LETTER OF TRANSMITTAL.

DEPARTMENT OF COMMERCE,
BUREAU OF THE CENSUS,
Washington, D. C., July 14, 1923.

SIR:

I transmit herewith the annual report on Mortality Statistics for 1921, which is the twenty-second annual compilation of such statistics prepared by the Bureau of the Census. It is based on transcripts of death certificates received from the registration area for deaths, which, in 1921, had an estimated population of 88,933,402, or 82.3 per cent of the total estimated population of the United States and the Territory of Hawaii.

The total number of deaths returned from this death registration area for the calendar year 1921 was 1,035,933, corresponding to a death rate of 11.6 per 1,000 population.

Populations were estimated and diagrams were prepared by C. S. Sloane, geographer of the Bureau of the Census.

This report was prepared under the direction of Dr. William H. Davis, chief statistician for vital statistics, assisted by John B. Mitchell, expert chief of division.

Acknowledgment is made of the efficient service rendered in the preparation of this report by Clyde D. Williams, John O. Spain, and Clarence E. Batschelet.

Respectfully,

W. M. STEUART,
Director of the Census.

Hon. HERBERT HOOVER,
Secretary of Commerce.

STATES NOT IN REGISTRATION AREA

MORTALITY STATISTICS: 1921.

INTRODUCTION.

The present report presents mortality statistics for the death registration area of the United States. The area for 1921 is identical with that for 1920, so that for these two years the rates are really comparable.

Because of the distant location of Hawaii and the peculiar constitution of its population, deaths from this part of the registration area are not included in the general tables but are shown in special tables. Data presented in both the text and the general tables are based on all deaths in the registration area, exclusive of Hawaii.

All death rates are based on total deaths, including deaths of nonresidents and deaths in hospitals and institutions. Caution should always be exercised in drawing deductions from crude death rates, for due allowance must first be made for deaths of nonresidents, and for the peculiar composition of the population as regards age and sex distribution, color, and nativity, as well as for other factors.

To refine all death rates so that they would be strictly comparable and would truly represent the relative healthfulness of different localities is impossible from the data at hand. Certain partial refinements, however, have been attempted in the present report, and, it is believed, have made some of the rates more nearly comparable and therefore of greater value. These partial refinements will be found as adjusted rates, based on the standard million population of England and Wales, 1901, and as corrections indicated for deaths of nonresidents.

EXTENT OF THE REGISTRATION AREA IN 1921.

The registration area in 1921 includes 34 States, the District of Columbia, and 16 cities in nonregistration States. These States and cities were added to the area on the basis of approximately complete registration of deaths (at least 90 per cent of all deaths) and when the data at hand showed that the deaths were recorded properly under State law, or, for cities, under municipal ordinances. The States included in the registration area for 1921 are:

California.	Louisiana.	Nebraska.	Rhode Island.
Colorado.	Maine.	New Hampshire.	South Carolina.
Connecticut.	Maryland.	New Jersey.	Tennessee.
Delaware.	Massachusetts.	New York.	Utah.
Florida.	Michigan.	North Carolina.	Vermont.
Illinois.	Minnesota.	Ohio.	Virginia.
Indiana.	Mississippi.	Oregon.	Washington.
Kansas.	Missouri.	Pennsylvania.	Wisconsin.
Kentucky.	Montana.		

The entire registration area comprises not only the States named but also the District of Columbia, Territory of Hawaii, and the following cities in nonregistration States:

Birmingham, Ala.	Savannah, Ga.	El Paso, Tex.
Mobile, Ala.	Fargo, N. Dak.	Galveston, Tex.
Montgomery, Ala.	Oklahoma City, Okla.	Houston, Tex.
Atlanta, Ga.	Beaumont, Tex.	San Antonio, Tex.
Augusta, Ga.	Dallas, Tex.	Wheeling, W. Va.
Brunswick, Ga.		

GROWTH OF THE REGISTRATION AREA: 1880 TO 1921.

The first mortality statistics published by the Federal Government related to 1850 and were based on data collected at the decennial census of that year and covered the entire United States. The decennial collection of vital statistics by census enumerators was continued through 1900, but for the census year 1880 there was established a registration area from which transcripts of deaths were received in addition to enumerators' returns. So also for the census years 1890 and 1900 transcripts of death certificates were received from the States and cities included in the registration area.

The annual collection of mortality statistics for that part of the United States known as the registration area began with the calendar year 1900.

Table A shows the States which were included in the registration area of the United States from 1880 to 1921, with the year when each was added; in each year the registration area also included qualified cities in nonregistration States.

Table A

STATE.	Year.	STATE.	Year.	STATE.	Year.
Massachusetts	1880[1]	Colorado	1906	Virginia	1913
New Jersey		Maryland		Kansas	1914

Indiana	1900	Kentucky	1911	Mississippi	
California	1906	Missouri		Nebraska	1920

[1] Census year ending May 31.
[2] Included in registration States.
[3] Dropped from the registration area in the census year 1900.
[4] Dropped from the registration area in 1910.
[5] Included only municipalities having a population of 1,000 or more in 1900.
[6] The remainder of the State of North Carolina was added to the registration area in 1916. (See note 5.)

Table B, on page 10, shows the growth of the registration area in both population and land area from 1880 to 1921, inclusive.

The percentages which the population and land area of the registration area, exclusive of Hawaii, formed of the corresponding totals for the United

States in 1880, 1890, and 1900 to 1921, inclusive, are presented in Diagram 1.

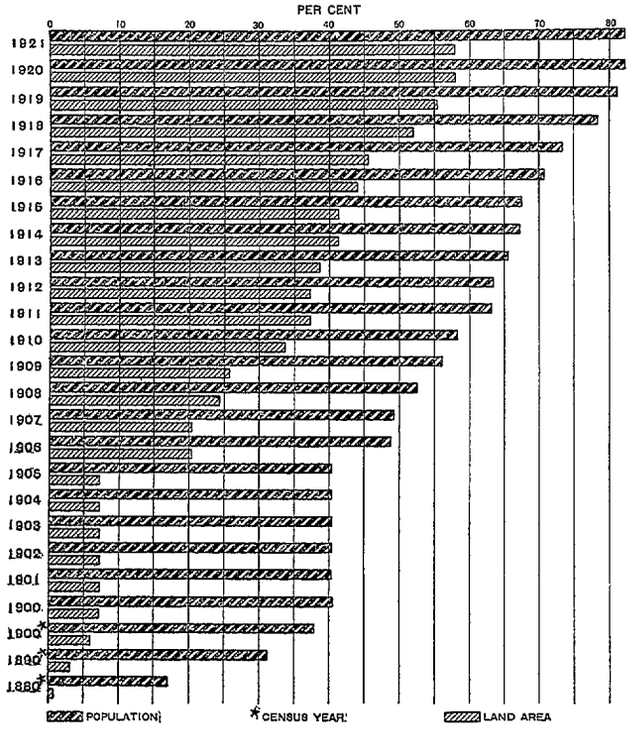
1890 [4]	62,947,714	2,973,965	19,659,440	31.2	90,695	3.0
1880 [4]	50,155,783	2,973,965	8,538,366	17.0	16,481	0.6

[1] Exclusive of Hawaii.
[2] The net reduction of 116 square miles as compared with area stated by census of 1910 was due to irrigation projects.
[3] The net reduction of 269 square miles as compared with area stated by census of 1900 was due to drainage of lakes and swamps in Illinois and Indiana, building of the Roosevelt and Laguna Reservoirs, and overflow of the Colorado River into the Salton Sea in California.
[4] Census year ending May 31.
[5] The increase of 194 square miles as compared with area stated by census of 1890 was due to the reclamation of part of Potomac River Flats in the District of Columbia and of part of Lake Tulare in California.

DIAGRAM 1.—PERCENTAGES WHICH THE POPULATION AND LAND AREA OF THE REGISTRATION AREA FORMED OF THE TOTAL POPULATION AND LAND AREA OF THE UNITED STATES FOR THE YEARS 1880, 1890, AND 1900 TO 1921, INCLUSIVE.



DEATHS AND CRUDE DEATH RATES.

The total number of deaths returned from the registration area of the United States, exclusive of Hawaii, for the calendar year 1921, is 1,032,009, as reported to the Census Bureau by the State and municipal registration offices. The death rate is 11.6 per 1,000 population, based on an estimated midyear population of 88,667,602, or 82.2 per cent of the total estimated population of the United States. The rate for 1921 is much lower than that for any year since the publication of the annual reports beginning in 1900.

Table C shows the number of deaths and death rates per 1,000 population for the census years ending May 31, 1880, 1890, and 1900, and for the calendar years 1900 to 1921.

Table C — CALENDAR YEAR.	DEATHS FROM ALL CAUSES,[1] REGISTRATION AREA.[2]		CALENDAR YEAR.	DEATHS FROM ALL CAUSES,[1] REGISTRATION AREA.[2]	
	Number.	Rate per 1,000 population.[3]		Number.	Rate per 1,000 population.[3]

1901	518,207	97,477	18.8	141,678	27.3
1900	539,939	111,687	20.7	164,137	30.4

[1] Exclusive of stillbirths. [2] Exclusive of Hawaii.

In 1900 the deaths under 1 year of age formed 20.7 per cent, and those under 5 years 30.4 per cent, of the total deaths at all ages, but in 1921 the corresponding percentages are 15.5 and 21.4. The very large decreases in these percentages are undoubtedly due, in large part, to the better care which children now receive.

DIAGRAM 3.—NUMBER OF DEATHS IN THE REGISTRATION AREA (EXCLUSIVE OF HAWAII) AT ALL AGES, UNDER 1 YEAR OF AGE, AND FROM 1 TO 4 YEARS OF AGE, FOR EACH OF THE YEARS 1900 TO 1921.

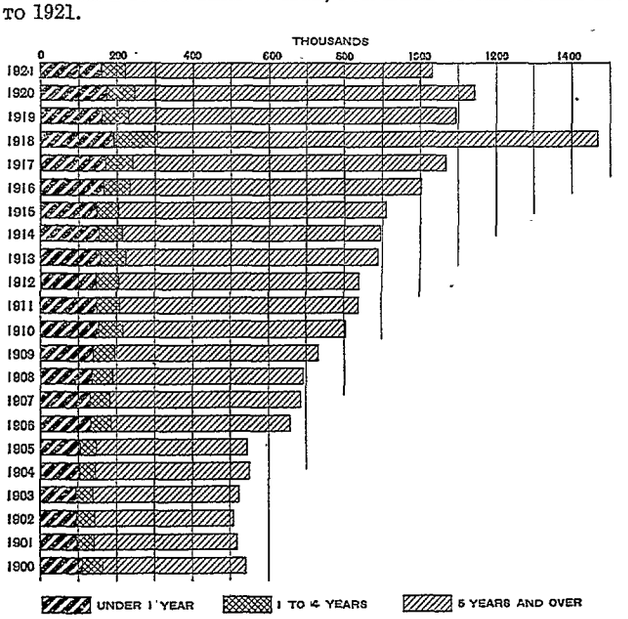

DIAGRAM 4.—PER CENT OF DEATHS IN THE REGISTRATION AREA (EXCLUSIVE OF HAWAII) UNDER 1 YEAR OF AGE, FROM 1 TO 4 YEARS, AND 5 YEARS AND OVER, FOR EACH OF THE YEARS 1900 TO 1921.

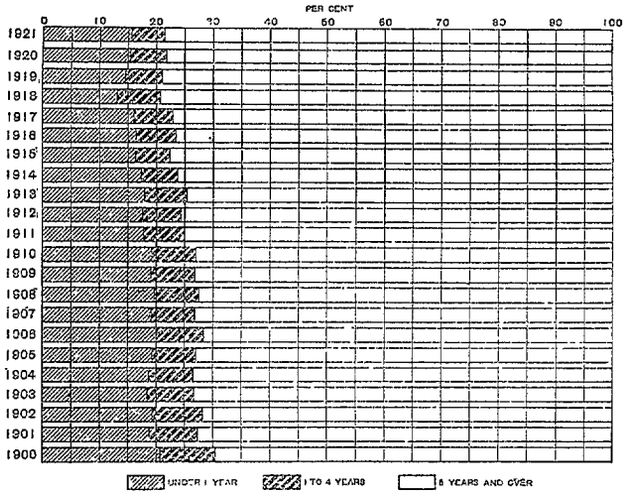

DEATH RATES BY MONTHS.

Table G shows for the registration area and for the registration States of 1900, for the years 1900, 1910, 1920, and 1921, the annual death rate from all causes per 1,000 estimated population, by months.

Table G — ANNUAL DEATH RATE FROM ALL CAUSES [1] PER 1,000 POPULATION.

MONTH OF DEATH.	Registration area.				Registration States of 1900.[2]			
	1921 [3]	1920 [3]	1910	1900	1921	1920	1910	1900
Total	11.6	13.1	15.0	17.6	12.2	13.8	15.6	17.2
January	12.8	15.1	15.5	17.9	13.6	16.6	16.2	17.0
February	13.0	24.8	15.9	19.1	13.9	26.6	16.6	18.4
March	12.7	15.7	16.7	21.3	13.6	16.0	17.7	21.0
April	12.1	13.0	15.4	21.2	12.9	14.2	16.5	20.8
May	11.6	12.3	14.1	17.6	12.0	13.4	14.7	17.0
June	10.9	11.1	13.8	15.0	11.0	11.5	14.2	14.4
July	11.0	10.4	15.3	18.2	11.1	10.6	16.3	18.0
August	10.8	10.5	15.3	17.8	11.2	11.0	15.9	18.1

October	11.3	10.9	13.7	15.4	11.6	11.3	14.2	15.3
November	11.3	11.5	14.3	15.0	11.7	11.8	14.5	14.4
December	11.8	11.8	15.4	15.8	12.4	12.5	16.0	15.2

[1] Exclusive of stillbirths.
[2] Includes Connecticut, Indiana, Maine, Massachusetts, Michigan, New Hampshire, New Jersey, New York, Rhode Island, Vermont, and District of Columbia.
[3] Exclusive of Hawaii.

In the registration area the highest annual rate from all causes in 1921, by month of death, is for February (13); this rate is 11.8 lower than the corresponding rate (24.8) in 1920, the decrease being due to the great reduction in deaths from influenza and pneumonia. The lowest annual rate in 1921 (10.6) is for September.

The only months which show slightly higher rates in 1921 than in 1920 are July, August, and October.

ADJUSTED RATES.

For a comparison of mortality rates of different areas or divisions of the population, adjusted rates are much better than crude rates. Many of the adjusted rates have been brought together in Tables H and I, and they will serve as a ready check against unwarranted conclusions which might be drawn from some of the other rates.

Table H — DEATH RATE PER 100,000 ESTIMATED POPULATION IN THE REGISTRATION STATES.

CAUSE OF DEATH AND YEAR.	Both sexes.		Males.		Females.

NOTE.—These adjusted rates for 1920 may differ from those in the report of Mortality Rates, 1910-1920, since an estimated population is used for one, and an enumerated population for the other.

The adjusted and specific rates for the registration States have been computed by using estimated populations. (See p. 694.) For the adjusted rates full corrections have been made for the deaths and populations at unknown age—the sum of the deaths in the standard million population, based on the specific rates, having been multiplied by the corrective factor R_d/R_p, where R_d is the ratio of total deaths to deaths at known age and R_p, the ratio of total population to population at known age.

In Table 2 of the Appendix, the adjusted and crude rates are shown, as well as the specific rates, based on the enumerated population of 1920. In computing these rates, data of unknown age are included in rates for all ages, both crude and adjusted, but they have not been distributed for the specific rates. See in preceding paragraph explanation for corrections to include unknown age. As it is a big task to estimate, for many units, the populations by sex and age and then to compute specific and adjusted rates, and as the sex and age distribution of a given population does not usually change much in the first few years following a census enumeration, it has been assumed in the computation of the following adjusted rates for 1920 and 1921, that the ratio of the adjusted to the crude rate each year was the same as the ratio of the adjusted and crude rates based on deaths and enumerated populations of 1920. In other words, the ratio of the adjusted rate to the crude rate (based on the enumerated population of 1920) has been applied to the crude rates of 1920 and 1921 (based on estimated populations) to obtain adjusted rates. Discussion of some of these rates will be found farther on in the text under the various causes of death.

[1] Exclusive of stillbirths.
[2] No deaths in 1920, therefore, there is no factor to apply to the 1921 crude rate. See p. 728.

NOTE.—These adjusted rates for 1920 may differ from those in the report of Mortality Rates, 1910–1920, since an estimated population is used for one, and an enumerated population for the other.

DEATH RATES OF THE REGISTRATION AREA.

The death rates from all causes in the registration area and its main subdivisions, for the years 1916 to 1921, are shown in Table J.

Table J — AREA.	DEATH RATE FROM ALL CAUSES,[1] PER 1,000 POPULATION.					
	1921	1920	1919	1918	1917	1916
The registration area [2]	11.6	13.1	12.9	18.1	14.3	14.0
Registration States [3]	11.6	13.0	12.8	18.0	14.1	13.9
Cities in registration States [3]	12.3	14.1	13.9	19.9	15.3	15.1
Rural part of registration States	10.9	11.9	11.9	16.3	13.0	12.9
Registration cities in nonregistration States	15.1	17.0	15.6	23.0	16.4	15.5
All registration cities [3]	12.4	14.2	13.9	20.0	15.5	15.2

[1] Exclusive of stillbirths.
[2] Exclusive of Hawaii.
[3] Including the District of Columbia.

The rates for all the subdivisions of the registration area are lower in 1921 than in any other year shown and in every year the rates for the rural part of the States are much lower than those for cities.

In view of the many changes which have taken place in the extent of the registration area since 1900, rates for the area usually are not strictly comparable year after year; therefore, in Table K, rates are presented for the years 1916 to 1921 for the registration States of 1900—the "original registration States:" Connecticut, Indiana, Maine, Massachusetts, Michigan, New Hampshire, New Jersey, New York, Rhode Island, and Vermont, and the District of Columbia.

Table K — AREA.	DEATH RATE FROM ALL CAUSES,[1] PER 1,000 POPULATION.					
	1921	1920	1919	1918	1917	1916
Registration States of 1900 [2]	12.2	13.8	13.5	18.9	15.0	15.0
Cities [3]	11.8	13.7	13.5	19.3	15.2	15.2
Rural districts	12.9	14.0	13.4	18.1	14.6	14.6

[1] Exclusive of stillbirths.
[2] Including the District of Columbia.

The 1920 and 1921 total rates (13.8 and 12.2, respectively) for the States of 1900 are higher than those for the States of 1920 (13 and 11.6, respectively), and these differences are almost entirely accounted for by the much higher rates in the rural part of the States of 1900. For these States the rates for the rural districts in 1920 and 1921 are higher than those for the cities, but from 1916 to 1919 they are lower.

DEATH RATES OF THE REGISTRATION STATES.

Table L shows for the years 1920 and 1921, adjusted death rates, and for 1914 to 1921, crude death rates for the registration States:

Table L — STATE.	DEATH RATE FROM ALL CAUSES [1] PER 1,000 POPULATION.									
	Adjusted.		Crude.							
	1921	1920	1921	1920	1919	1918	1917	1916	1915	1914

[1] Exclusive of stillbirths.
[2] Including District of Columbia.
[3] Not added to registration area until a later date.
[4] Includes only municipalities having a population of 1,000 or more in 1910.

NOTE.—These adjusted rates for 1920 may differ from those in the report of Mortality Rates, 1910–1920, since an estimated population is used for one, and an enumerated population for the other.

Crude death rates by no means tell the whole story regarding the healthfulness of different localities.

Race stock, occupations of the inhabitants, the sex and age distribution of the population, and the relative number of deaths of nonresidents are factors which must be considered before it can be determined that one city or State is more healthful than another. For example, adjustments simply for the differences in the sex and age distribution of the population in the States, give Montana in 1921 the lowest adjusted rate (8.7), and the highest adjusted rate (13.3) is for Maryland.

DEATH RATES OF LARGE CITIES.

Table M shows for the years 1920 and 1921, adjusted death rates, and for the years 1914 to 1921, crude death rates for registration cities which had 100,000 population or more in 1920.

Table M — DEATH RATE FROM ALL CAUSES [1] PER 1,000 POPULATION.

CITY.	Adjusted.		Crude.

[1] Exclusive of stillbirths. [2] Not added to registration area until a later date. [3] Not computed. [4] Transcripts of deaths not received.

NOTE.—These adjusted rates for 1920 may differ from those in the report of Mortality Rates, 1910–1920, since an estimated population is used for one, and an enumerated population for the other.

The adjusted as well as the crude rates from all causes in 1921 are lower than those in 1920 for every city except Los Angeles, for which the adjusted rates are equal. The lowest adjusted rates in 1921 are for Akron (9.1) and Seattle (9.4), and the highest are for Memphis (18.8), New Orleans (17.4), San Antonio (17.2), and Birmingham (17.1).

For only 16 of the 66 cities shown, are the adjusted rates, in both years, lower than the crude, and not one of the 13 cities shown by color is included.

DEATHS OF NEGROES.

The deaths of Negroes in the registration States in 1921 numbered 109,597, with a rate of 15.8 per 1,000 population against a corresponding rate of 17.7 in 1920. Oregon is the only State which shows a higher rate in 1921 than in 1920 (16.5 against 15.2). The distribution of these deaths is shown in Table N.

DEATHS OF COLORED POPULATIONS OTHER THAN NEGRO.

Deaths of colored, other than Negro, in the registration States, numbered 4,483 in 1921, and constituted 3.9 per cent of the deaths of the total colored in the same area. The distribution is shown in Table O.

[3] The only cities shown are those which reported 10 or more deaths of either Indians, Chinese, Japanese, or other colored.

DEATHS OF INDIANS.

The number of deaths of Indians in the registration States in 1921 is 1,725, with a rate of 17.5 per 1,000 population against a corresponding rate of 23.1 in 1920. The rates are crude and therefore of limited value.

Table P shows the States in which most of the deaths of Indians occurred.

Table P

STATE.	DEATHS [1] OF INDIANS.			
	Number.		Rate per 1,000 population.	
	1921	1920	1921	1920
Registration States [2]	1,725	2,289	17.5	23.1
California	241	343	13.8	19.7
Michigan	170	166	32.0	30.1
Minnesota	121	222	13.9	25.4
Montana	249	241	22.7	22.0
Nebraska	96	153	34.4	53.6
North Carolina	155	149	12.5	12.4
Oregon	63	164	14.0	35.9
Utah	59	55	22.3	20.4
Washington	211	342	24.1	38.2
Wisconsin	165	209	17.3	21.8
All other States	195	245	12.5	15.5

[1] Exclusive of stillbirths. [2] Including the District of Columbia.

For the total registration States, the very much lower rate in 1921 (17.5) than in 1920 (23.1) is probably due to the reduction in deaths from influenza and pneumonia; nevertheless, the rate for 1921 is still high, and is largely to be attributed to deaths from tuberculosis and from diseases of the respiratory system. Among those showing lower rates, the greatest decreases appear for Oregon (from 35.9 in 1920 to 14 in 1921), Nebraska (from 53.6 to 34.4), and for Washington (from 38.2 to 24.1).

Four of the 10 States shown have only slightly higher rates in 1921 than in 1920.

DEATHS OF JAPANESE.

In the registration States in 1921 the deaths of Japanese numbered 1,327, with a rate of 11.8 per 1,000 population against a rate of 14 for the corresponding area in 1920. The rates are crude and therefore of limited value.

Table Q shows the distribution of most of these deaths by States.

Table Q

STATE.	DEATHS [1] OF JAPANESE.			
	Number.		Rate per 1,000 population.	
	1921	1920	1921	1920
Registration States [2]	1,327	1,508	11.8	14.0

All other States	73	90	9.8	12.5

[1] Exclusive of stillbirths. [2] Including the District of Columbia.

DEATHS OF NONRESIDENTS.

Deaths of nonresidents have long been known to be an important factor in the crude death rates of certain places. In health resorts, for example, the number of deaths of nonresidents may be very large, and the same may be true of a city which offers hospital accommodations to an entire State or other large area. Some idea of the relative importance of this factor in the various cities and rural units in the registration area in 1921 may be obtained from Table I B.

Residence has been determined in each case exactly as it was by the census enumerators in taking the population census in 1920.

Briefly stated, the principal points to be considered are as follows:

"Residents" indicates decedents whose "usual place of abode" was in the specified area, whether death occurred there or elsewhere in the registration area. As a rule the "usual place of abode" is the place where a person regularly sleeps.

Nonresidents, therefore, include—

Persons visiting a town.

Transient boarders or lodgers who have some other usual or permanent place of abode.

Students and children living or boarding in towns in order to attend some school or college, but not regarding the place as their home.

Servants or other persons working in town, but not sleeping there.

Decisions for special cases—

(*a*) Civilian employees of the United States are treated as resident at the place where they regularly sleep. For example, employees in the Government offices in Washington who regularly sleep in Washington are treated as resident at Washington, even though they may have "legal residence" elsewhere.

(*b*) Any person who was formerly a resident of the town, but has since become an inmate of an *out of town* asylum, almshouse, home for the aged, reformatory or prison, is treated as resident at the town in which the asylum or prison is located.

(*c*) Persons having an unknown residence should be treated exactly as those having no permanent home or usual place of abode and should be counted as residents of the place in which they die.

(*d*) Inmates of medical or surgical hospitals are usually there only for temporary treatment and are therefore treated as resident at their home towns.

In Table I B (p. 123) the term *transferable nonresidents* refers to deaths of nonresidents which can be transferred to place of residence, i. e., to places within the registration area.

The term *nonresidents not transferable* refers to deaths of nonresidents which can not be transferred to place of residence because the place of residence was outside the registration area.

In the second column are given total deaths including deaths of nonresidents. The figures of the fourth column have been obtained by deducting from the figures of the second column deaths of persons who resided outside the registration unit in which they died, but whose residence was still within the registration area. The figures of the fifth column

have been obtained by adding to those in the fourth column deaths of residents who died elsewhere in the registration area. The figures in column 6 represent those who resided outside the registration unit in which they died and also outside the registration area.

It is a very simple matter to determine from the figures shown what per cent of the total number of deaths in 1921 in any place was due to deaths of nonresidents and how much this nonresident percentage would be reduced if deaths of persons whose residence was in that place, but who died elsewhere in the registration area, were credited to that place.

For example, in Long Branch, N. J., there were 191 deaths of transferable nonresidents, or 53 per cent of the total number of deaths, which is reduced to 49 per cent by crediting to Long Branch 14 deaths of Long Branch residents who died in registration territory outside. It is apparent, however, that this per cent probably would have been reduced somewhat more were it possible to credit to Long Branch deaths of residents dying in nonregistration territory. In Englewood, N. J., there were 76 deaths of transferable nonresidents, or 39 per cent of the total number; this is reduced to 29 per cent if Englewood is credited with 19 deaths of residents who died in registration territory outside. On the other hand, in East Orange, N. J., there were 25 deaths of transferable nonresidents, but 135 residents died in registration territory outside, which, if credited to East Orange, would increase the original total 29 per cent. In Everett, Mass., 14, or 4 per cent of the total number of deaths, were those of transferable nonresidents, but the number of Everett residents who died in registration territory outside was 142, which, if credited to Everett, makes the net total 37 per cent higher than the original total.

If desired, still other calculations can be made by deducting also the deaths given in column 6, and percentages are shown in the last column based upon such more complete corrections.

The last column of the table shows the per cent of the original death rate which must be added or deducted, as the case may be, to obtain the death rate in the registration area of residents only. Extreme caution should be used in interpreting the figures in the table for places near nonregistration territory where residents may have died.

Taking the figures as they stand, it is interesting to note that to correct partially the original rate in this way a reduction of 62 per cent is needed for Rochester, Minn., 39 per cent for St. Petersburg, Fla., and a reduction of 30 per cent or more for such places as Gadsden County, Fla., Ashland, Wis., Shelby County, Ill., and Adams County, Miss.

On the other hand, to correct partially the original rate of Douglas County, Wis., an addition of 48 per cent is needed; and an addition of 35 per cent or more is needed for New Rochelle, N. Y., Revere, Mass., Sarpy County, Nebr., Tonawanda, N. Y., Montclair, N. J., Watertown town, Mass., West Hoboken and Bloomfield, N. J.

Corrections for deaths of nonresidents are needed, not only for the white population, but for the colored as well. For example, for Winn Parish, La., an addition of 29 per cent is needed, and for Gadsden County, Fla., a reduction of 29 per cent, to correct partially the original rate for the colored.

DEATH RATES OF FOREIGN COUNTRIES.

Table R presents the latest available death rates per 1,000 population for the principal European countries and for certain other countries for the specified five-year periods from 1881 to 1915 and the calendar years 1919, 1920, and 1921.

Table R — ANNUAL CRUDE DEATH RATE [1] PER 1,000 POPULATION.

COUNTRY.	1921	1920	1919	1911 to 1915	1906 to 1910	1901 to 1905	1896 to 1900	1881 to 1885	Decrease per cent between 1881 to 1885 and 1911 to 1915.

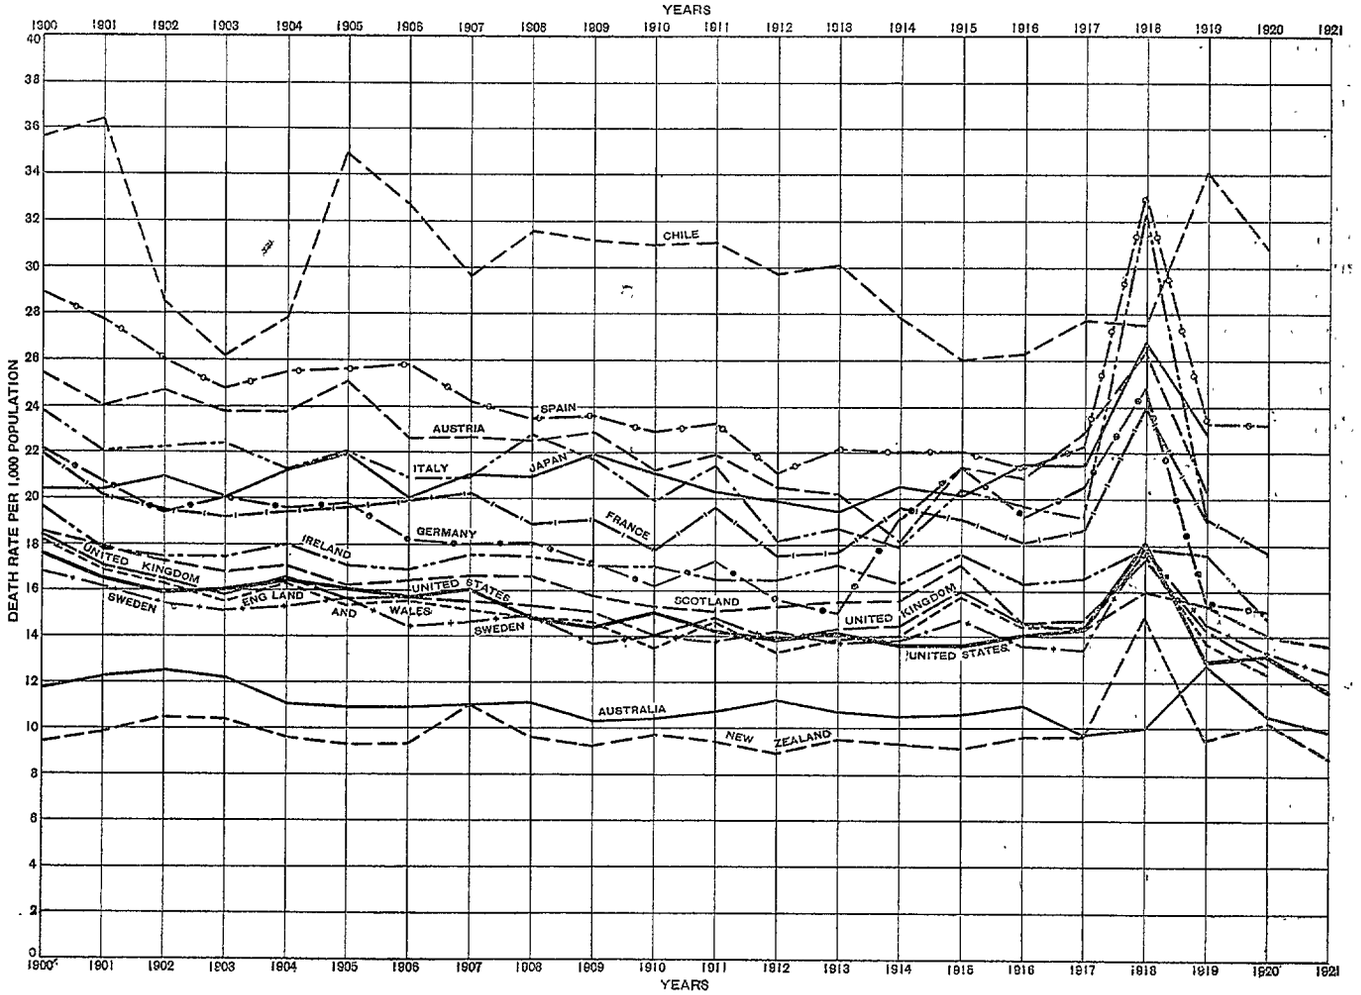
*Exclusive of Hawaii.
[1] Exclusive of stillbirths.
[2] Figures not available.
[3] Based upon civilian deaths and estimated civilian population.
[4] Figures relate to 77 "departements," not invaded.
[5] Exclusive of Alsace-Lorraine.
[6] Exclusive of that part of the province of Posen surrendered to Poland.
[7] Exclusive of that part of the province of Posen surrendered to Poland; also of the district of Memel, Republic of Danzig, surrendered to Poland, and of the territory surrendered to Czechoslovakia, Denmark, and Belgium.
[8] The figures are provisional.
[9] Including only civilian deaths and population as regards England and Wales.

NOTE.—The rates are taken from the following reports: Australia, 1911 to 1921—Commonwealth Demography, Australia, 1921; Austria, 1913—Annuaire Statistique, France, for 1919 and 1920; Austria, 1914 to 1919—Statistical Year Book, Austria, 1921; Chile, 1915 to 1920—Anuario Estadistico, Vol. 1, Demografia, 1919 and 1920; England and Wales, Ireland, and the United Kingdom, 1900 to 1920—Annual Report of the Registrar-General, England and Wales, 1920; France, 1913 to 1920, and Italy, 1917 to 1919—Statistique Annuelle du Mouvement de la Population, France, 1920; Germany, 1913 to 1920—Statistical Year Book, Germany, 1922; Italy, 1911 to 1916—Annuario Statistico, Italy, 1915, and 1917–1918; Japan, 1911 to 1919—Résumé Statistique, 1921, and Mouvement de la Population, Empire of Japan, 1919; New Zealand, 1900 to 1921—Official Year Book, New Zealand, 1919, and 1923; Scotland, 1900 to 1921—Annual Report of the Registrar-General, Scotland, 1921; Spain, 1900 to 1920—Movement of Population, 1915, and Annuario Estadistico, Spain, 1920; Sweden, 1900 to 1921—Annuaire Statistique, Sweden, 1922; and Australia, Italy, and Japan, 1900 to 1910, Austria, France, and Germany, 1900 to 1912, and Chile, 1900 to 1914—Annual Report of the Registrar-General, England and Wales, 1915.

DIAGRAM 5.—GENERAL DEATH RATES OF THE UNITED STATES (REGISTRATION AREA) AND CERTAIN FOREIGN COUNTRIES FOR EACH OF THE YEARS FROM 1900 TO 1921.



CAUSES OF DEATH.

Rate Tables II, III, and IV, and General Tables 5 to 11 present statistics of causes of death, the data covering the principal factors of area, age, sex, color, and month of death.

DETAILED AND ABRIDGED INTERNATIONAL LISTS.

The International List of Causes of Death is made up of (1) a detailed list which serves as a basis for the specific presentation of deaths from disease and violence, and (2) an abridged list in which many of the titles are consolidations of the headings of the detailed list.

In some instances, where the title headings are identical in the two lists, the causes of death included are not the same. An example of this is title No. 25 of the detailed list, "Other epidemic and endemic diseases." Used in this sense "Other epidemic and endemic diseases" includes only those epidemic and endemic maladies which are not shown separately in titles 1 to 24 of this detailed classification; but when the same expression, "Other epidemic and endemic diseases," is used in reference to the abridged list it signifies a heading of that list which includes titles 3, 4, 12, 13, and 16 to 25 of the detailed list.

Table T shows the distribution of the 1921 deaths by the causes of the abridged list, together with corresponding rates and percentages. In parentheses after each title of the abridged list appears the number, or numbers, corresponding to the included title or titles of the detailed International List.

CHANGES IN THE DETAILED INTERNATIONAL LIST.

The title numbers of the third revision (1921) of the detailed International List are given in the first column of Table U. In the second column are the 1921 revised titles, in the third column, as nearly as can be given, the corresponding 1910 list numbers, and in the fourth column the changes from the inclusions in the Second Reprint of the 1910 Manual. In the fourth column the terms transferred to a title are indicated by plus (+) and followed by the 1910 list numbers, and the terms transferred from a title are indicated by minus (−) and followed by the 1921 list numbers.

For example, the data regarding 1921 title No. 84, Other diseases of the nervous system, shows that this title in the 1921 revised list corresponds to title No. 74 of the 1910 list, with certain exceptions; for example, "Paralysis agitans," which in 1910 was classified under title No. 63, has been transferred to this title, and the term "Hydatid of brain," which was included under this title in 1910, has been transferred to title No. 116 of the 1921 list.

Table T

Abridged Int. List No.	CAUSE OF DEATH.[1]	DEATHS IN REGISTRATION AREA [2]: 1921. Number.	Rate per 100,000 population.	Per cent.
	All causes [3]	1,032,009	1,163.9	100.0

105	Asthma	96	+Asthmatic catarrh (90).
106	Pulmonary emphysema	97	
107	Other diseases of the respiratory system (tuberculosis excepted).	98	+Diseases of the mediastinum (new subtitle) (77, 144). −Aspergillosis of lung (30). −Saccharomycete infection (30). −New growth of bronchi (50). − lung (50). − pleura (50). − trachea (50). −Pulmonary tumor (50). −Tumor of bronchi (50). − lung (50). − pleura (50). − trachea (50). −Cysticercus of lung (116). −Hydatid cyst of lung (116). − of lung (116). − tumor of lung (116).
	(a) Chronic interstitial pneumonia, including occupational diseases of the respiratory system.	98	Part of.
	(b) Diseases of the mediastinum (new subtitle)	77, 144	Part of.
	(c) Others under this title.	98	Part of.
108	Diseases of the mouth and annexa.	99	+Angina ludovici (100). +Ludwig's angina (100). + disease (100). −Aphthæ (thrush) (30). −Black tongue (30). −Muguet (30). −Oidium albicans (30). −Parasitic disease of mouth (30). − tongue (30). − stomatitis (30). −Sprue (thrush) (30). −Stomatomycosis (30). −Thrush (30). −Angioma of mouth (50). −Cyst of lip (50). − mouth (50). − salivary gland (50). − tongue (50). −Epulis (50). −Gaseous tumor of parotid (50). −Lingual hematoma (50). −New growth of gum (50). − mouth (50). − salivary gland (50). − tongue (50). −Odontoma (50). −Parotid tumor (50). −Tumor of gum (50). − lip (50). − mouth (50). − parotid gland (50). − salivary gland (50). − tongue (50).
109	Diseases of the pharynx and tonsils (including adenoid vegetations).	86, 100	Part of.
	(a) Adenoid vegetations	86	Part of.
	(b) Others under this title.	100	−New growth of fauces (50). − pharynx (50). − tonsil (50). −Specific growth in throat (50). −Tumor of fauces (50). − pharynx (50). − throat (50). − tonsil (50). − uvula (50). −Angina ludovici (108). −Ludwig's angina (108). − disease (108). −Foreign body impacted in pharynx (202).
110	Diseases of the esophagus	101	−New growth of esophagus (50). −Tumor of esophagus (50). −Foreign body in esophagus (202).
111	Ulcer of the stomach and duodenum.	102, 104, 105	Part of.
	(a) Ulcer of the stomach.	102	
	(b) Ulcer of the duodenum.	104, 105	Part of.
112	Other diseases of the stomach (cancer excepted).	103	−New growth of stomach (50). −Tumor of stomach (nonmalignant) (50). −Obstruction of pylorus (under 6 months) (159c). −Pylorospasm (under 6 months) (159c). −Stenosis of pylorus (under 6 months) (159c). −Stricture of pylorus (under 6 months) (159c). −Hematemesis (under 1 month) (162). −Foreign body in stomach (202).
113	Diarrhea and enteritis (under 2 years of age).	104	−Ulcer of the duodenum (new subtitle) (111b). −Flagellate diarrhea (116).
114	Diarrhea and enteritis (2 years and over).	105	−Ulcer of the duodenum (new subtitle) (111b). −Flagellate diarrhea (116).
115	Ancylostomiasis	106	+Griesinger's disease (54).
116	Diseases due to other intestinal parasites.	107	+Cysticercus of brain (74). +Hydatid of brain (74). +Cysticercus of lung (98). +Hydatid cyst of lung (98). + of lung (98). + tumor of lung (98). +Flagellate diarrhea (104) (105). +Cysticercus cellulosæ (112). +Hydatid cyst of spleen (116). + kidney (122). + breast (133). −California disease (30). −Coccidioidal granuloma (30).
	(a) Cestodes (hydatids of the liver excepted).	107	Part of.
	(b) Trematodes	107	Part of.
	(c) Nematodes (other than ancylostoma).	107	Part of.
	(d) Coccidia	107	Part of.
	(e) Other parasites specified.	107	Part of.
	(f) Parasites not specified.	107	Part of.
117	Appendicitis and typhlitis.	108	+Foreign body in appendix (110).
118	Hernia, intestinal obstruction.	109	+Adhesion of intestine (110). −Congenital hernia (159c). − inguinal hernia (159c). − rupture (159c).
	(a) Hernia	109a	−Congenital hernia (159c). − inguinal hernia (159c). − rupture (159c).
	(b) Intestinal obstruction.	109b	+Adhesion of intestine (110).
119	Other diseases of the intestines.	110	−Psilosis (30). −Sprue (psilosis) (30) −New growth of anus (50). − rectum (50). −Polypus of rectum (50). −Tumor of anus (50). − intestine (50). − rectum (50). −Adhesion of intestine (118b). −Foreign body in appendix (117). −Melena (under 3 months) (162). −Foreign body in alimentary canal (202). − intestine (202). − rectum (202).
120	Acute yellow atrophy of the liver.	111	−Spirochetal hemorrhagic jaundice (new title) (19).
121	Hydatid tumor of the liver.	112	−Cysticercus cellulosæ (116).
122	Cirrhosis of the liver	113	+Hypertrophic hepatitis (115). −Malarial cirrhosis (5).
	(a) specified as alcoholic	113	Part of.
	(b) not specified as alcoholic.	113	Part of.

CHANGES IN THE DETAILED INTERNATIONAL LIST OF CAUSES OF DEATH—Continued.

[Some subdivisions of the 1910 title numbers shown below do not appear in the Manual, but have been used by the Census Bureau.]

List number, 1921.	Table U—Con. REVISED TITLE, 1921.	Corresponding list number, 1910.	CHANGES IN INCLUSIONS. [Terms transferred to a title are indicated by plus (+) and are followed by old title numbers in parentheses. Terms transferred from a title are indicated by minus (−) and are followed by new title numbers in parentheses.]
123	Biliary calculi	114	
124	Other diseases of the liver	115	−Amebic abscess of liver (16). −Tropical abscess of liver (16). −Cyst of gall-bladder 50). − gall-duct (50). − liver (50). −Fibroid tumor of liver (50). −New growth of gall-bladder (50). − gall-duct (50). − liver (50). −Tumor of bile-duct (50). − gall-bladder (50). − gall-duct (50). − liver (50). −Portal phlebitis (93). −Hypertrophic hepatitis (122).
125	Diseases of the pancreas (new title).	118	Part of.
126	Peritonitis without specified cause.	117	+Abdominal abscess (118). +Abscess of abdomen (118). +Subdiaphragmatic abscess (118). +Subphrenic abscess (118). −Cyst of mesentery (50). − peritoneum (50). −Tumor of peritoneum (50). −Metroperitonitis (nonpuerperal) (141). −Foreign body in peritoneum (202). −Traumatic peritonitis (202).
127	Other diseases of the digestive system (cancer and tuberculosis excepted).	118	−Cyst of pancreas (50). −New growth of pancreas (50). −Tumor of pancreas (50). −Diseases of the pancreas (new title) (125). −Abdominal abscess (126). −Abscess of abdomen (126). −Subdiaphragmatic abscess (126). −Subphrenic abscess (126).
128	Acute nephritis (including unspecified under 10 years of age).	119	+Croupous nephritis (120). +Postoperative nephritis (120). + uremia (120). +Unspecified under 10 years of age: Albuminous nephritis (120). Albuminuria (120). Albuminuric retinitis (120). Bright's disease (120). Catarrhal nephritis (120). Diffuse interstitial nephritis (120). nephritis (120). Epithelial nephritis (120). Exudative nephritis (120). Hemorrhagic nephritis (120). Inflammation of kidney (120). Interstitial nephritis (120). Nephritis (120). Parenchymatous nephritis (120). Renal albuminuria (120). asthma (120). dropsy (120). retinitis (120). Tubal nephritis (120). Tubular nephritis (120). Uremia (120). Uremic aphasia (120). apoplexy (120). coma (120). convulsions (120). delirium (120). dementia (120). dropsy (120). dyspnea (120). eclampsia (120). fever (120). intoxication (120). mania (120). paralysis (120). poisoning (120). toxemia (120). vomiting (120).
129	Chronic nephritis (including unspecified 10 years and over).	120	+Cardiovascularrenal disease (79). −Croupous nephritis (128). −Postoperative nephritis (128). − uremia (128). −Unspecified under 10 years of age: Albuminous nephritis (128). Albuminuria (128). Albuminuric retinitis (128). Bright's disease (128). Catarrhal nephritis (128). Diffuse interstitial nephritis (128). nephritis (128). Epithelial nephritis (128). Exudative nephritis (128). Hemorrhagic nephritis (128). Inflammation of kidney (128). Interstitial nephritis (128). Nephritis (128). Parenchymatous nephritis (128). Renal albuminuria (128). asthma (128). dropsy (128). retinitis (128).
129	Chronic nephritis (including unspecified 10 years and over).	120	−Unspecified under 10 years of age: Tubal nephritis (128). Tubular nephritis (128). Uremia (128). Uremic aphasia (128). apoplexy (128). coma (128). convulsions (128). delirium (128). dementia (128). dropsy (128). dyspnea (128). eclampsia (128). fever (128). intoxication (128). mania (128). paralysis (128). poisoning (128). toxemia (128). vomiting (128). −Purulent nephritis (131). −Septic nephritis (131).
		121	− uremia (131).
130	Chyluria		
131	Other diseases of the kidneys and annexa.	122	+Hemoglobinuric fever (19). + (nonmalarial) (19) +Purulent nephritis (120). +Septic nephritis (120). + uremia (120). −Cyst of kidney (50). − ureter (50). −New growth of kidney (50). −Paranephric tumor (50). −Perinephric tumor (50). −Renal cyst (50). −Tumor of kidney (50). −Hydatid cyst of kidney (116).
132	Calculi of the urinary passages.	123	
133	Diseases of the bladder	124	+Varix of bladder (83). −Fibroma of bladder (50). −New growth of bladder (50). −Papilloma of bladder (50). −Tumor of bladder (50). −Villous tumor of bladder (50). −Foreign body in bladder (202).
134	Diseases of the urethra, urinary abscess, etc.	125	−New growth of urethra (50). −Tumor of urethra (50). −Foreign body in urethra (202). −Traumatic stricture of urethra (202). − urethral fever (202).
	(a) Stricture of the urethra.	125	Part of.
	(b) Others under this title.	125	Part of.
135	Diseases of the prostate	126	
136	Nonvenereal diseases of the male genital organs.	127	+Phimosis (150c). −Cyst of epididymis (50). − testicle (50). −Dermoid cyst of testicle (50). −Malassez's disease (50). −New growth of penis (50). − scrotum (50). − spermatic cord (50). − testicle (50). −Tumor of penis (50). − scrotum (50). − spermatic cord (50). − testicle (50). −Circumcision (ritual) (184). −Traumatic orchitis (202).
137	Cysts and other benign tumors of the ovary.	131	
138	Salpingitis and pelvic abscess (female) (new title).	130 132	Part of.
139	Benign tumors of the uterus	129	
140	Nonpuerperal uterine hemorrhage.	128	
141	Other diseases of the female genital organs.	130 132	Part of. +Metroperitonitis (nonpuerperal) (117). −Traumatic metritis (202).
142	Nonpuerperal diseases of the breast (cancer excepted).	133	−Paget's disease of nipple (47). −Cyst of breast (50). − mammary gland (50). −New growth of breast (50). − mammary gland (50). − nipple (50). −Tumor of breast (50). − mammary gland (50). −Hydatid cyst of breast (116).
143	Accidents of pregnancy	134	+Hydatid mole (42). +Hydatidiform mole (42). +Chorea of pregnancy (138).
	(a) Abortion	134	Part of.
	(b) Ectopic gestation	134	Part of.
	(c) Others under this title.	134	Part of.
144	Puerperal hemorrhage	135	

CHANGES IN THE DETAILED INTERNATIONAL LIST OF CAUSES OF DEATH—Continued.

[Some subdivisions of the 1910 title numbers shown below do not appear in the Manual, but have been used by the Census Bureau.]

List number, 1921.	Table U—Con. REVISED TITLE, 1921.	Corresponding list number, 1910.	CHANGES IN INCLUSIONS. [Terms transferred to a title are indicated by plus (+) and are followed by old title numbers in parentheses. Terms transferred from a title are indicated by minus (−) and are followed by new title numbers in parentheses.]
145	Other accidents of labor	136	
	(a) Cesarean section	136	Part of.
	(b) Other surgical operations and instrumental delivery.	136	Part of.
	(c) Others under this title.	136	Part of.
146	Puerperal septicemia	137	
147	Puerperal phlegmasia alba dolens, embolus, sudden death.	139	
148	Puerperal albuminuria and convulsions.	138	−Chorea of pregnancy (143).
149	Following child-birth (not otherwise defined).	140	
150	Puerperal diseases of the breast.	141	
151	Gangrene	142	+Ainhum (149). −Emphysematous gangrene (41).
152	Furuncle	143	
153	Acute abscess	144	−Abscess of cervical gland (94). − mediastinum (107b). −Acute mediastinitis (107b).
154	Other diseases of the skin and annexa.	145	+Infection of scalp (189a). −Tumor of nail (50). − skin (50). −Peliosis rheumatica (69). −Ivy poisoning (177). −Chilblain (193). −Pernio (193).
155	Diseases of the bones (tuberculosis excepted).	146	+Angular curvature of spine (36). + deformity of spine (36). +Anterior curvature of spine (36). +Curvature of spine (36). +Hypertrophic osteoarthropathy (36). +Kyphoscoliosis (36). +Kyphosis (36). +Lateral curvature of spine (36). +Lordosis (36). +Mollities ossium (36). +Osteoarthropathy (36). +Osteomalacia (36). +Posterior curvature of spine (36). +Pulmonary osteoarthropathy (36). +Scoliosis (36). +Softening of bone (36). −Myelomatosis (49). −Cyst of bone (50). − jaw (50). −Exostosis (50). −New growth of accessory sinus (50) − bone (50). − jaw (50). − spine (50). −Osseous tumor (50). −Osteochondroma (50). −Osteoma (50). −Sacrococcygeal tumor (50). −Symmetrical exostosis (50). − osteoma (50). −Tumor of accessory sinus (50). − bone (50). − cranium (50). − jaw (50). − skull (50). − spine (50). −Diseases of the mastoid process (new subtitle) (86b). − nasal fossæ annexa (new subtitle) (97b). −Foreign body in accessory sinus (202). − antrum (202). − of Highmore(202). − frontal sinus (and other sinuses) (202). − maxillary sinus (202).
156	Diseases of the joints (tuberculosis and rheumatism excepted).	147	−Cyst of joint (50). −New growth of joint (50). −Tumor of joint (50). −Arthritis (52). −Polyarthritis (nonvertebral) (52). −Hemophilia of joint (69).
157	Amputations	148	
158	Other diseases of the organs of locomotion.	149	−Bursal cyst (50). −New growth of bursa (50). − tendon (50). −Tumor of bursa (50). − cartilage (50). − fascia (50). − tendon (50). −Idiopathic muscular atrophy (73). −Myotonia congenita (84). −Thomsen's disease (84). −Ainhum (151). −Traumatic ossifying myositis (202).
159	Congenital malformations (still-births not included).	150	+Congenital cardiac insufficiency (1 year and over) (79). +Obstruction of pylorus (under 6 months) (103). +Pylorospasm (under 6 months) (103). +Stenosis of pylorus (under 6 months) (103). +Stricture of pylorus (under 6 months) (103). +Congenital hernia (109a). + inguinal hernia (109a). + rupture (109a). − enlargement of thymus (62). −Imperfect heart (1 year and over) (90). − valve (1 year and over) (90). −Phimosis (136).
	(a) Congenital hydrocephalus.	150a	
	(b) Congenital malformations of the heart.	150b	+Congenital cardiac insufficiency (1 year and over) (79). −Imperfect heart (1 year and over) (90). − valve (1 year and over) (90).
	(c) Others under this title.	150c	+Obstruction of pylorus (under 6 months) (103). +Pylorospasm (under 6 months) (103). +Stenosis of pylorus (under 6 months) (103). +Stricture of pylorus (under 6 months) (103). +Congenital hernia (109a). + inguinal hernia (109a). + rupture (109a). − enlargement of thymus (62). −Phimosis (136).
160	Congenital debility, icterus, and sclerema.	151b	+Defective development (151a). +Deficient development (151a). +Faulty development (151a). +Incomplete development (151a). +Insufficient development (151a). +Lack of development (151a). +Nondevelopment (151a) +Poor development (151a). +Puerperal eclampsia (child) (151a). +Undeveloped (151a). +Anasarca (under 1 year) (187). +Dropsy (under 1 year) (187). +Hydrops (under 1 year) (187). +Universal hydrops (under 1 year) (187)
161	Premature birth; injury at birth (new title).	151a 152a	−Defective development (160). −Deficient development (160). −Faulty development (160). −Incomplete development (160). −Insufficient development (160). −Lack of development (160). −Nondevelopment (160). −Poor development (160). −Puerperal eclampsia (child) (160). −Undeveloped (160).
	(a) Premature birth (not still-born).	151a	−Defective development (160). −Deficient development (160). −Faulty development (160). −Incomplete development (160). −Insufficient development (160). −Lack of development (160). −Nondevelopment (160). −Poor development (160). −Puerperal eclampsia (child) (160). −Undeveloped (160).
	(b) Injury at birth (not still-born).	152a	
162	Other diseases peculiar to early infancy.	152b	+Hemorrhage of nose (under 1 month) (85). +Hematemesis (under 1 month) (103). +Melena (under 3 months) (110).
163	Lack of care	153	
164	Senility	154	
165	Suicide by solid or liquid poisons (corrosive substances excepted).	155	Part of.
166	Suicide by corrosive substances (new title).	155	Part of.
167	Suicide by poisonous gas	156	
168	Suicide by hanging or strangulation.	157	
169	Suicide by drowning	158	
170	Suicide by firearms	159	
171	Suicide by cutting or piercing instruments.	160	
172	Suicide by jumping from high places.	161	
173	Suicide by crushing	162	
174	Other suicides	163	
175	Poisoning by food	164	
176	Poisoning by venomous animals (new title).	165	Part of.

CHANGES IN THE DETAILED INTERNATIONAL LIST OF CAUSES OF DEATH—Continued.

[Some subdivisions of the 1910 title numbers shown below do not appear in the Manual, but have been used by the Census Bureau.]

List number, 1921.	Table U—Con. REVISED TITLE, 1921.	Corresponding list number, 1910.	CHANGES IN INCLUSIONS. [Terms transferred to a title are indicated by plus (+) and are followed by old title numbers in parentheses. 177	Other acute accidental poisonings (gas excepted).	165	+Ivy poisoning (145). —Poisoning by venomous animals (new title) (176). —Poisoned wound (202).
178	Conflagration	166	
179	Accidental burns (conflagration excepted).	167	
180	Accidental mechanical suffocation (new title).	168	Part of.
181	Accidental absorption of irrespirable, irritating, or poisonous gas.	168	—Accidental mechanical suffocation (new title) (180).
182	Accidental drowning	169	
183	Accidental traumatism by firearms (wounds of war excepted).	170	
184	Accidental traumatism by cutting or piercing instruments.	171	+Circumcision (ritual) (127). +Puncture by foreign body (186). + of vein (186).
185	Accidental traumatism by fall.	172	
186	Accidental traumatism in mines and quarries.	173	
	(a) Mines	173a	
	(b) Quarries	173b	
187	Accidental traumatism by machines.	174	
188	Accidental traumatism by other crushing (vehicles, railways, landslides, etc.).	175	
	(a) Railroad accidents	175a	
	(b) Street-car accidents	175b	
	(c) Automobile accidents	175c	
	(d) Aeroplane and balloon accidents.	175h	
	(e) Motorcycle accidents.	175g	
	(f) Injuries by other vehicles.	175d, 175f	
	(g) Landslide, other crushing.	175e	
189	Injuries by animals (not poisoning).	176	
190	Wounds of war (new title)	186	Part of.
191	Execution of civilians by belligerent armies (new title).	186	Part of.
192	Starvation (deprivation of food or water).	177	
193	Excessive cold	178	+Chilblain (145). +Pernio (145).
194	Excessive heat	179	
195	Lightning	180	
196	Other accidental electric shocks.	181	
197	Homicide by firearms	182	—Infanticide (by firearms) (200).
198	Homicide by cutting or piercing instruments.	183	—Infanticide (by cutting or piercing instruments) (200).
199	Homicide by other means	184	—Infanticide (other and unspecified) (200).
200	Infanticide (murder of infants less than 1 year of age) (new title).	182, 183, 184	Part of.
201	Fracture (cause not specified).	185	
202	Other external violence	186	+Infected wound (20). +Traumatic encephalitis (60). + inflammation of brain (60). + psychosis (68). +Bends (74). +Caisson disease (74).
202	Other external violence	186	+Divers' palsy (74). + paralysis(74). +Erichsen's disease (74). +Traumatic epilepsy 74). + neurasthenia (74). + neurosis (74). +Foreign body in ear (76). + nose (86). +Hematoma of nasal septum (86). +Traumatic pneumonia (92b). +Foreign body impacted in pharynx (100). + in esophagus (101). + stomach (103). + alimentary canal (110). + intestine (110). + rectum (110). + peritoneum (117). +Traumatic peritonitis (117). +Foreign body in bladder (124). + urethra (125). +Traumatic stricture of urethra (125). + urethral fever (125). + orchitis (127). + metritis (130). +Foreign body in accessory sinus (146). + antrum (146). + of Highmore (146). + frontal sinus (and other sinuses) (146). + maxillary sinus (146). +Traumatic ossifying myositis (149). +Poisoned wound (185). —Air embolism (92). —Puncture by foreign body (184). — of vein (184). —Wounds of war (new title) (190). —Execution of civilians by belligerent armies (new title) (191). —Violent deaths of unknown causation (203).
203	Violent deaths of unknown causation.	186	Part of.
204	Sudden death	188	
205	Cause of death not specified or ill-defined.	189	+Leukocytosis (53). +Cephalalgia (74). +Ill-defined organic disease (old title discontinued) (187). —Congestive chill (in malarial regions) (5). —Infectious disease (42). —Infection of axillary gland (94). — scalp (154). —Anasarca (under 1 year) (160). —Dropsy (under 1 year) (160). —Hydrops (under 1 year) (160). —Universal hydrops (under 1 year) (160).
	(a) Ill-defined	189a	+Leukocytosis (53). +Cephalalgia (74). +Ill-defined organic disease (old title discontinued) (187). +Lack of medical attention (189b). —Congestive chill (in malarial regions) (5). —Infectious disease (42) —Infection of axillary gland (94). — scalp (154). —Anarsarca (under 1 year) (160). —Dropsy (under 1 year) (160). —Hydrops (under 1 year) (160). —Universal hydrops (under 1 year) (160).
	(b) Not specified or unknown.	189b	—Lack of medical attention (205a).

DEATH RATES FROM CERTAIN IMPORTANT CAUSES OF DEATH IN THE REGISTRATION AREA AND IN THE REGISTRATION STATES OF 1900 FOR THE YEARS 1900 AND 1910 TO 1921.

Rates from 14 important causes or groups of causes of death in the registration area, exclusive of Hawaii, for the years 1900 and 1910 to 1921 are shown in Table V and in Diagram 6.

Table V

[1] Exclusive of Hawaii.

[2] Exclusive of stillbirths.

In Table W corresponding data to those shown for the registration area are presented for the registration States of 1900 (Connecticut, Indiana, Maine, Massachusetts, Michigan, New Hampshire, New Jersey, New York, Rhode Island, and Vermont and the District of Columbia); these represent more than one-third of the entire population of the registration area, exclusive of Hawaii.

Table W

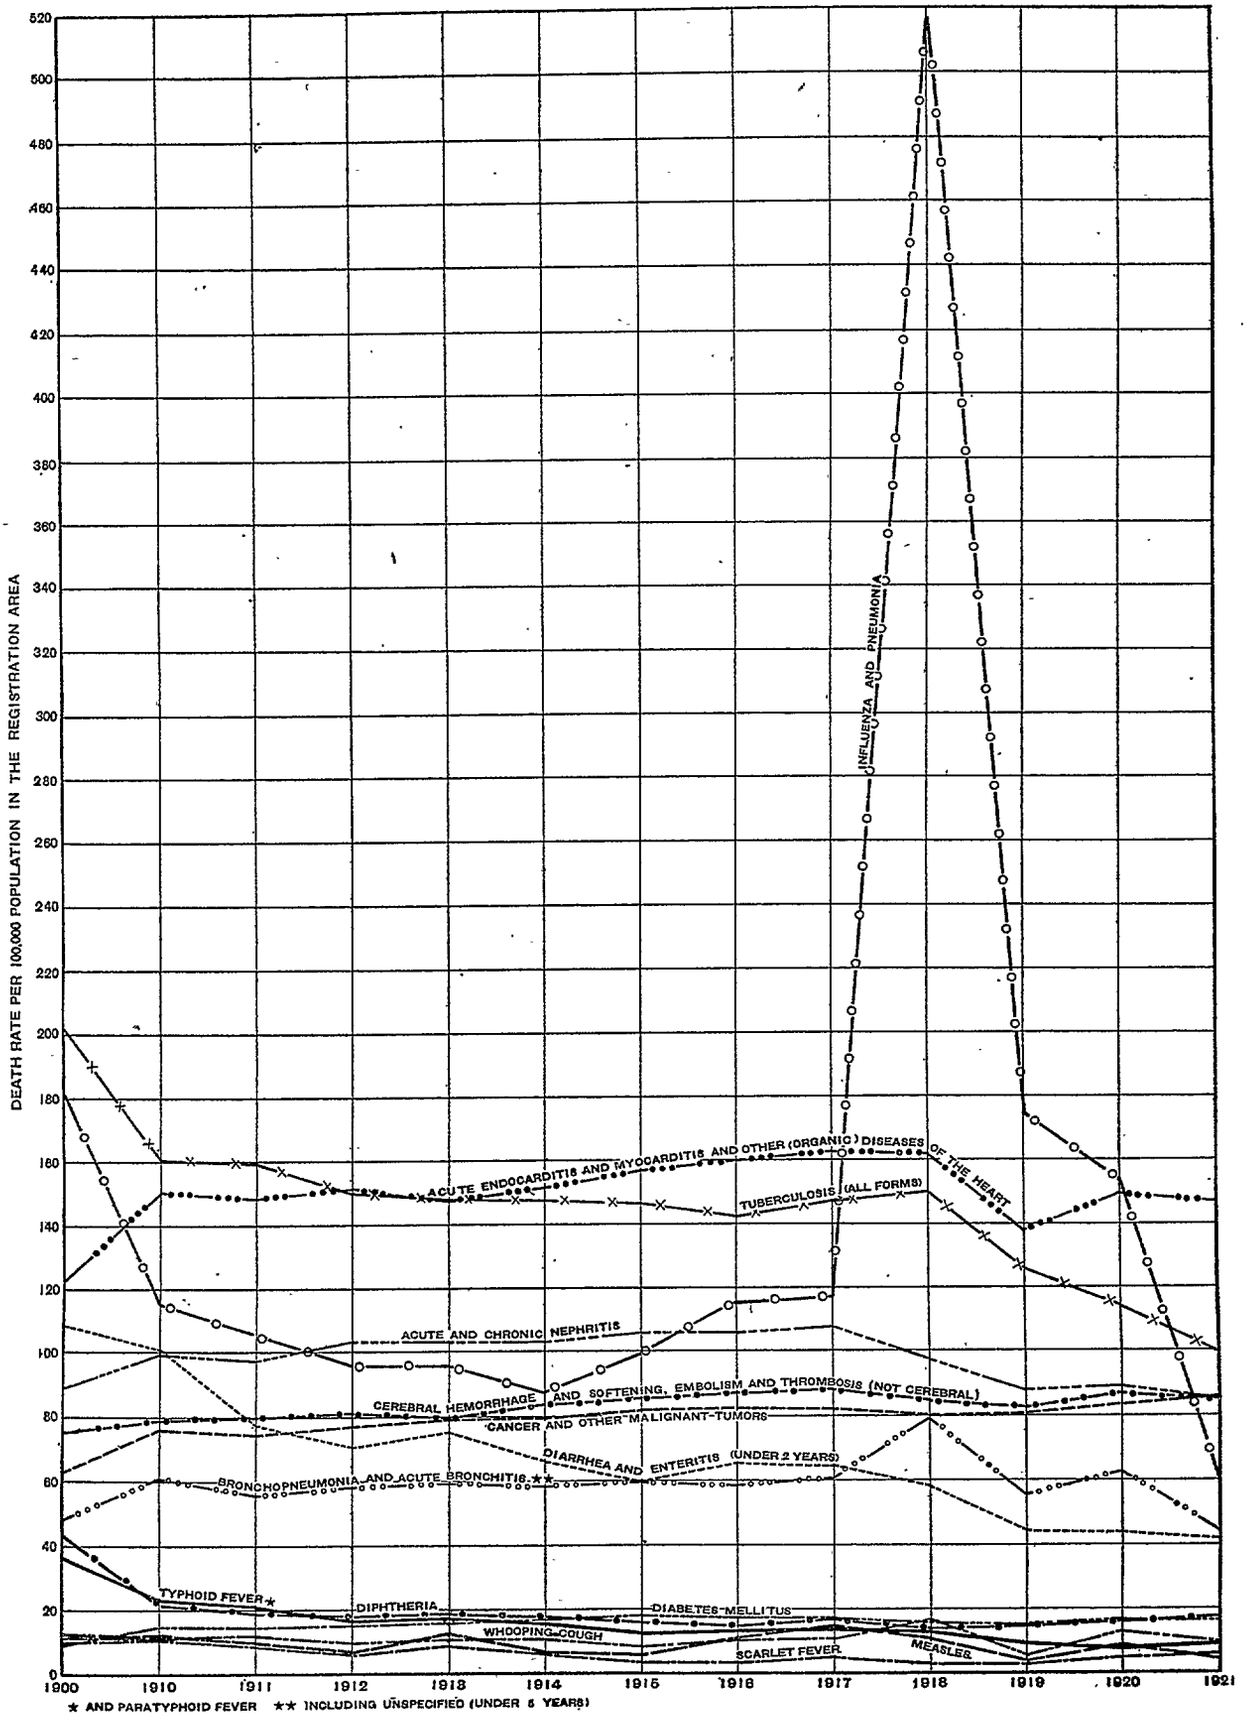
[1] Exclusive of stillbirths.

For the registration area (exclusive of Hawaii) and also for the registration States of 1900, 4 of the 14 causes or groups of causes of death have, in 1921, record low rates; that is, lower for 1921 than for any year since the publication, in 1900, of the first annual report. These 4 are influenza and pneumonia, tuberculosis (all forms), bronchopneumonia and acute bronchitis (including unspecified under 5 years), and diarrhea and enteritis (under 2 years). For the registration area a record low rate also appears for acute and chronic nephritis.

On the other hand, the trend of mortality from cancer is decidedly upward, and hows a remarkable increase since 1900. For the registration area the rate is 86 per 100,000 population in 1921 against 63 in 1900, and the increase is continuous from 1917; for the States of 1900 the rate is 102.6 in 1921 against 64 in 1900, and since then has continuously increased in every year of the series shown except 1918; in each of these years the rates for these States are higher than those for the registration area. For both of these areas an upward trend is also shown in the rates from scarlet fever, diphtheria, and diabetes mellitus; the first 2 of these causes in 1921 have their highest rates since 1914, and diabetes mellitus, its highest, since 1917.

DIAGRAM 6.—DEATH RATES FROM CERTAIN IMPORTANT CAUSES OF DEATH IN THE REGISTRATION AREA OF THE UNITED STATES FOR THE YEARS 1900 AND 1910 TO 1921.



* AND PARATYPHOID FEVER ** INCLUDING UNSPECIFIED (UNDER 5 YEARS)

For the registration area the rates in 1921 from typhoid and paratyphoid fever and from whooping cough are higher than those for the States of 1900, but, for these States, in every year shown, the rates from cerebral hemorrhage and softening, embolism and thrombosis (not cerebral), and from acute endocarditis and myocarditis and other (organic) diseases of the heart, are much higher than those for the registration area.

When comparisons of the rates for the earlier years are made with those of recent years, both areas show marked decreases for typhoid and paratyphoid fever, measles, diphtheria, influenza and pneumonia, tuberculosis (all forms), and diarrhea and enteritis (under 2 years).

TYPHOID AND PARATYPHOID FEVER.

The number of deaths from typhoid and paratyphoid fever in 1921 is 8,007, corresponding to a crude death rate of 9 per 100,000 population; this is higher than the rate for 1920 (7.8) which was the record low rate in the period of 21 years from 1900 to 1920, inclusive.

Table X shows adjusted rates per 100,000 population for the years 1920 and 1921, and crude rates from 1914 to 1921; rates of 40 and higher are printed in bold-faced type.

Table X — DEATH RATE FROM TYPHOID AND PARATYPHOID FEVER PER 100,000 POPULATION. [Rates of 40 or more in bold-faced type.]

[1] Exclusive of Hawaii.
[2] Not computed.
[3] Including District of Columbia.
[4] Not added to registration area until a later date.
[5] Includes only municipalities having a population of 1,000 or more in 1910.
[6] Transcripts of deaths not received.
[7] No deaths in 1920, therefore there is no factor to apply to the 1921 crude rate. See page 728.

NOTE.—These adjusted rates for 1920 may differ from those in the report of Mortality Rates, 1910–1920, since an estimated population is used for one, and an enumerated population for the other.

In 1921 no State shows an adjusted rate even approaching 40. South Carolina shows the highest adjusted rate (26.5), followed by Kentucky (26.3), Tennessee (26), and Mississippi (18.6). The States showing the lowest adjusted rates are Rhode Island (2.6), Wisconsin (2.9), Massachusetts (3), and Montana (3.4). There are 22 States with higher adjusted rates in 1921 than in 1920. The differences between the adjusted and the crude rates for States in 1921 are generally very slight, and in 9 States these rates are equal. The greatest increase (0.5) in an adjusted rate over a crude rate is shown for South Carolina, and the greatest decrease (0.4) is shown for Oregon.

Among the registration cities of 100,000 population or more in 1920, 35 have higher adjusted rates in 1921 than in 1920. Those showing the highest adjusted rates are Nashville (21.5), Birmingham (17.8), San Antonio (17.1), and Youngstown (15.9). Cities with the lowest adjusted rates are Oakland (0.8), Minneapolis (1.1), Chicago (1.2), and Seattle (1.6). For cities shown by color, Nashville has for colored the very high adjusted rate of 27.5.

As the amount of typhoid fever in an area is regarded as an index of the effectiveness of public health work, refinements of death rates from this cause seem especially desirable. The extent to which typhoid fever mortality rates would have been changed by corrections for deaths of nonresidents is indicated in Table Y.

Note, for example, that the rate for Birmingham, Ala., would have been reduced from 18.3 per 100,000 population to 9.1, and that Cambridge, which had no deaths from typhoid fever, would have been credited with 2 deaths from this disease outside of Cambridge.

MALARIA.

The number of deaths from malaria in 1921 is 3,229 corresponding to a rate of 3.6 per 100,000 population, the same rate as that shown for 1920. The death rate from this cause was 7.9 in 1900, but after that year there was a continued decrease until 1910, for which year the rate was 2.2; from 1910 to 1919 the rate ranged between 2.2 and 3.8.

Table Z shows the rates per 100,000 population for the years 1912 to 1921, rates of 10 and higher being printed in bold-faced type.

[1] Exclusive of Hawaii.
[2] Including District of Columbia.
[3] Not added to registration area until a later date.
[4] Less than one-tenth of 1 per 100,000 population.
[5] Includes only municipalities having a population of 1,000 or more in 1910.
[6] Includes only municipalities having a population of 1,000 or more in 1900.
[7] Transcripts of deaths not received.

States having rates above 10 per 100,000 population in 1921 are Mississippi (49.9), South Carolina (27.9), Florida (23.7), Louisiana (23.4), and Tennessee (14.4). Other States with rates well above that for the registration area as a whole (3.6 per 100,000) are North Carolina (6.9) and Missouri (5.6). Five States (Colorado, Massachusetts, Minnesota, Montana, and Utah) and 37 of the 66 cities show no rate from malaria for 1921. For cities the highest rates are for Memphis (47.1), Houston (16.5), and San Antonio (9.9). Although Memphis has the highest rate shown, special attention is called to the remarkable decline in its rate in late years; in 1904 its rate was 149.8. In 1921 the rate for the colored is very high in Mississippi (63.2), South Carolina (45.5), and Florida (33.9), and the highest rates shown in registration cities of 100,000 population or more in 1920 are for Memphis (82.7) and Houston (40.1).

SMALLPOX.

Not for many years has smallpox been an important cause of death in this country.

Since 1900, the year for which the first annual report was published, smallpox has never reached a rate as high as 7 per 100,000 population for the registration area. The highest rate from this cause in any year from 1900 to 1920 is 6.6 in 1902; in 1903 it is 4.2; in 1901, 3.5; 2.1 in 1904; and 1.9 in 1900. With the exception of these five years the rate for the registration area has never reached 1 per 100,000 population.

The danger of smallpox, however, among an unvaccinated population must not be lost sight of, and the high rate (78.7) in 1921 for the colored of Kansas City, Kans., and the high total rate (47.3) for Kansas City, Mo., should serve as a warning.

Table AA shows the rates per 100,000 population for 1912 to 1921.

Table AA — DEATH RATE FROM SMALLPOX PER 100,000 POPULATION.

[1] Exclusive of Hawaii.
[2] Including District of Columbia.
[3] Less than one-tenth of 1 per 100,000 population.
[4] Not added to registration area until a later date.
[5] Includes only municipalities having a population of 1,000 or more in 1910.
[6] Includes only municipalities having a population of 1,000 or more in 1900.
[7] Transcripts of deaths not received.

Of the 66 cities presented only 24 show rates for 1921 and 10 of these have rates of 1 or more.

MEASLES.

The number of deaths from measles in 1921 is 3,790, or 4.3 per 100,000 population. This is less than half the rate (8.8) for 1920 and only slightly higher than that for 1919 (3.9), which was the lowest rate from this cause on record in the annual mortality reports, the first of which was published in 1900.

Table AB shows the rates per 100,000 population for the years 1912 to 1921, with rates of 20 and higher in bold-faced type.

[1] Exclusive of Hawaii.
[2] Including District of Columbia.
[3] Not added to registration area until a later date.
[4] Includes only municipalities having a population of 1,000 or more in 1910.
[5] Includes only municipalities having a population of 1,000 or more in 1900.
[6] Transcripts of deaths not received.

Comparing the rates for the registration States in 1921 and 1920, decreases are shown for 24 of the 34 States, the largest appearing for Delaware (from 16.1 to 0.9), Ohio (from 12.9 to 2.5), Michigan (from 11.8 to 1.8), Indiana (from 11.8 to 2.8), and Pennsylvania (from 13.1 to 5.4).

Among the registration cities of 100,000 population or more in 1920, only 1, Fall River (23.2), shows a rate in 1921 in excess of 20. Those showing the lowest rates are St. Paul (0.4), Dayton and New Haven (each 0.6), and Bridgeport, Grand Rapids, and Rochester (each 0.7).

SCARLET FEVER.

The number of deaths from scarlet fever in 1921 is 4,718, corresponding to a rate of 5.3 per 100,000 population, which is the highest rate since 1914.

Twenty States have higher rates in 1921 than in 1920. Those showing the highest death rates from scarlet fever in 1921 are Michigan (9.1), Wisconsin (9), Minnesota (7.8), and Ohio (7.4); those showing the lowest rates are Louisiana (0.6), South Carolina (0.8), Mississippi (0.9), and Florida (1.1).

Among the registration cities of 100,000 population or more in 1920 the highest rates are for Youngstown (21.9), Bridgeport (16), Cleveland (14.4), and Minneapolis (14). The lowest rates are for Richmond (0.6), New Bedford and New Orleans (each 0.8), and Reading (0.9). Of the 14 cities showing deaths by color 3 had no deaths from scarlet fever in 1921 and 7 others had no deaths among the colored.

Table AC shows the rates per 100,000 population for 1912 to 1921, rates of 20 and higher being in bold-faced type.

Table AC — DEATH RATE FROM SCARLET FEVER PER 100,000 POPULATION. [Rates of 20 or more in bold-faced type.]

[1] Exclusive of Hawaii.
[2] Including District of Columbia.
[3] Not added to registration area until a later date.
[4] Includes only municipalities having a population of 1,000 or more in 1910.
[5] Includes only municipalities having a population of 1,000 or more in 1900.
[6] Transcripts of deaths not received.

WHOOPING COUGH.

The number of deaths from whooping cough in 1921 is 8,070, with a death rate of 9.1 per 100,000 population, against a rate of 12.5 in 1920.

Table AD shows the rates per 100,000 population for 1912 to 1921, rates of 20 and higher being in bold-faced type.

[1] Exclusive of Hawaii.
[2] Including District of Columbia.
[3] Not added to registration area until a later date.
[4] Includes only municipalities having a population of 1,000 or more in 1910.
[5] Includes only municipalities having a population of 1,000 or more in 1900.
[6] Transcripts of deaths not received.

Of the 34 States, 24 show lower rates in 1921 than in 1920. The highest rates appear for Utah (31.7), Virginia (19.3), Maryland (16.9), and South Carolina (16.3). The lowest are shown for Washington (3.7), Oregon (4.5), Nebraska (5), and Massachusetts (5.2). Of the 66 cities shown, 21 have higher rates in 1921 than in 1920; the highest rates in 1921 are for Fall River (25.7), Nashville (21.3), and Richmond (21.1); the lowest are for St. Paul (0.8), Omaha (1), Kansas City, Mo., (1.2), Los Angeles (1.3), and Seattle (1.9).

The rates for the colored are, for the most part, higher than for the white populations. Among the areas which show by color rates of more than 20 in 1921 appear for the colored in 4 of the 9 States and in 6 of the 14 cities.

DIPHTHERIA.

As diphtheria is primarily a disease of childhood, the age constitution of populations must be considered in the study of the crude rates. Of the deaths from this cause in 1921, those of children under 5 years of age represent 53.9 per cent of the total.

The total number of deaths from diphtheria in 1921 is 15,683, corresponding to a rate of 17.7 per 100,000 population. In 1900 the death rate from this cause in the registration area was 43.3. If we assume that these figures measure the reduction in the death rate from this cause in the United States since 1900, then in round numbers there is a saving of about 28,000 lives in 1921 to be credited to the advancement made in the treatment and prevention of this disease.

Table AE shows the rates per 100,000 population for the years 1912 to 1921, rates of 40 and higher being printed in bold-faced type.

Table AE DEATH RATE FROM DIPHTHERIA PER 100,000 POPULATION. [Rates of 40 or more in bold-faced type.]

[1] Exclusive of Hawaii.
[2] Including District of Columbia.
[3] Not added to registration area until a later date.
[4] Includes only municipalities having a population of 1,000 or more in 1910.
[5] Includes only municipalities having a population of 1,000 or more in 1900.
[6] Transcripts of deaths not received.

The rate from diphtheria in 1921 (17.7) is the highest recorded since 1914 (17.9). In 24 States the rates are higher in 1921 than in 1920. The highest rates are for Kentucky (25.9), Michigan (25), Colorado (24.8), Indiana (23.8), and Missouri (23). Very low rates are shown for Louisiana (6), Delaware (6.2), Florida (6.9), and Vermont (7.9).

Among the registration cities of 100,000 population or more in 1920, the highest rates in 1921 are for Syracuse (45.6), Omaha (44.6), Toledo (36.3), Reading (35.7), and Detroit (33.8). The first three of these cities have higher rates in 1921 than in any other year shown. The cities with low rates are Norfolk (3.3), New Orleans (3.5), Birmingham (5.4), Wilmington (6.2), and Seattle (7). Five cities, New Orleans, Wilmington, Providence, New York, and Philadelphia, show lower rates in 1921 than in any other year of the series.

Of the 9 states and 14 cities shown by color all but 2 have lower rates in 1921 for the colored than for the white.

INFLUENZA AND PNEUMONIA (ALL FORMS).

The mortality rate from influenza and pneumonia (all forms) for the registration area in 1921 is 99.8 against 208.3 in 1920.

For the States the highest rates in 1921 are found for Pennsylvania (146.9), Maine (130.5), Colorado (130.4), and Delaware (124.7), and the lowest rates are for Florida (61.5), Kansas (68.8), Washington (70.7), Minnesota (71.7), and Nebraska (72.6).

For the cities the highest rates in 1921 appear for Pittsburgh (274.4), Scranton (180.6), Denver (179.7), Camden (175.4), and Youngstown (164), and the lowest are for Grand Rapids (60.2), Dayton (60.7), Seattle (62.5), Rochester (69.7), St. Paul (74.4), and Houston (75.1).

For the areas shown by color, the rates for the colored are far in excess of those for the white.

Table AF shows the rates per 100,000 population for the years 1912 to 1921.

[1] Exclusive of Hawaii.
[2] Including District of Columbia.
[3] Not added to registration area until a later date.
[4] Includes only municipalities having a population of 1,000 or more in 1910.
[5] Includes only municipalities having a population of 1,000 or more in 1900.
[6] Transcripts of deaths not received.

NOTE.—From 1912 to 1920, inclusive, excludes capillary bronchitis.

ACUTE ANTERIOR POLIOMYELITIS.

The number of deaths from acute anterior poliomyelitis in 1921 is 1,597, corresponding to a rate of 1.8 per 100,000 population against a rate of 0.9 for the same area in 1920. In striking contrast to these stands out the high rate (10) for 1916.

Table AG shows the rates per 100,000 population for the years 1912 to 1921, rates of 2 and higher being printed in bold-faced type.

Table AG AREA.	DEATH RATE FROM ACUTE ANTERIOR POLIOMYELITIS PER 100,000 POPULATION. [Rates of 2 or more in bold-faced type.]

[1] Exclusive of Hawaii.
[2] Including District of Columbia.
[3] Not added to registration area until a later date.
[4] Includes only municipalities having a population of 1,000 or more in 1910.
[5] Includes only municipalities having a population of 1,000 or more in 1900.
[6] Transcripts of deaths not received.

Twenty-seven of the 34 States show higher rates in 1921 than in 1920; those showing the greatest increases are Washington (from 0.3 to 8.8); Minnesota (from 0.7 to 3.9); Michigan (from 0.9 to 3.0); and New York (from 0.6 to 2.6).

Of the 66 registration cities of 100,000 population or more in 1920, 40 have higher rates in 1921 than in 1920 and 17 have rates of 2 or more, Spokane showing a record high rate of 17.2. Sixteen show no deaths from this cause in 1921 against 23 with no deaths in 1920.

LETHARGIC ENCEPHALITIS.

The number of deaths in 1921 from lethargic encephalitis is 1,355 against 1,070 in 1920. Besides these there are 354 deaths in 1921 in which lethargic encephalitis appears as a contributory cause against 435 in 1920; about half of these contributory causes were returned in combination with influenza, bronchopneumonia or pneumonia.

Table AH gives for the registration area and its subdivisions all deaths when lethargic encephalitis was given either as a primary or a contributory cause of death.

The increase in deaths from lethargic encephalitis in 1921, as compared with 1920, is mostly in the rural districts (410 against 238), Michigan, Ohio, Kentucky, and Illinois together, showing half the total increase.

The rapid increase in this new disease—lethargic encephalitis—not only in this country but also in Europe, is cause for very serious concern. The figures for lethargic encephalitis undoubtedly understate the situation, as more deaths are now recorded under Title 70, Encephalitis (excluding lethargic encephalitis), than were recorded a few years ago, and it is only reasonable to conclude that most of this increase is due to other deaths from lethargic encephalitis certified simply as encephalitis. The increase in the deaths and death rates from encephalitis and lethargic encephalitis in the registration area is shown in Table AI.

Table AI REGISTRATION AREA.[1]

CAUSE OF DEATH.	Number of deaths.					Rate per 100,000 population.

OTHER EPIDEMIC AND ENDEMIC DISEASES.

In the detailed International List of Causes of Death, titles 1 to 25 are assigned to the epidemic and endemic diseases, of which 10 have been discussed. Of the others, no deaths are reported in 1921 for Asiatic cholera. Every effort has been made by the Census Bureau to authenticate the returns of rare diseases before tabulating them under the designated titles; each case has been made the subject of a special inquiry, and either the existence of the disease has been verified or no reply has been received; in the latter case there is no alternative but to classify the death as reported. In 1921 typhus fever is the cause of 12 deaths distributed as follows: 1 each in Los Angeles and Los Angeles County, Calif., Bridgeport, Conn., Kent County, Del., Elk County, Kans., Baltimore and Cecil County, Md., Gloucester, Mass., and 2 each in Brooklyn and Manhattan Boroughs, N. Y.; relapsing fever caused 3 deaths: 1 each in Pensacola, Fla., Savannah, Ga., and Milford town, Mass.; miliary fever caused 2 deaths: 1 each in Dubois County, Ind., and St. Louis County, Mo.; bubonic plague caused 1 death in San Benito County, Calif.; yellow fever, 2 deaths: 1 each in Los Angeles, Calif., and New Orleans, La.; leprosy, 18 deaths: 1 in Alameda County, 2 in San Francisco, and 3 in Los Angeles, Calif., 1 each in Key West, Fla., Boston, Mass., and Manhattan Borough, N. Y., 2 in San Antonio, Tex., and 7 in Iberville Parish, La. Malta fever caused 1 death in Montgomery County, Pa.; mumps, 131; cholera nostras, 232; dysentery, 3,570; spirochetal hemorrhagic jaundice, 27; erysipelas, 2,501; and meningococcus meningitis, 1,296.

Under the title "Other epidemic and endemic diseases" is included a miscellaneous collection of diseases, and in 1921 the number of deaths charged to these is 209 distributed as follows: Chicken-pox, 163; German measles, 11; acrodynia, 1 death in Union County, S. C.; dengue fever, 9 deaths: 7 in Miami and 1 in Palm Beach, Fla., and 1 in Unicoi County, Tenn.; Rocky Mountain spotted fever, 19 deaths: 1 each in Moffat

and Saguache Counties, Colo., 2 in Missoula, 1 in Fergus County, and 7 in Ravalli County, Mont., and 1 each in Grant and Wheeler Counties, 2 in Harney County, and 3 in Crook County, Oreg.; Roseola, 3 deaths: 1 each in Pike County, Miss., Jackson County, Mo., and Williamsburg County, S. C.; and milk sickness, 3 deaths: 1 in Jackson County, N. C., and 1 each in Bledsoe and Hamilton Counties, Tenn.

GLANDERS.

In 1921 the only death reported as due to glanders occurred in Monterey County, Calif. The distribution of deaths from this cause for each of the years 1912 to 1921, inclusive, is shown in Table AJ.

MYCOSES.

The total number of deaths from mycoses in 1921 is 197; of this number, 143, or 72.6 per cent, are due to thrush, which, prior to 1921, was classified under "Diseases of the mouth and annexa." Of these 143

cases of thrush 109 were from the rural districts and 80 were deaths of colored children under 1 year.

The distribution of deaths from mycoses is shown in Table AM.

TUBERCULOSIS (ALL FORMS).

Tuberculosis (all forms) includes seven titles of the detailed International List of Causes of Death. The number of deaths from this cause in 1921 is 88,135, corresponding to a crude rate of 99.4 per 100,000 population, and constituting 8.5 per cent of deaths from all causes. The crude death rate for 1921 is by far the lowest rate recorded in the annual mortality reports, the first of which was published in 1900.

In discussions of tuberculosis in previous years attention has been directed to the fact that there are many localities to which persons afflicted with this disease are attracted because of climatic conditions favorable to the treatment of this disease. States and cities which annually show high death rates from tuberculosis (all forms) are not always those which have conditions tending to the development of tuberculous diseases, but, in many instances, are health resorts.

Table AN shows adjusted mortality rates from tuberculosis (all forms) per 100,000 population, and also crude mortality rates. The adjusted rates are based on the standard million population of England and Wales, 1901. Rates of 175 or more are printed in bold-faced type.

[1] Exclusive of Hawaii.
[2] Not computed.
[3] Including District of Columbia.
[4] Not added to registration area until a later date.
[5] Includes only municipalities having a population of 1,000 or more in 1910.
[6] Transcripts of deaths not received.

The adjusted rate (95.8) for the States as a whole in 1921 is a remarkable reduction from the corresponding rate (110.3) in 1920, and every State but Utah shows a lower rate in 1921 than in 1920.

The States which show the highest adjusted rates in 1921 from tuberculosis (all forms) are Colorado (173.8), Tennessee (148.4), Virginia (140.7), California (137.2), and Kentucky (136.6). The States with the lowest rates are Nebraska (36.6), Utah (41.3), Kansas (42.3), Montana (56.5), and Vermont (65.9).

Of the registration cities with populations of 100,000 or more in 1920, only 2 in 1921 have adjusted rates higher than 175, and only 5 have higher adjusted rates in 1921 than in 1920. The cities having the highest adjusted rates in 1921 are San Antonio (237.3), Denver (188.9), and New Orleans (173.9). The lowest rates appear for Akron (47), Salt Lake City (57.9), Portland (60), Grand Rapids (61.1), and Spokane (61.8).

For the States and cities that show by color, the adjusted rate for the colored is higher than 175 for all the States but Florida (159.7), and for all the cities but Houston (144.3) and Norfolk (174.6). For the white in these areas, Mississippi and Houston are the only ones which show higher rates in 1921 than in 1920, while for the colored, Atlanta, Baltimore, Louisville, Richmond, and Washington, D. C., show higher rates in 1921.

TUBERCULOSIS OF THE RESPIRATORY SYSTEM AND ACUTE DISSEMINATED TUBERCULOSIS.

The number of deaths in 1921 from tuberculosis of the respiratory system and acute disseminated tuberculosis, is 77,703, and the crude death rate (87.6 per 100,000 population) is by far the lowest rate recorded in the annual mortality reports.

Table AO shows the rates per 100,000 population for 1912 to 1921, rates of 150 and higher being printed in bold-faced type.

Table AO — DEATH RATE FROM TUBERCULOSIS OF THE RESPIRATORY SYSTEM AND ACUTE DISSEMINATED TUBERCULOSIS PER 100,000 POPULATION.

[Rates of 150 or more in bold-faced type.]

[1] Exclusive of Hawaii.
[2] Including District of Columbia.
[3] Not added to registration area until a later date.
[4] Includes only municipalities having a population of 1,000 or more in 1910.
[5] Includes only municipalities having a population of 1,000 or more in 1900.
[6] Transcripts of deaths not received.

Tuberculosis of the respiratory system and acute disseminated tuberculosis represent 88.2 per cent of all forms of tuberculosis in 1921, which is slightly lower than the corresponding per cent (88.3) in 1920.

States with the highest rates in 1921 are Colorado (172.8), California (135.1), Tennessee (124.7), Maryland (122.2), and Delaware (122). States which have the lowest rates are Nebraska (32.1), Utah (32.7), Kansas (37), Montana (55.7), and Vermont (57.9).

Only one State—Colorado—has a rate of 150 or higher for every one of the 10 years shown, and Utah is the only State which has a higher rate (32.7) in 1921 than in 1920 (32).

Of the registration cities of 100,000 population or more in 1920, four have rates higher than 150 for each of the years shown. Very low rates in 1921 are for Akron (39.8), Spokane (46.9), Grand Rapids (47.4), and Portland (47.9).

All of the nine States shown by color have rates in 1921 nearly three times as high for the colored as for the white, and every city shown by color has for the colored a rate in 1921 of 150 or more.

The same caution which was given for tuberculosis (all forms) should be exercised in making comparisons for tuberculosis of the respiratory system and acute disseminated tuberculosis. The mortality from this cause among Negroes and among certain other races is markedly high, for which reason the composition of a given population in respect to color and race should be carefully considered.

SYPHILIS.

The number of deaths credited to syphilis in 1921 is 6,962, corresponding to a rate of 7.9 per 100,000 as against 7,969 deaths in 1920 and a rate of 9.1. Death rates from syphilis, tabes dorsalis, and general paralysis of the insane are given in Table AP.

DEATHS AND DEATH RATES PER 100,000 POPULATION FROM SYPHILIS, TABES DORSALIS, AND GENERAL PARALYSIS OF THE INSANE, IN THE REGISTRATION AREA AND IN THE REGISTRATION STATES OF 1900, FOR THE YEARS 1900 TO 1921, AND IN THE REGISTRATION STATES OF 1910, FOR THE YEARS 1910 TO 1921.

Table AP — YEAR.	DEATHS.				DEATH RATE PER 100,000 ESTIMATED POPULATION.			
	Total.	Syphilis.	Tabes dorsalis.	General paralysis of the insane.	Total.	Syphilis.	Tabes dorsalis.	General paralysis of the insane.

[1] Including District of Columbia.
[2] Including District of Columbia and excluding North Carolina.

NOTE.—Prior to 1921 when syphilis was returned jointly with tabes dorsalis or with general paralysis of the insane, the assignment was to syphilis; in 1921, to either tabes dorsalis, or to general paralysis of the insane.

The data for syphilis in the preceding table are presented largely as a matter of record, for it is generally recognized that certification of syphilis has been and is still so incomplete that death rates from this cause are almost valueless.

Perhaps a comparison of the rates from tabes dorsalis and general paralysis of the insane in 1900 and in 1916 will throw a little light on the increase of syphilis in that period of 16 years antedating the entrance of the United States into the war and the influenza epidemic. The mortality from tabes dorsalis and general paralysis of the insane together increased in the registration States of 1900 from 9.4 per 100,000 population in 1900 to 11.6 in 1916. For the registration States of 1910 the corresponding rate in 1910 was 8.3 and in 1916, 10.7. On the other hand, the 1921 mortality rates from the combined causes syphilis, tabes dorsalis, and general paralysis of the insane are lower than appear for any year since 1913. For comparison a few rates are given in Table AQ for England and Wales.

Table AQ — ENGLAND AND WALES.	DEATH RATE PER 100,000 ESTIMATED POPULATION.		
	Syphilis.	Tabes dorsalis.	General paralysis of the insane.

1910	4.6	1.6	6.2

From Annual Report, Registrar-General, 1920.

CANCER.

The number of deaths in 1921 from cancer and other malignant tumors is 76,274, corresponding to a crude rate of 86 per 100,000 population, against 83.4 in 1920, and 80.5 in 1919. The rate for 1921 shows an increase of 36.5 per cent over the rate for 1900 (63), and the increase is continuous to 1917 if the years 1906 and 1911 are excepted.

Comparisons of crude mortality rates from this cause, however, magnify somewhat the actual increase in mortality which has occurred, for crude rates do not take into account the fact that the percentage of our population at older ages is annually increasing. For example (on page 81 of Mortality Rates, 1910–1920) the crude rates from cancer show for the registration States of 1900 a rate of 64 in 1900 and a rate of 99.6 in 1920, suggesting an increase of 56 per cent, whereas the adjusted rates are respectively, 60.7 and 87.8, or an increase of 45 per cent. Particular attention, therefore, is called to the following adjusted rates, based on the specific rates of each locality, by sex and age, and on the standard million population of England and Wales, 1901. The adjusted mortality rates from cancer for 1921 are higher than those for 1920 in 26 of the 34 States in the registration area, and the

adjusted rate for the States increased from 78.5 in 1920 to 81.2 in 1921 or 3.4 per cent.

Table AR shows adjusted mortality rates from cancer per 100,000 population for 1920 and 1921 and also crude mortality rates for 1914 to 1921, rates of 80 and higher being printed in bold-faced type.

Table AR — DEATH RATE FROM CANCER AND OTHER MALIGNANT TUMORS PER 100,000 POPULATION. [Rates of 80 or more in bold-faced type.]

[1] Exclusive of Hawaii.
[2] Not computed.
[3] Including District of Columbia.
[4] Not added to registration area until a later date.
[5] Includes only municipalities having a population of 1,000 or more in 1910.
[6] Transcripts of deaths not received.

NOTE.—The adjusted rates for 1920 may differ from those in the 1920 Report since an estimated population is used for one, and an enumerated population for the other

The States which have the highest adjusted rates in 1921 are Massachusetts (99.6), Rhode Island (97.4), New York (96), and New Jersey (92.7). The lowest adjusted rates are shown for South Carolina (47.6), Tennessee (51.9), Mississippi (52.4), and North Carolina (53.7). Of the nine States shown by color, six have higher adjusted rates in 1921, and Maryland shows the highest adjusted rates from cancer for both the white and the colored populations (86.9 and 74.6, respectively). The lowest adjusted rate for the white population is 51.5 for Tennessee, and the lowest for the colored population is 36.4 for Florida. Adjusted rates of 80 or more are shown for 15 States in 1921, against 12 in 1920, but crude rates of 80 or more are shown for 21 States in 1921, against 20 in 1920.

In 1921 adjusted rates of 80 or more are shown for 62 of the 66 registration cities of 100,000 population or more in 1920. The cities with the highest adjusted rates in 1921 are San Francisco (132.2), Cambridge (128.5), Hartford (126.2), Boston (125.8), and Omaha (121.9). The cities with lowest rates are New Bedford (70.9), Akron (73.8), Wilmington (76.3), and Reading (77.4). There is an increase in the adjusted rates for 1921 over those for 1920 in 35 of the cities shown.

For cities especially even adjusted rates do not serve as absolutely accurate measures of relative mortality from this disease, for allowance must still be made for deaths of nonresidents who go to the city for hospital treatment.

Summarized briefly, the adjusted rates show that the Northern States have comparatively high, and the Southern States comparatively low cancer mortality, whereas there is little difference between the adjusted cancer rates of the white and colored races of the same States. In other words, the white and colored races seem equally susceptible to cancer, but both races seem less susceptible in the South than in the North. Some of the adjusted rates on page 86 of Mortality Rates, 1910–1920, seem to afford a partial explanation at least for the higher rates from cancer for the whites of the North than for the whites of the South. I refer to the adjusted rates from cancer for the various race stocks and to the fact that the percentage of the population of foreign race stock is less in the South than in the North. In the State of New York, for example, an adjusted rate of 117.1 per 100,000 population appears for those having mothers born in Ireland as against 73.9 for those having mothers born in the United States and 61 for those having mothers born in Italy. These differences are *not* to be accounted for on the basis of better certification for some race stocks than for others. What possible reason, for example, is there for believing that certification for those whose mothers were born in the United States was poorer than for those whose mothers were born in Ireland? It has been suggested that the lower cancer rates in the South might be due to the concealment of cancer mortality under such rubrics as Old age and Unknown or Ill-defined, but calculations show that although Massachusetts has an adjusted cancer rate twice that of South Carolina, the distribution proportionately by age and color of all deaths now appearing under Old age and Unknown or Ill-defined in South Carolina would increase the cancer rate of South Carolina only about 4 per cent for the whites and 8 per cent for the colored; or if the calculations were based on replies to queries of these indefinite causes, the cancer rate of South Carolina would be increased less than 2 per cent.

Whether cancer is really increasing year after year or only apparently increasing has been a subject of controversy for years. Those who hold that the increase is only apparent maintain that improvement in diagnoses accounts for the increase in the recorded cancer rates, while the other side, admitting that improvement in diagnoses accounts for some of the recorded increase, still holds that there is an actual increase.

In the 1917 report of the Registrar-General of England and Wales, Dr. T. H. C. Stevenson presents some very convincing figures showing a recorded increase in the mortality from cancer of accessible sites, the argument being that here an actual increase can hardly be questioned, as we have no reason to think the diagnoses of cancer of accessible sites, such as the skin, mouth, and breast, are any better to-day than they were 20 years or more ago.

Table AS substantiates these findings and shows conclusively that cancer of certain parts increased very rapidly in this country between 1900 and 1921.

CRUDE AND ADJUSTED DEATH RATES FROM CANCER OF THE BUCCAL CAVITY, BREAST, AND SKIN PER 100,000 POPULATION, BY SEX AND CERTAIN AGE GROUPS, IN THE REGISTRATION STATES OF 1900, FOR THE YEARS 1900, 1910, 1920, AND 1921.

Table AS	1921				1920				1910				1900

[1] Less than one-tenth of 1 per 100,000 population.
[2] Cancer of breast for males not tabulated separately, but included in cancer of other organs.

NOTE.—Populations and deaths at unknown age distributed in computing the adjusted rates, but not the specific rates. In computing these rates the enumerated populations are used for the years 1900, 1910 and 1920, and the estimated populations for 1921

Particular attention is called to the rates adjusted to the standard million population of England and Wales, 1901. In the registration States of 1900, the death rate from cancer of the buccal cavity was 1.4 per 100,000 population in 1900, 2.7 in 1910, 2.9 in 1920, and 2.8 in 1921; the death rate from cancer of the breast was 5 in 1900, 7.9 in 1910, and 9.2 each in 1920, and 1921; and the death rate from cancer of the skin was 1.9 in 1900, 2.5 each in 1910 and 1920, and 2.4 in 1921. Considering these three accessible sites together the adjusted rate of 8.4 in 1900 has increased to 14.4 in 1921, or 71.4 per cent in 21 years.

From the specific rates it appears that the increase between 1900 and 1921 is almost entirely due to increased rates at age periods above 35. The greatest increase from cancer of the buccal cavity appears for males aged 75 years and over, the 1900 rate being 29.4 per 100,000 population and the 1921 rate, 95.6, an increase of 225 per cent in 21 years, while males between 65 and 74 show a rate of 16.7 in 1900 and a

rate of 45.3 in 1921, or an increase of 171 per cent. The greatest increase from cancer of the breast appears for females aged 75 years and over, the 1900 rate being 98.9 and the 1921 rate 157.5, an increase of 59 per cent in 21 years, whereas females between 65 and 74 show a rate of 50.7 in 1900 and a rate of 96.6 in 1921, or an increase of 91 per cent, and those between 55 and 64 show a rate of 42.8 in 1900 and a rate of 77.8 in 1921, or an increase of 82 per cent. The greatest increase from cancer of the skin appears for females aged 75 years and over, the 1900 rate being 30.3 per 100,000 population and the 1921 rate 60.3, an increase of 99 per cent, while males 75 years of age and over show a rate of 67.9 in 1900 and a rate of 98.6 in 1921, or an increase of only 45 per cent.

DEATH RATES FROM CANCER OF THE BUCCAL CAVITY, BREAST, AND SKIN PER 100,000 POPULATION IN EACH REGISTRATION STATE OF 1900, FOR THE YEARS 1900, 1910, 1920, AND 1921.

Table AT

AREA AND CAUSE OF DEATH.	DEATH RATE PER 100,000 POPULATION.					
	Adjusted.		Crude.			
	1921	1920	1921	1920	1910	1900
Cancer of the buccal cavity, breast, and skin (total):

New York	2.5	2.0	2.7	2.2	2.4	2.1
Rhode Island	2.8	2.1	3.1	2.3	3.7	3.3
Vermont	2.2	2.4	4.0	4.3	5.1	2.9

NOTE.—The crude rates for 1910 and 1920, and the crude and adjusted for 1921 were computed on estimated populations, and those for 1900, on enumerated populations. These adjusted rates for 1920 may differ from those in the 1920 report, since an estimated population is used for one, and an enumerated population for the other.

Comparing the adjusted rates in 1921 from cancer of these three accessible sites, for the registration States of 1900, it appears that Connecticut has the highest rate (16.6 per 100,000 population) and Michigan the lowest (12.2); both of these rates are higher than the corresponding rates for 1920. But there is a bit of comfort in the fact that for this group of States the rate from cancer of the breast was no higher in 1921 than in 1920 and the rate from cancer of the buccal cavity and the rate from cancer of the skin were both a little lower than in 1920.

Cancer and other malignant tumors include seven titles of the detailed International List of Causes of Death, to three of which are charged nearly two-thirds of all deaths from this cause in 1921. The total number of deaths is 76,274, and 28,367 of these, or 37.2 per cent, are due to cancer of the stomach and liver; 10,653, or 14 per cent, to cancer of the peritoneum, intestines, and rectum; and 11,181, or 14.7 per cent, to cancer of the female genital organs.

The classification, by seat of disease, of the deaths from cancer in 1921 and 1920, with the rates per 100,000 population, is shown in Table AU.

Table AU

SEAT OF DISEASE.	DEATHS IN THE REGISTRATION AREA.[1]

In previous reports attention has been called repeatedly to the fact that deaths of nonresidents might affect materially cancer mortality rates. In Table AV appear data bearing on this point, and it will perhaps suffice to point out a few instances where cancer rates would have been changed considerably had corrections been made for the deaths of nonresidents. Minnesota would have had its cancer rate reduced from 89.4 to 82.3, while Delaware would have had its rate increased from 79.1 to 83.6. Of the 66 large cities listed, all but 7 would have had lower rates and the greatest reduction would have been for Hartford, Conn.—a reduction from 126.8 to 92.7.

Of the total deaths from cancer, 43,779, or 57.4 per cent, are of females and 32,495, or 42.6 per cent, are of males. Year after year the statistics show that more than half of those who die of cancer are females, although the male population of the registration area exceeds the female. The causes which show a large excess of male deaths are cancer of the buccal cavity (2,132 males and 478 females), cancer of the skin (1,488 males and 945 females), and cancer of other organs or of organs not specified (9,240 males and 4,774 females). Cancer of the stomach and liver (14,844 males and 13,523 females) caused nearly half of all the deaths of males, but only about one-third of the deaths of females. Cancer of the breast and cancer of the female genital organs caused 41.4 per cent of all cancer deaths among females in 1921.

Classification, by age and sex, according to the nature of the malignant disease, whether carcinoma, sarcoma, or hypernephroma, is shown in Table AW.

PELLAGRA.

The number of deaths caused by pellagra in 1921 is 2,541, corresponding to a death rate of 2.9 per 100,000 population against 2.7 in 1920. The only area which shows a noticeable increase in the number of deaths in 1921 as compared with 1920 is the rural part of Mississippi (568 against 405).

[1] Exclusive of Hawaii.
[2] Including District of Columbia.
[3] Included with cities in nonregistration States.
[4] Not added to registration area until a later date.
[5] Includes only municipalities having from 1,000 to 10,000 population in 1910.
[6] Includes only municipalities having from 1,000 to 10,000 population in 1900.
[7] Transcripts of deaths not received.
[8] Includes cities which were in nonregistration States for at least one year of the series shown.
[9] Included with cities in registration States.

DIABETES MELLITUS.

The number of deaths from diabetes mellitus in 1921 is 14,933, corresponding to a crude death rate of 16.8 per 100,000 population. This is the highest rate since 1917, and, with the exception of the rates for 1915, 1916, and 1917, is the highest for the series of years shown. The rate for cities in the States is much higher in every year than that for the rural districts, and the rate for all registration cities is higher in 1921 than in any other year shown.

As the registration area was exactly the same for 1920 and 1921, rates for these two years are strictly comparable. In every subdivision of the area an increase is shown in 1921, but the most striking appears for registration cities in nonregistration States (from 11.4 in 1920 to 17 in 1921).

Among the registration States 8 show rates above 20 in 1921, and all but 10 show increases over 1920. The States with the highest rates are New Hampshire (29), Maine (26), Vermont (24.7), New York (23.4), and Connecticut (22.2), and those with the lowest rates are Mississippi (5.8), Tennessee (6.1), South Carolina (7.3), North Carolina (7.5), and Kentucky (8.7).

Of the 66 cities shown 29 have rates of 20 or more per 100,000 population, and 39 have higher rates in 1921 than in 1920. The greatest increases appear for Dallas (from 9.9 in 1920 to 23.4 in 1921), Reading from (25.9 to 38.5), and Fall River (from 14.9 to 27.3). The cities with the highest rates are Reading (38.5), Albany (31.3), Hartford (30.4), Scranton (29.5), and New Haven and Worcester (28.1, each). The lowest rates appear for Akron (7.7), Memphis (10.9), and Detroit (11.3).

In the 9 States and 14 cities shown by color, the rate for the colored is lower than that for the white in all but Kentucky, Atlanta, and Indianapolis.

Table AY shows the death rates per 100,000 population for the years 1912 to 1921, rates of 20 and higher being printed in bold-faced type.

[1] Exclusive of Hawaii.
[2] Including District of Columbia.
[3] Not added to registration area until a later date.
[4] Includes only municipalities having a population of 1,000 or more in 1910.
[5] Includes only municipalities having a population of 1,000 or more in 1900.
[6] Transcripts of deaths not received.

ALCOHOLISM AND CIRRHOSIS OF THE LIVER.

The declining death rates from alcoholism and cirrhosis of the liver in recent years are of particular interest in view of war-time prohibition measures and later national prohibition.

The registration States of 1910 show a declining rate from alcoholism from 6.3 per 100,000 population in 1917 to 1.2 in 1920, with an increase to 2 in 1921 and a declining rate from cirrhosis of the liver from 12.2 in 1917 to 7.6 in 1920, with a slight increase to 7.9 in 1921. States like Kansas, Maine, Tennessee, and North Carolina, which had prohibition laws long before the war and which already in 1917 had comparatively low mortality rates from alcoholism and cirrhosis of the liver, show for recent years either smaller declines or slight increases in death rates from these causes.

The deaths and death rates per 100,000 population, from wood alcohol poisoning (including denatured alcohol) in the United States death registration area, 1920 and 1921 were as follows:

YEAR.	Number of deaths.	Rate per 100,000 population.
1921	194	0.2
1920	359	0.4

The death rates from alcoholism and cirrhosis of the liver per 100,000 population, together with the death rate from all causes, from 1910 to 1921 are shown in Table BB on page 71.

DEATH RATES FROM ALCOHOLISM AND CIRRHOSIS OF THE LIVER.

[Rates in *italics* are based on less than 5 deaths.]

DISEASES OF THE HEART.

The number of deaths in 1921 from diseases of the heart, which includes titles 87 to 90, is 139,264, corresponding to a rate of 157.1 per 100,000 population, and constituting 13.5 per cent of the deaths from all causes. In each year from 1912 to 1921 there were more deaths from diseases of the heart than from tuberculosis (all forms).

In making comparisons it must not be forgotten that nearly all persons who die of heart diseases have passed middle life, and therefore the crude death rates should be used with caution and considered only in connection with the age distribution of the population.

The greatest increases among the States in the 10-year period 1912 to 1921 are for Washington (from 93.3 to 131.7), New York (from 177.6 to 211.3), Maine (from 194.3 to 222.3), Vermont (from 231.2 to 255.9), and Maryland (from 162.5 to 184.7).

Table BC shows the rates per 100,000 population for 1912 to 1921, rates of 200 and higher being printed in bold-faced type.

[1] Exclusive of Hawaii.
[2] Including District of Columbia.
[3] Not added to registration area until a later date.
[4] Including only municipalities having a population of 1,000 or more in 1910.
[5] Including only municipalities having a population of 1,000 or more in 1900.
[6] Not separately tabulated.
[7] Transcripts of deaths not received.

In both 1921 and 1920 the same six States have rates above 200 per 100,000 population; these States are California, Maine, Massachusetts, New Hampshire, New York, and Vermont. Vermont is the only one that shows such a high rate for the series of years 1912 to 1921. The lowest rates in 1921 are for Montana (90.9), Tennessee (94.6), Mississippi (97), and Kentucky (97.4).

Of the 66 registration cities of 100,000 population or more in 1920, those showing the greatest increase in the 10-year period 1912 to 1921 are Cambridge (from 175.6 to 220), Syracuse (from 175.2 to 216.9), Spokane (from 102.5 to 142. 7), Portland (from 132.8 to 171), Rochester (from 177.5 to 213.3), and Seattle (from 104.8 to 140.5). Six cities have rates of 200 or more for the series of years 1912 to 1921; of these, the highest rates in 1921 are for Albany (262.4), San Francisco (244.6), New Orleans (240), and Boston (234.5).

The highest rate (247.2) shown for the colored in any State is for Maryland, and the lowest (109.8) is for South Carolina.

Of the cities shown by color Nashville has the highest rate (389.1) and Dallas the lowest (143.4).

PNEUMONIA (ALL FORMS).

In 1921 the number of deaths due to pneumonia (all forms) is 78,263. Of these, 37,871 are due to lobar pneumonia, 34,889 to bronchopneumonia, and 5,503 to pneumonia (unspecified). The death rate from pneumonia (all forms) in 1921 is 88.3 and is the record low rate since 1900, in which year the first annual mortality report was published.

Table BD shows the death rates per 100,000 population for the years 1912 to 1921, rates of 200 and higher being printed in bold-faced type.

The rate in 1921 is much lower than that in 1920 for each State and each city of 100,000 population or more in 1920, and among all these areas, Pittsburgh is the only one which has a rate over 200 in 1921.

Among the States the highest death rates in 1921 from pneumonia (all forms) are for Pennsylvania (129.7), Maine (112.6), Colorado (110.5), Utah (107.8), and Maryland (106.8); the greatest decrease in 1921 is shown for Missouri (from 164.1 in 1920 to 83.6). The lowest rates are for Florida (50), Washington (57.1), Kansas (60), Nebraska (62.6), and Minnesota (64.6).

Among the registration cities of 100,000 population or more in 1920, the highest rates are for Pittsburgh (254.3), Camden (169.6), Scranton (161.9), Youngstown (160.2), and Denver (157.3); the lowest are for Seattle (50.4), Dayton (50.6), Grand Rapids (57.4), Houston (60.6), and Oakland (65.8).

The highest rate shown for the colored in any State is 179.9 for Maryland, and the lowest is 69.2 for Florida; for the cities Richmond has the highest rate (253.8), and Houston the lowest (80.2).

Table BD — DEATH RATE FROM PNEUMONIA (ALL FORMS) PER 100,000 POPULATION. [Rates of 200 or more in bold-faced type.]

[1] Exclusive of Hawaii.
[2] Including District of Columbia.
[3] Not added to registration area until a later date.
[4] Includes only municipalities having a population of 1,000 or more in 1910.
[5] Includes only municipalities having a population of 1,000 or more in 1900.
[6] Transcripts of deaths not received.

NOTE.—Excluding capillary bronchitis from 1912 to 1920.

DIARRHEA AND ENTERITIS (UNDER 2 YEARS).

Diarrhea and enteritis in 1921 is the cause of death of 37,192 children under 2 years of age, corresponding to a rate of 41.9 per 100,000 population at all ages. This is the lowest rate for any year since 1900, when the rate was 108.8, and this marked reduction is doubtless due, in large part, to measures now employed to prevent loss of child life. The great difference, however, which still exists between the rates of the various States and cities certainly suggests that at least some of these rates are still too high.

Table BE shows the death rates per 100,000 population at all ages for the years 1912 to 1921, rates of 100 and higher being printed in bold-faced type.

Table BE

AREA.	DEATH RATE FROM DIARRHEA AND ENTERITIS (UNDER 2 YEARS) PER 100,000 POPULATION AT ALL AGES. [Rates of 100 or more in bold-faced type.]

[1] Exclusive of Hawaii.
[2] Including District of Columbia.
[3] Not added to registration area until a later date.
[4] Including only municipalities having a population of 1,000 or more in 1910.
[5] Including only municipalities having a population of 1,000 or more in 1900.
[6] Transcripts of deaths not received.

NOTE.—Includes ulcer of the duodenum from 1912 to 1920.

ACUTE AND CHRONIC NEPHRITIS.

In 1921 the number of deaths from acute and chronic nephritis is 75,696, corresponding to a crude rate of 85.4 per 100,000 population, which is the lowest rate since 1900. Of these deaths, 5,741 are due to acute nephritis and 69,955 to chronic nephritis.

For the States as a whole the adjustments for sex and age reduce the crude rate of 84.9 in 1921 to an adjusted rate of 79, and in a comparison of the 34 States for 1921 and 1920, lower adjusted rates appear in 1921 for all but nine.

The States which have the highest adjusted rates in 1921 are Maryland (122.8), Delaware (117.2), South Carolina (115.1), and Louisiana (109.3); those which have the lowest rates are Oregon (49.1), Wisconsin (52), Nebraska (52.8), Minnesota (55.7), and Washington (56.6).

Forty-nine of the registration cities of 100,000 population or more in 1920 show decreases in the adjusted rate for 1921 as compared with the rate for 1920; the greatest decrease (44.2) is shown for Hartford (from 141 in 1920 to 96.8 in 1921). Of the 17 cities showing increases in 1921, the greatest is shown for Scranton (from 88.6 to 134.9). The cities showing the highest rates in 1921 are Atlanta (177.8), Memphis (175.6), New Orleans (172.7), Camden (139.2), and Baltimore (139.1). Cities show-

ing lowest rates are Worcester (43), Lowell (48), Cambridge (48.3), New Bedford (51.9), and Portland (55.3). Of the areas shown by color, Maryland is the only State, though there are 8 of the 13 cities, to show for the colored a rate of 150 or more.

Table BF shows adjusted mortality rates from acute and chronic nephritis per 100,000 population, and also crude mortality rates. The adjusted rates are based on the standard million population of England and Wales, 1901. Rates of 150 or more are printed in bold-faced type.

Table BF — DEATH RATE FROM ACUTE AND CHRONIC NEPHRITIS PER 100,000 POPULATION. [Rates of 150 or more in bold-faced type.]

[5] Including only municipalities having a population of 1,000 or more in 1910.
[6] Transcripts of deaths not received.

PUERPERAL CAUSES.

Are puerperal causes of death an increasing or a decreasing danger to the women of the United States?

If every State had had good birth and death registration since 1900 a satisfactory answer to this question would be possible, based on death rates from puerperal causes per 1,000 births, but as the birth registration area was not established until 1915, and then included but 10 States and the District of Columbia, it is possible to show only a few such rates for a few years, and it must be borne in mind that even then rates are too high whenever birth registration is incomplete. It is possible, however, to show death rates from puerperal causes based on female population at all ages, female population 15 to 44 years of age, and married female population 15 to 44 years, and so to fill, in some degree, the gap in our evidence.

How do the death rates from puerperal causes in the United States compare with the rates in foreign countries? Here again is a question of the greatest interest and importance which can not be answered satisfactorily both because of lack of data in this country and because there is no certainty that all deaths from these causes are classified in the same way in the various countries. This latter objection can always be raised whenever specific death rates of different countries are compared, but it is not believed to be usually a serious objection and is mentioned only in the interest of accuracy and as a caution against too positive deductions from such comparisons.

It was pointed out in a previous report that the very high death rate (9.2) in 1918 from all puerperal causes per 1,000 live births in the birth registration area was undoubtedly due to the influenza epidemic, and that the same factor in 1919 accounted for the difference between the rate (7.4) for that year and the rate (6.2) for the more normal year—1916. Again in 1920, with another epidemic of influenza in the early months of the year, there was an increased rate (8), and again a large part of the increase should be charged to influenza. Happily, lower rates from these causes are general in 1921.

Special attention is called to the fact that for both white and colored for each of the six years 1916 to 1921, rates from all puerperal causes and puerperal septicemia are, without exception, lower for the rural part of the birth registration area than for the urban.

For 1921 among the States in the birth registration area the highest rates from all puerperal causes per 1,000 live births appear for South Carolina (9.8) and for Mississippi (9.5). These excessively high rates are accounted for by the very high rates for the colored (11.8 and 12, respectively), but the highest rate for the colored (14.8) is in Kentucky. The lowest rates appear for Connecticut (5.3), Minnesota (5.7), Wisconsin (5.8), and New Jersey (5.9).

Among the cities of 100,000 population or more in 1920 in the birth registration area the highest rates from all puerperal causes per 1,000 live births appear for Reading (14), Richmond (12.2), Scranton (11.6), and Norfolk (11.4), and the lowest rates are for Oakland (4.3), and Lowell and Syracuse (4.8 each).

The rates for mothers under 20 years of age are considerably higher than the rates for mothers 20 to 29, and a partial explanation, at least, is the comparatively large number of illegitimate children involved and the lack of care so common in such cases.

For each of the five years 1917 to 1921 the rates from puerperal causes are higher for mothers aged 30 to 39 than for mothers aged 20 to 29, and higher for

mothers aged 40 years and over than for mothers aged 30 to 39 years. These figures certainly point to the conclusion that childbearing becomes more and more dangerous as women grow older.

The figures by color and by birthplace of mother are most interesting, but they must be used with caution. For example, rates for colored mothers are nearly double those for white mothers. Probably so great a difference in the rates does not actually exist, for it is extremely likely that births of colored children are not as completely reported as are the births of white children, and that therefore the rates for colored mothers are exaggerated.

Other differences, such as comparatively high adjusted rates for mothers born in the United States and the very much lower rates for mothers born in Italy, appear to be actual differences and may well serve as the starting point for intensive study.

Tables BG, BH, and BI throw considerable light on these questions and are well worth careful study.

DEATH RATES FROM PUERPERAL CAUSES PER 1,000 LIVE BIRTHS IN THE BIRTH REGISTRATION AREA, EACH REGISTRATION STATE, AND REGISTRATION CITIES OF 100,000 POPULATION OR MORE IN 1920, FOR THE YEARS 1916 TO 1921.

[Rates for deaths numbering less than 5 are shown in *italics*.]

1918	6.6	6.6	6.7	5.7	7.7	10.3
1917	3.9	3.9	4.0	2.8	5.1	8.3

[1] Corrected on basis of standard million live births of 1917.

NOTE.—The "specific" death rate is based on specified age groups. The "adjusted" death rate is the rate at all ages that would have resulted from the rates for the specified age groups if the age constitution of the mothers of live births had been identical with that of the standard million live births of 1917.

CRUDE AND ADJUSTED DEATH RATES AT ALL AGES AND SPECIFIC DEATH RATES IN EIGHT AGE GROUPS, FROM PUERPERAL CAUSES, PER 1,000 LIVE BIRTHS, BY COLOR, AND FOR WHITE BY COUNTRY OF BIRTH OF MOTHER, IN THE BIRTH REGISTRATION AREA, FOR THE YEARS 1920 AND 1921.

[Unknown age is distributed in each nationality. The rates for deaths numbering less than 5 are shown in *italics*.]

[1] Corrected on basis of standard million live births of 1917.

[2] Rates not computed.

NOTE.—The "specific" death rate is based on specified age groups. The "adjusted" death rate is the rate at all ages that would have resulted from the rates for the specified age groups if the age constitution of the mothers of live births had been identical with that of the standard million live births of 1917.

Table BJ gives for a series of 12 years rates from puerperal causes for the registration States of 1910.

The rate from all puerperal causes per 100,000 married women aged 15 to 44 years has fluctuated considerably since 1910, when the rate was 112.3. In 1912 the rate reached the low point 103.3, in 1918, as a result of the influenza epidemic, it increased to 152.6 and in 1921 fell to 108.9. In the same interval, 1910 to 1921, the rate from puerperal septicemia per 100,000 married female population aged 15 to 44 years has declined from 51.1 to 45.6, while the rate from other puerperal causes has increased from 61.2 to 63.3.

DEATHS AND DEATH RATES FROM PUERPERAL CAUSES PER 100,000 FEMALE POPULATION AT ALL AGES AND FOR FEMALE AND MARRIED FEMALE POPULATION, 15 TO 44 YEARS, IN THE REGISTRATION STATES OF 1910 (EXCLUSIVE OF NORTH CAROLINA), FOR THE YEARS 1910 TO 1921.

Table BK gives for a series of 22 years rates from puerperal causes for the registration States of 1900.

For the registration States of 1900 the rate from all puerperal causes per 100,000 married female population has ranged since 1900 between the low 1902 rate, 92.8, and the high 1918 rate, 145.5, the rate for 1921 being 106.1. In the same interval, 1900 to 1921, the rate from puerperal septicemia per 100,000 married female population aged 15 to 44 has declined only one-tenth from 42.9 to 42.8, while the rate from all other puerperal causes has increased from 56.2 to 63.3. From these figures one can only conclude that death rates from total puerperal causes are higher to-day than they were 20 years ago. It is, of course, barely possible that these higher rates are due in part to better certification of causes of death by physicians in recent years.

DEATHS AND DEATH RATES FROM PUERPERAL CAUSES PER 100,000 FEMALE POPULATION AT ALL AGES AND FOR FEMALE AND MARRIED FEMALE POPULATION, 15 TO 44 YEARS, IN THE REGISTRATION STATES OF 1900, FOR THE YEARS 1900 TO 1921.

Table BL shows death rates from all causes and from puerperal causes for several foreign countries and for the United States (the birth registration area as constituted in 1915) and permits certain comparisons to be made.

The figures there presented show that deaths from puerperal causes were classified very differently in different countries during the influenza epidemic, the United States and Scotland showing much higher rates from puerperal causes in 1918 than in 1917, while England and Wales, Australia, and New Zealand show much lower rates in 1918 than in 1917. Ireland shows a rate practically unchanged for the two years. Bearing this fact in mind it is interesting to note that Scotland and the United States birth registration area each had a death rate of 6.1 from all puerperal causes per 1,000 live births in 1915, the corresponding rate for 1921 having increased in Scotland to 6.4, while in the birth registration area in 1921 it had increased to 6.5.

The fact that the rates from puerperal causes for the other countries shown are very much lower is not in itself conclusive evidence that the mortality from these causes is actually lower in these countries, but there is no getting away from the fact that England and Wales shows for each of the years 1915 to 1920 lower rates from all causes for females aged 15 to 44 than appear for our birth registration area of 1915, and Scotland, though starting out with a higher rate in 1915 than that shown for our birth registration area, has a lower rate for 1920 than we have.

DEATH RATES FROM PUERPERAL CAUSES PER 100,000 FEMALE POPULATION AND PER 1,000 LIVE BIRTHS IN THE UNITED STATES (BIRTH REGISTRATION AREA AS OF 1915) AND CERTAIN FOREIGN COUNTRIES.

* These rates are based on the deaths of females whether married or unmarried.

[1] Exclusive of Rhode Island.
[2] Female population 15 to 44 years not available.
[3] Figures relate to 47 districts.
[4] Reports for 1917 and 1918 not available.
[5] Female, 15 to 49 years.

NOTE.—The data for this table taken from annual reports of the several countries.

The present-day tendency for women to go to hospitals for confinement increases the necessity for considering deaths of nonresidents in connection with mortality rates from puerperal causes. In Table BM appear data bearing on this point, and it will perhaps suffice to point out a few instances where puerperal mortality rates would have been changed considerably had corrections been made for deaths of nonresidents. Vermont would have had its rate per 100,000 population increased from 16.5 to 18.7. Of the 66 large cities listed not one would have had a higher rate, and the greatest reduction would have been for Birmingham (from 34.4 to 23.1) and for the white of that city (from 28.3 to 13.3).

Table BM — DEATHS IN 1921 FROM PUERPERAL CAUSES.

AREA.	Including nonresidents.		Excluding all nonresidents and including residents who died elsewhere in registration area.		
	Number.	Rate per 100,000 population.	Number.	Rate per 100,000 population.	Increase (+) or decrease (−) in rate.

OLD AGE.

In Table BN death rates from old age are given to enable the student to estimate more easily the probable effect of these declining rates on rates from other causes of death. (See also on p. 94 death rates from unknown or ill-defined diseases.)

[1] Exclusive of Hawaii.
[2] Not added to registration area until a later date.
[3] Includes only municipalities having a population of 1,000 or more in 1900.
[4] Includes only municipalities having a population of 1,000 or more in 1910.
[5] Dropped from registration area in 1910.

SUICIDE.

The number of deaths from suicide in 1921 is 11,136, corresponding to a rate of 12.6 per 100,000 population; this is the highest rate recorded since 1917. Every State but two has a higher rate in 1921 than in 1920; those which show the highest rates in 1921 are California (27), Washington (20.7), Montana (16.3), and Oregon (16.1). Since 1906, when California was added to the registration area, it has had a higher rate than any other registration State. The States which have the lowest rates in 1921 are Mississippi (3.8), North Carolina (4.3), South Carolina (4.7), and Kentucky (7.2).

Among the registration cities of 100,000 population or more in 1920, 50 have higher rates in 1921 than in 1920; the 5 which show the highest rates are San Francisco (37.7), Spokane (33.5), Los Angeles (28.2).

Oakland (25.6), and Seattle (24.4). The cities which have the lowest rates are Fall River (5.8), Camden (6.7), Lowell (8.8), Dayton (8.9), and Cambridge (10).

The most pronounced increases in the rates from suicide in 1921 as compared with 1920 are shown for Norfolk (18.1 against 5.1), San Francisco (37.7 against 25.6), Spokane (33.5 against 22), Yonkers (12.6 against 2), and Hartford (21.7 against 11.4).

Under the title "Suicide" are included 10 headings, to 4 of which 78.9 per cent of all deaths from this cause are charged in 1921. The greatest number of deaths from suicide is due to firearms (4,122, with a rate of 4.6 per 100,000 population), followed by hanging or strangulation (1,942, with a rate of 2.2), by poisonous gas (1,401, with a rate of 1.6), and by corrosive substances (1,323, with a rate of 1.5).

Table BO shows the rates from suicide per 100,000 population for the years 1912 to 1921.

[1] Exclusive of Hawaii.
[2] Including District of Columbia.
[3] Not added to registration area until a later date.
[4] Includes only municipalities having a population of 1,000 or more in 1910.
[5] Includes only municipalities having a population of 1,000 or more in 1900.
[6] Transcripts of deaths not received.

HOMICIDE.

The term "homicide," as here used, includes murder, manslaughter, justifiable homicide, and incendiarism, but not legal execution.

Table BP shows the rates from homicide per 100,000 population for the years 1912 to 1921.

Table BP DEATH RATE FROM HOMICIDE PER 100,000 POPULATION. [Rates in *italics* are based on less than 5 deaths.]

[1] Exclusive of Hawaii.
[2] Including District of Columbia.
[3] Not added to registration area until a later date.
[4] Including only municipalities having a population of 1,000 or more in 1910.
[5] Including only municipalities having a population of 1,000 or more in 1900.
[6] Transcripts of deaths not received.

For 1921 the number of deaths from homicide in the registration area is 7,545, corresponding to a rate of 8.5 per 100,000 population as against 7.1 in 1920. The higher rates in recent years are due to the addition of States with large colored populations.

The rate in the registration area for the white population is 6.2 in 1921 against 5 in 1912, and the rate for the colored is 33.7 against 40.9. All but five States show higher rates in 1921 than in 1920. The highest rates in 1921 are for Florida (24.9), Mississippi (21.1), and Louisiana (18.8). The States with the lowest rates are Vermont (1.7), Wisconsin, New Hampshire, and Maine (each 2.2), and Massachusetts (2.8).

For the registration cities of 100,000 population or more in 1920, the highest rates in 1921 are for Memphis (59.2), Birmingham (52.7), Atlanta (41.5), and Nashville (32.8). The extremely high rates for these cities are due to the high rates for the colored population; these range from 63.5 for Nashville to 100.9 for Atlanta. Very low rates are shown for Worcester (*1.1*) and New Bedford (*1.6*).

Among the cities, 51 have higher death rates from homicides in 1921 than in 1920; notable increases are shown for Nashville, with a rate of 32.8 against 13.5 in 1920; Kansas City, Kans., with a rate of 21.2 against 10.8; and Cincinnati, with a rate of 15.4 against 6.

From the standpoint of prevention, it is interesting to note that 73 per cent of all homicides in the registration area in 1921 are caused by firearms as against 62 per cent in 1912.

ACCIDENTAL OR UNDEFINED EXTERNAL CAUSES.

In 1921 the number of deaths due to accidental or undefined external causes is 60,896, which corresponds to a rate of 68.7 per 100,000 population—the lowest rate since 1910 (84.4).

The greatest number of deaths under this title are due to automobile accidents (10,168, with a rate of 11.5); next in order are deaths due to traumatism by fall (10,102, with a rate of 11.4); accidental drowning (6,489, with a rate of 7.3); burns (conflagration excepted) (5,329, with a rate of 6); railroad accidents (5,297, with a rate of 6); traumatism by firearms (2,346, with a rate of 2.6); traumatism in mines and quarries (1,867, with a rate of 2.1); and absorption of irrespirable, irritating, or poisonous gas (1,778, with a rate of 2).

The rate in 1921 from street-car accidents, and the rate from injuries by other vehicles (each 1.6), is the lowest recorded from each of these causes, since 1910. Deaths from excessive heat number 946 in 1921, with a rate of 1.1. Aeroplane and balloon accidents show a total of 132 deaths, with a rate of 0.1 per 100,000 population.

Among the States, those showing the highest death rates in 1921 from accidental or undefined external causes are California (91), Colorado (88.3), Florida (81.5), Washington (79.8), and Oregon (78.7). The lowest rates are for Tennessee (51.9), South Carolina (52.4), North Carolina (53), Kentucky (53.6), and Mississippi (55.6).

AUTOMOBILE ACCIDENTS.

The death rate from automobile accidents again shows an increase over the figures for the preceding year (11.5 per 100,000 population in 1921 against the 1920 rate of 10.4). The five States showing the highest rates in 1921 are California (24.4), Connecticut (15.5), New York (15.4), New Jersey (14.9), and Washington (14.5); the five showing the lowest rates are Mississippi (2.6), Kentucky and South Carolina (each 4.3), and Louisiana and North Carolina (each 5.3).

Of the 66 cities listed in the table on page 90, 41 show increases in the rate for 1921 as compared with the rate for 1920. The cities showing the greatest increases are Albany (from 11.4 to 26.9), Houston (from 5.7 to 17.3), Lowell (from 7.1 to 18.5), and Paterson (from 13.2 to 23.3); those showing the greatest decreases are Memphis (from 26.3 to 15.1), Omaha (from 21.2 to 11.7), Reading (from 23.1 to 14.7), and Dayton (from 16.2 to 9.5). The highest death rates from automobile accidents in 1921 are shown for Los Angeles (27.1), Albany (26.9), Youngstown (25.7), and Paterson (23.3). Of course these rates, like all crude death rates, are simply rough indexes—not exact measures—of local conditions. Many deaths from automobile accidents charged against a city result from accidents outside city limits. On the other hand, some deaths from automobile accidents, charged to rural districts, result from accidents within city limits. An attempt has been made to determine, by queries, for a few cities how much the rates would be changed if only accidents within city limits were charged against the city. The crude rates for Birmingham, Los Angeles, and Youngstown are, respectively, 22.6, 27.1, and 25.7. From information received from replies to queries, these rates, if based only on fatal accidents within city limits, would have been reduced at least to 19.9, 24.4, and 19.6, respectively. However, these figures do not take into account fatal accidents in the cities when deaths occurred outside. The nonresident factor is also of importance in the consideration of refined death rates from automobile accidents. If more tourists pass through some cities than through others, more fatalities are to be expected. Table BR, on page 92, presents for the areas shown, figures for deaths from automobile accidents which exclude deaths of nonresidents. If corrections are made for deaths of nonresidents, the greatest reductions in rates appear for Trenton (from 21.2 to 8.1) and for Camden (from 22.6 to 12.5).

In 1900, when an automobile was almost a curiosity, the mortality rate from "accidents and injuries by vehicles and horses" per 100,000 population in the registration area was 1.3 (including automobile accidents)—a rate which stands in striking contrast with the rate 11.5 from automobile accidents in 1921.

And to-day, in England and Wales, where fewer automobiles are used, death rates from automobile accidents are very much lower than in the registration area of the United States. A death rate from this cause in England and Wales for 1921 has been calculated by the Bureau of the Census as 4 per 100,000 population, a rate which stands in marked contrast to the rate of 11.5 in the United States registration area for the same year.

One phase, which is particularly distressing, is the large number of deaths from this cause among children. In 1921, 31.1 per cent of the total number of deaths from automobile accidents are of children under 15 years of age, as contrasted with 7.1 per cent below that age from railroad accidents, and 16.8 per cent from street-car accidents.

The number of deaths charged by the Bureau of the Census to automobile accidents in any State or city may vary considerably from the number so charged by local officials. The rules of assignment in the Bureau of the Census are:

1. In collisions between automobiles and street cars assign the death to the heavier vehicle, i. e., the street car.

2. In collisions between automobiles and railroad trains assign the death to the heavier vehicle, i. e., the railroad train.

3. In collisions between automobiles and motor cycles assign the death to the heavier vehicle, i. e., the automobile.

If local officials charge all of these deaths against the automobile, their totals will, of course, be greater than those of the Bureau of the Census. The contributory cause table on page 91 of the report on Mortality Statistics, 1918, clearly shows how greatly totals would be changed if other rules of assignment were followed.

Deaths from motor cycles are not included in deaths from automobiles, but if included would raise the grand total for the registration area fron 10,168 to 10,465 and raise the rate per 100,000 from 11.5 to 11.8.

In Table BQ are given for 1916 to 1921 deaths and death rates from automobile accidents in the registration area (exclusive of Hawaii), registration States, and registration cities of 100,000 population or more in 1920.

Table BQ

Table BR—Con. — DEATHS IN 1921 FROM AUTOMOBILE ACCIDENTS.

[1] Returns incomplete.

UNKNOWN OR ILL-DEFINED DISEASES.

The marked improvement in the certification of causes of death is shown in Table BS.

Although the per cent of total deaths classified as due to unknown or ill-defined diseases by no means tells the whole story in regard to certification, still it does serve as a very reliable index of the character of such certification. The per cent of certificates showing unknown or ill-defined diseases in the registration area fell steadily from 4.2 in 1900 to 0.8 in 1912. The slightly higher per cents (1.1 in 1916 and 1918, 1.3 in 1917, and 1.4 in 1919, 1920, and 1921) are largely accounted for by the addition of new territory to the registration area for those years.

In Table BT corresponding death rates from these causes are also given to enable the student to estimate more easily the probable effect of these declining rates on rates from other causes of death. (See also, on page 85, death rates from old age.)

Table BS

PER CENT OF TOTAL DEATHS DUE TO UNKNOWN OR ILL-DEFINED DISEASES.

[1] Exclusive of Hawaii.
[2] Not added to registration area until a later date.
[3] Includes only municipalities having a population of 1,000 or more in 1900.
[4] Includes only municipalities having a population of 1,000 or more in 1910.
[5] Dropped from registration area in 1910.

ADJUSTED AND SPECIFIC RATES FOR WHITE AND COLORED.

Tables BU and BV contrast adjusted and crude mortality rates of the white, colored, Negro, Indian, Chinese, and Japanese in the registration States.

The lowest adjusted rate for both sexes, 1,069.4 per 100,000 population, appears for the white, and the highest adjusted rate, 2,256.5, for the Chinese.

Next to the white come the Japanese with an adjusted rate of 1,356.5, then the Indian with a rate of 1,606.9, and the Negro with a rate of 1,734.2.

Higher rates are found for the Chinese than for the white for every age period. Higher rates are found for the Negro than for the white for every age period up to 75 years, and higher rates are found for the Indian and Japanese than for the white in every age period up to 55.

Tuberculosis is one of the principal causes of the comparatively high rates of each of the colored races, though many other causes are also responsible, cancer, suicide, and homicide among the Chinese being particularly noteworthy.

[1] Including District of Columbia. [2] Exclusive of stillbirths.

NOTE.—For deaths from each cause see Table 4 of the Appendix.

DEATHS OF CHILDREN UNDER 1 YEAR OF AGE.

Deaths of children under 1 year of age are usually considered in connection with the number of births, and the number of deaths under 1 year of age per 1,000 births is commonly spoken of as the infant mortality rate.

As the number of births is known in but 27 of the 34 states of the death registration area, no consideration of infant mortality for the entire death registration area is possible. But as we now have a birth registration area and an annual report on Birth Statistics, it has been thought best to show in that report those infant mortality tables which relate exclusively to the birth registration area and to retain in the Mortality Statistics other tables which relate to the death registration area.

Tables BW and BX indicate that in recent years infant deaths form a much smaller part of total deaths and that the decreases occur principally after the second week of life. Premature birth, congenital malformations, and injury at birth form considerably larger per cents of the total in 1921 than in 1912.

PER CENT OF DEATHS FROM CERTAIN IMPORTANT CAUSES TO TOTAL DEATHS UNDER 1 YEAR OF AGE IN THE REGISTRATION STATES OF 1910 (EXCLUSIVE OF NORTH CAROLINA), FOR THE YEARS 1912 TO 1921.

[3] Includes ulcer of the duodenum from 1912 to 1920.

In default of data showing the number of births in the death registration States of 1910 (exclusive of North Carolina) death rates per 1,000 estimated mid-year population under 1 year of age instead of per 1,000 live births, are shown by certain important causes for children under 1 year of age. The rate from all causes in 1921 is 91, and is the lowest rate for the series of years shown in Table BY.

Only three causes have slightly higher rates in 1921 than in 1920; these are scarlet fever, congenital malformations, and injury at birth.

PER CENT OF DEATHS UNDER 1 YEAR OF AGE TO TOTAL DEATHS, AND IN EACH OF THE 12 SUBDIVISIONS OF THE FIRST YEAR OF LIFE, TO DEATHS UNDER 1 YEAR OF AGE IN THE REGISTRATION STATES OF 1910 (EXCLUSIVE OF NORTH CAROLINA), FOR THE YEARS 1912 TO 1921.

[1] Exclusive of stillbirths.
[2] States shown for 1900 and the District of Columbia.
[3] Not added to registration area until a later date.

NOTE.—The deaths returned from North Carolina in 1910 included only those from municipalities having a population of 1,000 or more in 1900. (The population of these areas formed about 16 per cent of the total population of the State.)

Tables BZ and CC, giving mortality rates per 1,000 estimated population under 1 year of age, show the improvement which has taken place in the rates for the first year of life in the various States; for the birth registration area of 1915, specific rates are presented which should never be used as infant mortality rates (deaths of infants under 1 year of age per 1,000 live births), but which are valuable for purposes of comparison with the infant mortality rates given in the annual report Birth Statistics, published by the Bureau of the Census. For example, for the State of Connecticut the 1921 infant mortality rate is given in the birth report as 73, while in Table CC the specific rate for Connecticut is 80.4, a figure 10 per cent greater than the infant mortality rate.

Table CC

ACCURACY OF STATISTICS OF CAUSES OF DEATH.

It is obvious that the cause of death can not be classified correctly unless it has been stated accurately. It is not stated accurately when one or two of several factors are not given in the physician's report. Again, it is not stated accurately when the physician fails to enter on the death certificate a qualifying term which, if given, would modify the classification of the death. For example, the reporting of a death from tuberculous peritonitis as having been caused by "peritonitis" represents an error of omission which, if not corrected, would cause the death to be incorrectly classified, not only with reference to the title of the International List of Causes of Death to which, on the basis of the incomplete statement, it would have to be assigned, but also with reference to the class or group of causes into which the list is divided.

One of the principal difficulties in classifying deaths according to the International List is the fact that each year the Census Bureau receives several hundred thousand certificates of deaths on each of which the names of two or more diseases appear. Practically all systems of classification in present use are based upon the principle that each death must be charged to a single cause. This means that if two or more morbid conditions are stated on a certificate with nothing to indicate which was the chief or primary cause, one of them must be selected as the cause under which the death shall be classified. In many cases no dependence can be placed upon the order in which the terms are written; nor can the compiler rely upon the statements as to the "cause of death" or the "contributory cause," since these terms are used with different and diametrically opposed meanings, not only by physicians but by registration officers.

In its effort to improve the statement of cause of death, the Bureau of the Census, at the beginning of the annual collection of mortality statistics, sent to every physician in the country a copy of the pamphlet "Relation of Physicians to Mortality Statistics," which, later, was superseded by the "Physicians' Pocket Reference to the International List of Causes of Death." These pamphlets were, first, to acquaint physicians with the form, scope, and requirements of the International List of Causes of Death, and, second, to emphasize the fact that the value of statistics of causes of death depends largely upon the precision and completeness with which the information is supplied by the medical profession. With these ends in view, the titles of the International List are included in each pamphlet, together with comments on some of the

principal undesirable terms commonly used in reporting causes of death; these comments give the reasons why each such term is unsatisfactory and present suggestions for more precise statements.

The following tables show the results obtained in 1921 by sending queries to physicians:

TOTAL DEATHS, NUMBER OF CAUSES QUERIED, AND PER CENT OF CAUSES QUERIED TO TOTAL DEATHS, IN THE REGISTRATION AREA: 1921 AND 1920.

[1] A minus sign (−) denotes decrease, a plus sign (+) increase.
[2] Title under which 1 or more unsatisfactory terms were queried.

The first test inquiry was made for 1911. Five of the undesirable terms frequently used in reporting causes of death—"meningitis," "paralysis," "convulsions," "pneumonia," and "peritonitis"—were selected, and in cases where they had been employed *without qualification*, circular letters were sent to the physicians who had signed the death certificates. These letters requested such additional statements or information relative to the cause of death as might be needed for a more satisfactory classification, and with each was inclosed a copy of the "Physicians' Pocket Reference to the International List of Causes of Death," the paragraph therein referring to the unsatisfactory nature of the term used being marked. In Mortality Statistics, 1911 (pp. 36–38), the results of this test may be found. It is sufficient to say that approximately 2,000 replies were received, and the additional information obtained from the physicians enabled the bureau to improve the classification in 57 per cent of the cases covered by replies.

Still further evidence bearing upon the reliability of rates from various causes will be found in Tables CG and CH for South Carolina and for Vermont. These tables deal with the deaths for which causes were not certified by physicians, coroners, assistant coroners, health officers, or midwives.

In Vermont 0.2 per cent of the total number were not certified as against 26.3 per cent in South Carolina.

ALL DEATHS, AND DEATHS FROM EACH TABULATED CAUSE WHICH WAS NOT CERTIFIED, TOGETHER WITH CAROLINA:

[1] Exclusive of stillbirths.

THE RELATION OF THE FOREIGN POPULATION TO THE MORTALITY RATES OF BOSTON.

In the vital statistics analyses for the census year 1900, published by the Bureau of the Census, appear many death rates by country of birth of mother of decedent. Since that time comparatively little has been published regarding death rates of the various race stocks which make up the white population of the United States. Some figures will be found in "Special Tables of Mortality from Influenza and Pneumonia" published in 1919, some in "Mortality Rates, 1910-1920," and some in a few papers published by statisticians outside the Government service. However, the subject is an important one, and it is now possible to present some comparative figures for Boston for the years 1900, 1910,[1] and 1920.

Death rates based on enumerated populations and on deaths (exclusive of nonresidents), for certain race stocks are presented below and in Table 3 of the Appendix. The crude rate in 1900 was 19.4 per 1,000 population against a rate of 15.4 in 1910 and a rate of 13.2 in 1920. As the colored population in Boston was only between 2 and 3 per cent of the total in any of the years considered, the slightly higher rates of this part of Boston's population were not important factors in raising Boston's death rates.

On the other hand, the population having mothers born in Ireland was 31 per cent of the total in 1900, 26 per cent in 1910, and 23 per cent in 1920, and as the rates of this part of Boston's population were considerably higher than the general rates, it is evident that the population having mothers born in Ireland must have contributed materially to Boston's comparatively high mortality rates. The crude rate of those having mothers born in Ireland was in 1900, 3.3 per 1,000 population higher than the general rate, in 1910 it was 4 higher and in 1920 it was 3 higher, and if a comparison is made of the rates of those having mothers born in the United States and of those having mothers born in Ireland, the latter class shows in 1900 and 1910 rates of 6 per 1,000 population higher, and in 1920 a rate 3.8 higher.

To quote some of the principal findings of earlier analyses:

In 1900 Boston residents of Italian mothers had for males under 5 years of age a mortality rate of 108 per 1,000 and for females a rate of 79, while those of mothers born in Germany had corresponding rates of 37 and 34. Again, for example, in the age period 30 to 34 years, the rates for those having mothers born in Ireland were 14 per 1,000 for males and for females 12 per 1,000—a rate for males seven times that of the Russians, three and one-half times that of the Italians or Scandinavians, and more than twice that of the English, Scotch, or natives, and a rate for females twice that of the Scandinavians, Scotch, Italians, or Russians, and three times that of the natives. If now the rates of those having mothers born in the United States be taken as standard, Boston's rate for 1900 would have been 14.7 instead of 19.4, and 59 per cent of the difference between these rates is accounted for by the high rates of those having mothers born in Ireland.

Data for 1910 showed that under 5 years of age the rate per 1,000 population had dropped from 64 in 1900 to 45 in 1910, the improvement being general, though the colored population and the Italians in 1910, as in 1900, had comparatively high rates for this age period. For age period 30 to 34 years, the rates for those having mothers born in Ireland were 13 per 1,000 for males and 8 per 1,000 for females—rates somewhat lower than in 1900, though still high compared with those of other nationalities. Taking the rates of those having mothers born in the United States as standard, Boston's rate for 1910 would have been 11.7 instead of 15.4, and 60 per cent of the difference between these rates is accounted for by the high rates of those having mothers born in Ireland. Thus the figures for 1900 and 1910 clearly indicate that the problem of securing a reasonably low death rate in Boston is closely linked with the problem of securing lower death rates for those having mothers born in Ireland.

In 1910, for both males and females, the rates for this part of the population were higher than the corresponding rates for aggregate whites in all the fourteen age periods from 5 to 74 years—in fact, averaging in these fourteen age periods for males 41 per cent higher than the rates of the aggregate white males and 111 per cent higher than the corresponding rates of those having mothers born in the United States, and for females averaging also 41 per cent higher than the rates of the aggregate white females and 119 per cent higher than the corresponding rates of those having mothers born in the United States. Although the rates of all nationalities declined between 1900 and 1910, the rates of those of mothers born in Ireland did not decline as much as some of the others.

But why such high rates for this particular race stock? Using 1910 rates of those having mothers born in the United States as standard, it was found

[1] The figures for 1900 and 1910 are taken from local compilations (See Bulletin of the American Academy of Medicine, February, 1913) and manuscript figures in the files of the Bureau of the Census.

NOTE.—Attention should be called to the fact that Boston's figures presented for this analysis are exclusive of nonresidents who died in Boston and of residents who died outside of Boston.

that for males at all ages among those of mothers born in Ireland, tuberculosis of the lungs accounted for 33 per cent of the excess deaths, for males aged 15 to 19 years, 58 per cent, and in the age period 25 to 29, for 63 per cent; and other important causes accounting for the excess deaths were external causes, pneumonia, organic diseases of the heart, alcoholism, cancer, Bright's disease, cerebral hemorrhage, and apoplexy. Among the females also tuberculosis of the lungs was a most important factor, causing 14 per cent of the excess deaths.

"Comparison of the cancer rates for 1900 and 1910 is especially interesting in view of the disputed question of cancer increase. Uncorrected for age distribution and using the census populations, the rate for 1900 was 76.7 per 100,000 population and for 1910, 86.5, or 13 per cent higher than in 1900. But in the decade under consideration Boston grew old, that is, the older age periods comprised a greater part of Boston's total population in 1910 than in 1900.

"Correcting, therefore, for this difference in age distribution by applying the 1900 cancer rates by age periods to the corresponding populations of 1910, it is found that the rate for 1910 would have been 82.7.

"The difference, therefore, between 82.7 and 86.5 represents the real increase in cancer mortality for the decade—an increase of 4.6 per cent.

"If the males and females be considered separately in the same way, the real increase for the males is found to be the difference between 61.3 and 66.7, an increase of 8.8 per cent, and for the females the difference between 103.2 and 105.6, an increase of 2.3 per cent. If those having mothers born in Ireland be considered in the same way the real increase for the males is found to be the difference between 80.9 and 92.6, an increase of 14.5 per cent, and for the females the difference between 120.3 and 147.5, an increase of 22.6 per cent."

All in all the effect of the foreign population on the Boston death rate was the same in 1910 as in 1900.

"Therefore, it is evident that these differences in the rates of various nationalities *were not* due to chance but to the actual differences in the people themselves, or in their occupations, or in their manner of living. Evidently tuberculosis is especially dangerous to those of Irish blood so that it would not seem amiss to urge that part of our population to safeguard itself in every way against this disease.

"Also other pulmonary diseases, as chronic bronchitis, bronchopneumonia, and pneumonia, together with cancer, cerebral hemorrhage, apoplexy, alcholism, organic diseases of the heart, and Bright's disease, exacted too high a toll of the Irish race stock."

So much for previous findings!

As Boston's really big problem is to lower the death rates of those of Irish descent further consideration will be limited to noting the progress made in that direction as indicated by 1920 figures. The upper line in each of the following diagrams represents the specific rates of those having mothers born in Ireland and the lower line the specific rates of those having mothers born in the United States. These lines are certainly nearer in 1920 than in either 1910 or 1900. However, if we regard the rates of those having mothers born in the United States as standard, the rates of those having mothers born in Ireland are still for the most part considerably too high though the improvement since 1900 is encouraging. Particularly encouraging are the declines in the rates from tuberculosis of the lungs (including miliary tuberculosis). The two lines for both sexes are very much nearer together in 1920 than in 1910 or 1900. So also for pneumonia (all forms) the two lines for both sexes are very much nearer together in 1920 than in 1910 or in 1900.

On the other hand if diagrams were made for cancer, organic diseases of the heart, and nephritis, no such marked approach of the two lines in 1920 would be found. Perhaps 1920 differences can best be pictured by noting that the number of deaths among those of mothers born in Ireland was 2,765, whereas the number would have been 894 less had the rates of those having mothers born in the United States prevailed. Some of the causes of these excess deaths and the numbers involved were as follows:

Organic diseases of the heart	242
Tuberculosis of the lungs	174
Cancer and other malignant tumors	104

In Boston as the years go by it is undoubtedly true that those designated as "having mothers born in the United States" contain a constantly growing proportion of persons of Irish descent. This in itself theoretically might partially account for the approach of the mortality lines. But this fact will hardly account for the more marked approach of these lines in the last decade than in the previous one.

More extended calculations of the differences by sex and age are presented in Table CL. Remembering that the population having mothers born in Ireland constituted 31 per cent of the total in 1900, 26 per cent in 1910, and 23 per cent in 1920, note the comparatively high percentages shown for this race stock for certain causes in Table CM.

Looking at the problem then in a broad way a mortality handicap still exists for this race stock, but the handicap is less than in 1910 and in 1900. The improvement is most encouraging, and leads to the hope that the handicap will grow less and less as environmental conditions become better.

BOSTON DEATH RATES FROM ALL CAUSES PER 1,000 WHITE POPULATION, AT SPECIFIED AGES, BY SEX, FOR THOSE OF MOTHERS BORN IN THE UNITED STATES, AND FOR THOSE OF MOTHERS BORN IN IRELAND: 1920, 1910, 1900.

SUMMARY AND RATE TABLES

SUMMARY AND RATE TABLES.

TABLE I A.—POPULATION, DEATHS (EXCLUSIVE OF STILLBIRTHS), AND DEATH RATES PER 1,000 ESTIMATED POPULATION, IN THE REGISTRATION AREA (EXCLUSIVE OF HAWAII), ITS MAIN SUBDIVISIONS, AND EACH REGISTRATION STATE, BY CITIES AND RURAL DISTRICTS: 1921.

[The populations are estimated by the arithmetical method, based on the censuses of 1910 and 1920. The rates are based on total deaths, including deaths of nonresidents and deaths in hospitals and institutions. Rates in *italics* are based on less than 5 deaths. The term "cities" indicates municipalities of 10,000 inhabitants or more in 1920; the remainder of the state is included in "rural districts."]

AREA.	POPULATION.		DEATHS: 1921.	
	Census of Jan. 1, 1920.	Estimated as of July 1, 1921.	Number.	Rate per 1,000 estimated population.

[1] Population Jan. 1, 1920; decrease since 1910; no estimate made.

TABLE I B.—POPULATION, DEATHS OF NONRESIDENTS IN RELATION TO TOTAL DEATHS, AND DEATH RATES PER 1,000 ESTIMATED POPULATION IN EACH CITY AND EACH RURAL UNIT IN THE REGISTRATION AREA (EXCLUSIVE OF HAWAII): 1921.

[Populations are estimated by the arithmetical method, based on the censuses of 1910 and 1920. Rates in *italics* are based on less than 5 deaths. Minor areas which are designated by asterisks (*) contain state insane asylums, state hospitals, etc. The term "cities" indicates municipalities of 10,000 inhabitants or more in 1920. The white and colored are shown separately for areas when the colored population of the area formed at least 10 per cent of the total, or numbered 10,000 or more, in 1920. A detailed explanation of this table may be found on p. 20.]

AREA AND COLOR.	Population estimated as of July 1, 1921.	DEATHS (EXCLUSIVE OF STILLBIRTHS) IN 1921.							
		Including nonresidents.		Excluding transferable nonresidents.	Excluding transferable nonresidents and including residents who died elsewhere in registration area.	Nonresidents not transferable.	Excluding all nonresidents and including residents who died elsewhere in registration area.		
		Number.	Rate per 1,000 population.				Number.	Rate per 1,000 population.	Per cent of change.

[1] Nonregistration state; the only cities shown are those with satisfactory registration of deaths.
[2] Less than 1 per cent.
[3] Population Jan. 1, 1920. Decrease since 1910; no estimate made.
[4] Population Jan. 1, 1920; no estimate made.
[5] Includes state institutions.
[6] Population Jan. 1, 1920. West Warwick town organized from Warwick town since 1910; no estimate made.
[7] Exclusive of municipalities having a population of 10,000 or more in 1920.
[8] Estimated population not available; rate not computed. See Vol. I, Population, 1920.
[9] Per cent not shown when either rate is based on less than 5 deaths.
[10] Exclusive of population Jan. 1, 1920, of 1 city and of the estimated increase in the population of Bridgeport.
[11] Exclusive of the estimated increase in the population of Hartford.
[12] Population Jan. 1, 1920, exclusive of estimated population, 1921, of city in the county. Decrease since 1910; no estimate made.
[13] Includes National Military Home.
[14] Population Jan. 1, 1920, exclusive of estimated population, 1921, and population Jan. 1, 1920, of cities in the county. Decrease since 1910; no estimate made.
[15] Exclusive of the estimated increase in the population of Detroit.
[16] Estimated population not available; rate not computed. County organized since 1920.
[17] Exclusive of the estimated increase in the population of Youngstown.
[18] Exclusive of the estimated increase in the population of Akron.
[19] Exclusive of the estimated increase in the population of Seattle.
[20] Data relating to nonresidents are incomplete on transcripts of deaths from Kentucky.

[1] Exclusive of Hawaii.
[2] Exclusive of stillbirths.
[3] Not comparable.
[4] See following table—"All other causes."
[5] Less than one-tenth of 1 per 100,000 population.
[6] See following table for combined causes, which for 1921 and 1920 are approximately comparable.
[7] Not tabulated separately.
[8] In 1920, when syphilis (38) was returned jointly with tabes dorsalis (locomotor ataxia) (72) or with general paralysis of the insane (76) it was assigned to syphilis; in 1921 it was assigned to either locomotor ataxia or to general paralysis of the insane.
[9] This cause is not comparable for 1921 owing to changes in inclusions for that year.
[10] The figures for infanticide are included in those for homicide.

NOTE.—Nearly all benign tumors and tumors not returned as malignant which are not classified under definite titles are now included under title (50) Benign tumors and tumors not returned as malignant (tumors of the female genital organs excepted).
Hydatid tumors (except hydatid tumors of the liver) have been transferred to title (116) Diseases due to other intestinal parasites.
Practically all foreign bodies are now included under title (202) Other external violence.

COMPARABLE GROUPS OF CAUSES FOR THE REGISTRATION AREA (EXCLUSIVE OF HAWAII): 1921 AND 1920.

(For notes see preceding table, p. 158.)

TABLE III.—DEATH RATES PER 100,000 ESTIMATED POPULATION IN THE REGISTRATION AREA (EXCLUSIVE

The rates are based on total deaths, including deaths of nonresidents and deaths in hospitals and institutions. Rates in *italics* are based on less than 5 deaths. Bases of hospitals, etc. The term "cities" indicates municipalities of 10,000 inhabitants or more in 1920; the remainder of the state is included in "rural districts." Rates by color the colored formed at least 10 per cent of the total, with a minimum of 5,000, Jan. 1, 1920. Numbers under causes of death correspond to those of the 1920 revision of the

	AREA AND COLOR.	DEATH RATE PER 100,000 POPULATION FROM—														
		All causes.[1]	Typhoid and paratyphoid fever.	Malaria.	Smallpox.	Measles.	Scarlet fever.	Whooping-cough.	Diphtheria.	Influenza.	Erysipelas.	Meningococcus meningitis.	Tuberculosis of the respiratory system.	Tuberculosis of the meninges, etc.	Other forms of tuberculosis.	Cancer and other malignant tumors.

[3] Less than one-tenth of 1 per 100,000 population.

TABLE IV.—DEATH RATES PER 100,000 POPULATION IN THE REGISTRATION AREA (EXCLUSIVE OF HAWAII), EACH CAUSE AND CLASS

[See note at head of this table, pp. 196, 197.]

Detailed List No.	Int. No.	CAUSE OF DEATH.	DEATH RATE PER 100,000 POPULATION.											
			Registration area (exclusive of Hawaii).	REGISTRATION STATES.			Registration cities in nonregistration states.[2]	All registration cities.[1]	CALIFORNIA.			COLORADO.		
				Total.[1]	Cities.[1]	Rural districts.			Total.	Cities.	Rural districts.	Total.	Cities.	Rural districts.
		XIV.—External causes—Continued.												
		Accidental or undefined (total)	68.7	68.3	71.6	65.1	92.7	72.3	91.0	80.9	104.6	88.3	76.3	95.8
175		Poisoning by food	1.0	1.0	0.9	1.2	2.7	0.9	1.6	1.8	1.4	0.9	*0.5*	1.2
176		Poisoning by venomous animals	0.1	0.1	0.1	0.1	0.5	0.1	*0.1*	[3]	*0.1*	*0.3*	.....	*0.5*
177		Other acute poisonings (gas excepted)	1.7	1.7	1.9	1.5	3.2	2.0	2.6	2.7	2.6	2.4	2.7	2.2
178		Conflagration	1.0	1.0	0.9	1.2	1.8	0.9	1.2	0.7	1.9	1.0	1.4	0.8
179		Burns (conflagration excepted)	6.0	5.9	6.8	5.1	10.3	7.0	4.9	5.5	4.2	3.7	4.6	3.2
180		Mechanical suffocation	1.1	1.1	0.8	1.3	1.3	0.8	0.9	0.8	1.0	2.3	1.4	2.9
181		Absorption of irrespirable, irritating, or poisonous gas.	2.0	2.0	3.6	0.5	1.1	3.5	3.2	5.0	0.8	1.1	2.2	*0.5*
182		Drowning	7.3	7.3	5.4	9.2	8.2	5.5	8.6	3.9	14.9	19.5	10.6	25.0
183		Traumatism by firearms (except in war)	2.6	2.6	1.6	3.5	6.8	1.7	2.8	1.7	4.3	4.0	2.4	4.9
184		Traumatism by cutting or piercing instruments.	0.5	0.5	0.6	0.5	0.5	0.6	0.7	0.6	0.7	0.5	*0.8*	*0.3*
185		Traumatism by fall	11.4	11.4	13.3	9.6	11.2	13.2	13.4	15.3	10.7	10.3	14.1	7.9
186a		Traumatism in mines	2.0	2.0	1.1	2.8	2.0	1.2	0.6	*0.1*	1.2	7.2	1.6	10.6
186b		Traumatism in quarries	0.1	0.1	0.1	0.1	*0.2*	0.1	0.2	*0.1*	0.3	*0.1*	.....	*0.2*
187		Traumatism by machines	1.8	1.8	2.0	1.6	2.5	2.0	2.9	2.6	3.3	2.4	1.9	2.7
188a		Railroad accidents	6.0	5.9	5.2	6.7	8.2	5.3	6.8	4.6	9.7	5.7	3.8	6.9
188b		Street-car accidents	1.6	1.6	2.7	0.7	2.2	2.6	3.4	4.7	1.6	0.7	1.9	.....
188c		Automobile accidents	11.5	11.4	15.3	7.6	17.9	15.4	24.4	22.6	26.8	12.6	16.0	10.5
188d		Aeroplane and balloon accidents	0.1	0.1	0.1	0.2	0.3	0.1	0.7	0.2	1.4	*0.3*	*0.5*	*0.2*
188e,f		Injuries by other vehicles	1.9	1.9	1.7	2.1	1.9	1.7	2.2	1.3	3.5	4.4	2.7	5.4
188g		Landslide, other crushing	0.6	0.6	0.5	0.7	0.4	0.5	1.2	0.8	1.7	1.4	1.9	1.0
189		Injuries by animals (not poisoning)	0.8	0.8	0.4	1.1	1.0	0.4	0.7	0.3	1.2	1.4	*1.1*	1.5
190		Wounds of war	[3]	[3]	[3]	[3]	*0.1*	[3]	.....	.....	.....	.....	.....	.....
192		Starvation (deprivation of food or water)	[3]	[3]	[3]	[3]	.....	[3]	.....	.....	.....	*0.1*	.....	*0.2*
193		Excessive cold	0.1	0.1	0.1	0.2	.....	0.1	*0.1*	.....	*0.2*	*0.1*	.....	*0.2*
194		Excessive heat	1.1	1.1	1.2	1.0	0.5	1.1	0.8	*0.2*	1.6	.....	.....	.....
195		Lightning	0.5	0.5	0.1	0.9	*0.1*	0.1	*0.1*	.....	*0.1*	1.1	*0.3*	1.7
196		Other accidental electric shocks	0.8	0.8	0.8	0.8	1.1	0.8	1.7	1.0	2.6	0.8	1.4	*0.5*
201		Fracture (cause not specified)	0.6	0.6	0.6	0.5	1.1	0.6	0.3	*0.2*	0.3	*0.2*	*0.3*	*0.2*
202		Other external violence	3.2	3.1	3.0	3.2	4.1	3.1	3.9	3.3	4.8	2.5	2.2	2.7
203		Violent deaths of unknown causation	1.1	1.1	1.0	1.2	1.4	1.0	1.1	0.8	1.5	1.2	*0.3*	1.9
		XV.—Ill-defined diseases	16.0	15.8	3.8	27.4	25.9	4.5	1.8	1.2	2.6	2.6	*0.5*	3.9
204		Sudden death	1.1	1.1	0.3	1.9	0.8	0.3	*0.1*	.....	*0.2*	*0.2*	.....	*0.3*

GENERAL TABLES

GENERAL TABLES.

TABLE 1.—DEATHS (EXCLUSIVE OF STILLBIRTHS) IN THE REGISTRATION AREA (EXCLUSIVE OF HAWAII) AND CERTAIN SUBDIVISIONS, BY MONTH OF DEATH: 1921.

The term "cities" indicates municipalities of 10,000 inhabitants or more in 1920; the remainder of the state is included in "rural districts." Minor areas which are designated by asterisks (*) contain state insane asylums, state hospitals, etc.]

[1] Nonregistration state; the only cities shown are those with satisfactory registration of deaths.

TABLE 1.—DEATHS (EXCLUSIVE OF STILLBIRTHS) IN THE REGISTRATION AREA (EXCLUSIVE OF HAWAII) AND CERTAIN SUBDIVISIONS, BY MONTH OF DEATH: 1921—Continued.

[The term "cities" indicates municipalities of 10,000 inhabitants or more in 1920; the remainder of the state is included in "rural districts." Minor areas which are designated by asterisks (*) contain state insane asylums, state hospitals, etc.]
