

MULTIPLE CAUSE OF DEATH PUBLIC USE TAPE

ICDA-8 (1968-1978)

PHYSICIAN MEDICAL EXAMINER OR CORONER
U.S. STANDARD
CERTIFICATE OF DEATH

DEATH NUMBER: 104

DATE OF BIRTH: JULY 4 1926
DATE OF DEATH: JULY 4 1976

AGE: 50
SEX: M
RACE: W
ETHNICITY: UNION

HOSPITAL OR OTHER INSTITUTION: USPH HOSPITAL

RESIDENCE: 1 ELM STREET, UNION

DEATH CAUSE BY: CARDIAC ARREST
 I. IMMEDIATE CAUSE: MYOCARDIAL INFARCTIC
 II. INTERMEDIATE CAUSE: GENERALIZED ARTERIOSCLEROSIS
 III. UNDERLYING CAUSE: HYPERTENSIVE DISEASE

DEATH OCCURRED AT: HOME

DECLARED BY: JERRY RICE

DATE OF BIRTH: JUL 4 1926
DATE OF DEATH: JUL 4 1976
TIME OF DEATH: 7:07 p.m.

PLACE OF BURIAL: BLACKHOLE

DECEMBER 1, 1980

DOCUMENTATION OF MULTIPLE CAUSE OF DEATH
PUBLIC USE TAPES FOR ICDA-8 DATA (1968-1978)

December 1, 1980

II. DATA FILE CHARACTERISTICS

File Organization: One file, multiple reels.

Record Type: Fixed length.

Record Length: 285.

Blocksize: 28,500.

| <u>Data Year</u> | <u>Number of Records</u> |
|------------------|--------------------------|
| 1968 | 1,930,082 |
| 1969 | 1,921,990 |
| 1970 | 1,922,966 |
| 1971 | 1,929,476 |
| 1972 | 983,001 |
| 1973 | 1,975,126 |
| 1974 | 1,936,476 |
| 1975 | 1,895,135 |
| 1976 | 1,911,907 |
| 1977 | 1,902,106 |
| 1978 | 1,930,627 |

1. For 1972 data year, NCHS processed only a 50 percent sample of death records.
2. Each data year was processed using the PL/1 language on an IBM 370/158.
3. The last block for each data year may be a short block.
4. The data are recorded in IBM/EBCDIC 8-bit code for each character.
5. Codes may be numeric, alphabetic, or blanks (Hex 40).
6. A code "Z" is the EBCDIC code for the letter "Z."
7. A code "&" is the EBCDIC code for an ampersand (a punched card code 12).

DOCUMENTATION OF MULTIPLE CAUSE OF DEATH
PUBLIC USE TAPES FOR ICDA-8 DATA (1968-1978)

I. INTRODUCTION

This document is intended to provide guidance to the consumer in accessing and utilizing eleven Multiple Cause of Death Public Use Tape files which are now being prepared for release and will cover deaths occurring in the United States during the period 1968-1978. Each yearly tape file will contain two multiple cause of death fields which have been coded using the International Classification of Diseases, Adapted for Use in the United States, Eighth Revision (ICDA-8) and are available for the first time from these tapes. In addition, each tape file will contain all underlying cause, demographic, and geographic detail data originally released as part of the NCHS micro data tape program (see pages 9, 12, and 13, NCHS Standardized Micro-Data Tape Transcripts, Hyattsville, Maryland June 1978). The documentation provides the technical data processing information necessary to access the tapes and the classification structure and coding rules applied to create each variable on the tapes such that the user can readily assess relevance at varying levels of detail to his own particular research. Additionally, it conveys the characteristics of the multiple cause fields sufficient to guide the user in analyzing and interpreting multiple cause data. The user is alerted to certain pitfalls of interpretation, and the appropriateness of each type of multiple cause data to given applications is discussed.

The tape files are being readied for release according to the following order of priority: 1976, 1977, 1978, 1970, 1971, 1969, 1975, 1974, 1973, 1972, 1968. Current projections call for release of the 1976 file around December 31, 1980 with subsequent release of one file every nine to ten weeks throughout the period 1981-1982. These historical data files are being prepared on an ad hoc basis secondary to our current data files (1979 forward). In the event that there is competition for the same staff and computer resources, priority will go to the current data files and release of the remaining historical data files will be delayed.

In the following sections, data tapes for the entire period 1968-1978 are documented. Where there are differences in specifications among years, these differences are indicated. In certain cases, an entire attachment or appendix may be repeated to cover a separate set of years. In other situations, a footnote or parenthetical entry may suffice to denote an exception in one year.

III. TAPE FORMAT AND VARIABLE DEFINITION

In creating the multiple cause of death public use tape, all of the items contained on the traditional underlying cause detail mortality tape (see pages 9, 12, and 13 NCHS Standardized Micro-Data Tape Transcripts, Hyattsville, Maryland June, 1978) have been retained in their same code structure although some item locations have changed. Two multiple cause of death fields have been added to the tape to create a new tape of 285 bytes (with some compression of blanks in the original record).

Appendix A, and its attachments A-1 - A-5, provide documentation of variables, variable categories, and variable location on the multiple cause of death public use tapes. It is noted that the following material, while used in the processing of mortality data, is not included in this package:

- A. Eighth Revision International Classification of Diseases, Adapted for Use in the United States, Volumes 1 and 2.
- B. NCHS Instruction Manual Data Preparation Part 2a, Vital Statistics Instructions for Classifying the Underlying Cause of Death. 1/
- C. NCHS Instruction Manual Data Preparation Part 2b, Vital Statistics Instructions for Classifying Multiple Causes of Death. 1/
- D. NCHS Instruction Manual Data Preparation Part 2a, Vital Statistics ICDA Eighth Revision Decision Tables for Classifying Underlying Causes of Death.
- E. NCHS Instruction Manual Data Preparation Part 4, Vital Statistics Demographic Classification and Coding Instructions for Death Records.
- F. Vital Statistics Instruction Manual Part 9, Cause of Death Lists for Deaths Occurring in 1969.

1/ Prior to 1975, underlying cause and multiple cause coding instructions were printed in one manual, Part 2.

These documents, which are printed corresponding to a specific data year or combination of years, describe in detail the rules employed for demographic and medical classification on death records. Volumes 1 and 2 of the ICDA may be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402. The remaining documents (items B-F), while not absolutely essential to the proper interpretation of the data for a number of general applications, should nevertheless be studied carefully prior to any detailed analysis of demographic or medical data variables. In particular, there are a number of exceptions to the ICDA rules in multiple cause of death coding which, if not treated properly, may result in faulty analysis of the data. Users who do not already have access to these documents may request them from the Chief, Data Preparation Branch, Division of Data Processing, National Center for Health Statistics, P. O. Box 12214, Research Triangle Park, North Carolina 27709. The applicable data year(s) should be requested corresponding to the public use tape(s) being processed.

In addition, the user should refer to the Technical Appendices from the Vital Statistics of the United States for information on the source of data, coding procedures, quality of the data, etc. The Technical Appendix for the year(s) being requested is an enclosure to this documentation.

IV. MULTIPLE CAUSE DATA

The original scheme for coding conditions contained on the death certificate was designed with two objectives in mind. First, to facilitate etiological studies of the relationships among conditions, it was necessary to reflect accurately in coded form each condition and its location on the certification in the exact manner given by the certifier. Secondly, the codification needed to be carried out in a manner by which the underlying cause of death could be assigned through computer applications. The approach was to suspend the linkage provisions of the ICDA for the purpose of condition coding and code each entity with minimum regard to other conditions present on the certification. For ICDA-8 coding, this general approach -- hereafter called entity coding -- and the corresponding rules stated in the NCHS Instruction Manual Data Preparation Part 2b, Vital Statistics Instructions for Classifying Multiple Causes of Death worked well for the above purposes and have essentially been carried over for multiple cause coding under the Ninth Revision of the International Classification of Diseases.

Unfortunately, the set of multiple cause codes produced by entity coding is not conducive to a third objective -- the generation of person based multiple cause statistics. Person based analysis requires that each condition be coded within the context of every other condition on

the same certificate and modified or linked to such conditions as provided by ICDA-8. By definition, the entity data cannot meet this requirement since the linkage provisions distort the character and placement of the information originally recorded by the certifying physician.

Since the two objectives are incompatible, DVS has chosen to create from the original set of entity codes a new code set called record axis multiple cause data. The automated process through which they are created is called axis translation. Essentially, the axis of classification has been converted from an entity basis to a record (or person) basis. The record axis codes are assigned in terms of the set of codes that best describes the overall medical certification portion of the death certificate. The translation is accomplished through selective use of traditional linkage and modification rules for mortality coding. Underlying cause linkages which simply prefer one code over another for purposes of underlying cause selection are not included. Each entity code on the record is examined and modified (or perhaps deleted) as necessary to create a set of codes which are free of contradictions and are the most precise within the constraints of ICDA-8 and medical information on the record. Repetitive codes are deleted. The process may (1) combine two entity axis categories together to a new category thereby eliminating a contradiction or standardizing the data; (2) modify a category based on the presence of another to make it more accurate; or (3) eliminate one category in favor of another to promote specificity of the data or resolve contradictions. The following examples from ICDA-8 illustrate the effect of this translation:

Case 1: If "rheumatic heart disease" and "aortic endocarditis" are reported on a record they are entity coded to 398 (other heart disease, specified as rheumatic) and 3959 (diseases of aortic valve not specified as rheumatic). A more precise codification would be to code 3950 (diseases of aortic valve specified as rheumatic) in lieu of 3959 since rheumatic heart disease implies rheumatic involvement in the aortic endocarditis.

Case 2: Cerebral hemorrhage and benign hypertension are entity coded to 4319 (cerebral hemorrhage without mention of hypertension) and 401 (essential benign hypertension). Tabulation of records with 4319 codes would on the surface falsely imply that such records had no mention of hypertension. A preferable codification would be 4310 (cerebral hemorrhage with hypertension (benign)) in lieu of both 4319 and 401.

A. Entity Axis Codes

The original conditions coded for selection of the underlying cause of death were reformatted and edited prior to creating the public use tape. The following paragraphs describe these processing steps and the application of entity axis data.

REFORMAT: The conditions were originally coded in free format fashion (see Parts 2b and 4 of the NCHS Vital Statistics Instruction Manual Series) with special symbols denoting placement of codes, nature of injury codes, and computer processing flags. This format has been modified to remove and/or change these special symbols. Each condition is now denoted by an overall eight byte code with subcomponents as follows:

- 1. line indicator: The first byte represents the line of the certificate on which the code appears. Five lines (1-5) are allowable with the fourth denoting a written in "due to" beyond the three lines provided in Part I of the U.S. standard death certificate. Line "5" represents Part II of the certificate.
- 2. position indicator: The next two bytes indicate the position of the code on the line i.e., it is the first (01), second (02), ... fourteenth (14) code on the line.
- 3. cause category: The next four bytes represent the ICDA-8 cause code.
- 4. nature of injury flag: ICDA-8 uses the same series of numbers (800-999) to indicate nature of injury (N codes) and external cause codes (E codes). This flag distinguishes between the two with a one (1) representing nature of injury codes and a zero (0) representing all other cause codes.

A maximum of 14 of these eight byte codes is captured on a record for multiple cause purposes. This may consist of 14 codes on a line or 14 codes distributed across one or more lines depending on where the subject conditions are located on the certificate. Codes may be omitted from one or more lines, e.g., line 1 with one or more codes, line 2 with no codes, line 3 with one or more codes.

In writing out these codes, they are ordered as follows: line 1 first code, line 1 second code, etc. ----- line 2 first code, line 2 second code, etc. ----- line 3 ----- line 4 ----- line 5. Any space remaining in the field is left blank. The specifics of locations are contained in Appendix A.

EDIT: The original conditions have also been edited to remove invalid codes, reverify the coding of certain rare causes of death, and assure age/cause and sex/cause compatibility. Appendix B provides the details of these edit criteria. The appendix cites the set of cause codes which are valid to entity axis multiple cause coding. This set is different from the set of valid underlying cause codes in two instances.

1. Nature of injury codes are valid to multiple cause entity axis coding but not to underlying cause coding.
2. For codes 764-768, the fourth digit nine is substituted for 0-4 in multiple cause entity axis coding (see Part 2b of the NCHS Vital Statistics Instruction Manual Series, 1976-1978, page 181). For underlying cause coding, fourth digits 0-4 and 9 are valid.

The rare causes were checked back to the source certificate to verify accuracy of coding and further verified with the vital registrars where it was deemed necessary. In general the objective of the rare cause edit was to assure that rare causes were not only coded accurately but also confirmed by the Health Officer as accurate diagnoses. Unfortunately, the extensive time lag between source document creation and processing of the data precluded total achievement of this objective. Frequently, it was not practicable to confirm the diagnosis at the time of processing. Moreover, the source document was occasionally not available in NCHS files. Therefore, the user should recognize that despite the edit, a few errors may exist in some of these categories.

Age/cause and sex/cause incompatibilities were likewise checked against the source document and coding errors in the multiple causes were corrected. In a few instances where the original source document appeared to be in error it was necessary to arbitrarily modify the ICDA-8 codes to pass the edit. In order to retain compatibility with previously published data, demographic data and underlying cause of death data were not changed. Few such errors were noted. In each case, the multiple cause codes were changed to provide compatibility.

In interpreting the entity axis codes through reference to ICDA-8 and the valid code lists (Appendix B) it should be recognized that certain categories of the ICDA have been modified for multiple cause purposes. These categories are contained in Part 2b of the Vital Statistics Instruction Manual Series but are repeated in Appendix C for convenience of reference. Additionally, it should be noted that the code 7968 has been converted to 7969 and is not contained in the entity axis set. Finally, the component (parenthetical) codes addressed in Part 2b of the NCHS Vital Statistics Instruction Manual Series (e.g., see pages 38-43 of the 1976-1978 issuance) have been dropped.

ENTITY AXIS APPLICATIONS: The entity axis multiple cause data set is appropriate to analyses which require that each condition be coded as a stand alone entity without linkage to other conditions and/or information on the placement of such conditions in the certificate. Within this framework, the entity data are appropriate to the examination of etiological relationships among conditions, accuracy of certification reporting, and the validity of traditional assumptions in underlying cause selection. Additionally, the entity data provide in certain categories a more detailed code assignment which is linked out in the creation of record axis data. Where such detail is needed for a study, the user should selectively employ entity data. Finally, the researcher may wish to not be bound by the assumptions used in the axis translation process preferring rather to investigate hypotheses of his own predilection.

By definition, the main limitation of entity axis data is that an entity code does not necessarily reflect the best code for a condition when considered within the context of the medical certification as a whole. As a result certain entity codes can be misleading or even contradict other codes in the record. For example, category 4109 is titled "Acute myocardial infarction Without mention of hypertensive disease." Within the framework of entity codes this is interpreted to mean that the codable entity itself contained no mention of hypertensive disease rather than that hypertensive disease is not mentioned anywhere on the record. Tabulation of records with a "4109" as a count of persons having an acute myocardial infarction without mention of hypertensive disease would therefore be erroneous. This illustrates the fact that under entity coding the ICDA-8 titles cannot be taken literally. The user must study the rules for entity coding as they relate to his research prior to utilization of entity data. The user is further cautioned that the inclusion notes in ICDA-8 which relate to modifying and combining categories are seldom applicable to entity coding (except where provided in Part 2b of the Vital Statistics Instruction Manual Series).

In tabulating the entity axis data, one may count codes with the resultant tabulation of an individual code representing the number of times the disease(s) represented by the code appears in the file. In this kind of tabulation of morbid condition prevalence, the counts among categories may be added together to produce counts for groups of codes. Alternatively, subject to the limitations given above one may count persons having mention of the disease represented by a code or codes. In this instance it is not correct to add counts for individual codes to create person counts for groups of codes. Since more than one code in the researcher's interest may appear together on the certificate, totaling must account for higher order interactions among codes. Up to 14 codes may be assigned on a record; therefore, a 14-way interaction is theoretically possible. All totaling must be based on mention of one or more of the categories under investigation.

B. Record Axis Codes

FORMAT: Each record (or person) axis code is displayed in five bytes. Locational information is not relevant. The code consists of the following components:

| | |
|------------------------|--|
| Cause category: | The first four bytes represent the ICDA-8 cause code. |
| Nature of injury flag: | The last byte contains a 0 or 1 with the 1 indicating that the cause is a nature of injury category. |

Again, a maximum of 14 codes are captured on a record for multiple cause purposes. The codes are written in a 70 byte field in ascending code number (5 bytes) order with any unused bytes left blank.

EDIT: The entity codes have been edited for rare causes and age/cause and sex/cause compatibility; and this compatibility is retained in the translation process. Likewise, individual code validity is retained. The valid code set for record axis coding is the same as that for entity coding with one exception.

The codes 7640-7644, 7650-7654, 7660-7664, 7670-7674, and 7680-7684 which were valid for underlying cause coding but not for entity coding are valid for record axis coding. They are generated through the modification rules which are used in both the selection of the underlying cause and in the axis translation process. These codes are cited in Appendix D.

AXIS TRANSLATION LOGIC. The axis translation process is described in detail in a paper by Chamblee and Evans entitled "ICDA-8 Multiple Cause of Death Axis Translation System" which is available from the address given at the end of this documentation. The following paragraphs provide a summary of the main features. The approach used in axis translation is to examine each code (anchor code) on the record and determine whether it (the anchor code) should be link combined with or link modified by any other code (subanchor code) on the record. The examination process starts with the left most code on the highest used line of the certificate. That code is successively paired with other codes in a predefined priority order until a combination or modification is made. Once a combination or modification is made, the new code (recode) is substituted for the original anchor code and this recode is similarly paired with other codes on the record. The process continues until all possible combination and modification linkages with the original anchor or its substitute are exhausted. Then the process is repeated using remaining codes in the record as anchor codes until all original codes are utilized. At the conclusion of all combination and modification linkages, deletion linkages are invoked where the anchor code is deleted and the subanchor code is retained. Repetitive codes are also deleted. Each 5 byte record axis code is then written to the output tape file.

A given "linkage" involves either (1) combination of both codes in a pair into a new code, (2) modification of one code of a pair by the other, or (3) deletion of one code of a pair. As an additional constraint, certain linkages are defined to be valid only if one code is in a due to positional relationship (i.e., they appear on different but adjacent lines of the certificate) to the other code. Other linkages are valid regardless of positional relationship (i.e., a mention of linkage). The following examples illustrate each component of the process.

combining two codes into one code

If a 4109 ("acute myocardial infarction without mention of hypertensive disease") is mentioned with a 401 ("hypertension"), replace the 4109 and the 401 with a 4100 ("acute myocardial infarction with hypertensive disease").

If a 320.0 ("H. influenzae meningitis") is reported due to 0119 ("pulmonary tuberculosis NOS"), replace the 320.0 and the 0119 with an 0130 ("tuberculous meningitis").

modifying one code based on the presence of another

If 3949 ("diseases of mitral valve not specified as rheumatic") is mentioned with a 398 ("other heart disease, specified as rheumatic"), modify the 3949 to 3940 ("diseases of mitral valve specified as rheumatic") and keep the 398.

If 1929 ("malignant neoplasm of other parts of the nervous systems site unspecified") is reported due to 4319 ("cerebral hemorrhage without mention of hypertension"), modify the 1929 to 191 ("malignant neoplasm of brain") and keep 4319.

deleting one code based on the presence of another

If 4109 ("acute myocardial infarction without mention of hypertensive disease") is mentioned with 4100 ("acute myocardial infarction with mention of hypertension"), delete 4109.

If 507 ("hay fever") is mentioned with 493 ("asthma"), delete 507.

If 0909 ("congenital syphilis, unspecified") is mentioned with 0900 ("early congenital syphilis, symptomatic"), delete 0909.

If 1519 ("malignant neoplasm of stomach, part unspecified") is mentioned with 1519 ("malignant neoplasm of stomach, part unspecified"), delete one of the 1519's.

Putting it together into a record, the following example illustrates the character of the overall process.

```

While it is necessary to follow the translation algorithm on an actual record to assess the implications for a specific set of codes, the following general statements can be made.

- * The objective of the translation process is to convert multiple cause data from an entity axis basis to a record axis basis while maintaining the maximum amount of detail consistent with the creation of an accurate, noncontradictory, unduplicated set of ICDA-8 codes for each record. The linkages employed in the translation process are traditional to underlying cause selection and modification. However, only those linkages necessary to achieve the above objectives are utilized.
- * For each code on the record an opportunity is given for every other code to modify or influence it through any valid linkage.
- * To insure consistency and avoid contradictions in the translation process, priorities in applying the linkages are assigned as follows:
 1. combinations over modifications over deletions
 2. "due to" linkages over "mention of" linkages
 3. "due tos" changing lower code over "due tos" changing upper code
- * Anchor codes are selected in the following priority order: First listed on record (line 1 code 1) to the last listed on record (line 5 code 14).
- * Codes to be paired with anchor codes are selected in the following priority:
 1. to the right on same line as anchor code
 2. next lower line and across it left to right
 3. etc. . . to Part II
 4. then back to line a, b, etc., until anchor code is again reached.
- * When a code combines with an anchor code, that combined code cannot serve as a future anchor code. This is done to avoid the generation of superfluous codes conveying the same information.

AXIS TRANSLATION TABLES: A set of tables consisting of approximately 4,000 entries contains all linkages valid to the system. These tables are given in Appendix E which provides the following information for each entry:

1. anchor code (A): the code which is being modified, combined, or deleted.
2. ambivalent flag: codes "1" - "5" in this column indicate that the particular linkage is ambivalent in nature. In other words, the linkage cannot be resolved on the basis of the code numbers alone. It is valid only for certain specified inclusion terms in ICDA-8 which are assignable to the codes and this can be determined only by reference back to the source document.

Special provision was built into the system to handle these entries without costly reference back to source documents. The rules are as follows:

- a. If the underlying cause of death is the same as the recode for a combination and modification type or same as subanchor for deletion type linkages, that linkage is invoked on the basis that the underlying cause modification process originally invoked that same linkage.
- b. If the underlying cause of death is the same as either the anchor code or subanchor code for combination and modification type linkages or same as the anchor code for deletion type linkages, the linkage is not invoked on the basis that the underlying cause modification process did not invoke the linkage.
- c. If neither of the above situations exist, then the linkage is invoked 10 percent of the time (i.e., when sequence number ends in 5) if the AMB flag is "1"; 40 percent of the time (i.e., when the sequence number ends in 1, 3, 6, 7) if the AMB flag is "2"; 60 percent of the time (i.e., when the sequence number ends in 0, 1, 3, 4, 5, 7) if the AMB flag is "3"; 90 percent of the time (i.e., when the sequence number ends in 0, 1, 2, 3, 5, 6, 7, 8, 9) if the AMB flag is "4". AMB flag "5" is used in situations where an anchor and subanchor are repeated in a given table, link to different recodes, and one of the recodes must be selected. Code "5" forces the record to link with the most likely recode if rules a and b above fail.

The entries in 1-5 in the tables reflect the judgment of expert neurologists on the percentage of time each ambivalent linkage would be a "yes" if the record were actually examined and past experience with the linkage in assigning the underlying cause of death. In general, the bias in this procedure is minimal. Rule c is employed on only 0.5 percent of the records. Nevertheless, when examining specific records involving these categories, the user should be aware that a given record axis code may be a result of an arbitrary linkage.

3. subanchor code (S). The code (or span of codes) which invokes combination, modification or deletion of the anchor code.
4. recode: The new code resulting from the linkage if any (see 5 below).
5. type: The character of the particular linkage is defined as follows.

COM - DUE TO: Anchor code and subanchor code are combined into a third code based on "due to" positional relationship where anchor code is due to subanchor code.

COM - MENTION OF: Anchor code and subanchor code are combined into third code based on "mention of" positional relationship.

MOD - S DUE TO A: Anchor code is modified by subanchor code based on "due to" positional relationship where subanchor code is due to anchor code.

MOD - A DUE TO S: Anchor code is modified by subanchor code based on "due to" positional relationship where anchor code is due to subanchor code.

MOD - MENTION OF: Anchor code is modified by subanchor code based on "mention of" positional relationship.

DELETION: Anchor code is deleted and subanchor code is retained as more specific or to eliminate a contradiction.

6. entry number: This is the line number of the entry in the tables given in sequential order and allows the user to relate specific entries to information given in Appendices F and G.

The entries given in Appendix E are perhaps most useful to the user in relation to Appendices F (Record Axis Multiple Cause Codes Which May Have Been Generated by Axis Translation and the Table Entries in Which They Are Located) and G (Entity Axis Multiple Cause Codes Which May Be Changed by Axis Translation and the Table Entries in Which They Are Located). With Appendix F, one can determine the potential entity axis components of a given record axis code i.e., linkages which may have given rise to the code. In reverse, with Appendix G, one can assess the potential impact of axis translation on a given entity axis code i.e., linkages which may modify it. Again, the user is cautioned that the information contained herein is only a guide to the effect of the process. The exact algorithm can be provided upon request.

IMPUTATION OF E CODES TO WHICH N CODES RELATE: Under entity axis coding rules for ICDA-8, when one term entities are given which state or imply cause (E code) and effect (N code), an N code and an E code are both assigned only for predefined terms given in the instruction manual (see Part 2b of the Vital Statistics Instruction Manual Series for more information). Otherwise, the comparable E code is not coded in the entity axis field unless the external cause is specifically stated elsewhere on the record. Thus, the E code is lost unless by the underlying cause coding rules it is inputted to be the underlying cause of death. The lack of such E codes creates problems in analyzing nature of injury and external cause data on a comparable basis.

To overcome these limitations, the axis translation process has been extended beyond the basic linkage concept described in the preceding paragraphs to generate in the record axis data field the E code to which an N code or group of N codes relate. This is accomplished by the following steps which are applied in order:

1. If the underlying cause of death is an E code and is not in the record axis field, insert it in the record axis field.
2. If there is an N code(s) but no E code in the record axis field, insert the appropriate E code based on Appendix H. When multiple N codes convert to different E codes, insert E929, the residual accident category.
3. If there are E codes in the categories E9300-E9319, E947 with N codes in the categories N820-N959, N9800-N9899, N9910-N9969 and no other E code is on the record, then assign an E code from Appendix H as in 2 above.
4. If there are E codes in the categories E911-E912 with N codes in the categories N820-N931, N936-N959, N9800-N9899, N9910-N9969 and no other E code is on the record, then assign an E code from Appendix H as in 2 above.

These four actions do not completely eliminate the problem since a maximum of only one E code may be added to the file. However, it is felt that it does reduce the problem to the extent it can be without examining each source record manually. The need for multiple E codes is estimated to be infrequent and automatic generation of these codes could produce incompatible E codes within the record axis field. The process does reduce the E code omissions from approximately 10 percent to less than 1 percent of the records with N codes.

RECORD AXIS APPLICATIONS: The record axis multiple cause data set is the basis for NCHS core multiple cause tabulations. Location of codes is not relevant to this data set and conditions have been linked into the most meaningful categories for the certification. The most immediate consequence for the user is that the codes on the record already represent mention of a disease assignable to that particular ICDA-8 category. This is in contrast to the entity code which is assigned each time such a disease is reported on two different lines of the certification. Secondly, the linkage implies that within the constraints of ICDA-8 the most meaningful code has been assigned. The translation process creates for the user a data set which is edited for contradictions, duplicate codes, and imprecisions. In contrast to entity axis data, record axis data are classified in a manner comparable to underlying cause of death classification thereby facilitating joint analysis of these variables. 1/ Likewise, they are comparable to general morbidity coding where the linkage provisions of ICDA-8 are usually utilized. A potential disadvantage of record axis data is that some detail is sacrificed in a number of the linkages

The user can take the record axis codes as literally representing the information conveyed in ICDA-8 category titles. While knowledge of the rules for combining and linking and coding conditions is useful, it is not a prerequisite to meaningful analysis of the data as long as one is willing to accept the assumptions of the axis translation process. The user is cautioned, however, that due to special rules in mortality coding, not all linkage notes in ICDA-8 are utilized. Accordingly, one should rely on Appendix E for axis translation linkages in lieu of ICDA-8 notes.

1/ The underlying cause of death code is present in the record axis multiple cause of death field 95.91 percent of the time and is present in the entity axis multiple cause of death field 94.21 percent of the time.

The user should proceed with caution in using record axis data to count conditions as opposed to people with conditions since linkages have been invoked and duplicate codes have been eliminated. As with entity data, person based tabulations which combine individual cause categories must take into account the possible interaction of up to 14 codes on a single certificate.

IV. INFORMATION CONTACTS

In using the NCHS multiple cause data tapes, the user is urged to review the information in this document and its references. The instructional material does change from year to year and revision to revision. The user is cautioned that coding of specific ICDA-8 categories should be checked in the appropriate instruction manual. What may appear on the surface to be the correct code by ICDA-8 may in fact not be correct as given in the instruction manuals.

If on the surface it is not obvious whether entity axis or record axis data should be employed in a given application, detailed examination of Appendices E, F, and G will probably provide the necessary information to make a decision. They allow the user to determine the extent of the trade-offs between the two sets of data in terms of specific categories and the assumptions of axis translation. In certain situations, a combination of entity and record axis data may be the more appropriate alternative.

Several basic tabulations of data from selected variables contained on this tape have been produced and are available to the user as an aid in determining if his own tabulations are correct. For verification of geographic, demographic, and underlying cause data at several levels of detail, refer to the publications Vital Statistics of the United States Volume II - Mortality Parts A and B which are available from the Superintendent of Documents, US GPO, Washington, DC 20402. For verification of multiple cause of death data at the "each cause" level of detail, Appendix I provides counts of the number of deaths on which a given ICDA-8 category is mentioned as the underlying cause of death, a record axis multiple cause of death, and an entity axis multiple cause of death, respectively. This table is based on all resident deaths in the United States (excludes deaths to non-residents).

Where further assistance is needed, Ronald F. Chamblee, Statistician, Technical Services Branch, Division of Vital Statistics, NCHS, Room 116, P. O. Box 12214, Research Triangle Park, North Carolina 27709, telephone FTS 629-4558, Commercial (919) 541-4558 may be contacted.

Appendix 1

Summary of Changes Among Data Years 1968-1978

Although the code outline has been designed to cover data year 1968 through 1978 under one basic format, there are certain changes in item content among these years. The most significant is the geographic codes for the residence and occurrence items. For 1968 and 1969 these codes are based on the 1960 Census of Population. For 1970-1978 these codes are based on the 1970 Census of Population. A summary of differences is as follows:

| <u>Item</u> | <u>Change</u> | <u>Affects Positions</u> |
|-------------------|---|--------------------------|
| Foreign Residents | For data year 1970-1978, foreign residents are uniquely identified. However, for 1978 data, code 58 (Other Western Hemisphere) for state of residence has been eliminated. For data years 1968-1969, the place of residence is coded the same as place of occurrence for foreign residents. | 12, 13-25, 48-49 |
| Geographic Codes | For data years 1970-1978, classification of residence/occurrence data is based on the 1970 Census of Population. For data years 1968-1969, classification of residence/occurrence data is based on the 1960 Census of Population. | 14-21, 28-30 |
| Day of Death | Day of death was not coded for 1968-1971 data. | 53-54 |
| Race | In coding race of decedent, codes 5 (Guamanian) for 1968-1971 data and 6 (Filipino) for 1968-1978 data were not used for 1978 data. code 4 is defined as "Other Asian or Pacific Islander" for 1978 data. | 57 |
| Autopsy Performed | Autopsy performed as coded for 1968-1971 data. | 61 |

| <u>Item</u> | <u>Change</u> | <u>Affects Positions</u> |
|-------------------|---|--------------------------|
| Findings Used | Findings used was not coded for 1968-1971, 1978 data. | 53 |
| Place of Accident | Place of accident was not coded for 1968 data. | 91 |

Appendix A

ICDA-8 Multiple Cause of Death Public Use Tape
Format for Data Years 1968-1978

| <u>Tape Location</u> | <u>Size of Field</u> | <u>Item and Code Outline</u> |
|----------------------|----------------------|--|
| 1 | 1 | <u>Last Digit of Data Year</u> 8... 1968 or 1978 9... 1969 0... 1970 Etc. to 7... 1977 |
| 2-3 | 2 | <u>Shipment Number</u> Shipments from each reporting area are numbered consecutively beginning with 01. |
| 4 | 1 | <u>Reporting Area</u> The following codes when used with the State of occurrence codes, tape locations 26-27, identify separate reporting areas. 1... Bronx Borough 2... Brooklyn Borough 3... Manhattan Borough 4... Queens Borough 5... Richmond Borough 6... Chicago 0... All other areas |
| 5-10 | 6 | <u>Certificate Number</u> These positions are blank. |
| 11 | 1 | <u>Record Type (Computer Generated)</u> 1... Residents State and County of Occurrence and Residence are the same. 2... Nonresidents State and/or County of Occurrence and Residence are different. |

| <u>Tape Location</u> | <u>Size of Field</u> | <u>Item and Code Outline</u> |
|----------------------|----------------------|---|
| 12 | 1 | <u>Resident Status (Computer Generated)</u> <ol style="list-style-type: none"> 1... Residents State and County of Occurrence and Residence are the same. 2... Intrastate Nonresidents State of Occurrence and Residence are the same but County is different. 3... Interstate Nonresidents State of Occurrence and Residence are different but both are in the U.S. 4... Foreign Residents (Not applicable to 1968-1969 data.) State of Occurrence is one of the 50 States or the District of Columbia but Place of Residence is outside the U.S. |

13-25 13 PLACE OF RESIDENCE

1968-1969 Data

Refer to the "Vital Statistics Instruction Manual, Geographic Reference Manual: Codes Used in Computer Operations Effective With 1962 Data" for a complete list of areas and codes.

1970-1978 Data

Refer to the "Geographic Code Manual: Codes Used in Computer Processing Effective With 1970 Data" for a complete list of areas and codes.

The appropriate manual (or manuals) is enclosed for the applicable data year being supplied to the requestor.

Foreign Residents were not uniquely identified in 1968 or 1969. The Place of Residence was allocated to the Place of Occurrence (State and County).

| <u>Tape Location</u> | <u>Size of Field</u> | <u>Item and Code Outline</u> |
|----------------------|----------------------|--|
| 13-25 | 13 | <u>PLACE OF RESIDENCE:</u> continued |
| 13-14 | 2 | <u>State</u> 01 51... Each State and the District of Columbia are numbered alphabetically (see Appendix A-1). |

Foreign Residents (Not applicable to 1968-1969)

- 52... Puerto Rico
- 53... Virgin Islands
- 54... Guam
- 55... Canada
- 56... Cuba
- 57... Mexico
- 58... Other Western Hemisphere
- 59... Remainder of the World

NOTE. Code 58 was deleted in 1978.

| | | |
|-------|---|--|
| 15-17 | 3 | <u>County</u> 001-nnn... Counties and county equivalents are numbered alphabetically within each State. zzz... Foreign Residents (not applicable to 1968-1969) |
|-------|---|--|

| | | |
|-------|---|---|
| 18-20 | 3 | <u>City</u> 001-nnn... Cities are numbered alphabetically within each State and identify each city with a population of 250,000 or more. 999... Balance of County zzz... Foreign Residents (not applicable to 1968-1969) |
|-------|---|---|

1968-1969 Data

Population is based on the 1960 Census.

1970-1978 Data

Population is based on the 1970 Census.

| <u>Tape Location</u> | <u>Size of Field</u> | <u>Item and Code Outline</u> |
|----------------------|----------------------|--|
| 13-25 | 13 | <u>PLACE OF RESIDENCE</u> - continued |

Appendix C

Special ICDA-8 Categories Created/Modified Specifically for Cause of Death Coding

1. Chronic Ischemic Heart Diseases (412) (Modification Applies to 1968-1978 Data)

Disregard the Index for classifying conditions classifiable to 412. Code these conditions as follows:

- Aneurysm of heart
- Arteriosclerotic heart (disease)
- Arteriosclerotic myocarditis
- Coronary (artery):
 - arteriosclerosis
 - atheroma
 - disease
 - sclerosis
 - stricture
- Healed myocardial infarct
- Ischemia, ischemic:
 - cardiovascular (disease)
 - degeneration, heart or myocardium
 - heart (disease)
 - myocardopathy NOS
- Postmyocardial infarct syndrome
- Any condition in 410 specified as chronic or with a stated duration of over 8 weeks
- Cardiovascular (arteriosclerotic):
 - accident
 - arteriosclerosis
 - attack
 - catastrophy
 - changes
 - degeneration
 - disease
 - insufficiency
 - sclerosis
 - stenosis
- Vascular heart disease

Code these conditions to *4121 only when they are stated as hypertensive.

Code these conditions to *4122 only when they are stated as hypertensive.

NOTE: Conditions coded to 4121 and 4122 are equivalent to the indexing of these terms to 4120. See ICDA Volume 1 for inclusion notes for these codes.

** When "acute," "days," "instant," or "sudden" is reported in the duration block with a term classifiable to 412, use the duration to qualify the 412 as "acute" and code 410 with appropriate fourth digit.

1. Chronic Ischemic Heart Disease (412) - continued

Disregard the Index for classifying conditions classifiable to 412. Code these conditions as follows:

Aneurysm of heart
Arteriosclerotic heart (disease)
Arteriosclerotic myocarditis
Coronary (artery):
 arteriosclerosis
 atheroma
 disease
 sclerosis
 stricture
Healed myocardial infarct
Ischemia, ischemic:
 cardiovascular (disease)
 degeneration, heart or myocardium
 heart (disease)
 mycardiopathy NOS
Postmyocardial infarct syndrome
Any condition in 410 specified as
 chronic or with a stated duration
 of over 8 weeks

} Code these conditions to *4123 when they are
not stated as hypertensive.

Cardiovascular (arteriosclerotic):
 accident
 arteriosclerosis
 attack
 catastrophy
 changes
 degeneration
 disease
 insufficiency
 sclerosis
 stenosis
Vascular heart disease

} Code these conditions to *4124 when they are
not stated as hypertensive.

NOTE: Conditions coded to 4123 and 4124 are equivalent to the indexing of these terms to 4129.
See ICDA Volume 1 for inclusion notes for these codes.

** When "acute," "days," "instant," or "sudden" is reported in the duration block with a term classifiable to 412, use the duration to qualify the 412 as "acute" and code 410 with appropriate fourth digit.

4. Sudden Death (Cause Unknown) (*795) (Modification applies to 1973-1978 data only -- 1968-1972 data coded as indexed)

Disregard the Index for classifying the following terms. Code these terms to 795 with the appropriate fourth digit.

*7950 Sudden infant death syndrome, under one year of age

INCLUDES:

| | |
|--|---|
| Acute fatal infant syndrome | Sudden death (in infancy) (syndrome) |
| Cause unknown | Sudden infant death (syndrome) |
| Cot death | Sudden (unexpected) (unattended) (unexplained) death (infant death) (in infancy) (syndrome) |
| Crib death | Undetermined cause |
| Died without sign of disease | Unexpected (infant) death (in infancy) |
| Found dead (in crib/cradle/cot/bed/etc.) | Unexplained (infant) death (in infancy) |
| Infant found in bed | |
| Other unknown and unspecified causes | |
| SDII, SID, SIDS, SUD, SUDI, SUID | |

EXCLUDES: Any term listed above if decedent one year of age (7951)
Any term listed above if decedent two years of age or over (7952, 7962, 7963, 7968, 7969)
Any term classifiable to 7968 unless only entry in Part I or only entry on certificate (Part I or Part II) (7968)

*7951 Sudden death syndrome, one year of age

INCLUDES: Any term listed in 7950, one year of age

EXCLUDES: Any term listed in 7950 if decedent is less than one year of age (7950)
Any term listed in 7950 if decedent is two years of age or over (7952, 7962, 7963, 7968, 7969)
Any term classifiable to 7968 unless only entry in Part I or only entry on certificate (Part I or II) (7968)

2. Obstructive Lung Disease (5193) (Modification applies to 1969-1974 data)

Obstructive:

airway or respiratory disease (acute) (chronic)
lung or pulmonary disease (acute) (chronic)

This category identifies these specific lung diseases only.

3. Chronic Obstructive Lung Disease (*5193) (Modification applies to 1975-1978 data)

Disregard the Index for classifying the following conditions:

Chronic obstruction (disease):

airway(s)
lung(s)
pulmonary
respiratory

Obstructive (chronic):

airway disease
lung disease
pulmonary (broncho) disease
respiratory disease

Code all of the above conditions to 5193.

4. Sudden Death (Cause Unknown) (*795) - continued

*7952 All other sudden death, age two years and over

INCLUDES:

Died suddenly
Dropped dead

Fell dead
Sudden death

EXCLUDES: Any term listed in 7950 if decedent is under two years of age (7950, 7951)
Any other term listed in 7950 if decedent is two years of age or over (7962, 7963, 7968, 7969)

5. Unknown Cause (*7968) (This special code was used from 1968-1978 but has been converted to 7969 (see ICDA-8, Volume 1) on the public use tapes)

Disregard the Index for classifying the following terms. Code these terms to 7968.

*7968 Unknown cause

INCLUDES:

Cause unknown (CU)
Cause undetermined

Etiology unknown
Etiology undetermined

Undetermined
Unknown

EXCLUDES: Above terms when only entry in Part I, age under 2 years (7950, 7951)
Above terms when only entry on certificate (Part I or Part II), age under 2 years (7950, 7951)
Above terms reported on same line with natural causes (7963)
above terms reported as first entry on certificate, age under 2 years (7950, 7951)

6. Acute Narcotism (Intravenous) (*8548) (Special code applies to 1971-1978 data)

Disregard the Index for classifying the E-code for "acute narcotism (intravenous)." Code this term to 8548 in accidental or undetermined circumstances.
