1967

VOLUME I—NATALITY

U.S. DEPARTMENT OF  
HEALTH, EDUCATION, AND WELFARE

ROBERT H. FINCH, SECRETARY

PUBLIC HEALTH SERVICE

WILLIAM H. STEWART, SURGEON GENERAL

WASHINGTON: 1969

## GENERAL PATTERN OF VITAL REGISTRATION AND STATISTICS IN THE UNITED STATES

RESPONSIBLE PERSON OR AGENCY	BIRTH CERTIFICATE	DEATH CERTIFICATE	FETAL DEATH CERTIFICATE (Stillbirth)	REPORTING OFFICIALS	MARRIAGE RECORD	DIVORCE OR ANNULMENT RECORD
Physician, Other Professional Attendant, or Hospital Authority	<ol style="list-style-type: none"> <li>1. Completes entire certificate in consultation with parent(s). Physician's signature required.</li> <li>2. Files certificate with local office of district in which birth occurred.</li> </ol>	<ol style="list-style-type: none"> <li>1. Completes medical certification and signs certificate.</li> <li>2. Returns certificate to funeral director.</li> </ol>	<ol style="list-style-type: none"> <li>1. Completes or reviews medical items on certificate.</li> <li>2. Certifies to the cause of fetal death and signs certificate.</li> <li>3. Returns certificate to funeral director.</li> <li>4. In absence of funeral director, files certificate.</li> </ol>	Clerk of Local Government	<ol style="list-style-type: none"> <li>1. Receives application for marriage license, and reviews application for completeness, accuracy, and compliance with law.</li> <li>2. Issues marriage license, and records date.</li> <li>3. Checks completeness of entries about the marriage ceremony.</li> <li>4. Sends specified information regarding marriage to State Registrar.</li> </ol>	
Funeral Director		<ol style="list-style-type: none"> <li>1. Obtains personal facts about deceased.</li> <li>2. Takes certificate to physician for medical certification.</li> <li>3. Delivers completed certificate to local office of district where death occurred and obtains burial permit.</li> </ol>	<ol style="list-style-type: none"> <li>1. Obtains the facts about fetal death.</li> <li>2. Takes certificate to physician for entry of causes of fetal death.</li> <li>3. Delivers completed certificate to local office of district where delivery occurred and obtains burial permit.</li> </ol>	Marriage Officer	<ol style="list-style-type: none"> <li>1. Checks the validity of the marriage license.</li> <li>2. Performs the marriage ceremony.</li> <li>3. Certifies to the facts of the marriage ceremony.</li> <li>4. Returns the record to the license clerk within the legally prescribed time.</li> </ol>	
Local Office (may be Local Registrar or City or County Health Department)	<ol style="list-style-type: none"> <li>1. Verifies completeness and accuracy of certificate.</li> <li>2. Makes copy, ledger entry, or index for local use.</li> <li>3. Sends certificates to State Registrar.</li> </ol>	<ol style="list-style-type: none"> <li>1. Verifies completeness and accuracy of certificate.</li> <li>2. Makes copy, ledger entry, or index for local use.</li> <li>3. Issues burial permit to funeral director and verifies return of permit from cemetery attendant.</li> <li>4. Sends certificates to State Registrar.</li> </ol>		Clerk of Court		<ol style="list-style-type: none"> <li>1. Provides form for report to plaintiff or attorney, or makes entries on such form from petition for decree.</li> <li>2. Verifies entries on return form.</li> <li>3. Enters information on final decree.</li> <li>4. Sends completed report to State Registrar.</li> </ol>
City and county health departments use certificates in allocating medical and nursing services, followups on infectious diseases, planning programs, measuring effectiveness of services, and conducting research studies.				Attorney for Plaintiff		<ol style="list-style-type: none"> <li>1. Enters personal characteristics of spouses.</li> <li>2. Returns form to Clerk of Court.</li> </ol>
State Registrar, Bureau of Vital Statistics	<ol style="list-style-type: none"> <li>1. Queries incomplete or inconsistent information.</li> <li>2. Maintains files for permanent reference and as the source of certified copies.</li> <li>3. Develops vital statistics for use in planning, evaluating, and administering State and local health activities and for research studies.</li> <li>4. Compiles health related statistics for State and civil divisions of State for use of the health department and other agencies and groups interested in the fields of medical science, public health, demography, and social welfare.</li> <li>5. Prepares copies of birth, death, fetal death, marriage, and divorce certificates or records for transmission to the National Center for Health Statistics.</li> </ol>					
Public Health Service National Center for Health Statistics	<ol style="list-style-type: none"> <li>1. Prepares and publishes national statistics of births, deaths, fetal deaths, marriages, and divorces; and constructs the official U.S. life tables and related actuarial tables.</li> <li>2. Conducts health and social-research studies based on vital records and on sampling surveys linked to records.</li> <li>3. Conducts research and methodological studies in vital statistics methods including the technical, administrative, and legal aspects of vital records registration and administration.</li> <li>4. Maintains a continuing technical assistance program to improve the quality and usefulness of vital statistics.</li> </ol>					
<p>NOTE.—In some States there is no central file for marriage and divorce records at the State level.</p>						

## NATIONAL CENTER FOR HEALTH STATISTICS

THEODORE D. WOOLSEY, *Director*

PHILIP S. LAWRENCE, Sc.D., *Associate Director*

OSWALD K. SAGEN, Ph.D., *Assistant Director for Health Statistics Development*

WALT R. SIMMONS, M.A., *Assistant Director for Research and Scientific Development*

ALICE M. WATERHOUSE, M.D., *Medical Consultant*

JAMES E. KELLY, D.D.S., *Dental Advisor*

EDWARD E. MINTY, *Executive Officer*

MARGERY R. CUNNINGHAM, *Information Officer*

## DIVISION OF VITAL STATISTICS

ROBERT D. GROVE, Ph.D., *Director*

ROBERT A. ISRAEL, M.S., *Deputy Director*

ROBERT A. ISRAEL, M.S., *Acting Chief, Mortality Statistics Branch*

JOHN E. PATTERSON, *Chief, Natality Statistics Branch*

LOREN E. CHANCELLOR, *Chief, Registration Methods Branch*

ALICE M. HETZEL, *Chief, Marriage and Divorce Statistics Branch*

ARNE B. NELSON, M.A., *Chief, Vital Records Survey Branch*

MICHAEL J. ZUGZDA, *Chief, Statistical Resources Section*

# VITAL STATISTICS OF THE UNITED STATES, 1967

## VOLUME I—NATALITY

A brief summary of the contents for each section is listed below for the convenience of the reader. A complete table of contents is shown at the beginning of each section and is identified by a narrow black edge which can be located easily by fanning the pages. Each section is paged independently, using the section number as the identifying prefix.

### Section 1. Natality—Rates and Characteristics

Summary tables showing trends in period and cohort fertility measures and characteristics of live births including color, age of mother, live-birth order, sex, month, and legitimacy status.

Detailed frequency tabulations for each State, each metropolitan area, and other geographic areas of the United States. Data are shown by color and race, sex, month, age of mother, live-birth order, attendant, birth weight, period of gestation, plurality, and legitimacy status.

### Section 2. Natality—Local Area Statistics

Frequency tabulations by place of residence and occurrence for each State, county, and city with a population of 10,000 or more by color and attendant and by place of residence for population-size groups in metropolitan and nonmetropolitan counties within each State by color, attendant, and birth weight.

### Section 3. Technical Appendix

Text discussion of the source, classification, and quality of the natality statistics published in this volume. Includes population tables for computing vital rates.

## Guide to tables in Section 1

[All data are for births occurring in the United States]

TABLE: 1	-1	-2	-3	-4	-5	-6	-7	-8	-9	-10	-11	-12	-13
PAGE: 1	-3	-4	-5	-5	-6	-7	-8	-9	-10	-11	-11	-12	-13
Geographic area: United States-----	1	2	3	4	5	6	7	8	9	10	11	12	13
Years:													
1909-67-----		2											
1915-67-----	1 <sup>1</sup>												
1940-67-----			3	4	5	6		8					
1950-67-----							7						
Specified years as of January 1-----												12	13
Specified years and 1967-----											11		
1967 only-----									9	10			
Type of entry:													
Age-specific birth rates-----						6	7		9				
Gross and net reproduction rates-----				4									
Intrinsic rates of birth, death, and natural increase-----					5								
Number of births-----	1	2											
Percentage distribution-----										10			13
Probabilities-----												12	
Total fertility rates-----						6							
Rates per 1,000 married women aged 15-44 (fertility)-----							7						
Rates per 1,000 population	1	2	3										
Rates per 1,000 women-----				4	5	6							
Rates per 1,000 women aged 15-44 (fertility)-----		2						8	9				
Adjusted rates for:													
Age and sex-----			3										
Underregistration through 1959-----		2	3	4	5	6	7	8					
Underregistration for all years <sup>2</sup> -----												12	
Characteristics:													
Age of mother-----						6	7		9	10	11 <sup>3</sup>	12	13
Cohorts of women-----													13
Color-----	1	2	3	4	5	6		8	9	10	11		
Live-birth order-----								8	9	10	11		
Parity-----												12	13

<sup>1</sup>Entire United States for 1933-67; birth-registration States for 1915-32.

<sup>2</sup>Numbers of women adjusted for underenumeration and misstatements of age in the censuses for all years.

<sup>3</sup>Median age.

# *Section 1. Natality-Rates and Characteristics*

Table	Page
1-1. Live births and birth rates, by color: Birth-registration States, 1915-32, and United States, 1933-67-----	1-3
1-2. Live births, birth rates, and fertility rates, by color: United States, 1909-67 -----	1-4
1-3. Age-sex-adjusted birth rates, by color: United States, 1940-67-----	1-5
1-4. Gross and net reproduction rates, by color: United States, 1940-67 -----	1-5
1-5. Intrinsic rates of birth, death, and natural increase, by color: United States, 1940-67-----	1-6
1-6. Total fertility rates and birth rates by age of mother, by color: United States, 1940-67 -----	1-7
1-7. Estimated birth rates, by age of mother, for married women: United States, 1950-67 -----	1-8
1-8. Birth rates, by live-birth order and color: United States, 1940-67 -----	1-9
1-9. Birth rates, by age of mother, live-birth order, and color: United States, 1967-----	1-10
1-10. Percentage distribution of live births by live-birth order, by age of mother and color: United States, 1967 --	1-11
1-11. Median age of mother, by live-birth order and color: United States, 1940, 1950, and 1960-67 -----	1-11
1-12. Birth probabilities for women, by parity, by exact age: United States, 1940, 1950, and 1956-67-----	1-12
1-13. Percentage distribution of women by parity, by exact age, in selected groups of cohorts from 1876-80 to 1949-53: United States, 1920-68 -----	1-13
1-14. Central birth rates, by live-birth order and current age of mother, for women in groups of cohorts from 1917-21 to 1948-52: United States, 1961-67-----	1-14
1-15. Cumulative birth rates, by live-birth order and exact age of mother, for women in groups of cohorts from 1908-12 to 1949-53: United States, 1962-68-----	1-15
1-16. Central birth rates, by live-birth order and current age of mother, for women in each cohort from 1918 to 1953: United States, 1967 -----	1-16
1-17. Cumulative birth rates, by live-birth order and exact age of mother, for women in each cohort from 1918 to 1953: United States, 1968-----	1-17
1-18. Live births by sex and sex ratio, by color: United States, 1940-67 -----	1-18
1-19. Percent completeness of birth registration, by color: United States, 1933-67 -----	1-18
1-20. Live births, birth rates, and fertility rates, by month: United States, 1958-67 -----	1-19
1-21. Birth rates and fertility rates, by month, adjusted for seasonal variation: United States, 1958-67 -----	1-19
1-22. Number and percentage distribution of live births by attendant, by color: United States, 1940-67 -----	1-20
1-23. Percentage distribution of live births by attendant, by color: United States, each division and State, 1967 ----	1-21
1-24. Estimated number of illegitimate live births and ratios, by color, and illegitimacy rates: United States, 1940-67-----	1-22
1-25. Estimated illegitimacy rates, by age of mother: United States, 1940-67-----	1-22
1-26. Estimated number of illegitimate live births and ratios, by age of mother and color: United States, 1961-67 --	1-23
1-27. Estimated number of illegitimate live births, by live-birth order and color: United States, 1967-----	1-23
1-28. Ratio of illegitimate live births to total live births, by color: 35 reporting States, 1964-67 -----	1-24

Table	Page
1-29. Percentage distribution of live births by birth weight, by age of mother and color: United States, 1967-----	1-25
1-30. Percentage distribution of live births by birth weight, by color, for the United States and each geographic division; and by plurality for the United States: 1967-----	1-26
1-31. Percentage distribution of live births by birth weight, by period of gestation and color: United States, 1967--	1-27
1-32. Percentage distribution of live births by birth weight, by period of gestation and color: Total of five selected registration areas, 1967-----	1-28
1-33. Median birth weight by age of mother, live-birth order, and color: United States, 1967 -----	1-28
1-34. Birth rates: United States, each division and State, 1950 and 1959-67 -----	1-29
1-35. Live births by State of occurrence distributed according to area of residence: United States and each State, 1967 -----	1-30
1-36. Live births by month and State of occurrence: United States and each State, 1967-----	1-31
1-37. Live births by month and color for the United States and each State; and by sex for the United States: 1967--	1-32
1-38. Live births by specified race: United States and each State, 1967 -----	1-34
1-39. Live births by plurality of birth and color: United States and each State, 1967-----	1-35
1-40. Live births by birth weight, plurality of birth, color, and sex: United States, 1967 -----	1-36
1-41. Live births by birth weight, age of mother, plurality of birth, and color: United States, 1967-----	1-37
1-42. Live births by birth weight and color: United States and each State, 1967 -----	1-39
1-43. Live births by birth weight, period of gestation, and color, for metropolitan and nonmetropolitan counties: United States, 1967 -----	1-41
1-44. Live births by birth weight, period of gestation, and color: Total of five selected registration areas, 1967--	1-42
1-45. Live births by period of gestation, plurality of birth, and color, by sex of child and by age of mother: United States, 1967-----	1-43
1-46. Live births by period of gestation, plurality of birth, and color, by sex of child and by age of mother: Total of five selected registration areas, 1967 -----	1-45
1-47. Live births by period of gestation and color: United States and each State, 1967 -----	1-47
1-48. Live births by month, age of mother, live-birth order, and color: United States, 1967-----	1-49
1-49. Live births by age of mother, live-birth order, sex of child, and race: United States, 1967 -----	1-51
1-50. Live births by age of mother, live-birth order, and race: Each State, 1967 -----	1-53
1-51. Live births by single year of age of mother, live-birth order, and race: United States, 1967 -----	1-76
1-52. Live births by age of mother and race, for <u>metropolitan</u> and <u>nonmetropolitan counties</u> : United States and each State, 1967 -----	1-78
1-53. Live births by age of mother and race, for standard metropolitan statistical areas of the United States: 1967-----	1-85
1-54. Live births by live-birth order and race, for metropolitan and nonmetropolitan counties: United States and each State, 1967 -----	1-96
1-55. Live births by live-birth order and race, for standard metropolitan statistical areas of the United States: 1967-----	1-103
1-56. Illegitimate live births by age of mother and color, for population-size groups and specified urban places of 100,000 or more: 35 reporting States, 1967 -----	1-114
1-57. Illegitimate live births by age of mother, live-birth order, and color, for metropolitan and nonmetropolitan counties: Total of 35 reporting States, 1967 -----	1-123
1-58. Live births by age of mother and race, for cities of 100,000 or more in the United States: 1967 -----	1-124

<sup>1</sup>For 1917-19 and 1941-46, based on population including Armed Forces abroad.

<sup>2</sup>Based on a 20- to 50-percent sample of births.

<sup>3</sup>Based on a 50-percent sample of births.

<sup>4</sup>Figures by color exclude data for residents of New Jersey; see Technical Appendix.

<sup>5</sup>Due to rounding to the nearest thousand, figures by color may not add to totals. For 1915-32, figures include adjustments for States not in the registration area; for years prior to 1915, figures are estimates based on the number of registered births in the 10 original registration States for the same period. Estimates for 1909-34 were prepared by P. K. Whelpton. See National Office of Vital Statistics, "Births and Birth Rates in the Entire United States, 1909 to 1948," Vital Statistics—Special Reports, Vol. 33, No. 6, 1950.

SECTION 1 - NATALITY

Table 1-3. Age-Sex-Adjusted Birth Rates, by Color: United States, 1940-67

[Rates per 1,000 population. Computed by the direct method, using as the standard population the age distribution of women aged 10-49 years as enumerated in 1940; see Technical Appendix. Based on birth rates by age of mother and color shown in table 1-6]

Year	Total	White	Nonwhite	Year	Total	White	Nonwhite

Table 1-4. Gross and Net Reproduction Rates, by Color: United States, 1940-67

[Gross reproduction rates are the sums of birth rates by 5-year age groups of mothers multiplied by 5 and by the proportion of births that were female. These rates represent the average number of daughters that a hypothetical cohort of women born on the same date would bear if they all survived from birth to the end of the childbearing period and if they experienced a given set of age-specific fertility rates. Net reproduction rates are the sums of birth rates by 5-year age groups of mothers multiplied by 5 and by the probability (as determined from the life table for the year) of women surviving to a specified age group and by the proportion of births that were female. These rates represent the average number of daughters that a hypothetical cohort of women would bear if they experienced given sets of age-specific mortality and fertility rates]

Year	Gross reproduction rate			Net reproduction rate			Year	Gross reproduction rate			Net reproduction rate

## SECTION 1 : NATALITY

Table 1-5. Intrinsic Rates of Birth, Death, and Natural Increase, by Color: United States, 1940-67

[Rates per 1,000 women. The intrinsic rates of birth, death, and natural increase are the rates that would eventually prevail if a population were to experience the age-specific mortality and fertility rates for a given year over a long period of time. For method of computation, see page 4-13, Volume I, Vital Statistics of the United States, 1962]

1950	137.3	33.8	30.3	22.9	15.3	10.4	12.6	12.0
1949	135.1	35.4	30.8	21.2	14.0	9.8	12.2	11.8
1948	131.6	37.3	29.5	19.4	12.9	9.2	11.7	11.6
1947	125.9	38.4	26.2	17.3	12.1	8.8	11.4	11.6
1946	113.9	31.1	25.4	16.0	11.8	8.7	11.3	11.7
1945	106.0	27.9	20.1	14.7	11.3	8.7	11.3	11.9
1944	108.5	28.7	21.1	15.6	11.7	8.6	11.3	11.6
1943	111.0	31.0	22.2	15.5	11.4	8.4	11.0	11.6
1942	107.6	31.0	21.1	14.9	10.8	8.1	10.6	11.1
1941	105.4	29.8	20.6	14.5	10.6	8.0	10.6	11.3
1940	102.4	28.6	19.6	14.1	10.5	7.8	10.4	11.3

<sup>1</sup>Based on a 20- to 50-percent sample of births.<sup>2</sup>The rate for first births is somewhat understated due to an error in classifying approximately 20,000 to 24,000 births by live-birth order. It is therefore probably about the same as in 1966 rather than lower. See Technical Appendix.<sup>3</sup>Based on a 50-percent sample of births.<sup>4</sup>The rate for first births is somewhat understated due to an error in coding. See Technical Appendix.<sup>5</sup>Figures exclude data for residents of New Jersey; see Technical Appendix.

Table 1-9. Birth Rates, by Age of Mother, Live-Birth Order, and Color: United States, 1967

<sup>1</sup>Rates computed by relating total births, regardless of age of mother, to women aged 15-44 years.

NOTE: The rates for first births are somewhat understated due to an error in classifying approximately 20,000 to 24,000 births by live-birth order. See Technical Appendix.

## SECTION 1 - NATALITY

1-11

Table 1-10. Percentage Distribution of Live Births by Live-Birth Order, by Age of Mother and Color:  
United States, 1967.

[Based on a 20- to 50-percent sample of births. Live-birth order refers to number of children born alive to mother]

Live-birth order and color	Total	Age of mother							
		Under 15 years	15-19 years	20-24 years	25-29 years	30-34 years	35-39 years	40-44 years	45-49 years

<sup>1</sup>Based on a 20- to 50-percent sample of births.

<sup>2</sup>Based on a 50-percent sample of births.

<sup>3</sup>Figures exclude data for residents of New Jersey; see Technical Appendix.

SECTION 1 - NATALITY

Table 1-12. Birth Probabilities for Women, by Parity, by Exact Age: United States, 1940, 1950, and 1956-67

[Based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses. Parity refers to the number of children ever borne alive by a woman. Probabilities are the number of births per 1,000 women in specified parity and exact age group. Figures in the "0 parity" column show the probability of first births to "0 parity" women, those in the "1 parity" column show the probability of second births to "1 parity" women, etc.]

## SECTION I - NATALITY

1-13

Table 1-13. Percentage Distribution of Women by Parity, by Exact Age, in Selected Groups of Cohorts From 1876-80 to 1949-53: United States, 1920-68

[Parity refers to the number of children ever borne alive by a woman as of a particular time. Based on cumulative rates shown in table 1-15 of this report, table 1-17, Volume I, Vital Statistics of the United States, 1964, and in table 2 of "Fertility Tables for Birth Cohorts of American Women," by P. K. Whelpton and A. A. Campbell, National Office of Vital Statistics, Vital Statistics—Special Reports, Vol. 51, No. 1, 1960. For method of computation, see Technical Appendix]

## SECTION 1 - NATALITY

Table 1-13. Percentage Distribution of Women by Parity, by Exact Age, in Selected Groups of Cohorts From 1876-80 to 1949-53: United States, 1920-68—Con.

[Parity refers to the number of children ever borne alive by a woman as of a particular time. Based on cumulative rates shown in table 1-15 of this report, table 1-17, Volume I, Vital Statistics of the United States, 1964, and in table 2 of "Fertility Tables for Birth Cohorts of American Women," by P. K. Whelpton and A. A. Campbell, National Office of Vital Statistics, Vital Statistics—Special Reports, Vol. 51, No. 1, 1960. For method of computation, see Technical Appendix]

Exact age of woman and cohort	As of January 1	Total	Parity								
			0	1	2	3	4	5	6	7 or higher	
40-44 years:											
1924-28	1968	100.0	10.9	12.8	23.6	20.6	13.5	7.6	4.4	6.7

1881-85	1925	100.0	18.7	15.6	15.0	11.9	9.9	7.3	6.2	15.4	
1876-80	1920	100.0	17.6	15.3	13.9	11.5	9.8	7.5	6.7	17.7	

Table 1-14. Central Birth Rates, by Live-Birth Order and Current Age of Mother, for Women in Groups of Cohorts From 1917-21 to 1948-52: United States, 1961-67

[Live-birth order refers to number of children born alive to mother. Rates for 1967 are averages of the rates per 1,000 women for single cohorts shown in table 1-16; these rates are based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses. Comparable data for 1917-57 are shown in table 1 of the report cited in the headnote of table 1-13. Comparable data for 1958-60 are shown in table 1-16, Volume I, Vital Statistics of the United States, 1964]

Current age of woman and cohort	Calendar year	Total	Live-birth order							
			1	2	3	4	5	6	7	8 and over

## SECTION 1 - NATALITY

1-17

Table 1-17. Cumulative Birth Rates, by Live-Birth Order and Exact Age of Mother, for Women in Each Cohort From 1918 to 1953: United States, 1968

[Live-birth order refers to number of children born alive to mother. Rates are per 1,000 women and are based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses. Comparable data for 1917-58 are shown in table 4 of the report cited in the headnote of table 1-13; for 1959-65, see table 1-19, Volume I, Vital Statistics of the United States, 1964; for 1966 and 1967, see table 1-18 in Volume I of Vital Statistics of the United States for those years]

Cohort and exact age of woman as of January 1, 1968	Total	Live-birth order

Table 1-21. Birth Rates and Fertility Rates, by Month, Adjusted for Seasonal Variation: United States, 1958-67

[Based on a 20- to 50-percent sample of births for 1967 and a 50-percent sample for all other years. Monthly birth and fertility rates adjusted for seasonal variation are those that would have been observed if the characteristic seasonal pattern of births prevailing over the preceding 10 years were eliminated. Rates on an annual basis per 1,000 estimated population for specified month. Birth rates based on total population; fertility rates based on women aged 15-44 years. For method of seasonal adjustment, see Technical Appendix]

<sup>1</sup>Figures by color exclude data for residents of New Jersey; see Technical Appendix.

Table 1-27. Estimated Number of Illegitimate Live Births, by Live-Birth Order and Color: United States, 1967

[Based on a 20- to 50-percent sample of births. Due to rounding estimates to the nearest hundred, figures by color may not add to totals. Live-birth order refers to number of children born alive to mother]

Live-birth order	Total	White	Nonwhite
Total-----	318,100	142,200	175,800
First child-----	188,800	88,800	89,900
Second child-----	53,500	18,500	35,000
Third child-----	25,900	8,800	17,100
Fourth child-----	15,800	5,600	10,200
Fifth child and over-----	30,600	8,000	22,600
Not stated-----	3,400	2,500	900

NOTE: Due to an error in classifying approximately 20,000 to 24,000 births by live-birth order, the number with birth order not stated is inflated. It is believed that most of the misclassified births were actually first births. See Technical Appendix.

## SECTION 1 - NATALITY

Table 1-28. Ratio of Illegitimate Live Births to Total Live Births, by Color: 35 Reporting States, 1964-67

[Refers only to illegitimate births occurring within the reporting area to residents of area. Based on a 20- to 50-percent sample of births for 1967 and a 50-percent sample for all other years. Ratios per 1,000 total live births in specified group. Asterisk indicates ratio based on frequency of less than 20]

<sup>1</sup>Period of gestation reported in months allocated to gestation intervals in weeks as shown in the Technical Appendix.

<sup>2</sup>Computed to nearest 10 grams on basis of exact conversion of interval limits from pounds and ounces.

<sup>3</sup>Equivalents of the gram weights in terms of pounds and ounces are shown in the Technical Appendix.

Table 1-33. Median Birth Weight by Age of Mother, Live-Birth Order, and Color: United States, 1967

[Based on a 20- to 50-percent sample of births. Live-birth order refers to number of children born alive to mother. Median birth weight is shown in grams, computed to nearest 10 grams on basis of exact conversion of interval limits from pounds and ounces]

Age of mother and color	Total <sup>1</sup>	Live-birth order

<sup>1</sup>Equivalents of the gram weights in terms of pounds and ounces are shown in the Technical Appendix.

## SECTION 1 - NATALITY

1-41

Table 1-43. Live Births by Birth Weight, Period of Gestation, and Color, for Metropolitan and Nonmetropolitan Counties: United States, 1967

[Based on a 20- to 50-percent sample of births. Maryland (except Baltimore) and Massachusetts did not require reporting of period of gestation; figures for this item are included in "Not stated." For definition of areas, see Technical Appendix]

Area, period of gestation, <sup>1</sup> and color	Total	Birth weight <sup>2</sup>											
		500 grams or less	501-1,000 grams	1,001-1,500 grams	1,501-2,000 grams	2,001-2,500 grams	2,501-3,000 grams	3,001-3,500 grams	3,501-4,000 grams	4,001-4,500 grams	4,501-5,000 grams	5,001 grams or more	Not stated

SECTION 1 - NATALITY

Table 1-43. Live Births by Birth Weight, Period of Gestation, and Color, for Metropolitan and Nonmetropolitan Counties: United States, 1967—Con.

[Based on a 20- to 50-percent sample of births. Maryland (except Baltimore) and Massachusetts did not require reporting of period of gestation; figures for this item are included in "Not stated." For definition of areas, see Technical Appendix]

Area, period of gestation, <sup>1</sup> and color	Total	Birth weight <sup>2</sup>											
		500 grams or less	501-1,000 grams	1,001-1,500 grams	1,501-2,000 grams	2,001-2,500 grams	2,501-3,000 grams	3,001-3,500 grams	3,501-4,000 grams	4,001-4,500 grams	4,501-5,000 grams	5,001 grams or more	Not stated

<sup>1</sup>Period of gestation reported in months allocated to gestation intervals in weeks as shown in the Technical Appendix.

<sup>2</sup>Equivalents of the gram weights in terms of pounds and ounces are shown in the Technical Appendix.

Table 1-44. Live Births by Birth Weight, Period of Gestation, and Color, Total of Five Selected Registration Areas, 1967

[Based on a 20- to 50-percent sample of births. Refers only to births occurring within the selected registration areas—Baltimore, California, District of Columbia, Minnesota, and New York City. Figures by period of gestation for these areas are based on an item on the birth record, first day of last normal menstrual period (LMP); see Technical Appendix]

<sup>1</sup>Period of gestation reported in months allocated to gestation intervals in weeks as shown in the Technical Appendix.

## SECTION 1 - NATALITY

1-45

Table 1-46. Live Births by Period of Gestation, Plurality of Birth, and Color, by Sex of Child and by Age of Mother:  
Total of Five Selected Registration Areas, 1967

[Based on a 20- to 50-percent sample of births. Refers only to births occurring within the selected registration areas—Baltimore, California, District of Columbia, Minnesota, and New York City. Figures by period of gestation for these areas are based on an item on the birth record, first day of last normal menstrual period (LMP); see Technical Appendix]

<sup>1</sup>Period of gestation reported in months allocated to gestation intervals in weeks as shown in the Technical Appendix.

<sup>2</sup>Figures by period of gestation are for births occurring in Baltimore to residents of Maryland and for births occurring in other States to residents of the State.

<sup>3</sup>Figures by period of gestation are for births occurring in other States to residents of Massachusetts.

## SECTION 1 - NATALITY

Table 1-48. Live Births by Month, Age of Mother, Live-Birth Order, and Color: United States, 1967--Con.

NOTE: Due to an error in classifying approximately 20,000 to 24,000 births by live-birth order, the number with birth order not stated is inflated. It is believed that most of the misclassified births were actually first births. See Technical Appendix.

NOTE: Due to an error in classifying approximately 20,000 to 24,000 births by live-birth order, the number with birth order not stated is inflated. It is believed that most of the misclassified births were actually first births. See Technical Appendix.

NOTE: Due to an error in classifying approximately 20,000 to 24,000 births by live-birth order, the number with birth order not stated is inflated. It is believed that most of the misclassified births were actually first births. Although this error affects figures for many States, it is particularly great for Massachusetts, Wisconsin, New Jersey, and Utah. See Technical Appendix.

NOTE: Due to an error in classifying approximately 20,000 to 24,000 births by live-birth order, the number with birth order not stated is inflated. It is believed that most of the misclassified births were actually first births. See Technical Appendix.

## SECTION 1 - NATALITY

Table 1-52. Live Births by Age of Mother and Race, for Metropolitan and Nonmetropolitan Counties: United States and Each State, 1967

[Based on a 20- to 50-percent sample of births. For definition of areas, see Technical Appendix]

NOTE: Due to an error in classifying approximately 20,000 to 24,000 births by live-birth order, the number with birth order not stated is inflated. It is believed that most of the misclassified births were actually first births. Although this error affects figures for many States, it is particularly great for Massachusetts, Wisconsin, New Jersey, and Utah. See Technical Appendix.

## SECTION 1 - NATALITY

1-103

Table 1-55. Live Births by Live-Birth Order and Race, for Standard Metropolitan Statistical Areas of the United States:

1967

[Based on a 20- to 50-percent sample of births. Live-birth order refers to number of children born alive to mother. For definition of areas, see Technical Appendix]

Negro-----	34,738	11,115	7,497	4,755	3,505	2,360	1,718	1,234	2,518	36

<sup>1</sup>Comprised of four standard metropolitan statistical areas--New York, N.Y., Newark, N.J., Jersey City, N.J., and Paterson-Clifton-Passaic, N.J.--and two nonmetropolitan counties--Middlesex and Somerset Counties, N.J.

<sup>2</sup>Comprised of two standard metropolitan statistical areas--Chicago, Ill., and Gary-Hammond-East Chicago, Ind.

NOTE: Due to an error in classifying approximately 20,000 to 24,000 births by live-birth order, the number with birth order not stated is inflated. It is believed that most of the misclassified births were actually first births. Although this error affects figures for many States, it is particularly great for Massachusetts, Wisconsin, New Jersey, and Utah. See Technical Appendix.

SECTION 1 - NATALITY

Table 1-56. Illegitimate Live Births by Age of Mother and Color, for Population-Size Groups and Specified Urban Places of 100,000 or More: 35 Reporting States, 1967

[Refers only to illegitimate births occurring within the reporting area to residents of area. Based on a 20- to 50-percent sample of births. Urban places are those with populations of 10,000 or more in 1960. Specified urban places are those with populations of 100,000 or more in 1960 and are incorporated unless otherwise noted. Figures for white and nonwhite are shown separately where the 1960 population for nonwhite formed 10 percent of the total population of the area or numbered 10,000 or more.]

NOTE: Due to an error in classifying approximately 20,000 to 24,000 births by live-birth order, the number with birth order not stated is inflated. It is believed that most of the misclassified births were actually first births. See Technical Appendix.

Table 1-58. Live Births by Age of Mother and Race, for Cities of 100,000 or More in the United States: 1967

[Refers only to births occurring within the United States. Based on a 20- to 50-percent sample of births. Cities are those with populations of 100,000 or more in 1960]

## *Section 2. Natality-Local Area Statistics*

Table	Page
2-1. Live births by place of delivery and color: United States, each State and county, and specified urban places of 10,000 or more, 1967----	2-3
2-2. Live births by attendant, birth weight, and color, for population-size groups in metropolitan and nonmetropolitan counties: United States and each State, 1967-----	2-60
	2-1

SECTION 2 - LOCAL AREA STATISTICS

Table 2-1. Live Births by Place of Delivery and Color: United States, Each State and County, and Specified Urban Places of 10,000 or More, 1967.

[Based on a 20- to 50-percent sample of births. Small figures should be used with caution; for sampling errors, see Technical Appendix. Urban places are those with populations of 10,000 or more in 1960 and are incorporated unless otherwise noted. Figures for white and nonwhite are shown separately where the 1960 populations for nonwhite formed 10 percent of the total population of the area or numbered 10,000 or more]

<sup>#</sup>Classified as urban under special rule; see Technical Appendix.<sup>1</sup>Includes all births in hospitals or institutions and births attended by physicians in clinics. A very large proportion of births in hospitals are attended by physicians; see Technical Appendix.<sup>2</sup>"Districts" shown are election districts, the nearest equivalent of counties.<sup>3</sup>Includes District 1, Prince of Wales.<sup>4</sup>Includes data for Texarkana, Ark., only.<sup>5</sup>The cities of Honolulu and Hilo have legally established limits and therefore are treated as incorporated places.<sup>6</sup>Geographically located within limits of Idaho, Montana, and Wyoming.<sup>7</sup>Approximately 5,000 births to Baltimore County residents were misclassified as births to residents of the city of Baltimore.<sup>8</sup>Includes data for Bristol, Tenn., only.<sup>9</sup>Includes data for Texarkana, Tex., only.<sup>10</sup>Includes data for the city of Lexington, which became an independent city on January 1, 1966.<sup>11</sup>Independent cities having populations of less than 10,000 according to the 1960 census are Buena Vista, Clifton Forge, Colonial Heights, Franklin, Galax, Norton, Radford, South Boston, and Williamsburg.<sup>12</sup>Includes data for Bristol, Va., only.<sup>13</sup>Includes data for Bluefield, W. Va., only.

SECTION 2 - LOCAL AREA STATISTICS

Table 2-2. Live Births by Attendant, Birth Weight, and Color, for Population-Size Groups in Metropolitan and Nonmetropolitan Counties: United States and Each State, 1967

[Based on a 20- to 50-percent sample of births. Urban places in metropolitan counties are those with populations of 10,000 or more; urban places in nonmetropolitan counties are those with populations of 10,000 or more but less than 50,000. For definition of areas, see Technical Appendix]

## SECTION 3. TECHNICAL APPENDIX

### DEFINITION OF LIVE BIRTH

Every product of conception that gives signs of life after birth, regardless of the length of the pregnancy, is considered a live birth. This concept is embraced by the definition set forth by the World Health Organization<sup>1</sup> as follows:

Live birth is the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached; each product of such a birth is considered live-born.

This definition distinguishes in precise terms a live birth from a fetal death (see section on fetal deaths in the Technical Appendix of Volume II of this report). In the interest of comparable natality statistics, both the Statistical Commission of the United Nations and the vital statistics agency of the United States have adopted this definition.<sup>2,3</sup>

### SOURCES OF DATA

#### Natality statistics

Natality statistics for 1967 are based on information obtained from a systematic 20- to 50-percent sample of microfilm copies of all birth certificates filed in the United States. These copies are received from the registration offices of all States, certain cities, and the District of Columbia. The statistical information on these records is edited, classified, placed on punchcards, and tabulated in the National Center for Health Statistics (NCHS).

<sup>1</sup>Third World Health Assembly: *Official Records*, No. 28 (WHA 3.6). Geneva. World Health Organization, May 1950. pp. 16-17.

<sup>2</sup>Statistical Office of the United Nations: *Principles for a Vital Statistics System; Recommendations for the Improvement and Standardization of Vital Statistics*, Doc. ST/STAT/SER.M/19. New York. United Nations, Aug. 1953. p. 6.

<sup>3</sup>National Office of Vital Statistics: *International Recommendations on Definitions of Live Birth and Fetal Death*. PHS Pub. No. 39. Public Health Service. Washington. U.S. Government Printing Office, Oct. 1950. p. 6.

The birth registration system of the United States covers the 50 States, the District of Columbia, Puerto Rico, and the U.S. Virgin Islands. However, in the statistical tabulations, *United States* refers only to the aggregate of the 50 States and the District of Columbia. Alaska has been included in the U.S. tabulations since 1959 and Hawaii since 1960. Data for Puerto Rico and the Virgin Islands are not reported in this volume as in past years, but they continue to be published in the respective annual vital statistics reports of the Department of Health of the Commonwealth of Puerto Rico and the Department of Health of the Virgin Islands.

Natality data for the United States are limited to births occurring within the United States, including those occurring to nonresident aliens. Births occurring to U.S. citizens outside the United States are not included.

#### Standard Certificate of Live Birth

The Standard Certificate of Live Birth, issued by the Public Health Service, has served for many years as the principal means of attaining uniformity in the content of the documents used to collect information on births in the United States. It has been modified in each State to the extent required by the particular needs of the State or by special provisions of the State vital statistics law. However, the certificates of most States conform closely in content and arrangement to the standard certificate.

The first issue of the standard certificate of birth appeared shortly before the formation of the registration area in 1915. Since then it has been revised periodically by the national vital statistics agency through consultation with State health officers and registrars; Federal agencies concerned with vital statistics; national, State, and county medical societies; and others working in the fields of public health, social welfare, demography, and insurance. This revision procedure has assured careful evaluation of each item in terms of its current and future usefulness for registration, identification, legal, medical, and research purposes. New items have been added when necessary, and old items have been modified to ensure better reporting or in some cases have been dropped when their usefulness appeared to be limited.

Statistics for 1967 are based on State certificates which conform closely to the revision of the Standard Certificate of Live Birth which was recommended in 1955. It was

prepared in close collaboration with the Public Health Conference on Records and Statistics and was recommended to the States for adoption as of January 1, 1956 (figure 3-A). With a few exceptions, only minor changes in content and format were made in the 1956 revision of the standard certificate. In an effort to obtain a more accurate designation for place of residence, the question "Is residence inside city limits?" was added.

prepared separately until they became States—Alaska in 1959 and Hawaii in 1960.

The original birth-registration area of 1915 consisted of 10 States and the District of Columbia. The growth of this area is indicated in table 3-1. Table 3-1 also presents for each year through 1932 the estimated midyear population of the United States and of those States included in the registration system.

Because of the growth of the area for which data have been collected and tabulated, a national series of geographically comparable data prior to 1933 can be obtained only by estimation. Annual estimates of births have been prepared by P. K. Whelpton for the period 1909-34 (table 1-2 in Section 1). These estimates include adjustments for under-registration and for States not in the birth-registration area before 1933.

**HISTORY**

The national birth-registration area was proposed in 1850, established in 1915, and completed in 1933. The organized territories of Hawaii and Alaska were admitted in 1929 and 1950, respectively; data from these areas were

## CLASSIFICATION OF DATA

The principal value of vital statistics data is realized through the presentation of rates which are computed by relating the vital events of a class to the population of a similarly defined class. Vital statistics and population statistics must therefore be classified according to similarly defined systems and tabulated in comparable groups. Even when the variables common to both, such as geographic area, age, race, and sex, have been similarly classified and tabulated, differences between the enumeration method of obtaining population data and the registration method of obtaining vital statistics data may result in significant discrepancies.

The general rules used in the classification of geographic and personal items for live births are set forth in *Vital Statistics Instruction Manual*, Part 3, "Live Births and Fetal Deaths Occurring in 1966, Coding and Punching Instructions," which was revised for the 1967 data. The classification of certain important items is discussed on the following pages.

### Classification by occurrence and residence

Tabulations for States and other areas within the United States in this report are by place of residence unless otherwise specified in the tables.

The tabulations by place of occurrence and by place of residence are identical for the total United States because births to U.S. residents occurring outside the country and to foreign residents occurring in the country are not reallocated to the country of residence.

Tabulations by place of occurrence include all births occurring in a given county. In residence tabulations, all births occurring within the United States are allocated to the usual place of residence of the mother as reported on the birth certificate except as noted below.

Births to nonresident alien mothers are considered as births to residents of the exact place of occurrence, including cities. In 1964 and 1965 all such births to nonresident aliens were allocated to "balance of county" even if the birth occurred in a city. No evaluation of the effect of this change has been made.

**Residence error.**—A nationwide test of birth registration completeness in 1950 provided measures of residence error for natality statistics. The 1950 test indicates that for the country as a whole, errors in residence reporting result in a significant overstatement of births to residents of urban areas and a corresponding understatement for residents of other areas. This situation has assumed special importance because of a concomitant development, the increased utilization of hospitals in cities by residents of nearby places.

### Geographic classification

The rules followed in the classification of geographic areas for live births are contained in the instruction manual mentioned above. The geographic code structure for 1967 is given in another manual entitled "Geographic Codes."

**Standard metropolitan statistical areas.**—The standard metropolitan statistical areas (SMSA's) used in this report are those established by the U.S. Bureau of the Budget as of 1960 (except in the New England States) and used by the U.S. Bureau of the Census.

Except in the New England States, an SMSA is a county or a group of contiguous counties containing at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000 in the 1960 census. In addition to the county or counties containing such a city or cities, contiguous counties are included in an SMSA if, according to specified criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city or cities.<sup>4</sup>

In the New England States the Bureau of the Budget uses towns and cities rather than counties as geographic components of SMSA's. The National Center for Health Statistics cannot, however, use the SMSA classification for these States because its data are not coded to identify all towns. Instead the metropolitan State economic areas (MSEA's) established by the Bureau of the Census, which are made up of county units, are used.<sup>5</sup>

**Standard consolidated areas.**—For the metropolitan complexes around New York and Chicago, several contiguous SMSA's and additional counties that do not appear to meet the formal integration criteria for SMSA's but do have strong interrelationships of other kinds have been combined into the New York-Northeastern New Jersey and the Chicago-Northwestern Indiana Standard Consolidated Areas.<sup>6</sup>

**Metropolitan and nonmetropolitan counties.**—Counties included in SMSA's or in New England MSEA's are called metropolitan counties; all other counties are classified as nonmetropolitan.

**Population-size groups (formerly "urban and rural areas").**—Vital statistics data for cities and certain other urban places in 1967 are classified according to the population enumerated in the 1960 Census of Population. Beginning in 1964, cities and other urban places of 2,500 to 10,000 population were not separately identified but were included with the areas formerly classified as rural. Data continue to be available for the individual cities and other urban places of 10,000 or more population. Data for the remaining areas are shown in the tables under the heading "balance of area" or "balance of county."

Urban places other than incorporated cities for which vital statistics data are shown in this report include

1. Each town in New England and each township in New Jersey and Pennsylvania that had no incorporated municipality as a subdivision and had either 25,000

<sup>4</sup>For a more complete discussion, see U.S. Bureau of the Census, *U.S. Census of Population, 1960, Number of Inhabitants, United States Summary*, Final Report PC(1)-1A, Washington, U.S. Government Printing Office, 1961, and U.S. Bureau of the Budget, *Standard Metropolitan Statistical Areas*, Washington, U.S. Government Printing Office, 1961.

<sup>5</sup>For discussion of MSEA's, see U.S. Bureau of the Census, *State Economic Areas*, Washington, U.S. Government Printing Office, 1951, and the first reference cited in footnote 4.

<sup>6</sup>See footnote 4.

- inhabitants or more or a population of 10,000 to 25,000 and a density of 1,500 persons or more per square mile.
- Each county in States other than the New England States, New Jersey, and Pennsylvania that had no incorporated municipality within its boundary and had a density of 1,500 persons or more per square mile. (Arlington County, Virginia, is the only county classified as urban under this rule.)

### Age of mother

The birth certificate asks for "age (at time of this birth)." While no restrictions are placed on the reported age of the father, the age of the mother is edited for upper and lower limits. When mothers are reported to be below 13 years of age, the birth record is inspected and queried if necessary. Mothers reported to be age 50 or above are considered to have age not stated and their age is allocated as described below. Tests of birth registration completeness in 1940 and 1950 show coverage to be about the same for all age groups except for the oldest, in which coverage is slightly lower.<sup>7</sup>

Age-specific birth rates shown in this report are based on populations of women by age. These populations are estimated by the U.S. Bureau of the Census. The 1960 Census of Population asked for age in a manner different from previous censuses. The 1960 Census question was "When was this person born?" and the replies were birth dates in terms of year and month. In censuses prior to 1960 "age in completed years" was asked for. This was nearly the equivalent of the birth certificate question, which the 1950 matched test of birth and census records confirms by showing a high degree of consistency in the reporting of age in these two sources.<sup>8</sup>

*Median age of mother.*—Median age is the value which divides an age distribution into two equal parts, one half of the values being less and one half being greater. In reports prior to 1964 median age was computed from birth frequencies by 5-year age groups of mothers; beginning with 1964, medians for all years shown are computed from age-specific birth rates for 5-year age groups in order to eliminate the effects of changes in the age composition of the child-bearing population.

*Not stated age of mother.*—Beginning with 1964, age-of-mother category "not stated" includes those mothers reported as 50 years and older. A check of 1962 birth records showed that most of the reports of mothers aged 50 years and over were in error. In 1963, birth records with age not stated were allocated according to the age appearing on the record previously processed for a mother of identical color and parity. In 1964, the procedure was modified, however, to allocate not stated age of mother according to her color and the number of fetal deaths and live births she had had. For the years 1960-62, not stated or unknown ages were distrib-

uted in proportion to the known ages for each color group. Before 1960 this was also done for age-specific birth rates but not for the birth frequency tables, which have a special category for age not stated.

### Live-birth order

Birth order or parity classifications shown in this volume refer to the total number of live births the mother has had. This excludes fetal deaths and includes the 1967 birth and previous births as ascertained from two questions on the birth certificate, "How many other children are now living?" and "How many other children were born alive but are now dead?"

Due to a coding error, the number of births with birth order not stated in 1967 is inflated. Out of a total of 26,835 birth certificates coded "not stated," about 4,500 were selected for a review of the birth-order items. They were chosen from the four States with the largest numbers of birth order not stated (Massachusetts, Wisconsin, New Jersey, and Utah). Examination of these records showed that 98 percent would have been coded as first births if the coding error had not occurred, but such a large proportion probably does not apply to all other States. Based on proportions coded "not stated" in 1965 and 1966, it is believed that 20,000 to 24,000 births were incorrectly coded as not stated in 1967. Most of these should have been coded as first births. There is no information on the distribution of these births by other characteristics such as color, age of mother, or birth weight, however, and no adjustments have been made in the tabulations by live-birth order.

### Race and color

Births in the United States in 1967 are classified for statistical purposes according to the race of the parents. The racial categories are "white," Negro, American Indian, Chinese, Japanese, Hawaiian and Part-Hawaiian combined, and "other nonwhite." In most tables a less detailed classification of "white" and "nonwhite" is used.

The category "white" comprises births reported as white, Mexican, Puerto Rican, and Cuban, and prior to 1964, all births for which race was not stated. Beginning in 1964, a portion of the race not stated frequencies is assigned to Negro.

The category "nonwhite" comprises Negro, American Indian, Chinese, Japanese, Hawaiian and Part-Hawaiian, and "other nonwhite." Beginning in 1964 Aleuts and Eskimos are included in American Indian, significantly increasing the births in this racial category when comparisons are made with previous years. The State of Alaska is particularly affected in this regard. Before 1964 Aleuts and Eskimos were assigned to the "other nonwhite" category.

The newborn child is ordinarily assigned to the race of his parents. If the parents are of different races, the following rules apply: (1) When the parental combination is white-nonwhite, the child is assigned to the nonwhite race. (2) When the parental combination is of two nonwhite races, the child is assigned to the father's race with two exceptions. If the mother is Hawaiian or Part-Hawaiian, the child is

<sup>7</sup>National Vital Statistics Division: Matched record comparison of birth certificate and census information, United States, 1950, by J. Schachter. *Vital Statistics—Special Reports*, Vol. 47, No. 12. Public Health Service, Washington, D.C., Mar. 1962.

<sup>8</sup>Ibid.

assigned to Hawaiian; if the mother is Negro and the father is not Hawaiian, the child is assigned to Negro.

For all years except 1964, if the race of a parent was ill-defined or not clearly identifiable, such as "oriental" or "yellow," it was assigned to a specific category such as Chinese, Japanese, or other nonwhite. In 1964 these ill-defined races were assigned to "race not stated." As a result, the numbers of births classified as Chinese, Japanese, and other nonwhite in 1964 were considerably smaller than they would have been under the procedure used in other years.

**Race not stated.**—Race of a child was considered not stated only in those cases in which the race of both parents was missing. When the race of only one parent was missing, the race of the other parent determined that of the child. Beginning in 1964 when the race of both parents was not stated, the race of the child was allocated, as the birth record was electronically processed, to white or Negro according to the race of the child on the preceding record. If the race on the preceding record was white, the assignment was to white; if it was nonwhite, the assignment was to Negro.

All statistics by color or race for the United States as a whole in 1962 and 1963 are affected by a lack of information for the State of New Jersey. Birth frequencies in those years contain unusually large proportions of color or race not stated. Birth rates by color or race for those years are computed on a population base which excludes New Jersey. (For the method of estimating the United States population by age, sex, and color excluding New Jersey in 1962 and 1963, see *Vital Statistics of the United States, 1963*, Volume I, page 4-8.)

**Completeness of registration.**—The quality of birth data by race is variable in that coverage is higher for the white group than for the nonwhite. In 1967, birth registration completeness was estimated to be 99.4 percent for white births and 97.3 percent for nonwhite births. The most recent figures for specified nonwhite groups are from the 1950 test. In that year the registration completeness for Negroes was estimated to be 93.7 percent; for American Indians, 85.1 percent; and for "other races," chiefly Chinese and Japanese, 97.4 percent. These figures are probably higher for 1967, but more precise estimates are unavailable.

### Illegitimate births

Legitimacy status is reported in 34 States and the District of Columbia. The following 16 States did not report legitimacy in 1967: Arizona, Arkansas, California, Colorado, Connecticut, Georgia, Idaho, Maryland, Massachusetts, Montana, Nebraska, New Hampshire, New Mexico, New York, Oklahoma, and Vermont.

In making estimates of the number of illegitimate births occurring in the country as a whole, the States are grouped into the nine geographic divisions. The combined ratio of illegitimate births per 1,000 total live births for all reporting States in a single geographic division is then applied to all the live births occurring to residents of that division. This yields an estimate of illegitimate live births for the geographic division. This estimating procedure is done separately for white and nonwhite births. The sum of these

estimates for the nine geographic divisions makes up the estimate for the United States.

In processing the data, no adjustments are made for misstatements of legitimacy status on the birth record or for failure to register illegitimate births because the extent of such reporting problems is unknown. A birth with legitimacy status not stated is considered to be legitimate. Illegitimacy figures for each reporting State are based on a 20- to 50-percent sample of births occurring to its residents within the 34 reporting States and the District of Columbia.

When illegitimate births are reported as second or higher order births, it is not known whether previous deliveries to the mother occurred out of wedlock since the marital status of the mother at the time of these earlier pregnancies is not available from the birth record.<sup>9</sup>

### Attendant at birth

The classification of births by attendant at birth combines information about place of delivery and the person in attendance at birth. Births occurring in hospitals and institutions regardless of the person in attendance and those occurring in clinics, centers, or homes that were attended by physicians are included in the category "in hospital." In this context the word "home" does not refer to the mother's residence but to an institution such as a home for unwed mothers.

In previous years it was assumed that all births occurring in hospitals were delivered by physicians. However, a special tabulation of births in 1964 showed that 97 percent of the 3,834,334 births that occurred in hospitals or institutions were delivered by physicians. Of the remainder, 3,902 were delivered by midwives (these were probably certified nurse midwives, who are registered nurses trained in obstetrics) and 97,496 were delivered by persons other than physicians and midwives or by persons for whom no status was specified. Nevertheless, all these births are included in the category "in hospital."

For births occurring outside hospitals, the place of delivery is not considered in classifying births by attendant at birth. Persons specified as other than physicians and midwives and those for whom no status is given are classified separately.

The place of delivery of an infant born in a moving vehicle is defined as the place where he was removed from the vehicle; for instance, babies born en route to the hospital are referred to as having been born in the hospital. This may account for some of the hospital births not delivered by physicians.

### Birth weight

In practically all areas birth weight is reported in terms of pounds and ounces rather than in grams. However,

<sup>9</sup> For a detailed report on data for illegitimate births, see National Center for Health Statistics, Trends in Illegitimacy, United States, 1940-65, *Vital and Health Statistics*, PHS Pub. No. 1000-Series 21-No. 15, Public Health Service, Washington, D.C., Feb. 1968.

the metric system has been used in tabulating and presenting the statistics to facilitate comparison with data published by other groups in the United States. The equivalents in pounds and ounces of the gram intervals are as follows:

500 grams or less	= 1 lb. 1 oz. or less
501-1,000 grams	= 1 lb. 2 oz. - 2 lb. 3 oz.
1,001-1,500 grams	= 2 lb. 4 oz. - 3 lb. 4 oz.
1,501-2,000 grams	= 3 lb. 5 oz. - 4 lb. 6 oz.
2,001-2,500 grams	= 4 lb. 7 oz. - 5 lb. 8 oz.
2,501-3,000 grams	= 5 lb. 9 oz. - 6 lb. 9 oz.
3,001-3,500 grams	= 6 lb. 10 oz. - 7 lb. 11 oz.
3,501-4,000 grams	= 7 lb. 12 oz. - 8 lb. 13 oz.
4,001-4,500 grams	= 8 lb. 14 oz. - 9 lb. 14 oz.
4,501-5,000 grams	= 9 lb. 15 oz. - 11 lb. 0 oz.
5,001 grams or more	= 11 lb. 1 oz. or more

For purposes of classification the term "immature" refers to infants weighing 2,500 grams or less at birth. This definition was recommended by the American Academy of Pediatrics in 1935 and adopted by the World Health Organization in the Sixth Revision of the International Lists of Diseases and Causes of Death (1948). The NCHS definition of "premature" is based on the period of gestation and is given below.

After data classified by pounds and ounces were converted to grams, median weights were computed and rounded prior to publication. To establish the continuity of class intervals needed to convert pounds and ounces to grams, the end points of these intervals were assumed to be half an ounce less at the lower end and half an ounce more at the upper end. For example, 2 lb. 4 oz. - 3 lb. 4 oz. is interpreted as 2 lb. 3½ oz. - 3 lb. 4½ oz.

### Period of gestation

The period of gestation is defined as beginning with the first day of the last normal menstrual period (LMP) and ending with the day of birth. The LMP is used as the initial date since it can be more accurately determined than the date of conception, which usually occurs 2 weeks after LMP.

The reporting of period of gestation in most States is in terms of weeks or of months of pregnancy. When months are reported, they are converted to gestation intervals in weeks as follows:

4 months to under 20 weeks
5 and 6 months to 20-27 weeks
7 months to 28-31 weeks
8 months to 32-35 weeks
9 months to 40 weeks
10 months to 43 weeks and over

Births occurring prior to 37 weeks of gestation are considered to be premature for purposes of classification in accordance with the definition of the World Health Organization Expert Group on Prematurity established in 1950.

An examination of the reported information on period of gestation suggests a substantial heaping at the intervals of 36 weeks and 40 weeks and over for those areas report-

ing in terms of weeks or months of pregnancy. These biases result from the fact that the gestation period is frequently not carefully observed and that the newborn infant of normal size is generally assumed to have had a gestation period of 40 weeks or 9 months, depending on conventional usage. Such errors in reporting are minimized in areas where the gestation period item on the birth certificate requests the "first day of the last normal menstrual period." Areas using this wording of the item are Baltimore City, California, the District of Columbia, Minnesota, New York City, and Rhode Island.

*Rhode Island.*—In processing 1967 data for Rhode Island, information on period of gestation was coded from the item "length of pregnancy—completed weeks" rather than from the item "first day, last regular menstrual period" (LMP). For this reason gestation data for Rhode Island are excluded from the 1967 tables based only on LMP data (tables 1-32, 1-44, and 1-46). Data for Rhode Island are included, however, in all other tabulations on gestation for the United States.

*Maryland and Massachusetts.*—Maryland, except for the city of Baltimore, and Massachusetts did not require reporting of gestation in any form in 1967. The gestation data shown for Massachusetts are only for births to Massachusetts residents occurring in other States—only 1.4 percent of all births to Massachusetts residents in 1967. For Maryland residents about 44.6 percent of the 1967 births include period of gestation; most of these births occurred in Baltimore and the balance were outside the State.

### QUALITY OF DATA

While vital statistics data are useful for a variety of administrative and scientific purposes, they cannot be correctly interpreted unless various qualifying factors and methods of classification are taken into account. The factors to be considered depend on the specific purposes for which the data are to be used. It is not feasible to discuss all the pertinent factors in the use of vital statistics tabulations, but some of the more important ones should be mentioned.

Most of the factors limiting the use of the data arise from imperfections in the original records or from the impracticability of tabulating these data in very detailed categories. These defects should not be ignored, but their existence does not vitiate the value of the data for most general purposes.

### Completeness of registration

It is estimated that 99.0 percent of all births occurring in the United States in 1967 were registered. This estimate is based on results of the 1950 test of birth registration completeness, which indicates that 98.6 percent of white births and 93.6 percent of nonwhite births were registered in that year. Estimates of birth registration completeness by color since 1933 are shown in table 1-19, Section 1, and in figure 3-B. (For a detailed discussion of the method and results of the 1950 birth registration test, see *Vital Statistics of the United States, 1950*, Volume I, Chapter 6.)

*Discontinuation of adjustment for underregistration, 1960.*—Adjustment for underregistration of births was dis-

FIGURE 3-B

continued in 1960, when the birth registration for the United States was estimated to be 98.9 percent complete. Continuing adjustment was considered unwarranted in view of the fact that 10 years had elapsed since the last test of birth registration completeness. The results of the 1950 test form the basis for all adjustments in the subsequent years. The adjustments were made by assuming that the registration completeness of births classified by place of delivery, color, and State in 1950 prevailed in the year in question. Such assumptions become more tenuous as we move further away from 1950.

Another reason for the discontinuation of adjustment for underregistration was the bias introduced into age-specific rates when adjusted births classified by age were used. Age-specific rates are calculated by dividing the number of births to an age group of mothers by the population of women in that age group. Tests have shown that population figures are likely to be understated through census undercounts; these errors compensate for underregistration of births. Adjustment for underregistration of births therefore removes the compensating error of underenumeration, biasing the age-specific rates more than when uncorrected birth and population data are used. (For further details, see *Vital Statistics of the United States, 1963, Volume I, page 4-11.*)

The age-specific rates used in the cohort fertility tables (tables 1-12 through 1-17 in Section 1) represent an exception to the above statement. These rates are

computed from births corrected for underregistration and population estimates adjusted for underenumeration and misstatement of age. Adjusted births and population estimates were used for the cohort rates because they are an integral part of a series of rates, estimated with a consistent methodology, that extends back to 1917. It was considered desirable to maintain consistency with respect to the cohort rates, even though it means that they will not be precisely comparable with other rates shown for 5-year age groups.

### Quality control procedures

The coding and punching of birth data are performed simultaneously directly from microfilm images or transcripts of the original certificates. Approximately 75 percent of all cards punched are verified on a 10-percent systematic sample basis. The expected result from this system of verification is that on the average 2.25 percent of the cards contain one or more errors. The rest of the cards are verified completely, and the errors remaining are presumably very few.

Both systems of verification involve controlling two types of error (coding and punching) at the same time, and the error rates are a combined measure of both types. While it may be assumed that punching errors are randomly distributed across all items on the card, this assumption cannot be made as readily for coding errors. It is possible for systematic errors in coding rare events to escape detection during sample verification. This is partially controlled by complete reverification of randomly selected lots from each operator's work. Errors detected by any method of verification are reviewed to determine coding bias.

After completion of coding and punching, card counts are balanced against control totals for each shipment of records from a registration area. Impossible codes are eliminated during the editing processes on the computer and are corrected on the basis of reference to the source record or adjusted by arbitrary code assignment. All subsequent operations involved in tabulating and table preparation are verified during the computer processing or by statistical clerks.

### Sampling of birth records

Birth statistics presented in this report for years prior to 1951 and for 1955 are based on the total file of birth records. Statistics for 1951-54 and 1956-66 are based on 50-percent samples which consist of even-numbered birth records. During the course of processing the 1967 data, the sampling rate was reduced from 50-percent to 20-percent. The proportion of births sampled at the 50-percent and 20-percent rates for 1967 varies by State because of differences in time of receipt and processing of the birth records. Table 3-A shows the estimated percentages of births based on 50-percent and 20-percent samples for each State.

The sample design is essentially a stratified random sample. The sampling frame consists of births that occur in the United States during a calendar year and that are recorded by State registrars of vital statistics. Each month

## SECTION 3 - TECHNICAL APPENDIX

Table 3-A. Estimated percentage of live births based on 50-percent and 20-percent samples, and the adjustment factor for standard errors: United States and each State, 1967

[By place of occurrence]

Area	Estimated percentage of births			Adjustment factor for standard errors	Area	Estimated percentage of births			Adjustment factor for standard errors
	Total	Based on a 50-percent sample	Based on a 20-percent sample			Total	Based on a 50-percent sample	Based on a 20-percent sample	
United States-----	100.0	58.6	41.4	0.9	Mississippi-----	100.0	46.5	53.5	1.0

					Wyoming-----	100.0	48.2	51.8	1.0

the birth certificates that have been filed during that month are sent by local registrars to the State registrars, where the records are numbered consecutively as they are received. Therefore the records for each local registration area, usually a county, are numbered sequentially, and the total file of birth records for each State is grouped by county of occurrence. Microfilm copies of the birth records filed in the States are generally forwarded each month to the National Center for Health Statistics, where a sample is drawn on the basis of the terminal digit of the record number. In 1967 even-numbered records were selected at the 50-percent sampling rate and records ending in "0" and "5" were selected at the 20-percent rate.

Total births by place of occurrence are not subject to sampling error. There is, however, sampling error in the total number of births when tabulated by place of residence. There is also sampling error in the numbers of births by characteristics such as race and sex when tabulated by either residence or occurrence.

The difference between an estimate based on a sample and the value being estimated (assuming there is no measurement error) is known as the sampling error. As calculated for this report, the standard error reflects this error as well as random measurement errors that may have been made in data collection and processing. However, it does not include any systematic biases in the data. The chances are about two out of three that a sample estimate differs from the value which would have been obtained from all births by less than one standard error. The chances are about 19 out of 20 that the difference is less than twice the standard error and about 99 out of 100 that it is less than 2½ times as large.

For estimated numbers of births in 1967 by characteristics, the approximate standard errors are presented in table 3-B. The figures shown are based on the assumption that, using a simple random sampling procedure, half of the birth records were sampled at the 50-percent rate and half at the 20-percent rate. These standard errors should be

Table 3-B. Standard errors of estimated births by size of estimate and total births in the area: United States, 1967

[Values are computed assuming that half the births were sampled at a 50-percent rate and half at a 20-percent rate. Instructions to be followed when the adjustment factor in table 3-A applicable to the area is other than 1.0 are given in the text below]

Number of births with a specified characteristic	Total births in the area <sup>1</sup>								
	250	500	1,000	2,000	5,000	10,000	20,000	50,000	500,000

<sup>1</sup>By place of occurrence "total births in the area" refers to the number of births occurring in the city, county, or State; by place of residence "total births in the area" is the number of births to residents of the State.

sufficiently precise for slightly more than half the States, as indicated by an adjustment factor of 1.0 in table 3-A. For those States whose sample deviated significantly from the assumption underlying table 3-B, the standard error shown in the appropriate cell in table 3-B should be multiplied by the proper adjustment factor from table 3-A.

To determine the standard error of an estimate from table 3-B, one must know the total number of births in the area and the estimate of the number of births with a specified characteristic. For estimated births with a specified characteristic by place of occurrence, the appropriate "total births in the area" is the number *occurring* in the area, e.g., city, county, or State. For the estimated total number of births and the number of births with a specified characteristic by place of residence, the number of births to *residents of the State* is used as "total births in the area."

For example, consider a county in which a total of 5,000 births occur and the estimate of nonwhite births is 500. Table 3-B shows that when "total births in the area" is 5,000, the standard error for an estimate of 500 births is 33.0 births. If the adjustment factor from table 3-A is 0.6, the standard error for the estimate is 19.8 births. Applying the concept stated above, the probability is 0.67 that the actual number of births is between 480 and 520 and about 0.95 that the actual number is between 460 and 540.

The sampling errors shown in table 3-B for 1967 are likely to be slight overstatements for estimated numbers of births with specified characteristics by place of occurrence at the State and national levels; for county and city statistics they should be quite accurate. For the estimated total number of births and numbers of births with specified characteristics by county or city of residence, the sampling errors in table 3-B are slight overstatements in most cases; for some areas the sampling errors may be considerably lower than those shown. For the years 1951-54 and 1956-66, when the sampling rate was 50 percent, the sampling errors were about 40 percent smaller than those shown.

## COMPUTATION OF RATES

### Population bases

Rates for 1940, 1950, and 1960 are based on the populations enumerated as of April 1 in the censuses of those years. Rates for all other years are based on the estimated midyear (July 1) population for the respective years.

*Population estimates for 1967.*—Preliminary estimates of the total resident population (excluding Armed Forces abroad) used to compute rates by age, color, and sex for 1967 are shown in table 3-2. They are consistent with

estimates published by the U.S. Bureau of the Census in *Current Population Reports*, Series P-25, Number 385, which include Armed Forces abroad. Provisional estimates of the total resident population of each State, published in Series P-25, Number 380, are shown in table 3-3.

*Population estimates for 1966.*—Preliminary estimates of the total resident population of the United States by age, color, and sex in 1966 are published by the Bureau of the Census in *Current Population Reports*, Series P-25, Number 352. Estimates of the total resident population of each State were obtained from Series P-25, Number 354.

*Population estimates for 1965.*—Preliminary estimates of the total resident population of the United States by age, color, and sex in 1965 are published by the Bureau of the Census in *Current Population Reports*, Series P-25, Number 321. Estimates of population in the 50 States and the District of Columbia are published in Series P-25, Number 354.

*Population estimates for 1961-64.*—Birth rates in this volume for the years 1961-64 are based on revised estimates of the population and thus may differ slightly from rates published in those years. The revised estimates are published by the Bureau of the Census in *Current Population Reports*, Series P-25, Number 321 (total resident population of the United States by age, color, and sex), and Number 324 (total resident population of each State).

*Population estimates for 1951-59.*—Final intercensal estimates of the population by age, color, and sex and by State for 1951-59 are shown in tables 4-4 and 4-5 of Volume I, *Vital Statistics of the United States, 1966*. Beginning with 1963 these final estimates have been used to compute birth rates for 1951-59 in all issues of *Vital Statistics of the United States*.

*Population estimates for cohort fertility tables.*—The various fertility measures shown for cohorts of women in tables 1-12 through 1-17 (Section 1) are computed from births adjusted for underregistration and population estimates corrected for underenumeration and misstatement of age. These estimates were prepared by the Scripps Foundation for Research in Population Problems and are described in Section A of the methodological appendix in a previous report.<sup>10</sup> The method described for population estimates for the years 1955-57 was also used for estimating populations in 1958-67.

### Age-sex-adjusted birth rates

The age-sex-adjusted birth rates shown in table 1-3 are computed by the direct method. The age distribution of women aged 10-49 as enumerated in 1940 and the total population of the United States for that year are used as the standard populations. The crude rates by age of mother and color that are used are shown in table 1-6. The age-sex-adjusted birth rates show differences in the level of fertility

<sup>10</sup>National Office of Vital Statistics: Fertility tables for birth cohorts of American women, by P. K. Whelpton and A. A. Campbell, *Vital Statistics—Special Reports*, Vol. 51, No. 1. Public Health Service. Washington, D.C., Jan. 1960.

independent of differences in the age and color composition of the population. It is important not to confuse these adjusted rates with the crude rates shown in other tables.

### Total fertility rate

The total fertility rate is the sum of the birth rates by age of mother (in 5-year age groups) multiplied by 5. It is an age-adjusted rate because it is based on the assumption that there are the same number of women in each age group. In table 1-6 the rate of 2,573 in 1967, for example, means that if a hypothetical group of 1,000 women were to have the same birth rates in each age group that were observed in the actual childbearing population in 1967, they would have a total of 2,573 children by the time they reached the end of the reproductive period (taken here as age 50), assuming that all survive to that age.

### Computation of intrinsic vital rates

The intrinsic vital rates shown in table 1-5 in Section 1 are calculated from a stable population. A stable population is that hypothetical population, closed to external migration, which would become fixed in age-sex structure after repeated applications of a constant set of age-sex specific birth and death rates. (For the mathematical derivation of intrinsic vital rates, see *Vital Statistics of the United States, 1962*, Volume I, pages 4-13 and 4-14. For the techniques of calculating intrinsic vital rates, see *Techniques of Population Analysis* by George W. Barclay, New York, John Wiley and Sons, Inc., 1958, pages 216-222.)

### Computation of parity distribution

The percentage distributions of women by parity (number of children ever born alive to mother) shown in table 1-13 in Section 1 are derived from cumulative birth rates by order of birth, which are shown in table 1-15. The percentage of zero-parity women is found by subtracting the cumulative first birth rate from 1,000 and dividing by 10. The proportions of women at parities one through six are found from the following formula:

$$\text{Percent at } N \text{ parity} = \frac{(\text{cum. rate, order } N) - (\text{cum. rate, order } N+1)}{10}$$

The percentage of women at seventh and higher parities is found by dividing the cumulative rate for seventh order births by 10.

### Seasonal adjustment of rates

The seasonally adjusted birth and fertility rates shown in table 1-21 (Section 1) are computed from the X-11 variant of Census Method II.<sup>11</sup> This method of seasonal adjust-

<sup>11</sup>U.S. Bureau of the Census: *The X-11 Variant of the Census Method II Seasonal Adjustment Program*, Technical Paper No. 15. Washington. U.S. Government Printing Office, 1965.

ment differs slightly from the BLS Seasonal Factor Method, which was used for *Vital Statistics of the United States, 1964*. The fundamental technique is the same in that it is an adaptation of the ratio-to-moving-average method. Prior to 1964, the method of seasonal adjustment was based on the X-9 variant and other variants of Census Method II. A comparison between Census Method II and the BLS Seasonal Factor Method shows the differences in the seasonal patterns of births to be negligible.<sup>12</sup>

<sup>12</sup>National Center for Health Statistics: Seasonal variation of births, United States, 1933-63. *Vital and Health Statistics*. PHS Pub. No. 1000-Series 21-No. 9. Public Health Service. Washington. U.S. Government Printing Office, May 1966. p. 41

Seasonally adjusted rates for 1966 have been revised and differ from those published in *Vital Statistics of the United States, 1966*. No changes have been made in the rates for 1965 and prior years.
