6.5	8.8	10.0	39.5	54.2	107.6	109.7
Cities	20.4	22.7	8.3	9.0	12.8	13.4	61.9	79.5	124.7	142.3
Males	25.1	27.8	10.0	10.9	15.5	14.5	79.1	91.3	145.2	159.6
Females	15.7	17.6	6.6	7.2	10.2	12.4	45.3	68.2	108.7	128.7
Rural	19.9	15.5	8.1	6.2	6.7	6.4	38.4	35.1	112.0	92.6
Males	24.2	18.5	9.6	7.2	7.1	7.2	44.0	33.9	117.3	91.2
Females	15.6	12.4	6.5	5.3	6.3	5.7	32.4	36.4	106.7	94.0
Cities in other states	29.3	28.5	11.2	11.1	12.3	13.8	69.0	81.2	149.8	144.9
Males	32.4	34.1	12.4	13.7	15.8	18.4	87.2	108.1	186.1	175.8
Females	26.1	22.7	10.1	8.4	8.8	9.1	50.0	53.1	118.7	118.6

It will be seen from this table that the death rate from diseases of the liver was highest in persons 65 years of age and over, and that at this age it was higher in the cities in the nonregistration states (149.8) than in the cities in the registration states (124.7). The lowest death rates from these causes at each age occurred in the rural portions of the registration states.

There appears to have been but little difference in the comparative death rates from diseases of the liver at the specified ages between 1890 and 1900.

The combined relations of age and race to the death rates from diseases of the liver are indicated, for the registration area, in the following table, giving the death rates during the census year in each of five age groups, per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 5.	Under 15.	15 to 44.	45 to 64.	65 and over.
White	23.1	9.1	11.0	57.8	128.9
Colored	41.0	16.3	16.4	49.1	59.3
Mothers born in—					
United States	20.9	8.3	5.8	32.2	94.2
Ireland	19.3	7.4	19.8	78.2	141.7
Germany	18.1	5.9	13.9	71.9	146.0
England and Wales	13.5	5.2	11.3	51.2	143.3
Canada	17.0	7.1	6.7	39.8	140.5
Scandinavia	13.0	5.5	4.9	55.8	112.7
Scotland	6.2	3.9	10.9	50.9	113.6
Italy	30.4	16.3	9.1	64.1	165.4
France	.....	.....	36.8	83.2	192.0
Hungary	35.7	15.9	4.5	125.1	187.3
Bohemia	18.6	6.6	26.9	83.2	.....

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS—Continued.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 5.	Under 15.	15 to 44.	45 to 64.	65 and over.
Mothers born in—					
Russia	23.7	9.7	9.3	31.1	155.9
Poland	11.2	5.3	5.3	23.1	40.5
Other foreign	16.9	8.5	12.0	51.8	85.0

The preceding table shows that the death rates due to diseases of the liver in white persons 45 to 64 years of age were highest in those whose mothers were born in Hungary (125.1), in Bohemia (83.2), and in France (83.2); and lowest in those whose mothers were born in Poland (23.1), in Russia (31.1), and in the United States (32.2).

At 65 years of age and over, they were highest in those whose mothers were born in France (192), in Hungary (187.3), and in Italy (165.4); and lowest in those whose mothers were born in Poland (40.5), in "Other foreign" countries (85), and in the United States (94.2).

The following table shows, for the registration area, the proportions of deaths from diseases of the liver at each age, per 1,000 deaths at known ages from these diseases, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	94.5	91.8	91.4	81.4
1 year	3.3	4.2	5.5	5.6
2 years	3.9	5.7	3.6	1.5
3 years	1.3	3.4	3.3	3.0

NUMBER OF DEATHS AT EACH AGE—Continued.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
4 years	2.8	4.1	1.1	1.5
Under 5 years	105.8	109.2	104.9	93.0
5 to 9 years	5.9	8.3	7.6	5.1

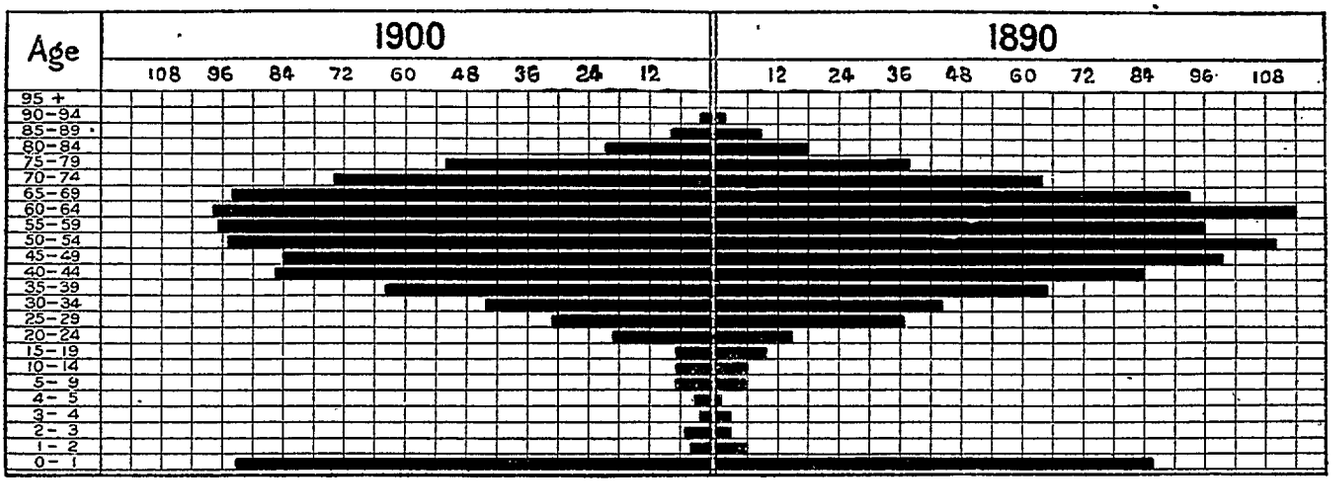
15 to 19 years	6.4	7.6	9.8	11.1
20 to 24 years	16.5	21.9	15.3	15.2
25 to 29 years	31.4	31.0	33.9	40.9
30 to 34 years	45.1	43.4	45.9	42.4
35 to 39 years	66.4	61.6	73.2	57.6
40 to 44 years	93.5	79.0	88.5	80.4
45 to 49 years	93.2	75.6	103.4	96.0
50 to 54 years	99.1	90.3	106.3	102.1
55 to 59 years	103.0	91.0	95.1	97.0
60 to 64 years	104.5	91.8	116.9	99.0
65 to 69 years	91.2	96.7	83.4	102.6
70 to 74 years	64.6	83.1	53.2	75.3
75 to 79 years	44.3	60.4	35.7	39.9
80 to 84 years	16.0	26.8	13.1	23.2
85 to 89 years	5.1	11.3	7.6	9.6
90 to 94 years	1.8	2.3	1.1	3.5
95 years and over	0.3	.....	.....	.....

The average age at death from diseases of the liver in the registration area in 1900 was 48.2 years. In 1890 it was 47.9 years. For those dying at 15 years of age and over, the average age was 54.6 years in 1900 and 53.7 years in 1890.

The comparative proportions of deaths from diseases of the liver at each age in the registration area in 1900 and 1890 are shown in the following diagram:



The following table shows, for each grand group in the United States, the proportions of deaths from diseases of the liver during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	10.7	12.1	11.1	12.4	8.1
2. Middle Atlantic Coast region	12.2	10.8	9.5	14.2	10.9
3. South Atlantic Coast region	10.2	11.9	9.2	9.7	8.7
4. Gulf Coast region	15.4	16.9	14.2	18.9	10.9
5. Northeastern hills and plateaus	10.8	11.4	10.0	10.9	10.5
6. Central Appalachian region	10.7	11.0	10.5	12.0	8.5
7. Region of the Great Northern lakes	13.2	14.6	14.3	14.3	10.5
8. Interior plateau	12.2	13.5	10.7	13.2	11.3
9. Southern Central Appalachian region	11.6	12.2	10.9	15.4	10.8
10. Ohio River belt	13.6	13.4	10.6	17.7	12.8
11. Southern Interior plateau	9.3	10.6	8.1	.....	.....
12. South Mississippi River belt	9.5	8.5	8.6	20.2	6.2
13. North Mississippi River belt	13.9	13.2	11.9	18.1	12.0
14. Southwest Central region	13.0	15.6	10.4	14.6	4.9
15. Central region—plains and prairies	12.7	13.0	11.7	15.4	13.6
16. Prairie region	12.8	12.8	12.9	13.4	11.6
17. Missouri River belt	11.3	12.4	10.5	13.7	7.6
18. Region of the Western plains	11.8	11.0	12.0	12.2	13.9
19. Heavily timbered region of the Northwest	14.9	16.7	14.2	13.8	11.2
20. Cordilleran region	10.5	11.2	8.8	15.0	6.6
21. Pacific Coast region	17.3	11.3	11.7	21.2	20.9

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES—Con.

This table indicates that the proportions of deaths due to diseases of the liver were greatest in the Pacific Coast region (17.3), the Gulf Coast region (15.4), and the heavily timbered region of the Northwest (14.9); and least in the Southern Interior plateau (9.3), South Mississippi River belt (9.5), and the South Atlantic Coast region (10.2).

PERITONITIS.

The total number of deaths reported as due to peritonitis in the United States during the census year was 7,501, of which 2,845 were males, and 4,656 were females, and the proportion of deaths from this disease in 1,000 deaths from all known causes was 7.5. In 1890 the corresponding proportion was 6.2.

In the registration area the number of deaths reported as due to this disease was 5,028, of which 1,838 were males and 3,190 were females, giving a proportion of 9.9 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 17.5 per 100,000 of population. In 1890 the death rate was 17.4.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from peritonitis in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES.		
		Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	1900	15.8	16.3	14.9	11.6	11.8	11.3	19.9	20.7	18.7
	1890	17.5	19.4	14.7	15.3	17.2	12.6	19.7	21.5	16.8
Connecticut	1900	12.5	12.1	13.5	9.3	8.5	10.5	15.9	15.5	16.5
	1890	16.1	19.0	14.0	14.1	18.4	11.1	18.1	19.6	16.9
District of Columbia	1900	17.9	17.9	.....	11.3	11.3	.....	23.8	23.8	.....

Vermont	1900	20.9	34.3	18.8	19.4	31.1	17.7	22.5	37.4	20.0
	1890	11.4	21.2	10.5	10.6	36.9	8.4	12.3	6.8	12.8

[1] Nonregistration in 1890.

This table shows that the death rates from peritonitis in the registration states were highest in Vermont (20.9) and the District of Columbia (17.9), and lowest in Rhode Island (7.5) and Connecticut (12.5).

The following table shows, for the registration area and its subdivisions, the death rates from peritonitis among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	14.8	15.1	14.1	13.9	14.4	17.5
Ireland	15.6	16.2	14.8	15.3	13.1	21.7
Germany	18.4	18.8	17.6	17.9	16.4	20.3
England and Wales	14.1	15.0	12.7	13.3	11.7	20.5
Canada	15.8	17.6	15.2	16.7	13.2	24.8
Scandinavia	18.5	18.1	18.9	18.3	19.9	17.9

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
Scotland	12.2	12.4	9.8	8.8	11.9	26.3
Italy	16.6	17.7	14.6	15.5	10.1	36.8
France	18.9	22.8	16.4	21.3	4.7	25.7
Hungary and Bohemia	11.8	10.9	10.7	8.9	21.3	13.9
Russia and Poland	9.4	8.9	8.6	7.9	13.8	13.0
Other foreign	18.4	19.0	18.2	18.9	16.6	19.6

The preceding table shows that the death rates from peritonitis in the registration area were highest among those whose mothers were born in France (18.9), in Scandinavia (18.5), and in Germany (18.4), and lowest among those whose mothers were born in Russia and Poland (9.4), in Hungary and Bohemia (11.8), and in Scotland (12.2).

The following table shows, for the registration area

and its subdivisions, the death rates from peritonitis during the census year in each of four age groups, per 100,000 of population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 15.		15 TO 44.		45 TO 64.		65 AND OVER.	
	1900	1890	1900	1890	1900	1890	1900	1890
Total	12.0	11.3	19.3	18.3	18.0	20.4	29.5	36.9
Males	12.8	12.3	10.9	12.9	15.3	18.5	26.6	36.2
Females	11.2	10.2	27.8	23.8	20.8	22.3	32.1	37.4
Cities	12.2	11.4	20.3	19.5	20.1	22.6	31.4	41.6
Males	13.3	12.6	11.3	13.6	17.1	20.4	28.3	42.2
Females	11.1	10.2	29.1	25.2	23.1	24.8	33.9	41.1
States	12.0	12.8	16.7	17.5	15.9	20.5	27.3	34.8
Males	12.6	13.9	9.3	13.2	12.7	18.8	24.8	34.2
Females	11.3	11.7	24.0	21.6	19.1	22.2	29.6	35.3
Cities	12.3	14.1	17.2	19.3	18.2	25.0	28.2	40.8
Males	13.5	15.6	9.4	15.0	14.2	22.7	25.5	42.5
Females	11.2	12.6	24.6	23.4	22.1	27.1	30.2	39.5
Rural	11.4	10.8	15.9	14.3	13.2	15.0	26.7	30.4
Males	11.4	11.2	9.3	10.2	11.1	13.9	24.3	28.9
Females	11.5	10.4	22.9	18.4	15.4	16.1	29.1	31.9
Cities in other states	12.1	9.1	23.1	19.6	21.8	20.2	34.7	42.5
Males	13.1	10.0	13.0	12.5	19.7	18.1	31.0	41.8
Females	11.1	8.1	33.3	26.9	24.1	22.4	37.8	43.0

This table shows that the death rate from peritonitis was highest in persons 65 years of age and over (29.5), and that in this age group it was higher in the cities in the nonregistration states (34.7) than in the cities in the registration states (28.2) or in the rural districts of the same states (26.7). Below 15 years of age the death rate of males from this disease was greater than that of females, but at ages above 15 years the death rate of females was very much greater than that of males.

In comparison with 1890 the figures show an increase in the death rates from peritonitis up to 45 years of age, and a decrease in the rates from this cause above 45.

The combined relations of age and race to the death rates from peritonitis are indicated, for the registration area, in the following table, giving the death rates during the census year in each of four age groups, per 100,000 of population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 15.	15 to 44.	45 to 64.	65 and over.
White	11.5	18.5	17.6	29.2
Colored	25.1	36.1	29.6	41.5
Mothers born in—				
United States	11.5	16.8	13.4	22.0
Ireland	11.2	15.2	18.2	25.6
Germany	13.2	17.7	22.8	34.1
England and Wales	7.9	15.4	13.1	27.2
Canada	12.4	17.3	16.7	21.9
Scandinavia	13.5	18.8	30.8	33.8
Scotland	5.8	11.6	13.1	34.1
Italy	12.8	16.5	31.0	20.7
France	20.2	20.2	12.5	29.5
Hungary	9.1	19.7	11.4	.....
Bohemia	.....	12.2	10.4	.....
Russia	9.7	12.3	17.3	.....
Poland	6.0	4.7	26.9	20.3
Other foreign	15.9	18.7	12.6	63.7

The preceding table shows that the death rates from peritonitis in white persons 15 to 44 years of age were highest in those whose mothers were born in France (20.2), in Hungary (19.7), and in Scandinavia (18.8) and lowest in those whose mothers were born in Poland (4.7), in Scotland (11.6), and in Bohemia (12.2).

The following table shows, for the registration area, the proportions of deaths from peritonitis at each specified age, per 1,000 deaths at known ages from this cause, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	74.3	29.9	69.9	39.7
1 year	21.3	12.2	24.7	12.6
2 years	25.1	9.4	14.1	7.5
3 years	10.4	6.9	8.5	6.0
4 years	9.3	6.0	12.7	4.0
Under 5 years	140.4	64.4	129.9	69.8
5 to 9 years	77.1	38.3	54.4	31.2
10 to 14 years	77.6	45.3	66.4	45.7
15 to 19 years	84.7	80.5	90.4	70.4
20 to 24 years	82.0	134.5	84.8	121.1
25 to 29 years	79.2	133.9	98.9	136.7
30 to 34 years	62.3	119.1	66.4	116.6
35 to 39 years	57.9	104.7	57.2	94.5
40 to 44 years	70.5	71.7	61.4	67.3
45 to 49 years	59.6	42.7	50.8	53.8
50 to 54 years	35.5	34.9	41.0	36.7
55 to 59 years	43.1	32.1	44.5	40.2
60 to 64 years	38.3	30.2	51.5	31.6
65 to 69 years	34.4	25.8	35.3	33.2
70 to 74 years	23.5	21.4	31.1	21.1
75 to 79 years	15.8	12.6	20.5	13.1
80 to 84 years	7.7	3.8	12.0	10.5
85 to 89 years	3.8	2.5	2.8	6.0
90 years and over	1.6	1.6	0.7	0.5

The average age at death from peritonitis in the registration area in 1900 was 31.8 years. In 1890 it

was 33.2 years. For those dying at 15 years of age and over, the average age was 38.3 years in 1900, and 39.6 in 1890.

The following table shows, for each grand group in the United States, the proportions of deaths from peritonitis during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex, for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	8.3	5.5	10.0	6.2	11.1
2. Middle Atlantic Coast region	6.9	4.6	10.4	4.6	9.4
3. South Atlantic Coast region	2.7	0.6	1.7	4.8	8.7
4. Gulf Coast region	4.7	2.3	4.1	5.2	8.8
5. Northeastern hills and plateaus	10.2	8.0	11.8	7.3	14.5
6. Central Appalachian region	8.7	5.2	9.5	9.5	14.4
7. Region of the Great Northern lakes	9.9	7.9	11.7	6.8	13.8
8. Interior plateau	8.6	4.8	7.9	8.0	13.9
9. Southern Central Appalachian region	3.7	2.7	3.3	6.5	25.2
10. Ohio River belt	9.1	5.0	7.5	7.9	19.3
11. Southern Interior plateau	2.6	2.6	2.7	.....	.....
12. South Mississippi River belt	5.0	1.3	2.7	11.6	26.9
13. North Mississippi River belt	9.1	4.6	7.3	8.0	19.1
14. Southwest Central region	3.7	2.5	4.4	7.3	23.4
15. Central region—plains and prairies	7.7	3.9	9.0	8.3	20.1
16. Prairie region	7.8	5.5	9.7	9.2	17.5
17. Missouri River belt	11.9	5.8	9.0	11.5	28.5
18. Region of the Western plains	7.5	4.2	6.7	5.6	27.7
19. Heavily timbered region of the Northwest	12.0	8.5	13.5	8.2	26.9
20. Cordilleran region	8.9	4.6	12.6	11.9	24.7
21. Pacific Coast region	9.9	5.4	10.3	7.7	17.8

The preceding table indicates that the proportions of deaths due to peritonitis were greatest in the heavily timbered region of the Northwest (12), the Missouri River belt (11.9), and the Northeastern hills and plateaus (10.2), and least in the Southern Central Appalachian region (3.7), Southern Interior plateau (2.6), and the South Atlantic Coast region (2.7).

DISEASES OF THE URINARY SYSTEM AND MALE ORGANS OF GENERATION.

The total number of deaths reported as due to this class of diseases in the United States during the census year was 44,941, of which 27,869 were males and 17,072 were females, and the proportion of deaths from these diseases in 1,000 deaths from all known causes was 45. In 1890 the corresponding proportion was 28.1.

In the registration area the number of deaths reported as due to this class of diseases was 29,447, of which 17,159 were males and 12,288 were females, giving a proportion of 58 deaths from these diseases in 1,000 deaths from all known causes, and a death rate of 102.2 per 100,000 of population. In 1890 the death rate was 70.7.

In England and Wales the death rate due to this class of diseases for the year 1899 was 48.5 per 100,000 (males, 60.2; females, 37.4).

The following table shows, for the registration area and its subdivisions, the death rates from diseases of this class in the census years 1900 and 1890, by sex, color, general nativity, and parent nativity:

DEATH RATES BY COLOR AND NATIVITY.

AREAS.	Aggregate.	WHITE.							COLORED.		
		Total.	Males.	Females.	Native.			Foreign.	Total.	Males.	Females.
					Total.	Both parents native.	One or both parents foreign.				
Registration area 1900	102.2	99.8	116.8	82.9	79.6	95.2	60.3	163.4	155.0	174.1	136.6
Registration area 1890	70.7	70.0	83.7	56.3	.....	.....	.....	.....	85.5	106.8	64.7
Cities 1900	107.2	104.3	120.4	88.5	79.3	94.6	66.6	172.5	159.0	180.3	138.6
Cities 1890	74.6	73.8	85.6	62.0	.....	.....	.....	.....	88.3	111.2	66.5
States 1900	104.8	104.2	120.6	87.8	84.4	99.9	63.7	162.7	136.9	139.1	134.8
States 1890	80.1	79.8	94.9	65.1	.....	.....	.....	.....	91.1	103.6	79.4
Cities 1900	117.2	116.4	130.9	102.5	88.0	106.2	73.1	177.9	147.7	152.9	142.8
Cities 1890	94.4	94.0	106.7	82.0	.....	.....	.....	.....	106.9	122.6	92.8
Rural 1900	87.0	86.7	106.5	66.0	80.3	95.1	42.1	120.1	106.9	103.4	110.6
Rural 1890	58.3	58.4	77.7	38.7	.....	.....	.....	.....	54.8	63.5	45.5
Cities in other states 1900	98.2	92.7	110.6	74.8	71.8	73.2	47.9	164.7	162.3	188.1	137.3
Cities in other states 1890	56.4	53.8	65.7	41.7	.....	.....	.....	.....	83.2	108.1	58.8

It will be seen from this table that the death rate from diseases of the urinary system and male organs of generation was highest in the cities in the registration states (117.2) and lowest in the rural districts of the same states (87). It was much higher for the colored (155) than for the whites (99.8); also higher for the foreign whites (163.4) than for the native whites (79.6). For the last-mentioned class the rate was higher among those of native parents (95.2) than among those having one or both parents foreign (60.3).

In comparison with 1890 there was a decided increase in the death rate due to this class of diseases, being

greatest in the cities in the nonregistration states, where it amounted to nearly 75 per cent.

The following table shows for the registration states, in the aggregate, and for the cities and rural districts, the death rates from diseases of the urinary system and male organs of generation in the census year, per 100,000 of population:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.	AGGREGATE.			MALES.			FEMALES.		
	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	104.8	117.2	87.0	120.9	131.4	106.5	88.8	103.6	66.6

Massachusetts	85.6	82.8	94.4	101.6	96.5	117.3	70.4	70.0	71.8
Michigan	65.0	69.8	62.9	81.8	91.7	78.0	47.0	48.6	46.3
New Hampshire	77.0	66.7	83.5	91.5	73.4	102.3	62.5	60.5	63.9
New Jersey	104.2	114.9	90.1	119.0	127.5	108.1	89.4	102.5	71.9
New York	125.7	141.9	91.9	141.0	154.9	112.9	110.4	129.2	70.2
Rhode Island	129.7	124.6	139.7	148.2	147.7	149.2	111.9	102.9	130.1
Vermont	89.6	85.8	90.2	103.9	71.0	108.8	74.8	99.7	70.6

It will be seen from this table that the death rates from diseases of the urinary system and male organs of generation were highest in Rhode Island (129.7), New York (125.7), and the District of Columbia (124.9); and lowest in Michigan (65), New Hampshire (77), and Massachusetts (85.6). The rate was much higher in the cities (117.2) than in the rural districts (87), and was also much higher among males (120.9) than among females (88.8). The highest death rate from this class of diseases was that of males in the cities in New York (154.9), and the lowest was that of females in the rural districts in Michigan (46.3).

The following table shows, for the registration area and its subdivisions, the death rates from diseases of the urinary system and male organs of generation among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	77.1	74.3	83.2	86.3	80.7	50.4
Ireland	160.6	172.7	166.3	182.0	111.0	115.2
Germany	106.4	112.7	116.0	128.9	76.6	83.9
England and Wales	113.8	118.1	118.0	126.0	103.1	93.7
Canada	49.4	54.1	49.7	55.1	42.8	44.7
Scandinavia	50.1	53.4	56.3	65.9	38.7	39.2
Scotland	111.3	119.5	110.7	120.8	89.4	114.8
Italy	55.7	60.2	55.0	59.8	30.2	63.9
France	143.8	163.7	131.7	157.1	70.3	176.1
Hungary and Bohemia	52.1	54.7	57.1	62.1	26.6	43.2
Russia and Poland	42.9	45.4	43.5	46.7	19.4	40.4
Other foreign	68.0	76.1	67.8	77.9	43.2	69.0

This table shows that the death rates from these diseases in the registration area were highest among those whose mothers were born in France (143.8), in Ireland (160.6), and in England and Wales (113.8), and lowest among those whose mothers were born in Russia and Poland (42.9), in Canada (49.4), and in Scandinavia (50.1).

The following table shows, for the registration area and its subdivisions, the death rates from diseases of the urinary system and male organs of generation during the census year in each of five age groups, per 100,000 of population of corresponding ages, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	Under 5.	Under 15.	15 to 44.	45 to 64.	65 and over.
Total	35.6	21.7	52.0	235.0	768.8
Males	39.1	23.0	51.5	273.8	1,069.6
Females	32.0	20.3	52.6	195.5	500.1
Cities	39.0	23.8	57.7	277.6	878.6
Males	42.6	25.2	58.6	325.8	1,230.6
Females	35.4	22.4	56.9	229.4	591.6
States	35.3	20.9	51.9	223.0	784.2
Males	40.2	22.9	49.3	253.9	1,009.1
Females	30.2	19.0	54.5	191.9	483.9
Cities	42.0	25.1	63.9	300.1	907.2
Males	48.1	27.5	63.2	344.8	1,245.3
Females	36.0	22.6	64.6	257.1	644.2
Rural	24.5	14.9	32.2	134.0	607.4
Males	27.9	16.1	27.5	153.9	859.2
Females	21.1	13.5	37.0	113.1	350.4
Cities in other states	36.1	22.8	52.2	256.3	850.1
Males	37.3	23.2	54.6	308.5	1,216.8
Females	34.9	22.3	49.8	201.9	587.1

It will be seen from this table that the death rate from diseases of the urinary system and male organs of generation was highest in persons 65 years of age and over (768.8), and at this age it was higher in the cities in the registration states (907.2) than in the cities in the nonregistration states (850.1), or the rural districts in the registration states (607.4).

The combined relations of age and race to the death rates from diseases of the urinary system and male organs of generation are indicated, for the registration area, in the following table, giving the death rates during the census year in each of five age groups, per 100,000 of population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 5.	Under 15.	15 to 44.	45 to 64.	65 and over.
White	34.3	20.8	49.9	226.3	760.8
Colored	71.3	44.0	92.6	447.1	1,061.7
Mothers born in—					
United States	31.8	18.9	35.4	149.2	576.4
Ireland	29.6	20.1	87.2	347.3	813.1
Germany	27.2	18.8	45.6	225.8	768.8
England and Wales	33.7	18.3	49.8	198.7	711.2
Canada	30.6	16.8	28.6	134.9	540.1
Scandinavia	26.0	19.6	34.9	123.1	642.3
Scotland	12.3	15.5	42.8	182.2	721.1
Italy	67.4	41.4	34.3	152.6	744.1

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS—Continued.

COLOR AND BIRTHPLACES OF MOTHERS.	Under 5.	Under 15.	15 to 44.	45 to 64.	65 and over.
Mothers born in—					
France	.....	.....	33.1	299.4	797.5
Hungary	45.9	20.4	31.8	193.3	842.7
Bohemia	9.3	13.2	49.0	156.1	555.3
Russia	46.0	23.7	42.7	321.3	1,091.0
Poland	30.4	14.7	12.3	53.9	243.2
Other foreign	39.4	20.4	30.7	216.5	800.2

This table shows that the death rates due to this class of diseases in white persons 45 to 64 years of age were highest in those whose mothers were born in Ireland (347.3), in Russia (321.3), and in France (299.4), and lowest in those whose mothers were born in Poland (53.9), in Scandinavia (123.1), and in Canada (134.9).

At 65 years of age and over they were highest in those whose mothers were born in Russia (1,091), in Hungary (842.7), and in Ireland (813.1), and lowest in those whose mothers were born in Poland (243.2), in Canada (540.1), and in Bohemia (555.3).

The following table shows the death rates from diseases of the urinary system and male organs of generation, per 100,000 of population in the registration area during the census year, by conjugal condition in relation to age:

DEATH RATES BY CONJUGAL CONDITION AND AGE.

CONJUGAL CONDITION.	AGE.							
	15 years and over.		15 to 44 years.		45 to 64 years.		65 years and over.	
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.
Single	73.7	48.8	45.1	31.1	383.3	204.1	1,231.1	585.7
Married	171.7	106.2	52.8	65.4	231.5	168.6	933.5	452.0
Widowed	665.1	300.6	123.7	100.7	440.4	250.2	1,263.8	506.6

The preceding table shows that in persons 15 to 44 years of age the death rates of the married from this class of diseases (males, 52.8; females, 65.4) were higher than those of the single (males, 45.1; females, 31.1). At 45 to 54 years of age they were higher in the single (males, 383.3; females, 204.1) than in the married (males, 231.5; females, 168.6), and in the age group 65 years and over, also higher in the single (males, 1,231.1; females, 585.7) than in the married (males, 933.5; females, 452).

The following table shows, for the registration area, the proportions of deaths from diseases of the urinary system and male organs of generation, at each specified age, per 1,000 deaths at known ages from these diseases, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	17.3	16.4	18.0	17.2
1 year	4.8	6.3	6.6	5.4
2 years	3.6	6.1	6.4	7.9
3 years	4.4	4.8	4.6	6.5
4 years	3.8	4.7	4.7	6.5
Under 5 years	33.9	38.3	40.3	43.5
5 to 9 years	14.0	17.1	15.3	22.6
10 to 14 years	8.8	14.2	8.7	13.1
15 to 19 years	12.2	20.6	16.4	22.8
20 to 24 years	22.8	42.5	26.4	49.6
25 to 29 years	33.9	58.4	41.8	70.7
30 to 34 years	39.9	57.4	48.9	67.5
35 to 39 years	51.0	71.7	58.6	73.1
40 to 44 years	61.5	71.1	62.8	80.1
45 to 49 years	67.2	76.9	76.2	80.8
50 to 54 years	85.3	80.5	81.4	87.3
55 to 59 years	92.5	87.5	80.1	78.8
60 to 64 years	103.1	95.7	99.8	86.9
65 to 69 years	107.8	88.2	106.7	80.1
70 to 74 years	103.2	81.8	96.3	60.2
75 to 79 years	85.3	55.7	77.2	44.3
80 to 84 years	50.5	29.1	40.2	24.4
85 to 89 years	22.0	14.0	19.1	9.9
90 to 94 years	4.0	3.0	2.9	3.2
95 years and over	1.1	1.3	0.9	1.1

The following table shows, for the registration states, the death rates from diseases of the urinary system and male organs of generation in each month of the census year, in the aggregate, and for the cities and rural districts:

DEATH RATES BY MONTHS.

MONTHS.	Total.	Cities.	Rural.
January	9.5	11.0	7.4
February	8.8	9.9	7.1
March	10.6	12.1	8.5
April	9.6	10.5	8.4
May	9.2	10.0	8.2
June	8.1	9.1	6.5
July	8.3	9.3	6.9
August	7.7	8.4	6.7
September	7.8	8.7	6.4
October	8.3	9.3	6.8
November	8.1	9.3	6.5
December	8.8	9.6	7.5

The preceding table shows that the highest death rates from diseases of the urinary system and male organs of generation, in both cities and rural districts of the registration states, occurred in March. In the cities the rate for these diseases was lowest in August, and in the rural districts in September.

The following table shows the comparative proportions of deaths from diseases of the urinary system and male organs of generation in each month during the census year, per 1,000 deaths in known months in the United States, as a whole, and in the registration states:

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH.

MONTHS.	United States.	Registration states.
January	90.0	90.8
February	85.5	88.5
March	99.3	101.4
April	97.2	92.1
May	94.8	88.2
June	71.6	76.8
July	76.6	79.6
August	72.7	73.5
September	72.2	74.0
October	78.5	78.9
November	77.4	77.7
December	84.2	83.5

BRIGHT'S DISEASE.

The total number of deaths reported as due to Bright's disease in the United States during the census year was 32,170, of which 18,997 were males and 13,173 were females, and the proportion of deaths from this disease, per 1,000 deaths from all known causes, was 32.2.

In the registration area the number of deaths reported as due to this disease was 22,276, of which 12,385 were males and 9,891 were females, giving a proportion of 43.9 deaths from this disease in 1,000 deaths from all known causes, and a death rate of 77.3 per 100,000 of population.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from Bright's disease in the census year, per 100,000 of population:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.	AGGREGATE.			MALES.			FEMALES.		
	Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	81.5	95.4	61.5	89.0	102.8	69.9	74.0	88.2	52.7
Connecticut	84.4	83.9	85.5	92.7	88.5	100.2	76.2	79.3	70.4
District of Columbia	98.7	98.7	.....	121.2	121.2	.....	78.4	78.4	.....
Maine	70.0	78.5	68.2	80.9	77.9	81.5	58.8	79.1	54.3
Massachusetts	62.6	60.6	68.7	69.2	65.6	80.2	56.3	55.9	57.3
Michigan	43.5	50.7	40.5	50.9	62.9	46.2	35.6	38.9	34.2
New Hampshire	56.6	48.5	61.7	58.4	45.8	65.9	54.8	50.9	57.5
New Jersey	81.4	91.4	68.1	90.0	99.3	78.2	72.7	83.8	58.0
New York	102.5	120.8	64.3	110.0	128.3	72.9	95.0	113.5	55.3
Rhode Island	106.1	102.7	112.9	113.0	112.0	115.0	99.5	94.0	110.7
Vermont	61.1	62.2	60.9	66.2	53.3	68.2	55.8	70.6	53.3

The preceding table shows that the death rates from Bright's disease were highest in Rhode Island (106.1), New York (102.5), and the District of Columbia (98.7); and were lowest in Michigan (43.5), New Hampshire (56.6), and Vermont (61.1).

The following table shows, for the registration area and its subdivisions, the death rates from Bright's disease among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	55.5	55.3	60.7	66.6	55.8	32.9
Ireland	134.8	147.6	140.6	157.1	82.5	88.7
Germany	86.8	93.0	97.8	111.1	57.0	60.9
England and Wales	85.1	90.5	89.5	98.9	71.8	64.6
Canada	35.1	39.1	35.3	39.8	29.5	32.3
Scandinavia	38.4	41.0	44.5	52.5	29.7	28.0
Scotland	87.5	95.2	88.6	98.9	67.1	81.3
Italy	36.6	40.0	34.7	38.1	17.3	56.5
France	117.8	134.5	107.0	128.0	56.2	146.7
Hungary and Bohemia	39.3	41.7	48.0	53.3	16.0	23.7
Russia and Poland	28.7	30.4	31.4	34.0	12.4	16.6
Other foreign	49.6	56.6	50.0	59.0	28.1	47.2

The preceding table shows that the death rates due to Bright's disease, in the registration area, were highest among those whose mothers were born in Ireland (134.8), in France (117.8), and in Scotland (87.5) and lowest among those whose mothers were born in Russia and Poland (28.7), in Canada (35.1), and in Italy (36.6). The death rate due to this disease among those whose mothers were born in the United States (55.5) was lower than the rate for those whose mothers were born in Germany (86.8) or in England and Wales (85.1).

The following table shows, for the registration area and its subdivisions, the death rates from Bright's disease during the census year in each of three age groups, per 100,000 population of corresponding ages, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	15 to 44.	45 to 64.	65 and over.
Total	42.2	195.7	544.9
Males	42.2	222.3	682.9
Females	42.1	168.7	421.7
Cities	47.0	232.8	643.6
Males	48.2	266.2	817.3
Females	45.8	199.3	502.1
States	43.8	192.2	529.5
Males	42.5	213.4	651.7
Females	45.1	170.9	418.2
Cities	55.1	265.2	706.3
Males	55.5	297.4	879.0
Females	54.7	234.3	571.9

DEATH RATES AT CERTAIN AGES—Continued.

REGISTRATION AREAS.	15 to 44.	45 to 64.	65 and over.
States—Continued.			
Rural	25.4	108.0	399.8
Males	22.2	121.1	507.3
Females	28.7	94.3	290.2
Cities in other states	39.7	202.1	581.3
Males	41.9	237.9	758.9
Females	37.6	164.7	429.7

The preceding table shows that the death rate from Bright's disease was highest in persons 65 years of age and over (544.9), and that at each age it was highest in the cities in the registration states, and lowest in the rural districts of the same states.

The combined relations of age and race to the death rates from Bright's disease are indicated for the registration area, in the following table, giving the death rates during the census year in each of three groups, per 100,000 population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	15 to 44.	45 to 64.	65 and over.
White	40.2	187.9	536.6
Colored	78.6	386.7	848.2
Mothers born in—			
United States	28.3	122.0	394.5
Ireland	76.8	305.2	618.7
Germany	37.9	200.4	591.0
England and Wales	38.7	164.2	495.3
Canada	22.6	104.7	384.0
Scandinavia	28.9	107.7	450.7
Scotland	34.7	155.9	522.4
Italy	26.8	130.4	599.4
France	25.7	253.7	635.1
Hungary	25.7	147.8	561.8
Bohemia	41.6	145.7	504.8
Russia	35.4	273.0	841.6
Poland	8.2	42.3	101.3
Other foreign	25.2	188.3	509.9

It will be seen from this table that the death rates from Bright's disease in white persons 45 to 64 years of age were highest in those whose mothers were born in Ireland (305.2), in Russia (273), and in France (253.7) and lowest in those whose mothers were born in Poland (42.3), in Canada (104.7), and in Scandinavia (107.7). In this age group the death rate from this disease in those whose mothers were born in the United States (122) was less than that of those whose mothers were born in Germany (200.4), in England and Wales (164.2), or in Scotland (155.9).

At 65 years of age and over, the death rates from this disease were highest in those whose mothers were born in Russia (841.6), in Ireland (618.7), and in France (635.1); and lowest in those whose mothers were born in Poland (101.3), in Canada (384), and in the United States (394.5).

The following table shows, for each grand group in the United States, the proportions of deaths from Bright's disease during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	40.0	52.0	38.9	38.7	36.5
2. Middle Atlantic Coast region	57.8	44.1	33.6	62.5	62.1
3. South Atlantic Coast region	27.6	13.6	7.9	72.8	63.7
4. Gulf Coast region	33.5	21.9	15.2	53.1	53.5
5. Northeastern hills and plateaus	40.1	43.5	35.3	42.7	39.6

17. Missouri River belt	24.1	29.0	14.1	31.1	22.9
18. Region of the Western plains	20.5	22.8	11.3	32.8	25.4
19. Heavily timbered region of the Northwest	31.1	35.2	23.3	46.1	23.7
20. Cordilleran region	25.3	27.0	18.2	33.2	38.9
21. Pacific Coast region	39.0	38.1	22.6	46.0	39.5

This table indicates that the proportions of deaths due to Bright's disease were greatest in the Middle Atlantic Coast region (57.8), the Northeastern hills and plateaus (40.1), and the North Atlantic Coast region (40) and least in the Southwest Central region (12.9), Southern Interior plateau (13.4), and the Southern Central Appalachian region (13.7).

DISEASES OF THE KIDNEY.

The deaths compiled under this title were mostly due to Bright's disease. In 1890 deaths from acute nephritis were compiled under diseases of the kidney, and in 1900 under Bright's disease, which makes it necessary that they be considered together in order to make comparisons with 1900. Deaths from Bright's disease in 1900 are treated separately.

The total number of deaths reported as due to diseases of the kidney in the United States during the census year was 36,724, of which 21,944 were males and 14,780 were females, and the proportion of deaths from these diseases in 1,000 deaths from all known causes was 36.8. In 1890 the corresponding proportion was 23.9.

In the registration area the number of deaths reported as due to these diseases was 24,124, of which 13,460 were males and 10,664 were females, giving a proportion of 47.5 deaths from diseases of the kidney in 1,000 deaths from all known causes, and a death rate of 83.8 per 100,000 of population. In 1890 the death rate was 59.7.

DISEASES OF THE FEMALE ORGANS OF GENERATION.

The total number of deaths reported as due to diseases of the female organs of generation in the United States during the census year was 3,253, and the proportion of deaths from this class of diseases in 1,000 deaths from all known causes among females was 6.9. In 1890 the corresponding proportion was 7.3.

In the registration area the number of deaths reported as due to these diseases was 1,812, giving a proportion of 7.6 deaths from these diseases in 1,000 deaths of females from all known causes, and a death rate of 12.6 per 100,000 of female population. In 1890 the death rate was 10.4.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from diseases of the female organs of generation in the census year, per 100,000 of female population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		FEMALES.		
		Total.	Cities.	Rural.
Total	1900	11.7	13.7	8.7
	1890	9.5	10.8	7.5
Connecticut	1900	11.0	12.8	7.6
	1890	11.4	12.7	10.5
District of Columbia	1900	26.6	26.6	.....
	1890	9.9	9.9	.....
Maine [1]	1900	9.0	14.5	7.8
Massachusetts	1900	9.7	10.7	6.2
	1890	9.4	9.9	7.6
Michigan [1]	1900	14.0	17.8	12.3
New Hampshire	1900	7.3	7.3	7.3
	1890	9.5	8.6	9.9
New Jersey	1900	6.9	8.5	4.7
	1890	8.7	8.7	8.7
New York	1900	12.8	14.8	8.6
	1890	9.5	11.5	6.3
Rhode Island	1900	17.4	21.3	9.7
	1890	7.9	10.6	4.1
Vermont	1900	10.1	8.3	10.4
	1890	8.6	20.3	7.4

[1] Nonregistration in 1890.

This table shows that there was a slight increase in the death rates due to diseases of the female organs of generation in the registration states over 1890. The highest death rates from these diseases were in the District of Columbia (26.6), Rhode Island (17.4), and Michigan (14), and the lowest in New Jersey (6.9), New Hampshire (7.3), and Maine (9). In Vermont the death rate from this class of diseases was highest in the rural districts (10.4), and in New Hampshire it was exactly the same in both cities and rural districts (7.3). In all other registration states the death rate from this class of diseases was much higher in the cities than in the rural districts.

The following table shows, for the registration area and its subdivisions, the death rates from diseases of

the female organs of generation among the whites during the census year, per 100,000 of white female population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	9.6	10.6	9.7	11.2	8.4	9.4
Ireland	11.2	11.6	11.2	11.7	9.2	11.1
Germany	12.3	13.1	13.0	14.3	8.7	10.9
England and Wales	9.7	11.0	8.8	10.0	6.3	14.0
Canada	9.3	11.6	9.1	11.4	5.9	13.0
Scandinavia	7.6	8.6	6.0	7.0	3.9	10.5
Scotland	10.9	10.9	12.7	13.6	10.8	.....
Italy	14.9	17.0	15.7	18.1	.....	6.1
France	16.4	20.3	17.0	23.3	.....	14.7
Hungary and Bohemia	9.0	8.7	9.2	8.7	13.1	8.7
Russia and Poland	8.2	9.0	7.7	8.5	.....	10.9
Other foreign	10.0	10.6	9.5	10.0	8.2	13.2

The preceding table shows that the death rates due to these diseases in the registration area were highest among those whose mothers were born in France (16.4), in Italy (14.9), and in Germany (12.3), and lowest among those whose mothers were born in Scandinavia (7.6), in Russia and Poland (8.2), and in Hungary and Bohemia (9).

The following table shows, for the registration area and its subdivisions, the death rates from diseases of the female organs of generation during the census year in each of three age groups, per 100,000 of female population of corresponding ages, in comparison with 1890:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	15 TO 44.		45 TO 64.		65 AND OVER.	
	1900	1890	1900	1890	1900	1890
Total	17.0	12.4	19.5	20.4	17.6	19.4
Cities	19.0	13.7	20.5	23.4	18.3	21.1
States	15.1	10.8	19.8	18.5	17.8	17.8
Cities	18.3	12.5	22.1	22.8	19.4	19.1
Rural	9.6	7.8	17.0	13.0	16.5	16.8
Cities in other states	19.7	14.8	18.9	24.0	17.2	23.6

The preceding table shows that the death rate from diseases of the female organs of generation was about the same at 15 to 44 years (17) as at 65 years of age and over (17.6), and that it was highest in the age group 45 to 64 years (19.5). At 15 to 44 years the death rate from these diseases in the cities in the nonregistration states was higher than in the cities in the registration states, but above 45 years the death rate from these diseases was higher in the cities in the registration states. At each age it was lowest in the rural districts of the registration states.

In comparison with 1890 the figures show a decrease in the rate at each age above 45 years and an increase in the rate at 15 to 44.

The combined relations of age and race to the death rates from diseases of the female organs of generation are indicated, for the registration area, in the following table, giving the death rates during the census year in each of three age groups, per 100,000 of female population of corresponding ages, by color and birthplaces of mothers.

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	15 to 44.	45 to 64.	65 and over.
White	15.9	18.8	17.5
Colored	36.6	35.8	20.7
Mothers born in—			
United States	12.5	19.4	14.8
Ireland	13.2	12.4	17.8
Germany	15.2	18.1	16.5
England and Wales	9.6	17.5	18.5
Canada	14.2	14.6	.....
Scandinavia	9.3	22.7	21.5
Scotland	13.6	13.8	11.1
Italy	25.5	24.0	.....
France	11.0	27.2	64.1
Hungary	16.2	.....	.....
Bohemia	14.2	20.9	.....
Russia	21.5	.....	69.5
Poland	8.1	9.2	.....
Other foreign	16.0	7.4	15.2

The preceding table shows that the death rates due to this class of diseases in white females 15 to 44 years of age were highest in those whose mothers were born in Italy (25.5), in Russia (21.5), and in "Other foreign" countries (16), and lowest in those whose mothers were born in Poland (8.1), in England and Wales (9.6), and in Scandinavia (9.3).

The following table shows the death rates from diseases of the female organs of generation per 100,000 of female population in the registration area during the census year, by conjugal condition in relation to age:

DEATH RATES BY CONJUGAL CONDITION AND AGE.

CONJUGAL CONDITION.	AGE.			
	15 years and over.	15 to 44 years.	45 to 64 years.	65 years and over.
Single	9.8	8.5	28.9	14.6
Married	21.4	22.7	18.7	16.8
Widowed	19.9	30.2	15.9	18.1

The preceding table shows that in females 15 to 44 years of age the death rate of the married from diseases of the female organs of generation (22.7) was very much higher than that of the single (8.5). At 45 to 64 years the death rate of the single (28.9) was higher than that

of the married (18.7) or of the widowed (15.9). At 65 years of age and over, the death rate was highest in the widowed (18.1), and was higher in the married (16.8) than in the single (14.6).

The following table shows, for the registration area, the proportions of deaths from diseases of the female organs of generation at each specified age, per 1,000 deaths at known ages from these diseases, in 1900 and 1890:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900	1890
	Females.	Females.
Under 5 years	6.5	2.0
5 to 9 years	0.6	1.0
10 to 14 years	5.0	3.9
15 to 19 years	37.6	33.3
20 to 24 years	104.0	79.4
25 to 29 years	142.7	134.3
30 to 34 years	141.0	111.8
35 to 39 years	132.2	143.1
40 to 44 years	135.0	116.7
45 to 49 years	101.2	107.8
50 to 54 years	61.9	75.5
55 to 59 years	36.0	53.9
60 to 64 years	31.0	52.0
65 to 69 years	26.0	36.3
70 to 74 years	17.7	17.6
75 to 79 years	12.7	14.7
80 to 84 years	6.1	12.8
85 to 89 years	1.1	3.9
90 to 94 years	1.1	.....
95 years and over	0.6	.....

The average age at death from diseases of the female organs of generation in the registration area in 1900 was 39.1 years. In 1890 it was 41.8 years.

AFFECTIONS CONNECTED WITH PREGNANCY.

The total number of deaths reported as due to affections connected with pregnancy in the United States during the census year was 9,699, and the proportion of deaths from these diseases in 1,000 deaths from all known causes among females was 20.7. In 1890 the corresponding proportion was 28.5.

In the registration area the number of deaths reported as due to these diseases was 3,772, giving a proportion of 15.9 deaths from these diseases in 1,000 deaths of females from all known causes, and a death rate of 26.2 per 100,000 of female population. In 1890 the death rate was 30.5.

The following table shows, for the registration area and its subdivisions, the death rate from this class of diseases in the census years 1900 and 1890, by sex, color, general nativity, and parent nativity:

DEATH RATES BY COLOR AND NATIVITY.

AREAS.	Aggregate.	WHITE.					Colored.
		Total.	Native.			Foreign.	
			Total.	Both parents native.	One or both parents foreign.		
Registration area 1900	26.2	25.6	20.3	19.1	21.5	43.4	37.2
1890	30.5	29.8	.....	20.9	26.9	47.2	45.4
Cities 1900	26.7	26.1	19.7	17.8	20.7	44.2	38.2
1890	33.0	32.2	.....	22.3	27.4	49.7	45.8
States 1900	26.3	26.3	20.0	18.9	21.1	45.3	28.6
1890	28.0	27.8	.....	19.5	27.1	43.7	38.6
Cities 1900	27.6	27.5	18.5	17.1	19.7	47.2	30.0
1890	31.5	31.3	.....	19.7	27.9	47.2	37.9
Rural 1900	24.5	24.5	21.8	20.3	24.7	39.4	24.3
1890	22.5	22.2	.....	19.3	24.9	31.7	40.4
Cities in other states 1900	25.9	24.7	20.8	19.5	23.5	39.7	40.7
1890	34.5	33.2	.....	28.2	26.3	52.8	48.1

It will be seen from this table that there was comparatively little difference in the death rates from affections connected with pregnancy in the several registration areas, the highest being that in the cities in the registration states (27.6) and the lowest that in the rural districts of the same states (24.5). The death rate from these causes was higher among the colored (37.2) than among the white (25.6); higher for the native whites having one or both parents foreign (21.5) than for those of native parents (19.1); and more than twice as high for the foreign whites (43.4) as for the native whites (20.3).

In comparison with 1890 there was a decrease in the death rate due to affections connected with pregnancy in the cities and an increase in the rural districts.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts,

the death rates from affections connected with pregnancy in the census year, per 100,000 of female population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		FEMALES.		
		Total.	Cities.	Rural.
Total	1900	26.3	27.6	24.5
	1890	28.0	31.5	18.2
Connecticut	1900	25.3	25.3	25.4
	1890	25.2	34.8	18.3
District of Columbia	1900	29.3	29.3	.....
	1890	37.3	37.3	.....
Maine [1]	1900	25.6	17.8	27.4
Massachusetts	1900	18.8	19.6	16.2
	1890	24.7	23.9	27.2
Michigan [1]	1900	34.7	34.7	34.7
New Hampshire	1900	15.5	7.3	21.0
	1890	21.6	17.1	23.6
New Jersey	1900	25.3	27.5	22.3
	1890	28.6	35.3	19.6
New York	1900	27.1	30.6	19.5
	1890	28.9	34.6	19.3
Rhode Island	1900	33.0	36.4	26.3
	1890	31.6	28.8	35.5
Vermont	1900	27.9	33.2	27.0
	1890	33.7	27.1	34.4

[1] Nonregistration in 1890.

This table shows that the death rates from affections connected with pregnancy in the registration states were highest in Rhode Island (33), Michigan (34.7), and the District of Columbia (29.3), and lowest in New Hampshire (15.5), Massachusetts (18.8), and Connecticut and New Jersey, in each of which it was 25.3.

The following table shows, for the registration area and its subdivisions, the death rates from affections connected with pregnancy among the whites during the census year, per 100,000 of white female population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	17.5	16.3	17.7	16.1	19.1	16.6
Ireland	29.7	31.8	30.5	33.3	20.3	22.8
Germany	32.3	31.1	34.4	33.1	38.4	27.4
England and Wales	30.2	30.2	29.8	29.7	30.0	31.9
Canada	26.6	21.5	26.4	20.4	34.4	31.2
Scandinavia	26.6	24.8	28.5	26.1	33.1	23.2
Scotland	20.3	20.9	18.6	18.5	18.9	30.8
Italy	60.8	65.5	61.9	67.3	25.9	49.1
France	14.3	10.2	17.0	11.6	31.5	7.4
Hungary and Bohemia	24.1	22.9	30.7	29.5	39.4	11.7
Russia and Poland	31.0	31.4	30.3	30.7	26.5	34.3
Other foreign	37.8	34.8	40.6	38.0	47.7	21.3

This table shows that the death rates due to affections connected with pregnancy in the registration area were highest among those whose mothers were born in Italy (60.8), in "Other foreign" countries (37.8), and in Germany (32.3), and lowest among those whose mothers were born in France (14.3), in the United States (17.5), and in Scotland (20.3).

The following table shows, for the registration area and its subdivisions, the death rates from affections connected with pregnancy during the census year at 15 to 49 years of age, per 100,000 of female population of corresponding ages, in comparison with 1890:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	15 TO 49.	
	1900	1890
Total	46.3	53.6
Cities	46.0	56.7
States	47.5	49.7
Cities	47.7	53.8
Rural	47.2	42.5
Cities in other States	44.5	59.5

The preceding table shows that the death rate from affections connected with pregnancy in females 15 to 49 years of age was highest in the cities in the registration states (47.7) and lowest in the cities in the nonregistration states (44.5).

In comparison with 1890 the figures show a decrease in the death rate due to these diseases amounting to about 15 per cent.

The combined relations of age and race to the death rates from affections connected with pregnancy are indicated, for the registration area, in the following table, giving the death rates during the census year at 15 to 49 years of age, per 100,000 of female population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	15 to 49.
White	45.7
Colored	57.4
Mothers born in—	
United States	34.7
Ireland	45.1
Germany	52.7
England and Wales	50.7
Canada	45.6
Scandinavia	45.7
Scotland	33.7
Italy	121.7
France	22.5
Hungary	52.6
Bohemia	30.6
Russia	66.2
Poland	54.7
Other foreign	65.3

The preceding table shows that the death rates due to affections connected with pregnancy in white females

15 to 49 years of age were highest in those whose mothers were born in Italy (121.7), in Russia (66.2), and in "other foreign" countries (65.3), and lowest in those whose mothers were born in France (22.5), in Bohemia (30.6), in Scotland (33.7), and in the United States (34.7).

The following table shows, for the registration area, the proportions of deaths from affections connected with pregnancy at each specified age, per 1,000 deaths at known ages from these diseases, in 1900 and 1890:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900	1890
	Females.	Females.
Under 15 years	1.3	0.3
15 to 19 years	69.0	67.9
20 to 24 years	216.5	231.4
25 to 29 years	246.6	258.1
30 to 34 years	210.4	204.6
35 to 39 years	165.4	162.5
40 to 44 years	80.7	58.8
45 years and over	10.1	16.4

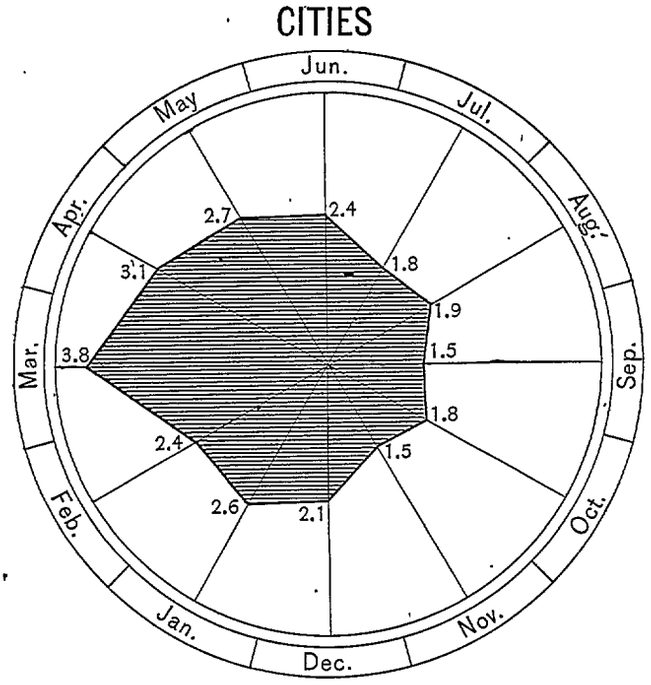
The average age at death from affections connected with pregnancy in the registration area in 1900 was 29.9 years. In 1890 it was 29.6 years.

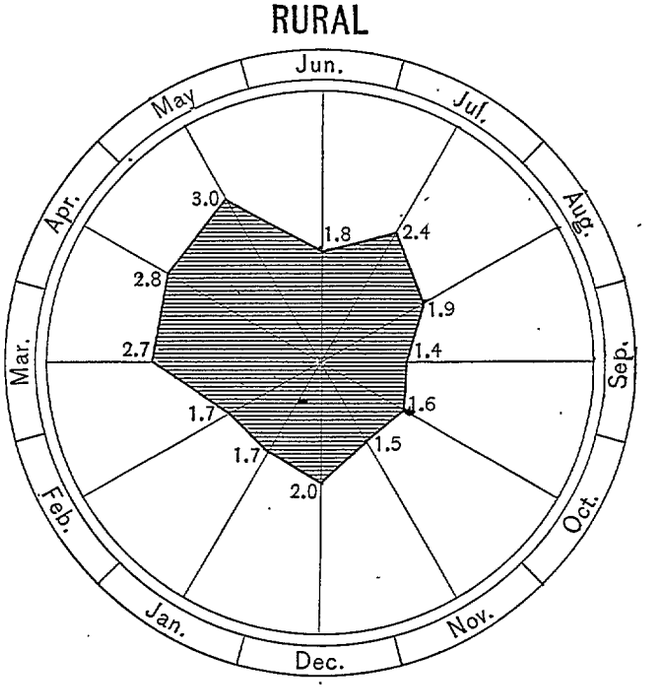
The following table shows, for the registration states, the death rates from affections connected with pregnancy in each month of the census year, in the aggregate, and for the cities and rural districts:

DEATH RATES BY MONTHS.

MONTHS.	Total.	Cities.	Rural.
January	2.3	2.6	1.7
February	2.1	2.4	1.7
March	3.4	3.8	2.7
April	2.9	3.1	2.8
May	2.8	2.7	3.0
June	2.2	2.4	1.8
July	2.0	1.8	2.4
August	1.9	1.9	1.9
September	1.4	1.5	1.4
October	1.7	1.8	1.6
November	1.5	1.5	1.5
December	2.1	2.1	2.0

The death rates from affections connected with pregnancy in each month, in the cities and rural districts, and the relative differences in the rates in the two areas, are shown in the following diagram:





The following table shows the comparative proportions of deaths from affections connected with pregnancy in each month during the census year, per 1,000 deaths of females in known months, in the United States, as a in whole, and the registration states:

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH.

MONTHS.	United States.	Registration states.
January	93.2	86.5
February	93.7	81.3
March	117.3	128.2
April	105.0	110.8
May	106.8	106.1
June	70.2	82.1
July	68.6	76.9
August	67.4	70.4
September	68.8	54.8
October	70.6	66.5
November	64.4	56.9
December	74.0	79.5

DISEASES OF THE BONES AND JOINTS.

The total number of deaths reported as due to diseases of the bones and joints in the United States during the census year was 3,021, of which 1,717 were males and 1,304 were females, and the proportion of deaths from this class of diseases in 1,000 deaths from all known causes was 3. In 1890 the corresponding proportion was 3.3.

In the registration area the number of deaths reported as due to this class of diseases was 1,050, of which 600 were males and 450 were females, giving a proportion of 2.1 deaths from these diseases in 1,000 deaths from all known causes, and a death rate of 3.6 per 100,000 of population. In 1890 the death rate was 4 per 100,000.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from diseases of the bones and joints in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES.		
		Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.

[1] Nonregistration in 1890.

This table indicates that the death rates due to diseases of the bones and joints in the registration states were highest in the District of Columbia (6.1) and Rhode Island (5.4), and lowest in New Jersey (3.3) and New Hampshire (3.6).

The following table shows, for the registration area and its subdivisions, the death rates from diseases of the bones and joints among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	3.4	3.3	3.7	3.8	3.6	2.2
Ireland	4.1	4.4	4.3	4.7	3.1	2.2

DEATH RATES BY BIRTHPLACES OF MOTHERS—Continued.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total,	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
Germany	2.8	2.7	3.0	2.8	3.5	2.5
England and Wales	2.8	2.3	3.0	2.4	4.1	1.9
Canada	3.3	4.1	3.3	4.1	2.3	3.7
Scandinavia	4.1	4.7	4.2	5.5	1.8	3.9
Scotland	4.3	4.0	5.1	5.0	5.3	.....
Italy	3.9	4.1	4.2	4.5	2.9	.....
France	2.0	2.5	2.8	3.9	.....	.....
Hungary and Bohemia	1.5	1.1	2.3	1.8	5.3	.....
Russia and Poland	2.8	2.6	3.1	2.9	4.2	1.5
Other foreign	2.8	2.6	2.9	2.7	3.6	2.3

This table shows that the death rates due to diseases of the bones and joints in the registration area were

highest among those whose mothers were born in Scotland (4.3), in Scandinavia (4.1), and in Ireland (4.1), and lowest among those whose mothers were born in Hungary and Bohemia (1.5) and in France (2).

The following table shows, for the registration area and its subdivisions, the death rates from diseases of the bones and joints during the census year in each of four age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 5.		5 TO 14.		15 TO 44.		45 AND OVER.	
	1900	1890	1900	1890	1900	1890	1900	1890
Total	5.4	6.6	3.3	4.9	2.6	2.8	6.0	5.0
Males	6.3	7.8	3.4	5.6	3.3	3.5	6.2	5.3
Females	4.5	5.3	3.1	4.2	1.9	2.0	5.7	4.6
Cities	5.4	6.9	3.6	5.8	2.6	3.0	5.8	5.1
Males	6.1	8.4	3.8	6.8	3.3	3.8	6.3	6.0
Females	4.7	5.3	3.4	4.8	1.8	2.2	5.3	4.2
States	6.2	6.2	3.4	5.4	2.8	2.7	6.1	5.0
Males	7.5	7.0	3.8	5.7	3.6	3.4	6.5	4.9
Females	4.9	5.4	3.1	5.1	2.0	1.9	5.8	5.0
Cities	6.7	6.6	4.3	7.7	3.0	3.0	5.9	5.2
Males	7.8	7.9	5.0	8.5	3.9	4.0	7.0	5.8
Females	5.7	5.2	3.5	6.9	2.1	2.1	5.0	4.7
Rural	5.5	5.6	2.2	2.0	2.6	2.0	6.3	4.7
Males	7.1	5.6	2.0	1.8	3.3	2.5	6.0	4.0
Females	3.8	5.7	2.4	2.3	1.9	1.6	6.6	5.3
Cities in other states	4.2	7.1	3.0	4.2	2.2	2.9	5.7	5.0
Males	4.5	8.9	2.7	5.4	2.8	3.7	5.7	6.1
Females	3.9	5.3	3.2	3.0	1.6	2.2	5.7	3.7

This table shows that the death rate due to diseases of the bones and joints was highest at 45 years of age and over, and that at this age it was higher in the rural districts of the registration states (6.3) than in the cities of the same states (5.9) or in the cities in the nonregistration states (5.7). It was higher in males than in females at each age.

The following table shows, for the registration area, the proportions of deaths from diseases of the bones and joints at each age, per 1,000 at known ages from this class of diseases, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	66.7	77.8	65.4	68.3
1 year	23.3	31.1	24.0	31.1
2 years	10.0	13.3	30.5	40.4
3 years	30.0	17.8	26.1	12.4
4 years	26.7	6.7	26.1	12.4
Under 5 years	156.7	146.7	172.1	164.6
5 to 9 years	75.0	113.3	132.9	136.6

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES—Continued.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
10 to 14 years	78.3	77.8	95.9	108.7
15 to 19 years	93.3	55.6	76.2	62.1
20 to 24 years	81.7	60.0	74.1	43.5
25 to 29 years	50.0	35.5	80.6	59.0

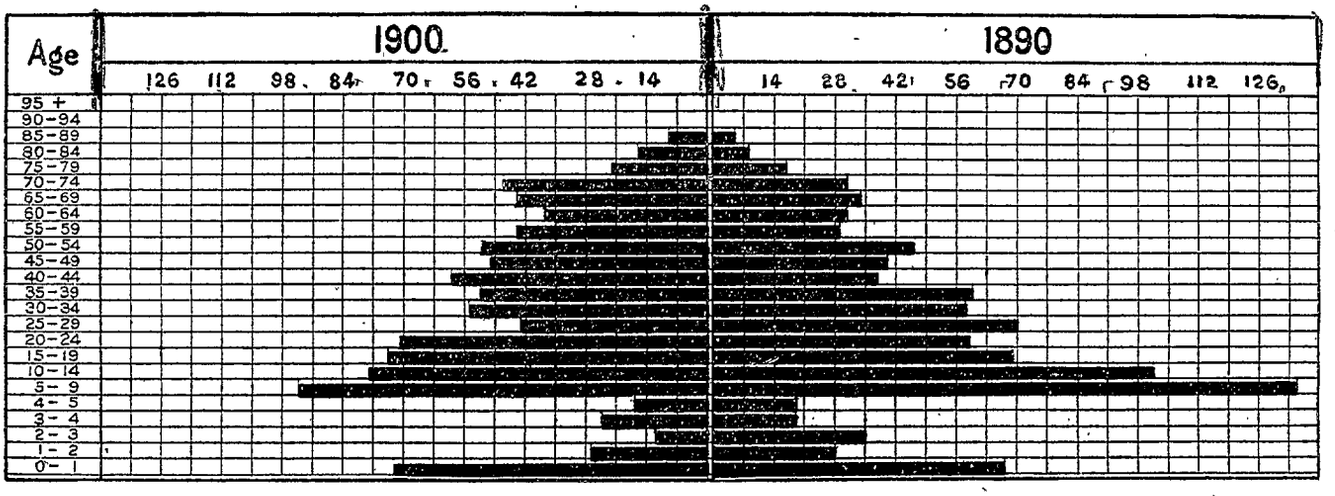
70 to 74 years	30.0	64.4	21.8	40.4
75 to 79 years	26.7	17.8	15.3	18.6
80 to 84 years	5.0	26.7	6.5	9.3
85 to 89 years	5.0	6.7	4.4	6.2
90 to 94 years	1.7	4.4	.....	.....
95 years and over	.....	.....	.....	.....

The average age at death from diseases of the bones and joints in the registration area in 1900 was 32.3

years. In 1890 it was 27.5 years. For those dying at 15 years of age and over, the average age was 44.7 years in 1900 and 41.8 years in 1890.

The comparative proportions of deaths at each age in the registration area in 1890 and 1900 are shown in the following diagram:



ACCIDENTS AND INJURIES.

The total number of deaths reported as due to accidents and injuries in the United States during the census year was 57,513, of which 43,414 were males and 14,099 were females, and the proportion of deaths from these causes in 1,000 deaths from all known causes was 57.6. In 1890 the corresponding proportion was 53.7.

In the registration area the number of deaths reported as due to this class of causes was 27,649, of which 21,067 were males and 6,582 were females, giving a proportion of 54.5 deaths from these causes in 1,000 deaths from all known causes and a death rate of 96 per 100,000 of population. In 1890 the death rate was 91.9.

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from accidents and injuries in the census year per 100,000 of population in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES.		
		Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.

[1] Nonregistration in 1890.

This table shows that the death rates due to accidents and injuries in the registration states were highest in Connecticut (95.8), District of Columbia (92.9), and New Jersey (91.3); and lowest in Massachusetts (74.8) and in New Hampshire (73.9). In the cities in the registration states the death rate from accidents and injuries was highest in Maine (114) and lowest in New Hampshire (66.1). In the rural districts of these states the rate due to these causes was highest in Connecticut (104.9) and lowest in Maine (73.8). In both cities and

rural districts the death rate from this class of causes was about three times as high among males as it was among females.

The following table shows, for the registration area and its subdivisions, the death rates from accidents and injuries among the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total.	Cities.	Rural.	
United States	62.7	62.0	60.0	55.7	63.5	74.8
Ireland	99.9	99.4	95.2	93.3	101.7	137.3
Germany	84.5	83.3	81.7	78.8	90.4	91.3
England and Wales	77.2	78.5	71.0	69.3	74.1	106.8
Canada	71.5	71.0	69.8	67.9	72.3	98.2
Scandinavia	79.1	75.7	84.4	80.8	91.0	70.0
Scotland	82.8	88.3	77.2	81.3	68.4	114.8
Italy	119.5	114.1	106.1	97.6	149.7	258.0
France	78.9	79.9	76.8	77.6	75.0	84.4
Hungary and Bohemia	77.2	74.3	55.5	47.0	106.3	117.0
Russia and Poland	75.9	74.8	62.2	59.1	85.8	136.3
Other foreign	107.4	104.1	95.3	86.2	117.3	173.8

This table shows that the death rates due to accidents and injuries in the registration area were highest among those whose mothers were born in Italy (119.5), in "Other foreign" countries (107.4), and in Ireland (99.9) and lowest among those whose mothers were born in Canada (71.5) and in the United States (62.7).

The following table shows, for the registration area and its subdivisions, the death rates from accidents and injuries during the census year in each of three age groups, per 100,000 of population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	UNDER 15.		15 TO 44.		45 AND OVER.	
	1900	1890	1900	1890	1900	1890
Total	67.0	67.4	89.8	82.8	150.5	146.7
Males	85.4	88.3	148.7	137.7	223.8	221.6
Females	48.6	46.3	31.1	28.3	78.0	74.3
Cities	70.2	72.1	94.3	89.1	163.8	159.2
Males	89.5	94.5	156.6	147.7	250.7	246.6
Females	50.9	49.6	33.3	31.3	80.1	75.6
States	63.7	65.3	73.4	72.3	131.2	135.5
Males	80.6	85.9	122.3	122.3	187.8	200.4
Females	46.7	44.4	24.9	23.9	75.8	74.0
Cities	68.2	74.1	73.1	79.4	139.7	149.6
Males	86.1	97.7	122.4	134.5	206.7	230.1
Females	50.3	50.4	25.9	27.6	77.9	76.1
Rural	57.2	51.6	73.9	59.8	122.6	120.3
Males	72.7	67.7	122.1	101.9	169.5	169.4
Females	41.3	34.9	23.1	17.1	73.5	71.6
Cities in other states	72.0	70.4	113.4	97.9	186.9	169.4
Males	92.6	91.7	186.6	159.3	291.0	263.1
Females	51.5	48.9	40.0	34.8	82.4	75.0

This table shows that the death rate due to accidents and injuries was highest in persons 45 years of age and over, and that at this age it was higher in the cities in the nonregistration states (186.9) than in the cities in the registration states (139.7). It was lowest in the rural districts of the registration states (122.6).

In comparison with 1890 the figures show that the death rate from these causes was less among those under 15 years of age and greater for those 15 years of age and over.

The following table shows, for the registration area, the proportions of deaths from accidents and injuries, excluding suicides, at each specified age, per 1,000 deaths at known ages from these causes, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 1 year	46.6	115.7	59.1	145.4
1 year	12.8	35.6	15.2	32.7
2 years	15.8	32.8	15.2	30.3
3 years	14.4	35.9	11.5	28.5
4 years	11.2	28.5	9.6	21.2
Under 5 years	100.8	248.5	110.6	258.1
5 to 9 years	48.4	73.0	48.7	55.3
10 to 14 years	49.1	32.1	52.6	40.8
15 to 19 years	65.9	37.3	68.7	37.0
20 to 24 years	93.1	53.0	99.9	56.4
25 to 29 years	102.5	54.4	103.5	58.8
30 to 34 years	95.1	56.1	90.3	53.7
35 to 39 years	98.8	57.8	82.5	55.3
40 to 44 years	73.6	44.1	70.3	45.9
45 to 49 years	63.5	40.8	62.6	47.0
50 to 54 years	50.8	38.0	53.4	39.4
55 to 59 years	40.8	34.2	44.4	30.6
60 to 64 years	37.5	38.6	35.9	39.4
65 to 69 years	28.3	41.9	27.9	40.0
70 to 74 years	20.5	40.1	19.3	37.8
75 to 79 years	15.4	40.8	14.3	34.3
80 to 84 years	9.6	33.4	9.5	33.0
85 to 89 years	4.4	23.8	4.0	24.4
90 to 94 years	1.6	9.0	1.0	8.0
95 years and over	0.3	3.1	0.6	4.8

The average age at death from accidents and injuries, exclusive of suicides, in the registration area in 1900 was 33.5 years. In 1890 it was 32.9 years. For those dying at 15 years of age and over the average age was 42.3 years in 1900 and 42 years in 1890.

The following table shows, for each grand group in the United States, the proportions of deaths from accidents and injuries during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	43.9	64.1	26.3	62.0	23.5
2. Middle Atlantic Coast region	46.0	76.9	28.9	61.5	24.0
3. South Atlantic Coast region	60.7	84.6	42.2	77.6	28.5
4. Gulf Coast region	62.0	96.6	38.2	74.8	24.8

20. Cordilleran region	108.3	151.0	40.1	146.6	37.0
21. Pacific Coast region	82.9	126.8	40.1	100.1	36.2

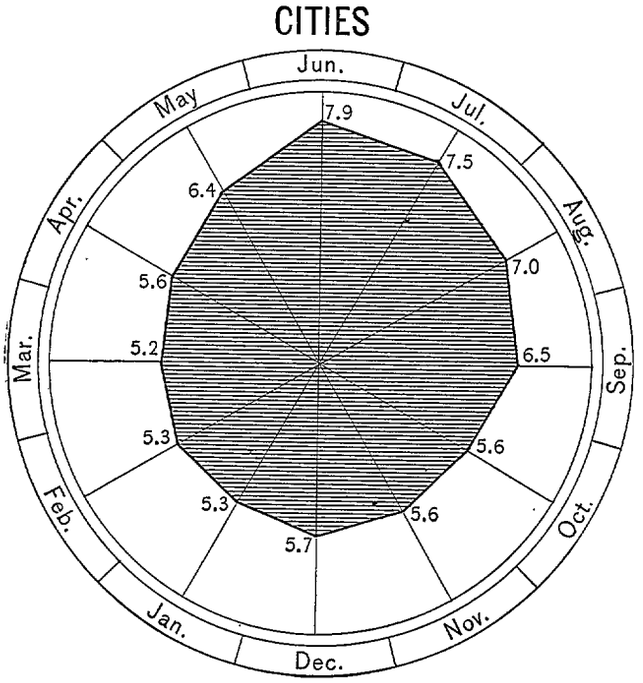
This table indicates that the proportions of deaths due to accidents and injuries were greatest in the Cordilleran region (108.3), the Pacific Coast region (82.9), and the region of the Western plains (71.9), and least in the North Atlantic Coast region (43.9), Middle Atlantic Coast region (46), and the Northeastern hills and plateaus (48.4).

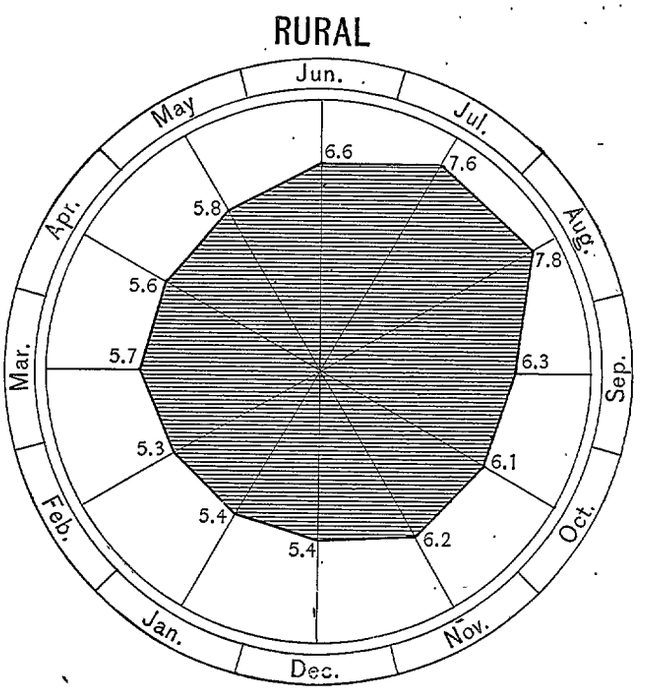
The following table shows, for the registration states, the death rates from accidents and injuries, exclusive of suicide, in each month of the census year, in the aggregate, and for the cities and rural districts:

DEATH RATES BY MONTHS.

MONTHS.	Total.	Cities.	Rural.
January	5.3	5.3	5.4
February	5.3	5.3	5.3
March	5.4	5.2	5.7
April	5.6	5.6	5.6
May	6.2	6.4	5.8
June	7.4	7.9	6.6
July	7.6	7.5	7.6
August	7.3	7.0	7.8
September	6.4	6.5	6.3
October	5.8	5.6	6.1
November	5.8	5.6	6.2
December	5.6	5.7	5.4

The death rates from accidents and injuries, excluding suicide, in each month in the cities and the rural districts, and the relative differences in the rates in the two areas, are shown in the following diagram:





The following table shows the comparative proportions of deaths from accidents and injuries, exclusive of suicide, in each month during the census year, per 1,000 deaths in known months, in the United States, as a whole, and in the registration states:

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH.

MONTHS.	United States.	Registration states.
January	82.3	72.2
February	79.6	72.3
March	82.2	73.9
April	80.5	75.9
May	99.3	83.9
June	79.9	99.7
July	88.0	102.4
August	88.3	99.3
September	73.6	87.3
October	79.1	78.4
November	77.1	78.9
December	85.1	75.8

SUICIDE.

The deaths from suicide are treated collectively under this title. In the general tables showing the relation of sex and age to causes of death, these details are stated separately for deaths from suicide by drowning, poison, and shooting, and for suicide by all other means. The number of deaths was as follows:

SUICIDE BY—	UNITED STATES.		REGISTRATION AREA.	
	Males.	Females.	Males.	Females.
Drowning	157	84	112	52
Poison	761	464	551	364
Shooting	1,190	103	764	53
Other means	2,205	534	1,203	301

The total number of deaths reported as due to suicide in the United States during the census year was 5,498, of which 4,313 were males and 1,185 were females, and the proportion of deaths from this cause in 1,000 deaths from all known causes was 5.5. In 1890 the corresponding proportion was 4.5.

In the registration area the number of deaths reported as due to this cause was 3,400, of which 2,630 were males and 770 were females, giving a proportion of 6.7 deaths from this cause in 1,000 deaths from all known causes and a death rate of 11.8 per 100,000 of population. In 1890 the death rate was 10.3.

In England and Wales the death rate from suicide for the year 1899 was 9 per 100,000 of population (males, 13.7; females, 4.4).

The following table shows, for the registration states, in the aggregate, and for the cities and rural districts, the death rates from suicide in the census year, per 100,000 of population, in comparison with 1890:

DEATH RATES IN CITIES AND RURAL DISTRICTS.

REGISTRATION STATES.		AGGREGATE.			MALES.			FEMALES.		
		Total.	Cities.	Rural.	Total.	Cities.	Rural.	Total.	Cities.	Rural.
Total	1900	9.9	10.5	9.0	15.1	16.1	13.7	4.8	5.1	4.2

	1890	8.1	10.6	7.9	12.4	22.2	11.6	3.7	.....	4.0

[1] Nonregistration in 1890.

This table shows that the death rates due to suicide in the registration states were highest in Maine (10.8), New York (10.6), and Connecticut (10.5), and lowest in Michigan (8.7), and New Jersey and Rhode Island, in each of which it was 9.1. In both cities and rural districts in all of these states, except the District of Columbia, the death rate of males from suicide was about three times as high as that of females.

The following table shows, for the registration area and its subdivisions, the death rates from suicide among

the whites during the census year, per 100,000 of white population, by birthplaces of mothers:

DEATH RATES BY BIRTHPLACES OF MOTHERS.

BIRTHPLACES OF MOTHERS.	REGISTRATION RECORD.					
	Total.	Cities.	States.			Cities in other states.
			Total	Cities.	Rural.	
United States	6.8	6.1	7.0	6.2	7.5	5.9
Ireland	6.1	6.2	6.2	6.2	5.9	5.8
Germany	19.3	20.2	19.9	21.3	15.3	18.2
England and Wales	10.4	11.8	10.1	11.8	6.8	11.9
Canada	6.5	6.5	6.1	5.8	6.4	12.5
Scandinavia	10.7	11.0	11.2	11.9	9.9	10.1
Scotland	11.6	12.9	11.5	13.2	7.9	12.0
Italy	5.1	4.6	4.2	3.4	8.6	14.8
France	22.0	22.8	20.5	21.3	18.8	25.7
Hungary and Bohemia	11.8	13.1	11.4	13.3	.....	12.5
Russia and Poland	5.8	6.0	5.8	6.3	2.8	5.0
Other foreign	15.1	15.1	15.3	15.4	15.1	13.8

The preceding table shows that the death rates due to suicide in the registration area were highest among those whose mothers were born in France (22), in Germany (19.3), and in "Other foreign" countries (15.1), and lowest among those whose mothers were born in Italy (5.1), in Russia and Poland (5.8), and in Ireland (6.1). The death rate from suicide among those whose mothers were born in the United States (6.8) was lower than among those whose mothers were born in England and Wales (10.4), in Scandinavia (10.7), or in Scotland (11.6).

The following table shows for the registration area and its subdivisions, the death rates from suicide during the census year in each of three age groups, per 100,000 population of corresponding ages, in comparison with 1890, by sex:

DEATH RATES AT CERTAIN AGES.

REGISTRATION AREAS.	15 TO 44.		45 TO 64.		65 AND OVER.	
	1900	1890	1900	1890	1900	1890
Total	12.8	10.4	25.2	24.5	30.0	27.3
Males	18.2	15.1	43.1	41.4	53.5	49.2
Females	7.4	5.8	7.0	7.8	9.0	7.8
Cities	14.3	11.6	28.3	27.7	31.2	30.8
Males	20.4	16.8	49.6	47.8	58.5	58.5
Females	8.3	6.4	6.9	7.7	8.9	8.2
States	10.3	8.4	21.0	20.3	26.8	22.4
Males	14.5	12.6	34.7	33.3	46.5	39.6
Females	6.1	4.3	7.3	7.8	8.8	6.8
Cities	11.8	9.6	28.5	23.1	24.7	22.1
Males	16.7	14.7	40.5	39.3	45.6	42.5
Females	7.1	4.8	7.2	7.7	8.5	6.1

DEATH RATES AT CERTAIN AGES—Continued.

REGISTRATION AREAS.	15 TO 44.		45 TO 64.		65 AND OVER.	
	1900	1890	1900	1890	1900	1890
Rural	7.8	6.2	18.1	16.9	28.3	22.9
Males	10.9	9.1	28.3	25.9	47.1	37.8
Females	4.5	3.3	7.4	8.0	9.1	7.3
Cities in other states	16.5	13.4	32.8	32.4	37.6	40.7
Males	23.6	18.7	57.8	56.1	70.7	76.0
Females	9.4	8.0	6.6	7.7	9.3	10.6

It will be seen from this table that the death rate due to suicide was highest in persons 65 years of age and over, and that in this age group it was highest in the cities in the nonregistration states (37.6) and lowest in the cities in the registration states (24.7). In the rural districts of the registration states it was 28.3. For the age groups below 65 years of age, the highest death rates from suicide also occurred in the cities in the nonregistration states and the lowest in the rural districts of the registration states.

In comparison with 1890, the figures show a slight increase in the death rates due to this cause.

The combined relations of age and race to the death rates from suicide are indicated, for the registration area, in the following table, giving the death rates during the census year in each of 3 age groups, per 100,000 of population of corresponding ages, by color and birthplaces of mothers:

DEATH RATES BY AGE, COLOR, AND BIRTHPLACES OF MOTHERS.

COLOR AND BIRTHPLACES OF MOTHERS.	15 to 44.	45 to 64.	65 and over.
White	13.0	26.1	30.6
Colored	8.6	4.1	5.9
Mothers born in—			
United States	7.2	16.7	16.5
Ireland	6.7	7.3	14.2
Germany	16.6	41.5	60.5
England and Wales	9.9	18.8	21.8
Canada	7.6	18.0	12.5
Scandinavia	9.4	42.3	67.6
Scotland	10.2	23.0	17.0
Italy	8.7	6.6	.....
France	16.5	33.3	73.8
Hungary	12.1	.....	.....
Bohemia	19.6	62.4	50.5
Russia	14.2	17.3	62.3
Poland	2.3	11.5	.....
Other foreign	17.1	43.9	28.3

The preceding table shows that the death rates from suicide in white persons 45 to 64 years of age were highest for those whose mothers were born in Bohemia (62.4), in "Other foreign" countries (43.9), and in Scandinavia (42.3). At 65 years of age and over the rates were highest in those whose mothers were born in France (73.8), in Scandinavia (67.6), and in Russia

(62.3). There were no deaths from suicide at this age among white persons whose mothers were born in Italy, Hungary, or Poland.

The following table shows the death rates from suicide in the registration area during the census year, by conjugal condition in relation to age:

DEATH RATES BY CONJUGAL CONDITION AND AGE.

CONJUGAL CONDITION.	AGE.							
	15 years and over.		15 to 44 years.		45 to 64 years.		65 years and over.	
	Males.	Females.	Males.	Females.	Males.	Females.	Males.	Females.
Single	18.0	7.2	15.2	7.0	56.0	10.7	77.3	12.5
Married	25.2	7.1	18.2	7.4	35.5	6.2	40.8	7.7
Widowed	64.3	7.8	51.5	7.8	67.6	6.9	68.5	9.1

The preceding table shows that in persons 15 years of age and over the death rate of married males from suicide (25.2) was higher than that of single males (18), but that it was higher for single females (7.2) than for married females (7.1). At 15 to 44 years of age the rates were higher in the married (males, 18.2; females, 7.4) than in the single (males, 15.2; females, 7). At 45 to 64 years they were higher in the single (males, 56; females, 10.7) than in the married (males, 35.5; females, 6.2), and in females of these ages the rate was higher for the single (10.7) than for the widowed (6.9).

At 65 years of age and over the rate was very much higher in the single (males, 77.3; females, 12.5) than in the married (males, 40.8; females, 7.7), and in females of these ages the rate was also higher in the single (12.5) than in the widowed (9.1).

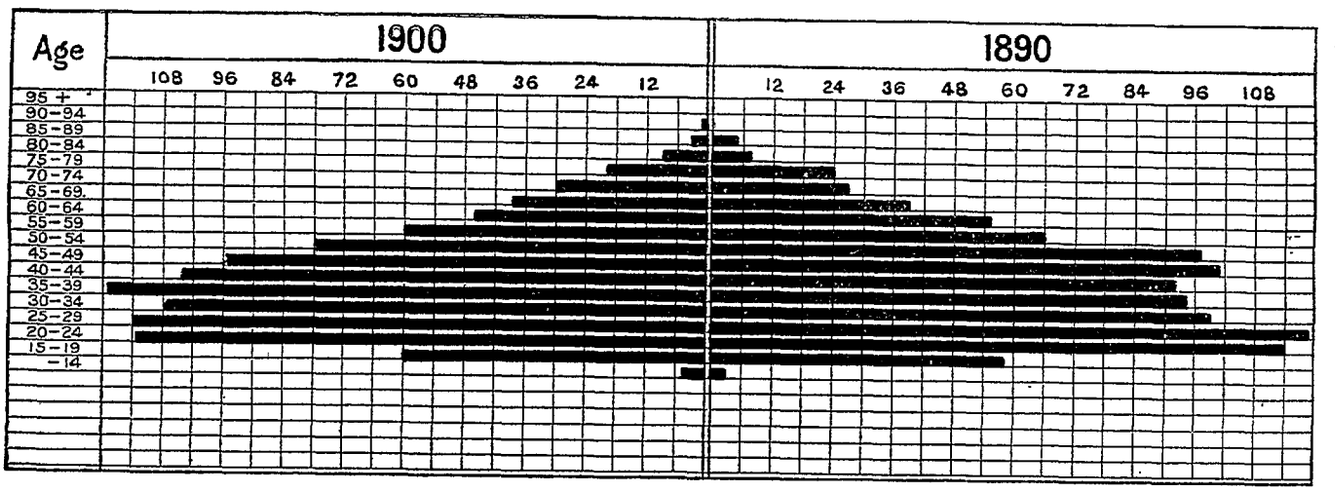
The following table shows, for the registration area, the proportions of deaths from suicide at each specified age, per 1,000 deaths at known ages from this cause, in 1900 and 1890, by sex:

NUMBER OF DEATHS AT EACH AGE PER 1,000 AT KNOWN AGES.

AGE.	1900		1890	
	Males.	Females.	Males.	Females.
Under 15 years	1.2	7.8	3.2	2.3
15 to 19 years	18.8	100.5	23.7	92.8
20 to 24 years	68.8	158.0	69.2	158.4
25 to 29 years	92.6	135.8	92.9	144.8
30 to 34 years	103.4	109.7	99.4	99.5
35 to 39 years	114.2	124.0	103.9	83.7
40 to 44 years	117.3	90.1	100.0	83.7
45 to 49 years	113.4	75.7	119.9	81.4
50 to 54 years	105.7	50.9	110.3	83.7
55 to 59 years	79.2	40.5	82.7	49.8
60 to 64 years	62.3	28.7	68.6	40.7
65 to 69 years	50.4	27.4	53.8	24.9
70 to 74 years	35.8	23.5	41.0	13.6
75 to 79 years	25.0	14.4	20.5	27.1
80 to 84 years	9.2	7.8	8.3	6 8
85 to 89 years	1.9	3.9	2.6	6.8
90 years and over	0.8	1.3	.....	.....

The average age at death from suicide in the registration area in 1900 was 43.6 years. In 1890 it was 44.1 years.

The comparative proportions of deaths from suicide at each age in the registration area in 1900 and 1890 are shown in the following diagram:



The following table shows, for each grand group in the United States, the proportions of deaths from suicide during the census year, per 1,000 deaths from known causes, in the aggregate, and by sex for the cities and rural districts:

NUMBER OF DEATHS PER 1,000 DEATHS FROM KNOWN CAUSES.

GRAND GROUP.	Total.	RURAL.		CITIES.	
		Males.	Females.	Males.	Females.
1. North Atlantic Coast region	5.6	9.7	2.8	8.0	2.6
2. Middle Atlantic Coast region	5.6	5.6	1.7	8.7	3.1
3. South Atlantic Coast region	0.7	0.6	0.2	2.1	0.5
4. Gulf Coast region	3.2	2.8	1.0	8.7	0.8
5. Northeastern hills and plateaus	5.2	7.6	3.1	7.3	2.0
6. Central Appalachian region	3.1	5.2	1.4	3.8	0.5
7. Region of the Great Northern lakes	9.3	10.3	3.1	14.7	5.3
8. Interior plateau	4.6	6.4	1.8	7.3	2.1
9. Southern Central Appalachian region	1.7	2.3	1.0	4.0	0.9
10. Ohio River belt	5.5	6.8	1.3	11.0	3.0
11. Southern Interior plateau	1.4	2.6	0.4	.....	.....
12. South Mississippi River belt	1.5	2.1	0.5	3.6	.....
13. North Mississippi River belt	7.9	8.3	3.4	13.4	5.8
14. Southwest Central region	2.9	4.7	0.9	8.2	.....
15. Central region—plains and prairies	5.4	7.9	1.9	10.7	4.1
16. Prairie region	6.3	9.7	3.3	9.9	3.4
17. Missouri River belt	7.8	13.4	3.8	8.5	3.6
18. Region of the Western plains	6.3	9.9	3.1	5.5	2.4
19. Heavily timbered region of the Northwest	6.5	9.7	1.9	8.9	6.0
20. Cordilleran region	11.8	14.0	6.7	23.2	4.8
21. Pacific Coast region	15.6	13.8	5.7	24.3	10.8

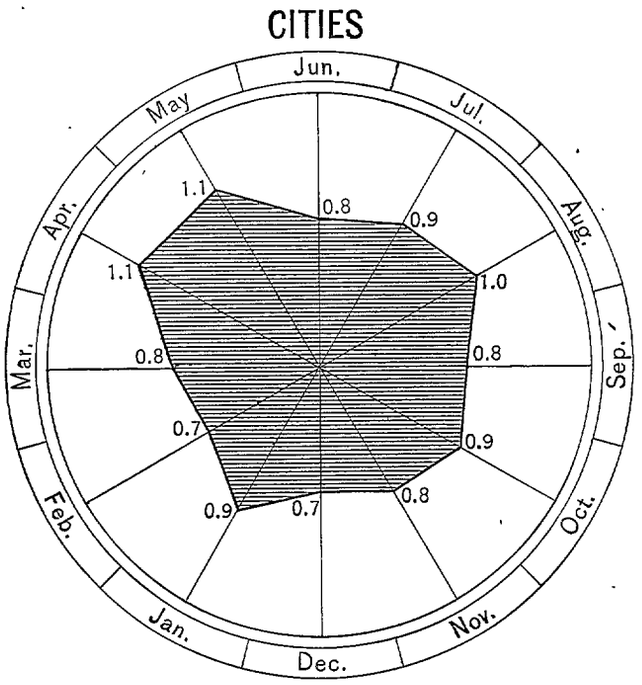
The preceding table indicates that the proportions of deaths due to suicide were greatest in the Pacific coast region (15.6), the Cordilleran region (11.8), the region of the Great Northern lakes (9.3); and were least in the South Atlantic Coast region (0.7), the Southern Interior plateau (1.4), and the South Mississippi River belt (1.5).

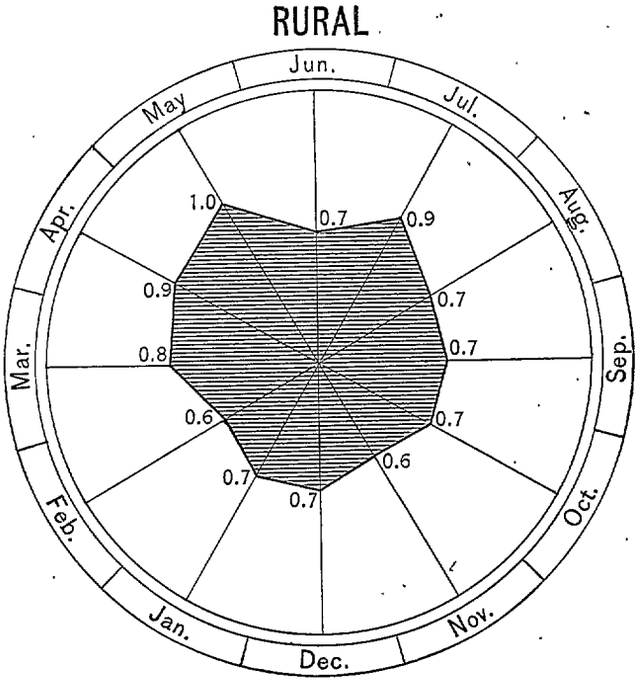
The following table shows, for the registration states, the death rates from suicide in each month of the census year, in the aggregate, and for the cities and rural districts:

DEATH RATES BY MONTHS.

MONTHS.	Total.	Cities.	Rural.
January	0.8	0.9	0.7
February	0.6	0.7	0.6
March	0.8	0.8	0.8
April	1.0	1.1	0.9
May	1.1	1.1	1.0
June	0.8	0.8	0.7
July	0.9	0.9	0.9
August	0.9	1.0	0.7
September	0.8	0.8	0.7
October	0.8	0.9	0.7
November	0.7	0.8	0.6
December	0.7	0.7	0.7

The death rates from suicide in each month in the cities and rural districts and the relative differences in the rates in the two areas are shown in the following diagram:





The following table shows the comparative proportions of deaths from suicide in each month during the census year, per 1,000 deaths in known months, in the United States, as a whole, and the registration states:

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH.

MONTHS.	United States.	Registration states.
January	76.8	80.4
February	68.2	63.7
March	82.6	80.4

COMPARATIVE PROPORTIONS OF DEATHS IN EACH MONTH—Continued.

MONTHS.	United States.	Registration states.

August	87.4	86.2
September	79.2	78.1
October	80.4	85.1
November	75.1	74.7
December	71.3	72.3

SECTION XIII.

OCCUPATIONS IN RELATION TO DEATHS.

The data available for studying the influence of occupation upon the death rate in various localities or from different causes consist of the returns made by the enumerators showing the occupations of the living population, and the registration record of deaths which show, to a certain extent only, the occupations of decedents. They are not fully comparable because the enumerators made their returns of occupations in accordance with certain definite instructions concerning the manner of stating occupations, while the physicians or others reporting deaths in the registration areas stated occupapations according to their individual understanding, and entirely without uniformity.

In some of the registration areas but little attention is given to the returns of the occupations of decedents, and in others it is not required at all. (See section I, concerning registration returns.)

For these reasons the subject can be discussed only in general terms, and death rates can be given only for such individual occupations as are not subject to particular rules or fine distinctions concerning the classification. Most of the distinctive occupations, including all the more important ones, are, however, generally stated in simple terms that leave no doubt as to the kind of work done, and for these the data are sufficient for fairly accurate death rates.

The general tables giving the statistics of deaths in relation to occupation are the following:

Table 2, Part I, shows, for the United States, the registration area, and its subdivisions, and the nonregistration area, the number of deaths of males engaged in each occupation and class of occupations, by color, age, and birthplaces of mothers.

Table 5, Part I, gives the same information for females.

Table 3, Part I, shows, for the United States, the registration area and its subdivisions, and the nonregistration area, the number of deaths at the specified ages of white males engaged in each occupation and class of occupations.

Table 6, Part I, gives the same information for white females.

Table 4, Part I, shows, for the United States, the registration area and its subdivisions, and the nonregistration area, the number of deaths at the specified ages of colored males engaged in each occupation and class of occupations.

Table 7, Part I, gives the same information for colored females.

Table 8, Part I, shows, for the United States, the registration area and its subdivisions, and the nonregistration area, the number of deaths from each specified disease and class of diseases of males engaged in each occupation and class of occupations.

Table 11, Part I, gives the same information for females.

Table 9, Part I, shows, for the United States, the registration area and its subdivisions, and the nonregistration area, the number of deaths from each specified disease and class of diseases of white males engaged in each occupation and class of occupations.

Table 12, Part I, gives the same information for white females.

Table 10, Part I, shows, for the United States, the registration area and its subdivisions, and the nonregistration area, the number of deaths from each specified disease and class of diseases of colored males engaged in each occupation and class of occupations.

Table 13, Part I, gives the same information for colored females.

The classification of occupations used in the present statistics is the same as that employed in the Eleventh Census (1890), except that it includes all reported occupations, whereas in 1890 it included only certain specified occupations. Those not comprehended in the statistics given in 1890 are included in the general title "All other" occupations, or "Other occupations" of the particular classes to which they belong. They are comparatively few in number.

Of 360,739 males 10 years of age and over dying in the United States during the census year, 278,147, or 77.1 per cent, were reported as having a gainful occupation. Of females 10 years of age and over there were 324,075 deaths, and 45,491, or 14 per cent, were reported as having a gainful occupation.

In the registration area, as a whole, there were 181,084 deaths reported of males 10 years of age and over, and 136,917, or 75.6 per cent, were engaged in gainful occu-

pations. For the females 10 years of age and over the total number of deaths in this area was 162,969, and of these 21,984, or 13.5 per cent, were engaged in gainful occupations.

The following discussion relates only to occupations in the registration states,[1] as the population data relating to occupations in the other areas could not be supplied in time to complete the analysis within the period fixed by Congress for publication of the census reports.

In these states the number of deaths during the census year of males 10 years of age and over was 104,511, and 83,815, or 80.2 per cent, were reported as having gainful occupations. Of females 10 years of age and over there were 99,510 deaths, and of this number 13,203, or 13.3 per cent, were reported as engaged in gainful occupations.

The following table shows, for the registration states, the population, deaths, and death rates during the census year, by occupations and classes of occupations, in comparison with 1890:

POPULATION, DEATHS, AND DEATH RATES, BY OCCUPATIONS.

OCCUPATIONS.	Population.	Deaths.	DEATH RATE.	
			1900	1890
MALES.

Personal service, police and military	2.7	2.1	3.0	2.9	2.1
Laboring and servant	14.4	16.5	14.4	12.8	10.6
Manufacturing and mechanical industry	32.2	32.3	33.6	31.1	24.6
Agriculture, transportation, and other outdoor	27.4	24.8	25.0	31.3	44.8
All other occupations	1.6	2.7	1.2	1.0	0.6

The age distribution of the population engaged in the different occupations has a great influence upon the comparative death rates, and this distribution is shown for both population and deaths in the tables given for each occupation in detail in the analysis following. In the tables given for the classes of occupations, comparisons are made with the totals for all occupations, and in those for each individual occupation, with the total of the class to which it belongs.

The following table shows, for the registration states, the death rates of males engaged in all occupations and in each class of occupations, at all ages, and in each of four age groups, per 1,000 of corresponding population:

DEATH RATES AT CERTAIN AGES.

CLASSES.	AGE.				
	All ages.	15 to 24.	25 to 44.	45 to 64.	65 years and over.
All occupations	15.0	5.1	8.8	19.9	98.4
Professional	15.3	4.8	7.6	20.7	105.6
Clerical and official	13.5	7.2	11.1	19.9	55.9
Mercantile and trading	12.1	2.6	6.7	19.9	93.8
Public entertainment	15.4	5.2	11.6	23.8	68.0
Personal service, police, and military	12.9	5.9	8.2	19.9	64.0
Laboring and servant	20.2	7.7	13.9	31.9	126.6
Manufacturing and mechanical industry	13.8	4.4	8.4	20.2	105.4
Agriculture, transportation, and other outdoor	15.8	4.6	6.6	14.7	96.7
All other occupations	6.5	3.1	6.5	12.7	55.5

As shown by the preceding table the death rate of males 10 years of age and over reported as engaged in gainful occupations during the census year was 15 per 1,000. This represents the average death rate for all classes of occupations.

Considering the specific classes of occupations, it will be seen that the highest death rates occurred in the laboring and servant class (20.2); the class engaged in agriculture, transportation, and other out-door pursuits (15.8), and the public entertainment class (15.4). The lowest rates were those of the mercantile and trading class (12.1); the personal service, police, and military class (12.9), and the clerical and official class (13.5). The death rates of laborers and servants were highest at each age.

The following table shows, for the registration states, the deaths of occupied males from certain diseases and classes of diseases during the census year, and the death rates per 100,000 of population in comparison with 1890:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths, 1900.	DEATH RATE.	
		1900	1890
Malarial fever	261	4.7	11.7
Typhoid fever	1,962	35.2	40.3
Rheumatism	409	7.3	9.1
Consumption	13,197	236.7	279.7
Diabetes	719	12.9	7.0
Diseases of nervous system	10,569	189.6	159.0
Heart disease	9,484	170.1	131.9
Other diseases, circulatory system	1,023	18.3	.....
Pneumonia	8,592	154.1	237.3
Other diseases, respiratory system	2,372	42.5	
Diseases of liver	1,640	29.4	25.4
Other diseases, digestive system	3,323	59.6	41.1
Diseases of urinary system	8,031	144.0	100.6
Diseases of bones and joints	203	3.6	2.8
Suicide	1,124	20.2	15.6
Other accidents and injuries	6,312	113.2	102.8
Cancer	3,181	57.1	.....

This table shows that the diseases causing the highest mortality in occupied males were consumption (236.7), pneumonia, and other diseases of the respiratory system (196.6), diseases of the nervous system (189.6), and heart disease (170.1). These diseases also caused the highest rates in 1890, but the rate for consumption shows a decrease of about 18 per cent, and that for diseases of the respiratory system of about 21 per cent, as compared with the rates from these diseases in 1890. On the other hand the death rates for the other principal diseases, such as diseases of the nervous system, heart disease, and diseases of the urinary system, were correspondingly higher than in 1890.

PROFESSIONAL CLASS.

The total number of males engaged in occupations included in this class, in the registration states, was 203,104, or 3.6 per cent of the total males having gainful occupations. The number of deaths in this class was 3,109, or 3.7 per cent of all deaths of occupied males in this area, and the death rate was 15.3 per 1,000. In 1890 the death rate in this class was 15.7.

The following table shows, for the registration states, the number of males in professional occupations at all ages, and in each of 4 age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population.

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	203,104	32,144	112,568	47,125	10,615
Per cent at each age	.....	15.8	55.4	23.2	5.2
Deaths	3,109	153	857	974	1,121
Per cent at each age	.....	4.9	27.6	31.3	36.1
Death rate	15.3	4.8	7.6	20.7	105.6
Average rate in all classes	15.0	5.1	8.8	19.9	98.4

The preceding table shows that a majority (55.4 per cent) of males having professional occupations were between 25 and 45 years of age, and that in this age group the death rate of males in this class (7.6) was less than the average rate for all occupied males (8.8). At 15 to 24 years the death rate for this class (4.8) was also less than the average rate of all classes (5.1). Above 45 years the rates for this class were higher than the average rates for all classes.

The following table shows, for the registration states, the number of deaths of males in professional occupations during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	14	6.9
Typhoid fever	77	37.9
Rheumatism	15	7.4
Consumption	370	182.2
Diabetes	45	22.2
Diseases of nervous system	535	263.4
Heart disease	359	176.8
Other diseases, circulatory system	51	25.1
Pneumonia	292	143.8
Other diseases, respiratory system	88	43.3
Diseases of liver	59	29.0
Other diseases, digestive system	132	65.0
Diseases of urinary system	342	168.4
Diseases of bones and joints	10	4.9
Suicide	33	16.2
Other accidents and injuries	124	61.1
Cancer	105	51.7

This table shows that the highest death rates of males in professional occupations were due to diseases of the nervous system (263.4), consumption (182.2), heart disease (176.8), and diseases of the urinary system (168.4). The rate from diseases of the nervous system in this class was much higher than the average rate from these diseases in all classes (189.6), while that from con-

sumption was much below the average rate for all classes (236.7).

The death rates of males in this class from pneumonia, diseases of the liver, consumption, suicide and other accidents and injuries, and cancer were lower than the average rates from these causes in all classes, but for all other specified causes they were higher than the average.

The following table shows the comparative death rates of males in each occupation in this class, at all ages, and in each of four age groups, per 1,000 of corresponding population:

DEATH RATES IN EACH OCCUPATION, BY AGES.

OCCUPATIONS.	AGE.				
	All ages.	15 to 24 years.	25 to 44 years.	45 to 64 years.	65 years and over.
Professional	15.3	4.8	7.6	20.7	105.6
Architects, artists, and teachers of art, etc	11.7	3.3	6.8	20.0	98.9
Clergymen	23.5	5.1	6.2	20.8	123.4
Engineers and surveyors	8.2	4.2	6.2	14.1	86.5
Journalists	15.0	5.3	6.7	29.2	99.4
Lawyers	17.2	4.2	6.9	20.1	94.7
Musicians and teachers of music	15.2	9.3	11.3	18.5	95.0
Physicians and surgeons	19.9	6.1	8.7	21.4	113.7
Teachers (school)	12.2	4.5	7.0	21.6	97.4
Others of this class	16.0	3.8	10.0	24.1	99.0

This table shows that in this class of occupations the highest death rates were those for clergymen (23.5), physicians and surgeons (19.9), and lawyers (17.2). The lowest rates were those for engineers and surveyors (8.2), architects, artists, and teachers of art, etc. (11.7), and school teachers (12.2).

ARCHITECTS, ARTISTS, AND TEACHERS OF ART, ETC.

This title includes architects, artists, teachers of art, designers, draftsmen, sculptors, and inventors.

The number of architects, artists, and teachers of art reported in the registration states was 19,587. The number of deaths in these occupations during the census year was 229, and the death rate was 11.7 per 1,000. The death rates per 1,000 of population, by age groups, were as follows: At 15 to 24 years, 3.3; at 25 to 44 years, 6.8; at 45 to 64 years, 20; and at 65 years and over, 98.9.

The death rate for architects, artists, and teachers of art from consumption (188.9) was slightly higher than the average rate in the professional class (182.2), but the rates were considerably below the average of this class from diseases of the nervous system (architects, artists, and teachers of art, 188.9; professional class, 263.4), pneumonia (architects, artists, and teachers of art, 102.1; professional class, 143.8), and diseases of the urinary organs (architects, artists, and teachers of art, 56.2; professional class, 168.4).

CLERGYMEN.

The number of clergymen reported in the registration states was 23,485, and the number of deaths of clergymen during the census year was 553, the death rate being 23.5 per 1,000. In 1890 the rate was 18.2.

The following table shows, for the registration states, the number of clergymen at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	23,485	584	12,170	8,209	2,463
Per cent at each age		2.5	51.8	35.0	10.5
Deaths	553	3	75	171	304
Per cent at each age		0.5	13.6	30.9	55.0
Death rate	23.5	5.1	6.2	20.8	123.4
Average rate in this class	15.3	4.8	7.6	20.7	105.6

This table shows that more than 45 per cent of the clergymen in the registration states were over 45 years of age, and that the greatest number of deaths occurred in the age group 65 years and over, or in 10.5 per cent of the population, the death rate in this age group 123.4 per 1,000. The total death rate of clergymen (23.5) was very much higher than the average death rate in the professional class (15.3).

The following table shows, for the registration states, the number of deaths of clergymen during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	4	17.0
Typhoid fever	11	46.8
Rheumatism		
Consumption	29	123.5
Diabetes	8	34.1
Diseases of nervous system	103	438.6
Heart disease	64	272.5
Other diseases, circulatory system	13	55.4
Pneumonia	60	255.5
Other diseases, respiratory system	20	85.2
Diseases of liver	5	21.3
Other diseases, digestive system	25	106.5
Diseases of urinary system	77	327.9
Diseases of bones and joints	1	4.3
Suicide	2	8.5
Other accidents and injuries	12	51.1
Cancer	24	102.2

This table shows that the highest death rates among clergymen occurred from diseases of the nervous system (438.6), diseases of the urinary system (327.9), heart disease (272.5), and pneumonia (255.5). In comparison

with the average death rates of males in the professional class, the death rates of clergymen from all of these causes were excessively high. The rate from consumption (123.5) was, however, much less than the average rate from this disease in the professional class (182.2). The rate from cancer (102.2) was nearly twice the average rate from this cause in the professional class (51.7), which is partly accounted for by the large number of clergymen of advanced ages.

ENGINEERS AND SURVEYORS.

This title includes those engaged in civil, mechanical, mining, electrical, and other engineering professions, surveyors, and electricians.

The number of engineers and surveyors reported in the registration states was 36,539. The number of deaths of engineers and surveyors during the census year was 300, and the death rate was 8.2 per 1,000 of population. In 1890 the death rate was 5.6. The death rates per 1,000 of population by age groups were as follows: At 15 to 24 years, 4.2; at 25 to 44 years, 6.2; at 45 to 64 years, 14.1; and at 65 years and over, 86.5.

The death rates of engineers and surveyors, per 100,000 of population, were above the average of the professional class from accidents and injuries exclusive of suicide (engineers and surveyors, 84.8; professional class, 61.1), suicide (engineers and surveyors, 21.9; professional class, 16.2), and typhoid fever (engineers and surveyors, 43.8; professional, 37.9). From all other causes the death rates of engineers and surveyors were considerably below the average for that class.

JOURNALISTS.

The number of journalists, reported in the registration, states was 9,021. The number of deaths of journalists in the same area during the census year was 135, and the death rate was 15 per 1,000. By age groups the death rates were as follows: At 15 to 24 years, 5.3; at 25 to 44 years, 6.7; at 45 to 64 years, 29.2; and at 65 years and over, 99.4.

The death rate of journalists, per 100,000 of population, from diseases of the urinary organs (232.8) was higher than the average in the professional class (168.4), as was also the rate from consumption (journalists, 188.4; professional class, 182.2), while the rate from diseases of the nervous system was below the average (journalists, 221.7; professional class, 263.4).

LAWYERS.

The total number of lawyers reported in the registration states was 28,597. The number of deaths of lawyers during the census year was 493, and the death rate was 17.2 per 1,000. In 1890 the death rate was 17.7.

The following table shows, for the registration states, the number of lawyers at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	28,597	2,156	15,543	8,696	2,123
Per cent at each age	.....	7.5	54.4	30.4	7.4
Deaths	493	9	107	175	201
Per cent at each age	.....	1.8	21.7	35.5	40.8
Death rate	17.2	4.2	6.9	20.1	94.7
Average rate in this class	15.3	4.8	7.6	20.7	105.6

It will be seen from this table that over 60 per cent of the lawyers reported in the registration states were under 45 years of age, 54.4 per cent being between 25 and 45 years. In this age group the death rate (6.9) was somewhat less than the average rate at this age in the professional class. At 15 to 24 years, and at 45 to 64 years, the rates were about the same as the average rate for the professional class, but at 65 years of age and over the rate was considerably less than the average rate in this class.

The following table shows, for the registration states, the number of deaths of lawyers during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	3	10.5
Typhoid fever	9	31.5
Rheumatism	3	10.5
Consumption	40	139.9
Diabetes	9	31.5
Diseases of nervous system	102	356.7
Heart disease	67	234.3
Other diseases, circulatory system	12	42.0
Pneumonia	38	132.9
Other diseases, respiratory system	13	45.5
Diseases of liver	13	45.5
Other diseases, digestive system	25	87.4
Diseases of urinary system	56	195.8
Diseases of bones and joints	2	7.0
Suicide	4	14.0
Other accidents and injuries	16	55.9
Cancer	15	52.5

This table shows that the highest death rate among lawyers occurred from diseases of the nervous system (356.7). This rate was very much higher than the average rate from these diseases in the professional class (263.4). The rate from heart disease (234.3) was also very high, and was much higher than the average rate in the professional class (176.8).

The death rate of lawyers from consumption (139.9) was much below the average rate from this disease in the professional class (182.2), and the rate from pneumonia (132.9) was also less than the average rate from this disease (143.8).

MUSICIANS AND TEACHERS OF MUSIC.

The number of musicians and teachers of music reported in the registration states was 16,008. The number of deaths of musicians and teachers of music during the census year was 243, and the death rate was 15.2 per 1,000. The death rates per 1,000 of population by age groups were as follows: At 15 to 24 years, 9.3; at 25 to 44 years, 11.3; at 45 to 64 years, 18.5; and at 65 years and over, 95.

The death rate of musicians and teachers of music from consumption (349.8) was nearly twice as high as the average in the professional class (182.2); the rate was also above the average from heart disease (musicians and teachers of music, 187.4; professional class, 176.8), while the rates were below the average for the professional class from diseases of the nervous system (musicians and teachers of music, 187.4; professional class, 263.4); and diseases of the urinary organs (musicians and teachers of music, 149.9; professional class, 168.4).

PHYSICIANS AND SURGEONS.

The total number of physicians and surgeons reported in the registration states was 29,622. The number of deaths of physicians and surgeons during the census year was 589, and the death rate was 19.9 per 1,000. In 1890 the rate was 21.6.

The following table shows, for the registration states, the number of physicians and surgeons at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	29,622	1,483	17,236	8,688	2,137
Per cent at each age	.....	5.0	58.2	29.3	7.2
Deaths	589	9	150	186	243
Per cent at each age	.....	1.5	25.5	31.6	41.3
Death rate	19.9	6.1	8.7	21.4	113.7
Average rate in this class	15.3	4.8	7.6	20.7	105.6

The preceding table shows that the death rate of physicians and surgeons (19.9) was higher than the average death rate in the professional class (15.3), and that the rates were slightly higher than the average in each age group.

The following table shows, for the registration states, the number of deaths of physicians and surgeons during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	1	3.4
Typhoid fever	10	33.8
Rheumatism	3	10.1
Consumption	50	168.8
Diabetes	5	16.9
Diseases of nervous system	120	405.1
Heart disease	64	216.1
Other diseases, circulatory system	9	30.4
Pneumonia	53	178.9
Other diseases, respiratory system	19	64.1
Diseases of liver	11	37.1
Other diseases, digestive system	27	91.1
Diseases of urinary system	69	232.9
Diseases of bones and joints	2	6.8
Suicide	7	23.6
Other accidents and injuries	14	47.3
Cancer	20	67.5

The highest death rates among physicians and surgeons occurred from diseases of the nervous system (405.1), diseases of the urinary system (232.9), heart disease (216.1), and pneumonia (178.9); and the rates from these diseases were very much higher than the average rates in the professional class. The rate from consumption (168.8) was considerably lower than the average rate in the professional class (182.2).

SCHOOL TEACHERS.

This title includes professors and teachers in schools and colleges, and private tutors and instructors.

The number of male teachers reported in the registration states was 20,135. The number of deaths of teachers in the same area during the census year was 246, and the death rate was 12.2 per 1,000. The death rates per 1,000 of population by age groups were as follows: At 15 to 24 years, 4.5; at 25 to 44 years, 7; at 45 to 64 years, 21.6; and at 65 years and over, 97.4.

The death rate of teachers from pneumonia (144) was slightly higher than the average for the professional class (143.8), but was below the average from consumption (teachers, 144; professional class, 182.2), and diseases of the nervous system (teachers, 203.6; professional class, 263.4).

CLERICAL AND OFFICIAL CLASS.

The total number of males engaged in occupations included in this class in the registration states was 424,781, or 7.6 per cent of the total males having gainful occupations. The number of deaths in this class during the census year was 5,716, or 6.8 per cent of the whole number of deaths of occupied males in this area, and the death rate was 13.5 per 1,000. In 1890 the death rate in this class was 9.8.

The following table shows, for the registration states, the number of males in clerical and official occupations at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	424,781	126,397	194,476	82,989	17,600
Per cent at each age		29.8	45.8	19.5	4.1
Deaths	5,716	906	2,165	1,652	984
Per cent at each age		15.9	37.9	28.9	17.2
Death rate	13.5	7.2	11.1	19.9	55.9
Average rate in all classes	15.0	5.1	8.8	19.9	98.4

It will be seen from this table that the death rate in this class (13.5) was slightly lower than the average rate for all occupied males (15). This class contains a larger percentage of males in the age group 15 to 24 years than any other class (29.8), and in this age group the death rate (7.2) was higher than the average rate at this age for all classes (5.1). At 25 to 44 years the death rate of this class (11.1) was also higher than the average rate (8.8). At 45 to 64 years the rate was exactly the same as the average rate (19.9), but at 65 years of age and over the rate for this class (55.9) was very much less than the average rate (98.4).

The following table shows, for the registration states, the number of deaths of males in clerical and official occupations during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	16	3.8
Typhoid fever	198	46.6
Rheumatism	32	7.5
Consumption	1,292	304.2
Diabetes	77	18.1
Diseases of nervous system	654	154.0
Heart disease	572	134.7
Other diseases, circulatory system	82	19.3
Pneumonia	589	138.7
Other diseases, respiratory system	123	29.0
Diseases of liver	133	31.3
Other diseases, digestive system	267	62.9
Diseases of urinary system	586	138.0
Diseases of bones and joints	15	3.5
Suicide	104	24.5
Other accidents and injuries	235	55.3
Cancer	160	37.7

The greatest mortality in this class was caused by consumption. The death rate from this disease (304.2) was much higher than the average rate for all classes (236.7). The death rates in this class were also above the average from typhoid fever, rheumatism, diabetes, diseases of the liver, and suicide. They were below the average from diseases of the nervous system, heart disease, pneumonia and other diseases of the respiratory system, diseases of the urinary system, and cancer.

The following table shows the comparative death rates of males in each occupation in this class, at all ages, and in each of four age groups, per 1,000 of corresponding population:

DEATH RATES IN EACH OCCUPATION, BY AGES.

OCCUPATION.	AGE.				
	All ages.	15 to 24 years.	25 to 44 years.	45 to 64 years.	65 years and over.
Clerical and official	13.5	7.2	11.1	19.9	55.9
Bookkeepers, clerks, and copyists	13.6	7.7	13.3	25.2	90.1
Bankers, brokers, and officials of companies	11.8	2.9	5.1	14.5	28.0
Collectors, auctioneers, and agents	13.1	3.4	7.5	15.8	60.3
Others of this class	15.1	3.9	9.2	19.2	71.3

Of the individual occupations included in this class, the death rate of bookkeepers, clerks, and copyists (13.6) was slightly above the average rate in this class (13.5), but the rates of bankers, brokers, and officials of companies (11.8) and of collectors, auctioneers, and agents (13.1) were below the average. The highest rates at each age occurred among bookkeepers, clerks, and copyists.

BOOKKEEPERS, CLERKS, AND COPYISTS.

This title includes accountants, bookkeepers, copyists, Government clerks, and all others in ordinary clerical positions, but not stenographers and typewriters.

The total number of bookkeepers, clerks, and copyists reported in the registration states was 278,137. The number of deaths of bookkeepers, clerks, and copyists during the census year was 3,788, and the death rate was 13.6 per 1,000. In 1890 the rate was 11.2.

The following table shows, for the registration states, the number of bookkeepers, clerks, and copyists at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	278,137	109,562	126,371	35,073	4,163
Per cent at each age		39.4	45.4	12.6	1.5
Deaths	3,788	847	1,679	883	375
Per cent at each age		22.4	44.3	23.3	9.9
Death rate	13.6	7.7	13.3	25.2	90.1
Average rate in this class	13.5	7.2	11.1	19.9	55.9

It will be seen from the preceding table that over 80 per cent of the bookkeepers, clerks, and copyists in the registration states were under 45 years of age, and that the death rates were higher than the average rates for the clerical and official class in every age group.

The following table shows, for the registration states, the number of deaths of bookkeepers, clerks, and copyists during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	12	4.3
Typhoid fever	141	50.7
Rheumatism	21	7.6
Consumption	1,107	398.0
Diabetes	44	15.8
Diseases of nervous system	347	124.8
Heart disease	332	119.4
Other diseases, circulatory system	38	13.7
Pneumonia	403	144.9
Other diseases, respiratory system	79	28.4
Diseases of liver	78	28.0
Other diseases, digestive system	181	65.1
Diseases of urinary system	334	120.1
Diseases of bones and joints	5	1.8
Suicide	59	21.2
Other accidents and injuries	159	57.2
Cancer	78	28.0

The highest death rate among bookkeepers, clerks, and copyists occurred from consumption (398), and the rate from this disease was much higher than the average rate in this class (304.2). The rates from heart disease (119.4), diseases of the nervous system (124.8), and diseases of the urinary system (120.1) were lower than the average rates in this class, but the rate from pneumonia (144.9) was slightly higher than the average (138.7).

BANKERS, BROKERS, AND OFFICIALS OF COMPANIES.

This title includes bankers and bank officials, commercial and stock brokers, superintendents and other officials of insurance, trust, trade, transportation, and other companies, proprietors and managers, and all others in similar positions of responsibility, as distinguished from ordinary clerical work.

The number of bankers, brokers, and officials of companies reported in the registration states was 43,430. The number of deaths of bankers, brokers, and officials of companies during the census year was 514, and the death rate was 11.8 per 1,000.

The following table shows, for the registration states, the number of bankers, brokers, and officials of companies at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	43,430	2,453	19,065	15,001	6,830
Per cent at each age		5.6	43.9	34.5	15.7
Deaths	514	7	98	217	191
Per cent at each age		1.4	19.1	42.2	37.2
Death rate	11.8	2.9	5.1	14.5	28.0
Average rate in this class	13.5	7.2	11.1	19.9	55.9

The preceding table shows that the death rates of bankers, brokers, and officials of companies were lower, in the aggregate, and in each age group, than the average rates in this class. Over 50 per cent of the bankers, brokers, and officials of companies in the registration states were more than 45 years of age, and the highest number of deaths occurred in the age group 45 to 64 years, in which the death rate (14.5) was less than the average rate for the class (19.9). At 65 years of age and over, the rate (28) was only about half as high as the average rate in this class (55.9).

The following table shows, for the registration states, the number of deaths of bankers, brokers, and officials of companies during the census year from certain specified causes, and the death rates per 100,000 of population.

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	1	2.3
Typhoid fever	16	36.8
Rheumatism	2	4.6
Consumption	40	92.1
Diabetes	9	20.7
Diseases of nervous system	84	193.4
Heart disease	60	138.2
Other diseases, circulatory system	20	46.1
Pneumonia	50	115.1
Other diseases, respiratory system	12	27.6
Diseases of liver	13	29.9
Other diseases, digestive system	25	57.6
Diseases of urinary system	76	175.0
Diseases of bones and joints	4	9.2
Suicide	9	20.7
Other accidents and injuries	21	48.4
Cancer	18	41.4

The highest death rate of bankers, brokers, etc., occurred from diseases of the nervous system (193.4), and this was considerably higher than the average rate from these diseases in the clerical and official class (154). The rates from heart disease (138.2), and other diseases of the circulatory system (46.1), and diseases of the urinary organs (175) were higher than the average rates in this class, but the rate from consumption (92.1) was less than one-third of the average rate in this class (304.2).

COLLECTORS, AUCTIONEERS, AND AGENTS.

This title includes collectors, auctioneers, and claim, commission, real estate, insurance, and other agents.

The number of collectors, auctioneers, and agents reported in the registration states was 73,958. The number of deaths of collectors, auctioneers, and agents during the census year was 972, and the death rate was 13.1 per 1,000. In 1890 the rate was 10.7.

The following table shows, for the registration states, the number of collectors, auctioneers, and agents at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	73,958	8,466	36,711	23,763	4,826
Per cent at each age	.....	11.4	49.6	32.1	6.5
Deaths	972	29	274	376	291
Per cent at each age	.....	3.0	28.2	38.7	29.9
Death rate	13.1	3.4	7.5	15.8	60.3
Average rate in this class	13.5	7.2	11.1	19.9	55.9

This table shows that about 50 per cent of the collectors, auctioneers, and agents reported in the registration states were between 25 and 45 years of age, and that in this age group the death rate of males in these occupations (7.5) was much lower than the average rate in this class (11.1). The rate at 45 to 64 years was also lower than the average rate in this class, but at 65 years of age and over, it was somewhat higher than the average.

The following table shows, for the registration states, the number of deaths of collectors, auctioneers, and agents during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	2	2.7
Typhoid fever	28	37.9
Rheumatism	7	9.5
Consumption	97	131.2
Diabetes	16	21.6
Diseases of nervous system	162	219.0
Heart disease	133	179.8
Other diseases, circulatory system	17	23.0
Pneumonia	84	113.6
Other diseases, respiratory system	23	31.1
Diseases of liver	28	37.9
Other diseases, digestive system	43	58.1
Diseases of urinary system	108	146.0
Diseases of bones and joints	4	5.4
Suicide	32	43.3
Other accidents and injuries	38	51.4
Cancer	43	58.1

The causes of death among collectors, auctioneers, and agents, for which the death rates were higher than the average rates in this class, were diseases of the nervous system, heart disease and other diseases of the circulatory system, diseases of the liver, diseases of the urinary organs, suicide, and cancer. The rates from typhoid fever, consumption, and pneumonia were less than the average rates in this class.

MERCANTILE AND TRADING CLASS.

The total number of males engaged in occupations included in this class in the registration states was 493,994, or 8.9 per cent of the total males having gainful occupations. The number of deaths in this class during the census year was 6,000, or 7.2 per cent of the whole number of deaths of occupied males in this area, and the death rate was 12.1 per 1,000. In 1890 the death rate in this class was 12.3.

The following table shows, for the registration states, the number of males engaged in mercantile and trading pursuits, at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24	25 to 44	45 to 64	65 and over.
Population	493,994	102,500	252,877	116,506	18,200
Per cent at each age	.....	20.7	51.2	23.6	3.7
Deaths	6,000	266	1,700	2,320	1,707
Per cent at each age	.....	4.4	28.3	38.7	28.5
Death rate	12.1	2.6	6.7	19.9	93.8
Average rate in all classes	15.0	5.1	8.8	19.9	98.4

The preceding table shows that the death rate in this class (12.1) was less than the average rate in all classes (15), and that the rates were less at each age except at 45 to 64 years, in which age group the rate was exactly the same as the average rate (19.9).

The following table shows, for the registration states, the number of deaths of males in mercantile and trading occupations during the census year from certain specified causes, and the death rates per 100,000 of population.

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	17	3.4
Typhoid fever	140	28.3
Rheumatism	27	5.5
Consumption	819	165.8
Diabetes	96	19.4
Diseases of nervous system	847	171.5
Heart disease	719	145.5
Other diseases, circulatory system	114	23.1
Pneumonia	659	133.4
Other diseases, respiratory system	166	33.6
Diseases of liver	155	31.4
Other diseases, digestive system	269	54.5
Diseases of urinary system	696	140.9
Diseases of bones and joints	11	2.2
Suicide	100	20.2
Other accidents and injuries	227	46.0
Cancer	257	52.0

This table shows that the highest death rates in this class were caused by diseases of the nervous system (171.5), consumption (165.8), heart disease (145.5), and diseases of the urinary organs (140.9), but the rates from these causes were generally much less than the average rates in all classes. The only diseases for which death rates in this class were above the average were diabetes and diseases of the liver.

The following table shows the comparative death rates of males in each occupation in this class, at all ages, and in each of four age groups, per 1,000 of corresponding population:

DEATH RATES IN EACH OCCUPATION BY AGES.

CUPATIONS.	AGE.				
	All ages.	15 to 24 years.	25 to 44 years.	45 to 64 years.	65 years and over.
Mercantile and trading	12.1	2.6	6.7	19.9	93.8
Apothecaries, pharmacists, etc	18.3	11.7	11.8	29.2	104.3
Commercial travelers	5.7	1.1	3.8	9.1	32.2
Merchants and dealers	16.4	4.2	6.7	20.4	104.8
Hucksters and peddlers	12.0	4.0	8.6	19.6	57.9
Others of this class	7.4	1.7	6.5	20.6	69.9

The very low death rate of commercial travelers as given in the preceding table (5.7) indicates that probably this occupation was not reported with sufficient accuracy by the physicians in making their returns. It is evident that this rate does not represent the mortality in this class, and this affects to some extent the average rate for the class as a whole, in the aggregate, and for each group. At 25 to 44 years the death rate was highest among the apothecaries, pharmacists, etc. (11.8), being nearly twice as high as the rate for general merchants and dealers (6.7), but at 65 years of age and over the death rate of general merchants and dealers (104.8) was about the same as that of apothecaries, pharmacists, etc. (104.3).

APOTHECARIES, PHARMACISTS, ETC.

This title includes apothecaries, pharmacists, druggists, and dealers in drugs, chemicals, and medicines.

The number of apothecaries, pharmacists, etc., reported in the registration states was 14,728. The number of deaths of apothecaries, pharmacists, etc., during the census year was 270, and the death rate was 18.3. The death rates per 1,000 of population by age groups were as follows: At 15 to 24 years, 11.7; at 25 to 44 years, 11.8; at 45 to 64 years, 29.2; and at 65 years and over, 104.3.

The death rates of apothecaries, pharmacists, etc., per 100,000 of population, were very much higher than the average for the mercantile and trading class from the following causes: Consumption (305.5), diseases of the nervous system (271.6), pneumonia (230.9), and diseases of the urinary organs (237.6).

COMMERCIAL TRAVELERS AND SALESMEN.

The number of commercial travelers reported in the registration states was 25,989. The number of deaths of commercial travelers in the same area during the census year was 147, and the death rate was 5.7 per 1,000. The death rates per 1,000 of population by age groups were as follows: At 15 to 24 years, 1.1; at 25 to 44 years, 3.8; at 45 to 64 years, 9.1; and at 65 years and over, 32.2.

The death rate of commercial travelers per 100,000 of population was highest from diseases of the nervous system (92.3), which was very much less than the average for the mercantile and trading class (171.5). The death rate of commercial travelers from the causes specified were generally much below the average rates in this class.

MERCHANTS AND DEALERS.

This title includes all wholesale and retail merchants, storekeepers, and dealers, except retail wine and liquor dealers. The number of merchants and dealers reported in the registration states was 228,899. The number of deaths of merchants and dealers during the census year was 3,764, and the death rate was 16.4 per 1,000. In 1890 the rate was 14.7.

The following table shows, for the registration states, the number of merchants and dealers at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	228,899	20,646	121,114	73,149	13,154
Per cent at each age	.....	9.0	52.9	32.0	5.7
Deaths	3,764	87	807	1,489	1,378
Per cent at each age	.....	2.3	21.4	39.6	36.6
Death rate	16.4	4.2	6.7	20.4	104.8
Average rate in this class	12.1	2.6	6.7	19.9	93.8

This table shows that the death rate of merchants and dealers (16.4) was considerably higher than the average death rate in the mercantile and trading class (12.1), and that the rates were higher at each age except at 25 to 44 years, in which the rate was exactly the same as the average rate in this class (6.7).

The following table shows, for the registration states, the number of deaths of merchants and dealers during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	13	5.7
Typhoid fever	77	33.6
Rheumatism	18	7.9
Consumption	375	163.8
Diabetes	71	31.0
Diseases of nervous system	573	250.3
Heart disease	492	214.9
Other diseases, circulatory system	74	32.3
Pneumonia	382	166.9
Other diseases, respiratory system	114	49.8
Diseases of liver	97	42.4
Other diseases, digestive system	180	78.6
Diseases of urinary system	469	204.9
Diseases of bones and joints	7	3.1
Suicide	56	24.5
Other accidents and injuries	109	47.6
Cancer	186	81.3

The highest death rates among merchants and dealers occurred from diseases of the nervous system (250.3), heart disease (214.9), and diseases of the urinary organs (204.9), and these rates were very much higher than the average rates from the same diseases in this class. The rate from suicide (24.5) was somewhat higher than the average rate in this class (20.2), and that from cancer (81.3) was very high, the average rate from this cause in the mercantile and trading class being 52.

HUCKSTERS AND PEDDLERS.

The number of hucksters and peddlers reported in the registration states was 33,482. The number of deaths of hucksters and peddlers during the census year was 401, and the death rate was 12 per 1,000. In 1890 the rate was 14.1.

The following table shows, for the registration states, the number of hucksters and peddlers, at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	33,482	7,260	16,623	7,664	1,364
Per cent at each age		21.7	49.6	22.9	4.1
Deaths	401	29	143	150	79
Per cent at each age		7.2	35.7	37.4	19.7
Death rate	12.0	4.0	8.6	19.6	57.9
Average rate in this class	12.1	2.6	6.7	19.9	93.8

This table shows that the death rate of hucksters and peddlers (12) was about the same as the average rate in the mercantile and trading class (12.1). Over 70 per cent of the hucksters and peddlers reported in the registration states were under 45 years of age, and at these ages the death rates of hucksters and peddlers were higher than the average rates in the mercantile and trading class. Above 45 years the death rates of hucksters and peddlers were lower than the average rates.

The following table shows, for the registration states, the number of deaths of hucksters and peddlers during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever		
Typhoid fever	5	14.9
Rheumatism		
Consumption	84	250.9
Diabetes	2	6.0
Diseases of nervous system	43	128.4
Heart disease	45	134.4
Other diseases, circulatory system	3	9.0
Pneumonia	36	107.5
Other diseases, respiratory system	12	35.8
Diseases of liver	9	26.9
Other diseases, digestive system	17	50.8
Diseases of urinary system	40	119.5
Diseases of bones and joints		
Suicide	5	14.9
Other accidents and injuries	22	65.7
Cancer	21	62.7

The death rate of hucksters and peddlers from consumption (250.9) was much higher than the average rate from this disease in the mercantile and trading class (165.8), but the rates from the other specified causes were generally much lower than the average rates in this class.

PUBLIC ENTERTAINMENT CLASS.

The total number of males engaged in occupations included in this class in the registration states was 87,888, or 1.6 per cent of the total males having gainful occupations. The number of deaths in this class during the census year was 1,350, or 1.6 per cent of the whole number of deaths of occupied males in this area, and the death rate was 15.4 per 1,000. In 1890 the death rate in this class was 14.5.

The following table shows, for the registration states, the number of males in this class at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population.

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	87,888	10,599	53,417	21,245	2,471
Per cent at each age		12.1	60.8	24.2	2.8
Deaths	1,350	55	621	506	168
Per cent at each age		4.1	46.0	37.5	12.4
Death rate	15.4	5.2	11.6	23.8	68.0
Average rate in all classes	15.0	5.1	8.8	19.9	98.4

The preceding table shows that the death rate in this class (15.4) was slightly higher than the average rate in all classes (15). The rates in this class were considerably above the average at 25 to 44 years, and at 45 to 64 years, but were below the average at 65 years of age and over. For those 15 to 24 years, the rate (5.2) was about the same as the average rate (5.1).

The following table shows, for the registration states, the number of deaths of males in this class during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	3	3.4
Typhoid fever	24	27.3
Rheumatism	9	10.2
Consumption	236	268.5
Diabetes	14	15.9
Diseases of nervous system	169	192.3
Heart disease	126	143.4
Other diseases circulatory system	18	20.5
Pneumonia	146	166.1
Other diseases respiratory system	25	28.4
Diseases of liver	98	111.5
Other diseases digestive system	64	72.8
Diseases of urinary system	152	172.9
Diseases of bones and joints	2	2.3
Suicide	21	23.9
Other accidents and injuries	57	64.9
Cancer	31	35.3

In this class the death rates from rheumatism (10.2), consumption (268.5), diabetes (15.9), diseases of the nervous system (192.3), pneumonia (166.1), diseases of the liver (111.5), and other diseases of the digestive system (72.8), diseases of the urinary organs (172.9), and suicide (23.9) were all higher than the average rates from these causes in all classes. The rate from diseases of the digestive system (184.3) was excessively high, being more than twice the average rate from these diseases in all classes (89).

The following table shows the comparative death rates of males in each occupation in this class, at all ages, and in each of four age groups, per 1,000 of corresponding population:

DEATH RATES IN EACH OCCUPATION, BY AGES.

OCCUPATIONS.	AGE.				
	All ages.	15 to 24 years.	25 to 44 years.	45 to 64 years.	65 years and over.
Public entertainment	15.4	5.2	11.6	23.8	68.0
Hotel and boarding house keepers	22.3	11.2	11.1	25.8	82.1
Saloon keepers, liquor dealers, bartenders, and restaurant keepers	13.3	4.9	11.7	22.6	47.5

This table shows that the death rate of hotel and boarding house keepers (22.3) was much higher than that of saloon keepers, liquor dealers, etc. (13.3), and that it was higher in each age group except at 25 to 44 years, in which group the death rate of saloon keepers, liquor dealers, etc. (11.7) was slightly higher than that of hotel and boarding house keepers (11.1).

HOTEL AND BOARDING HOUSE KEEPERS.

The number of hotel and boarding house keepers reported in the registration states was 19,969. The number of deaths of hotel and boarding house keepers during the census year was 445, and the death rate was 22.3 per 1,000. In 1890 the rate was 14.9.

The following table shows, for the registration states, the number of hotel and boarding house keepers at all ages and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	19,969	535	9,809	8,140	1,461
Per cent at each age		2.7	49.1	40.8	7.3
Deaths	445	6	109	210	120
Per cent at each age		1.3	24.5	47.2	27.0
Death rate	22.3	11.2	11.1	25.8	82.1
Average rate in this class	15.4	5.2	11.6	23.8	68.0

This table shows that the death rate of hotel and boarding house keepers (22.3) was much higher than the average rate in this class (15.4). About 50 per cent of the persons reported in these occupations in the registration states were between 25 and 45 years of age, and in this age group the death rate of hotel and boarding house keepers (11.1) was slightly lower than the average rate in this class (11.6). About 40 per cent were between 45 and 65 years of age, and in this age group the death rate (25.8) was higher than the average rate in this class (23.8).

The following table shows, for the registration states, the number of deaths of hotel and boarding house keepers during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever		
Typhoid fever	7	35.1
Rheumatism	5	25.0
Consumption	42	210.3
Diabetes	5	25.0
Diseases of nervous system	68	340.5
Heart disease	64	320.5
Other diseases, circulatory system	10	50.1
Pneumonia	43	215.3
Other diseases, respiratory system	8	40.1
Diseases of the liver	19	95.1
Other diseases, digestive system	23	115.2
Diseases of the urinary system	66	330.5
Diseases of bones and joints	1	5.0
Suicide	7	35.1
Other accidents and injuries	15	75.1
Cancer	12	60.1

The death rates of hotel and boarding-house keepers from diseases of the nervous system (340.5), heart disease (320.5), pneumonia (215.3), and diseases of the urinary system (330.5) were all very high, being much higher than the average rates from these diseases in this class. The rate from consumption (210.3) was much less than the average rate in this class (268.5), but for the other specified diseases the death rates of hotel and boarding-house keepers were generally higher than the average rates in this class.

SALOON AND RESTAURANT KEEPERS.

This title includes saloon keepers, bartenders, retail wine and liquor dealers, restaurant keepers, and keepers of billiard saloons, and bowling alleys.

The number of males engaged in these occupations in the registration states was 67,919, and the number of deaths during the census year was 905, the death rate per 1,000 being 13.3. In 1890 the rate was 14.4.

The following table shows, for the registration states, the number of saloon and restaurant keepers at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	67,919	10,064	43,608	13,105	1,010
Per cent at each age		14.8	64.2	19.3	1.5
Deaths	905	49	512	296	48
Per cent at each age		5.4	56.6	32.7	5.3
Death rate	13.3	4.9	11.7	22.6	47.5
Average rate in this class	15.4	5.2	11.6	23.8	68.0

This table shows that the death rate of saloon and restaurant keepers, bartenders, etc. (13.3), was lower than the average rate in this class (15.4). Nearly 80 per cent of the persons reported in these occupations in the registration states were under 45 years of age, and in the age group 25 to 44 the rate was higher than the average rates in this class. In the age groups above 45 years the rates were lower than the average rates.

The following table shows, for the registration states, the number of deaths of saloon and restaurant keepers during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	3	4.4
Typhoid fever	17	25.0
Rheumatism	4	5.9
Consumption	194	285.6
Diabetes	9	13.3
Diseases of nervous system	101	148.7

DEATH RATES FROM CERTAIN CAUSES—Continued.

CAUSE OF DEATH.	Deaths.	Death rate.
Heart disease	62	91.3
Other diseases, circulatory system	8	11.8
Pneumonia	103	151.7
Other diseases, respiratory system	17	25.0
Diseases of liver	79	116.3
Other diseases, digestive system	41	60.4
Diseases of urinary system	86	126.6
Diseases of bones and joints	1	1.5
Suicide	14	20.6
Other accidents and injuries	42	61.8
Cancer	19	28.0

The highest death rates of saloon and restaurant keepers, bartenders, etc., were due to consumption (285.6), pneumonia (151.7), and diseases of the nervous system (148.7). The rates from consumption (285.6) and diseases of the liver (116.3) were also higher than the average rates from these diseases in this class, but the rates from the other specified causes were generally much lower than the average in this class.

PERSONAL SERVICE, POLICE, AND MILITARY CLASS.

The total number of males engaged in occupations included in this class, in the registration states, was 149,164, or 2.7 per cent of the total males having gainful occupations. The number of deaths in this class during the census year was 1,931, or 2.3 per cent of the whole number of deaths of the occupied males in this area, and the death rate was 12.9 per 1,000. In 1890 the death rate in this class was 15.4.

The following table shows, for the registration states, the number of males in this class at all ages and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	149,164	26,396	79,127	37,015	5,949
Per cent at each age		17.7	53.0	24.8	4.0
Deaths	1,931	156	649	735	381
Per cent at each age		8.1	33.6	38.1	19.7
Death rate	12.9	5.9	8.2	19.9	64.0
Average rate in all classes	15.0	5.1	8.8	19.9	98.4

This table shows that the death rate in this class (12.9) was less than the average in all classes (15), and that the rate was lower at 25 to 44 years (8.2) than the average rate at this age (8.8), also at 65 years and over, in which age group the rate in this class (64) was much less than the average rate (98.4). At 15 to 24 years, the death rate in this class (5.9) was slightly higher than the average rate (5.1), and at 45 to 64 years it was exactly the same as the average rate in all classes (19.9).

The following table shows, for the registration states, the number of deaths of males in this class during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	13	8.7
Typhoid fever	57	38.2
Rheumatism	10	6.7
Consumption	380	254.8
Diabetes	13	8.7
Diseases of nervous system	216	144.8
Heart disease	188	126.0
Other diseases, circulatory system	26	17.4
Pneumonia	221	148.2
Other diseases, respiratory system	47	31.5
Diseases of liver	42	28.2
Other diseases, digestive system	72	48.3
Diseases of urinary system	217	145.5
Diseases of bones and joints	4	2.7
Suicide	41	27.5
Other accidents and injuries	125	83.8
Cancer	64	42.9

The death rates in this class from consumption (254.8), typhoid fever (38.2), malarial fever (8.7), diseases of the urinary system (145.5), and suicide (27.5) were higher than the average rates from these diseases in all classes, but the rates due to all other specified causes were lower than the average rates.

The following table shows the comparative death rates of males in each occupation in this class, at all ages, and in each of four age groups, per 1,000 of corresponding population:

DEATH RATES IN EACH OCCUPATION, BY AGES.

OCCUPATION.	AGE.				
	All ages.	15 to 24 years.	25 to 44 years.	45 to 64 years.	65 years and over.
Personal service, police, and military	12.9	5.9	8.2	19.9	64.0
Barbers and hairdressers	10.4	5.7	8.7	19.5	90.9
Janitors and sextons	16.6	2.8	9.1	20.3	43.9
Policemen, watchmen, and detectives	15.4	2.0	7.2	19.4	65.6
Soldiers, sailors, and marines (United States)	12.1	6.5	9.5	32.2	198.6
Others of this class	10.9	7.3	8.0	18.3	68.8

This table shows that of the individual occupations included in this class, the death rates were above the average for the class (12.9) among janitors and sextons (16.6) and policemen, watchmen, and detectives (15.4). The lowest rate in this class was that of barbers and hairdressers (10.4).

BARBERS AND HAIRDRESSERS.

The number of barbers and hairdressers reported in the registration states was 40,007, and the number of deaths of barbers and hairdressers during the census year was 416, the death rate per 1,000 being 10.4. In 1890 the rate was 12.5.

The following table shows, for the registration states, the number of barbers and hairdressers at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	40,007	10,103	23,390	5,687	462
Per cent at each age		25.3	58.5	14.2	1.2
Deaths	416	58	203	111	42
Per cent at each age		13.9	48.8	26.7	10.1
Death rate	10.4	5.7	8.7	19.5	90.9
Average rate in this class	12.9	5.9	8.2	19.9	64.0

This table shows that the death rate of barbers and hairdressers in the registration states (10.4) was lower than the average rate in this class (12.9). Over 80 per cent of the barbers and hairdressers in this area were under 45 years of age, 58.5 per cent being between 25 and 45 years. The highest number of deaths occurred in this age group, and the death rate (8.7) was slightly higher than the average rate in this class (8.2). At 15 to 24 years, and at 45 to 64 years, the death rates of barbers and hairdressers were lower than the average rates in this class, but at 65 years of age and over, the rate was considerably higher than the average.

The following table shows, for the registration states, the number of deaths of barbers and hairdressers during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	1	2.5
Typhoid fever	16	40.0
Rheumatism	1	2.5
Consumption	134	334.9
Diabetes	2	5.0
Diseases of nervous system	30	75.0
Heart disease	41	102.5
Other diseases, circulatory system	7	17.5
Pneumonia	31	77.5
Other diseases, respiratory system	12	30.0
Diseases of liver	13	32.5
Other diseases, digestive system	16	40.0
Diseases of urinary system	36	90.0
Diseases of bones and joints	1	2.5
Suicide	12	30.0
Other accidents and injuries	18	45.0
Cancer	11	27.5

The highest death rate among barbers and hairdressers was due to consumption (334.9) and this was very much higher than the average rate from this disease in this class (254.8). The rates from typhoid fever, dis-

eases of the circulatory system other than heart disease, diseases of the liver, and suicide, were all higher than the average rates in this class, but the rates due to the other specified causes were generally much lower than the average.

JANITORS AND SEXTONS.

The number of janitors and sextons reported in the registration states was 19,493, and the number of deaths of janitors and sextons during the census year was 324, the death rate per 1,000 being 16.6. In 1890 the rate was 17.2.

The following table shows, for the registration states, the number of janitors and sextons at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	19,493	1,480	8,170	7,885	1,957
Per cent at each age	.....	7.3	41.9	40.5	10.0
Deaths	324	4	74	160	86
Per cent at each age	.....	1.2	22.8	49.4	26.5
Death rate	16.6	2.8	9.1	20.3	43.9
Average rate in this class	12.9	5.9	8.2	19.9	64.0

This table shows that the death rate of janitors and sextons in the registration states (16.6) was considerably higher than the average rate in this class (12.9), and that the rates were higher in the age groups 25 to 44 and 45 to 64 years, which included over 80 per cent of the janitors and sextons reported. At 15 to 24 years of age and at 65 years and over the death rates of janitors and sextons were lower than the average rates in this class.

The following table shows, for the registration states, the number of deaths of janitors and sextons during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	1	5.1
Typhoid fever	5	25.7
Rheumatism	.....	.....
Consumption	49	251.4
Diabetes	.....	.....
Diseases of nervous system	37	189.8
Heart disease	30	153.9
Other diseases, circulatory system	5	25.7
Pneumonia	62	318.1
Other diseases, respiratory system	8	41.0
Diseases of liver	2	10.3
Other diseases, digestive system	16	82.1
Diseases of urinary system	47	241.1
Diseases of bones and joints	.....	.....
Suicide	8	41.0
Other accidents and injuries	13	66.7
Cancer	13	66.7

The death rate of janitors and sextons from pneumonia (318.1) was excessively high, being more than twice the average rate in this class (148.2). The rate from diseases of the urinary organs (241.1) was also very much higher than the average rate in this class (145.5). The rate from consumption (251.4) was slightly lower than the average rate in this class (254.8).

POLICEMEN, WATCHMEN, AND DETECTIVES.

The number of policemen, watchmen, and detectives reported in the registration states was 43,145, and the number of deaths during the census year was 665, the death rate being 15.4 per 1,000. In 1890 the rate was 16.2.

The following table shows, for the registration states, the number of policemen, watchmen, and detectives at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	43,145	1,534	22,160	16,665	2,715
Per cent at each age	.....	3.6	51.4	38.6	6.3
Deaths	665	3	160	323	178
Per cent at each age	.....	0.5	24.1	48.6	26.8
Death rate	15.4	2.0	7.2	19.4	65.6
Average rate in this class	12.9	5.9	8.2	19.9	64.0

This table shows that the death rate of policemen, watchmen, and detectives was higher than the average rate in this class (12.9), but that the rates were lower in each of the age groups up to 65 years. At 65 years and over, the death rate of policemen, watchmen, and detectives (65.6) was slightly higher than the average rate in this class (64). The greatest number of deaths of policemen, watchmen, and detectives occurred between the ages of 45 and 65 years, and in this age group the rate (19.4) was about the same as the average rate in this class (19.9).

The following table shows, for the registration states, the number of deaths of policemen, watchmen, and detectives during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	2	4.6
Typhoid fever	9	20.9
Rheumatism	6	13.9
Consumption	59	136.7
Diabetes	4	9.3
Diseases of nervous system	105	243.4
Heart disease	77	178.5
Other diseases, circulatory system	10	23.2
Pneumonia	75	173.8
Other diseases, respiratory system	17	39.4

DEATH RATES FROM CERTAIN CAUSES—Continued.

CAUSE OF DEATH.	Deaths.	Death Rate.
Diseases of liver	17	39.4
Other diseases, digestive system	23	53.3
Diseases of urinary system	94	217.9
Diseases of bones and joints		
Suicide	13	30.1
Other accidents and injuries	60	139.1
Cancer	26	60.3

The highest death rates of policemen, watchmen, and detectives were due to diseases of the nervous system (243.4), diseases of the urinary system (217.9), heart disease (178.5), and pneumonia (173.8), and the rates from these diseases were all much higher than the average rates in this class. The rate from accidents and injuries other than suicide (139.1) was very much higher than the average rate (83.8) and the rates from suicide, cancer, rheumatism, diseases of the liver, and other diseases of the digestive system were also higher than the average rates in this class, but the rate due to consumption (136.7) was very much lower than the average rate in this class (254.8).

SOLDIERS, SAILORS, AND MARINES (UNITED STATES SERVICE).

The number of soldiers, sailors, and marines reported in the registration states was 14,851; the number of deaths of soldiers, sailors, and marines during the census year was 180; and the death rate was 12.1 per 1,000. The death rates per 1,000 of population by age groups were as follows: At 15 to 24 years, 6.5; at 25 to 44 years, 9.5; at 45 to 64 years, 32.2; and at 65 years and over, 198.6.

The death rates of soldiers, sailors, and marines per 100,000 of population were above the average for the class, from accidents and injuries exclusive of suicide (141.4) and typhoid fever (80.8). The death rates from other causes were generally below the class average.

LABORING AND SERVANT CLASS.

The total number of males engaged in occupations included in this class in the registration states was 800,983, or 14.4 per cent of the total males having gainful occupations. The number of deaths in this class during the census year was 16,158, or 19.3 per cent of the whole number of deaths of occupied males in this area, and the death rate was 20.2 per 1,000. In 1890 the death rate in this class was 22.6.

The following table shows, for the registration states, the number of males in this class at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	800,983	207,579	386,253	164,833	30,101
Per cent at each age		25.9	48.2	20.6	3.8
Deaths	16,158	1,606	5,382	5,253	3,812
Per cent at each age		9.9	33.3	32.5	23.6
Death rate	20.2	7.7	13.9	31.9	126.6
Average rate in all classes	15.0	5.1	8.8	19.9	98.4

The preceding table shows that about 75 per cent of the population in the laboring and servant class were under 45 years of age. The death rate of this class (20.2) was much higher than the average rate of all classes (15), and the rates were higher in each age group than the average rates at the same ages in all classes.

The following table shows, for the registration states, the number of deaths of males in this class during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	43	5.4
Typhoid fever	409	51.1
Rheumatism	53	6.6
Consumption	3,018	376.8
Diabetes	63	7.9
Diseases of nervous system	1,601	199.9
Heart disease	1,542	192.5
Other diseases, circulatory system	128	16.0
Pneumonia	1,996	249.2
Other diseases, respiratory system	513	64.0
Diseases of liver	256	32.0
Other diseases, digestive system	626	78.2
Diseases of urinary system	1,340	167.3
Diseases of bones and joints	48	6.0
Suicide	165	20.6
Other accidents and injuries	1,764	220.2
Cancer	533	66.5

In comparison with the average death rates from the specified causes, the death rates of laborers and servants from consumption (376.8) was very much higher than the average rate (236.7), and the rate from pneumonia (249.2) was also much higher than the average rate from this disease (154.1). The only diseases in which the death rates of this class were lower than the average rate were rheumatism, diabetes, and diseases of the circulatory system other than heart disease.

The following table shows the comparative death rates of males in each occupation in this class, at all

ages, and in each of four age groups, per 1,000 of corresponding population:

DEATH RATES IN EACH OCCUPATION, BY AGES.

OCCUPATIONS.	AGE.				
	All ages.	15 to 24 years.	25 to 44 years.	45 to 64 years.	65 years and over.
Laboring and servant	20.2	7.7	13.9	31.9	126.6
Laborers (not agricultural)	20.7	8.0	14.0	31.6	127.3
Servants	15.5	6.0	13.5	36.0	110.7

The preceding table shows that the death rates of laborers were higher than those of servants at each age, except at 45 to 64 years, in which group the death rate of servants (36) was considerably higher than that of laborers (31.6).

LABORERS.

This title includes all persons reported as laborers, excepting agricultural laborers.

The number of laborers reported in the registration states was 719,647, and the number of deaths of laborers during the census year was 14,895, the death rate per 1,000 being 20.7. In 1890 the rate was 25.3.

The following table shows, for the registration states, the number of laborers (not agricultural) at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	719,647	184,404	341,508	154,081	28,963
Per cent at each age		25.6	47.5	21.4	4.0
Deaths	14,895	1,467	4,776	4,866	3,686
Per cent at each age		9.8	32.1	32.7	24.7
Death rate	20.7	8.0	14.0	31.6	127.3
Average rate in this class	20.2	7.7	13.9	31.9	126.6

This table shows that the death rates of laborers (not agricultural) in the aggregate and at each age were higher than the rates for the laboring and servant class, but the average rates for this class are determined largely by the deaths of the laborers themselves, as they represent the great majority in this class. In comparison with the total death rate of males in all occupations, it will be seen that the death rate of laborers (20.7) was much higher than the average death rate of all occupied males (15). At 15 to 24 years the death rate of laborers (8) was 2.9 per 1,000 higher than the average rate of all males at these ages (5.1); at 25 to 44 years, the average death rate of all occupied males was 8.8, and that of laborers was 14. At 45 to 64 years, the average death rate of all occupied males was 19.9, and that of laborers was 31.6; and at 65 years of age and over, the death rate of all occupied males was 98.4, and that of laborers was 127.3.

The following table shows, for the registration states, the number of deaths of laborers (not agricultural) during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	39	5.4
Typhoid fever	373	51.8
Rheumatism	50	6.9
Consumption	2,668	370.7
Diabetes	57	7.9
Diseases of nervous system	1,507	209.4
Heart disease	1,423	197.7
Other diseases, circulatory system	115	16.0
Pneumonia	1,840	255.7
Other diseases, respiratory system	488	67.8
Diseases of liver	235	32.7
Other diseases, digestive system	576	80.0
Diseases of urinary system	1,201	166.9
Diseases of bones and joints	45	6.3
Suicide	153	21.3
Other accidents and injuries	1,692	235.1
Cancer	497	69.1

The death rates of laborers were higher than those of all occupied males from each of the causes specified in the preceding table, except rheumatism, diabetes, and diseases of the circulatory system other than heart disease. The death rate of laborers from consumption (370.7) was excessively high, the average rate from this disease in all occupied males being 236.7. The rate from pneumonia (255.7) was also very much higher than the average rate from this disease in all occupied males (154.1), and the rate from accidents and injuries other than suicide (235.1) was more than twice the average rate from these causes in all occupied males (113.2).

SERVANTS.

The number of servants reported in the registration states was 81,336, and the number of deaths of servants during the census year was 1,263, the death rate being 15.5 per 1,000. In 1890 the rate was 12.6.

The following table shows, for the registration states, the number of servants, at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	81,336	23,175	44,745	10,752	1,138
Per cent at each age		28.5	55.0	13.2	1.4
Deaths	1,263	139	606	387	126
Per cent at each age		11.0	48.0	30.6	10.0
Death rate	15.5	6.0	13.5	36.0	110.7
Average rate in this class	20.2	7.7	13.9	31.9	126.6

This table shows that the death rate of servants (15.5) was less than the death rate of laborers (20.7), but was slightly higher than the average death rate in all occupied males (15). Over 80 per cent of the male servants reported in the registration states were under 45 years of age. The greatest number of deaths occurred in the age group 25 to 44 years, and in this age group the death rate of servants (13.5) was nearly as high as that of laborers (14) and was very much higher than the average rate of all occupied males at these ages (8.8).

The following table shows, for the registration states, the number of deaths of servants during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	4	4.9
Typhoid fever	36	44.3
Rheumatism	3	3.7
Consumption	350	430.3
Diabetes	6	7.4
Diseases of nervous system	94	115.6
Heart disease	119	146.3
Other diseases, circulatory system	13	16.0
Pneumonia	156	191.8
Other diseases, respiratory system	25	30.7
Diseases of liver	21	25.8
Other diseases, digestive system	50	61.5
Diseases of urinary system	139	170.9
Diseases of bones and joints	3	3.7
Suicide	12	14.8
Other accidents and injuries	72	88.5
Cancer	36	44.3

The high death rates of servants, as compared with the average rates for all occupied males, was largely due to the excessive death rates from consumption, pneumonia, and diseases of the urinary organs. The death rate of servants from consumption (430.3) was nearly twice the average rate from this disease in all occupied males (236.7). The rates from diseases of the nervous system (115.6) and heart disease (146.3) were very much below the average rates from these diseases in all occupied males.

MANUFACTURING AND MECHANICAL INDUSTRY CLASS.

The total number of males engaged in occupations included in this class in the registration states was 1,796,928, or 32.2 per cent of the total males having gainful occupations. The number of deaths in this class during the census year was 24,769, or 29.6 per cent of the whole number of deaths of occupied males in this area, and the death rate was 13.8 per 1,000. In 1890 the death rate in this class was 13.

The following table shows, for the registration states, the number of males in this class at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population.

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	1,796,928	407,398	899,543	398,684	69,608
Per cent at each age		22.7	50.1	22.2	3.9
Deaths	24,769	1,805	7,514	8,039	7,339
Per cent at each age		7.3	30.3	32.5	29.6
Death rate	13.8	4.4	8.4	20.2	105.4
Average rate in all classes	15.0	5.1	8.8	19.9	98.4

This table shows that the death rate of males engaged in manufacturing and mechanical pursuits (13.8) was less than the average rate of males in all classes of occupations (15), and that the rates were lower in each age group up to 45 years. Above the age of 45 years the rates in this class were higher than the average rates of all classes.

The following table shows, for the registration states, the number of deaths of males in this class during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	84	4.7
Typhoid fever	529	29.4
Rheumatism	123	6.8
Consumption	4,710	262.1
Diabetes	202	11.2
Diseases of nervous system	3,102	172.6
Heart disease	2,696	150.0
Other diseases, circulatory system	295	16.4
Pneumonia	2,496	138.9
Other diseases, respiratory system	760	42.3
Diseases of liver	479	26.7
Other diseases, digestive system	877	48.8
Diseases of urinary system	2,419	134.6
Diseases of bones and joints	57	3.2
Suicide	366	20.4
Other accidents and injuries	1,589	88.4
Cancer	957	53.3

The death rate from consumption in this class (262.1) was higher than the average rate from this disease in all classes (236.7), but the rates from all other causes, except suicide, were less than the average rates, being comparatively low from diseases of the nervous system, heart disease, pneumonia, and diseases of the urinary system. The rate from suicide (20.4) was about the same as the average rate from this cause in all classes (20.2).

The following table shows the comparative death rates of males in each occupation in this class, at all ages, and

in each of four age groups, per 1,000 of corresponding population:

DEATH RATES IN EACH OCCUPATION, BY AGES.

OCCUPATIONS.	AGE.				
	All ages.	15 to 24 years.	25 to 44 years.	45 to 64 years.	65 years and over.
Manufacturing and mechanical industry	13.8	4.4	8.4	20.2	105.4
Bakers and confectioners	12.3	4.5	7.9	23.4	105.8
Blacksmiths	18.3	3.8	7.6	20.0	134.3
Boot and shoe makers	9.4	2.7	3.4	11.2	77.9
Brewers, distillers, and rectifiers	19.7	1.8	12.2	32.4	138.9
Butchers	16.1	5.5	10.4	29.5	133.6
Cabinetmakers and upholsterers	18.0	4.6	10.5	19.8	109.6
Carpenters and joiners	17.2	4.2	6.8	16.4	98.9
Cigarmakers and tobacco workers	18.7	5.9	14.6	31.0	120.6
Compositors, printers, and pressmen	12.1	5.0	12.3	20.0	108.8
Coopers	23.8	3.2	9.6	23.9	152.1
Engineers and firemen (not locomotive)	15.7	6.4	10.2	23.1	107.2
Glass blowers and glass workers	10.8	4.6	10.9	21.8	82.3
Hat and cap makers	17.9	5.4	13.1	32.9	173.1
Iron and steel workers	10.7	3.2	7.8	22.0	100.4
Leather makers	12.3	3.5	7.8	19.7	94.2
Leather workers	17.5	3.4	7.5	23.7	94.6
Machinists	10.5	3.9	6.6	20.3	92.1
Marble and stone cutters	14.9	3.4	9.3	24.7	122.9
Masons (brick and stone)	19.9	5.3	9.1	21.8	112.0
Mill and factory operatives (textiles)	8.8	4.1	7.6	18.2	119.9
Millers (flour and grist)	26.6	5.8	10.5	15.6	164.9
Painters, glaziers, and varnishers	16.2	5.3	11.3	24.3	97.8
Plasterers and whitewashers	17.0	7.8	10.7	23.5	88.4
Plumbers, and gas and steam fitters	9.1	4.6	10.4	16.6	34.6
Tailors	11.8	2.6	5.6	19.9	113.6
Tinners and tinware makers	14.5	5.0	9.6	22.5	112.0
Others of this class	13.9	5.1	8.4	20.3	108.0

Considering the individual occupations included in this class, the preceding table shows that the highest death rates occurred among millers (26.6), coopers (23.8), and brick and stone masons (19.9); and the lowest rates among boot and shoe makers (9.4), plumbers, and gas and steam fitters (9.1), and mill and factory operatives (8.8).

The variations in the death rates at the different ages are largely due to differences in the ages of the population employed in the respective occupations, and the percentage of population at each age, as shown in the small tables given for the individual occupations following, and the differences should be taken into consideration in comparing the rates in this class.

BAKERS AND CONFECTIONERS.

The number of bakers and confectioners reported in the registration states was 39,181, and the number of deaths of bakers and confectioners during the census year was 483, the death rate being 12.3 per 1,000. In 1890 the rate was 14.6.

The following table shows, for the registration states, the number of bakers and confectioners at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	39,181	9,200	21,566	7,106	992
Per cent at each age		23.5	55.0	18.1	2.5
Deaths	483	41	170	166	105
Per cent at each age		8.5	35.2	34.4	21.7
Death rate	12.3	4.5	7.9	23.4	105.8
Average rate in this class	13.8	4.4	8.4	20.2	105.4

This table shows that the death rate of bakers and confectioners (12.3) was lower than the average rate in this class (13.8). More than 75 per cent of the bakers and confectioners reported in the registration states were under 45 years of age, and in the age group 25 to 44 years the death rate of bakers and confectioners was lower than the average rate, but in the other age groups the rates were slightly higher than the average rates in this class.

The following table shows, for the registration states, the number of deaths of bakers and confectioners during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever		
Typhoid fever	14	35.7
Rheumatism	1	2.6
Consumption	98	250.1
Diabetes	5	12.8
Diseases of nervous system	63	160.8
Heart disease	40	102.1
Other diseases, circulatory system	4	10.2
Pneumonia	46	117.4
Other diseases, respiratory system	15	38.3
Diseases of liver	18	45.9
Other diseases, digestive system	23	58.7
Diseases of urinary system	57	145.5
Diseases of bones and joints	3	7.7
Suicide	6	15.3
Other accidents and injuries	24	61.3
Cancer	20	51.0

The highest death rates of bakers and confectioners were due to consumption (250.1), diseases of the urinary organs (145.5), diseases of the nervous system (160.8), and pneumonia (117.4), but the rates due to all of these diseases except diseases of the urinary organs were lower than the average rates in this class. The rates from diseases of the liver (45.9) and other diseases of the digestive system (58.7) were much higher than the average rates from these diseases in this class.

BLACKSMITHS.

This title includes blacksmiths and horseshoers and their apprentices and helpers. The number of blacksmiths reported in the registration states was 56,840, and the number of deaths of blacksmiths during the census year was 1,041, the death rate being 18.3 per 1,000. In 1890 the rate was 15.6.

The following table shows, for the registration states, the number of blacksmiths at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	56,840	8,207	28,677	16,338	3,424
Per cent at each age		14.4	50.5	28.7	6.0
Deaths	1,041	31	219	327	460
Per cent at each age		3.0	21.0	31.4	44.2
Death rate	18.3	3.8	7.6	20.0	134.3
Average rate in this class	13.8	4.4	8.4	20.2	105.4

This table shows that the death rate of blacksmiths (18.3) was much higher than the average death rate of males engaged in manufacturing and mechanical industries (13.8). About 50 per cent of the blacksmiths reported in the registration states were between 25 and 45 years of age, and in this age group the death rate of blacksmiths (7.6) was less than the average rate in this class. It was also less at 15 to 24 years, and at 45 to 64 years, but at 65 years of age and over, in which group the highest number of deaths occurred, the death rate of blacksmiths (134.3) was much higher than the average rate in this class (105.4).

The following table shows, for the registration states, the number of deaths of blacksmiths during the census year from certain specified causes, and the death rates per 100,000 of population.

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	2	3.5
Typhoid fever	24	42.2
Rheumatism	5	8.8
Consumption	121	212.9
Diabetes	7	12.3
Diseases of nervous system	170	299.1
Heart disease	108	190.0
Other diseases, circulatory system	14	24.6
Pneumonia	96	168.9
Other diseases, respiratory system	33	58.1
Diseases of liver	21	36.9
Other diseases, digestive system	36	63.3
Diseases of urinary system	108	190.0
Diseases of bones and joints	1	1.8
Suicide	19	33.4
Other accidents and injuries	57	100.3
Cancer	61	107.3

The death rate of blacksmiths from the causes specified in the preceding table were all higher than the average rates in this class except those from malarial fever, diseases of the bones and joints, and consumption. The death rate of blacksmiths from suicide (33.4) was much higher than the average rate in this class (20.4), and that from other accidents and injuries (100.3) was also higher than the average rate (88.4). The rate from cancer (107.3) was excessively high, being more than twice the average rate in this class (53.3).

BOOT AND SHOE MAKERS.

The number of boot and shoe makers reported in the registration states was 96,662, and the number of deaths of boot and shoe makers during the census year was 909, the death rate being 9.4 per 1,000. In 1890 the rate was 15.3.

The following table shows, for the registration states, the number of boot and shoe makers at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	96,662	22,650	45,140	22,101	5,740
Per cent at each age		23.4	46.7	22.9	5.9
Deaths	909	62	153	247	447
Per cent at each age		6.8	16.8	27.2	49.2
Death rate	9.4	2.7	3.4	11.2	77.9
Average rate in this class	13.8	4.4	8.4	20.2	105.4

This table shows that the death rate of boot and shoe makers (9.4) was much less than the average rate in this class (13.8), and was lower than the average rate in each age group. About one-half of the deaths occurred in the age group 65 years of age and over, or in less than 6 per cent of the population engaged in this occupation. At this age the death rate (77.9) was considerably lower than the average rate in this class (105.4).

The following table shows, for the registration states, the number of deaths of boot and shoe makers during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	6	6.2
Typhoid fever	9	9.3
Rheumatism	7	7.2
Consumption	131	135.5
Diabetes	6	6.2
Diseases of nervous system	145	150.0
Heart disease	141	145.9
Other diseases, circulatory system	7	7.2
Pneumonia	92	95.2
Other diseases, respiratory system	24	24.8
Diseases of liver	14	14.5
Other diseases, digestive system	28	29.0

DEATH RATES FROM CERTAIN CAUSES—Continued.

CAUSE OF DEATH.	Deaths.	Death rate.
Diseases of urinary system	76	78.6
Diseases of bones and joints	1	1.0
Suicide	11	11.4
Other accidents and injuries	32	33.1
Cancer	33	34.1

The highest death rate among boot and shoe makers occurred from diseases of the nervous system (150), but this rate was much lower than the average rate from these diseases in this class (172.6). The rate from heart disease and dropsy (145.9) was a little lower than the average rate in this class (150), but for all other specified causes, excepting rheumatism and malarial fever, the death rates of boot and shoe makers were much below the average rates.

BREWERS, DISTILLERS, AND RECTIFIERS.

The number of brewers, distillers, and rectifiers reported in the registration states was 5,840. The number of deaths of brewers, distillers, and rectifiers during the census year was 115, and the death rate was 19.7 per 1,000. The death rates per 1,000 of population by age groups were as follows: At 15 to 24 years, 1.8; at 25 to 44 years, 12.2; at 45 to 64 years, 32.4; and at 65 years and over, 138.9.

The death rates of brewers, distillers, and rectifiers per 100,000 of population were generally above the average of the class engaged in manufacturing and mechanical industries, the highest being from diseases of the nervous system (brewers, distillers, and rectifiers 274; class average 172.6), diseases of the urinary organs (brewers, distillers, and rectifiers 256.8; class average 134.6), and heart disease (brewers, distillers, and rectifiers 222.6; class average 150). The rate from consumption (brewers, distillers, and rectifiers 256.8; class average 262.1) was slightly below the average for the class.

BUTCHERS.

The number of butchers reported in the registration states was 38,228, and the number of deaths of butchers during the census year was 614, the death rate being 16.1 per 1,000. In 1890 the rate was 14.9.

The following table shows, for the registration states, the number of butchers at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	38,228	8,400	21,251	7,332	973
Per cent at each age	.....	22.0	55.6	19.2	2.5
Deaths	614	46	222	216	130
Per cent at each age	.....	7.5	36.2	35.2	21.2
Death rate	16.1	5.5	10.4	29.5	133.6
Average rate in this class	13.8	4.4	8.4	20.2	105.4

This table shows that the death rate of butchers (16.1) was higher than the average rate in this class (13.8), and that the rates were higher in each age group. Over 70 per cent of the butchers in the registration states were under 45 years of age, and the greatest number of deaths of butchers occurred in the age group 25 to 44 years, in which the death rate of butchers was 10.4, and the average rate for the class was 8.4.

The following table shows, for the registration states, the number of deaths of butchers during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	1	2.6
Typhoid fever	16	41.9
Rheumatism	6	15.7
Consumption	110	287.7
Diabetes	3	7.8
Diseases of nervous system	88	230.2
Heart disease	68	177.9
Other diseases, circulatory system	5	13.1
Pneumonia	66	172.6
Other diseases, respiratory system	15	39.2
Diseases of liver	19	49.7
Other diseases, digestive system	36	94.2
Diseases of urinary system	52	136.0
Diseases of bones and joints	3	7.8
Suicide	8	20.9
Other accidents and injuries	31	81.1
Cancer	17	44.5

The highest death rates of butchers occurred from consumption (287.7), diseases of the nervous system (230.2), heart disease (177.9), pneumonia (172.6), and diseases of the urinary system (136), and in all of these the death rates were higher than the average rates in this class. The rates from malarial fever, diabetes, diseases of the respiratory system other than pneumonia, accidents and injuries other than suicide, and cancer were all lower than the average rates in this class.

CABINETMAKERS AND UPHOLSTERERS.

The number of cabinetmakers and upholsterers reported in the registration states was 24,787, and the number of deaths of cabinetmakers and upholsterers during the census year was 446, the death rate being 18 per 1,000. In 1890 the rate was 15.3.

The following table shows, for the registration states, the number of cabinetmakers and upholsterers at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	24,787	4,135	12,239	6,825	1,496
Per cent at each age	.....	16.7	49.4	27.5	6.0
Deaths	446	19	128	135	164
Per cent at each age	.....	4.3	28.7	30.3	36.8
Death rate	18.0	4.6	10.5	19.8	109.6
Average rate in this class	13.8	4.4	8.4	20.2	105.4

This table shows that the death rate of cabinetmakers and upholsterers (18) was much higher than the average rate in this class (13.8), and that it was higher in each age group except at 45 to 64 years of age, in which the death rate of cabinetmakers and upholsterers (19.8) was less than the average rate in this class (20.2). The greatest number of deaths of cabinetmakers and upholsterers occurred in the age group 65 years and over, and in this group the death rate (109.6) was but slightly higher than the average rate in this class (105.4).

The following table shows, for the registration states, the number of deaths of cabinetmakers and upholsterers during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	2	8.1
Typhoid fever	14	56.5
Rheumatism	2	8.1
Consumption	89	359.1
Diabetes	5	20.2
Diseases of nervous system	55	221.9
Heart disease	40	161.4
Other diseases, circulatory system	5	20.2
Pneumonia	43	173.5
Other diseases, respiratory system	20	80.7
Diseases of liver	9	36.3
Other diseases, digestive system	18	72.6
Diseases of urinary system	39	157.3
Diseases of bones and joints		
Suicide	10	40.3
Other accidents and injuries	16	64.5
Cancer	18	72.6

The death rate of cabinetmakers and upholsterers from consumption (359.1) was excessively high, the average rate from this disease in this clsas being 262.1. The rate from suicide (40.3) was nearly twice the average rate in this class (20.4), and that from cancer (72.6) was very much higher than the average rate (53.3). The death rates of cabinetmakers and upholsterers were higher from all of the causes specified except accidents and injuries other than suicide.

CARPENTERS AND JOINERS.

The number of carpenters and joiners reported in the registration states was 180,110, and the number of deaths of carpenters and joiners during the census year was 3,090, the death rate being 17.2 per 1,000. In 1890 the rate was 13.8.

The following table shows, for the registration states, the number of carpenters and joiners, at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	180,110	17,249	86,439	61,691	14,280
Per cent at each age		9.6	48.0	34.3	7.9
Deaths	3,090	72	592	1,011	1,412
Per cent at each age		2.3	19.2	32.7	45.7
Death rate	17.2	4.2	6.8	16.4	98.9
Average rate in this class	13.8	4.4	8.4	20.2	105.4

This table shows that the death rate of carpenters and joiners (17.2) was higher than the average rate in this class (13.8). The greatest number of deaths of carpenters and joiners occurred in the age group 65 years and over, and in this age group the death rate of carpenters and joiners (98.9) was slightly less than the average rate at this age (105.4). The rates were lower than the average rates for all of the age groups specified, but were somewhat higher than the average for those under 15 years and those of unknown age, which are not shown in the table.

The following table shows, for the registration states, the number of deaths of carpenters and joiners during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	14	7.8
Typhoid fever	43	23.9
Rheumatism	10	5.6
Consumption	416	231.0
Diabetes	15	8.3
Diseases of nervous system	442	245.4
Heart disease	403	223.8
Other diseases, circulatory system	49	27.2
Pneumonia	263	146.0
Other diseases, respiratory system	82	45.5
Diseases of liver	47	26.1
Other diseases, digestive system	98	54.4
Diseases of urinary system	313	173.8
Diseases of bones and joints	11	6.1
Suicide	36	20.0
Other accidents and injuries	213	118.3
Cancer	140	77.7

The death rate of carpenters and joiners from consumption (231) was less than the average rate in this class (262.1), but the rates from diseases of the nervous system (245.4), heart disease (223.8), and diseases of the urinary organs were much higher than the average rates from these diseases, and the rate from accidents and injuries other than suicide (118.3) was also very much

higher than the average rate from these causes (88.4). The rates from typhoid fever, rheumatism, diabetes, diseases of the liver, and suicide were less than the average rates from these causes in this class.

CIGARMAKERS AND TOBACCO WORKERS.

The number of cigarmakers and tobacco workers reported in the registration states was 25,581, and the number of deaths of cigarmakers and tobacco workers during the census year was 479, the death rate being 18.7 per 1,000. In 1890 the rate was 16.3.

The following table shows, for the registration states, the number of cigarmakers and tobacco workers at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	25,581	5,810	13,226	5,554	655
Per cent at each age		22.7	51.7	21.7	2.6
Deaths	479	34	193	172	79
Per cent at each age		7.1	40.3	35.9	16.5
Death rate	18.7	5.9	14.6	31.0	120.6
Average rate in this class	13.8	4.4	8.4	20.2	105.4

This table shows that the death rate of cigarmakers and tobacco workers (18.7) was much higher than the average rate in this class (13.8). Over 70 per cent of the cigarmakers and tobacco workers in the registration states were under 45 years of age. The greatest number of deaths occurred in the age group 25 to 44 years, and in this age group the death rate of cigarmakers and tobacco workers (14.6) was nearly twice the average rate in this class (8.4).

The following table shows, for the registration states, the number of deaths of cigarmakers and tobacco workers during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever		
Typhoid fever	9	35.2
Rheumatism	4	15.6
Consumption	122	476.9
Diabetes	4	15.6
Diseases of nervous system	46	179.8
Heart disease	45	175.9
Other diseases, circulatory system	7	27.4
Pneumonia	55	215.0
Other diseases, respiratory system	25	97.7
Diseases of liver	13	50.8
Other diseases, digestive system	12	46.9
Diseases of urinary system	43	168.1
Diseases of bones and joints	3	11.7
Suicide	17	66.5
Other accidents and injuries	18	70.4
Cancer	19	74.3

The death rates of cigar makers and tobacco workers were higher from all of the specified causes except diseases of the digestive system other than diseases of the liver, and accidents and injuries other than suicide. The rate from suicide (66.5) was more than three times the average rate in this class (20.4), and the rate from cancer (74.3) was also much higher than the average rate in this class (53.3). The rate from consumption (476.9) was excessively high, the average rate in this class being 262.1.

COMPOSITORS, PRINTERS, AND PRESSMEN.

The number of compositors, printers, and pressmen reported in the registration states was 54,374, and the number of deaths of compositors, printers, and pressmen during the census year was 658, the death rate being 12.1 per 1,000. In 1890 the rate was 11.1.

The following table shows, for the registration states, the number of compositors, printers, and pressmen at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	54,374	18,632	27,102	7,098	818
Per cent at each age		34.3	49.8	13.1	1.5
Deaths	658	94	333	142	89
Per cent at each age		14.3	50.6	21.6	13.5
Death rate	12.1	5.0	12.3	20.0	108.8
Average rate in this class	13.8	4.4	8.4	20.2	105.4

This table shows that the death rate of compositors, printers, and pressmen (12.1) was less than the average rate in this class (13.8). About 75 per cent of the compositors, printers, and pressmen in the registration states were under 45 years of age. Below this age the rates were higher than the average rates in this class. At 45 to 64 years, the rate was slightly lower than the average rate, but at 65 years of age and over it was slightly higher than the average.

The following table shows, for the registration states, the number of deaths of compositors, printers, and pressmen during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	2	3.7
Typhoid fever	13	23.9
Rheumatism	5	9.2
Consumption	237	435.9
Diabetes	2	3.7
Diseases of nervous system	71	130.6
Heart disease	51	93.8
Other diseases, circulatory system	10	18.4

DEATH RATES FROM CERTAIN CAUSES—Continued.

CAUSE OF DEATH.	Deaths.	Death rate.
Pneumonia	63	115.9
Other diseases, respiratory system	21	38.6
Diseases of liver	12	22.1
Other diseases, digestive system	23	42.3
Diseases of urinary system	51	93.8
Diseases of bones and joints	2	3.7
Suicide	10	18.4
Other accidents and injuries	27	49.7
Cancer	12	22.1

The death rates of compositors, printers, and pressmen were less than the average rates in this class from all of the specified causes except rheumatism, consumption, and diseases of the bones and joints. The gross death rate of males in these occupations is raised materially by the excessive death rate from consumption (435.9), which is very much higher than the average rate in this class (262.1), and nearly twice the average death rate from this disease of males in all occupations (236.7).

COOPERS.

The number of coopers reported in the registration states was 11,020, the number of deaths of coopers for the same area during the census year being 262, and the death rate 23.8 per 1,000. The death rates per 1,000 of population, by age groups, were as follows: at 15 to 24 years, 3.2; at 25 to 44 years, 9.6; at 45 to 64 years, 23.9; and at 65 years and over 152.1.

The death rates of coopers were generally above the average of the manufacturing and mechanical industry class, the highest being from diseases of the urinary organs (coopers 308.5; class average 134.6), consumption (coopers 299.5; class average 262.1), and diseases of the nervous system (coopers 290.4; class average 172.6).

ENGINEERS AND FIREMEN (NOT LOCOMOTIVE).

The number of engineers and firemen (not locomotive) reported in the registration states was 71,388, and the number of deaths of engineers and firemen (not locomotive) during the census year was 1,119, the death rate being 15.7 per 1,000. In 1890 the rate was 13.6.

The following table shows, for the registration states, the number of engineers and firemen (not locomotive), at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	71,388	8,025	42,647	18,675	1,865
Per cent at each age	.....	11.2	59.7	26.2	2.6
Deaths	1,119	51	434	431	200
Per cent at each age	.....	4.6	38.8	38.5	17.9
Death rate	15.7	6.4	10.2	23.1	107.2
Average rate in this class	13.8	4.4	8.4	20.2	105.4

This table shows that the death rate of engineers and firemen (not including locomotive engineers and firemen) was 15.7, which was slightly higher than the average rate in this class (13.8). About 60 per cent of the engineers and firemen were between 25 and 45 years of age, and in this age group the death rate was 10.2 per 1,000, and the average rate in this class was 8.4. The death rates of engineers and firemen in the other age groups were proportionately higher than the average rates in this class.

The following table shows, for the registration states, the number of deaths of engineers and firemen (not locomotive) during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	4	5.6
Typhoid fever	30	42.0
Rheumatism	10	14.0
Consumption	164	229.7
Diabetes	7	9.8
Diseases of nervous system	149	208.7
Heart disease	129	180.7
Other diseases, circulatory system	12	16.8
Pneumonia	127	177.9
Other diseases, respiratory system	25	35.0
Diseases of liver	20	28.0
Other diseases, digestive system	37	51.8
Diseases of urinary system	119	166.7
Diseases of bones and joints	2	2.8
Suicide	13	18.2
Other accidents and injuries	131	183.5
Cancer	34	47.6

The death rate of engineers and firemen was highest from consumption (229.7), but this rate was lower than the average rate from this disease in this class (262.1). The rates were higher than the average in this class from diseases of the nervous system (208.7), heart disease (180.7), pneumonia (177.9), and diseases of the urinary system (166.7). The rate from accidents and injuries other than suicide (183.5) was more than twice the average rate from these causes in this class.

GLASS BLOWERS AND GLASS WORKERS.

The number of glass blowers and glass workers reported in the registration states was 10,219, the number of deaths of glass blowers and glass workers in the same area during the census year being 110, and the death rate 10.8 per 1,000. The death rates per 1,000 of population by age groups were as follows: at 15 to 24 years, 4.6; at 25 to 44 years, 10.9; at 45 to 64 years, 21.8; and at 65 years and over, 82.3.

The death rates of the glass blowers and glass workers per 100,000 of population were above the average of the manufacturing and mechanical industry class, from consumption and accidents and injuries exclusive of suicide, and were generally below the class average in the other specified causes.

HAT AND CAP MAKERS.

The number of hat and cap makers reported in the registration states was 12,763, the number of deaths of hat and cap makers in the same area during the census year being 228, and the death rate 17.9 per 1,000. The death rates per 1,000 of population by age groups were as follows: at 15 to 24 years, 5.4; at 25 to 44 years, 13.1; at 45 to 64 years, 32.9; and at 65 years and over, 173.1.

The death rates of hat and cap makers were generally above the average of the manufacturing and mechanical industry class, being highest from consumption, heart disease, and pneumonia. The rate from diseases of the nervous system was below the average.

IRON AND STEEL WORKERS.

The number of iron and steel workers reported in the registration states was 69,851, and the number of deaths of iron and steel workers during the census year was 748, the death rate being 10.7 per 1,000. In 1890 the rate was 9.8.

The following table shows, for the registration states, the number of iron and steel workers at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	69,851	18,158	38,145	11,654	1,335
Per cent at each age		26.0	54.6	16.7	1.9
Deaths	748	59	296	256	134
Per cent at each age		7.9	39.6	34.2	17.9
Death rate	10.7	3.2	7.8	22.0	100.4
Average rate in this class	13.8	4.4	8.4	20.2	105.4

This table shows that the death rate of iron and steel workers (10.7) was less than the average rate in this class (13.8), and that the rates were lower at each age except in the age group 45 to 64 years, in which the death rate of iron and steel workers (22) was somewhat higher than the average rate in this class (20.2).

The following table shows, for the registration states, the number of deaths of iron and steel workers during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	6	8.6
Typhoid fever	29	41.5
Rheumatism	2	2.9
Consumption	165	236.2

DEATH RATES FROM CERTAIN CAUSES—Continued.

CAUSE OF DEATH.	Deaths.	Death rate.
Diabetes	2	2.9
Diseases of nervous system	64	91.6
Heart disease	71	101.6
Other diseases, circulatory system	3	4.3
Pneumonia	127	181.8
Other diseases, respiratory system	30	42.9
Diseases of liver	11	15.7
Other diseases, digestive system	21	30.1
Diseases of urinary system	54	77.3
Diseases of bones and joints	2	2.9
Suicide	10	14.3
Other accidents and injuries	55	78.7
Cancer	22	31.5

The highest death rate among iron and steel workers occurred from consumption (236.2), but this was less than the average rate from this disease in this class (262.1). The rates from malarial fever (8.6), typhoid fever (41.5), pneumonia (181.8), and other diseases of the respiratory system (42.9) were higher than the average rates from the same diseases in this class, but the rates from all other causes were lower than the average.

LEATHER MAKERS.

This title includes leather curriers, dressers, finishers, and tanners.

The number of leather makers reported in the registration states was 16,697, the number of deaths of leather makers in the same area during the census year being 206, and the death rate 12.3 per 1,000. The death rates per 1,000 of population by age groups were as follows: at 15 to 24 years, 3.5; at 25 to 44 years, 7.8; at 45 to 64 years, 19.7; and at 65 years and over, 94.2.

The death rate of leather makers was highest from consumption (311.4), which was considerably higher than the average in this class (262.1). In most of the other specified causes the death rates of leather makers were below the class average, the greatest difference being in the rate for diseases of the nervous system (leather makers, 101.8; class average, 172.6).

LEATHER WORKERS.

This title includes harness and saddle makers and repairers, trunk, valise, leather case and pocketbook makers.

The number of leather workers reported in the registration states was 12,320, the number of deaths of leather workers in the same area during the census year being 216, and the death rate 17.5 per 1,000. The death rates per 1,000 of population by age groups were as follows: at 15 to 24 years, 3.4; at 25 to 44 years, 7.5; at 45 to 64 years, 23.7; and at 65 years and over, 94.6.

The death rates of leather workers were above the average of the manufacturing and mechanical industry

class from diseases of the nervous system (leather workers, 267.9; class average, 172.6), diseases of the urinary organs (leather workers, 227.3; class average, 134.6), and heart disease (leather workers, 211; class average, 150), while from consumption (leather workers, 227.3; class average, 262.1), and pneumonia (leather workers, 97.4; class average, 138.9) the rates were below the average for the class.

MACHINISTS.

The number of machinists reported in the registration states was 116,918, and the number of deaths of machinists during the census year was 1,222, the death rate being 10.5 per 1,000. In 1890 the rate was 11.4.

The following table shows, for the registration states, the number of machinists at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	116,918	33,398	58,738	21,278	2,963
Per cent at each age		28.6	50.2	18.2	2.5
Deaths	1,222	129	386	432	273
Per cent at each age		10.6	31.6	35.4	22.3
Death rate	10.5	3.9	6.6	20.3	92.1
Average rate in this class	13.8	4.4	8.4	20.2	105.4

This table shows that the death rate of machinists, in the registration states (10.5), was less than the average rate in this class (13.8), and that the rates were lower than the average in each age group, except between 45 and 65 years. In this age group the death rate of machinists (20.2) was about the same as the average rate in this class. More than 75 per cent of the machinists in the registration states were under 45 years of age.

The following table shows, for the registration states, the number of deaths of machinists during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	5	4.3
Typhoid fever	41	35.1
Rheumatism	5	4.3
Consumption	229	195.9
Diabetes	6	5.1
Diseases of nervous system	145	124.0
Heart disease	121	103.5
Other diseases, circulatory system	12	10.3
Pneumonia	129	110.3
Other diseases, respiratory system	37	31.6
Diseases of liver	21	18.0
Other diseases, digestive system	52	44.5
Diseases of urinary system	115	98.4
Diseases of bones and joints	4	3.4
Suicide	17	14.5
Other accidents and injuries	83	71.0
Cancer	61	52.2

The death rates of machinists from all of the specified causes were lower than the average rates in this class, excepting those from typhoid fever (machinists, 35.1; average, 29.4), and diseases of the bones and joints (machinists, 3.4; average, 3.2). The death rate of machinists from consumption (195.9) was much below the average rate in this class (262.1).

MARBLE AND STONE CUTTERS.

The number of marble and stone cutters reported in the registration states was 26,272, and the number of deaths of marble and stone cutters during the census year was 392, the death rate being 14.9 per 1,000. In 1890 the rate was 13.8.

The following table shows, for the registration states, the number of marble and stone cutters at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	26,272	3,875	15,336	6,271	659
Per cent at each age		14.7	58.4	23.9	2.5
Deaths	392	13	143	155	81
Per cent at each age		3.3	36.5	39.5	20.7
Death rate	14.9	3.4	9.3	24.7	122.9
Average rate in this class	13.8	4.4	8.4	20.2	105.4

This table shows that the death rate of marble and stone cutters (14.9) was higher than the average rate in this class (13.8), and that the rates were higher at each age except in the age group 15 to 24 years. The greatest number of deaths of marble and stone cutters occurred in the age group 45 to 64 years, and in this age group the death rate was 24.7, the average rate for this class being 20.2.

The following table shows, for the registration states, the number of deaths of marble and stone cutters during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever		
Typhoid fever	4	15.2
Rheumatism	3	11.4
Consumption	142	540.5
Diabetes		
Diseases of nervous system	29	110.4
Heart disease	42	159.9
Other diseases, circulatory system	1	3.8
Pneumonia	36	137.0
Other diseases, respiratory system	17	64.7
Diseases of liver	5	19.0
Other diseases, digestive system	8	30.5
Diseases of urinary system	22	83.7
Diseases of bones and joints		
Suicide	2	7.6
Other accidents and injuries	26	99.0
Cancer	12	45.7

The death rate of marble and stone cutters is very materially increased by the excessive death rate from consumption (540.5), which was more than twice the average rate in this class (262.1). The rates from heart disease (159.9), and from diseases of the respiratory system other than pneumonia (64.7) were higher than the average rates in this class, as was also the rate due to accidents and injuries other than suicide (99). For all other specified causes the death rates of marble and stone cutters were generally lower than the average rates.

MASONS (BRICK AND STONE).

The number of brick and stone masons reported in the registration states was 55,117, and the number of deaths of brick and stone masons during the census year was 1,097, the death rate being 19.9. In 1890 the rate was 15.6.

The following table shows, for the registration states, the number of brick and stone masons at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	55,117	6,081	27,025	18,075	3,760
Per cent at each age		11.0	49.0	32.8	6.8
Deaths	1,097	32	245	394	421
Per cent at each age		2.9	22.3	35.9	38.4
Death rate	19.9	5.3	9.1	21.8	112.0
Average rate in this class	13.8	4.4	8.4	20.2	105.4

This table shows that the death rate of brick and stone masons (19.9) was much higher than the average rate in this class and that the rates were higher in each age group. It will be seen that 60 per cent of the brick and stone masons reported in the registration states were under 45 years of age, 32.8 per cent being between 45 and 65 years, and 6.8 per cent 65 years of age and over. The greatest number of deaths occurred in the highest age group (65 years and over). In this age group the death rate of brick and stone masons (112) was higher than the average rate, which was 105.4.

The following table shows, for the registration states, the number of deaths of brick and stone masons during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	3	5.4
Typhoid fever	17	30.8
Rheumatism	3	5.4
Consumption	162	293.9

DEATH RATES FROM CERTAIN CAUSES—Continued.

CAUSE OE DEATH.	Deaths.	Death rate.
Diabetes	10	18.1
Diseases of nervous system	125	226.8
Heart disease	128	232.2
Other diseases, circulatory system	13	23.6
Pneumonia	127	230.4
Other diseases, respiratory system	50	90.7
Diseases of liver	27	49.0
Other diseases, digestive system	25	45.4
Diseases of urinary system	101	183.2
Diseases of bones and joints	4	7.3
Suicide	17	30.8
Other accidents and injuries	87	157.8
Cancer	54	98.0

The death rate of brick and stone masons from rheumatism (5.4) was less than the average rate in this class (6.8), and the rate from diseases of the digestive system other than diseases of the liver (45.4) was also slightly less than the average rate in this class (48.8). For all other specified causes the death rates of brick and stone masons were higher than the average rates in this class, being particularly high from diseases of the nervous system (226.8), heart disease (232.2), pneumonia (230.4) and other diseases of the respiratory system (90.7), and diseases of the urinary system (183.2). The rate from accidents and injuries other than suicide (157.8) was excessively high, the average rate from this cause in this class being (88.4). The rate from cancer (98) was also very much higher than the average rate in this class (53.3).

MILL AND FACTORY OPERATIVES (TEXTILES).

The number of mill and factory operatives (textiles) reported in the registration states was 150,783, and the number of deaths of mill and factory operatives (textiles) during the census year was 1,332, the death rate being 8.8. In 1890 the rate was 8.1.

The following table shows, for the registration states, the number of mill and factory operatives (textiles) at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	150,783	58,004	64,965	18,969	1,935
Per cent at each age		38.5	43.1	12.6	1.3
Deaths	1,332	238	494	346	232
Per cent at each age		17.9	37.1	26.0	17.4
Death rate	8.8	4.1	7.6	18.2	119.9
Average rate in this class	13.8	4.4	8.4	20.2	105.4

This table shows that the death rate of mill and factory operatives (8.8) was very much less than the average

rate in this class (13.8), which is largely due to the fact that the persons in these occupations were generally of younger ages, over 80 per cent being under 45 years of age. The death rates were lower than the average rates in each age group except at 65 years of age and over, in which group the rate (119.9) was higher than the average rate in this class.

The following table shows, for the registration states, the number of deaths of mill and factory operatives (textiles) during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	5	3.3
Typhoid fever	55	36.5
Rheumatism	7	4.6
Consumption	313	207.6
Diabetes	6	4.0
Diseases of nervous system	127	84.2
Heart disease	137	90.9
Other diseases, circulatory system	10	6.6
Pneumonia	122	80.9
Other diseases, respiratory system	40	26.5
Diseases of liver	31	20.6
Other diseases, digestive system	55	36.5
Diseases of urinary system	86	57.0
Diseases of bones and joints	4	2.7
Suicide	18	11.9
Other accidents and injuries	114	75.6
Cancer	52	34.5

The death rate of mill and factory operatives from typhoid fever (36.5) was higher than the average rate in this class (29.4), but the rates from all other specified causes were very much lower than the average rates, particularly those due to consumption, diseases of the nervous system, heart disease, pneumonia and other diseases of the respiratory system, diseases of the digestive system, and diseases of the urinary organs.

MILLERS (FLOUR AND GRIST).

The number of millers reported in the registration states was 6,044, the number of deaths of millers in the same area during the census year being 161, and the death rate 26.6 per 1,000. The death rates per 1,000 of population by age groups were as follows: at 15 to 24 years, 5.8; at 25 to 44 years, 10.5; at 45 to 64 years, 15.6; and at 65 years and over, 164.9.

The death rates of millers from the specified causes, per 100,000 of population, were generally higher than the average in this class, the highest being from diseases of the nervous system (millers, 380.5; class average, 172.6) and pneumonia (millers, 297.8; class average, 138.9). The death rate from consumption (millers, 198.5; class average, 262.1) was below the average for the class.

PAINTERS, GLAZIERS, AND VARNISHERS.

The number of painters, glaziers, and varnishers reported in the registration states was 108,992, and the number of deaths of painters, glaziers, and varnishers during the census year was 1,769, the death rate being 16.2 per 1,000. In 1890 the rate was 13.

The following table shows, for the registration states, the number of painters, glaziers, and varnishers at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	108,992	20,054	58,306	26,491	3,631
Per cent at each age		18.4	53.5	24.3	3.3
Deaths	1,769	107	660	645	355
Per cent at each age		6.0	37.3	36.5	20.1
Death rate	16.2	5.3	11.3	24.3	97.8
Average rate in this class	13.8	4.4	8.4	20.2	105.4

This table shows that the death rate of painters, glaziers, and varnishers (16.2) was higher than the average rate in this class (13.8), and that the rates were higher in each age group up to 65 years. At 65 years of age and over, the death rate (97.8) was lower than the average rate in this class (105.4). Over 70 per cent of the painters, glaziers, and varnishers reported in the registration states were under 45 years of age. The greatest number of deaths occurred in the age group 25 to 44 years, and in this group the death rate of painters, glaziers, and varnishers was 11.3, and the average rate was 8.4.

The following table shows, for the registration states, the number of deaths of painters, glaziers, and varnishers during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	6	5.5
Typhoid fever	39	35.8
Rheumatism	4	3.7
Consumption	348	319.3
Diabetes	11	10.1
Diseases of nervous system	233	213.8
Heart disease	185	169.7
Other diseases, circulatory system	30	27.5
Pneumonia	168	154.1
Other diseases, respiratory system	40	36.7
Diseases of liver	31	28.4
Other diseases, digestive system	62	56.9
Diseases of urinary system	199	182.6
Diseases of bones and joints	2	1.8
Suicide	18	16.5
Other accidents and injuries	140	128.4
Cancer	49	45.0

The highest death rates among painters, glaziers, and varnishers occurred from consumption (319.3), diseases of the nervous system (213.8), diseases of the urinary organs (182.6), heart disease (169.7), pneumonia (154.1), and accidents and injuries other than suicide (128.4), the rates from all of these causes being considerably above the average rates in this class. The rates from rheumatism, diabetes, suicide, and cancer were lower than the average.

PLASTERERS AND WHITEWASHERS.

The number of plasterers and whitewashers reported in the registration states was 8,603, the number of deaths of plasterers and whitewashers in the same area during the census year being 146, and the death rate 17 per 1,000. The death rates per 1,000 of population by age groups were as follows: at 15 to 24 years, 7.8; at 25 to 44 years, 10.7; at 45 to 64 years, 23.5; and at 65 years and over, 88.4.

The death rates of plasterers and whitewashers were greatly above the average in this class, being highest from consumption, pneumonia, and diseases of the urinary organs.

PLUMBERS, AND GAS AND STEAM FITTERS.

The number of plumbers, and gas and steam fitters reported in the registration states was 48,634, and the number of deaths of plumbers, and gas and steam fitters during the census year was 442, the death rate being 9.1 per 1,000. In 1890 the rate was 9.7.

The following table shows, for the registration states, the number of plumbers, and gas and steam fitters at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	48,634	17,838	24,818	5,180	463
Per cent at each age		36.7	51.0	10.7	1.0
Deaths	442	82	257	86	16
Per cent at each age		18.6	58.1	19.5	3.6
Death rate	9.1	4.6	10.4	16.6	34.6
Average rate in this class	13.8	4.4	8.4	20.2	105.4

This table shows that the death rate of plumbers, and gas and steam fitters (9.1) was much lower than the average rate in this class (13.8). More than 87 per cent of the plumbers, and gas and steam fitters reported in the registration states were under 45 years of age, 51 per cent being in the age group 25 to 44 years, and in this group the death rate of plumbers, and gas and steam fitters (10.4) was higher than the average rate in this class, but in the age groups above 45 the rates were lower than the average.

The following table shows, for the registration states, the number of deaths of plumbers and gas and steam fitters during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	3	6.2
Typhoid fever	10	20.6
Rheumatism	2	4.1
Consumption	143	294.0
Diabetes	3	6.2
Diseases of nervous system	44	90.5
Heart disease	29	59.6
Other diseases, circulatory system		
Pneumonia	55	113.1
Other diseases, respiratory system	5	10.3
Diseases of liver	7	14.4
Other diseases, digestive system	13	26.7
Diseases of urinary system	43	88.4
iseases of bones and joints		
Suicide	5	10.3
Other accidents and injuries	37	76.1
Cancer	4	8.2

The death rate of plumbers, and gas and steam fitters from consumption (294) was higher than the average rate in this class (262.1), and the rate from malarial fever (6.2) was also higher than the average rate (4.7), but the rates due to all other specified causes were generally much lower than the average.

TAILORS.

The number of tailors reported in the registration states was 83,856, and the number of deaths of tailors during the census year was 991, the death rate being 11.8 per 1,000. In 1890 the rate was 16.5.

The following table shows, for the registration states, the number of tailors at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	83,856	18,540	46,391	14,751	3,397
Per cent at each age		22.1	55.3	17.6	4.1
Deaths	991	49	260	293	386
Per cent at each age		4.9	26.2	29.6	39.0
Death rate	11.8	2.6	5.6	19.9	113.6
Average rate in this class	13.8	4.4	8.4	20.2	105.4

This table shows that the death rate of tailors (11.8) was less than the average rate in this class, and that the rates were lower in each age group up to 65 years. The greatest number of deaths of tailors occurred in the age group 65 years of age and over, and in this age

group the death rate of tailors (113.6) was higher than the average rate in this class (105.4).

The following table shows, for the registration states, the number of deaths of tailors during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	1	1.2
Typhoid fever	12	14.3
Rheumatism	9	10.7
Consumption	183	218.2
Diabetes	12	14.3
Diseases of nervous system	120	143.1
Heart disease	108	128.8
Other diseases, circulatory system	21	25.0
Pneumonia	95	113.3
Other diseases, respiratory system	39	46.5
Diseases of liver	11	13.1
Other diseases, digestive system	38	45.3
Diseases of urinary system	116	138.3
Diseases of bones and joints	.....	.....
Suicide	24	28.6
Other accidents and injuries	43	51.3
Cancer	49	58.4

The death rates of tailors from consumption (218.2), pneumonia (113.3), diseases of the nervous system (143.1), and heart disease (128.8) were lower than the average rates in this class, but the death rates due to rheumatism (10.7), diabetes (14.3), diseases of the urinary organs (138.3), suicide (28.6), and cancer (58.4) were all higher than the average rates from these causes.

TINNERS AND TINWARE MAKERS.

The number of tinners and tinware makers reported in the registration states was 19,708, the number of deaths of tinners and tinware makers in the same area during the census year being 285, and the death rate 14.5 per 1,000. The death rates per 1,000 of population by age groups were as follows: At 15 to 24 years, 5; at 25 to 44 years, 9.6; at 45 to 64 years, 22.5; and at 65 years and over, 112.

The death rates of tinners and tinware makers per 100,000 of population were above the average of the manufacturing and mechanical industry class from consumption (tinners and tinware makers, 365.3; class average, 262.1) and diseases of the nervous system (tinners and tinware makers, 177.6; class average, 172.6), while from heart disease (tinners and tinware makers, 126.9; class average, 150) and diseases of the urinary organs (tinners and tinware makers, 131.9; class average, 134.6) the death rates were below the average for the class.

AGRICULTURE, TRANSPORTATION, AND OTHER OUTDOOR CLASS.

The total number of males engaged in occupations included in this class in the registration states was 1,528,241, or 27.4 per cent of the total males having gainful occupations. The number of deaths in this class during the census year was 24,196, or 28.9 per cent of the whole number of deaths of occupied males in this area, and the death rate was 15.8 per 1,000. In 1890 the death rate in this class was 12.1.

The following table shows, for the registration states, the number of males in this class, at all ages, and in each of four age groups the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	1,528,241	311,977	669,231	401,461	127,053
Per cent at each age	.....	20.4	43.8	26.3	8.3
Deaths	24,196	1,432	4,441	5,895	12,281
Per cent at each age	.....	5.9	18.4	24.4	50.8
Death rate	15.8	4.6	6.6	14.7	96.7
Average rate in all classes.	15.0	5.1	8.8	19.9	98.4

The preceding table shows that the death rate in this class (15.8) was about the same as the average rate in all classes (15). By age periods, the death rates in this class were slightly lower than the average rates in all classes, for the ages shown in the table, which do not include those under 15 years and those of unknown age, in which the rates in this class were slightly higher than the average.

The following table shows, for the registration states, the number of deaths of males in this class during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	69	4.5
Typhoid fever	501	32.8
Rheumatism	138	9.0
Consumption	2,250	147.2
Diabetes	204	13.3
Diseases of nervous system	3,382	221.3
Heart disease	3,226	211.1
Other diseases, circulatory system	302	19.8
Pneumonia	2,139	140.0
Other diseases, respiratory system	634	41.5
Diseases of liver	399	26.1
Other diseases, digestive system	992	64.9
Diseases of urinary system	2,223	145.5
Diseases of bones and joints	55	3.6
Suicide	291	19.0
Other accidents and injuries	2,133	139.6
Cancer	1,058	69.2

The preceding table shows that the highest death rates in this class were due to diseases of the nervous system (221.3) and heart disease (211.1). In both of these the rates were considerably higher than the average rates from these diseases in all classes. The death rate from diseases of the urinary system (145.5) was

also higher than the average rate from these diseases in all classes (144), and the rate from accidents and injuries other than sucide (139.6) was much higher in this class than the average in all classes (113.2), owing to the number of hazardous occupations included under this title. The death rate from consumption (147.2) was very much less than the average death rate from this disease (236.7), and the rate from pneumonia (140) was also considerably less than the average rate in all classes (154.1).

The following table shows the comparative death rates of males in each occupation in this class, at all ages, and in each of four age groups, per 1,000 of corresponding population:

DEATH RATES IN EACH OCCUPATION, BY AGES.

OCCUPATION.	AGE.				
	All ages.	15 to 24 years.	25 to 44 years.	45 to 64 years.	65 years and over.
Agriculture, transportation, and other outdoor	15.8	4.6	6.6	14.7	96.7
Boatmen and canalmen	18.8	12.1	10.4	21.6	101.6
Draymen, hackmen, teamsters, etc	11.0	4.7	9.9	16.7	75.3
Farmers, planters, and farm laborers	17.6	3.7	4.6	13.2	96.8
Gardeners, florists, nurserymen, and vine growers	17.2	3.9	7.3	18.2	71.0
Livery stable keepers and hostlers	12.1	3.2	9.1	19.9	68.6
Lumbermen and raftsmen	16.5	6.6	8.7	24.2	163.7
Miners and quarrymen	9.6	5.4	7.8	13.1	116.6
Sailors, pilots, fishermen, and oystermen	27.7	12.0	14.0	31.3	163.9
Steam railroad employees	10.8	8.9	7.9	15.7	65.0
Stock raisers, herders, and drovers	32.1	.....	20.6	32.9	148.1
Others of this class	9.9	4.3	6.6	14.8	108.9

The number of deaths of stock raisers, herders, and drovers was so small that the high death rate in this occupation (32.1) has no special significance. Of the other individual occupations included in this class, the death rates were highest for sailors, pilots, fishermen, and oystermen (27.7) and boatmen and canalmen (18.8), and were lowest among miners and quarrymen (9.6) and steam railroad employees (10.8). The age distribution and the death rates from certain causes are given below for the individual occupations.

BOATMEN AND CANALMEN.

The number of boatmen and canalmen reported in the registration states was 8,178, the number of deaths of boatmen and canalmen in the same area during the census year being 154, and the death rate 18.8 per 1,000. The death rates per 1,000 of population by age groups were as follows: At 15 to 24 years, 12.1; at 25 to 44 years, 10.4; at 45 to 64 years, 21.6; and at 65 years and over, 101.6.

The death rates of boatmen and canalmen per 100,000 of population were above the average of the agriculture, transportation, and other outdoor class, from accidents and injuries exclusive of suicide (boatmen and canalmen 403.5; agriculture, transportation, and other outdoor 139.6), and consumption (boatmen and canalmen 256.8; agriculture, transportation, and other outdoor 147.2), but were below the average from pneumonia (boatmen and canalmen 110.1; agriculture, transportation, and other outdoor 140), and diseases of the urinary organs (boatmen and canalmen 134.5; agriculture, transportation, and other outdoor 145.5).

DRAYMEN, HACKMEN, TEAMSTERS, ETC.

The number of draymen, hackmen, teamsters, etc., reported in the registration states was 185,552, and the number of deaths of draymen, hackmen, teamsters, etc., during the census year was 2,044, the death rate being 11 per 1,000. In 1890 the rate was 12.1.

The following table shows, for the registration states, the number of draymen, hackmen, teamsters, etc., at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	185,552	46,167	101,504	32,741	3,572
Per cent at each age	.....	24.9	54.7	17.6	1.9
Deaths	2,044	217	1,005	548	269
Per cent at each age	.....	10.6	49.2	26.8	13.2
Death rate	11.0	4.7	9.9	16.7	75.3
Average rate in this class	15.8	4.6	6.6	14.7	96.7

This table shows that the death rate of draymen, hackmen, teamsters, etc. (11), was less than the average rate in this class (15.8), but 76 per cent of the deaths in these occupations occurred between 25 and 65 years of age, and at these ages the death rates of draymen, hackmen, teamsters, etc., were higher than the average rates. At 15 to 24 years the rate was about the same as the average rate, but at 65 years of age and over it was very much less than the average.

The following table shows, for the registration states, the number of deaths of draymen, hackmen, teamsters, etc., during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	3	1.6
Typhoid fever	59	31.8
Rheumatism	8	4.3
Consumption	485	261.4
Diabetes	11	5.9
Diseases of nervous system	166	89.5

DEATH RATES FROM CERTAIN CAUSES—Continued.

CAUSES OF DEATH.	Deaths.	Death rates.
Heart disease	177	95.4
Other diseases, circulatory system	13	7.0
Pneumonia	274	147.7
Other diseases, respiratory system	42	22.6
Diseases of liver	33	17.8
Other diseases, digestive system	62	33.4
Diseases of urinary system	167	90.0
Diseases of bones and joints	7	3.8
Suicide	30	16.2
Other accidents and injuries	248	133.7
Cancer	42	22.6

The death rate of draymen, hackmen, teamsters, etc., from consumption (261.4) was very much higher than the average rate in this class (147.2), and the rate due to pneumonia (147.7) was somewhat higher than the average rate (140), but for the other specified causes the death rates of draymen, hackmen, teamsters, etc., were generally very much below the average.

FARMERS, PLANTERS, AND FARM LABORERS.

The number of farmers, planters, and farm laborers reported in the registration states was 958,778, and the number of deaths of farmers, planters, and farm laborers during the census year was 16,899, the death rate being 17.6 per 1,000. In 1890 the death rate was 11.9. The addition of Maine and Michigan, with their large proportions of rural territory, to the registration states since 1890 is probably accountable for the differences in the death rates in these occupations.

The following table shows, for the registration states, the number of farmers, planters, and farm laborers at all ages and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rate per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	958,778	192,361	354,473	287,673	109,951
Per cent at each age		20.1	37.0	30.0	11.5
Deaths	16,899	715	1,639	3,797	10,642
Per cent at each age		4.2	9.7	22.5	63.0
Death rate	17.6	3.7	4.6	13.2	96.8
Average rate in this class	15.8	4.6	6.6	14.7	96.7

This table shows that the death rate of farmers, planters, and farm laborers (17.6) was higher than the average rate in the agricultural and outdoor class (15.8), which is largely due to the number in these occupations under 15 and over 65 years of age. It will be seen that 63 per cent of the deaths occurred at ages above 65 years, or in 11.5 per cent of the population. In this age group the death rate of farmers, planters, and farm laborers (96.8) was a little higher than the average rate in this class (96.7). In the other age groups specified the rates were lower than the average.

The following table shows, for the registration states, the number of deaths of farmers, planters, and farm laborers, during the census year, from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	51	5.3
Typhoid fever	293	30.6
Rheumatism	111	11.6
Consumption	1,071	111.7
Diabetes	158	16.5
Diseases of nervous system	2,595	270.7
Heart disease	2,520	262.8
Other diseases, circulatory system	236	24.6
Pneumonia	1,430	149.1
Other diseases, respiratory system	469	48.9
Diseases of liver	306	31.9
Other diseases, digestive system	773	80.6
Diseases of urinary system	1,635	170.5
Diseases of bones and joints	37	3.9
Suicide	201	21.0
Other accidents and injuries	808	84.3
Cancer	841	87.7

The death rate of farmers, planters, and farm laborers from typhoid fever (30.6) was lower than the average rate from this disease (32.8). The rate from consumption (111.7) was much lower than the average rate (147.2), and that due to accidents and injuries other than suicide (84.3) was also very much lower than the average rate from this cause (139.6). For all other of the specified causes the death rates of males in these occupations were higher than the average rates. This is particularly the case with the death rates due to cancer (87.7), diseases of the urinary organs (170.5), diseases of the nervous system (270.7), and heart disease (262.8).

GARDENERS, FLORISTS, NURSERYMEN, AND VINEGROWERS.

The number of gardeners, florists, nurserymen, and vinegrowers reported in the registration states was 34,296, and the number of deaths of gardeners, florists, nurserymen, and vinegrowers during the census year was 591, the death rate being 17.2 per 1,000. In 1890 the rate was 14.8.

The following table shows, for the registration states, the number of gardeners, florists, nurserymen, and vinegrowers at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	34,296	4,911	14,605	10,665	3,804
Per cent at each age		14.3	42.6	31.1	11.1
Deaths	591	19	107	194	270
Per cent at each age		3.2	18.1	32.8	45.7
Death rate	17.2	3.9	7.3	18.2	71.0
Average rate in this class	15.8	4.6	6.6	14.7	96.7

This table shows that the death rate of gardeners, florists, nurserymen, and vinegrowers (17.2) was higher than the average rate in this class (15.8) and was about the same as the death rate of farmers, planters, and farm laborers (17.6). The death rates of gardeners, florists, nurserymen, and vine growers at 15 to 24 years and at 65 years and over were lower than the average rates at these ages, but between 25 and 65 years the rates were higher than the average.

The following table shows, for the registration states, the number of deaths of gardeners, florists, nurserymen, and vine growers during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	1	2.9
Typhoid fever	8	23.3
Rheumatism	6	17.5
Consumption	64	186.6
Diabetes	7	20.4
Diseases of nervous system	99	288.7
Heart disease	80	233.3
Other diseases, circulatory system	8	23.3
Pneumonia	59	172.0
Other diseases, respiratory system	20	58.3
Diseases of liver	9	26.2
Other diseases, digestive system	19	55.4
Diseases of urinary system	55	160.4
Diseases of bones and joints		
Suicide	5	14.6
Other accidents and injuries	34	99.1
Cancer	25	72.9

The highest death rates among gardeners, florists, nurserymen, and vinegrowers were due to diseases of the nervous system (288.7) and heart disease (233.3), both being much higher than the average rates from these diseases. The rate due to consumption (186.6) was also higher than the average rate in this class (147.2). The rates due to malarial fever (2.9), typhoid fever (23.3), diseases of the digestive system other than diseases of the liver (55.4), suicide (14.6), and accidents and injuries other than suicide (99.1), were lower than the average rates from these causes, but for all other specified causes the rates were higher than the average.

LIVERY STABLE KEEPERS AND HOSTLERS.

The number of livery stable keepers and hostlers reported in the registration states was 32,529, and the number of deaths of livery stable keepers and hostlers during the census year was 395, the death rate being 12.1 per 1,000. In 1890 the rate was 12.

The following table shows, for the registration states, the number of livery stable keepers and hostlers at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	32,529	6,877	16,995	7,450	976
Per cent at each age		21.1	52.2	22.9	3.0
Deaths	395	22	155	148	67
Per cent at each age		5.6	39.2	37.5	17.0
Death rate	12.1	3.2	9.1	19.9	68.6
Average rate in this class	15.8	4.6	6.6	14.7	96.7

This table shows that the death rate of livery stable keepers and hostlers (12.1) was less than the average rate in this class (15.8), and that the rates were less than the average at 15 to 24 years and at 65 years and over. Between the ages of 25 and 65 the death rates of males in these occupations were higher than the average.

The following table shows, for the registration states, the number of deaths of livery stable keepers and hostlers during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever		
Typhoid fever	11	33.8
Rheumatism	2	6.1
Consumption	87	267.5
Diabetes	4	12.3
Diseases of nervous system	47	144.5
Heart disease	47	144.5
Other diseases, circulatory system	3	9.2
Pneumonia	35	107.6
Other diseases, respiratory system	11	33.8
Diseases of liver	6	18.4
Other diseases, digestive system	12	36.9
Diseases of urinary system	35	107.6
Diseases of bones and joints	2	6.1
Suicide	7	21.5
Other accidents and injuries	18	55.3
Cancer	15	46.1

The highest death rate among livery stable keepers and hostlers was due to consumption (267.5); and this was very much higher than the average rate in this class (147.2). The death rates of males in these occupations were also above the average rates from typhoid fever (33.8), diseases of the bones and joints (6.1), and suicide (21.5). The rates from all other specified causes were less than the average rates, being particularly low from diseases of the nervous system, heart disease, pneumonia, and diseases of the urinary organs.

LUMBERMEN AND RAFTSMEN.

The number of lumbermen and raftsmen reported in the registration states was 13,078, the number of deaths of lumbermen and raftsmen in the same area during

the census year being 216, and the death rate 16.5 per 1,000. The death rates per 1,000 of population by age groups were as follows: At 15 to 24 years, 6.6; at 25 to 44 years, 8.7; at 45 to 64 years, 24.2; and at 65 years and over, 163.7.

The death rates of lumbermen and raftsmen per 100,000 of population were above the average of the agricultural, transportation, and other outdoor class, from accidents and injuries exclusive of suicide (lumbermen and raftsmen, 351.7; agricultural, transportation, and other outdoor class, 139.6), diseases of the urinary organs (lumbermen and raftsmen, 221.7; agricultural, transportation, and other outdoor class, 145.5), diseases of the nervous system (lumbermen and raftsmen, 260; agricultural, transportation, and other outdoor class, 221.3), and were below the average from heart disease (lumbermen and raftsmen, 137.6; agricultural, transportation, and other outdoor class, 211.1), consumption (lumbermen and raftsmen, 107.1; agricultural, transportation, and other outdoor class, 147.2), and pneumonia (lumbermen and raftsmen, 122.3; agricultural, transportation, and other outdoor class, 140).

MINERS AND QUARRYMEN.

The number of miners and quarrymen reported in the registration states was 38,890, and the number of deaths of miners and quarrymen during the census year was 373, the death rate being 9.6 per 1,000. In 1890 the rate was 7.8.

The following table shows, for the registration states, the number of miners and quarrymen at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	38,890	9,606	22,215	6,196	566
Per cent at each age		24.7	57.1	15.9	1.5
Deaths	373	52	173	81	66
Per cent at each age		13.9	46.4	21.7	17.7
Death rate	9.6	5.4	7.8	13.1	116.6
Average rate in this class	15.8	4.6	6.6	14.7	96.7

This table shows that the death rate of miners and quarrymen (9.6) was much less than the average rate in this class (15.8). Over 80 per cent of the miners and quarrymen reported in the registration states were under 45 years, about 25 per cent being 15 to 24 years, and about 57 per cent 25 to 44 years of age. At 15 to 24 years the death rate of miners and quarrymen (5.4) was higher than the average rate at this age (4.6), and at 25 to 44 years the rate (7.8) was also higher than the average rate at this age (6.6).

The following table shows, for the registration states, the number of deaths of miners and quarrymen during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever		
Typhoid fever	15	38.6
Rheumatism		
Consumption	47	120.9
Diabetes		
Diseases of nervous system	15	38.6
Heart disease	22	56.6
Other diseases, circulatory system	5	12.9
Pneumonia	30	77.1
Other diseases, respiratory system	10	25.7
Diseases of liver	2	5.1
Other diseases, digestive system	15	38.6
Diseases of urinary system	19	48.9
Diseases of bones and joints	2	5.1
Suicide	1	2.6
Other accidents and injuries	147	378.0
Cancer	13	33.4

The death rate of miners and quarrymen from accidents and injuries other than suicide was excessively high, being 378 per 100,000, while the average rate in this class was 139.6. The rate due to typhoid fever (38.6) was slightly higher than the average rate in this class (32.8), but the rates due to all other specified causes were generally very much lower than the average rates, being particularly low from diseases of the nervous system, heart disease, pneumonia, and other diseases of the respiratory system.

SAILORS, PILOTS, FISHERMEN, AND OYSTERMEN.

The number of sailors, pilots, fishermen, and oystermen reported in the registration states was 47,747, and the number of deaths of sailors, pilots, fishermen, and oystermen during the census year was 1,321, the death rate being 27.7 per 1,000. In 1890 the rate was 22.

The following table shows, for the registration states, the number of sailors, pilots, fishermen, and oystermen at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	47,747	8,315	22,928	13,087	2,965
Per cent at each age		17.4	48.0	27.4	6.2
Deaths	1,321	100	320	409	486
Per cent at each age		7.6	24.2	31.0	36.8
Death rate	27.7	12.0	14.0	31.3	163.9
Average rate in this class	15.8	4.6	6.6	14.7	96.7

This table shows that the death rate of sailors, pilots, fishermen, and oystermen (27.7) was very much higher than the average rate in this class (15.8), and that the rates were higher than the average in each age group. The greatest number of deaths occurred in the age group 65 years and over, or in about 6 per cent of the population. In this age group the death rate of sailors, pilots, fishermen, and oystermen was 163.9, and the average rate in this class was 96.7.

The following table shows, for the registration states, the number of deaths of sailors, pilots, fishermen, and oystermen during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	6	12.6
Typhoid fever	32	67.0
Rheumatism	3	6.3
Consumption	159	333.0
Diabetes	8	16.8
Diseases of nervous system	177	370.7
Heart disease	151	316.3
Other diseases, circulatory system	19	39.8
Pneumonia	122	255.5
Other diseases, respiratory system	26	54.5
Diseases of liver	15	31.4
Other diseases, digestive system	33	69.1
Diseases of urinary system	119	249.2
Diseases of bones and joints	2	4.2
Suicide	19	39.8
Other accidents and injuries	176	368.6
Cancer	54	113.1

The death rate of sailors, pilots, fishermen, and oystermen from rheumatism (6.3) was lower than the average rate in this class (9), but the rates from all other specified causes were generally very much higher than the average. The rates due to consumption, diseases of the nervous system, heart disease, pneumonia, diseases of the urinary organs, suicide, cancer, accidents and injuries other than suicide, and malarial fever were all excessively high.

STEAM RAILROAD EMPLOYEES.

This title includes engineers and firemen, switchmen, conductors, section hands, and all other railroad employees except clerks, telegraph operators, and officials.

The number of steam railroad employees reported in the registration states was 129,472, and the number of deaths of steam railroad employees during the census year was 1,395, the death rate being 10.8 per 1,000. In 1890 the rate was 9.

The following table shows, for the registration states, the number of steam railroad employees at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	129,472	22,045	79,210	24,971	2,476
Per cent at each age	.....	17.0	61.2	19.3	1.9
Deaths	1,395	197	628	392	161
Per cent at each age	.....	14.1	45.0	28.1	11.5
Death rate	10.8	8.9	7.9	15.7	65.0
Average rate in this class	15.8	4.6	6.6	14.7	96.7

This table shows that the death rate of steam railroad employees (10.8) was much less than the average rate in this class (15.8). The death rates of males in these occupations, however, were higher than the average in each age group up to 65 years. Over 60 per cent of the persons reported in these occupations in the registration states were between 25 and 45 years of age, and the greatest number of deaths occurred also in this age group, the death rate being 7.9. The average rate for the class at these ages was 6.6.

The following table shows, for the registration states, the number of deaths of steam railroad employees during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	3	2.3
Typhoid fever	46	35.5
Rheumatism	3	2.3
Consumption	168	129.8
Diabetes	8	6.2
Diseases of nervous system	124	95.8
Heart disease	115	88.8
Other diseases, circulatory system	13	10.0
Pneumonia	78	60.2
Other diseases, respiratory system	25	19.3
Diseases of liver	11	8.5
Other diseases, digestive system	37	28.6
Diseases of urinary system	84	64.9
Diseases of bones and joints	3	2.3
Suicide	11	8.5
Other accidents and injuries	531	410.1
Cancer	40	30.9

The general death rate of steam railroad employees is raised greatly by the excessive death rate due to accidents and injuries other than suicide (410.1), the average rate in this class being 139.6, and the average rate from similar causes among all occupied males being 113.2. The rate due to typhoid fever (35.5) was slightly higher than the average rate in this class, but the rates due to all other specified causes were very much lower than the average, particularly those due to diseases of the nervous system, heart disease, pneumonia, diseases of the liver, rheumatism, and diabetes.

STOCK RAISERS, HERDERS, AND DROVERS.

The number of stock raisers, herders, and drovers reported in the registration states was 966, the number of deaths of stock raisers, herders, and drovers in the same area being 31, and the death rate 32.1 per 1,000 of population. The death rates per 1,000 of population by age groups were as follows: At 25 to 44 years, 20.6; at 45 to 64 years, 32.9; at 65 years and over, 148.1.

The number of persons and deaths in these occupations was so small that the rates have no significance.

OCCUPATIONS OF FEMALES.

The number of females reported as engaged in gainful occupations in the registration states was 1,587,874, and the number of deaths during the census year was 13,203, giving a death rate of 8.3 per 1,000. The death rate of females in the registration states from the selected occupations compiled in 1890 was 10.5 per 1,000.

The following table shows, for the registration states, the number of females reported as engaged in certain principal occupations, in the aggregate, and in each of four age groups, with the deaths of females in the same occupations during the census year, and the percentage of both population and deaths in each age group:

POPULATION AND DEATHS, BY AGES.

POPULATION AND DEATHS, OCCUPATIONS.	NUMBER.					PER CENT.			
	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.	15 to 24.	25 to 44.	45 to 64.	65 and over.
POPULATION.									
All occupations	1,587,874	725,291	601,200	187,957	33,771	45.7	37.9	11.8	2.1

All other occupations	2,423	454	728	577	649	18.7	30.0	23.8	26.8

The following table shows the percentage of females engaged in each specified occupation, in the aggregate, and for each of the age groups given in the preceding table:

PER CENT OF POPULATION IN EACH OCCUPATION.

OCCUPATION.	AGES.				
	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
All occupations	100.0	100.0	100.0	100.0	100.0
Musicians and teachers of music	1.1	0.9	1.4	0.9	0.3
Teachers in schools	5.8	5.1	7.8	4.0	1.6
Stenographers and typewriters	2.1	3.0	1.9	0.2	.....
Bookkeepers, clerks, and copyists	4.6	5.3	4.9	1.9	0.7
Hotel and boarding house keepers	1.3	0.1	1.4	5.0	5.1
Laundresses	3.7	1.6	4.7	9.0	6.8
Nurses and midwives	2.6	1.2	3.3	5.8	6.3
Servants	25.4	27.8	24.6	19.5	17.1
Artificial flower and paper-box makers	0.3	1.2	0.5	0.2	0.1
Cigarmakers and tobacco workers	0.8	1.1	0.6	0.3	0.1
Mill and factory operatives (textiles)	10.2	13.0	8.5	4.1	1.4
Milliners	1.8	2.1	1.8	1.3	0.7
Dressmakers and seamstresses	12.3	10.4	14.4	14.0	9.7
Telegraph and telephone operators	0.5	0.8	0.3	0.1	.....
All other occupations	27.0	26.4	23.9	33.7	50.1

The following table shows, for the registration states, the number of occupied females at all ages and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	1,587,874	725,291	601,200	187,957	33,771
Per cent at each age	.....	45.7	37.9	11.8	2.1
Deaths	13,203	2,456	4,301	3,425	2,948
Per cent at each age	.....	18.6	32.6	25.9	22.3
Death rate	8.3	3.4	7.2	18.2	87.3

This table shows that 45.7 per cent of the occupied females in the registration states were between 15 and 25 years of age, and in this age group the death rate of females was 3.4 per 1,000. The death rate of occupied males at the same ages was 5.1.

In the age group 25 to 44 years the percentage of occupied females was 37.9, and the death rate was 7.2. For males in this age group the rate was 8.8. The largest number of deaths of occupied females occurred in this age group.

At 45 to 64 years the percentage of occupied females was 11.8, and the death rate was 18.2 per 1,000, the corresponding rate for males being 19.9 per 1,000.

In the age group 65 years and over the death rate of females was 87.3, and that of males was 98.4.

The low death rate of females engaged in gainful occupations (8.3), as compared with that of occupied males (15), is largely due to the fact that a much larger number of occupied females are comparatively young, the percentage of females between 15 and 24 years of age being 45.7, and that of males 22.6. The large number of females engaged in housekeeping for their own families, without any fixed compensation, is not included among those having gainful occupations.

The following table shows, for the registration states, the deaths of occupied females from certain diseases and classes of diseases during the census year, and the death rates per 100,000 of population, in comparison with 1890:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths, 1900.	RATE.	
		1900	1890
Malarial fever	48	3.0	9.3
Typhoid fever	386	24.3	35.7
Rheumatism	80	5.0	6.5
Consumption	2,744	172.8	251.2
Diabetes	107	6.7	3.9
Diseases of nervous system	1,408	88.7	114.9
Heart disease	1,344	84.6	99.7
Other diseases, circulatory system	123	7.7	.....
Pneumonia	1,203	75.8	152.9
Other diseases, respiratory system	421	26.5	
Diseases of liver	159	10.0	15.4
Other diseases, digestive system	732	46.1	41.7
Diseases of urinary system	948	59.7	51.4
Diseases of bones and joints	22	1.4	2.4
Suicide	110	6.9	4.1
Other accidents and injuries	389	24.5	24.2
Cancer	789	49.7	.....

It will be seen from this table that the death rates of occupied females from the specified diseases were generally lower than the rates for the same diseases in 1890, particularly those due to consumption, heart disease, diseases of the nervous system, and diseases of the respiratory system.

The following table shows, for the registration states, the death rates of females in all occupations, and in each specified occupation, at all ages and in each of four age groups, per 1,000 of corresponding population:

DEATH RATES IN EACH OCCUPATION.

OCCUPATION.	AGE.				
	All ages.	15 to 24 years.	25 to 44 years.	45 to 64 years.	65 years and over.
All occupations	8.3	3.4	7.2	18.2	87.3
Musicians and teachers of music	5.0	2.9	4.3	14.8	37.0
Teachers in schools	5.9	3.8	5.0	14.0	108.4
Stenographers and typewriters	2.7	1.9	4.1	10.5	.....
Bookkeepers, clerks, and copyists	5.6	4.0	6.3	14.3	73.6
Hotel and boarding house keepers	4.5	5.1	2.1	4.6	15.6
Laundresses	5.1	2.1	3.8	7.2	22.7
Nurses and midwives	9.5	4.5	4.7	11.1	65.5
Servants	17.1	5.3	14.2	53.4	305.2
Artificial flower and paper box makers	1.3	0.7	3.0	3.4	.....
Cigarmakers and tobacco workers	4.1	3.0	5.1	13.7	.....
Mill and factory operatives (textiles)	4.0	2.8	4.6	12.0	85.2
Milliners	5.9	2.3	5.7	18.5	130.8
Dressmakers and seamstresses	5.2	2.1	4.8	10.2	51.0
Telegraph and telephone operators	5.4	5.1	5.9	6.5	142.9
All other occupations	5.7	2.4	5.1	9.1	38.4

This table shows that in the aggregate and also in each age group the death rates of female servants were very much the highest. The average death rate of females in all occupations is greatly increased by the excessive death rate of servants, as these constitute a large proportion of the total number of occupied females.

Excluding servants, the highest rates among females in specific occupations were those of nurses and midwives (9.5), school-teachers (5.9), milliners (5.9), and bookkeepers, clerks, and copyists (5.6). The rates from the principal occupations were lowest for mill and factory operatives (4), cigarmakers and tobacco workers (4.1), and hotel and boarding house keepers (4.5). There was but little difference in the death rates of females in the other occupations.

SCHOOL-TEACHERS.

The number of female school-teachers reported in the registration states was 91,964, and the number of deaths of school-teachers during the census year was 541, the death rate being 5.9 per 1,000. In 1890 the rate was 4.3.

The following table shows, for the registration states, the number of school-teachers at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	91,964	36,765	46,776	7,595	526
Per cent at each age		40.0	50.9	8.3	0.6
Deaths	541	140	236	106	57
Per cent at each age		25.9	43.6	19.6	10.5
Death rate	5.9	3.8	5.0	14.0	108.4
Average rate in all occupations	8.3	3.4	7.2	18.2	87.3

This table shows that 40 per cent of the female school-teachers were between 15 and 25 years of age, and in this age group the death rate (3.8) was slightly higher than the rate for all females (3.4). The greatest number of school-teachers was between 25 and 45 years of age, 50.9 per cent of the total number being in this age group, in which the death rate (5) was considerably lower than the average rate (7.2).

At 45 to 64 years the death rate of school-teachers (14) was much lower than the average rate at these ages (18.2), but at 65 years and over the rate (108.4) was much higher than the average rate (87.3).

The following table shows, for the registration states, the number of deaths of school-teachers during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	4	4.3
Typhoid fever	34	37.0
Rheumatism	2	2.2
Consumption	116	126.1
Diabetes	9	9.8
Diseases of nervous system	52	56.5
Heart disease	29	31.5
Other diseases, circulatory system	4	4.3
Pneumonia	44	47.8
Other diseases, respiratory system	13	14.1
Diseases of liver	4	4.3
Other diseases, digestive system	38	41.3
Diseases of urinary system	29	31.5
Diseases of bones and joints	2	2.2
Suicide	5	5.4
Other accidents and injuries	22	23.9
Cancer	44	47.8

The highest death rates of female school-teachers were due to consumption (126.1), diseases of the nervous system (56.5), and pneumonia and cancer, from each of which the rate was 47.8. The death rates of school-teachers from these diseases were, however, lower than the average rates from the same diseases of all occupied females.

The death rates from malarial fever, typhoid fever, diabetes, and diseases of the bones and joints were higher than the average rates from these diseases, but the rates for all other specified causes were lower than the average.

BOOKKEEPERS, CLERKS, AND COPYISTS.

The number of female bookkeepers, clerks, and copyists reported in the registration states was 72,713, and the number of deaths of bookkeepers, clerks, and copyists during the census year was 409, the death rate being 5.6 per 1,000. In 1890 the rate was 3.2.

The following table shows, for the registration states, the number of female bookkeepers, clerks, and copyists at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	72,713	38,550	29,490	3,566	231
Per cent at each age		53.0	40.6	4.9	.3
Deaths	409	154	186	51	17
Per cent at each age		37.7	45.5	12.5	4.2
Death rate	5.6	4.0	6.3	14.3	73.6
Average rate in all occupations	8.3	3.4	7.2	18.2	87.3

It will be seen from this table that 53 per cent of the female bookkeepers, clerks, and copyists in the registration states were between 15 and 25 years of age, and that in this age group the death rate of bookkeepers, clerks, and copyists was higher than the average rate of all occupied females. Above 25 years the rates were lower than the average.

The following table shows, for the registration states, the number of deaths of female bookkeepers, clerks, and copyists during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	3	4.1
Typhoid fever	20	27.5
Rheumatism	3	4.1
Consumption	144	198.0
Diabetes	2	2.8
Diseases of nervous system	17	23.4
Heart disease	36	49.5
Other diseases, circulatory system	4	5.5
Pneumonia	41	56.4
Other diseases, respiratory system	6	8.3
Diseases of liver	3	4.1
Other diseases, digestive system	28	38.5
Diseases of urinary system	18	24.8
Diseases of bones and joints	1	1.4
Suicide	4	5.5
Other accidents and injuries	11	15.1
Cancer	11	15.1

The death rate of female bookkeepers, clerks, and copyists from consumption (198) was considerably higher than the average rate from this disease in all occupied females (172.8), and the rates due to malarial fever (4.1) and typhoid fever (27.5) were slightly higher than the average rates, but those due to the other specified causes were lower than the average rates.

LAUNDRESSES.

The number of laundresses reported in the registration states was 59,300, and the number of deaths of laundresses during the census year was 302, the death rate being 5.1 per 1,000. In 1890 the rate was 6.7.

The following table shows, for the registration states, the number of laundresses at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	59,300	11,604	27,996	16,842	2,289
Per cent at each age		19.6	47.2	28.4	3.9
Deaths	302	24	105	121	52
Per cent at each age		7.9	34.8	40.1	17.2
Death rate	5.1	2.1	3.8	7.2	22.7
Average rate in all occupations	8.3	3.4	7.2	18.2	87.3

This table shows that the death rates of laundresses (5.1) was considerably lower than the average rate for all occupied females (8.3), and that the rates were lower than the average in each age group. Over 75 per cent of the laundresses reported in the registration states were between 25 and 65 years of age, 28.4 per cent being in the age group 45 to 64 years, and in this age group the death rate of laundresses (7.2) was very much lower than the average rate at these ages (18.2).

The following table shows, for the registration states, the number of deaths of laundresses during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever		
Typhoid fever	4	6.7
Rheumatism	2	3.4
Consumption	56	94.4
Diabetes	1	1.7
Diseases of nervous system	38	64.1
Heart disease	41	69.1
Other diseases, circulatory system	6	10.1
Pneumonia	24	40.5
Other diseases, respiratory system	9	15.2
Diseases of liver	5	8.4
Other diseases, digestive system	17	28.7
Diseases of urinary system	22	37.1
Diseases of bones and joints	2	3.4
Suicide		
Other accidents and injuries	9	15.2
Cancer	15	25.3

The highest death rates of laundresses were due to consumption (94.4), heart disease (69.1), and diseases of the nervous system (64.1), but the rates from these diseases were all much lower than the average rates of all occupied females. The death rate from diseases of the circulatory system other than heart disease (10.1) was the only rate that was higher than the average.

NURSES AND MIDWIVES.

The number of nurses and midwives reported in the registration states was 41,912, and the number of deaths of nurses and midwives during the census year was 397, the death rate being 9.5 per 1,000. In 1890 the rate was 11.2.

The following table shows, for the registration states, the number of nurses and midwives at all ages and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population.

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	41,912	9,097	19,562	10,950	2,138
Per cent at each age		21.7	46.7	26.1	5.1
Deaths	397	41	92	122	140
Per cent at each age		10.3	23.2	30.7	35.3
Death rate	9.5	4.5	4.7	11.1	65.5
Average rate in all occupations	8.3	3.4	7.2	18.2	87.3

This table shows that the death rate of nurses and midwives at 15 to 24 years (4.5) was higher than the average rate of all occupied females (3.4), and that the rates at ages above 25 years were lower than the average. The greatest number of deaths occurred in the age group 65 years and over, and in this age group the death rate of nurses and midwives was 65.5 while the average rate was 87.3.

The following table shows, for the registration states, the number of deaths of nurses and midwives during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever		
Typhoid fever	20	47.7
Rheumatism	3	7.2
Consumption	42	100.2
Diabetes	3	7.2
Diseases of nervous system	46	109.8
Heart disease	50	119.3
Other diseases, circulatory system	3	7.2
Pneumonia	39	93.1
Other diseases, respiratory system	12	28.6
Diseases of liver	8	19.1
Other diseases, digestive system	29	69.2
Diseases of urinary system	31	74.0
Diseases of bones and joints	1	2.4
Suicide	3	7.2
Other accidents and injuries	5	11.9
Cancer	44	105.0

The highest death rates of nurses and midwives were due to heart disease (119.3), diseases of the nervous system (109.8), and cancer (105), and the rates from these diseases were much higher than the average rates for all occupied females. The death rate from cancer in particular was excessively high, being more than twice the average rate (49.7).

The death rate due to consumption (100.2) was much lower than the average rate from this disease (172.8).

SERVANTS.

The number of female servants reported in the registration states was 403,801, and the number of deaths of female servants during the census year was 6,920, the death rate being 17.1 per 1,000. In 1890 the rate was 18.2.

The following table shows, for the registration states, the number of female servants at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	403,801	201,533	147,934	36,748	5,776
Per cent at each age		49.9	36.6	9.1	1.4
Deaths	6,920	1,062	2,097	1,961	1,763
Per cent at each age		15.3	30.3	28.3	25.5
Death rate	17.1	5.3	14.2	53.4	305.2
Average rate in all occupations	8.3	3.4	7.2	18.2	87.3

This table shows that the death rates of female servants, in the aggregate and at the different ages, were excessively high, in comparison with the average rates for all occupied females.

About 50 per cent of the female servants were between 15 and 25 years of age, and in this age group there was the least difference in the rates, that of servants being 5.3 and the average rate being 3.4. At 25 to 44 years the rate (14.2) was about twice the average rate (7.2). At 45 to 64 years the death rates of servants (53.4) was nearly three times the average rate (18.2) and at 65 years and over it was nearly four times the average (servants, 305.2; average, 87.3).

The following table shows, for the registration states, the number of deaths of female servants during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	28	6.9
Typhoid fever	142	35.2
Rheumatism	45	11.1
Consumption	1,291	319.7
Diabetes	57	14.1
Diseases of nervous system	768	190.2
Heart disease	767	189.9
Other diseases, circulatory system	61	15.1
Pneumonia	651	161.2
Other diseases, respiratory system	248	61.4
Diseases of liver	79	19.6
Other diseases, digestive system	334	82.7
Diseases of urinary system	554	137.2
Diseases of bones and joints	12	3.0
Suicide	61	15.1
Other accidents and injuries	199	49.3
Cancer	402	99.6

The death rates of female servants from all of the causes specified were higher, and generally very much higher than the average rates.

The highest death rates were due to consumption

(319.7), diseases of the nervous system (190.2), heart disease (189.9), pneumonia (161.2), diseases of the urinary organs (137.2), and cancer (99.6), the rates from all of these diseases being excessively high, and very much higher than the average rates from the same diseases in all occupied females.

MILL AND FACTORY OPERATIVES (TEXTILES).

The number of female mill and factory operatives (textiles) reported in the registration states was 162,392, and the number of deaths of female mill and factory operatives (textiles) during the census year was 644, the death rate being 4 per 1,000. In 1890 the rate was 5.3.

The following table shows, for the registration states, the number of female mill and factory operatives (textiles) at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	162,392	94,544	51,174	7,689	458
Per cent at each age		58.2	31.5	4.7	0.3
Deaths	644	268	236	92	39
Per cent at each age		41.6	36.6	14.3	6.1
Death rate	4.0	2.8	4.6	12.0	85.2
Average rate in all occupations	8.3	3.4	7.2	18.2	87.3

This table shows that the death rates of female mill and factory operatives were lower in every age group than the average rates for all occupied females.

Over 58 per cent of the female mill and factory operatives were between 15 and 25 years of age, and the greatest number of deaths also occurred at these ages, the death rate being 2.8 per 1,000. The average rate at these ages was 3.4.

The following table shows, for the registration states, the number of deaths of female mill and factory operatives (textiles) during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	3	1.8
Typhoid fever	44	27.1
Rheumatism	7	4.3
Consumption	234	144.1
Diabetes	4	2.5
Diseases of nervous system	42	25.9
Heart disease	43	26.5
Other diseases, circulatory system	4	2.5
Pneumonia	57	35.1
Other diseases respiratory system	19	11.7
Diseases of liver	4	2.5
Other diseases, digestive system	35	21.6

DEATH RATES FROM CERTAIN CAUSES—Continued.

CAUSE OF DEATH.	Deaths.	Death rate.
Diseases of urinary system	26	16.0
Diseases of bones and joints		
Suicide	10	6.2
Other accidents and injuries	20	12.3
Cancer	16	9.9

The death rate of female mill and factory operatives from typhoid fever (27.1) was higher than the average rate from this disease in all occupied females (24.3), but the rates due to the other specified causes were lower than the average rates, being particularly low from diseases of the nervous system, heart disease, diseases of the liver, and diseases of the urinary organs.

DRESSMAKERS AND SEAMSTRESSES.

The number of dressmakers and seamstresses reported in the registration states was 195,176, and the number of deaths of dressmakers and seamstresses during the census year was 1,021, the death rate being 5.2 per 1,000.

The following table shows, for the registration states, the number of dressmakers and seamstresses, at all ages, and in each of four age groups, the deaths at corresponding ages during the census year, with the per cent of both population and deaths at each age, and the death rates per 1,000 of population:

POPULATION, DEATHS, AND DEATH RATES, BY AGES.

POPULATION, DEATHS, AND DEATH RATES.	All ages.	15 to 24.	25 to 44.	45 to 64.	65 and over.
Population	195,176	75,832	86,538	26,330	3,292
Per cent at each age		38.9	44.3	13.5	1.7
Deaths	1,021	161	419	268	168
Per cent at each age		15.8	41.0	26.2	16.5
Death rate	5.2	2.1	4.8	10.2	51.0
Average rate in all occupations	8.3	3.4	7.2	18.2	87.3

This table shows that the death rates of dressmakers and seamstresses were lower than the average rates for all occupied females, in the aggregate, and in each age group. The greatest number of deaths occurred in the age group 25 to 44 years, which also included the largest percentage of population. In this age group the death rate was 4.8 and the average rate was 7.2.

The following table shows, for the registration states, the number of deaths of dressmakers and seamstresses during the census year from certain specified causes, and the death rates per 100,000 of population:

DEATH RATES FROM CERTAIN CAUSES.

CAUSE OF DEATH.	Deaths.	Death rate.
Malarial fever	3	1.5
Typhoid fever	23	11.8
Rheumatism		
Consumption	254	130.1

DEATH RATES FROM CERTAIN CAUSES—Continued.

CAUSE OF DEATH.	Deaths.	Death rate.
Diabetes	8	4.1
Diseases of nervous system	102	52.3
Heart disease	98	50.2
Other diseases, circulatory system	7	3.6
Pneumonia	94	48.2
Other diseases, respiratory system	35	17.9
Diseases of liver	12	6.1
Other diseases, digestive system	65	33.3
Diseases of urinary system	61	31.3
Diseases of bones and joints	.....	.....
Suicide	7	3.6
Other accidents and injuries	20	10.2
Cancer	75	38.4

The highest death rates among dressmakers and seamstresses were due to consumption (130.1), diseases of the nervous system (52.3), and heart disease (50.2), but the rates from these diseases were much lower than the average rates for all occupied females.

ARTIFICIAL FLOWER AND PAPER BOX MAKERS.

The number of female artificial flower and paper box makers reported in the registration states was 12,624. Of this number 8,605, or 68.2 per cent, were between 15 and 25 years of age, and 3,049, or 24.2 per cent, were between 25 and 45 years of age.

The total number of deaths reported in these occupations was only 17, and the death rates have no significance.

CIGARMAKERS AND TOBACCO WORKERS.

The number of female cigarmakers and tobacco workers reported in the registration states was 12,838, and the number of deaths of female cigarmakers and tobacco workers during the census year was 52, the death rate being 4.1 per 1,000. In 1890 the rate was 3.4.

The number of deaths in these occupations was too small to afford comparative death rates of any value.

HOTEL AND BOARDING HOUSE KEEPERS.

The number of female hotel and boarding house keepers reported in the registration states was 19,755, and the number of deaths of female hotel and boarding house keepers during the census year was 89, the death rate being 4.5 per 1,000. In 1890 the rate was 3.5.

The number of deaths in the different age groups and from the different causes was so small that the rates have no significance.

MILLINERS.

The number of milliners reported in the registration states was 29,122, and the number of deaths of milliners during the census year was 171, the death rate being 5.9 per 1,000.

Of the total number of deaths of milliners, 34 occurred at 15 to 24 years, and in this age group the death rate (2.3) was less than the average rate for all occupied females (3.4). There were 62 deaths at 25 to 44 years of age, the death rate being 5.7, which was also less than the average rate at these ages (7.2). At 45 to 64 years, there were 44 deaths, and the death rate in this age group (15.2) was above the average rate (18.2). In the age group 65 years and over there were 31 deaths, and the death rate (130.8) was much higher than the average rate at these ages (87.3).

The number of deaths from the different causes was so small as to have no special significance.

MUSICIANS AND TEACHERS OF MUSIC.

The number of female musicians and teachers of music reported in the registration states was 16,566, and the number of deaths of musicians and teachers of music during the census year was 83, the death rate being 5 per 1,000. In 1890 the rate was 2.4.

By age periods the death rates of female musicians and teachers of music were as follows: At 15 to 24 years, 2.9; at 25 to 44 years, 4.3; at 45 to 64 years, 14.8; and at 65 years and over, 37. These rates were all lower than the average rates of all occupied females at the same ages.

The number of deaths of female musicians and teachers of music from the different causes was so small that the rates have no significance.

STENOGRAPHERS AND TYPEWRITERS.

The number of female stenographers and typewriters reported in the registration states was 33,780, of which number 21,798, or 64.5 per cent, were between 15 and 25 years of age, and 11,430, or 33.8 per cent, were between 25 and 45 years of age. The total number of deaths of female stenographers and typewriters during the census year was 92, and the death rate per 1,000 was 2.7. The number of deaths among female stenographers and typewriters was too small to afford rates of any value.

TELEGRAPH AND TELEPHONE OPERATORS.

The number of female telegraph and telephone operators reported in the registration states was 7,801, and the number of deaths of female telegraph and telephone operators during the census year was 42, the death rate being 5.4 per 1,000. In 1890 the rate was 4.1.

More than 97 per cent of the females in these occupations were under 45 years of age, 71 per cent being between 15 and 25 years, and 26.3 per cent being between 25 and 45 years. In the age group 15 to 24 years the death rate of female telegraph and telephone operators (5.1) was higher than the average rate of all occupied females (3.4). At 25 to 44 years the rate (5.9) was lower than the average (7.2). There were but two deaths of females in these occupations at ages above 45 years.

The death rates of female telegraph and telephone operators from typhoid fever (51.3), consumption (205.1), pneumonia (76.9), and accidents and injuries other than suicide (38.5) were higher than the average rates from these causes, but the rates from all other causes were lower than the average rates.

APPENDIX.

DESCRIPTION OF AREAS FOR WHICH DATA ARE GIVEN IN THIS REPORT.

(*a*) The registration states are as follows: Connecticut, District of Columbia, Maine, Massachusetts, Michigan, New Hampshire, New Jersey, New York, Rhode Island, and Vermont.

(*b*) The cities in the registration states are the following: Adams town, Mass.; Albany, N. Y.; Amesbury town, Mass.; Amsterdam, N. Y.; Ann Arbor, Mich.; Ansonia town, Conn.; Arlington town, Mass.; Atlantic City, N. J., Attleboro town, Mass.; Auburn, N. Y.; Augusta, Me.; Bangor, Me.; Barre, Vt.; Bath, Me.; Battle Creek, Mich.; Bay City, Mich.; Bayonne, N. J.; Bennington town, Vt.; Berlin, N. H.; Beverly, Mass.; Biddeford, Me.; Binghamton, N. Y.; Boston, Mass.; Bridgeport, Conn.; Bridgeton, N. J.; Bristol town, Conn.; Brockton, Mass.; Brookline town, Mass.; Buffalo, N. Y.; Burlington, Vt.; Cambridge, Mass.; Camden, N. J.; Central Falls, R. I.; Chelsea, Mass.; Chicopee, Mass.; Clinton town, Mass.; Cohoes, N. Y.; Concord, N. H.; Corning, N. Y.; Cortland, N. Y.; Danbury town, Conn.; Danvers town, Mass.; Detroit, Mich.; District of Columbia; Dover, N. H.; Dunkirk, N. Y.; Elizabeth, N. J.; Elmira, N. Y.; Escanaba, Mich.; Everett, Mass.; Fall River, Mass.; Fitchburg, Mass.; Flint, Mich.; Framingham town, Mass.; Gardner town, Mass.; Geneva, N. Y.; Glens Falls, N. Y.; Gloucester, Mass.; Gloversville, N. Y.; Grand Rapids, Mich.; Greenwich town, Conn.; Harrison town, N. J.; Hartford town, Conn.; Haverhill, Mass.; Hoboken, N. J.; Holyoke, Mass.; Hudson, N. Y.; Hyde Park town, Mass.; Iron Mountain, Mich.; Ironwood, Mich.; Ishpeming, Mich.; Ithaca, N. Y.; Jackson, Mich.; Jamestown, N. Y.; Jersey City, N. J.; Johnstown, N. Y.; Kalamazoo, Mich.; Keene, N. H.; Kingston, N. Y.; Laconia, N. H.; Lansing, Mich.; Lansingburg, N. Y.; Lawrence, Mass.; Leominster town, Mass.; Lockport, N. Y.; Lowell, Mass.; Lynn, Mass.; Malden, Mass.; Manchester, N. H.; Manchester town, Conn.; Marlboro, Mass.; Marquette, Mich.; Medford, Mass.; Melrose, Mass.; Menominee, Mich.; Meriden town, Conn.; Middletown, N. Y.; Middletown town, Conn.; Milford town, Mass.; Millville, N. J.; Montclair town, N. J.; Morristown, N. J.; Mt. Vernon, N. Y.; Muskegon, Mich.; Nashua, N. H.; Natick town, Mass.; Naugatuck town, Conn.; Newark, N. J.; New Bedford, Mass.; New Britain town, Conn.; New Brunswick, N. J.; Newburg, N. Y.; Newburyport, Mass.; New Haven town, Conn.; New London, Conn.; Newport, R. I.; New Rochelle, N. Y.; Newton, Mass.; New York city, N. Y.; Niagara Falls, N. Y.; North Adams, Mass.; Northampton, Mass.; Norwalk town, Conn.; Norwich town, Conn.; Ogdensburg, N.Y.; Olean, N. Y.; Orange, N. J.; Owosso, Mich.; Passaic, N. J.; Paterson, N. J.; Pawtucket, R. I.; Peabody town, Mass.; Peekskill, N. Y.; Perth Amboy, N. J.; Phillipsburg town, N. J.; Pittsfield, Mass.; Plainfield, N. J.; Plymouth town, Mass.; Pontiac, Mich.; Port Huron, Mich.; Port Jervis, N. Y.; Portland, Me.; Portsmouth, N. H.; Poughkeepsie, N. Y.; Providence, R. I.; Quincy, Mass.; Revere town, Mass.; Rochester, N. H.; Rochester, N. Y.; Rockland, Me.; Rome, N. Y.; Rutland, Vt.; Saginaw, Mich.; Salem, Mass.; Saratoga Springs, N. Y.; Sault Ste. Marie, Mich.; Schenectady, N. Y.; Somerville, Mass.; Southbridge town, Mass.; Springfield, Mass.; Stamford town, Conn.; Stonington town, Conn.; Syracuse, N. Y.; Taunton, Mass.; Torrington town, Conn.; Town of Union, N. J.; Traverse City, Mich.; Trenton, N. J.; Troy, N. Y.; Utica, N. Y.; Vernon town, Conn.; Wakefield town, Mass.; Wallingford town, Conn.; Waltham, Mass.; Ware town, Mass.; Waterbury town, Conn.; Watertown, N. Y.; Watertown town, Mass.; Watervliet, N. Y.; Webster town, Mass.; West Bay City, Mich.; Westfield town, Mass.; Weymouth town, Mass.; Windham town, Conn.; Woburn, Mass.; Woonsocket, R. I.; Worcester, Mass.; Yonkers, N. Y.

(*c*) The rural part of the registration states includes all of such states not included in the cities enumerated above (paragraph *b*).

(*d*) The registration cities in the other states are the following: Alameda, Cal.; Alexandria, Va.; Allegheny, Pa.; Allentown, Pa.; Altoona, Pa.; Annapolis, Md.; Appleton, Wis.; Ashtabula, Ohio; Atlanta, Ga.; Aurora, Ill.; Baltimore, Md.; Bellaire, Ohio; Belleville, Ill.; Beloit, Wis.; Burlington, Iowa; Canton, Ohio; Carbondale, Pa.; Carlisle, Pa.; Charleston, S. C.; Chicago, Ill.; Chillicothe, Ohio; Chippewa Falls, Wis.; Cincinnati, Ohio; Cleveland, Ohio; Columbia, Pa.;

Columbus, Ind.; Columbus, Ohio; Covington, Ky.; Danville, Ill.; Davenport, Iowa; Dayton, Ohio; Decatur, Ill.; Denver, Colo.; Dubois, Pa.; Duluth, Minn.; Easton, Pa.; Eau Claire, Wis.; Erie, Pa.; Evansville, Ind.; Findlay, Ohio; Frederick, Md.; Fresno, Cal.; Galesburg, Ill.; Green Bay, Wis.; Hamilton, Ohio; Harrisburg, Pa.; Hazelton, Pa.; Helena, Mont.; Hutchinson, Kans.; Indianapolis, Ind.; Ironton, Ohio; Jacksonville, Fla.; Jacksonville, Ill.; Jeffersonville, Ind.; Johnstown, Pa.; Kansas City, Mo.; Keokuk, Iowa; Key West, Fla.; Lafayette, Ind.; Lancaster, Pa.; Lawrence, Kans.; Leadville, Colo.; Lebanon, Pa.; Leavenworth, Kans.; Lima, Ohio; Lincoln, Nebr.; Los Angeles, Cal.; Louisville, Ky.; Lynchburg, Va.; McKeesport, Pa.; Madison, Wis.; Mahanoy, Pa.; Manitowoc, Wis.; Mankato, Minn.; Marietta, Ohio; Marinette, Wis.; Marshalltown, Iowa; Massillon, Ohio; Meadville, Pa.; Memphis, Tenn.; Michigan City, Ind.; Middletown, Ohio; Milwaukee, Wis.; Minneapolis, Minn.; Mobile, Ala.; Mt. Carmel, Pa.; Muncie, Ind.; Muscatine, Iowa; Nashville, Tenn.; Natchez, Miss.; Newark, Ohio; Newcastle, Pa.; New Orleans, La.; Newport, Ky.; Norfolk, Va.; Norristown, Pa.; Oakland, Cal.; Oil City, Pa.; Omaha, Nebr.; Oskaloosa, Iowa; Ottawa, Ill.; Ottumwa, Iowa; Paducah, Ky.; Peru, Ind.; Petersburg, Va.; Philadelphia, Pa.; Phoenixville, Pa.; Pittsburg, Pa.; Pittston, Pa.; Plymouth, Pa.; Portland, Oreg.; Portsmouth, Ohio; Pottstown, Pa.; Pottsville, Pa.; Pueblo, Colo.; Quincy, Ill.; Raleigh, N. C.; Reading, Pa.; Richmond, Ind.; Richmond, Va.; Sacramento, Cal.; St. Joseph, Mo.; St. Louis, Mo.; St. Paul, Minn.; Salt Lake City, Utah; San Antonio, Tex.; San Diego, Cal.; San Francisco, Cal.; San Jose, Cal.; Savannah, Ga.; Scranton, Pa.; Seattle, Wash.; Shreveport, La.; Sioux City, Iowa; South Bethlehem, Pa.; Spokane, Wash.; Springfield, Ill.; Steelton, Pa.; Superior, Wis.; Tacoma, Wash.; Terre Haute, Ind.; Tiffin, Ohio; Toledo, Ohio; Vincennes, Ind.; Warren, Ohio.; Wheeling, W. Va.; Wichita, Kans.; Wilkesbarre, Pa.; Williamsport, Pa.; Wilmington, Del.; Wilmington, N. C.; Winona, Minn.; Youngstown, Ohio.

(*e*) The registration area consists of the registration states (paragraph *a*), including the cities (paragraph *b*) and the registration cities in the other states (paragraph *d*).

(*f*) The total registration cities includes those enumerated in paragraphs *b* and *d* above.

g. The grand groups are composed of state groups, as follows:

Grand Group 1, North Atlantic coast region, includes Connecticut 1, Maine 1, Massachusetts 1, New Hampshire 1, Rhode Island.

Grand Group 2, Middle Atlantic coast region, includes Delaware, District of Columbia, Maryland 1, New Jersey 1, New York 1, Virginia 1.

Grand Group 3, South Atlantic coast region, includes Georgia 1, North Carolina 1, South Carolina 1.

Grand Group 4, Gulf Coast region, includes Alabama 1, Florida, Louisiana 1, Mississippi 1, Texas 1.

Grand Group 5, Northeastern hills and plateaus, includes Connecticut 2, Maine 2, Massachusetts 2, New Hampshire 2, New York 2, Vermont.

Grand Group 6, Central Appalachian region, includes Maryland 2, New Jersey 2, New York 3, Pennsylvania 1.

Grand Group 7, Region of the Great Northern Lakes, includes Illinois 1, Indiana 1, Michigan 1, New York 4, Ohio 1, Wisconsin 1.

Grand Group 8, Interior plateau, includes New York 5, North Carolina 2, Pennsylvania 2, Virginia 2.

Grand Group 9, Southern Central Appalachian region, includes Alabama 2, Georgia 2, Kentucky 1, North Carolina 3, South Carolina 2, Tennessee 1, Virginia 3, West Virginia 1.

Grand Group 10, Ohio River belt, includes Indiana 2, Kentucky 2, Ohio 2, West Virginia 2.

Grand Group 11, Southern Interior plateau, includes Alabama 3, Georgia 3, Mississippi 2, South Carolina 3, Tennessee 2.

Grand Group 12, South Mississippi River belt, includes Arkansas 1, Kentucky 3, Louisiana 2, Mississippi 3, Tennessee 3.

Grand Group 13, North Mississippi River belt, includes Illinois 2, Iowa 1, Minnesota 1, Missouri 1, Wisconsin 2.

Grand Group 14, Southwest Central region, includes Arkansas 2, Louisiana 3, Missouri 2, Texas 2, Indian Territory.

Grand Group 15, Central region, plains and prairies, includes Indiana 3, Kentucky 4, Ohio 3, Tennessee 4.

Grand Group 16, Prairie region, includes Illinois 3, Iowa 2, Kansas 1, Minnesota 2, Missouri 3, Nebraska 1, North Dakota 1, South Dakota 1, Wisconsin 3.

Grand Group 17, Missouri River belt, includes Iowa 3, Missouri 4, Nebraska 2, North Dakota 2, South Dakota 2.

Grand Group 18, Region of the Western plains, includes Colorado 1, Kansas 2, Montana 1, Nebraska 3, New Mexico 1, Oklahoma, South Dakota 3, Texas 3, Wyoming 1.

Grand Group 19, Heavily timbered region of the Northwest, includes Michigan 2, Minnesota 3, Wisconsin 4.

Grand Group 20, Cordilleran region, includes Arizona, California 1, Colorado 2, Idaho, Montana 2, Nevada, New Mexico 2, Oregon 1, Utah, Washington 1, Wyoming 2.

Grand Group 21, Pacific coast region, includes California 2, Oregon 2, Washington 2.

(*h*) The state groups are composed of certain counties in each state, as follows:

ALABAMA.

GROUP 1.

Baldwin, Mobile.

GROUP 2.

Blount, Calhoun, Cherokee, Cleburne, Colbert, Cullman, Dekalb, Etowah, Franklin, Jackson, Jefferson, Lauderdale, Lawrence, Limestone, Madison, Marshall, Morgan, St. Clair, Shelby, Walker, Winston.

GROUP 3.

Autauga, Barbour, Bibb, Bullock, Butler, Chambers, Chilton, Choctaw, Clarke, Clay, Coffee, Conecuh, Coosa, Covington, Crenshaw, Dale, Dallas, Elmore, Escambia, Fayette, Geneva, Greene, Hale, Henry, Lamar, Lee, Lowndes, Macon, Marengo, Marion, Monroe, Montgomery, Perry, Pickens, Pike, Randolph, Russell, Sumter, Talladega, Tallapoosa, Tuscaloosa, Washington, Wilcox.

ARIZONA.

This territory forms one group.

ARKANSAS.

GROUP 1.

Chicot, Craighead, Crittenden, Cross, Desha, Jefferson, Lee, Lincoln, Mississippi, Phillips, Poinsett, St. Francis.

GROUP 2.

Arkansas, Ashley, Baxter, Benton, Boone, Bradley, Calhoun, Carroll, Clark, Clay, Cleburne, Cleveland, Columbia, Conway, Crawford, Dallas, Drew, Faulkner, Franklin, Fulton, Garland, Grant, Greene, Hempstead, Hot Spring, Howard, Independence, Izard, Jackson, Johnson, Lafayette, Lawrence, Little River, Logan, Lonoke, Madison, Marion, Miller, Monroe, Montgomery, Nevada, Newton, Ouachita, Perry, Pike, Polk, Pope, Prairie, Pulaski, Randolph, Saline, Scott, Searcy, Sebastian, Sevier, Sharp, Stone, Union, Van Buren, Washington, White, Woodruff, Yell.

CALIFORNIA.

GROUP 1.

Alpine, Amador, Butte, Calaveras, Colusa, Eldorado, Fresno, Glenn, Inyo, Kern, Kings, Lake, Lassen, Madera, Mariposa, Merced, Modoc, Mono, Napa, Nevada, Placer, Plumas, Sacramento, San Bernardino, San Joaquin, Shasta, Sierra, Siskiyou, Stanislaus, Sutter, Tehama, Tulare, Tuolumne, Yolo, Yuba.

GROUP 2.

Alameda, Contra Costa, Del Norte, Humboldt, Los Angeles, Marin, Mendocino, Monterey, Orange, Riverside, San Benito, San Diego, San Francisco, San Luis Obispo, San Mateo, Santa Barbara, Santa Clara, Santa Cruz, Solano, Sonoma, Trinity, Ventura.

COLORADO.

GROUP 1.

Arapahoe, Baca, Bent, Cheyenne, Douglas, Elbert, El Paso, Kiowa, Kit Carson, Las Animas, Lincoln, Logan, Morgan, Otero, Phillips, Prowers, Pueblo, Sedgwick, Teller, Washington, Weld, Yuma.

GROUP 2.

Archuleta, Boulder, Chaffee, Clear Creek, Conejos, Costilla, Custer, Delta, Dolores, Eagle, Fremont, Garfield, Gilpin, Grand, Gunnison, Hinsdale, Huerfano, Jefferson, Lake, La Plata, Larimer, Mesa, Mineral, Montezuma, Montrose, Ouray, Park, Pitkin, Rio Blanco, Rio Grande, Routt, Saguache, San Juan, San Miguel, Summit.

CONNECTICUT.

GROUP 1.

Fairfield, Middlesex, New Haven, New London.

GROUP 2.

Hartford, Litchfield, Tolland, Windham.

DELAWARE.

This state forms one group.

DISTRICT OF COLUMBIA.

This district forms one group.

FLORIDA.

This state forms one group.

GEORGIA.

Group 1.

Appling, Bryan, Bulloch, Camden, Charlton, Chatham, Clinch, Echols, Effingham, Glynn, Liberty, Lowndes, McIntosh, Pierce, Screven, Tattnall, Ware, Wayne.

Group 2.

Banks, Bartow, Catoosa, Chattooga, Cherokee, Cobb, Dade, Dawson, Dekalb, Fannin, Floyd, Forsyth, Franklin, Fulton, Gilmer, Gordon, Gwinnett, Habersham, Hall, Haralson, Hart, Jackson, Lumpkin, Madison, Milton, Murray, Paulding, Pickens, Polk, Rabun, Towns, Union, Walker, White, Whitfield.

Group 3.

Baker, Baldwin, Berrien, Bibb, Brooks, Burke, Butts, Calhoun, Campbell, Carroll, Chattahoochee, Clarke, Clay, Clayton, Coffee, Colquitt, Columbia, Coweta, Crawford, Decatur, Dodge, Dooly, Dougherty, Douglas, Early, Elbert, Emanuel, Fayette, Glascock, Greene, Hancock, Harris, Heard, Henry, Houston, Irwin, Jasper, Jefferson, Johnson, Jones, Laurens, Lee, Lincoln, McDuffie, Macon, Marion, Meriwether, Miller, Mitchell, Monroe, Montgomery, Morgan, Muscogee, Newton, Oconee, Oglethorpe, Pike, Pulaski, Putnam, Quitman, Randolph, Richmond, Rockdale, Schley, Spalding, Stewart, Sumter, Talbot, Taliaferro, Taylor, Telfair, Terrell, Thomas, Troup, Twiggs, Upson, Walton, Warren, Washington, Webster, Wilcox, Wilkes, Wilkinson, Worth.

IDAHO.

This state forms one group.

ILLINOIS.

Group 1.

Cook, Lake.

Group 2.

Adams, Alexander, Calhoun, Carroll, Gallatin, Hancock, Hardin, Henderson, Jackson, Jersey, Jo Daviess, Johnson, Madison, Massac, Mercer, Monroe, Pike, Pope, Pulaski, Randolph, Rock Island, St. Clair, Union, Whiteside.

ILLINOIS—Continued.

Group 3.

Bond, Boone, Brown, Bureau, Cass, Champaign, Christian, Clark, Clay, Clinton, Coles, Crawford, Cumberland, Dekalb, Dewitt, Douglas, Dupage, Edgar, Edwards, Effingham, Fayette, Ford, Franklin, Fulton, Greene, Grundy, Hamilton, Henry, Iroquois, Jasper, Jefferson, Kane, Kankakee, Kendall, Knox, Lasalle, Lawrence, Lee, Livingston, Logan, McDonough, McHenry, McLean, Macon, Macoupin, Marion, Marshall, Mason, Menard, Montgomery, Morgan, Moultrie, Ogle, Peoria, Perry, Piatt, Putnam, Richland, Saline, Sangamon, Schuyler, Scott, Shelby, Stark, Stephenson, Tazewell, Vermilion, Wabash, Warren, Washington, Wayne, White, Will, Williamson, Winnebago, Woodford.

INDIANA.

Group 1.

Lake, Laporte, Porter.

Group 2.

Clark, Crawford, Dearborn, Dubois, Floyd, Gibson, Harrison, Jefferson, Jennings, Ohio, Orange, Perry, Pike, Posey, Ripley, Scott, Spencer, Switzerland, Vanderburg, Warrick, Washington.

Group 3.

Adams, Allen, Bartholomew, Benton, Blackford, Boone, Brown, Carroll, Cass, Clay, Clinton, Daviess, Decatur, Dekalb, Delaware, Elkhart, Fayette, Fountain, Franklin, Fulton, Grant, Greene, Hamilton, Hancock, Hendricks, Henry, Howard, Huntington, Jackson, Jasper, Jay, Johnson, Knox, Kosciusko, Lagrange, Lawrence, Madison, Marion, Marshall, Martin, Miami, Monroe, Montgomery, Morgan, Newton, Noble, Owen, Parke, Pulaski, Putnam, Randolph, Rush, St. Joseph, Shelby, Starke, Steuben, Sullivan, Tippecanoe, Tipton, Union, Vermilion, Vigo, Wabash, Warren, Wayne, Wells, White, Whitley.

INDIAN TERRITORY.

This territory forms one group.

IOWA.

Group 1.

Allamakee, Clayton, Clinton, Des Moines, Dubuque, Jackson, Lee, Louisa, Muscatine, Scott.

Group 2.

Adair, Adams, Appanoose, Audubon, Benton, Blackhawk, Boone, Bremer, Buchanan, Buena Vista, Butler, Calhoun, Carroll, Cass, Cedar, Cerro Gordo, Cherokee, Chickasaw, Clarke, Clay, Crawford, Dallas, Davis, Decatur, Delaware, Dickinson, Emmet, Fayette, Floyd, Franklin, Greene, Grundy, Guthrie, Hamilton, Hancock, Hardin, Henry, Howard, Humboldt, Ida, Iowa, Jasper, Jefferson, Johnson, Jones, Keokuk, Kossuth, Linn, Lucas, Madison, Mahaska, Marion, Marshall, Mitchell, Monroe, Montgomery, O'Brien, Osceola, Page, Palo Alto, Pocahontas, Polk, Poweshiek, Ringgold, Sac, Shelby, Story, Tama, Taylor, Union, Van Buren, Wapello, Warren, Washington, Wayne, Webster, Winnebago, Winneshiek, Worth, Wright.

Group 3.

Fremont, Harrison, Lyon, Mills, Monona, Plymouth, Pottawattamie, Sioux, Woodbury.

KANSAS.

Group 1.

Allen, Anderson, Atchison, Bourbon, Brown, Butler, Chase, Chautauqua, Cherokee, Clay, Cloud, Coffey, Cowley, Crawford, Dickinson, Doniphan, Douglas, Elk, Ellsworth, Franklin, Geary, Greenwood, Harper, Harvey, Jackson, Jefferson, Jewell, Johnson, Kingman, Labette, Leavenworth, Lincoln, Linn, Lyon, McPherson, Marion, Marshall, Miami, Mitchell, Montgomery, Morris, Nemaha, Neosho, Osage, Ottawa, Pottawatomie, Reno, Republic, Rice, Riley, Saline, Sedgwick, Shawnee, Sumner, Wabaunsee, Washington, Wilson, Woodson, Wyandotte.

KANSAS—Continued.

Group 2.

Barber, Barton, Cheyenne, Clark, Comanche, Decatur, Edwards, Ellis, Finney, Ford, Gove, Graham, Grant, Gray, Greeley, Hamilton, Haskell, Hodgeman, Kearny, Kiowa, Lane, Logan, Meade, Morton, Ness, Norton, Osborne, Pawnee, Phillips, Pratt, Rawlins, Rooks, Rush, Russell, Scott, Seward, Sheridan, Sherman, Smith, Stafford, Stanton, Stevens, Thomas, Trego, Wallace, Wichita.

KENTUCKY.

Group 1.

Bell, Boyd, Breathitt, Carter, Clay, Clinton, Elliott, Estill, Floyd, Harlan, Jackson, Johnson, Knott, Knox, Laurel, Lawrence, Lee, Leslie, Letcher, Magoffin, Martin, Menifee, Morgan, Owsley, Perry, Pike, Powell, Pulaski, Rockcastle, Wayne, Whitley, Wolfe.

Group 2.

Boone, Bracken, Breckinridge, Campbell, Carroll, Crittenden, Daviess, Gallatin, Greenup, Hancock, Henderson, Jefferson, Kenton, Lewis, Livingston, McCracken, Mason, Meade, Oldham, Trimble, Union.

Group 3.

Ballard, Carlisle, Fulton, Hickman.

Group 4.

Adair, Allen, Anderson, Barren, Bath, Bourbon, Boyle, Bullitt, Butler, Caldwell, Calloway, Casey, Christian, Clark, Cumberland, Edmonson, Fayette, Fleming, Franklin, Garrard, Grant, Graves, Grayson, Green, Hardin, Harrison, Hart, Henry, Hopkins, Jessamine, Larue, Lincoln, Logan, Lyon, McLean, Madison, Marion, Marshall, Mercer, Metcalfe, Monroe, Montgomery, Muhlenberg, Nelson, Nicholas, Ohio, Owen, Pendleton, Robertson, Rowan, Russell, Scott, Shelby, Simpson, Spencer, Taylor, Todd, Trigg, Warren, Washington, Webster, Woodford.

LOUISIANA.

Group 1.

Acadia,
Ascension,
Assumption,
Calcasieu,
Cameron,
East Baton Rouge,
Iberia,
Iberville,
Jefferson,
Lafayette,
Lafourche,
Livingston,
Orleans,
Plaquemines,
St. Bernard,
St. Charles,
St. Helena,
St. James,
St. John the Baptist,
St. Landry,
St. Martin,
St. Mary,
St. Tammany,
Tangipahoa,
Terrebonne,
Vermilion,
Washington,
West Baton Rouge.

Group 2.

Avoyelles,
Concordia,
East Carroll,
East Feliciana,
Madison,
Pointe Coupee,
Tensas,
West Carroll,
West Feliciana.

Group 3.

Bienville,
Bossier,
Caddo,
Caldwell,
Catahoula,
Claiborne,
De Soto,
Franklin,
Grant,
Jackson,
Lincoln,
Morehouse,
Natchitoches,
Ouachita,
Rapides,
Red River,
Richland,
Sabine,
Union,
Vernon,
Webster,
Winn.

MAINE.

Group 1.

Androscoggin,
Cumberland,
Hancock,
Kennebec,
Knox,
Lincoln,
Sagadahoc,
Waldo,
Washington,
York.

Group 2.

Aroostook,
Franklin,
Oxford,
Penobscot,
Piscataquis,
Somerset.

MARYLAND.

Group 1.

Anne Arundel,
Baltimore,
Baltimore city,
Calvert,
Caroline,
Carroll,
Cecil,
Charles,
Dorchester,
Harford,
Howard,
Kent,
Montgomery,
Prince George,
Queen Anne,
St. Mary,
Somerset,
Talbot,
Wicomico,
Worcester.

Group 2.

Allegany,
Frederick,
Garrett,
Washington.

MASSACHUSETTS.

Group 1.

Barnstable,
Bristol,
Dukes,
Essex,
Middlesex,
Nantucket,
Norfolk,
Plymouth,
Suffolk.

Group 2.

Berkshire,
Franklin,
Hampden,
Hampshire,
Worcester.

MICHIGAN.

Group 1.

Alcona,
Alger,
Allegan,
Alpena,
Antrim,
Arenac,
Baraga,
Bay,
Benzie,
Berrien,
Charlevoix,
Cheboygan,
Chippewa,

Montmorency,
Newaygo,
Oakland,
Ogemaw,
Osceola,
Oscoda,
Otsego,
Roscommon,
St. Joseph,
Shiawassee,
Washtenaw,
Wexford.

MINNESOTA.

Group 1.

Anoka,
Benton,
Crow Wing,
Dakota,
Goodhue,
Hennepin,
Houston,
Morrison,
Ramsey,
Sherburne,
Stearns,
Wabasha,
Washington,
Winona,
Wright.

Group 2.

Bigstone,
Blue Earth,
Brown,
Carver,
Chippewa,
Cottonwood,
Dodge,
Douglas,
Faribault,
Fillmore,
Freeborn,
Grant,
Jackson,
Kandiyohi,
Lac qui Parle,
Lesueur,
Lincoln,
Lyon,
Martin,
McLeod,
Meeker,
Mower,
Murray,
Nicollet,
Nobles,
Olmsted,

Redwood,
Renville,
Rice,
Rock,
Scott,
Sibley,
Steele,
Stevens,
Swift,
Todd,
Traverse,
Waseca,
Watonwan,
Yellow Medicine.

Group 3.

Aitkin,
Becker,
Beltrami,
Carlton,
Cass,
Chisago,
Clay,
Cook,
Hubbard,
Isanti,
Itasca,
Kanabec,
Kittson,
Lake,
Marshall,
Millelacs,
Norman,
Ottertail,
Pine,
Polk,
Red Lake,
Roseau,
St. Louis,
Wadena,
Wilkin.

MISSISSIPPI.

Group 1.

Hancock, Harrison, Jackson.

Group 2.

Alcorn, Amite, Attala, Benton, Calhoun, Carroll, Chickasaw, Choctaw, Clarke, Clay, Copiah, Covington, Franklin, Greene, Grenada, Hinds, Holmes, Itawamba, Jasper, Jones, Kemper, Lafayette, Lauderdale, Lawrence, Leake, Lee, Lincoln, Lowndes, Madison, Marion, Marshall, Monroe, Montgomery, Neshoba, Newton, Noxubee, Oktibbeha, Panola, Pearl River, Perry, Pike, Pontotoc, Prentiss, Rankin, Scott, Simpson, Smith, Tate, Tippah, Tishomingo, Union, Wayne, Webster, Winston, Yalobusha.

Group 3.

Adams, Bolivar, Claiborne, Coahoma, De Soto, Issaquena, Jefferson, Leflore, Quitman, Sharkey, Sunflower, Tallahatchie, Tunica, Warren, Washington, Wilkinson, Yazoo.

MISSOURI.

Group 1.

Bollinger, Cape Girardeau, Clark, Dunklin, Jefferson, Lewis, Lincoln, Marion, Mississippi, New Madrid, Pemiscot, Perry, Pike, Ralls, St. Charles, Ste. Genevieve, St. Louis, St. Louis city, Scott, Stoddard.

Group 2.

MISSOURI—Continued.

Group 3.

Adair, Audrain, Caldwell, Clinton, Daviess, Dekalb, Gentry, Grundy, Harrison, Knox, Linn, Livingston, Macon, Mercer, Monroe, Nodaway, Putnam, Randolph, Schuyler, Scotland, Shelby, Sullivan, Worth.

Group 4.

Andrew, Atchison, Boone, Buchanan, Callaway, Carroll, Chariton, Clay, Cole, Cooper, Franklin, Gasconade, Holt, Howard, Jackson, Lafayette, Moniteau, Montgomery, Osage, Platte, Ray, Saline, Warren.

MONTANA.

Group 1.

Carbon, Custer, Dawson, Park, Sweetgrass, Valley, Yellowstone.

Group 2.

Beaverhead, Broadwater, Cascade, Choteau, Deerlodge, Fergus, Flathead, Gallatin, Granite, Jefferson, Lewis and Clarke, Madison, Meagher, Missoula, Ravalli, Silverbow, Teton.

NEBRASKA.

Group 1.

Adams, Antelope, Boone, Buffalo, Butler, Clay, Colfax, Cuming, Dodge, Fillmore, Franklin, Furnas, Gage, Gosper, Greeley, Hall, Hamilton, Harlan, Howard, Jefferson, Johnson, Kearney, Lancaster, Madison, Merrick, Nance, Nuckolls, Pawnee, Phelps, Pierce, Platte, Polk, Saline, Saunders, Seward. Sherman, Stanton, Thayer, Valley, Wayne, Webster, York.

Group 2.

Burt, Cass, Cedar, Dakota, Dixon, Douglas, Knox, Nemaha, Otoe, Richardson, Sarpy, Thurston, Washington.

NEBRASKA—Continued.

GROUP 3.

Banner, Blaine, Boxbutte, Boyd, Brown, Chase, Cherry, Cheyenne, Custer, Dawes, Dawson, Deuel, Dundy, Frontier, Garfield, Grant, Hayes, Hitchcock, Holt, Hooker, Keith, Keyapaha, Kimball, Lincoln, Logan, Loup, McPherson, Perkins, Redwillow, Rock, Scotts Bluff, Sheridan, Sioux, Thomas, Wheeler.

NEVADA.

This state forms one group.

NEW HAMPSHIRE.

GROUP 1.

Belknap, Hillsboro, Merrimack, Rockingham, Strafford.

GROUP 2.

Carroll, Cheshire, Coös, Grafton, Sullivan.

NEW JERSEY.

GROUP 1.

Atlantic, Bergen, Burlington, Camden, Cape May, Cumberland, Essex, Gloucester, Hudson, Middlesex, Monmouth, Ocean, Salem, Union.

GROUP 2.

Hunterdon, Mercer, Morris, Passaic, Somerset, Sussex, Warren.

NEW MEXICO.

GROUP 1.

Chaves, Colfax, Eddy, Guadalupe, Lincoln, Mora, San Miguel, Union.

GROUP 2.

Bernalillo, Donna Ana, Grant, Otero, Rio Arriba, San Juan, Santa Fe, Sierra, Socorro, Taos, Valencia.

NEW YORK.

GROUP 1.

Kings, Nassau, New York, Queens, Richmond, Rockland, Suffolk, Westchester.

GROUP 2.

Clinton, Essex, Franklin, Hamilton, Herkimer, St. Lawrence, Warren.

NEW YORK—Continued.

GROUP 3.

Delaware, Greene, Orange, Sullivan, Ulster.

GROUP 4.

Chautauqua, Erie, Genesee, Jefferson, Monroe, Niagara, Orleans, Oswego, Wayne.

GROUP 5.

Albany, Allegany, Broome, Cattaraugus, Cayuga, Chemung, Chenango, Columbia, Cortland, Dutchess, Fulton, Lewis, Livingston, Madison, Montgomery, Oneida, Onondaga, Ontario, Otsego, Putnam, Rensselaer, Saratoga, Schenectady, Schoharie, Schuyler, Seneca, Steuben, Tioga, Tompkins, Washington, Wyoming, Yates.

NORTH CAROLINA.

GROUP 1.

Beaufort, Bertie, Bladen, Brunswick, Camden, Carteret, Chowan, Columbus, Craven, Cumberland, Currituck, Dare, Duplin, Gates, Greene, Hertford, Hyde, Jones, Lenoir, Martin, New Hanover, Onslow, Pamlico, Pasquotank, Pender, Perquimans, Pitt, Robeson, Sampson, Tyrrell, Washington, Wayne.

GROUP 2.

Alamance, Anson, Cabarrus, Caswell, Catawba, Chatham, Cleveland, Davidson, Davie, Durham, Edgecomb, Forsyth, Franklin, Gaston, Granville, Guilford, Halifax, Harnett, Iredell, Johnston, Lincoln, Mecklenburg, Montgomery, Moore, Nash, Northampton, Orange, Person, Randolph, Richmond, Rockingham, Rowan, Scotland, Stanly, Stokes, Union, Vance, Wake, Warren, Wilson, Yadkin.

GROUP 3.

Alexander, Alleghany, Ashe, Buncombe, Burke, Caldwell, Cherokee, Clay, Graham, Haywood, Henderson, Jackson, McDowell, Macon, Madison, Mitchell, Polk, Rutherford, Surry, Swain, Transylvania, Watauga, Wilkes, Yancey.

NORTH DAKOTA.

Group 1.

Barnes,	Kidder,	Richland,
Benson,	Lamoure,	Rolette,
Bottineau,	Logan,	Sargent,
Cass,	McHenry,	Steele.
Cavalier,	McIntosh,	Stutsman,
Dickey,	Nelson,	Towner,
Eddy,	Pembina,	Traill,
Foster,	Pierce,	Walsh,
Grand Forks,	Ramsey,	Wells.
Griggs,	Ransom,	

Group 2.

Billings,	Mercer,	Ward,
Burleigh,	Morton,	Williams.
Emmons,	Oliver,	
McLean,	Stark,	

OHIO.

Group 1.

Ashtabula,	Lake,	Sandusky,
Cuyahoga,	Lorain,	Wood.
Erie,	Lucas,	
Geauga,	Ottawa,	

Group 2.

Adams,	Hamilton,	Perry,
Athens,	Highland,	Pickaway,
Belmont,	Hocking,	Pike,
Brown,	Jackson,	Preble,
Butler,	Jefferson,	Ross,
Clermont,	Lawrence,	Scioto,
Clinton,	Meigs,	Vinton,
Fairfield,	Monroe,	Warren,
Fayette,	Montgomery,	Washington.
Gallia,	Morgan,	
Greene,	Noble,	

Group 3.

Allen,	Hardin,	Paulding,
Ashland,	Harrison,	Portage,
Auglaize,	Henry,	Putnam,
Carroll,	Holmes,	Richland,
Champaign,	Huron,	Seneca,
Clark,	Knox,	Shelby,

Darke,	Mahoning,	Tuscarawas,
Defiance,	Marion,	Union,
Delaware,	Medina,	Van Wert,
Franklin,	Mercer,	Wayne,
Fulton,	Miami,	Williams,
Guernsey,	Morrow,	Wyandot.
Hancock,	Muskingum,	

OKLAHOMA TERRITORY.

This territory forms one group.

OREGON.

Group 1.

Baker,	Klamath,	Umatilla,
Crook,	Lake,	Union,
Gilliam,	Malheur,	Wallowa,
Grant,	Morrow,	Wasco,
Harney,	Sherman,	Wheeler.

OREGON—Continued.

Group 2.

Benton,	Douglas,	Marion,
Clackamas,	Jackson,	Multnomah,
Clatsop,	Josephine,	Polk,
Columbia,	Lane,	Tillamook,
Coos,	Lincoln,	Washington,
Curry,	Linn,	Yamhill.

PENNSYLVANIA.

Group 1.

Adams,	Fayette,	Northumberland,
Bedford,	Franklin,	Perry,
Blair,	Fulton,	Pike,
Bradford,	Huntingdon,	Schuylkill,
Cambria,	Indiana,	Snyder,
Cameron,	Juniata,	Somerset,
Carbon,	Lackawanna,	Sullivan,
Center,	Lebanon,	Susquehanna,
Clearfield,	Luzerne,	Tioga,
Clinton,	Lycoming,	Union,
Columbia,	Mifflin,	Wayne,
Cumberland,	Monroe,	Westmoreland,
Dauphin,	Montour,	Wyoming.

Group 2.

Allegheny,	Elk,	Montgomery,
Armstrong,	Erie,	Northampton,
Beaver,	Forest,	Philadelphia,
Berks,	Greene,	Potter,
Bucks,	Jefferson,	Venango,
Butler,	Lancaster,	Warren,
Chester,	Lawrence,	Washington,
Clarion,	Lehigh,	York.
Crawford,	McKean,	
Delaware,	Mercer,	

RHODE ISLAND.

This state forms one group.

SOUTH CAROLINA.

Group 1.

Beaufort,	Colleton,	Hampton,
Berkeley,	Dorchester,	Horry,
Charleston,	Florence,	Marion,
Clarendon,	Georgetown,	Williamsburg.

Group 2.

Oconee, Pickens.

Group 3.

Abbeville,	Edgefield,	Newberry,
Aiken,	Fairfield,	Orangeburg,
Anderson,	Greenville,	Richland,

TABLE 1.

DEATHS IN THE UNITED STATES, THE REGISTRATION AREA AND ITS SUBDIVISIONS AND THE NONREGISTRATION AREA DURING THE CENSUS YEAR ENDING MAY 31, 1900, FROM CERTAIN DISEASES AND CLASSES OF DISEASES, BY CONJUGAL CONDITION, COLOR, AGE, AND BIRTHPLACES OF MOTHERS, WITH DISTINCTION OF SEX.

NOTE.—Conjugal condition was not reported in the registration returns for Dubois, Pa., Erie, Pa., Galesburg, Ill., Helena, Mont., Natchez, Miss., and Wichita, Kans., and the deaths in these cities are therefore omitted in this table.

TABLE 1.—DEATHS FROM CERTAIN DISEASES AND CLASSES OF DISEASES, BY CONJUGAL

THE UNITED STATES.

	CAUSE AND CONJUGAL CONDITION.		White.	Colored.	AGE. All ages.	Under 15	15 to 19	20 to 24	25 to 34	35 to 44	45 to 54	55 to 64	65 and over.	Unknown.
