1.	Frequencies of selected circulatory diseases among persons 18 years of age and over, by selected characteristics: United States, 2005	15
2.	Age-adjusted percentages (with standard errors) of selected circulatory diseases among persons 18 years of age and over, by selected characteristics: United States, 2005	17
3.	Frequencies of selected respiratory diseases among persons 18 years of age and over, by selected characteristics: United States, 2005	19
4.	Age-adjusted percentages (with standard errors) of selected respiratory diseases among persons 18 years of age and over, by selected characteristics: United States, 2005	21
5.	Frequencies of cancer among persons 18 years of age and over, by selected characteristics: United States, 2005	23
6.	Age-adjusted percentages (with standard errors) of cancer among persons 18 years of age and over, by selected characteristics: United States, 2005	25
7.	Frequencies of selected diseases and conditions among persons 18 years of age and over, by selected characteristics: United States, 2005	27
8.	Age-adjusted percentages (with standard errors) of selected diseases and conditions among persons 18 years of age and over, by selected characteristics: United States, 2005	29
9.	Frequencies of migraines and pain in the neck, lower back, face or jaw among persons 18 years of age and over, by selected characteristics: United States, 2005	31
10.	Age-adjusted percentages (with standard errors) of migraines and pain in the neck, lower back, face or jaw among persons 18 years of age and over, by selected characteristics: United States, 2005	33
11.	Frequencies of hearing trouble, vision trouble, and absence of teeth among persons 18 years of age and over, by selected characteristics: United States, 2005	35
12.	Age-adjusted percentages (with standard errors) of hearing trouble, vision trouble, and absence of teeth among persons 18 years of age and over, by selected characteristics: United States, 2005	37
13.	Frequencies of feelings of sadness, hopelessness, worthlessness, or that everything is an effort among persons 18 years of age and over, by selected characteristics: United States, 2005	39
14.	Age-adjusted percentages (with standard errors) of feelings of sadness, hopelessness, worthlessness, or that everything is an effort among persons 18 years of age and over, by selected characteristics: United States, 2005	42
15.	Frequencies of feelings of nervousness and restlessness among persons 18 years of age and over, by selected characteristics: United States, 2005	45
16.	Age-adjusted percentages (with standard errors) of feelings of nervousness and restlessness among persons 18 years of age and over, by selected characteristics: United States, 2005	47
17.	Frequencies of work-loss days experienced in the past 12 months by employed persons 18 years of age and over, numbers (with standard errors) of work-loss days per employed person, frequencies of bed days experienced in the past 12 months by all persons 18 years of age and over, and numbers (with standard errors) of bed days per person, by selected characteristics: United States, 2005	49
18.	Frequencies of difficulties in physical functioning among persons 18 years of age and over, by selected characteristics: United States, 2005	51
19.	Age-adjusted percentages (with standard errors) of difficulties in physical functioning among persons 18 years of age and over, by selected characteristics: United States, 2005	54
20.	Frequency distributions of respondent-assessed health status among persons 18 years of age and over, by selected characteristics: United States, 2005	57
21.	Age-adjusted percent distributions (with standard errors) of respondent-assessed health status among persons 18 years of age and over, by selected characteristics: United States, 2005	59
22.	Frequency distributions of current health status relative to health status a year ago among persons 18 years of age and over, by selected characteristics: United States, 2005	61
23.	Age-adjusted percent distributions (with standard errors) of current health status relative to health status a year ago among persons 18 years of age and over, by selected characteristics: United States, 2005	64
24.	Frequency distributions of current cigarette smoking status among persons 18 years of age and over, by selected characteristics: United States, 2005	67
25.	Age-adjusted percent distributions (with standard errors) of current cigarette smoking status among persons 18 years of age and over, by selected characteristics: United States, 2005	69
26.	Frequency distributions of alcohol drinking status among persons 18 years of age and over, by selected characteristics: United States, 2005	71
27.	Age-adjusted percent distributions (with standard errors) of alcohol drinking status among persons 18 years of age and over, by selected characteristics: United States, 2005	73

28.	Frequency distributions of number of periods per week of vigorous leisure-time physical activity lasting 10 minutes or more among persons 18 years of age and over, by selected characteristics: United States, 2005.	75
29.	Age-adjusted percent distributions (with standard errors) of number of periods per week of vigorous leisure-time physical activity lasting 10 minutes or more among persons 18 years of age and over, by selected characteristics: United States, 2005.	77
30.	Frequency distributions of body mass index among persons 18 years of age and over, by selected characteristics: United States, 2005.	79
31.	Age-adjusted percent distributions (with standard errors) of body mass index among persons 18 years of age and over, by selected characteristics: United States, 2005	81
32.	Frequency distributions of having a usual place of health care among persons 18 years of age and over, and of type of place among those persons 18 years of age and over with a usual place of health care, by selected characteristics: United States, 2005.	83
33.	Age-adjusted percent distributions (with standard errors) of having a usual place of health care among persons 18 years of age and over, and of type of place among those persons 18 years of age and over with a usual place of health care, by selected characteristics: United States, 2005	85
34.	Frequency distributions of number of office visits to a doctor or other health care professional in the past 12 months among persons 18 years of age and over, by selected characteristics: United States, 2005	88
35.	Age-adjusted percent distributions (with standard errors) of number of office visits to a doctor or other health care professional in the past 12 months among persons 18 years of age and over, by selected characteristics: United States, 2005.	90
36.	Frequency distributions of length of time since last contact with a doctor or other health care professional among persons 18 years of age and over, by selected characteristics: United States, 2005.	92
37.	Age-adjusted percent distributions (with standard errors) of length of time since last contact with a doctor or other health care professional among persons 18 years of age and over, by selected characteristics: United States, 2005	94
38.	Frequency distributions of length of time since last contact with a dentist or other dental health professional among persons 18 years of age and over, by selected characteristics: United States, 2005	96
39.	Age-adjusted percent distributions (with standard errors) of length of time since last contact with a dentist or other dental health professional among persons 18 years of age and over, by selected characteristics: United States, 2005	98
40.	Frequency distributions of human immunodeficiency virus testing status among persons 18 years of age and over, by selected characteristics: United States, 2005	100
41.	Age-adjusted percent distributions (with standard errors) of human immunodeficiency virus testing status among persons 18 years of age and over, by selected characteristics: United States, 2005.	102

Abstract

Objectives

This report presents health statistics from the 2005 National Health Interview Survey (NHIS) for the civilian noninstitutionalized adult population, classified by sex, age, race/ethnicity, education, family income, poverty status, health insurance coverage, marital status, and place and region of residence. Estimates are presented for selected chronic conditions and mental health characteristics, functional limitations, health status, health behaviors, health care access and utilization, and human immunodeficiency virus testing. Percentages and percent distributions are presented in both age-adjusted and unadjusted versions.

Source of Data

NHIS is a household, multistage probability sample survey conducted annually by interviewers of the U.S. Census Bureau for the Centers for Disease Control and Prevention's National Center for Health Statistics. In 2005, data were collected for 31,428 adults for the Sample Adult questionnaire. The conditional response rate was 80.1%, and the final response rate was 69.0%. The health information for adults in this report was obtained from one randomly selected adult per family. In very rare instances where the sample adult was not able to respond for him- or herself, a proxy was allowed.

Highlights

In 2005, 62% of adults 18 years and over reported excellent or very good health. Sixty-two percent of adults never participated in any type of vigorous leisure-time physical activity, and 15% of adults did not have a usual place of health care. Twelve percent of adults had been told by a doctor or health professional that they had heart disease, and 22% had been told on two or more visits that they had hypertension. Twenty-one percent of all adults were current smokers, and 21% were former smokers. Based on estimates of body mass index, 35% of adults were overweight and 25% were obese.

Summary Health Statistics for U.S. Adults: National Health Interview Survey, 2005

By John R. Pleis, M.S., and Margaret Lethbridge-Çejku, Ph.D.,
Division of Health Interview Statistics

Introduction

This report is one in a set of reports summarizing data from the 2005 National Health Interview Survey (NHIS), a multipurpose health survey conducted by the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (NCHS). This report provides national estimates for a broad range of health measures for the U.S. civilian noninstitutionalized population of adults. Two other reports in this year's set provide estimates for selected health measures for the U.S. population and for children under 18 years of age (1,2). These three volumes of descriptive statistics and highlights are published for each year of the NHIS (3–5), and since 1997 have replaced the annual, one-volume Current Estimates series (6).

Estimates are presented here for selected chronic conditions, selected mental health characteristics, functional limitations, health status, health behaviors, health care access and utilization, and human immunodeficiency virus (HIV) testing status and are derived from the Sample Adult Core component of the annual NHIS Basic Module. These health estimates are shown in [Tables 1–41](#) for various subgroups of the population, including those defined by sex, age, race/ethnicity, education (for persons aged 25 and over), family income, poverty status, health insurance coverage, marital status, place of residence, and region of residence. [Appendix I](#) contains brief Technical Notes and detailed information about

age adjustment and unknown values ([Tables I–III](#)), [Appendix II](#) contains definitions of selected terms used in this report, and [Appendix III](#) contains tables of unadjusted health estimates.

NHIS has been an important source of information about health and health care in the United States since it was first conducted in 1957. Given the ever-changing nature of the U.S. population, the NHIS questionnaire has been revised every 10 to 15 years, with the latest revision occurring in 1997. The first design changes were introduced in 1973 and the first procedural changes in 1975 (7). In 1982, the NHIS questionnaire and data preparation procedures of the survey were extensively revised. The basic concepts of NHIS changed in some cases, and in other cases the concepts were measured in a different way. A more complete explanation of the 1982 changes is in [Appendix IV](#) of [Series 10](#), No. 150 (8). In 1985, a new sample design for NHIS and a different method of presenting sampling errors were introduced (9,10). In 1995, another change in the sample design was introduced, including the oversampling of black and Hispanic or Latino persons (11).

The 1997 NHIS featured both a substantially revised instrument (in terms of questionnaire content) and a new means of administration (i.e., computer-assisted personal interviewing). This new design improves the ability of NHIS to provide important health information. However, comparisons of NHIS data collected before and after the beginning of 1997 should not be undertaken without a

careful examination of the changes across survey instruments (6,8,10).

In response to the changing demographics of the U.S. population, in 1997 the Office of Management and Budget (OMB) issued new standards for collecting data on race and Hispanic or Latino origin (12). Most notably, the new standards allow respondents to the census and federal surveys to indicate more than one group in answering questions on race. Additionally, the category “Asian or Pacific Islander” is now split into two distinct categories, “Asian” and “Native Hawaiian or other Pacific Islander” (NHOPI), for data collection purposes. Although NHIS had allowed respondents to choose more than one race group for many years, NHIS became completely compliant with all of the new race and ethnicity standards with the fielding of the 1999 survey. The tables in this report reflect these new standards. The text in this report uses shorter versions of the new OMB race and Hispanic or Latino origin terms for conciseness, but the tables use the complete terms. For example, the category “Not Hispanic or Latino, black or African American, single race” in the tables is referred to as “non-Hispanic black” in the text.

Additionally, beginning with the 2003 NHIS, editing procedures were changed to maintain consistency with the U.S. Census Bureau procedures for collecting and editing data on race and ethnicity. As a result of these changes, in cases where “other race” was mentioned along with one or more OMB race groups, the “other race” response is dropped, and the OMB race group information is retained on the NHIS data file. In cases where “other race” was the only race response, it is treated as missing and the race is imputed. Although this change has resulted in an increase in the number of persons in the OMB race category “white” because this is numerically the largest group, the change is not expected to have a substantial effect on the estimates in this report. More information about the race/ethnicity editing procedures used by the U.S. Census Bureau can be found at the following website:

<http://www.census.gov/popest/archives/files/MRSF-01-US1.pdf>.

Methods

Data Source

The main objective of NHIS is to monitor the health of the U.S. population through the collection and analysis of data on a broad range of health topics. The target population for NHIS is the civilian noninstitutionalized population of the United States. Persons excluded are patients in long-term care institutions (e.g., nursing homes for the elderly; hospitals for the chronically ill, disabled, or retarded; and wards for abused or neglected children), correctional facilities (e.g., prisons or jails, juvenile detention centers, halfway houses), active duty Armed Forces personnel (although their civilian family members are included), and U.S. nationals living in foreign countries. Each year, a representative sample of households across the country is selected for NHIS using a multistage cluster sample design. Details on sample design can be found in “Design and Estimation for the National Health Interview Survey, 1995–2004” (11). Trained interviewers from the U.S. Census Bureau visit each selected household and administer the NHIS in person. Detailed interviewer instructions can be found in the *NHIS Field Representative’s Manual* (13).

The annual NHIS questionnaire, now called the Basic Module or Core, consists of three main components: the Family Core, the Sample Adult Core, and the Sample Child Core. The Family Core collects information for all family members regarding household composition and sociodemographic characteristics, along with basic indicators of health status, activity limitations, and utilization of health care services. All members of the household 17 years of age and over who are at home at the time of the interview are invited to participate and respond for themselves. For children and adults not available during the interview, information is provided by a knowledgeable adult family member (18 years of age or over) residing in the household. Although considerable

effort is made to ensure accurate reporting, the information from both proxies and self-respondents may be inaccurate because the respondent is unaware of relevant information, has forgotten it, does not wish to reveal it to an interviewer, or does not understand the intended meaning of the question.

The Sample Adult and Sample Child Cores obtain additional information on the health of one randomly selected adult and child in the family. The sample adult responds for himself or herself, and a knowledgeable adult in the family provides proxy responses for the sample child. In rare instances when the sample adult is mentally or physically incapable of responding, proxy responses are accepted for this person. The Sample Adult Core, the primary source of data for this report, collects information on health conditions, activity limitations, health behaviors, and access to and utilization of health care services from one randomly selected adult per family. The information regarding demographic characteristics in this report is obtained from the Family Core.

The interviewed sample for 2005 consisted of 38,509 households, which yielded 98,649 persons in 39,284 families. There were 39,227 adults eligible for the Sample Adult questionnaire. Data were collected for 31,428 adults, a conditional response rate of 80.1% (the number of completed Sample Adult interviews divided by the total number of eligible sample adults). The unconditional or final response rate for the Sample Adult Core component was calculated by multiplying the conditional rate by the overall family response rate of 86.1%, yielding a final Sample Adult component response rate of 69.0% (14).

Estimation Procedures

The Sample Adult weights were used to produce the national health estimates contained in this report. For each health measure, both weighted frequencies and percentages (or rates) for all adults and for various subgroups of the adult population are shown. All counts are expressed in thousands.

Counts for persons of unknown status with respect to health characteristics of interest are not shown separately in the tables, nor are they included in the calculation of percentages, to make the presentation of the data more straightforward. For all health measures in this report, the percentages with unknown values are typically small (generally less than 1%) and are shown in [Table II in Appendix I](#). Nevertheless, these unknown cases are included in the total population counts shown in selected tables. Therefore, it should be noted that the reader may obtain slightly different percentages than those shown in the tables if percentages are calculated based on the frequencies and population counts presented in the tables.

In addition, some of the sociodemographic variables that are used to delineate various subgroups of the population have unknown values. For most of these variables, the percentage unknown is small. However, in the case of family income, there is no income information for about 6% of sample adults in the 2005 survey, and about 17% of sample adults said only that their combined family income was either less than \$20,000 or \$20,000 or more, without providing additional detail. Poverty status, which is based on family income, has a high nonresponse rate as a result (see [Appendix I](#)) (15). Missing data on family income and personal earnings in NHIS have been imputed by NCHS analysts using multiple-imputation methodology. Five ASCII data sets containing imputed values for the survey year and additional information about the imputed income files can be found at <http://www.cdc.gov/nchs/nhis.htm>. However, income and poverty estimates in this publication are based only on reported income and may differ from other measures that are based on imputed data (which were not available when this report was prepared). Health estimates for sample adults with these unknown sociodemographic characteristics are not shown in the tables. See [Table III in Appendix I](#) for more information on the extent of unknown data for income and poverty status.

Transition to the 2000-Census-Based Weights

In Summary Health Statistics reports prior to 2003, the weights for NHIS data were derived from 1990-census-based postcensal population estimates. Beginning with 2003 data, NHIS transitioned to weights derived from the 2000-census-based population estimates. The impact of this transition was assessed for the 2002 NHIS by comparing estimates for selected health characteristics using the 1990-census-based weights with those using the 2000-census-based weights. Although the effect of new population controls on survey estimates differed by type of health characteristic, the effect of this change on health characteristic estimates was small, but was somewhat larger for weighted frequencies (16).

Age Adjustment

Beginning with the 2002 Summary Health Statistics report, estimates have been provided in two sets of tables. Percentages in the first set ([Tables 1–41](#)) were age adjusted to the 2000 U.S. standard population. Age adjustment was used to permit comparison among various sociodemographic subgroups that may have different age structures (17,18). The age groups used for age adjustment in this report are 18–44, 45–64, 65–74, and 75 years and over, unless otherwise noted (see [Table I in Appendix I](#)). Health insurance and education are restricted to certain age groups and are, therefore, adjusted accordingly (see relevant footnotes on tables for age groups). The age-adjusted estimates shown in the tables may not match age-adjusted estimates for the same health characteristic in other reports if different age groups were used for age adjustment. [Tables IV–XXIII in Appendix III](#) provide unadjusted estimates so that readers may compare current estimates with those published in the 1997–2001 Summary Health Statistics reports and may see the effects of age adjustment on the 2005 estimates (See [Appendix I](#) for details on age adjustment). Frequency tables have been removed from the set of unadjusted

tables in [Appendix III](#) to eliminate redundancy in the report.

Limitations of the Data

As mentioned above, the redesigned NHIS is quite different in content, format, and mode of data collection from earlier versions of the survey. These changes can make it complex to compare 1997–2005 NHIS estimates with those of earlier years. Beginning in 2003, NHIS uses weights derived from the 2000-census-based population estimates. Analysts who compare NHIS frequencies across this transition (e.g., comparing 2005 to 2002) need to recognize that some of the observed differences may be due to the change in the population estimates. Unadjusted percentage estimates shown in the [Appendix III](#) tables of this report may be compared with those published in Summary Health Statistics reports of 1997–2001, which did not contain age-adjusted estimates. Age-adjusted estimates in this report should not be compared with earlier unadjusted estimates unless it can be demonstrated that the effect of age adjustment is minimal.

It is important to note that frequencies are underestimates due to item nonresponse and unknowns, both of which are excluded from the tables (with the exception of the “All persons” or “Total” columns shown in each table). See [Appendix I](#) for more information about the number of unknowns with respect to each health characteristic.

Interpretation of estimates should be made only after reviewing [Appendix I](#), which contains important information about the methods used to obtain the estimates, changes in the survey instrument, and any measurement issues that are currently being evaluated.

Variance Estimation and Significance Testing

The NHIS data are based on a sample of the population and are, therefore, subject to sampling error. Standard errors are reported to indicate the reliability of the estimates. Estimates

and standard errors were calculated using SUDAAN software that takes into account the complex sampling design of NHIS. The Taylor series linearization method was used for variance estimation in SUDAAN (19).

Standard errors are shown for all percentages in the tables (but not for the frequencies). Estimates with relative standard errors of greater than 30% and less than or equal to 50% are considered statistically unreliable and are indicated with an asterisk (*). Estimates with a relative standard error greater than 50% are indicated with a dagger (†), and the estimates are not shown. The statistical significance of differences among point estimates was evaluated using two-sided *t*-tests at the 0.05 level and assuming independence. Terms such as “greater than,” “less than,” “more likely,” “less likely,” “compared with,” or “opposed to” indicate a significant difference among estimates, whereas “similar,” “no difference,” or “comparable” indicate that the estimates are not significantly different. A lack of commentary about any two estimates should not be interpreted to mean that a *t*-test was performed and the difference was found to be not significant. Furthermore, these tests did not take multiple comparisons into account.

Further Information

Data users can obtain the latest information about the National Health Interview Survey from the NCHS website: <http://www.cdc.gov/nchs/nhis.htm>. This website features downloadable public-use data and documentation for recent National Health Interview Surveys, as well as important information about any modifications or updates to the data or documentation.

Researchers may also wish to join the NHIS electronic mail list. To do so, go to <http://www.cdc.gov/subscribe.html>. Fill in the appropriate information, and click the “National Health Interview Survey (NHIS) researchers” box, followed by the “Subscribe” button at the bottom of the page. The list serve consists of approximately 4,000 NHIS data users located around the world who receive e-news about NHIS data (e.g., new releases of data or modifications to

existing data), publications, conferences, and workshops.

Selected Highlights

In the following section, brief, bulleted summaries of the estimates shown in [Tables 1–41](#) are presented. Estimates were age adjusted by the direct method to the 2000 standard U.S. population. In most cases, the age groups used to adjust estimates are the same age groups presented in the tables (see table notes for age adjustment groups). All estimates were calculated using the Sample Adult Weight variable, which is calibrated by NCHS staff to produce numbers consistent with estimates of the adult civilian noninstitutionalized population of the United States by sex, age, and race/ethnicity, based on projections from the 2000 U.S. Census.

Selected Circulatory Conditions ([Tables 1,2](#))

- Overall, 12% of adults 18 years of age and over had ever been told by a doctor or other health professional they had heart disease, 7% had ever been told they had coronary heart disease, 22% had been told on two or more visits that they had hypertension, and 2% had ever been told they had experienced a stroke.
- Among adults 18 years of age and over, men were more likely to have ever been told they had coronary heart disease than women, but women were more likely to have been told they had hypertension than were men.
- There was a positive relationship between age and the presence of heart disease (including coronary heart disease), hypertension, and stroke; as age increased, the percentages of adults with these conditions also increased.
- When results are considered by single race without regard to ethnicity, Asian and black adults were less likely to have ever been told they had heart disease than

white adults. Asian adults and white adults were less likely to have been told they had hypertension compared with black adults.

- When results are considered by single race and ethnicity, Hispanic adults were less likely to have been told that they had heart disease than non-Hispanic white adults. Thirty-two percent of non-Hispanic black adults had ever been told they had hypertension compared with 20% of Hispanic adults and 21% of non-Hispanic white adults.
- Education was inversely associated with heart disease, hypertension, and stroke; as educational level increased, the percentages of adults with these conditions decreased.
- Poverty level was inversely associated with heart disease (including coronary heart disease), hypertension, and stroke; adults in families that were poor and near poor were more likely to have ever been told they had these conditions than were adults in families that were not poor.
- Among adults under age 65, those covered by Medicaid or “other” insurance were more likely to have been told they had heart disease (including coronary heart disease), hypertension, or stroke than those with either private insurance or no insurance. Among adults 65 years and over, those covered by Medicaid and Medicare were more likely to have been told they had heart disease, hypertension, or stroke than those with either Medicare alone or private insurance.
- Thirty-four percent of non-Hispanic black women had hypertension compared with 21% of non-Hispanic white women and 23% of Hispanic women. Twenty-eight percent of non-Hispanic black men had hypertension compared with 22% of non-Hispanic white men and 17% of Hispanic men. Non-Hispanic white men had the highest percentage of heart disease (including coronary heart disease) compared with other single-race sex-ethnicity groups.

Selected Respiratory Conditions (Tables 3,4)

- Overall, 2% of adults 18 years of age and over had ever been told by a doctor or other health professional they had emphysema. Eleven percent had ever been told they had asthma, and 7% still had asthma. Nine percent of adults had been told in the past 12 months that they had hay fever, 13% had been told they had sinusitis, and 4% had been told they had chronic bronchitis.
- Women were more likely than men to have been told they had asthma, hay fever, sinusitis, or chronic bronchitis.
- When results are considered by single race without regard to ethnicity, Asian adults were less likely than black or white adults to have been told in the past 12 months they had sinusitis. Also, native Hawaiian or other Pacific Islander adults had asthma rates over twice as high as those for any other single-race group.
- Hispanic adults had lower rates of emphysema, hay fever, asthma, sinusitis, and chronic bronchitis than white adults and had lower rates for asthma, sinusitis, and chronic bronchitis than did black adults.
- Adults with a bachelor's degree or higher were less likely than adults with less education to have been told they had emphysema or chronic bronchitis, but more likely to have been told they had hay fever.
- Adults in poor families had higher percentages of emphysema, asthma, and chronic bronchitis than adults in families that were not poor. However, the reverse pattern was seen for hay fever.
- Among adults under age 65, those insured by Medicaid had higher percentages of emphysema, asthma, and chronic bronchitis than those with private insurance or who were uninsured. Similarly, among adults age 65 and over, those insured by Medicaid and Medicare had higher percentages of emphysema, asthma, and chronic bronchitis than those with Medicare alone.

- The percentage of adults with sinusitis was higher in the South than in any other region of the United States. The percentage of adults with hay fever was highest in the West.
- White non-Hispanic women and black non-Hispanic women were the most likely to have sinusitis. White non-Hispanic women also had the highest percentage of hay fever.

Selected Cancers (Tables 5,6)

- Overall, 7% of adults 18 years of age and over had ever been told by a doctor or other health professional they had some form of cancer.
- As age increased, the percentage of adults who had ever been told by a doctor or other health professional that they had cancer, breast cancer, or prostate cancer increased.
- Eight percent of non-Hispanic white adults had ever been told they had some form of cancer compared with 4% of non-Hispanic black adults and 4% of Hispanic adults.

Diabetes, Ulcers, Kidney Disease, Liver Disease, and Arthritis and Chronic Joint Symptoms (Tables 7,8)

- Overall, 7% of adults 18 years of age and over had ever been told by a doctor or other health professional that they had diabetes, 7% had ever been told they had an ulcer, 2% had been told in the past 12 months that they had kidney disease, and 1% had been told in the past 12 months that they had liver disease.
- Twenty-one percent of adults had ever been told by a doctor or other health care professional that they had some form of arthritis, rheumatoid arthritis, gout, lupus, or fibromyalgia, and 27% had chronic joint symptoms (e.g., pain or stiffness in or around a joint in the past 30 days that began more than 3 months ago).

- Women were more likely to be diagnosed with arthritis or to have chronic joint symptoms than were men.
- Age was positively associated both with arthritis diagnosis and the presence of chronic joint symptoms. Fifty-four percent of adults 75 years of age and over had an arthritis diagnosis compared with 8% of adults 18–44 years of age; 48% of adults 75 years of age and over had chronic joint symptoms compared with 16% of adults 18–44 years of age.
- When results are considered by single race without regard to ethnicity, American Indian or Alaska Native adults and black or African American adults had higher percentages of diabetes compared with white adults and Asian adults. Asian adults were less likely to have arthritis or chronic joint symptoms than white adults, black or African American adults, and American Indian or Alaska Native adults.
- When results are considered by single race and ethnicity, Hispanic adults and non-Hispanic black adults were more likely to have been told by a doctor or other health professional that they had diabetes compared with non-Hispanic white adults. Hispanic adults were less likely to have arthritis or chronic joint symptoms compared with non-Hispanic white adults and non-Hispanic black adults.
- There was an inverse relationship of diabetes with level of education: 12% of adults with less than a high school diploma have diabetes compared with 6% of adults with a bachelor's degree or higher.
- Adults in poor and near poor families were more likely to have ever been told by a doctor or other health professional that they had diabetes, ulcers, kidney disease, liver disease, or arthritis than were adults in families that were not poor.
- Among adults under age 65, those covered by Medicaid had the highest percentage of diabetes and kidney disease. Among adults aged 65 and over, those covered by Medicaid and Medicare had higher percentages of diabetes, ulcers, and kidney disease

than those with private insurance or who were uninsured.

- When results are considered by sex and ethnicity, non-Hispanic white men and women were less likely to have been told they had diabetes than Hispanic or non-Hispanic black men and women. Hispanic men and women and non-Hispanic black men were less likely to have chronic joint symptoms than were non-Hispanic white men and women and non-Hispanic black women.

Pain (Tables 9,10)

- During the 3 months prior to the interview, 15% of adults had experienced a migraine or severe headache, 15% had experienced pain in the neck area, 28% had experienced pain in the lower back, and 4% had experienced pain in the face or jaw area.
- Women were more likely to experience pain (in the form of migraines, neck pain, lower back pain, or face or jaw pain) than men. Women were twice as likely as men to experience migraines or severe headaches, or pain in the face or jaw.
- The percentage of persons experiencing migraines or severe headaches was inversely related to age. Eighteen percent of adults 18–44 years of age experienced a migraine or severe headache in the 3 months prior to the interview compared with 14% of adults 45–64 years of age, 7% of adults 65–74 years of age, and 5% of adults 75 years of age and over.
- Adults 18–44 years of age were less likely to have experienced pain in the lower back during the 3 months prior to the interview compared with older adults.
- When results are considered by single race without regard to ethnicity, Asian adults were less likely to have migraine, pain in the lower back, or pain in the face or jaw when compared with white adults and black adults.
- Adults with a bachelor's degree or higher were less likely to have migraine headaches, neck pain, or lower back pain compared with adults with less education.

- Adults in poor and near poor families were more likely to experience migraine headaches, neck pain, lower back pain, or face or jaw pain in the 3 months prior to the interview than were adults in families that were not poor.
- Among adults under age 65, those covered by Medicaid were more likely to have migraine headaches, neck pain, lower back pain, or pain in the face or jaw compared with those with no insurance. Among adults age 65 and over, those covered by Medicaid and Medicare were more likely to have migraine headaches, neck pain, lower back pain, or face or jaw pain than those with private insurance or Medicare alone.
- When results are considered by sex and ethnicity, women were more likely to have a severe headache or migraine than men in the same race/ethnicity groups. Non-Hispanic black men and Hispanic men had the lowest percentages of lower back pain compared with other men and women.

Hearing and Vision Trouble, and Absence of Natural Teeth (Tables 11,12)

- Overall, 17% of adults 18 years of age and over experienced some hearing difficulty without a hearing aid (defined as “a little trouble,” “a lot of trouble,” or “deaf”). Men were more likely to have experienced hearing trouble than were women.
- Nine percent of the adult population experienced vision trouble (defined as trouble seeing, even with glasses or contact lenses). Women were more likely to have experienced vision trouble than men.
- Eight percent of the adult population in the United States had lost all their natural teeth.
- Age was positively associated with hearing difficulties (without a hearing aid), vision trouble (even with glasses or contact lenses), and the loss of all natural teeth; as age

increased, the percentages of adults with these conditions also increased.

- When results are considered by single race without regard to ethnicity, Asian adults and black adults were less likely to have experienced some form of hearing difficulty (without a hearing aid) than were white adults and American Indian or Alaska Native adults. Six percent of Asian adults had experienced some form of vision trouble (even with glasses or contact lenses) compared with 9% of white adults and 11% of black adults.
- When results are considered by single race and ethnicity, 19% of non-Hispanic white adults experienced some form of hearing difficulty (without a hearing aid) compared with 10% of non-Hispanic black adults and 11% of Hispanic adults. Non-Hispanic black adults were more likely to have lost all their natural teeth than were Hispanic adults or non-Hispanic white adults.
- Absence of all natural teeth was inversely associated with education; 16% of adults with less than a high school diploma had lost all their natural teeth compared with 3% of adults with a bachelor's degree or higher.
- Seventeen percent of adults in poor families experienced vision trouble (even with glasses or contact lenses) compared with 8% of adults in families that were not poor. The poor and near poor were more likely to have lost all their natural teeth than those who were not poor.
- Among adults under age 65, those covered by Medicaid were more likely to have vision trouble (even with glasses or contact lenses) or absence of all natural teeth compared with those with private insurance or no insurance. Among adults age 65 and over, those covered by Medicaid and Medicare were more likely to have vision trouble (even with glasses or contact lenses) or absence of all natural teeth than those with only Medicare, private, or other insurance.

- Adults not living in an MSA were more likely to have hearing difficulty (without a hearing aid), vision trouble (even with glasses or contact lenses), or absence of all natural teeth compared with those living in small or large MSAs.
- When results are considered by sex and ethnicity, non-Hispanic white men were more likely to have had hearing trouble compared with other men or with women.

Feelings of Sadness, Hopelessness, Worthlessness, or That Everything is an Effort (Tables 13,14)

- Overall, 11% of adults experienced feelings of sadness for all, most, or some of the time during the 30 days prior to the interview; 6% felt hopeless; 5% felt worthless; and 14% felt like everything was an effort for all, most, or some of the time during the same time period.
- Fourteen percent of women felt sad for all, most, or some of the time during the 30 days prior to the interview compared with 9% of men. Women were also more likely than men to have feelings of hopelessness, worthlessness, or that everything is an effort during the 30 days prior to the interview.
- When results are considered by single race and ethnicity, non-Hispanic white adults were less likely to have feelings of sadness or hopelessness all, most, or some of the time during the 30 days prior to the interview than either non-Hispanic black adults or Hispanic adults. Non-Hispanic black adults were more likely to feel that everything is an effort all, most, or some of the time during the 30 days prior to the interview than either non-Hispanic white adults or Hispanic adults.
- Level of education was inversely associated with feelings of sadness, hopelessness, worthlessness, or that everything is an effort; the highest percentage of adults with these feelings was for adults with less than a high school diploma, and those least likely to have these feelings were those with a bachelor's degree or higher.
- Adults in poor families were at least twice as likely as adults in families that were not poor to feel hopeless, worthless, or that everything is an effort for all, most, or some of the time during the 30 days prior to the interview.
- Among adults under age 65, 28% of those who had Medicaid health care coverage experienced feelings of sadness for all, most, or some of the time during the 30 days prior to the interview compared with 16% of those who were uninsured and 8% of those who had private health insurance. Also, adults under age 65 who had Medicaid health care coverage were nearly twice as likely to feel hopeless, worthless, or that everything is an effort for all, most, or some of the time during the 30 days prior to the interview than were adults under age 65 who were either uninsured or who had private health insurance.
- Among adults aged 65 and over, 29% of those who had Medicaid and Medicare health care coverage experienced feelings of sadness for all, most, or some of the time during the 30 days prior to the interview compared with 13% of those who had Medicare only health care coverage and 11% of those who had private health insurance. Also, adults age 65 and over who had Medicaid and Medicare health care coverage were more likely to feel worthless, hopeless, or that everything is an effort for all, most, or some of the time during the 30 days prior to the interview as those who had private health insurance or only Medicare health care coverage.
- Widowed and divorced adults were more likely to have feelings of sadness, worthlessness, or that everything is an effort compared with adults who were married, never married, or living with a partner. Adults who were married were least likely to have these feelings.

Feelings of Nervousness or Restlessness (Tables 15,16)

- Overall, 16% of adults experienced feelings of nervousness, and 18% of adults experienced feelings of restlessness for all, most, or some of the time during the 30 days prior to the interview.
- Eighteen percent of women felt nervous for all, most, or some of the time during the 30 days prior to the interview compared with 13% of men. Similarly, women were more likely to feel restless all, most, or some of the time during the 30 days prior to the interview than were men.
- When results are considered by race without regard to ethnicity, Asian adults had the least feelings of restlessness compared with other single-race groups.
- Level of education was inversely associated with feelings of nervousness or restlessness; the highest percentage of adults with these feelings were adults with less than a high school diploma, and those least likely to have these feelings were those with a bachelor's degree or higher.
- Adults in poor families were more likely than adults in families that were not poor to feel nervous or restless for all, most, or some of the time during the 30 days prior to the interview.
- Among adults under age 65, 28% of those who had Medicaid health care coverage experienced feelings of nervousness for all, most, or some of the time during the 30 days prior to the interview compared with 18% of those who were uninsured and 13% of those who had private health insurance. Also, adults under age 65 who had Medicaid health care coverage were more likely to experience feelings of restlessness for all, most, or some of the time during the 30 days prior to the interview than those adults under age 65 who were either uninsured or who had private health insurance.
- Among adults aged 65 years and over, 28% of those who had

Medicaid and Medicare health care coverage experienced feelings of nervousness for all, most, or some of the time during the 30 days prior to the interview compared with 15% of those who had only Medicare health care coverage or 13% of those who had private health insurance. Also, adults age 65 and over who had Medicaid and Medicare health care coverage were more likely to experience feelings of restlessness for all, most, or some of the time during the 30 days prior to the interview than were adults age 65 and over who had only Medicare health care coverage or private health insurance.

- Adults who were married were the least likely to have feelings of nervousness or restlessness compared with adults who were divorced, separated, or living with a partner.

Work-loss Days and Bed Days (Table 17)

- Employed adults 18 years of age and over experienced an average of 4 work-loss days per person due to illness or injury in the past 12 months, or a total of approximately 653 million work-loss days.
- Adults 18 years of age and over experienced an average of 5 bed days per person due to illness or injury in the past 12 months, for a total of 1 billion bed days.
- Women experienced an average of 6 bed days per person due to illness or injury in the past 12 months compared with an average of 4 bed days per person for men.
- When results are considered by single race and ethnicity, non-Hispanic black adults had an average of 6 bed days per person due to illness or injury in the past 12 months compared with an average of 3 bed days per person for Hispanic adults and an average of 5 bed days per person for non-Hispanic white adults.
- Adults with less than a high school diploma had an average of 7 bed days per person due to illness or

injury in the past 12 months compared with 3 bed days per adult with at least a bachelor's degree.

- Adults in poor families averaged 11 bed days per person due to illness or injury in the past 12 months compared with 7 bed days per person among adults in near poor families and 3 bed days per person among adults in families that were not poor.
- Among adults under age 65, those who had Medicaid health care coverage averaged 16 bed days per person due to illness or injury in the past 12 months compared with 3 bed days per person for those who had private health insurance and 3 bed days per person for those who were uninsured. Among adults at least 65 years of age, those with Medicaid and Medicare health care coverage had 14 bed days per person compared with 6 bed days per person for those with private insurance and 5 bed days per person for those with only Medicare health care coverage.
- When results are considered by sex and ethnicity, non-Hispanic black women had 7 bed days per person due to illness or injury in the past 12 months compared with 4 bed days per person for Hispanic women. The difference between non-Hispanic black women and non-Hispanic white women was not statistically significant. Non-Hispanic black men had 5 bed days per person compared with 3 bed days per person for Hispanic men. As with women, the difference between non-Hispanic black men and non-Hispanic white men was not statistically significant.

Limitations in Physical Functioning (Tables 18,19)

- Overall, 15% of adults had great difficulty with at least one of nine physical activities performed without help and without the use of special equipment (responding “very difficult to do” or “can’t do at all” to walking a quarter of a mile; climbing 10 steps without resting;

standing for 2 hours; sitting for 2 hours; stooping, bending, or kneeling; reaching over the head; using the fingers to grasp or handle small objects; lifting or carrying 10 pounds; or pushing or pulling large objects).

- Only 2% of adults had difficulty grasping or handling small objects; 9% had difficulty standing for 2 hours, or stooping, bending, or kneeling; 7% had difficulty walking a quarter of a mile, or pushing or pulling large objects; and 5% had difficulty climbing 10 steps without resting.
- Seventeen percent of women had at least one physical difficulty compared with 12% of men, and more women than men had difficulty performing each of the nine physical activities.
- Age was positively associated with the presence of at least one physical difficulty; as age increased, the percentage of adults finding at least one of these activities very difficult or impossible to do also increased. The percentage of adults with this level of difficulty in each of the nine activities increased sharply both at age 65 and at age 75 and over.
- When results are considered by single race without regard to ethnicity, 18% of black adults had at least one physical difficulty compared with 15% of white adults and 8% of Asian adults.
- When results are considered by single race and ethnicity, a higher percentage of non-Hispanic black adults found at least one of the nine physical activities very difficult or impossible to do, compared with non-Hispanic white adults and Hispanic adults.
- Level of education was inversely associated with difficulty in any and in each of the nine activities; as education increased, the percentage of adults with difficulty performing the nine physical activities decreased.
- Adults in poor families were more than twice as likely as adults in families that were not poor to have difficulty with each of the nine activities.

- Among all ages, Medicaid health care coverage was associated with increased difficulty in performing at least one of the nine physical activities. For adults under 65 years of age, those with Medicaid health care coverage were nearly three times as likely to have physical difficulties when compared with adults with private insurance and adults who were uninsured. Similarly for adults at least 65 years of age, 59% of those with Medicaid and Medicare health care coverage reported at least one physical difficulty, compared with 36% of those with private insurance and 38% of those with only Medicare health care coverage.
- When results are considered by single race, sex, and ethnicity, non-Hispanic women were more likely to find at least one of the nine physical activities very difficult or impossible to do compared with the other single race/sex/ethnicity groupings.

Respondent-assessed Health Status (Tables 20,21)

- Overall, 62% of adults 18 years of age and over were in excellent or very good health, 26% were in good health, and 12% were in fair or poor health.
- Sixty-three percent of men were in excellent or very good health compared with 61% of women.
- Health status was inversely associated with age; as age increased, the percentage of adults with excellent health or very good health decreased, and the percentage of adults with fair or poor health increased.
- When results are considered by single race without regard to ethnicity, 48% of American Indian or Alaska Native adults and 51% of black adults had excellent or very good health compared with 63% of white adults and 62% of Asian adults.
- When considering results by single race and ethnicity, non-Hispanic white adults were more likely to have excellent or very good health and were less likely to have fair or poor health than either non-Hispanic black or Hispanic adults.
- Level of education was positively associated with health status; 75% of adults with a bachelor's degree or higher were in excellent or very good health compared with 40% of adults with less than a high school diploma. Twenty-seven percent of adults with less than a high school diploma were in fair-to-poor health compared with 6% of adults with a bachelor's degree or higher.
- Adults in families that were not poor were more likely to have excellent or very good health compared with adults in poor and near poor families, and adults in near poor and poor families were two to three times as likely to have fair or poor health compared with adults in families that were not poor.
- Among adults under age 65 years, 73% of those with private health insurance had excellent or very good health compared with 56% of adults under age 65 without health insurance coverage and 37% of adults with Medicaid health care coverage. Only 6% of adults under age 65 with private health insurance were in fair or poor health compared with 32% of those with Medicaid health care coverage.
- Among adults age 65 and over, 55% of those who had Medicaid and Medicare health care coverage had fair or poor health compared with 29% of those with only Medicare health care coverage and 22% of those with private health insurance.
- Married adults were less likely to have fair or poor health compared with adults who were widowed, divorced or separated, living with a partner, or never married.
- Adults who did not live in an MSA were more likely to have fair or poor health than adults who lived in a large or small MSA.
- Adults living in the South were more likely to have fair or poor health compared with adults living in other regions.

- Sixty-five percent of non-Hispanic white women were in excellent or very good health compared with 50% of Hispanic women and 51% of non-Hispanic black women. Conversely, only 11% of non-Hispanic white women were in fair or poor health compared with 20% of Hispanic and non-Hispanic black women. Similarly, 66% of white men were in excellent or very good health compared with 53% of non-Hispanic black men and 55% of Hispanic men. Only 10% of non-Hispanic white men were in fair or poor health compared with 19% of non-Hispanic black men and 16% of Hispanic men.

Current Health Status Relative to a Year Ago (Tables 22,23)

- Among adults with excellent or very good health in 2005, the health of 80% was about the same as a year ago, and the health of 17% had improved. Among adults with good health in 2005, the health of 73% was about the same as a year ago, the health of 17% had improved, and the health of 10% was worse than in 2004. Among adults with fair or poor health in 2005, the health of 52% was about the same as a year ago, the health of 16% had improved, and the health of 33% was worse than last year.

Current Cigarette Smoking Status (Tables 24,25)

- Overall, 21% of adults 18 years of age and over were current cigarette smokers, 21% were former smokers, and 58% had never smoked at least 100 cigarettes in their lifetime. Twenty-three percent of men were current smokers compared with 18% of women. Sixty-four percent of women had never smoked compared with 51% of men.
- As age increased, the percentage of current smokers decreased. However, adults who were 18–44 years of age were more likely to have never smoked than adults 45

- years of age and over.
- When results are considered by single race without regard to ethnicity, 13% of Asian adults were current smokers compared with 21% of white adults, 21% of black adults, and 25% of American Indian or Alaska Native adults.
- Fifty-four percent of non-Hispanic white adults had never smoked compared with 64% of non-Hispanic black adults and 69% of Hispanic adults.
- Adults with at least a bachelor's degree were less likely than other adults to be current smokers and more likely to be nonsmokers.
- Adults in families that were not poor were less likely to be current smokers and more likely to be former smokers than adults in families that were near poor or poor.
- Among adults under 65 years of age, 19% with private health insurance coverage were current smokers compared with 33% who were uninsured and 35% who had Medicaid health care coverage. In addition, adults under 65 years of age who had private health insurance coverage were more likely to have never smoked than adults in this age group who were uninsured or who had Medicaid health care coverage.
- Adults who did not live in an MSA were more likely to be current smokers than adults who lived in an MSA.
- Adults living in the West were less likely to be current or everyday smokers and more likely to be nonsmokers compared with adults living in other regions.
- Eleven percent of Hispanic women were current smokers compared with 17% of non-Hispanic black women and 21% of non-Hispanic white women. Seventy-nine percent of Hispanic women and 71% of non-Hispanic black women were nonsmokers compared with 59% of non-Hispanic white women. Among men, 20% of Hispanic men, 26% of non-Hispanic black men, and 24% of non-Hispanic white men were current smokers; 59% of Hispanic men and 56% of non-Hispanic black

men were nonsmokers compared with 49% of non-Hispanic white men.

Alcohol Drinking Status (Tables 26,27)

- Overall, 49% of adults 18 years of age and over were current regular drinkers, 12% were current infrequent drinkers, 6% were former regular drinkers, 8% were former infrequent drinkers, and 25% were lifetime abstainers.
- Fifty-eight percent of men were current regular drinkers compared with 41% of women. Men were also more likely than women to be former regular drinkers. Women were more likely than men to be current or former infrequent drinkers or lifetime abstainers.
- As age increased, the percentage of adults who were current regular drinkers decreased.
- Asian adults were more likely to be lifetime abstainers compared with other single-race groups.
- When results are considered by single race and ethnicity, 54% of non-Hispanic white adults were current regular drinkers compared with 38% of Hispanic adults and 34% of non-Hispanic black adults. Hispanic adults and non-Hispanic black adults were almost twice as likely as non-Hispanic white adults to be lifetime abstainers.
- Educational attainment and family income were positively associated with current regular drinking status and inversely associated with being a lifetime abstainer.
- Among adults under 65 years of age, 57% of those who had private health insurance coverage were current regular drinkers compared with 46% of those who were uninsured and 31% of those who had Medicaid health care coverage.
- Among adults aged 65 and over, 36% of those who had private health insurance coverage were current regular drinkers compared with 26% of those who had only Medicare health care coverage and 14% of those who had Medicaid and

Medicare health care coverage.

- Regionally, 31% of adults living in the South were lifetime abstainers, in contrast to 26% in the West, 19% in the Midwest, and 19% in the Northeast.
- Twenty-three percent of non-Hispanic white women were lifetime abstainers compared with 48% of Hispanic women and 45% of non-Hispanic black women. Conversely, 48% of non-Hispanic white women were current regular drinkers compared with 25% of non-Hispanic black women and 23% of Hispanic women. Among men, 14% of non-Hispanic white men were lifetime abstainers compared with 23% of Hispanic men and 29% of non-Hispanic black men; 62% of non-Hispanic white men were current regular drinkers compared with 52% of Hispanic men and 46% of non-Hispanic black men.

Frequency of Vigorous Leisure-time Physical Activity (Tables 28,29)

- Overall, 62% of adults 18 years of age and over never engaged in any periods of vigorous leisure-time physical activity lasting 10 minutes or more per week, and 24% engaged in such activity three or more times per week.
- Fifty-seven percent of men never engaged in periods of vigorous leisure-time physical activity lasting 10 minutes or more per week compared with 66% of women. Twenty-six percent of men engaged in such activities three or more times per week compared with 22% of women.
- When results are considered by single race and ethnicity, 57% of non-Hispanic white adults never engaged in periods of vigorous leisure-time physical activity compared with 72% of non-Hispanic black adults and 75% of Hispanic adults. Twenty-seven percent of non-Hispanic white adults engaged in such activities three or more times per week compared with 18% of non-Hispanic black adults and

- 15% of Hispanic adults.
- Educational attainment, family income, and nonpoverty status were inversely associated with never engaging in periods of vigorous leisure-time physical activity; 82% of adults with less than a high school diploma never engaged in periods of vigorous leisure-time physical activity compared with 48% of adults with a bachelor's degree or higher; 75% of adults in poor families never engaged in periods of vigorous leisure-time physical activity compared with 54% of adults in families that were not poor. Thirty-four percent of adults with a bachelor's degree or higher engaged in vigorous leisure-time physical activity three or more times a week compared with 11% of adults with less than a high school diploma. Twenty-eight percent of adults in families that were not poor engaged in vigorous leisure-time physical activity three or more times a week compared with 15% of those in poor families.
- A higher percentage of adults not residing in an MSA never engaged in periods of vigorous leisure-time physical activity lasting 10 minutes or more per week compared with adults residing in an MSA.
- A greater percentage of adults in the South never engaged in any periods of vigorous leisure-time physical activity lasting 10 minutes or more per week compared with adults living in other regions.
- When results are considered by single race without regard to ethnicity, 58% of Asian adults were at a healthy weight compared with 38% of white adults, 31% of black adults, and 22% of American Indian or Alaska Native adults. Black adults and American Indian or Alaska Native adults were three to four times as likely to be obese as Asian adults. White adults were about three times as likely as Asian adults to be obese.
- When results are considered by single race and ethnicity, 33% of non-Hispanic black adults were obese compared with 28% of Hispanic adults and 24% of non-Hispanic white adults. Hispanic adults were more likely to be overweight (but not obese) than either non-Hispanic white or non-Hispanic black adults.
- Educational attainment was positively associated with a healthy weight and inversely associated with being obese.
- Thirty-four percent of adults under age 65 who had Medicaid health care coverage were obese compared with 24% of those who had private health insurance and 27% of those who were uninsured. Among adults age 65 and over, 27% of those who were covered by Medicare and Medicaid were obese compared with 21% of those with private health insurance and 22% of those with Medicare alone.
- Adults who did not live in an MSA were more likely to be obese than adults who lived in an MSA.
- Forty-eight percent of non-Hispanic white women were at a healthy weight compared with 36% of Hispanic women and 30% of non-Hispanic black women; 31% of non-Hispanic white men, 33% of non-Hispanic black men, and 28% of Hispanic men were at a healthy weight. Thirty-six percent of non-Hispanic black women were obese compared with 31% of Hispanic women and 22% of non-Hispanic white women; 28% of non-Hispanic black men, 24% of Hispanic men, and 25% of non-Hispanic white men were obese.

Body Mass Index (Tables 30,31)

- Based on their body mass index, 2% of adults 18 years of age and over were underweight, 38% were at a healthy weight, 35% were overweight (but not obese), and 25% were obese.
- Forty-five percent of women were at a healthy weight compared with 31% of men. Forty-three percent of men were overweight (but not obese) compared with 28% of women. Women were at least twice as likely to be underweight as were men.

Usual Place of Health Care (Tables 32,33)

- Overall, 15% of adults 18 years of age and over were without a usual place of health care. Of those with a usual place of care, 80% considered a doctor's office or health maintenance organization (HMO) to be their usual place of care, 17% considered a clinic or health center to be their usual place of care, and 2% considered a hospital emergency room or outpatient department to be their usual place of health care.
- Twenty percent of men were without a usual place of health care compared with 11% of women. Of those with a usual place of care, men were more likely to consider a hospital emergency room or outpatient department to be their usual place of health care than were women.
- Not having a usual place of health care was inversely related to age; as age increased, the percentage of adults without a usual place of health care decreased.
- When results are considered by single race and ethnicity, 26% of Hispanic adults did not have a usual place of care compared with 13% of non-Hispanic white adults and 15% of non-Hispanic black adults. Of those adults with a usual place of care, 83% of non-Hispanic white adults considered a doctor's office or an HMO to be their usual place of care compared with 76% of non-Hispanic black adults and 68% of Hispanic adults. Six percent of non-Hispanic black adults who had a usual place of care considered a hospital emergency room or outpatient department their usual place of care compared with 5% of Hispanic adults who had a usual place of care and 1% of non-Hispanic white adults.
- Adults with higher educational attainment and higher family income were more likely than those with lower educational attainment and lower family income to have a usual place of health care and to consider a doctor's office or HMO as their usual place of care.

- Among adults under 65 years of age, 48% of those who were uninsured did not have a usual place of health care compared with 9% of adults with private health care coverage and 10% of adults with Medicaid health care coverage.
- Among adults aged 65 and over with a usual place of care, 19% of those who had Medicaid and Medicare health care coverage considered a clinic or health center as their usual place of care compared with 10% of those who had private health insurance and 12% of those who had only Medicare health care coverage.
- Of those adults with a usual place of health care, adults who did not live in an MSA were more likely to consider a health center or clinic their usual place of care than were adults living in an MSA.
- Eighteen percent of adults living in the West and 17% of adults living in the South were without a usual place of care compared with 13% in the Midwest and 9% in the Northeast.
- Thirty-three percent of Hispanic men did not have a usual place of care compared with 20% of non-Hispanic black men and 17% of non-Hispanic white men. Nineteen percent of Hispanic women were without a usual place of care compared with 10% of non-Hispanic black women and 9% of non-Hispanic white women.
- When results are considered by single race and ethnicity, 29% of Hispanic adults had no visits to a doctor or other health professional in the past 12 months compared with 21% of non-Hispanic black adults and 16% of non-Hispanic white adults. Hispanic adults were also less likely to have made between two and nine office visits in the past 12 months compared with non-Hispanic black and non-Hispanic white adults.
- Office visits to a doctor or other health professional in the past 12 months were inversely related to the level of education; 27% of adults with less than a high school diploma had no office visits compared with 12% of adults with at least a bachelor's degree.
- Adults in families that were not poor were more likely to have had an office visit to a doctor or other health professional in the past 12 months compared with other adults. Adults in families that were poor or near poor were more likely to have made 10 or more office visits to a doctor or other health professional in the past 12 months than adults who were not poor.
- Among adults under 65 years of age, 45% who were uninsured had no visits to a doctor or other health professional in the past 12 months compared with 16% with private health care coverage and 13% with Medicaid health care coverage. Adults in this age group who were covered by Medicaid or other forms of insurance were more likely to have 10 or more office visits in the past 12 months than those with private insurance or no insurance coverage.

Number of Office Visits to a Doctor or Other Health Professional in the Past 12 Months (Tables 34,35)

- Overall, 19% of adults 18 years and over did not make an office visit to a doctor or other health professional in the past 12 months, 17% had one office visit, 25% had 2–3 visits, 24% had 4–9 visits, and 15% had 10 or more visits.
- Twenty-six percent of men and 12% of women had no office visits to a doctor or other health professional in the past 12 months.
- Nine percent of adults aged 65 and over with only Medicare health care coverage had no visits to a doctor or other health professional in the past 12 months compared with 5% of those with private health insurance coverage and 5% of those with Medicaid and Medicare health care coverage. Adults in this age group who were covered by Medicaid and Medicare were more likely to have 10 or more office visits in the past

12 months than those with private or other forms of coverage.

- Twenty-three percent of adults who lived in the West and 20% of adults in the South had no visits to a doctor or other health professional in the past 12 months compared with 17% of adults in the Midwest and 14% of those in the Northeast.
- Thirty-seven percent of Hispanic men did not visit a doctor or other health professional in the past 12 months compared with 30% of non-Hispanic black men and 22% of non-Hispanic white men. Twenty percent of Hispanic women did not visit a doctor or other health professional in the past 12 months compared with 13% of non-Hispanic black women and 10% of non-Hispanic white women.

Length of Time Since Last Contact with a Doctor or Other Health Professional (Tables 36,37)

- Overall, 69% of adults 18 years of age and over last contacted a doctor or other health professional within the previous 6 months; 14% last contacted a doctor or other health professional more than 6 months ago, but not more than 1 year ago; 8% last contacted a doctor or other health professional more than 1 year ago, but not more than 2 years ago; 5% last contacted a doctor or other health professional more than 2 years ago, but not more than 5 years ago; and 3% last contacted a doctor or other health professional more than 5 years ago. One percent of adults had never contacted a doctor or other health professional.
- Seventy-six percent of women last contacted a doctor or other health professional within the previous 6 months, and 14% last contacted a doctor or other health professional more than 6 months, but not more than 1 year ago. In contrast, 61% of men last contacted a doctor or other health professional within the previous 6 months, and 15% last contacted a doctor or other health professional more than 6 months,

but not more than 1 year ago. Men were more likely to have last contacted a doctor a year or more ago, as well as to have never contacted a doctor, than were women.

- Older adults (aged 65 and over) were more likely to have had more recent contact (within the past 6 months) with a doctor or other health professional than were younger adults (under 65 years of age).
- When results are considered by single race and ethnicity, Hispanic adults were less likely to have had more recent contact (within the past 6 months) with a doctor or other health professional than either non-Hispanic white adults or non-Hispanic black adults. Hispanic adults were four times as likely to have never had contact with a doctor or other health professional as non-Hispanic black adults and more than six times as likely as non-Hispanic white adults to have never had contact with a doctor or other health professional.
- Adults with less than a high school diploma were less likely than adults with more education to have last seen a doctor within the last 6 months and were more likely to have never seen a doctor.
- Adults in families that were not poor were more likely to have had more recent contact (within the past 6 months) with a doctor or other health professional than adults in poor or near poor families.
- Adults under 65 years of age who were uninsured were much less likely than insured adults to have last contacted a doctor or other health professional within the previous 6 months.
- A greater percentage of adults living in the West had never had contact with a doctor or other health professional compared with adults living in other regions.
- Hispanic men were less likely to have seen a doctor or other health professional within the previous 6 months compared with non-Hispanic black and non-Hispanic white men; 4% of Hispanic men had never seen

or talked to a doctor or other health professional compared with 1% of non-Hispanic black men and non-Hispanic white men. Similarly, among women, Hispanic women were less likely to have had contact with a doctor in the last 6 months compared with non-Hispanic black and non-Hispanic white women.

Length of Time Since Last Contact with a Dentist or Other Dental Health Professional (Tables 38,39)

- Overall, 46% of adults 18 years of age and over last contacted a dentist or other dental health professional within the previous 6 months; 18% more than 6 months ago, but not more than 1 year ago; 13% more than 1 year ago, but not more than 2 years ago; 12% more than 2 years ago, but not more than 5 years ago; and 12% last contacted a dentist or other dental health professional more than 5 years ago. One percent of adults had never contacted a dentist or other dental health professional.
- Forty-eight percent of women last contacted a dentist or other dental health professional within the previous 6 months compared with 41% of men.
- When results are considered by single race and ethnicity, non-Hispanic white adults were more likely to have contacted a dentist or other dental health professional within the previous 6 months (49%) than either non-Hispanic black adults (32%) or Hispanic adults (29%). Four percent of Hispanic adults had never contacted a dentist compared with less than 1 percent of non-Hispanic white adults and 1 percent non-Hispanic black adults.
- Adults with higher educational attainment and higher family income were considerably more likely to have contacted a dentist or other dental health professional in the last 6 months than were those with lower educational attainment and lower family income.

- Among adults under 65 years of age, 54% of adults with private health care coverage had contact with a dentist or other dental professional within the past 6 months compared with 30% of adults with Medicaid health care coverage and 19% of adults who were uninsured.
- Among adults aged 65 years and over, 50% of adults with private health care coverage had contact with a dentist or other dental professional within the past 6 months compared with 35% of adults who had only Medicare health care coverage and 23% of adults who had Medicaid and Medicare health care coverage.
- Adults who did not live in an MSA were less likely to have had contact with a dentist or other dental health professional within the past 6 months than adults who lived in an MSA.

HIV Testing Status (Tables 40,41)

- Overall, 35% of adults 18 years of age and over had ever been tested for HIV.
- Women were more likely to have ever been tested for HIV than men were.
- HIV testing status was inversely related to age; 46% of adults aged 18–44 had ever been tested for HIV compared with 30% of those aged 45–64, 13% aged 65–74, and 7% aged 75 and over.
- When considering results by single race without regard to ethnicity, 48% of black adults had ever been tested for HIV compared with 38% of American Indian or Alaska Native adults, 34% of white adults, and 31% of Asian adults.
- When considering results by single race and ethnicity, 48% of non-Hispanic black adults had ever been tested for HIV compared with 37% of Hispanic adults and 33% of non-Hispanic white adults.
- A higher percentage of adults who had some college and of those with at least a bachelor's degree had ever

- been tested for HIV compared with adults with less education.
- Among adults under age 65, 52% of those who had Medicaid health care coverage had ever been tested for HIV compared with 39% of those who had private health insurance and 41% who were uninsured.
 - Forty-six percent of adults who were divorced or separated and 44% those who were living with a partner had ever been tested for HIV compared with 36% of married adults and 31% of never married adults.
 - Adults who did not live in an MSA were less likely to have ever been tested for HIV than adults who lived in an MSA.
 - Adults who lived in the South were more likely to have ever been tested for HIV than adults who lived in other regions.
 - Fifty-one percent of non-Hispanic black women had ever been tested for HIV compared with 43% of Hispanic women and 36% of non-Hispanic white women. Forty-six percent of non-Hispanic black men had ever been tested for HIV compared with 33% of Hispanic men and 30% of non-Hispanic white men.

Black or African American, single race, female	13,397	1,420	786	4,303	470

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹In separate questions, respondents were asked if they had ever been told by a doctor or other health professional that they had: hypertension (or high blood pressure); coronary heart disease; angina (or angina pectoris); heart attack (or myocardial infarction); any other heart condition or disease not already mentioned; a stroke. A person may be represented in more than one column.

²Heart disease includes coronary heart disease, angina pectoris, heart attack, or any other heart condition or disease.

³Coronary heart disease includes coronary heart disease, angina pectoris, or heart attack.

⁴Persons had to have been told on two or more different visits that they had hypertension or high blood pressure to be classified as hypertensive.

⁵Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the "all persons 18 years of age and over" column. The numbers in this table are rounded.

⁶Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁷In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁸The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁹Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

¹⁰Education is shown only for persons aged 25 years and over.

¹¹GED is General Educational Development high school equivalency diploma.

¹²The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹³Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹⁴Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹⁵MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Black or African American, single race, male	9.0 (0.76)	5.7 (0.65)	28.1 (1.20)	2.8 (0.47)
Black or African American, single race, female	11.4 (0.70)	6.6 (0.59)	34.0 (1.01)	4.0 (0.44)

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹In separate questions, respondents were asked if they had ever been told by a doctor or other health professional that they had: hypertension (or high blood pressure), coronary heart disease, angina (or angina pectoris), heart attack (or myocardial infarction), any other heart condition or disease not already mentioned, or a stroke. A person may be represented in more than one column.

²Heart disease includes coronary heart disease, angina pectoris, heart attack, or any other heart condition or disease.

³Coronary heart disease includes coronary heart disease, angina pectoris, or heart attack.

⁴Persons had to have been told on two or more different visits that they had hypertension or high blood pressure to be classified as hypertensive.

⁵Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I). Percentages in this table are rounded.

⁶Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁷Estimates for age groups are not age adjusted.

⁸In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁹The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

¹⁰Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

¹¹Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

¹²GED is General Educational Development high school equivalency diploma.

¹³The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁴Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹⁵Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹⁶MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table IV in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

– Quantity zero.

¹ Respondents were asked in two separate questions if they had ever been told by a doctor or other health professional that they had emphysema or asthma. Respondents who had been told they had asthma were asked if they still had asthma. Respondents were asked in three separate questions if they had been told by a doctor or other health professional in the past 12 months that they had hay fever, sinusitis, or bronchitis. A person may be represented in more than one column.

² Unknowns for the columns are not included in the frequencies (see Appendix I) but they are included in the “all persons 18 years of age and over” column. The numbers in this table are rounded.

³ Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴ In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race,” but not shown separately due to small sample sizes. Therefore, the frequencies for the category “1 race” will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, black or African American” in the tables is referred to as “black persons” in the text.

⁵ The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category “2 or more races” will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶ Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷ Education is shown only for persons aged 25 years and over.

⁸ GED is General Educational Development high school equivalency diploma.

⁹ The categories “less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰ Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹¹ Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category “private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, “private” includes persons with only private or private in combination with Medicare. The category “uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹² MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

– Quantity zero.

¹ Respondents were asked in two separate questions if they had ever been told by a doctor or other health professional that they had emphysema or asthma. Respondents who had been told they had asthma were asked if they still had asthma. Respondents were asked in three separate questions if they had been told by a doctor or other health professional in the past 12 months that they had hay fever, sinusitis, or bronchitis. A person may be represented in more than one column.

² Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I). Percentages in this table are rounded.

³ Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴ Estimates for age groups are not age adjusted.

⁵ In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix I), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race” but not shown separately due to small sample sizes. Therefore, the frequencies for the category “1 race” will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new OMB race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, black or African American” in the tables is referred to as “black persons” in the text.

⁶ The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category “2 or more races” will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁷ Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸ Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

⁹ GED is General Educational Development high school equivalency diploma.

¹⁰ The categories “less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹ Poverty status is based on family income and family size using the Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹² Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category “private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, “private” includes persons with only private or private in combination with Medicare. The category “uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix I).

¹³ MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table V in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

– Quantity zero.

¹ Respondents were asked if they had ever been told by a doctor or other health professional that they had a cancer or a malignancy of any kind. They were then asked to name the kind of cancer they had. A person may be represented in more than one column.

² Unknowns for the rows or columns are not included in the frequencies (see Appendix I) but they are included in the "All persons 18 years of age and over" column. The numbers in this tables are rounded.

³ Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴ In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵ The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶ Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷ Education is shown only for persons aged 25 years and over.

⁸ GED is General Educational Development high school equivalency diploma.

⁹ The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰ Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹ Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹² MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 6. Age-adjusted percentages (with standard errors) of cancer among persons 18 years of age and over, by selected characteristics: United States, 2005

Selected characteristic	Selected type of cancer ¹

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

0.0 Quantity more than zero but less than 0.05.

... Category not applicable.

– Quantity zero.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹ Respondents were asked if they had ever been told by a doctor or other health professional that they had a cancer or a malignancy of any kind. They were then asked to name the kind of cancer they had. A person may be represented in more than one column.

² Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I). Further, the denominators for calculating cervical cancer and prostate cancer percentages are sex-specific, while the denominators for calculating breast cancer percentages encompass all adults. Percentages in this table are rounded.

³ Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴ Estimates for age groups are not age adjusted.

⁵ In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁶ The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁷ Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸ Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

⁹ GED is General Educational Development high school equivalency diploma.

¹⁰ The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹ Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹² Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹³ MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table VI in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

– Quantity zero.

¹In separate questions, respondents were asked if they had ever been told by a doctor or other health professional that they had: an ulcer (including a stomach, duodenal, or peptic ulcer) or diabetes (or sugar diabetes; female respondents were instructed to exclude pregnancy-related diabetes). Responses from persons who said they had "borderline" diabetes were treated as unknown with respect to diabetes. A person may be represented in more than one column.

²In separate questions, respondents were asked if they had been told in the last 12 months by a doctor or other health professional that they had: weak or failing kidneys (excluding kidney stones, bladder infections, or incontinence) or any kind of liver condition.

³Respondents were asked if they had ever been told by a doctor or other health professional that they had some form of arthritis, rheumatoid arthritis, gout, lupus, or fibromyalgia. Those that answered yes were classified as having an arthritis diagnosis. Respondents were also asked: "During the past 30 days, have you had pain, aching, or stiffness in or around a joint?" (excluding back and neck) and, if yes, "Did your joint symptoms first begin more than 3 months ago?" Respondents with symptoms that began more than 3 months ago were classified in this table as having chronic joint symptoms.

⁴Unknowns for the columns are not included in the frequencies (see Appendix I) but they are included in the "all persons 18 years of age and over" column. The numbers in this table are rounded.

⁵Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁶In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁷The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁸Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁹Education is shown only for persons aged 25 years and over.

¹⁰GED is General Educational Development high school equivalency diploma.

¹¹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹²Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹³Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹⁴MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 8. Age-adjusted percentages (with standard errors) of selected diseases and conditions among persons 18 years of age and over, by selected characteristics: United States, 2005

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

– Quantity zero.

¹In separate questions, respondents were asked if they had ever been told by a doctor or other health professional that they had: an ulcer (including a stomach, duodenal, or peptic ulcer) or diabetes (or sugar diabetes; female respondents were instructed to exclude pregnancy-related diabetes). Responses from persons who said they had “borderline” diabetes were treated as unknown with respect to diabetes. A person may be represented in more than one column.

²In separate questions, respondents were asked if they had been told in the last 12 months by a doctor or other health professional that they had: weak or failing kidneys (excluding kidney stones, bladder infections, or incontinence) or any kind of liver condition.

³Respondents were asked if they had ever been told by a doctor or other health professional that they had some form of arthritis, rheumatoid arthritis, gout, lupus, or fibromyalgia. Those that answered yes were classified as having an arthritis diagnosis. Respondents were also asked: “During the past 30 days, have you had pain, aching, or stiffness in or around a joint?” (excluding back and neck) and, if yes, “Did your joint symptoms first begin more than 3 months ago?” Respondents with symptoms that began more than 3 months ago were classified in this table as having chronic joint symptoms.

⁴Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I). Percentages in this table are rounded.

⁵Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁶Estimates for age groups are not age adjusted.

⁷In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race,” but not shown separately due to small sample sizes. Therefore, the frequencies for the category “1 race” will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, black or African American” in the tables is referred to as “black persons” in the text.

⁸The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category “2 or more races” will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁹Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

¹⁰Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

¹¹GED is General Educational Development high school equivalency diploma.

¹²The categories “less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹³Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹⁴Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category “private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, “private” includes persons with only private or private in combination with Medicare. The category “uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹⁵MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table VII in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 9. Frequencies of migraines and pain in the neck, lower back, face or jaw among persons 18 years of age and over, by selected characteristics: United States, 2005—Con.

Selected characteristic	All persons 18 years of age and over	Migraines or severe headaches ¹	Pain in neck ²	Pain in lower back ³	Pain in face or jaw ⁴
Marital status					
Number in thousands ⁵					
Married	124,382	17,530	18,729	36,215	5,222
Widowed	13,805	1,299	2,177	4,641	562
Divorced or separated	23,244	4,317	4,427	7,708	1,404
Never married	42,947	7,006	4,724	9,253	1,755
Living with a partner	12,664	2,630	2,167	4,025	679
Place of residence ¹⁵					
Large MSA	99,488	13,745	13,327	25,860	3,782
Small MSA	74,393	11,833	11,587	21,702	3,359
Not in MSA	43,892	7,249	7,380	14,402	2,498
Region					
Northeast	39,843	5,696	5,825	11,402	1,466
Midwest	53,925	8,669	8,606	15,970	2,771
South	78,831	11,923	10,847	21,608	3,433
West	45,175	6,539	7,015	12,985	1,969
Sex and ethnicity					
Hispanic or Latino, male	14,266	1,351	1,236	3,134	323
Hispanic or Latina, female	13,504	2,968	2,256	3,849	600
Not Hispanic or Latino:					
White, single race, male	74,148	7,146	10,145	20,876	2,096
White, single race, female	80,178	16,299	14,373	25,222	5,203
Black or African American, single race, male	10,789	967	1,096	2,358	283
Black or African American, single race, female	13,397	2,540	1,755	3,731	644

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹ Respondents were asked, "During the past three months, did you have a severe headache or migraine?" Respondents were instructed to report pain that had lasted a whole day or more, and conversely, not to report fleeting or minor aches or pains. A person may be represented in more than one column.

² Respondents were asked, "During the past three months, did you have neck pain?" Respondents were instructed to report pain that had lasted a whole day or more, and conversely, not to report fleeting or minor aches or pains. Persons may be represented in more than one column.

³ Respondents were asked, "During the past three months, did you have low back pain?" Respondents were instructed to report pain that had lasted a whole day or more, and conversely, not to report fleeting or minor aches or pains. Persons may be represented in more than one column.

⁴ Respondents were asked, "During the past three months, did you have facial ache or pain in the jaw muscles or the joint in front of the ear?" Respondents were instructed to report pain that had lasted a whole day or more, and conversely, not to report fleeting or minor aches or pains. Persons may be represented in more than one column.

⁵ Unknowns for the columns are not included in the frequencies (see Appendix I) but they are included in the "all persons 18 years of age and over" column. The numbers in this table are rounded.

⁶ Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁷ In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁸ The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁹ Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

¹⁰ Education is shown only for persons aged 25 years and over.

¹¹ GED is General Educational Development high school equivalency diploma.

¹² The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹³ Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹⁴ Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹⁵ MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 10. Age-adjusted percentages (with standard errors) of migraines and pain in the neck, lower back, face or jaw among persons 18 years of age and over, by selected characteristics: United States, 2005

Selected characteristic	Migraines or severe headaches ¹	Pain in neck ²	Pain in lower back ³	Pain in face or jaw ⁴

West	14.3 (0.50)	15.4 (0.53)	28.8 (0.69)	4.3 (0.30)
Sex and ethnicity				
Hispanic or Latino, male	9.3 (0.70)	10.5 (0.90)	24.3 (1.13)	2.6 (0.50)
Hispanic or Latina, female	21.2 (0.91)	17.9 (0.93)	30.1 (1.11)	4.6 (0.47)
Not Hispanic or Latino:				
White, single race, male	9.8 (0.39)	13.5 (0.44)	28.0 (0.61)	2.9 (0.21)
White, single race, female	21.4 (0.49)	17.7 (0.43)	31.0 (0.53)	6.6 (0.28)
Black or African American, single race, male	8.6 (0.78)	10.3 (0.96)	22.1 (1.26)	2.7 (0.50)
Black or African American, single race, female	18.4 (0.99)	13.2 (0.87)	28.1 (1.16)	4.9 (0.49)

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹ Respondents were asked, "During the past three months, did you have a severe headache or migraine?" Respondents were instructed to report pain that had lasted a whole day or more, and conversely, not to report fleeting or minor aches or pains. A person may be represented in more than one column.

² Respondents were asked, "During the past three months, did you have neck pain?" Respondents were instructed to report pain that had lasted a whole day or more, and conversely, not to report fleeting or minor aches or pains. Persons may be represented in more than one column.

³ Respondents were asked, "During the past three months, did you have low back pain?" Respondents were instructed to report pain that had lasted a whole day or more, and conversely, not to report fleeting or minor aches or pains. Persons may be represented in more than one column.

⁴ Respondents were asked, "During the past three months, did you have facial ache or pain in the jaw muscles or the joint in front of the ear?" Respondents were instructed to report pain that had lasted a whole day or more, and conversely, not to report fleeting or minor aches or pains. Persons may be represented in more than one column.

⁵ Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I). Percentages in this table are rounded.

⁶ Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁷ Estimates for age groups are not age adjusted.

⁸ In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁹ The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

¹⁰ Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

¹¹ Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

¹² GED is General Educational Development high school equivalency diploma.

¹³ The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁴ Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹⁵ Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹⁶ MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table VIII in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 11. Frequencies of hearing trouble, vision trouble, and absence of teeth among persons 18 years of age and over, by selected characteristics: United States, 2005

West	45,175	7,548	3,892	2,338
Sex and ethnicity				
Hispanic or Latino, male	14,266	1,243	881	600
Hispanic or Latina, female	13,504	972	1,263	685
Not Hispanic or Latino:				
White, single race, male	74,148	18,082	6,001	5,507
White, single race, female	80,178	12,541	8,811	6,952
Black or African American, single race, male	10,789	1,054	885	691
Black or African American, single race, female	13,397	1,056	1,591	1,309

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹ Respondents were asked, "Which statement best describes your hearing without a hearing aid: good, a little trouble, a lot of trouble, deaf?" For this table, "a little trouble," "a lot of trouble," and "deaf" are combined into one category. Regarding their vision, respondents were asked, "Do you have any trouble seeing, even when wearing glasses or contact lenses?" Respondents were also asked "Are you blind or unable to see at all?" For this table, "any trouble seeing" and "blind" are combined into one category. Lastly, respondents were asked, in one question, "Have you lost all of your upper and lower natural (permanent) teeth?" A person may be represented in more than one column.

² Unknowns for the columns are not included in the frequencies (see Appendix I) but they are included in the "all persons 18 years of age and over" column. The numbers in this table are rounded.

³ Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴ In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵ The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶ Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷ Education is shown only for persons aged 25 years and over.

⁸ GED is General Educational Development high school equivalency diploma.

⁹ The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰ Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹ Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹² MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 12. Age-adjusted percentages (with standard errors) of hearing trouble, vision trouble, and absence of teeth among persons 18 years of age and over, by selected characteristics: United States, 2005

Selected characteristic	Selected sensory problems ¹

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹ Respondents were asked, "Which statement best describes your hearing without a hearing aid: good, a little trouble, a lot of trouble, deaf?" For this table, "a little trouble," "a lot of trouble," and "deaf" are combined into one category. Regarding their vision, respondents were asked, "Do you have any trouble seeing, even when wearing glasses or contact lenses?" Respondents were also asked "Are you blind or unable to see at all?" For this table "any trouble seeing" and "blind" are combined into one category. Lastly, respondents were asked, in one question, "Have you lost all of your upper and lower natural (permanent) teeth?" A person may be represented in more than one column.

² Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I). Percentages in this table are rounded.

³ Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴ Estimates for age groups are not age adjusted.

⁵ In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁶ The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁷ Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸ Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

⁹ GED is General Educational Development high school equivalency diploma.

¹⁰ The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹ Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹² Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹³ MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table IX in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 13. Frequencies of feelings of sadness, hopelessness, worthlessness, or that everything is an effort among persons 18 years of age and over, by selected characteristics: United States, 2005

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

– Quantity zero.

¹In four separate questions, respondents were asked how often in the past 30 days they felt: so sad that nothing could cheer them up, hopeless, worthless, or that everything was an effort. Respondents could choose from among five response categories: "all of the time," "most of the time," "some of the time," "a little of the time," or "none of the time." For this table, "all" and "most" are combined, and "some" is shown separately.

²Unknowns for the columns are not included in the frequencies (see Appendix I) but they are included in the "all persons 18 years of age and over" column. The numbers in this table are rounded.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 14. Age-adjusted percentages (with standard errors) of feelings of sadness, hopelessness, worthlessness, or that everything is an effort among persons 18 years of age and over, by selected characteristics: United States, 2005

Black or African American, single race, female	5.8 (0.60)	11.9 (0.77)	2.7 (0.34)	5.4 (0.51)	1.8 (0.27)	4.4 (0.54)	9.5 (0.79)	10.3 (0.75)	

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

– Quantity zero.

¹In four separate questions, respondents were asked how often in the past 30 days they felt: so sad that nothing could cheer them up, hopeless, worthless, or that everything was an effort. Respondents could choose from among five response categories: "all of the time," "most of the time," "some of the time," "a little of the time," or "none of the time." For this table, "all" and "most" are combined, and "some" is shown separately.

²Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I). Percentages in this table are rounded.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴Estimates for age groups are not age adjusted.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁶The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table X in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹In two separate questions, respondents were asked how often they felt nervous or restless in the past 30 days. Respondents could choose among five response categories: "all of the time," "most of the time," "some of the time," "a little of the time," or "none of the time." For this table, "all" and "most" are combined, and "some" is shown separately.

²Unknowns for the columns are not included in the frequencies (see Appendix I) but they are included in the "all persons 18 years of age and over" column. The numbers in this table are rounded.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

White, single race, female	5.0 (0.27)	13.7 (0.39)	6.3 (0.30)	12.5 (0.38)
Black or African American, single race, male	2.8 (0.48)	8.0 (0.79)	4.1 (0.56)	10.4 (1.04)
Black or African American, single race, female	4.6 (0.52)	11.1 (0.72)	6.7 (0.59)	14.0 (0.88)

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

¹In two separate questions, respondents were asked how often they felt nervous or restless in the past 30 days. Respondents could choose among five response categories: "all of the time," "most of the time," "some of the time," "a little of the time," or "none of the time." For this table, "all" and "most" are combined, and "some" is shown separately.

²Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I). Percentages in this table are rounded.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴Estimates for age groups are not age adjusted.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁶The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table XI in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 17. Frequencies of work-loss days experienced in the past 12 months by employed persons 18 years of age and over, numbers (with standard errors) of work-loss days per employed person, frequencies of bed days experienced in the past 12 months by all persons 18 years of age and over, and numbers (with standard errors) of bed days per person, by selected characteristics: United States, 2005

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹ Respondents who had worked during the past year were asked, "During the past 12 months, about how many days did you miss work at a job or business because of illness or injury (do not include maternity leave)?" In addition, all respondents were asked, "During the past 12 months, about how many days did illness or injury keep you in the bed more than half of the day (include days while an overnight patient in a hospital)?"

² Unknowns for the columns "work-loss days in the past 12 months" and "bed days in the past 12 months" are not included in the denominators when calculating rates in columns "days per person" (see Appendix I). They are, however, included in the "all employed persons 18 years of age and over" and "all persons 18 years of age and over" columns. The numbers in this table are rounded.

³ Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴ In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵ The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶ Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷ Education is shown only for persons aged 25 years and over.

⁸ GED is General Educational Development high school equivalency diploma.

⁹ The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰ Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹ Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹² MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 18. Frequencies of difficulties in physical functioning among persons 18 years of age and over, by selected characteristics: United States, 2005

Selected characteristic	Physical activities that are very difficult or cannot be done at all ¹										
	All persons 18 years of age and over	Any physical difficulty ²	Walk a quarter of a mile	Climb up 10 steps without resting	Stand for 2 hours	Sit for 2 hours	Stoop, bend, or kneel	Reach over head	Grasp or handle small objects	Lift or carry 10 pounds	Push or pull large objects

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹In a series of separate questions, respondents were asked the degree of difficulty they experienced performing nine physical activities by themselves, and without using any special equipment. The activities included walking a quarter of a mile (or three city blocks); standing for 2 hours; stooping/bending/kneeling; climbing 10 steps without resting; sitting for 2 hours; reaching over one's head; using one's fingers to grasp or handle small objects; lifting or carrying a 10-pound object (such as a full bag of

groceries); and pushing or pulling a large object (such as a living room chair). The response categories consisted of “not at all difficult,” “only a little difficult,” “somewhat difficult,” “very difficult,” “can’t do at all,” or “do not do this activity.” For this table, response categories “very difficult” and “can’t do at all” are combined and shown in the columns.

²Any physical difficulty” consists of a “very difficult” or “can’t do at all” response to at least one of the nine physical activities shown in columns 4–12.

³Frequencies of persons reporting no difficulty in physical functioning, “only a little” or “some” difficulty, who “do not do this activity,” or for whom the information is unknown (see Appendix I), are not shown separately, but are included in the “all persons 18 years of age and over” column. Numbers in this table are rounded.

⁴Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race,” but not shown separately due to small sample sizes. Therefore, the frequencies for the category “1 race” will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, black or African American” in the tables is referred to as “black persons” in the text.

⁶The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category “2 or more races” will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories “less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category “private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, “private” includes persons with only private or private in combination with Medicare. The category “uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. Not in MSA consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 19. Age-adjusted percentages (with standard errors) of difficulties in physical functioning among persons 18 years of age and over, by selected characteristics: United States, 2005

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹In a series of separate questions, respondents were asked the degree of difficulty they experienced performing nine physical activities by themselves, and without using any special equipment. The activities included walking a quarter of a mile (or three city

blocks); standing for 2 hours; stooping/bending/kneeling; climbing 10 steps without resting; sitting for 2 hours; reaching over one's head; using one's fingers to grasp or handle small objects; lifting or carrying a 10-pound object (such as a full bag of groceries); and pushing or pulling a large object (such as a living room chair). The response categories consisted of "not at all difficult," "only a little difficult," "somewhat difficult," "very difficult," "can't do at all," or "do not do this activity." For this table, response categories "very difficult" and "can't do at all" are combined and shown in the columns.

²Any physical difficulty" consists of a "very difficult" or "can't do at all" response to at least one of the nine physical activities shown in columns 3–11.

³Persons who respond "do not do this activity," as well as those for whom the information is unknown are not included in the denominator when calculating percentages. Percentages in this table are rounded.

⁴Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁵Estimates for age groups are not age adjusted.

⁶In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁷The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁸Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁹Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

¹⁰GED is General Educational Development high school equivalency diploma.

¹¹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹²Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹³Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹⁴MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table XII in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 20. Frequency distributions of respondent-assessed health status among persons 18 years of age and over, by selected characteristics: United States, 2005

Black or African American, single race, male	10,789	5,921	3,058	1,799
Black or African American, single race, female	13,397	6,817	3,985	2,595

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹The data in this table are based on a question in the survey that asked respondents, "Would you say (subject name's) health in general was excellent, very good, good, fair, or poor?" This information was obtained during a part of the interview that allowed proxy responses, such that a knowledgeable adult family member could respond on behalf of adults not taking part in the interview (however, the sample in this table is based on the reported health status for the Sample Adult only). "Excellent" and "very good" are combined in this table as are "fair" and "poor."

²Unknowns for the columns are not included in the frequency distributions (see Appendix I). They are, however, included in the "all persons 18 years of age and over" column. Numbers may not add to totals because of rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 21. Age-adjusted percent distributions (with standard errors) of respondent-assessed health status among persons 18 years of age and over, by selected characteristics: United States, 2005

Selected characteristic	Total	Current health status among persons 18 years of age and over ¹		
		Excellent or very good	Good	Fair or poor

Black or African American, single race, female	100.0	49.7 (1.18)	29.9 (1.04)	20.4 (0.93)

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

¹The data in this table are based on a question in the survey that asked respondents, "Would you say {subject name's} health in general was excellent, very good, good, fair, or poor?" This information was obtained during a part of the interview that allowed proxy responses, such that a knowledgeable adult family member could respond on behalf of adults not taking part in the interview (however, the sample in this table is based on the reported health status for the Sample Adult only). "Excellent" and "very good" are combined in this table, as are "fair" and "poor."

²Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴Estimates for age groups are not age adjusted.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁶The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table XIII in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

– Quantity zero.

¹This table is based on a question in the survey that asked respondents, "Would you say {subject name's} health in general is excellent, very good, good, fair, or poor?" Proxy responses were allowed for adults not taking part in this portion of the interview (however, the sample in this table is based on the reported health status for the Sample Adult only). "Excellent" and "very good" are combined in this table, as are "fair" and "poor." All sample adult respondents were also asked, "Compared with 12 months ago, would you say your health is better, worse, or about the same?"

²Unknowns for the columns are not included in the frequency distributions (see Appendix I). They are, however, included in the "all persons 18 years of age and over" column. Numbers may not add to totals because of rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 23. Age-adjusted percent distributions (with standard errors) of current health status relative to health status a year ago among persons 18 years of age and over, by selected characteristics: United States, 2005

Selected characteristic	Current health status among persons 18 years of age and over ¹									
	Excellent or very good			Good			Fair or poor			
	Better than last year	About the same as last year	Worse than last year	Better than last year	About the same as last year	Worse than last year	Better than last year	About the same as last year	Worse than last year

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

– Quantity zero.

¹This table is based on a question in the survey that asked respondents, “Would you say {subject name’s} health in general is excellent, very good, good, fair, or poor?” Proxy responses were allowed for adults not taking part in this portion of the interview (however, the sample in this table is based on the reported health status for the Sample Adult only). “Excellent” and “very good” are combined in this table, as are “fair” and “poor.” All sample adult respondents were also asked, “Compared with 12 months ago, would you say your health is better, worse, or about the same?”

²Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴Estimates for age groups are not age adjusted.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race,” but not shown separately due to small sample sizes. Therefore, the frequencies for the category “1 race” will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, black or African American” in the tables is referred to as “black persons” in the text.

⁶The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category “2 or more races” will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories “less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category “private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, “private” includes persons with only private or private in combination with Medicare. The category “uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table XIV in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 24. Frequency distributions of current cigarette smoking status among persons 18 years of age and over, by selected characteristics: United States, 2005

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

¹The data in this table are based on two questions in the survey: "Have you smoked at least 100 cigarettes in your entire life?" and "Do you now smoke cigarettes every day, some days, or not at all?"

²Current smokers have smoked at least 100 cigarettes in their lifetime and still currently smoke. Everyday smokers are current smokers who smoke every day while some day smokers are current smokers who smoke on some days.

³Former smokers are persons who have smoked at least 100 cigarettes in their lifetime, but currently do not smoke at all.

⁴Nonsmokers are persons who have never smoked at least 100 cigarettes in their lifetime.

⁵Unknowns for the columns are not included in the frequency distributions (see Appendix I) but they are included in the "all persons 18 years of age and over" column. Numbers may not add to totals because of rounding.

⁶Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁷In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁸The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁹Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

¹⁰Education is shown only for persons aged 25 years and over.

¹¹GED is General Educational Development high school equivalency diploma.

¹²The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹³Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹⁴Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹⁵MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Black or African American, single race, male	100.0	25.9 (1.32)	18.8 (1.20)	7.1 (0.68)	18.2 (1.11)	55.9 (1.47)
Black or African American, single race, female	100.0	16.9 (0.90)	13.3 (0.81)	3.6 (0.39)	12.6 (0.78)	70.5 (1.10)

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

¹The data in this table are based on two questions in the survey: "Have you smoked at least 100 cigarettes in your entire life?" and "Do you now smoke cigarettes every day, some days, or not at all?"

²Current smokers have smoked at least 100 cigarettes in their lifetime and still currently smoke. Everyday smokers are current smokers who smoke every day while some day smokers are current smokers who smoke on some days.

³Former smokers are persons who have smoked at least 100 cigarettes in their lifetime, but currently do not smoke at all.

⁴Nonsmokers are persons who have never smoked at least 100 cigarettes in their lifetime.

⁵Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

⁶Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁷Estimates for age groups are not age adjusted.

⁸In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁹The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

¹⁰Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

¹¹Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

¹²GED is General Educational Development high school equivalency diploma.

¹³The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁴Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹⁵Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹⁶MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. Not in MSA consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table XV in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹Data on alcohol consumption are derived from several source questions: "In ANY ONE YEAR, have you had at least 12 drinks of any type of alcoholic beverage?," "In your ENTIRE LIFE, have you had at least 12 drinks of any type of alcoholic beverage?," and "In the PAST YEAR, how often did you drink any type of alcoholic beverage?"

²The drinking status categories in this table are based on the same definitions used in the Health, United States publications (see Appendix II), and are derived from respondents' self-reported responses to a series of questions about alcohol consumption. A lifetime abstainer had fewer than 12 drinks in his/her lifetime. A former drinker had at least 12 drinks in his/her lifetime or in any one year AND had no drink in the past year. A current drinker had at least 12 drinks in his/her lifetime or in any one year AND had a drink between 1–365 times in the past year.

³Former infrequent drinkers had at least 12 drinks in their lifetime, but fewer than 12 drinks in any 1 year and no drinks in the last year. Former regular drinkers had at least 12 drinks in any 1 year and no drinks in the last year. Current infrequent drinkers had at least 12 drinks in their lifetime and fewer than 12 drinks in the past year, and current regular drinkers had at least 12 drinks in the past year. Former and current drinkers for whom the frequency of consumption or amount consumed was unknown are not included.

⁴Unknowns for the columns are not included in the frequency distributions (see Appendix I) but they are included in the "All persons 18 years of age and over" column. Numbers may not add to totals because of rounding.

⁵Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁶In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁷The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁸Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁹Education is shown only for persons aged 25 years and over.

¹⁰GED is General Educational Development high school equivalency diploma.

¹¹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹²Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹³Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹⁴MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 27. Age-adjusted percent distributions (with standard errors) of alcohol drinking status among persons 18 years of age and over, by selected characteristics: United States, 2005

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹Data on alcohol consumption are derived from several source questions: "In ANY ONE YEAR, have you had at least 12 drinks of any type of alcoholic beverage?," "In your ENTIRE LIFE, have you had at least 12 drinks of any type of alcoholic beverage?," and "In the PAST YEAR, how often did you drink any type of alcoholic beverage?"

²The drinking status categories in this table are based on the same definitions used in the Health, United States publications (see Appendix II), and are derived from respondents' self-reported responses to a series of questions about alcohol consumption. A lifetime abstainer had fewer than 12 drinks in his/her lifetime. A former drinker had at least 12 drinks in his/her lifetime or in any one year AND had no drink in the past year. A current drinker had at least 12 drinks in his/her lifetime or in any one year AND had a drink between 1–365 times in the past year.

³Former regular drinkers had at least 12 drinks in any one year and no drinks in the last year. Current infrequent drinkers had at least 12 drinks in their lifetime and fewer than 12 drinks in the past year, and current regular drinkers had at least 12 drinks in the past year. Former and current drinkers for whom the frequency of consumption or amount consumed was unknown are not included.

⁴Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

⁵Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁶Estimates for age groups are not age adjusted.

⁷In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁸The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁹Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

¹⁰Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

¹¹GED is General Educational Development high school equivalency diploma.

¹²The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹³Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹⁴Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹⁵MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table XVI in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 28. Frequency distributions of number of periods per week of vigorous leisure-time physical activity lasting 10 minutes or more among persons 18 years of age and over, by selected characteristics: United States, 2005

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

– Quantity zero.

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

¹The data in this table are based on several questions in the survey that asked respondents how often they did vigorous activities during their leisure time for at least 10 minutes that caused heavy sweating and large increases in breathing or heart rates. Persons could indicate the time period for these activities as “times per day,” “times per week,” “times per month,” or “times per year.” Persons who indicated they were unable to do vigorous activity were included in the “never” category.

²Unknowns for the columns are not included in the frequency distributions (see Appendix I) but they are included in the “all persons 18 years of age and over” column. Numbers may not add to totals because of rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race,” but not shown separately due to small sample sizes. Therefore, the frequencies for the category “1 race” will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, black or African American” in the tables is referred to as “black persons” in the text.

⁵The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category “2 or more races” will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories “less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category “private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, “private” includes persons with only private or private in combination with Medicare. The category “uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 29. Age-adjusted percent distributions (with standard errors) of number of periods per week of vigorous leisure-time physical activity lasting 10 minutes or more among persons 18 years of age and over, by selected characteristics: United States, 2005

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.
 – Quantity zero.
 * Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

¹The data in this table are based on several questions in the survey that asked respondents how often they did vigorous activities during their leisure time for at least 10 minutes that caused heavy sweating and large increases in breathing or heart rates. Persons could indicate the time period for these activities as “times per day,” “times per week,” “times per month,” or “times per year.” Persons who indicated they were unable to do vigorous activity were included in the “never” category.

²Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴Estimates for age groups are not age adjusted.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race,” but not shown separately due to small sample sizes. Therefore, the frequencies for the category “1 race” will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, black or African American” in the tables is referred to as “black persons” in the text.

⁶The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category “2 or more races” will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories “less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category “private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, “private” includes persons with only private or private in combination with Medicare. The category “uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table XVII in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

White, single race, female	80,178	2,348	35,603	20,831	16,738
Black or African American, single race, male	10,789	*90	3,437	3,965	3,021
Black or African American, single race, female	13,215	169	3,817	4,084	4,567

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

– Quantity zero.

¹Body mass index (BMI) is calculated from the information respondents supplied in response to the questions in the survey regarding height and weight. For both men and women, underweight is indicated by a BMI under 18.5; healthy weight is indicated by a BMI greater than or equal to 18.5 and less than 25.0; overweight is indicated by a BMI greater than or equal to 25.0 and less than 30.0; obesity is indicated by a BMI greater than or equal to 30.0. Analysts should note self-reported height and weight may differ from actual measurements.

²Unknowns for the columns are not included in the frequency distributions (see Appendix I), but they are included in the “all persons 18 years of age and over” column. Numbers may not add to totals because of rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race,” but not shown separately due to small sample sizes. Therefore, the frequencies for the category “1 race” will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, black or African American” in the tables is referred to as “black persons” in the text.

⁵The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category “2 or more races” will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories “less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category “private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, “private” includes persons with only private or private in combination with Medicare. The category “uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 31. Age-adjusted percent distributions (with standard errors) of body mass index among persons 18 years of age and over, by selected characteristics: United States, 2005

Selected characteristic	Total	Body mass index among persons 18 years of age and over ¹			
		Under-weight	Healthy weight	Over-weight	Obese

Black or African American, single race, female	100.0	1.4 (0.27)	30.1 (1.10)	32.7 (1.07)	35.9 (1.22)

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

– Quantity zero.

¹Body mass index (BMI) is calculated from the information respondents supplied in response to the questions in the survey regarding height and weight. For both men and women, underweight is indicated by a BMI under 18.5; healthy weight is indicated by a BMI greater than or equal to 18.5 and less than 25.0; overweight is indicated by a BMI greater than or equal to 25.0 and less than 30.0; obesity is indicated by a BMI greater than or equal to 30.0. Analysts should note self-reported height and weight may differ from actual measurements.

²Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴Estimates for age groups are not age adjusted.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁶The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table XVIII in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 32. Frequency distributions of having a usual place of health care among persons 18 years of age and over, and of type of place among those persons 18 years of age and over with a usual place of health care, by selected characteristics: United States, 2005

Black or African American, single race, male	10,789	2,290	8,381	6,216	1,348	543	*52
Black or African American, single race, female	13,215	1,363	11,868	8,921	2,172	651	*52

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

– Quantity zero.

¹The data in this table are based on a question in the survey that asked, "Is there a place that you usually go to when you are sick or need advice about your health?," and if there was at least one such place, then a followup question was asked: "What kind of place [is it/do you go to most often] - a clinic, a doctor's office, an emergency room, or some other place?" The choices for this second question are: "clinic or health center," "doctor's office or HMO," "hospital emergency room," "hospital outpatient department," "some other place," or "doesn't go to one place most often." For this table, "hospital emergency room" and "hospital outpatient department" are combined as well as "some other place" and "doesn't go to one place most often."

²HMO is health maintenance organization.

³Unknowns for the columns are not included in the frequency distributions (see Appendix I) but they are included in the "all persons 18 years of age and over" and "all persons with a usual place of care" columns. Numbers may not add to totals because of rounding.

⁴Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁶The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 33. Age-adjusted percent distributions (with standard errors) of having a usual place of health care among persons 18 years of age and over, and of type of place among those persons 18 years of age and over with a usual place of health care, by selected characteristics: United States, 2005

– Quantity zero.

¹The data in this table are based on a question in the survey that asked, "Is there a place that you usually go to when you are sick or need advice about your health?," and if there was at least one such place, then a followup question was asked: "What kind of place (is it/do you go to most often) - a clinic, a doctor's office, an emergency room, or some other place?" The choices for this second questions are: "clinic or health center," "doctor's office or HMO," "hospital emergency room," "hospital outpatient department," "some other place," or "doesn't go to one place most often." For this table, "hospital emergency room" and "hospital outpatient department" are combined as well as "some other place" and "doesn't go to one place most often."

²HMO is health maintenance organization

³Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

⁴Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁵Estimates for age groups are not age adjusted.

⁶In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁷The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁸Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁹Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

¹⁰GED is General Educational Development high school equivalency diploma.

¹¹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹²Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹³Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹⁴MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table XIX in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 34. Frequency distributions of number of office visits to a doctor or other health care professional in the past 12 months among persons 18 years of age and over, by selected characteristics: United States, 2005

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹The data in this table are based on a question in the survey that asked respondents, "During the past 12 months, how many times have you seen a doctor or other health care professional about your own health at a doctor's office, a clinic, or some other place?" Respondents are instructed to exclude overnight hospitalizations, visits to hospital emergency rooms, home visits, or telephone calls.

²Unknowns for the column variables are not shown in the frequency distributions (see Appendix I). They are, however, included in the "all persons 18 years of age and over" column.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics. Additionally, numbers within selected characteristics may not add to totals because of rounding.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 35. Age-adjusted percent distributions (with standard errors) of number of office visits to a doctor or other health care professional in the past 12 months among persons 18 years of age and over, by selected characteristics: United States, 2005

Other	100.0	4.7 (1.34)	11.4 (1.92)	19.0 (2.20)	41.7 (2.97)	23.2 (2.64)
Uninsured	100.0	25.7 (7.13)	†	*10.7 (4.79)	44.4 (10.02)	†

See footnotes at end of table.

Table 35. Age-adjusted percent distributions (with standard errors) of number of office visits to a doctor or other health care professional in the past 12 months among persons 18 years of age and over, by selected characteristics: United States, 2005—Con.

Selected characteristic	Total	Number of office visits in the past 12 months ¹				
		None	1	2–3	4–9	10 or more
Marital status		Percent distribution² (standard error)				
Married	100.0	16.5 (0.36)	17.5 (0.36)	26.6 (0.41)	25.3 (0.39)	14.1 (0.32)
Widowed	100.0	14.6 (3.04)	8.7 (1.36)	32.2 (4.68)	26.6 (3.30)	17.9 (3.22)
Divorced or separated	100.0	20.8 (0.80)	16.1 (0.65)	23.4 (0.72)	23.2 (0.75)	16.5 (0.68)
Never married	100.0	22.7 (0.73)	16.2 (0.63)	23.8 (0.79)	22.9 (0.84)	14.5 (0.69)
Living with a partner	100.0	22.4 (1.26)	18.8 (1.25)	21.2 (1.36)	21.7 (1.52)	15.8 (1.43)
Place of residence¹³						
Large MSA	100.0	19.4 (0.41)	17.5 (0.40)	25.9 (0.44)	23.8 (0.43)	13.4 (0.34)
Small MSA	100.0	18.1 (0.49)	16.6 (0.46)	25.4 (0.53)	24.5 (0.49)	15.4 (0.43)
Not in MSA	100.0	18.5 (0.72)	17.1 (0.58)	24.1 (0.60)	24.8 (0.72)	15.5 (0.60)
Region						
Northeast	100.0	14.1 (0.61)	15.7 (0.70)	27.9 (0.73)	26.5 (0.73)	15.8 (0.61)
Midwest	100.0	17.0 (0.56)	17.6 (0.55)	26.2 (0.60)	24.4 (0.59)	14.8 (0.51)
South	100.0	19.8 (0.49)	17.3 (0.44)	24.9 (0.50)	24.1 (0.48)	13.9 (0.40)
West	100.0	23.0 (0.66)	17.4 (0.51)	23.1 (0.60)	22.4 (0.61)	14.0 (0.51)
Sex and ethnicity						
Hispanic or Latino, male	100.0	37.2 (1.08)	18.8 (1.02)	17.9 (1.04)	17.3 (1.09)	8.9 (0.85)
Hispanic or Latina, female	100.0	20.1 (0.87)	15.8 (0.86)	22.3 (0.94)	26.8 (1.17)	15.0 (0.86)
Not Hispanic or Latino:						
White, single race, male	100.0	22.0 (0.54)	19.4 (0.50)	25.3 (0.56)	21.3 (0.48)	11.9 (0.42)
White, single race, female	100.0	9.7 (0.37)	14.8 (0.41)	27.4 (0.50)	29.0 (0.50)	19.1 (0.43)
Black or African American, single race, male	100.0	30.2 (1.27)	17.4 (1.13)	24.3 (1.32)	18.8 (1.12)	9.2 (0.87)
Black or African American, single race, female	100.0	12.8 (0.97)	15.7 (0.83)	28.1 (1.09)	27.2 (1.02)	16.2 (0.86)

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹The data in this table are based on a question in the survey that asked respondents, "During the past 12 months, how many times have you seen a doctor or other health care professional about your own health at a doctor's office, a clinic, or some other place?" Respondents are instructed to exclude overnight hospitalizations, visits to hospital emergency rooms, home visits, or telephone calls.

²Unknowns for the column variables are not included in the denominators when calculating percentages. Percentages may not add to totals due to rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics. Additionally, percentages may not add to totals because of rounding.

⁴Estimates for age groups are not age adjusted.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁶The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table XX in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 36. Frequency distributions of length of time since last contact with a doctor or other health care professional among persons 18 years of age and over, by selected characteristics: United States, 2005

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

– Quantity zero.

¹The data in this table are based on a question in the survey that asked respondents, "About how long has it been since you saw or talked to a doctor or other health care professional about your own health?" These contacts may include office visits, hospital visits, home visits, and phone calls (but not calls made for arranging appointments).

²Unknowns for the column variables are not shown in the frequency distributions (see Appendix I). They are, however, included in the "all persons 18 years of age and over" column.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics. Additionally, numbers within selected characteristics may not add to totals because of rounding.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 37. Age-adjusted percent distributions (with standard errors) of length of time since last contact with a doctor or other health care professional among persons 18 years of age and over, by selected characteristics: United States, 2005

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

– Quantity zero.

¹The data in this table are based on a question in the survey that asked respondents, "About how long has it been since you saw or talked to a doctor or other health care professional about your own health?" These contacts may include office visits, hospital visits, home visits, and phone calls (but not calls made for arranging appointments).

²Unknowns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴Estimates for age groups are not age adjusted.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁶The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table XXI in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 38. Frequency distributions of length of time since last contact with a dentist or other dental health professional among persons 18 years of age and over, by selected characteristics: United States, 2005

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

– Quantity zero.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹The data in this table are based on a question in the survey that asked respondents, "About how long has it been since you last saw or talked to a dentist?" Respondents are instructed to include all types of dentists, such as orthodontists, oral surgeons, and all other dental specialists, as well as dental hygienists.

²Unknowns for the columns are not included in the frequency distributions (see Appendix I) but they are included in the "all persons 18 years of age and over" column. Numbers may not add to totals due to rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

– Quantity zero.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹The data in this table are based on a question in the survey that asked respondents, "About how long has it been since you last saw or talked to a dentist?" Respondents are instructed to include all types of dentists, such as orthodontists, oral surgeons, and all other dental specialists, as well as dental hygienists.

²Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴Estimates for age groups are not age adjusted.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁶The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table XXII in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 40. Frequency distributions of human immunodeficiency virus testing status among persons 18 years of age and over, by selected characteristics: United States, 2005

Medicare only	9,435	835	7,901
Other	2,126	384	1,482
Uninsured	258	*55	174

See footnotes at end of table.

Table 40. Frequency distributions of human immunodeficiency virus testing status among persons 18 years of age and over, by selected characteristics: United States, 2005—Con.

Selected characteristic	All persons 18 years of age and over	HIV testing status among persons 18 years of age and over ¹	
		Ever tested	Never tested
Marital status			
		Number in thousands ²	
Married	124,382	41,348	77,895
Widowed	13,805	1,535	11,167
Divorced or separated	23,244	9,790	12,314
Never married	42,947	14,301	26,939
Living with a partner	12,664	6,262	5,871
Place of residence ¹²			
Large MSA	99,488	36,168	58,580
Small MSA	74,393	24,750	46,294
Not in MSA	43,892	12,473	29,657
Region			
Northeast	39,843	12,557	25,287
Midwest	53,925	15,669	35,977
South	78,831	29,315	45,987
West	45,175	15,850	27,281
Sex and ethnicity			
Hispanic or Latino, male	14,266	4,920	8,902
Hispanic or Latina, female	13,504	6,167	6,867
Not Hispanic or Latino:			
White, single race, male	74,148	21,193	49,352
White, single race, female	80,178	25,622	51,063
Black or African American, single race, male	10,789	4,977	5,358
Black or African American, single race, female	13,215	6,643	6,049

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

¹The data in this table are based on a question in the survey that asked respondents, "Have you ever been tested for HIV?" Analysts should note that this question is different from the 1999 version, "Have you ever had your blood tested for the AIDS virus infection?" HIV is human immunodeficiency virus.

²Unknowns for the columns are not included in the frequencies (see Appendix I), but they are included in the "all Persons 18 years of age and over" column. The numbers in this table are rounded.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table 41. Age-adjusted percent distributions (with standard errors) of human immunodeficiency virus testing status among persons 18 years of age and over, by selected characteristics: United States, 2005

Selected characteristic	Total	HIV testing status among persons 18 years of age and over ¹

Not Hispanic or Latino:			
White, single race, male	100.0	30.3 (0.58)	69.7 (0.58)
White, single race, female	100.0	35.8 (0.57)	64.2 (0.57)
Black or African American, single race, male	100.0	46.0 (1.58)	54.0 (1.58)
Black or African American, single race, female	100.0	50.6 (1.11)	49.4 (1.11)

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

¹The data in this table are based on a question in the survey that asked respondents, "Have you ever been tested for HIV?" Analysts should note that this question is different from the 1999 version, "Have you ever had your blood tested for the AIDS virus infection?" HIV is human immunodeficiency virus.

²Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴Estimates for age groups are not age adjusted.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁶The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over. Estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 25–44 years, 45–64 years, 65–74 years, and 75 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTES: Unless otherwise specified, estimates are age adjusted to the projected 2000 U.S. standard population using four age groups: 18–44 years, 45–64 years, 65–74 years, and 75 years and over. For crude percentages, refer to Table XXIII in Appendix III.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Appendix I

Technical Notes on Methods

This report is one of a set of statistical reports published by the staff of the National Center for Health Statistics (NCHS). It is based on data contained in the 2005 in-house Sample Adult and Person files, which are derived from the Sample Adult and Family Core components of the National Health Interview Survey. All estimates were weighted using the Sample Adult Record Weight and the in-house data file. The detailed sample design information was used to produce the most accurate variance estimates possible. All data used in the report are also available from the public-use data files with the exception of some detailed information on race and Hispanic or Latino origin and on the sample design. Detailed sample design variables and detailed information on race and Hispanic or Latino origin cannot be made available on the public-use file because of potential disclosure of confidential information. Standard errors produced by using the SUDAAN statistical package are shown for all

percentages in the tables (19). Standard errors for frequencies are calculated, but not shown in the tables. Percentages and frequencies with relative standard errors greater than 30% but less than or equal to 50% are considered unreliable and are indicated with an asterisk (*). Estimates with a relative standard error of greater than 50% are replaced with a dagger (†) and are not shown. The relative standard errors are calculated as follows:

$$\text{Relative standard error} = (SE/Est) 100,$$

where *SE* is the standard error of the estimate, and *Est* is the estimate (percentage or frequency). The reliability of frequencies and their corresponding percentages is determined independently, so it is possible for a particular frequency to be reliable and its associated percentage unreliable, and vice versa.

Age Adjustment

Data shown in Tables 1–41 were age adjusted using the projected 2000 U.S. standard population provided by the U.S. Census Bureau (17,18). Age adjustment was used to allow comparison among various population subgroups that have different age structures. This is particularly important

for demographic characteristics such as race and ethnicity, education, and marital status. It is also helpful for other characteristics.

Age-adjusted rates are calculated by the direct method as follows:

$$Est = \frac{\sum_{i=1}^n r_i p_i}{\sum_{i=1}^n p_i},$$

- where r_i = rate in age group i in the population of interest,
- p_i = standard population in age group i ,
- n = total number of age groups used for age adjustment, and
- Est = the age-adjusted rate.

The standard age distribution used for age-adjusting estimates from NHIS is the 2000 projected U.S. standard population. Table I shows the age distributions used to perform age adjustment. For all tables, the age groups used to age adjust estimates were 18–44, 45–64, 65–74, and 75 years and over unless otherwise noted. See Table I for age distribution and age-adjustment weights used in age-adjusting data. Health insurance and education are restricted to certain age groups, and are,

Table I. Age distributions and age-adjustment weights used in age-adjusting data shown in tables 1–41

Age	Population in thousands	Adjustment weight
Distribution #1 (Tables 2, 4, 6, 8, 10, 12, 14, 16, 19, 21, 23, 25, 27, 29, 31, 33, 35, 37, 39, 41)		
18 years and over	203,851	1.000000

Distribution #3 (Tables 2, 4, 6, 8, 10, 12, 14, 16, 19, 21, 23, 25, 27, 29, 31, 33, 35, 37, 39, 41– Health insurance coverage)		
18–64 years	169,141	1.000000
18–44 years.	108,150	0.639406
45–64 years.	60,991	0.360593
Distribution #4 (Tables 2, 4, 6, 8, 10, 12, 14, 16, 19, 21, 23, 25, 27, 29, 31, 33, 35, 37, 39, 41 – Health insurance coverage)		
65 years and over	34,710	1.000000
65–74 years.	18,136	0.522501
75 years and over.	16,574	0.477499

NOTE: These reflect the standard as specified in Shalala DE. HHS policy for changing the population standard for age adjusting death rates. Memorandum from the Secretary. August 26, 1998.

therefore, adjusted accordingly (for age groups used, see relevant footnotes on the tables). Using different age groups for age adjustment may result in slightly different estimates. For this reason, age-adjusted estimates for health characteristics in this report may not match age-adjusted estimates for the same health characteristics in other reports. Unadjusted estimates were also calculated and are provided in [Tables IV–XXIII in Appendix III](#).

For more information on the derivation of age-adjustment weights for use with NCHS survey data, see Klein and Schoenborn (18). That report is available through the NCHS home page at <http://www.cdc.gov/nchs/data/statnt/statnt20.pdf>. The year 2000 projected U.S. standard resident population is available through the U.S. Census Bureau home page at <http://www.census.gov/prod/1/pop/p25-1130/p251130.pdf>.

Treatment of Unknown Values

In the tables, all unknown values (responses coded as “refused,” “don’t know,” or “not ascertained”) with respect to each table’s variables of interest were removed from the denominators when calculating row percentages. In most instances, the overall number of unknowns is quite small and would not support disaggregation by the demographic characteristics included in the table. Because these unknowns are not shown separately, users calculating their own percentages based on the frequencies and population counts presented in the tables may obtain slightly different results. To aid users’ understanding of the data, weighted counts and percentages of unknowns (with respect to the variables of interest in each table) are shown in [Table II](#).

Unknowns with respect to the demographic characteristics used in each table are not shown due to small cell counts. However, unknowns for both family income and poverty status typically include a sizable number of persons regardless of the health outcome shown in the table. Missing data on family income and personal earnings in NHIS have been imputed by NCHS analysts using multiple-imputation

Table II. Weighted counts (in thousands) and weighted percentages of adults 18 years of age and over with unknown health information: National Health Interview Survey, 2005

Variable	Weighted count (in thousands)	Weighted percent
Total heart disease (Tables 1,2)	267	0.12
Coronary heart disease (Tables 1,2)	365	0.17
Hypertension (Tables 1,2)	482	0.22
Stroke (Tables 1,2)	242	0.11
Emphysema (Tables 3,4)	147	0.07
Asthma (ever) (Tables 3,4)	185	0.08
Asthma (still) (Tables 3,4)	390	0.18
Hay fever (Tables 3,4)	213	0.10
Sinusitis (Tables 3,4)	270	0.12
Chronic bronchitis (Tables 3,4)	152	0.07
Any cancer (Tables 5,6)	188	0.09
Breast cancer (Tables 5,6)	299	0.14
Cervical cancer (Tables 5,6) (women only)	181	0.16
Prostate cancer (Tables 5,6) (men only)	118	0.11
Diabetes ¹ (Tables 7,8)	2,340	1.07
Ulcers (Tables 7,8)	308	0.14
Kidney disease (Tables 7,8)	158	0.07
Liver disease (Tables 7,8)	180	0.08
Arthritic diagnosis (Tables 7,8)	495	0.23
Chronic joint symptoms (Tables 7,8)	360	0.17
Migraine or severe headaches (Tables 9,10)	320	0.15
Pain in neck (Tables 9,10)	436	0.20
Pain in lower back (Tables 9,10)	378	0.17
Pain in face or jaw (Tables 9,10)	382	0.18
Hearing problems (Tables 11,12)	165	0.08
Vision problems (Tables 11,12)	117	0.05
Absence of all natural teeth (Tables 11,12)	249	0.11
Sadness (Tables 13,14)	3,113	1.43
Hopelessness (Tables 13,14)	3,169	1.45
Worthlessness (Tables 13,14)	3,255	1.49
Everything is an effort (Tables 13,14)	3,203	1.47
Nervousness (Tables 15,16)	3,132	1.44
Restlessness (Tables 15,16)	3,100	1.42
Work-loss days (Table 17)	1,722	1.11
Bed days (Table 17)	3,254	1.50
Any difficulty in physical functioning ² (Tables 18,19)	557	0.26
Difficulty walking quarter mile ² (Tables 18,19)	3,849	1.76
Difficulty climbing 10 steps ² (Tables 18,19)	2,406	1.11
Difficulty standing 2 hours ² (Tables 18,19)	3,779	1.73
Difficulty sitting 2 hours ² (Tables 18,19)	1,557	0.71
Difficulty stooping, bending, or kneeling ² (Tables 18,19)	1,821	0.83
Difficulty reaching over one’s head ² (Tables 18,19)	1,238	0.56
Difficulty using fingers to grasp or handle small objects ² (Tables 18,19)	872	0.40
Difficulty lifting or carrying 10 pounds ² (Tables 18,19)	2,684	1.23
Difficulty pushing or pulling large object ² (Tables 18,19)	5,870	2.69
Current health status (Tables 20–23)	99	0.05
Change in health status since last year (Tables 22,23)	517	0.89
Current cigarette smoking status (Tables 24,25)	1,863	0.86
Alcohol drinking status (Tables 26,27)	6,823	3.13
Current drinking frequency or amount (Tables 26,27) (current drinkers only)	813	0.63
Former drinking frequency or amount (Tables 26,27) (former drinkers only)	28	0.09
Leisure-time vigorous physical activity (Tables 28,29)	3,719	1.71
Body mass index (Tables 30,31)	9,362	4.30
Usual place of health care (Tables 32,33)	2,008	0.92
Type of usual place of health care (Tables 32,33)	1,874	1.02
Office visits to doctor in past 12 months (Tables 34,35)	4,094	1.88
Length of time since last physician contact (Tables 36,37)	3,605	1.66
Length of time since last dentist contact (Tables 38,39)	4,153	1.91
HIV ³ testing status (Tables 40,41)	9,853	4.52

¹Unknown includes those who respond “borderline.”

²Unknown includes those who respond “do not do this activity.”

³HIV is human immunodeficiency virus.

methodology. Five ASCII data sets containing imputed values for the survey year and additional information about the imputed income files can be found at <http://www.cdc.gov/nchs/nhis.htm>.

However, income and poverty estimates in this publication are based only on reported income and may differ from other measures that are based on imputed data (which were not available when this report was prepared). Because it is difficult to interpret the relationship between “unknown” income (or poverty status) and the health outcomes displayed in the tables, counts of persons in these unknown categories are not shown in the tables. **Table III** shows weighted counts (in thousands) and weighted percentages of adults with unknown values for poverty status and family income, education, health insurance, and marital status.

The Income and Assets section in the Family Core of the NHIS instrument allows respondents to report their family income in several ways. Respondents were first asked to provide their family’s total combined income before taxes from all sources for the previous calendar year in a dollar amount (from \$0 up to \$999,995). Respondents who did not know or refused to state an amount were then asked if their family’s combined income in the previous calendar year was \$20,000 or more or less than \$20,000. If they again refused to answer or said that they do not know, they were not asked any more questions about their family income. Respondents who replied to the “above-below \$20,000” questions were then handed a list of detailed income categories (top-coded at \$75,000 or more) and were asked to pick the interval containing their best estimate of their family’s combined income. NHIS respondents thus fall into one of four categories with respect to income information: those who supplied a dollar amount (73% of sample adults in 2005), those who indicated their income from a fairly detailed set of intervals (4% of sample adults), those who said that their family’s income was either \$20,000 or more or less than \$20,000 (17% of sample adults), and those who provided no income information (6% of sample adults) (unweighted results).

Table III. Weighted counts (in thousands) and weighted percentages of adults with unknown information on selected sociodemographic characteristics: National Health Interview Survey, 2005

Variable of interest	Weighted count (in thousands)	Weighted percentage
Poverty status (total population 18 years and over) (Tables 1–41)	50,836	23.34
Poverty status (employed persons 18 years of age and over) (Table 17)	31,422	20.37
Family income (total population 18 years and over) (Tables 1–41)	13,250	6.08
Family income (employed persons 18 years of age and over) (Table 17)	7,643	4.95
Education (persons 25 years of age and over) (Tables 1–41)	2,322	1.23
Education (persons 25 years of age and over) (employed persons) (Table 17)	1,151	0.87
Health insurance (persons 18–64 years of age) (Tables 1–41)	771	0.42
Health insurance (persons 65 years of age and over) (Tables 1–41)	44	0.12
Health insurance (employed persons 18–64 years of age) (Table 17)	600	0.39
Health insurance (employed persons 65 years of age and over) (Table 17)	5	0.08
Marital status (total population 18 years and over) (Tables 1–41)	733	0.34
Marital status (employed persons 18 years of age and over) (Table 17)	429	0.28

Respondents who stated that their family income was below \$20,000 are included in the “Less than \$20,000” category under “Family Income” in the tables in this report, along with respondents who gave a dollar amount or an interval estimate that was less than \$20,000. Likewise, respondents who stated that their family income was at or above \$20,000 are included in the “\$20,000 or more” category under Family Income, along with those respondents who gave a dollar amount or an interval estimate that was \$20,000 or more. Users will note that the counts for the detailed (indented) amounts do not sum to the count shown for “\$20,000 or more” for this reason.

A recoded poverty status variable is formed for those respondents who supplied either a dollar amount or an interval estimate for their family’s income. This variable is the ratio of the family’s income in the previous calendar year to the appropriate 2004 poverty threshold (given the family’s size and number of children) defined by the U.S. Census Bureau (15). Adults who are categorized as “poor” had a ratio less than 1.0; that is, their family income was strictly below the poverty threshold. The “near poor” category includes adults with incomes of 100% to less than 200% of the poverty threshold. Lastly, “not poor” adults have incomes that are 200% of the poverty threshold or greater. The remaining groups of respondents—those who only indicated that they were at, above, or below \$20,000, as well as those who did not

provide any income information—are, by necessity, coded as “unknown” with respect to poverty status. Family income information is missing for 6% of the U.S. adult population, and poverty status information is missing for 23% of the U.S. adult population (weighted results). Similarly, 6% of the adult sample is missing information on income, and 23% of the adult sample is missing information on poverty status (unweighted results).

Hypothesis Tests

Two-tailed tests of significance were performed for all the comparisons mentioned in the “Selected Highlights” section of this report. No adjustments were made for multiple comparisons. The test statistic used to determine statistical significance of the difference between two percentages was

$$Z = \frac{|X_a - X_b|}{\sqrt{S_a^2 + S_b^2}}$$

where X_a and X_b are the two percentages being compared, and S_a and S_b are the SUDAAN-calculated standard errors of those percentages. The critical value used for two-sided tests at the 0.05 level was 1.96.

Appendix II

Definitions of Selected Terms

Sociodemographic Terms

Age—The age recorded for each adult is the age at the last birthday. Age is recorded in single years and grouped using a variety of age categories depending on the purpose of the table.

Education—The categories of education are based on the years of school completed or highest degree obtained for persons aged 25 and over. Only years completed in a school that advances a person toward an elementary or high school diploma, General Educational Development high school equivalency diploma (GED), college, university, or professional degree are included. Education in other schools and home schooling are counted only if the credits are accepted in a regular school system.

Employment—Persons 18 years of age and over were classified as currently employed if they reported that they either worked at or had a job or business at any time during the 1-week period preceding the interview. Current employment includes paid work as an employee in business, farming, or professional practice, and unpaid work in a family business or farm. Persons temporarily absent from a job or business because of a temporary illness, vacation, strike, or bad weather were considered currently employed if they expected to work as soon as the particular event causing the absence no longer existed. Freelance workers were considered currently employed if they had a definite arrangement with one or more employers to work for pay according to a weekly or monthly schedule, either full time or part time.

Excluded from the currently employed population are persons who have no definite employment schedule, but work only when their services are needed. Also excluded from the currently employed population were (a) persons receiving revenue from an enterprise, but not participating in its

operation; (b) persons doing housework or charity work for which they received no pay; (c) seasonal workers during the portion of the year when they were not working; and (d) persons who were not working, although they had a job or business, but were laid off and looking for work.

The number of currently employed persons estimated from NHIS will differ from the estimates prepared from the Current Population Survey (CPS) of the U.S. Census Bureau for several reasons. In addition to sampling variability, the two surveys have the following primary conceptual differences:

1) NHIS employment estimates are for persons 18 years of age and over; CPS estimates are for persons 16 years of age and over; and

2) NHIS is a continuous survey with separate samples taken weekly; CPS is a monthly sample taken for the survey week that includes the 19th of the month.

This report combines adults currently employed, as defined above, with those who were not employed in the week preceding the interview but who were employed within the past 12 months, to estimate the number of employed and unemployed adults for the year.

Family income—Each member of a family is classified according to the total income of all family members. Family members are all persons within the household related to each other by blood, marriage, cohabitation, or adoption. The income recorded is the total income received by all family members in the previous calendar year. Income from all sources includes wages, salaries, military pay (when an Armed Forces member lived in the family), pensions, government payments, child support or alimony, dividends, and help from relatives. Unrelated individuals living in the same household (e.g., roommates) are considered to be separate families and are classified according to their own incomes.

Health insurance coverage—NHIS respondents were asked about their health insurance coverage at the time of the interview. Respondents reported whether they were covered by private insurance (obtained from their employer

or workplace, purchased directly, or through a local or community program), Medicare, Medigap (supplemental Medicare coverage), Medicaid, State Children's Health Insurance Plan (SCHIP), Indian Health Service (IHS), military coverage (including VA, TRICARE, or CHAMP-VA), a state-sponsored health plan, another government program, or single-service plans. This information was used to form two health insurance hierarchies: one for those under age 65 years and another for those persons age 65 years and over.

For persons under age 65 years, a health insurance hierarchy of four mutually exclusive categories was developed (20). Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy listed below:

Private coverage—Includes persons who had any comprehensive private insurance plan (including health maintenance organizations and preferred provider organizations). These plans include those obtained through an employer, purchased directly, or through local or community programs.

Medicaid—Includes persons who do not have private coverage, but who have Medicaid or other state-sponsored health plans including SCHIP.

Other coverage—Includes persons who do not have private insurance or Medicaid (other public coverage), but who have any type of military health plan (includes VA, TRICARE, and CHAMP-VA) and Medicare. This category also includes persons who are covered by other government programs.

Uninsured—Includes persons who have not indicated that they are covered at the time of the interview under private health insurance (from employer or workplace, purchased directly, or through a state, local government, or community program), Medicare, Medicaid, SCHIP, a state-sponsored health plan, other government programs, or military health plan (includes VA,

TRICARE, and CHAMP-VA). This category also includes persons who are only covered by IHS or only have a plan that pays for one type of service such as accidents or dental care.

For persons age 65 years and over, a health insurance hierarchy of five mutually exclusive categories was developed (21). Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy listed below:

Private coverage—Includes older persons who have both Medicare and any comprehensive private health insurance plan (including health maintenance organizations and preferred provider organizations). These plans include those obtained through a current or former employer, purchased directly, or through local or community programs. This category also includes persons with private insurance only.

Medicare and Medicaid—Includes older persons who do not have any private coverage, but have Medicare and Medicaid and or other state-sponsored health plans including SCHIP.

Medicare only—Includes older persons who only have Medicare coverage.

Other coverage—Includes older persons who have not been previously classified as having private, Medicare and Medicaid, or Medicare-only coverage. This category also includes older persons who have only Medicaid, other state-sponsored health plans, or SCHIP, as well as persons who have any type of military health plan (VA, TRICARE, and CHAMP-VA) with or without Medicare.

Uninsured—Includes persons who have not indicated that they are covered at the time of the interview under private health insurance (from employer or workplace, purchased directly, or through a state, local government, or community

program), Medicare, Medicaid, SCHIP, a state-sponsored health plan, other government programs, or military health plan (VA, TRICARE, and CHAMP-VA). This category also includes persons who are covered by only IHS or only have a plan that pays for one type of service such as accidents or dental care.

For less than 1% of adults, coverage status (i.e., whether they are insured or uninsured) is unknown. Weighted frequencies indicate that less than 1% of the adult population under 65 years of age and less than 1% of the adult population aged 65 and over fell into this “unknown” category.

Hispanic or Latino origin and race—Hispanic or Latino origin and race are two separate and distinct concepts. Persons of Hispanic or Latino origin may be of any race. Hispanic or Latino origin includes persons of Mexican, Puerto Rican, Cuban, Central and South American, or Spanish origins. All tables show Mexicans or Mexican Americans as a subset of Hispanic or Latino. Other groups are not shown for reasons of confidentiality or statistical reliability.

In the 1997 and 1998 Summary Health Statistics reports, Hispanic ethnicity was shown as a part of race/ethnicity, which also included categories for non-Hispanic white, non-Hispanic black, and non-Hispanic other (some tables showed Mexican Americans as a subset of Hispanics). Beginning in 1999, the categories for race were expanded to be consistent with the 1997 Office of Management and Budget (OMB) Federal guidelines (12), and a distinction is now made between the characteristics of race and of Hispanic or Latino origin and race. Hispanic or Latino origin and race is divided into “Hispanic or Latino” and “Not Hispanic or Latino.” “Hispanic or Latino” includes a subset of “Mexican or Mexican American.” “Not Hispanic or Latino” is further divided into “white, single race” and “black or African American, single race.” Persons in these categories indicated only a single race group (see the definition of race in this appendix for more

information). Data are not shown for other “Not Hispanic or Latino single race” persons or multiple-race persons due to statistical unreliability as measured by the relative standard errors of the estimates (but are included in the total for “Not Hispanic or Latino”).

The text in this report uses shorter versions of the new OMB race and Hispanic or Latino origin terms for conciseness, and the tables use the complete terms. For example, the category “Not Hispanic or Latino, black or African American, single race” in the tables is referred to as “non-Hispanic black” in the text.

Marital status—Respondents were asked to choose a marital status category. Adults could select the category they felt most appropriate for their marital situation. Beginning in 1997, a new marital status category, “living with a partner,” also termed “cohabiting,” was added, and persons who were “living with a partner” were considered members of the same family, whereas in the pre-1997 NHIS, they were considered separate families. A legally annulled marriage is considered as not having taken place. Marital status is classified into the following five categories:

Married—This category includes all persons who identify themselves as married and who are not separated from their spouses. Married persons living apart because of circumstances of their employment are considered married. Persons may identify themselves as married regardless of the legal status of the marriage or sex of the spouses.

Separated and divorced—This category includes persons who are legally separated from their spouse or living apart for reasons of marital discord, and those who are divorced.

Widowed—This category includes persons who have lost their spouse due to death.

Never married—This category includes persons who were never married.

Living with partner—This category includes unmarried persons regardless of sex who are living together as a couple, but do not identify themselves as married.

Place of residence—Place of residence is classified as inside a metropolitan statistical area (MSA) or outside an MSA. Generally, an MSA consists of a county or group of counties containing at least one city or twin cities with a population of 50,000 or more, plus adjacent counties that are metropolitan in character and are economically and socially integrated with the central city. In New England, towns and cities rather than counties are the units used to define MSAs. The number of adjacent counties included in an MSA is not limited, and boundaries may cross state lines. The metropolitan populations in this report are based on MSAs as defined in the 1990 Census. In the tables for this report, place of residence is based on a variable in the 2005 Person data file indicating MSA size. This variable is collapsed into three categories: MSAs with a population of 1,000,000 or more, MSAs with a population of less than 1,000,000, and areas that are not within an MSA.

Poverty status—Poverty status is based on family income and family size using the Census Bureau's poverty thresholds. "Poor" persons are defined as persons whose family incomes are below the poverty threshold. "Near Poor" persons have family incomes of 100% to less than 200% of the poverty threshold. "Not Poor" persons have family incomes that are 200% of the poverty threshold or greater. More information on the measurement of family income and poverty status is available in [Appendix I](#).

Race—In the 1997 and 1998 Summary Health Statistics reports, race/ethnicity consisted of four categories: non-Hispanic white, non-Hispanic black, non-Hispanic other, and Hispanic (some tables showed Mexican Americans as a subset of Hispanics). Beginning in 1999, the categories for race were expanded to be consistent with the 1997 Office of Management and Budget (OMB) Federal guidelines (12), which now

distinguish persons of "one race" from persons of "two or more races." The category "one race" refers to persons who indicated only a single race group; it includes subcategories for white, black or African American, American Indian or Alaska Native, Asian, and Native Hawaiian or other Pacific Islander. The category "two or more races" refers to persons who indicated more than one race group. Estimates for multiple race combinations can only be reported to the extent that they meet the requirements for confidentiality and statistical reliability. In this report, three categories are shown for multiple-race individuals (a summary category and two multiple-race categories: black or African American and white and American Indian or Alaska Native and white). Other combinations are not shown due to statistical unreliability as measured by the relative standard errors of the estimates (but they are included in the total for "two or more races").

Prior to 2003, "other race" was a separate race response on NHIS, although it was not shown separately in the tables of the Summary Health Statistics reports. In the 2003 NHIS, however, editing procedures were changed to maintain consistency with the U.S. Census Bureau procedures for collecting and editing data on race and ethnicity. As a result of these changes, in cases where "other race" was mentioned along with one or more OMB race groups, the "other race" response is dropped, and the OMB race group information is retained on the NHIS data file. In cases where "other race" was the only race response, it is treated as missing and the race is imputed. Although this change has resulted in an increase in the number of persons in the OMB race category "white" because this is numerically the largest group, the change is not expected to have a substantial effect on the estimates in this report. More information about the race/ethnicity editing procedures used by the U.S. Census Bureau can be found at the following website:

<http://www.census.gov/popest/archives/files/MRSF-01-US1.pdf>.

The text in this report uses shorter versions of the new OMB race terms for

conciseness, and the tables use the complete terms. For example, the category "Black or African American, single race" in the tables is referred to as "black" in the text.

Region—In the geographic classification of the U.S. population, states are grouped into four regions used by the U.S. Census Bureau:

<i>Region</i>	<i>States included</i>
Northeast	Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, and Pennsylvania;
Midwest	Ohio, Illinois, Indiana, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Kansas, and Nebraska;
South	Delaware, Maryland, District of Columbia, West Virginia, Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Oklahoma, Arkansas, and Texas;
West	Washington, Oregon, California, Nevada, New Mexico, Arizona, Idaho, Utah, Colorado, Montana, Wyoming, Alaska, and Hawaii.

Terms Related to Health Characteristics and Outcomes

Arthritis and chronic joint symptoms—In 2002, there were major changes to core questions about arthritis and joint symptoms. Questions about joint symptoms were altered to exclude the respondent's back and neck. The reference period was changed from "past 12 months" to "past 30 days," and chronic joint symptoms were defined as having started "more than 3 months ago." The arthritis diagnosis question ("Have you ever been told by a doctor or other health professional that you have arthritis. . .") was modified to include "some form of arthritis, rheumatoid arthritis, gout, lupus, or

fibromyalgia.” These questions remained unchanged since 2002, and estimates for adults with self-reported arthritis diagnosis and self-reported chronic joint symptoms are shown separately in [Tables 7](#) and [8](#).

Asthma—This report covers both adults who have ever been told they have asthma by a doctor or other health professional, and adults who still have asthma (currently).

Bed day—A day during which a person stayed in bed more than half a day because of illness or injury. All hospital days for inpatients are considered bed days even if the patient was not in bed more than half a day.

Conditions—Condition is a general term that includes any specific illness (physical or mental) or injury. From 1978 to 1996, six chronic condition lists were used in NHIS. Those six lists covered 133 conditions. The 1997 (and beyond) NHIS chronic condition data cover a substantially reduced number of conditions. All data in the 2005 Sample Adult component are self-reported, and most questions ask whether a condition was diagnosed by a doctor or a health professional. The reference periods for the conditions vary. There are four basic reference periods: ever, past 12 months, past 30 days, and currently.

Difficulty in physical functioning—Refers to the degree of difficulty respondents experienced performing nine physical activities without the assistance of another person and without using special equipment. Questions for the sample adult regarding difficulty in physical functioning cover the following activities: walking a quarter of a mile (or three city blocks); climbing 10 steps without resting; standing for 2 hours; sitting for 2 hours; stooping, bending, or kneeling; reaching over one’s head; using the fingers to grasp or handle small objects; lifting or carrying 10 pounds (such as a bag of groceries); and pushing or pulling large objects (such as a living room chair). Response categories include “not at all difficult,” “only a little difficult,” “somewhat difficult,” “very difficult,” “can’t do at all,” or “do not do this activity.” Adults who indicated that the specific activity was “very difficult” or that they “can’t do (it) at all” were combined in a single

category as having difficulty in physical functioning. Those who responded “do not do this activity” were not included in the tables.

Doctor or other health professional—Doctor refers to medical doctors (MDs) and osteopathic physicians (DOs), including general practitioners and all types of specialists (such as surgeons, internists, gynecologists, obstetricians, proctologists, psychiatrists, dermatologists, ophthalmologists). Other health care professionals include physician assistants, psychologists, nurses, physical therapists, and chiropractors.

Health status—Respondent-assessed health status is obtained from a question in the survey that asked respondents, “Would you say your health in general was excellent, very good, good, fair, or poor?” Information was obtained about all respondents, with proxy responses allowed for adults not taking part in the interview. Prior health status is obtained from the question asked of all sample adults, “Compared with 12 months ago, would you say that your health is better, worse, or about the same?”

Work-loss day—A day in which a currently employed person 18 years of age or over missed more than one-half a day from a job or business.

Terms Relating to Sample Adult Behavior

Alcohol drinking status—Refers to the respondent’s alcohol drinking status at the time of interview. There are five alcohol consumption categories. Two refer to current drinking, two to former drinking, and the fifth to lifetime abstinence.

Current regular drinker—had 12 drinks or more in his or her lifetime and at least 12 drinks in the past year.

Current infrequent drinker—had 12 drinks or more in his or her lifetime, but fewer than 12 drinks in the past year.

Former regular drinker—had 12 drinks or more in his or her lifetime and at least 12 drinks in any 1 year,

but no drinks in the past year.

Former infrequent drinker—had 12 drinks or more in his or her lifetime, but never as many as 12 in a single year and no drinks in the past year.

Lifetime abstainer—had fewer than 12 drinks in his or her entire lifetime.

In 2002, a change was made in the calculation of the “Former infrequent” and “Current infrequent” drinker categories. Prior to 2002, these categories included a small number of respondents who indicated either the frequency of their drinking but not the amount or the amount but not the frequency, at the same time satisfying the broad definition of either former or current drinker. These individuals with incomplete responses are now categorized as “former or current drinker status unknown” and are not shown in the tables.

Body mass index—Body mass index (BMI) is calculated from the sample adult’s responses to survey questions regarding height and weight. $BMI = \text{weight (in kg)} / [\text{height (in m)}]^2$. For both sexes, the category “underweight” is defined as a BMI less than 18.5. “Healthy weight” is defined as a BMI greater than or equal to 18.5 and less than 25.0. “Overweight” is defined as a BMI greater than or equal to 25.0 and less than 30.0. “Obese” is defined as a BMI greater than or equal to 30.0.

Cigarette smoking status—Information on cigarette smoking status at the time of interview is derived from two questions on the survey. All respondents are first asked, “Have you smoked at least 100 cigarettes in your entire life?” Respondents who answered “yes” to the previous question are then asked, “Do you now smoke cigarettes every day, some days, or not at all?” The information obtained from these two questions is combined to create the variable represented in [Tables 24](#) and [25](#).

Current smoker—There are two categories of current smokers. The first category includes persons who smoke every day, and persons in the second category smoke only on some days.

Former smoker—This category includes persons who have smoked at least 100 cigarettes in their lifetime, but currently do not smoke at all.

Nonsmoker—This category includes persons who have never smoked at least 100 cigarettes in their lifetime.

Human Immunodeficiency Virus (HIV) testing status—This variable is based on a question that asked whether the respondent has ever had his or her blood tested for HIV. Starting in 2000, this question is slightly different than the one used in 1997–99, which asked about acquired immunodeficiency syndrome (AIDS) virus testing status (not HIV).

Leisure-time physical activity—All questions related to leisure-time physical activity are phrased in terms of current behavior and lack a specific prior reference period. Respondents are told that they are being asked only about leisure-time physical activities. Vigorous leisure-time physical activity is defined as the respondent performing vigorous activity for at least 10 minutes. Vigorous activity is that which causes heavy sweating and a large increase in breathing or heart rate.

Number of visits to a doctor or other health professional in the past 12 months—This is the number of visits to a doctor’s office, clinic, or other place that the respondent has made in the past 12 months regarding his/her own personal health. Overnight hospital stays, hospital emergency room visits, home visits, and telephone calls are excluded.

Time since last dental contact—This is the length of time since the respondent last saw or talked to a dentist, including dental specialists as well as dental hygienists, prior to the week of interview.

Time since last physician or other health care professional contact—This is the length of time, prior to the week of interview, since the respondent last consulted a physician or other health care professional in person or by telephone for health treatment or advice of any type. This may include a contact while a patient is in the hospital as well

as a contact from a home visit. The respondent is asked: “About how long has it been since you saw or talked to a doctor or other health professional about your own health?” The response categories for this question are: “6 months or less,” “more than 6 months, but not more than 1 year ago,” “more than 1 year, but not more than 2 years ago,” “more than 2 years, but not more than 5 years ago,” “more than 5 years ago,” and “never.”

Usual place of health care—Usual place of health care was based on a question that asked whether respondents had a place that they usually went to when they were sick or needed advice about their health. If yes, they were asked “What kind of place {is it/do you go to most often}—a clinic, a doctor’s office, an emergency room, or some other place?” The choices for this second question are: “clinic or health center,” “doctor’s office or HMO,” “hospital emergency room,” “hospital outpatient department,” “some other place,” or “doesn’t go to one place most often.” Although “hospital emergency room” is not considered a “usual place of health care” in other publications, in this report it is combined with “hospital outpatient clinic.” Also combined in this report are “some other place” and “doesn’t go to one place most often.”

Appendix III

Tables of Unadjusted (Crude) Estimates

Table IV. Crude percentages (with standard errors) of selected circulatory diseases among persons 18 years of age and over, by selected characteristics: United States, 2005

Selected characteristic	Selected circulatory diseases ¹			
	Heart disease ²			Stroke
	All types	Coronary ³	Hypertension ⁴	
	Percent ⁵ (standard error)			
Total ⁶ (crude)	11.8 (0.22)	6.5 (0.16)	22.4 (0.28)	2.4 (0.09)

Black or African American, single race, female	10.6 (0.70)	5.9 (0.56)	32.2 (1.19)	3.5 (0.42)

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹In separate questions, respondents were asked if they had ever been told by a doctor or other health professional that they had: hypertension (or high blood pressure), coronary heart disease, angina (or angina pectoris), heart attack (or myocardial infarction), any other heart condition or disease not already mentioned, or a stroke. A person may be represented in more than one column.

²Heart disease includes coronary heart disease, angina pectoris, heart attack, or any other heart condition or disease.

³Coronary heart disease includes coronary heart disease, angina pectoris, and heart attack.

⁴Persons had to have been told on two or more different visits that they had hypertension or high blood pressure to be classified as hypertensive.

⁵Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I). The percentages in this table are rounded.

⁶Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁷In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix I), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁸The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁹Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

¹⁰Education is shown only for persons aged 25 years and over.

¹¹GED is General Educational Development high school equivalency diploma.

¹²The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only persons who reported dollar amounts.

¹³Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹⁴Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix I).

¹⁵MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 2.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table V. Crude percentages (with standard errors) of selected respiratory diseases among persons 18 years of age and over, by selected characteristics: United States, 2005

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

– Quantity zero.

¹ Respondents were asked in two separate questions if they had ever been told by a doctor or other health professional that they had emphysema or asthma. Respondents who had been told they had asthma were asked if they still had asthma. Respondents were asked in three separate questions if they had been told by a doctor or other health professional in the past 12 months that they had hay fever, sinusitis, or bronchitis. A person may be represented in more than one column.

² Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I). The percentages in this table are rounded.

³ Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴ In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵ The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶ Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷ Education is shown only for persons aged 25 years and over.

⁸ GED is General Educational Development high school equivalency diploma.

⁹ The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰ Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹ Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹² MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 4.

DATA SOURCE: National Health Interview Survey, 2005. Data are based on household interviews of a sample of the civilian noninstitutionalized population.

0.0 Quantity more than zero but less than 0.05.

... Category not applicable.

– Quantity zero.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹ Respondents were asked if they had ever been told by a doctor or other health professional that they had a cancer or a malignancy of any kind. They were then asked to name the kind of cancer they had. A person may be represented in more than one column.

² Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I). Further, the denominators for calculating cervical cancer and prostate cancer percentages are sex-specific, and the denominators for calculating breast cancer percentages encompass all adults. The percentages in this table are rounded.

³ Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴ In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵ The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶ Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷ Education is shown only for persons aged 25 years and over.

⁸ GED is General Educational Development high school equivalency diploma.

⁹ The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰ Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹ Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹² MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

Not Hispanic or Latino:						
White, single race, male	7.7 (0.29)	7.5 (0.35)	1.6 (0.14)	1.5 (0.13)	20.1 (0.46)	28.3 (0.57)
White, single race, female	6.9 (0.28)	7.8 (0.28)	1.5 (0.13)	1.3 (0.12)	28.1 (0.51)	31.8 (0.54)
Black or African American, single race, male	9.9 (0.81)	4.9 (0.67)	2.5 (0.41)	1.4 (0.32)	13.1 (0.88)	18.7 (1.13)
Black or African American, single race, female	10.7 (0.71)	5.7 (0.56)	2.3 (0.34)	1.1 (0.23)	24.3 (1.09)	25.7 (1.20)

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

– Quantity zero.

¹In separate questions, respondents were asked if they had ever been told by a doctor or other health professional that they had: an ulcer (including a stomach, duodenal, or peptic ulcer) or diabetes (or sugar diabetes; female respondents were instructed to exclude pregnancy-related diabetes). Responses from persons who said they had "borderline" diabetes were treated as unknown with respect to diabetes. A person may be represented in more than one column.

²In separate questions, respondents were asked if they had been told in the last 12 months by a doctor or other health professional that they had: weak or failing kidneys (excluding kidney stones, bladder infections, or incontinence) or any kind of liver condition.

³Respondents were asked if they had ever been told by a doctor or other health professional that they had some form of arthritis, rheumatoid arthritis, gout, lupus, or fibromyalgia. Those that answered yes were classified as having an arthritis diagnosis. Respondents were also asked: "During the past 30 days, have you had pain, aching, or stiffness in or around a joint?" (excluding back and neck) and, if yes, "Did your joint symptoms first begin more than 3 months ago?" Respondents with symptoms that began more than 3 months ago were classified in this table as having chronic joint symptoms.

⁴Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I). The percentages in this table are rounded.

⁵Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁶In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁷The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁸Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁹Education is shown only for persons aged 25 years and over.

¹⁰GED is General Educational Development high school equivalency diploma.

¹¹The categories "Less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹²Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹³Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹⁴MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 8.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table VIII. Crude percentages (with standard errors) of migraines and pain in the neck, lower back, face or jaw among persons 18 years of age and over, by selected characteristics: United States, 2005

Selected characteristic	Migraines or severe headaches ¹	Pain in neck ²	Pain in lower back ³	Pain in face or jaw ⁴

Black or African American, single race, female	19.0 (1.03)	13.1 (0.88)	27.9 (1.17)	4.8 (0.50)

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹ Respondents were asked, "During the past 3 months, did you have a severe headache or migraine?" Respondents were instructed to report pain that had lasted a whole day or more, and conversely, not to report fleeting or minor aches or pains. A person may be represented in more than one column.

² Respondents were asked, "During the past 3 months, did you have neck pain?" Respondents were instructed to report pain that had lasted a whole day or more, and conversely, not to report fleeting or minor aches or pains. Persons may be represented in more than one column.

³ Respondents were asked, "During the past 3 months, did you have low back pain?" Respondents were instructed to report pain that had lasted a whole day or more, and conversely, not to report fleeting or minor aches or pains. Persons may be represented in more than one column.

⁴ Respondents were asked, "During the past 3 months, did you have facial ache or pain in the jaw muscles or the joint in front of the ear?" Respondents were instructed to report pain that had lasted a whole day or more, and conversely, not to report fleeting or minor aches or pains. Persons may be represented in more than one column.

⁵ Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I). The percentages in this table are rounded.

⁶ Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁷ In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race" but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁸ The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁹ Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

¹⁰ Education is shown only for persons aged 25 years and over.

¹¹ GED is General Educational Development high school equivalency diploma.

¹² The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹³ Poverty status is based on family income and family size using the Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold.

"Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹⁴ Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹⁵ MSA is Metropolitan Statistical Area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 10.

DATA SOURCE: National Health Interview Survey, 2005. Data are based on household interviews of a sample of the civilian noninstitutionalized population.

Table IX. Crude percentages (with standard errors) of hearing trouble, vision trouble, and absence of teeth among persons 18 years of age and over, by selected characteristics: United States, 2005

Selected characteristic	Selected sensory problems ¹

Not Hispanic or Latino:			
White, single race, male	24.4 (0.56)	8.1 (0.38)	7.4 (0.30)
White, single race, female	15.7 (0.41)	11.0 (0.37)	8.7 (0.31)
Black or African American, single race, male	9.8 (0.83)	8.2 (0.75)	6.4 (0.67)
Black or African American, single race, female	7.9 (0.64)	11.9 (0.79)	9.8 (0.78)

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

¹ Respondents were asked, "Which statement best describes your hearing without a hearing aid: good, a little trouble, a lot of trouble, deaf?" For this table, "a little trouble," "a lot of trouble," and "deaf" are combined into one category. Regarding their vision, respondents were asked, "Do you have any trouble seeing, even when wearing glasses or contact lenses?" Respondents were also asked "Are you blind or unable to see at all?" For this table, "any trouble seeing" and "blind" are combined into one category. Lastly, respondents were asked, in one question, "Have you lost all of your upper and lower natural (permanent) teeth?" A person may be represented in more than one column.

² Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I). The percentages in this table are rounded.

³ Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴ In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵ The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶ Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷ Education is shown only for persons aged 25 years and over.

⁸ GED is General Educational Development high school equivalency diploma.

⁹ The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰ Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹ Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹² MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 12.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Black or African American, single race, female	5.9 (0.61)	11.8 (0.77)	2.7 (0.34)	5.4 (0.51)	1.8 (0.27)	4.4 (0.53)	9.3 (0.78)	10.3 (0.74)	

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

– Quantity zero.

¹In four separate questions, respondents were asked how often in the past 30 days they felt: so sad that nothing could cheer them up, hopeless, worthless, or that everything was an effort.

Respondents could choose from among five response categories: "all of the time," "most of the time," "some of the time," "a little of the time," or "none of the time." For this table, "all" and "most" are combined, and "some" is shown separately.

²Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I). The percentages in this table are rounded.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 14.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table XI. Crude percentages (with standard errors) of feelings of nervousness or restlessness among persons 18 years of age and over, by selected characteristics: United States, 2005

Selected characteristic	Nervousness ¹		Restlessness ¹

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹In two separate questions, respondents were asked how often they felt nervous or restless in the past 30 days. Respondents could choose among five response categories: "all of the time," "most of the time," "some of the time," "a little of the time," or "none of the time." For this table, "all" and "most" are combined, and "some" is shown separately.

²Unknowns for the columns are not included in the denominators when calculating percentages (see Appendix I). The percentages in this table are rounded.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 16.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹In a series of separate questions, respondents were asked the degree of difficulty they experienced performing nine physical activities by themselves, and without using any special equipment. The activities included walking a quarter of a mile (or three city blocks); standing for 2 hours; stooping/bending/kneeling; climbing 10 steps without resting; sitting for 2 hours; reaching over one's head; using one's fingers to grasp or handle small objects; lifting or carrying a 10-pound object (such as a full bag of groceries); and pushing or pulling a large object (such as a living room chair). The response categories consisted of "not at all difficult," "only a little difficult," "somewhat difficult," "very difficult," "can't do at all," or "do not do this activity." For this table,

response categories “very difficult” and “can’t do at all” are combined and shown in the columns.

²“Any physical difficulty” consists of a “very difficult” or “can’t do at all” response to at least one of the nine physical activities shown in columns 3–11.

³Percentages of persons reporting no difficulty in physical functioning, “only a little” or “some” difficulty, who “do not do this activity,” or for whom the information is unknown (see Appendix I), are not shown separately. Persons who respond “do not do this activity” are not included in the denominator when calculating percentages. Percentages in this table are rounded.

⁴Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race,” but not shown separately due to small sample sizes. Therefore, the frequencies for the category “1 race” will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, black or African American” in the tables is referred to as “black persons” in the text.

⁶The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category “2 or more races” will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories “less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category “private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, “private” includes persons with only private or private in combination with Medicare. The category “uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 19.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table XIII. Crude percent distributions (with standard errors) of respondent-assessed health status among persons 18 years of age and over, by selected characteristics: United States, 2005

Selected characteristic	Total	Current health status among persons 18 years of age and over ¹

Sex and ethnicity				
Hispanic or Latino, male	100.0	60.1 (1.19)	28.8 (1.06)	11.1 (0.72)
Hispanic or Latina, female	100.0	53.6 (1.17)	29.9 (1.07)	16.5 (0.79)
Not Hispanic or Latino:				
White, single race, male	100.0	65.0 (0.63)	24.4 (0.51)	10.6 (0.37)
White, single race, female	100.0	62.7 (0.60)	25.3 (0.50)	12.0 (0.36)
Black or African American, single race, male	100.0	54.9 (1.60)	28.4 (1.35)	16.7 (1.14)
Black or African American, single race, female	100.0	50.9 (1.27)	29.7 (1.05)	19.4 (0.99)

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

¹The data in this table are based on a question in the survey that asked respondents, "Would you say [subject name's] health in general was excellent, very good, good, fair, or poor?" This information was obtained during a part of the interview that allowed proxy responses, such that a knowledgeable adult family member could respond on behalf of adults not taking part in the interview (however, the sample in this table is based on the reported health status for the sample adult only). "Excellent" and "very good" are combined in this table, as are "fair" and "poor."

²Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 21.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table XIV. Crude percent distributions (with standard errors) of current health status relative to health status a year ago among persons 18 years of age and over, by selected characteristics: United States, 2005

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

– Quantity zero.

¹This table is based on a question in the survey that asked respondents, "Would you say {subject name's} health in general is excellent, very good, good, fair, or poor?" Proxy responses were allowed for adults not taking part in this portion of the interview (however, the sample in this table is based on the reported health status for the Sample Adult only). "Excellent" and "very good" are combined in this table, as are "fair" and "poor." All sample adult respondents were also asked, "Compared with 12 months ago, would you say your health is better, worse, or about the same?"

²Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 23.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table XV. Crude percent distributions (with standard errors) of current cigarette smoking status among persons 18 years of age and over, by selected characteristics: United States, 2005

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹The data in this table are based on two questions in the survey: "Have you smoked at least 100 cigarettes in your entire life?" and "Do you now smoke cigarettes every day, some days, or not at all?"

²Current smokers have smoked at least 100 cigarettes in their lifetime and still currently smoke. Every day smokers are current smokers who smoke every day while some day smokers are current smokers who smoke on some days.

³Former smokers are persons who have smoked at least 100 cigarettes in their lifetime, but currently do not smoke at all.

⁴Nonsmokers are persons who have never smoked at least 100 cigarettes in their lifetime.

⁵Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

⁶Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁷In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁸The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁹Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

¹⁰Education is shown only for persons aged 25 years and over.

¹¹GED is General Educational Development high school equivalency diploma.

¹²The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹³Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹⁴Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹⁵MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 25.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table XVI. Crude percent distributions (with standard errors) of alcohol drinking status among persons 18 years of age and over, by selected characteristics: United States, 2005

Selected characteristic	Total	Alcohol drinking status among persons 18 years of age and over ¹				
		Lifetime abstainer ²	Former infrequent ^{2,3}	Former regular ^{2,3}	Current infrequent ^{2,3}	Current regular ^{2,3}
		Percent distribution ⁴ (standard error)				
Total ⁵ (crude)	100.0	24.3 (0.42)	8.2 (0.20)	6.1 (0.19)	12.0 (0.24)	49.0 (0.43)
Total ⁵ (age adjusted)	100.0	24.5 (0.42)	8.1 (0.20)	6.1 (0.19)	12.0 (0.24)	48.9 (0.43)

Black or African American, single race, female	100.0	44.6 (1.43)	11.5 (0.72)	4.6 (0.45)	13.0 (0.83)	26.2 (1.05)

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹Data on alcohol consumption are derived from several source questions: "In ANY ONE YEAR, have you had at least 12 drinks of any type of alcoholic beverage?," "In your ENTIRE LIFE, have you had at least 12 drinks of any type of alcoholic beverage?," and "In the PAST YEAR, how often did you drink any type of alcoholic beverage?"

²The drinking status categories in this table are based on the same definitions used in the Health, United States publications (see Appendix II), and are derived from respondents' self-reported responses to a series of questions about alcohol consumption. A lifetime abstainer had fewer than 12 drinks in his/her lifetime. A former drinker had at least 12 drinks in his/her lifetime or in any 1 year AND had no drinks in the past year. A current drinker had at least 12 drinks in his/her lifetime or in any 1 year AND had a drink between 1–365 times in the past year.

³Former regular drinkers had at least 12 drinks in any one year and no drinks in the last year. Current infrequent drinkers had at least 12 drinks in their lifetime and fewer than 12 drinks in the past year, and current regular drinkers had at least 12 drinks in the past year. Former and current drinkers for whom the frequency of consumption or amount consumed was unknown are not included.

⁴Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

⁵Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁶In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁷The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁸Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁹Education is shown only for persons aged 25 years and over.

¹⁰GED is General Educational Development high school equivalency diploma.

¹¹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹²Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹³Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹⁴MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 27.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table XVII. Crude percent distributions (with standard errors) of number of periods per week of vigorous leisure-time physical activity lasting 10 minutes or more among persons 18 years of age and over, by selected characteristics: United States, 2005

Not Hispanic or Latino:						
White, single race, male	100.0	53.5 (0.77)	3.1 (0.23)	14.9 (0.48)	14.7 (0.45)	13.8 (0.48)
White, single race, female	100.0	63.1 (0.64)	2.1 (0.17)	10.2 (0.35)	14.6 (0.43)	9.9 (0.34)
Black or African American, single race, male	100.0	64.0 (1.60)	2.2 (0.54)	10.6 (0.94)	12.1 (1.06)	11.1 (1.02)
Black or African American, single race, female	100.0	75.8 (1.12)	2.1 (0.37)	7.5 (0.67)	8.1 (0.63)	6.5 (0.59)

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

– Quantity zero.

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

¹The data in this table are based on several questions in the survey that asked respondents how often they did vigorous activities during their leisure time for at least 10 minutes that caused heavy sweating and large increases in breathing or heart rates. Persons could indicate the time period for these activities as “times per day,” “times per week,” “times per month,” or “times per year.”

Persons who indicated they were unable to do vigorous activity were included in the “never” category.

²Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category “1 race” refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for “1 race,” but not shown separately due to small sample sizes. Therefore, the frequencies for the category “1 race” will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category “1 race, black or African American” in the tables is referred to as “black persons” in the text.

⁵The category “2 or more races” refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category “2 or more races” will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories “less than \$20,000” and “\$20,000 or more” include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category “private” includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, “private” includes persons with only private or private in combination with Medicare. The category “uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 29.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table XVIII. Crude percent distributions (with standard errors) of body mass index among persons 18 years of age and over, by selected characteristics: United States, 2005

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

– Quantity zero.

¹Body mass index (BMI) is calculated from the information respondents supplied in response to the questions in the survey regarding height and weight. For both men and women, underweight is indicated by a BMI under 18.5; healthy weight is indicated by a BMI greater than or equal to 18.5 and less than 25.0; overweight is indicated by a BMI greater than or equal to 25.0 and less than 30.0; obesity is indicated by a BMI greater than or equal to 30.0. Analysts should note self-reported height and weight may differ from actual measurements.

²Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 31.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table XIX. Crude percent distributions (with standard errors) of having a usual place of health care among persons 18 years of age and over, and of type of place among those persons 18 years of age and over with a usual place of health care, by selected characteristics: United States, 2005

Selected characteristic	Total	Total without a usual place of care	Total with a usual place of care	Type of place ¹

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

– Quantity zero.

¹The data in this table are based on a question in the survey that asked, "Is there a place that you usually go to when you are sick or need advice about your health," and if there was at least one such place, then a followup question was asked: "What kind of place [is it/do you go to most often] - a clinic, a doctor's office, an emergency room, or some other place?" The choices for this second question are: "clinic or health center," "doctor's office or HMO," "hospital emergency room," "hospital outpatient department," "some other place," or "doesn't go to one place most often." For this table, "hospital emergency room" and "hospital outpatient department" are combined as well as "some other place" and "doesn't go to one place most often."

²HMO is health maintenance organization.

³Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

⁴Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁵In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁶The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁷Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁸Education is shown only for persons aged 25 years and over.

⁹GED is General Educational Development high school equivalency diploma.

¹⁰The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹¹Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹²Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹³MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 33.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table XX. Crude percent distributions (with standard errors) of number of office visits to a doctor or other health care professional in the past 12 months among persons 18 years of age and over, by selected characteristics: United States, 2005

Black or African American, single race, female	100.0	13.2 (1.01)	16.2 (0.86)	28.5 (1.12)	26.5 (1.02)	15.6 (0.85)

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹The data in this table are based on a question in the survey that asked respondents, "During the past 12 months, how many times have you seen a doctor or other health care professional about your own health at a doctor's office, a clinic, or some other place?" Respondents are instructed to exclude overnight hospitalizations, visits to hospital emergency rooms, home visits, or telephone calls.

²Unknowns were not included in the denominators when calculating percentages (see Appendix I). The numbers in this table are rounded.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 35.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table XXI. Crude percent distributions (with standard errors) of length of time since last contact with a doctor or other health care professional among persons 18 years of age and over, by selected characteristics: United States, 2005

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

– Quantity zero.

¹The data in this table are based on a question in the survey that asked respondents, "About how long has it been since you saw or talked to a doctor or other health care professional about your own health?" These contacts may include office visits, hospital visits, home visits, and phone calls (but not calls made for arranging appointments).

²Unknowns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. Not in MSA consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 37.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table XXII. Crude percent distributions (with standard errors) of length of time since last contact with a dentist or other dental health professional among persons 18 years of age and over, by selected characteristics: United States, 2005

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

– Quantity zero.

† Estimates with a relative standard error of greater than 50% are replaced with a dagger and are not shown.

¹The data in this table are based on a question in the survey that asked respondents, "About how long has it been since you last saw or talked to a dentist?" Respondents are instructed to include all types of dentists, such as orthodontists, oral surgeons, and all other dental specialists, as well as dental hygienists.

²Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). Percentages may not add to totals due to rounding.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 39.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Table XXIII. Crude percent distributions (with standard errors) of human immunodeficiency virus testing status among persons 18 years of age and over, by selected characteristics: United States, 2005

Selected characteristic	Total	HIV testing status among persons 18 years of age and over ¹	
		Ever tested	Never tested
		Percent distribution ² (standard error)	
Total ³ (crude)	100.0	35.3 (0.36)	64.7 (0.36)
Total ³ (age adjusted)	100.0	35.3 (0.36)	64.7 (0.36)
Sex			
Male	100.0	32.7 (0.50)	67.3 (0.50)
Female	100.0	37.7 (0.47)	62.3 (0.47)
Age			
18–44 years	100.0	46.4 (0.54)	53.6 (0.54)
45–64 years	100.0	30.0 (0.55)	70.0 (0.55)
65–74 years	100.0	13.4 (0.70)	86.6 (0.70)
75 years and over	100.0	6.7 (0.52)	93.3 (0.52)
Race			
1 race ⁴	100.0	35.2 (0.36)	64.8 (0.36)
White	100.0	33.1 (0.38)	66.9 (0.38)
Black or African American	100.0	50.6 (1.07)	49.4 (1.07)
American Indian or Alaska Native	100.0	43.8 (3.82)	56.2 (3.82)
Asian	100.0	33.0 (1.84)	67.0 (1.84)
Native Hawaiian or other Pacific Islander	100.0	51.9 (7.78)	48.1 (7.78)
2 or more races ⁵	100.0	45.9 (4.07)	54.1 (4.07)
Black or African American, white	100.0	46.2 (8.80)	53.8 (8.80)
American Indian or Alaska Native, white	100.0	41.7 (4.30)	58.3 (4.30)
Hispanic or Latino origin ⁶ and race			
Hispanic or Latino	100.0	41.3 (0.88)	58.7 (0.88)
Mexican or Mexican American	100.0	38.5 (1.07)	61.5 (1.07)
Not Hispanic or Latino	100.0	34.4 (0.39)	65.6 (0.39)
White, single race	100.0	31.8 (0.42)	68.2 (0.42)
Black or African American, single race	100.0	50.5 (1.08)	49.5 (1.08)
Education ⁷			
Less than a high school diploma	100.0	30.1 (0.84)	69.9 (0.84)
High school diploma or GED ⁸	100.0	29.7 (0.65)	70.3 (0.65)
Some college	100.0	41.4 (0.69)	58.6 (0.69)
Bachelor's degree or higher	100.0	40.3 (0.69)	59.7 (0.69)
Family income ⁹			
Less than \$20,000	100.0	34.0 (0.70)	66.0 (0.70)
\$20,000 or more	100.0	36.3 (0.41)	63.7 (0.41)
\$20,000–\$34,999	100.0	35.8 (0.78)	64.2 (0.78)
\$35,000–\$54,999	100.0	36.0 (0.83)	64.0 (0.83)
\$55,000–\$74,999	100.0	40.9 (1.09)	59.1 (1.09)
\$75,000 or more	100.0	39.0 (0.76)	61.0 (0.76)
Poverty status ¹⁰			
Poor	100.0	42.2 (1.10)	57.8 (1.10)
Near poor	100.0	36.6 (0.84)	63.4 (0.84)
Not poor	100.0	37.0 (0.47)	63.0 (0.47)
Health insurance coverage ¹¹			
Under age 65 years:			
Private	100.0	37.5 (0.48)	62.5 (0.48)
Medicaid	100.0	53.0 (1.43)	47.0 (1.43)
Other	100.0	48.9 (1.95)	51.1 (1.95)
Uninsured	100.0	42.3 (0.85)	57.7 (0.85)
Age 65 years and over:			
Private	100.0	9.1 (0.58)	90.9 (0.58)
Medicaid and Medicare	100.0	13.8 (1.90)	86.2 (1.90)
Medicare only	100.0	9.6 (0.88)	90.4 (0.88)
Other	100.0	20.6 (2.38)	79.4 (2.38)
Uninsured	100.0	*24.0 (8.25)	76.0 (8.25)

See footnotes at end of table.

Table XXIII. Crude percent distributions (with standard errors) of human immunodeficiency virus testing status among persons 18 years of age and over, by selected characteristics: United States, 2005—Con.

Selected characteristic	Total	HIV testing status among persons 18 years of age and over ¹	
		Ever tested	Never tested
Marital status		Percent distribution ² (standard error)	
Married	100.0	34.7 (0.46)	65.3 (0.46)
Widowed	100.0	12.1 (0.74)	87.9 (0.74)
Divorced or separated	100.0	44.3 (0.84)	55.7 (0.84)
Never married	100.0	34.7 (0.77)	65.3 (0.77)
Living with a partner	100.0	51.6 (1.52)	48.4 (1.52)
Place of residence¹²			
Large MSA	100.0	38.2 (0.51)	61.8 (0.51)
Small MSA	100.0	34.8 (0.65)	65.2 (0.65)
Not in MSA	100.0	29.6 (0.86)	70.4 (0.86)
Region			
Northeast	100.0	33.2 (0.83)	66.8 (0.83)
Midwest	100.0	30.3 (0.69)	69.7 (0.69)
South	100.0	38.9 (0.66)	61.1 (0.66)
West	100.0	36.7 (0.71)	63.3 (0.71)
Sex and ethnicity			
Hispanic or Latino, male	100.0	35.6 (1.22)	64.4 (1.22)
Hispanic or Latina, female	100.0	47.3 (1.16)	52.7 (1.16)
Not Hispanic or Latino:			
White, single race, male	100.0	30.0 (0.57)	70.0 (0.57)
White, single race, female	100.0	33.4 (0.57)	66.6 (0.57)
Black or African American, single race, male	100.0	48.2 (1.65)	51.8 (1.65)
Black or African American, single race, female	100.0	52.3 (1.23)	47.7 (1.23)

* Estimates preceded by an asterisk (*) have a relative standard error of greater than 30% and less than or equal to 50% and should be used with caution as they do not meet the standard of reliability or precision.

¹The data in this table are based on a question in the survey that asked respondents, "Have you ever been tested for HIV?" Analysts should note that this question is different from the 1999 version, "Have you ever had your blood tested for the AIDS virus infection?"

²Unknowns for the columns were not included in the denominators when calculating percentages (see Appendix I). The numbers in this table are rounded.

³Total includes other races not shown separately and persons with unknown education, family income, poverty status, health insurance, and marital status characteristics.

⁴In accordance with the 1997 standards for federal data on race and Hispanic or Latino origin (see Appendix II), the category "1 race" refers to persons who indicated only a single race group. Persons who indicated a single race other than the groups shown are included in the total for "1 race," but not shown separately due to small sample sizes. Therefore, the frequencies for the category "1 race" will be greater than the sum of the frequencies for the specific groups shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races. The tables in this report use the complete new Office of Management and Budget race and Hispanic origin terms, and the text uses shorter versions of these terms for conciseness. For example, the category "1 race, black or African American" in the tables is referred to as "black persons" in the text.

⁵The category "2 or more races" refers to all persons who indicated more than one race group. Only two combinations of multiple race groups are shown due to small sample sizes for other combinations. Therefore, the frequencies for the category "2 or more races" will be greater than the sum of the frequencies for the specific combinations shown separately. Persons of Hispanic or Latino origin may be of any race or combination of races.

⁶Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race.

⁷Education is shown only for persons aged 25 years and over.

⁸GED is General Educational Development high school equivalency diploma.

⁹The categories "less than \$20,000" and "\$20,000 or more" include both persons reporting dollar amounts and persons reporting only that their incomes were within one of these two categories (see Appendix I). The indented categories include only those persons who reported dollar amounts.

¹⁰Poverty status is based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

¹¹Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. Persons under age 65 years and those age 65 years and over were classified separately due to the prominence of Medicare coverage in the older population. The category "private" includes persons who had any type of private coverage either alone or in combination with other coverage. For example, for persons age 65 years and over, "private" includes persons with only private or private in combination with Medicare. The category "uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

¹²MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. "Not in MSA" consists of persons not living in a metropolitan statistical area.

NOTE: For age-adjusted percentages, refer to Table 41.

DATA SOURCE: National Health Interview Survey, 2005. Estimates are based on household interviews of a sample of the civilian noninstitutionalized population.

Vital and Health Statistics series descriptions

- SERIES 1. **Programs and Collection Procedures**—These reports describe the data collection programs of the National Center for Health Statistics. They include descriptions of the methods used to collect and process the data, definitions, and other material necessary for understanding the data.
- SERIES 2. **Data Evaluation and Methods Research**—These reports are studies of new statistical methods and include analytical techniques, objective evaluations of reliability of collected data, and contributions to statistical theory. These studies also include experimental tests of new survey methods and comparisons of U.S. methodology with those of other countries.
- SERIES 3. **Analytical and Epidemiological Studies**—These reports present analytical or interpretive studies based on vital and health statistics. These reports carry the analyses further than the expository types of reports in the other series.
- SERIES 4. **Documents and Committee Reports**—These are final reports of major committees concerned with vital and health statistics and documents such as recommended model vital registration laws and revised birth and death certificates.
- SERIES 5. **International Vital and Health Statistics Reports**—These reports are analytical or descriptive reports that compare U.S. vital and health statistics with those of other countries or present other international data of relevance to the health statistics system of the United States.
- SERIES 6. **Cognition and Survey Measurement**—These reports are from the National Laboratory for Collaborative Research in Cognition and Survey Measurement. They use methods of cognitive science to design, evaluate, and test survey instruments.
- SERIES 10. **Data From the National Health Interview Survey**—These reports contain statistics on illness; unintentional injuries; disability; use of hospital, medical, and other health services; and a wide range of special current health topics covering many aspects of health behaviors, health status, and health care utilization. They are based on data collected in a continuing national household interview survey.
- SERIES 11. **Data From the National Health Examination Survey, the National Health and Nutrition Examination Surveys, and the Hispanic Health and Nutrition Examination Survey**—Data from direct examination, testing, and measurement on representative samples of the civilian noninstitutionalized population provide the basis for (1) medically defined total prevalence of specific diseases or conditions in the United States and the distributions of the population with respect to physical, physiological, and psychological characteristics, and (2) analyses of trends and relationships among various measurements and between survey periods.
- SERIES 12. **Data From the Institutionalized Population Surveys**—Discontinued in 1975. Reports from these surveys are included in Series 13.
- SERIES 13. **Data From the National Health Care Survey**—These reports contain statistics on health resources and the public's use of health care resources including ambulatory, hospital, and long-term care services based on data collected directly from health care providers and provider records.
- SERIES 14. **Data on Health Resources: Manpower and Facilities**—Discontinued in 1990. Reports on the numbers, geographic distribution, and characteristics of health resources are now included in Series 13.
- SERIES 15. **Data From Special Surveys**—These reports contain statistics on health and health-related topics collected in special surveys that are not part of the continuing data systems of the National Center for Health Statistics.
- SERIES 16. **Compilations of Advance Data From Vital and Health Statistics**—Advance Data Reports provide early release of information from the National Center for Health Statistics' health and demographic surveys. They are compiled in the order in which they are published. Some of these releases may be followed by detailed reports in Series 10–13.
- SERIES 20. **Data on Mortality**—These reports contain statistics on mortality that are not included in regular, annual, or monthly reports. Special analyses by cause of death, age, other demographic variables, and geographic and trend analyses are included.
- SERIES 21. **Data on Natality, Marriage, and Divorce**—These reports contain statistics on natality, marriage, and divorce that are not included in regular, annual, or monthly reports. Special analyses by health and demographic variables and geographic and trend analyses are included.
- SERIES 22. **Data From the National Mortality and Natality Surveys**—Discontinued in 1975. Reports from these sample surveys, based on vital records, are now published in Series 20 or 21.
- SERIES 23. **Data From the National Survey of Family Growth**—These reports contain statistics on factors that affect birth rates, including contraception, infertility, cohabitation, marriage, divorce, and remarriage; adoption; use of medical care for family planning and infertility; and related maternal and infant health topics. These statistics are based on national surveys of women of childbearing age.
- SERIES 24. **Compilations of Data on Natality, Mortality, Marriage, and Divorce**—These include advance reports of births, deaths, marriages, and divorces based on final data from the National Vital Statistics System that were published as *National Vital Statistics Reports* (NVSR), formerly *Monthly Vital Statistics Report*. These reports provide highlights and summaries of detailed data subsequently published in *Vital Statistics of the United States*. Other special reports published here provide selected findings based on final data from the National Vital Statistics System and may be followed by detailed reports in Series 20 or 21.
