CHARGES FOR CARE IN NURSING HOMES

Joan Renée Fedell, *Division of Health Resources Statistics*

INTRODUCTION

This report presents data on the lowest, most frequent, and highest monthly charges for care in nursing homes in the United States for 1968. These charges are compared with charge data collected in 1963. In addition, the 1968 charges are presented according to type of nursing service, ownership, bed size, and geographic location of the nursing home. Data on the most frequent monthly charge (the modal charge) are compared according to the medical services available and whether or not homes had Medicare recipients. The extent of the Medicare and public assistance programs in these homes is indicated by data on the percentage of residents who received such benefits. Data on homes which make no charge for care are also presented.

Little information was available on charges in nursing homes for the last 5 years. Those statistics available in the past were limited because they were based on synthetic national estimates,¹ small area sample surveys,² or surveys of particular types of nursing homes.³ Statistics presented in this report are not limited by these factors because they are based on data from "all" nursing homes in the United States regardless of type of home. (See appendix II for information on completeness of the universe.)

Data presented in this report were collected in the 1968 Nursing Home Survey. This survey, conducted by mail during April-September 1968, was a census of "all" 18,185 nursing homes in the United States. (Nursing homes were defined

as resident institutions which provided nursing care and maintained three beds or more.) The survey collected information on nursing homes and their residents, charges, employees, admissions, and services. This report is the first of a series on data collected in the 1968 Nursing Home Survey. Future reports will present data on employees, admissions and discharges, and services.

In order to interpret the data in this report the reader should review the background material presented in the appendixes—information on survey design and procedure in appendix I; general qualifications of the data and imputation procedures in appendix II; definitions of terms, appendix III; classification of institution by type of nursing service, appendix IV; and forms used in the survey, appendix V.

The 1968 Nursing Home Survey was the third in a series of *ad hoc* surveys of institutional health facilities. The first of these surveys, Resident Places Survey I, was conducted during April-June 1963. The survey collected data on nursing homes, chronic disease and geriatric hospitals, nursing home units and chronic disease wards of general hospitals, and mental hospitals. The findings of that survey, as well as its design and methodology, have been published in several reports.⁴⁻⁸ The second *ad hoc* survey, Resident Places Survey II, was conducted a year later, during May-June 1964. This survey concentrated mainly on nursing homes and geriatric hospitals. More detailed information was collected about the institutions, their residents, and their employees.⁹⁻¹⁷ These three surveys of institutional health

facilities are part of the National Health Survey program to provide current health statistics on the Nation.¹⁸

SELECTED FINDINGS

The analysis which follows presents the highlights of the survey findings on charges for care and points out important relationships revealed by the data. Detailed information about charges for care is given in the detailed tables 1-10.

The data on charges for care are based on answers to the question "What is your most frequent, your highest, and your lowest charge per month for lodging, meals, nursing care, and other personal services?" Such answers do not provide *precise* facts about charges being made for the care of residents. However, by measuring the mode (most frequent charge) and the range of charges (i.e., lowest and highest charges), an accurate description of the distribution of charges can be made.

Charges for Care in 1968 and 1963

In 1968 the charges for care of 743,293 nursing home residents ranged from no charge to over \$500 per month. (See top of figure 1.) These extreme charges were the exception, however, since only 5 percent of the homes had no charge, initial payment-life care plans, or other non-charge arrangements and only 3 percent charged \$500 or more. More typically a home charged about \$253 per resident per month; this was the average most frequent charge (average modal charge) made by all homes. The average lowest charge was \$220, and the average highest charge was \$310 (table 1).

A more detailed description of the distribution of charges can be obtained by studying the average and standard deviation of the charges (table A). In 68 percent of all homes (i.e., one standard deviation above and below the mean) the most frequent charge ranged from \$139 to \$367. The lowest charge, which ranged from \$116 to \$324, had the least variability. The highest charge, which ranged from \$150 to \$470, had the greatest variability.

The universe, definitions, and questions for the 1968 Nursing Home Survey were similar to

Table A. Average and standard deviation of lowest, most frequent (modal), and highest monthly charges per resident in nursing homes charging for care: United States, April-September 1968

Monthly charge	Average	Standard deviation
Lowest charge-----	\$220	\$104
Most frequent (modal) charge-----	253	114
Highest charge-----	310	160

those for Resident Places Survey I, conducted in 1963, as mentioned above. Because of the similarities in the surveys, data on charges can be compared in order to measure any changes that occurred in the 5-year period.¹⁹ Generally charges for care in nursing homes increased from 1963 to 1968, as did service charges in other areas of the economy. The most frequent monthly charge per resident increased, on the average, by 49 percent—from \$170 in 1963 to \$253 in 1968.⁵

A comparison of the cumulative percent distributions of the lowest, most frequent, and highest monthly charges for 1963 and 1968 identifies the overall changes in range and interrelationship of charges (figure 1). Although the percent of homes with no charge or other noncharge arrangements remained stable at 5 percent, the lowest, most frequent, and highest charges increased during this period.

While 50 percent of all nursing homes had no charge higher than \$211 in 1963, by 1968 this figure had increased to \$287—an increase of \$76. There were comparable increases in the lowest and most frequent charges during the 5-year period. (See figure 1.)

The interrelationship of the lowest, most frequent, and highest charges also changed from 1963 to 1968. In 1963 the most frequent charge was closer to the lowest charge than to the highest charge. By 1968, however, the most frequent charge had moved away from the lowest

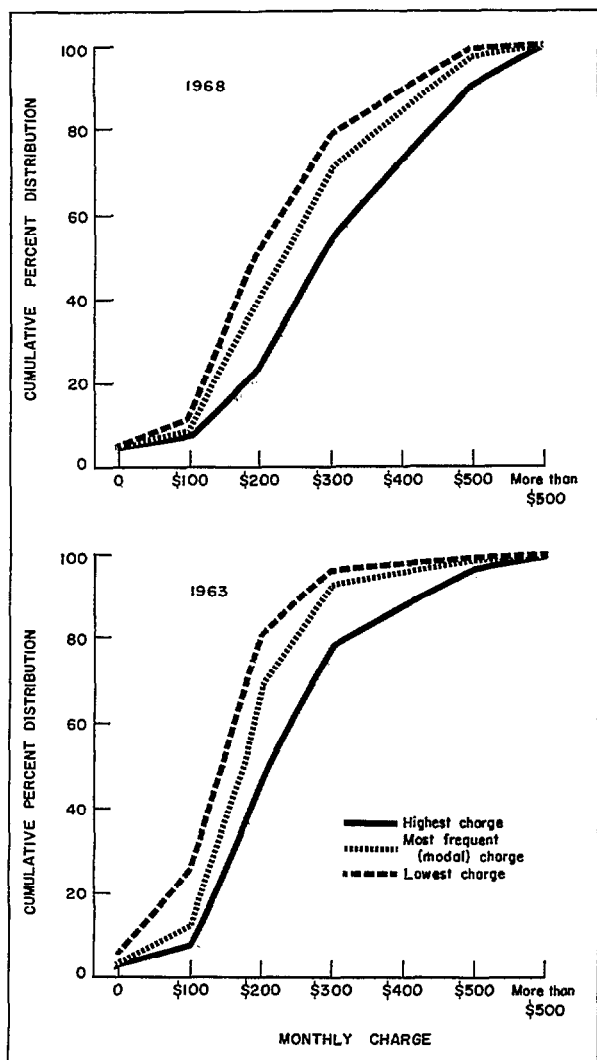

Figure 1. Cumulative percent distributions of nursing homes by lowest, most frequent (modal), and highest monthly charges per resident: United States, 1963 and 1968.

charge until it was almost equidistant from the lowest and highest charges.

Type of Nursing Service

Charges for care were directly related to the level of nursing service. As the level of nursing service increased, the average most frequent

charge increased. The average charge in personal care homes (lowest level of nursing service) was \$181 per month. In contrast, the average charge in nursing care homes (highest level of nursing service) was \$114 higher—\$295 per month (table B). Charges were highest in homes providing nursing care because such homes usually maintain more equipment and a larger nursing staff.

Generally this relationship between level of nursing service and average most frequent charge existed throughout the United States. Nursing care homes charged the highest amount in all States except West Virginia. In 43 States and the District of Columbia, personal care with nursing homes (intermediate level of nursing service) charged more than personal care homes (lowest level of nursing service). The situation was reversed in seven States (Louisiana, Mississippi, Nevada, New Hampshire, Utah, West Virginia, Wyoming), where personal care with nursing homes charged less than personal care homes (table 6). A possible explanation of this reversal is that the average charge for personal care homes in these seven States was based on a small number of homes and affected by several extremely high values.

Type of Ownership

Proprietary homes charged the highest amounts, nonprofit homes, the next highest, and government-owned homes, the lowest. This order was the same for lowest, most frequent, and highest charges (tables 1 and B). Charges were often less in nonprofit and government-owned homes because part of the cost was absorbed by the group operating the home and was not passed on to the resident.

Bed Size

As the size of homes increased, the average most frequent charge increased. It rose from a low of \$203 in homes with less than 25 beds to a high of \$315 in homes with 100 beds or more (table 2). One explanation for this increase is that 79 percent of the large homes (50 beds or more) that charged for care were nursing care

Table B. Average most frequent (modal) monthly charge per resident in nursing homes charging for care, by type of service and type of ownership of nursing home: United States, April-September 1968

Type of service	Type of ownership			
	All types	Proprietary	Church and other nonprofit	Government
All types of service-----	\$253	\$258	\$248	\$207
Nursing care-----	295	298	286	259
Personal care with nursing-----	210	207	225	184
Personal care-----	181	183	185	171

homes, which had the highest charges. Therefore, charges for large homes were highest because most of them were nursing care homes.

Region

Charges were highest in the Northeast and West Regions, lowest in the North Central and South Regions. The average most frequent charges were \$274 in the Northeast, \$257 in the West, \$243 in the North Central, and \$240 in the South. (See figure 2.) The main reason that average charges were highest in the Northeast and West Regions is that homes providing the highest level of nursing service (nursing care homes) charged more there than in the North Central and South Regions. (See figure 3.) This regional difference and the effect of charges in nursing care homes on regional charges existed in 1963.⁵ The higher charges for nursing care homes affected the overall regional charges because they comprised 57 percent of all nursing institutions and provided care for 72 percent of all residents. Comparison of figures 2 and 3 shows the influence of higher charges in nursing care homes on overall regional charges.

Medical Services

Nursing homes in which medical services were available generally had most frequent

Figure 2. Average lowest, most frequent (modal), and highest monthly charges per resident in all nursing homes, by geographic region: United States, April-September 1968.

Figure 3. Average lowest, most frequent (modal), and highest monthly charges per resident in nursing care homes (homes providing the highest level of nursing service), by geographic region: United States, April-September 1968.

charges that were higher than the national average charge of \$253. Medical services included any of the following:

- Arrangements with physicians to provide care for the residents
- Physical examination at admission and annually thereafter
- Availability of physical, occupational, or speech and hearing therapy
- Availability of physical therapy in the home or in an outpatient clinic

Although the following discussion considers each service separately, this is not to suggest that each service affects charges independently.

Rather, it is the combination of services available in the home plus other factors which influence charges for care.

Charges were higher for homes with a full-time staff physician (\$263) or physician visits at regular intervals (\$279) than they were for homes with physician visits when needed (\$236) or medical care in the physician's office (\$196). (See table C.) The higher charges in the first two arrangements may be related to the additional cost the homes pay to provide these arrangements for their patients. The most common arrangements were physician visits when needed (56 percent of all homes) and physician visits at regular intervals (35 percent). Medical care in the physician's office was the least common arrangement (2 percent), possibly because of the difficulties involved in transporting nonambulatory patients.

Charges were highest (\$267) for homes in which physical examinations were provided at admission and annually thereafter. This was the most common arrangement, occurring in 75 percent of all nursing homes (table C). Charges were lowest (\$194) for homes in which examinations were not provided either at admission or annually. Fifteen percent of the homes followed this policy. This does *not* mean that examinations were never provided in these homes. Rather, some may have followed a policy of examinations when needed depending on the health of the resident. Thus provision of examinations in these homes varied from resident to resident. This is further exemplified by the fact that the most common arrangement for physician services was visits when needed.

Thirty-one percent of all nursing homes provided physical, occupational, or speech and hearing therapy inside the home. Charges were highest (\$385) in homes providing all three types of therapy and lowest (\$219) in homes providing none of them. (See table D.) This difference suggests that the higher charges of homes providing all three types of therapy were related to the additional cost for specialized personnel, therapy equipment, and therapy facilities. For homes providing only one of the three types of therapy, charges were higher for physical therapy (\$304) than for speech and hearing therapy (\$254) or occupational therapy (\$247). Physical therapy was available inside more nursing homes (28 percent) than was oc-

Occupational only-----	247	472	2.6
None-----	219	12,553	69.0

¹Includes homes with noncharge arrangements.

cupational therapy (17 percent) or speech and hearing therapy (9 percent).

The 28 percent of homes providing physical therapy on the premises were further differentiated into those where patients received physical therapy inside the home exclusively (nearly 24 percent) and those where patients received physical therapy both inside the home *and* in an outpatient clinic (nearly 5 percent). (See table E.) In an additional 10 percent of the homes, patients received physical therapy in outpatient clinics exclusively. Altogether, physical therapy was received inside the home, in an outpatient clinic, or in both places in 38 percent of all nursing homes. Charges were higher (\$339) for homes where physical therapy was received inside the home only than for homes where it was received both inside the home and in an outpatient clinic (\$307). This may be because use of an outpatient clinic to supplement services available inside the home decreases the expense of providing some therapy equipment and facilities inside the home. Charges were lowest (\$215) in the 62 percent of homes where no physical therapy was received either inside the home or in an outpatient clinic.

Employees

As the number of full-time and part-time employees per 100 residents increased, the average most frequent charge increased—from \$188 for less than 20 employees per 100 residents to \$296 for 80 employees or more per 100 residents. (See table F.) Charges for homes with less than 20 employees per 100 residents were within a dollar of the charges for homes with 20-39 employees (\$189). It was not until homes employed at least 60 employees per 100 residents that the average most frequent charge of \$275 exceeded the national average of \$253. Slightly over half (56 percent) of all nursing homes had at least 60 employees per 100 residents.

The lowest and highest charges followed patterns similar to that of the average most frequent charge. Each charge increased as the employee-resident ratio increased, and each was nearly equal in the less than 20 and 20-39 ratio categories.

According to a study conducted on 400 nursing homes assisted by the Federal Housing Administration, the number of employees had a marked effect on the increase in charges from

Table E. Average most frequent (modal) monthly charge per resident and number and percent distribution of nursing homes by where physical therapy was received: United States, April-September 1968

[Due to rounding to nearest tenth, figures may not add to 100 percent]

Where physical therapy was received	Average most frequent (modal) monthly charge	Total homes ¹	
		Number	Percent
Inside the home and in an outpatient clinic-	\$307	816	4.5
Inside the home only-----	339	4,274	23.5

No physical therapy received-----	215	11,321	62.3

¹Includes homes with noncharge arrangements.

Table F. Average lowest, most frequent (modal), and highest monthly charges per resident and number and percent distribution of nursing homes charging for care by number of employees per 100 residents: United States, April-September 1968

[Due to rounding to nearest tenth, figures may not add to 100 percent]

Number of full-time and part-time employees per 100 residents	Average monthly charge			Homes charging for care	
	Lowest	Most frequent (modal)	Highest	Number	Percent
Less than 20 employees-----	\$162	\$188	\$228	849	5
20-39 employees-----	167	189	230	2,755	16
40-59 employees-----	198	230	280	4,103	24
60-79 employees-----	239	275	340	4,415	26
80 employees or more-----	260	296	366	5,154	30

1967 to 1969. When administrators of these homes were asked to choose the leading cause for monthly charge increases, 90 percent indicated that rising wages and salaries were the major reasons.³

Homes With and Without Medicare Recipients

Of the 17,276 homes charging for care, 16 percent had patients who were Medicare recipients. Charges for services rendered in homes with Medicare recipients were \$135 higher per month on the average than charges for services rendered in homes without Medicare recipients (table G). This difference probably reflects the kinds of services required for skilled nursing care covered under Medicare as well as the nature of the extended care facilities themselves. (See note to table G concerning the difference between counts of homes with Medicare recipients and of homes certified for Medicare as reported by the Social Security Administration.)

By type of nursing service, more nursing care homes (26 percent) had Medicare recipients than did personal care with nursing homes (5 percent) or personal care homes (0.3 percent). Only 10 of the 3,995 personal care homes had Medicare recipients. (Because the type of nursing service classification used by the National Center for

Health Statistics (NCHS) differs from that used by the Social Security Administration, homes certified for Medicare can fall in any of the NCHS service classifications. See appendix IV for classification details.)

Within each type of service classification, charges in homes with Medicare recipients were higher than charges in homes without Medicare recipients. Of all homes without Medicare recipients, nursing care homes charged the highest amounts (\$269); personal care with nursing homes, the next highest (\$204); and personal care homes, the lowest (\$181). (See table G.) For the 16 percent of all homes with Medicare recipients, charges in nursing care homes were higher (\$369) than charges in personal care homes with nursing (\$317). Charges for personal care homes are not presented because the number of homes in this category (10) was too small to make the data reliable.

The higher charges of homes with Medicare recipients is further illustrated by comparing the cumulative percent distributions of charges for homes with and without such recipients (figure 4). Twenty-two percent of the homes without Medicare recipients charged \$300 or more. In contrast, 74 percent of homes with Medicare recipients charged \$300 or more. Higher charges in homes

Table G. Number and percent distribution of nursing homes charging for care and average most frequent (modal) monthly charge per resident for homes with and without Medicare recipients, according to type of service: United States, April-September 1968

Type of service	Homes charging for care		Homes with Medicare recipients ¹		Homes without Medicare recipients	
	Number	Percent	Percent of homes	Average most frequent (modal) monthly charge	Percent of homes	Average most frequent (modal) monthly charge
All types of service-----	17,276	100.0	16.0	\$366	84.0	\$231
Nursing care-----	10,036	100.0	25.6	369	74.4	269
Personal care with nursing-----	3,245	100.0	5.4	317	94.6	204
Personal care-----	3,995	100.0	0.3	*	99.7	181

¹According to the Social Security Administration (SSA), there were approximately 3,400 nursing homes certified for Medicare January 1, 1967, when the universe for this survey was established. (See appendix II for details.) This figure is larger than that which can be calculated from the above table because:

- 121 homes certified for Medicare but making no charge for care were excluded from the table.
- 500 hospital-based extended care facilities were not included in the survey universe.
- Homes certified for Medicare but having no Medicare patients were not identified in this survey (see phrasing of question 16 in appendix V). However, such homes were included in the SSA figure.

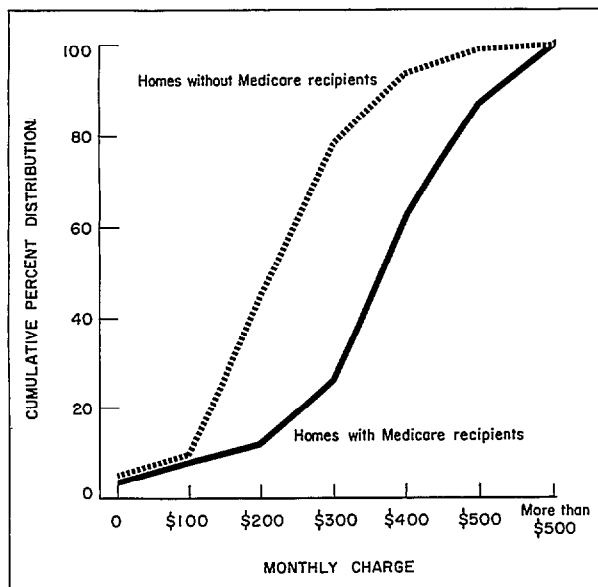

Figure 4. Cumulative percent distribution of nursing homes by most frequent (modal) monthly charge per resident for homes with and without Medicare recipients: United States, April-September 1968.

with Medicare recipients may be due to the increased costs of large nursing staff, specialized health personnel, special equipment, and special nursing and therapy services that homes must provide to be certified for Medicare.

Medical Assistance Benefits

Seventy-nine percent of all nursing homes participated in at least one Federal or State public assistance or medical assistance program. These programs include Old Age Assistance, Aid to the Blind, Aid to the Permanently and Totally Disabled, Aid to Families with Dependent Children, Medicare, and Medicaid.

Of the 743,293 residents in nursing homes, 45 percent received benefits from public or medical assistance programs, including all those listed in the preceding paragraph except Medicare. Five percent of all residents were receiving Medicare benefits, and 7 percent had exhausted their Medicare benefits (table H). Both residents who were receiving Medicare benefits *and* residents who had

Table H. Number and percent of residents of nursing homes with public or medical assistance benefits, Medicare benefits, or exhausted Medicare benefits, by type of service: United States, April-September 1968

Type of service	Number of residents	Percent of residents		
		With public or medical assistance benefits	With Medicare benefits ¹	With exhausted Medicare benefits ¹
All types of service----	743,293	44.9	5.3	7.3
Nursing care-----	535,743	47.3	7.0	8.9
Personal care with nursing----	150,291	36.8	1.3	2.7
Personal care-----	57,259	44.5	0.2	3.5

¹Residents in this category may have been receiving public or medical assistance benefits also.

exhausted their Medicare benefits may have been receiving benefits from other medical programs. If so, they were counted twice—once for receiving medical assistance benefits and once for receiving Medicare benefits or for having exhausted

them. Thus the categories in tables H and J are not additive.

For nursing care homes, which provided care for 72 percent of all residents in nursing institutions, the percent of residents receiving public

Table J. Number and percent of residents of nursing homes with public or medical assistance benefits, Medicare benefits, or exhausted Medicare benefits, by type of ownership: United States, April-September 1968

Type of ownership	Number of residents	Percent of residents		
		With public or medical assistance benefits	With Medicare benefits ¹	With exhausted Medicare benefits ¹
All types of ownership--	743,293	44.9	5.3	7.3
Proprietary-----	492,535	47.8	6.8	8.5
Church and other nonprofit----	177,421	33.6	2.9	5.1
Government-----	73,337	53.2	1.6	4.4

¹Residents in this category may have been receiving public or medical assistance benefits also.

or medical assistance benefits (47 percent) was similar to the percent for all homes (45 percent). Seven percent of residents in nursing care homes were receiving Medicare benefits and 9 percent had exhausted them (table H).

Government-owned homes had the highest percentage of residents receiving public or medical assistance benefits (53 percent), the lowest percentage receiving Medicare benefits (2 percent), and the lowest percentage who had exhausted their Medicare benefits (4 percent). (See table J.) Proprietary homes, which provided care for 66 percent of all residents, had the highest percentage of residents receiving Medicare benefits (7 percent) and the highest percentage with exhausted Medicare benefits (almost 9 percent). These percentages are similar to those for nursing care homes (see table H) because 81 percent

of the 492,535 residents in proprietary homes were in homes providing nursing care.

Homes With Noncharge Arrangements

Five percent of all nursing homes had either no charge, initial payment-life care plans, or other noncharge arrangements (table 3). These arrangements were more common in personal care with nursing homes (13 percent) than in personal care (4 percent) or nursing care homes (3 percent). By ownership, 15 percent of homes owned by non-profit groups had noncharge arrangements. In contrast, only 6 percent of government-owned homes and 3 percent of proprietary-owned homes had such arrangements. Possibly the percent of noncharging homes was highest for homes owned by nonprofit groups because they had sources of income other than from their residents.

LIST OF DETAILED TABLES

	Page
Table 1. Number of nursing homes charging for care and average and standard deviation of lowest, most frequent (modal), and highest monthly charges per resident, according to region, type of ownership, and bed size: United States, April-September 1968-----	14
2. Average and standard deviation of most frequent (modal) monthly charge per resident in nursing homes and number of homes by most frequent (modal) monthly charge, by type of service, type of ownership, and bed size: United States, April-September 1968-----	18
3. Average and standard deviation of most frequent (modal) monthly charge per resident in nursing homes, number and percent distribution of homes by most frequent (modal) monthly charge, according to type of service, type of ownership, and bed size: United States, April-September 1968-----	20
4. Average and standard deviation of most frequent (modal) monthly charge per resident in nursing homes, and number of homes by most frequent (modal) monthly charge, according to region, type of ownership, and bed size: United States, April-September 1968-----	22
5. Average and standard deviation of most frequent (modal) monthly charge per resident in nursing homes, number and percent distribution of homes by most frequent (modal) monthly charge, according to region, type of ownership, and bed size: United States, April-September 1968-----	24
6. Average most frequent (modal) monthly charge per resident, number of nursing homes, and percent distribution of homes by most frequent (modal) monthly charge, according to type of service and each State: United States, April-September 1968--	27
7. Average most frequent (modal) monthly charge per resident, number of nursing homes, and percent distribution of homes by most frequent (modal) monthly charge, according to medical services available inside and outside the home: United States, April-September 1968-----	32
8. Number of nursing homes charging for care and average lowest, most frequent (modal), and highest monthly charges per resident, by number of employees per 100 residents, type of ownership, and bed size: United States, April-September 1968--	33
9. Number of nursing homes charging for care and average most frequent (modal) monthly charge per resident for homes with and without Medicare recipients, by type of service and bed size: United States, April-September 1968-----	36
10. Number and percent of nursing home residents with public or medical assistance benefits, Medicare benefits, and exhausted Medicare benefits, by type of ownership, type of service, and bed size of nursing home: United States, April-September 1968-----	37

Table 1. Number of nursing homes charging for care and average and standard deviation of lowest, most frequent (modal), and highest monthly charges per resident, according to region, type of ownership, and bed size: United States, April-September 1968

¹According to the Social Security Administration (SSA), there were approximately 3,400 nursing homes certified for Medicare January 1, 1967, when the universe for this survey was established. (See appendix II for details.) This figure is larger than that shown in the above table because:

- 121 homes certified for Medicare but making no charge for care were excluded from the table.
- 500 hospital-based extended care facilities were not included in the survey universe.
- Homes certified for Medicare but having no Medicare patients were not identified in this survey (see phrasing of question 16 in appendix V). However, such homes were included in the SSA figure.

Table 10. Number and percent of nursing home residents with public or medical assistance benefits, Medicare benefits, and exhausted Medicare benefits, by type of ownership, type of service, and bed size of nursing home: United States, April-September 1968

¹Residents in this category may also have been receiving public or medical assistance benefits.

APPENDIX I

TECHNICAL NOTES ON THE SURVEY DESIGN AND PROCEDURES

General

The 1968 Nursing Home Survey included "all" (18,858) resident institutions in the United States which provide nursing or personal care to the aged, infirm, or chronically ill. Although it was directed toward the aged institutional population, all people who were residents of institutions within the scope of the survey were included regardless of age. The survey, conducted from April to September 1968, included nursing homes, convalescent homes, rest homes, homes for the aged, and other related facilities. Resident institutions which maintained at least three beds and provided some type of nursing service were included in the survey. (See appendix IV for the procedure used to classify these institutions by type of nursing service.)

This appendix describes the survey design and procedures for the 1968 Nursing Home Survey. Succeeding appendixes present the general qualifications of the data (appendix II), definitions of terms (appendix III), classification of institutions by type of nursing service (appendix IV), and forms used in the survey (appendix V).

Universe

The universe for the 1968 Nursing Home Survey consisted of all institutions classified as nursing homes in the 1967 Survey of the Master Facility Inventory (MFI). A detailed description of how the MFI was developed, its content, its maintenance plans, and a procedure for assessing the completeness of its coverage has been published.²⁰⁻²¹ The MFI includes the names, addresses, and certain descriptive information about "all" hospitals and resident institutions in the United States. It was originally developed by collating a large number of published and unpublished lists of establishments and surveying these establishments by mail to obtain information on their nature and status of business.

NOTE: The list of references follows the text.

Since the MFI serves as a sampling frame for institutions within the scope of the various health facilities surveys, it is imperative that it be kept as current as possible. To aid in accomplishing this purpose, a mechanism known as the Agency Reporting System has been developed to provide information on new institutions which is incorporated in the MFI at regular intervals. A report on the origin and development of the Agency Reporting System has been published.²²

Data Collection and Processing

Data for this survey were collected, primarily by mail, by the Wolf Research and Development Corporation, under contract to the National Center for Health Statistics. When the original mailing received no response, followup procedures consisted of three regular first-class mailings, each approximately 3 weeks after the prior mailing, and a final certified mailing. Before the certified mailing interviewers from the U.S. Bureau of the Census made personal visits to approximately 400 of the largest nursing homes which had not responded. (These 400 homes were not included in the certified followup.) Of those nonresponding homes left after the certified mailing, a sample of 2,000 homes, stratified by bed size and type of service, was selected for telephone followup.

Approximately 22 percent of the 18,185 homes in scope of the survey responded to the original mailing. The three additional first-class mailings added 39 percent, and the certified mailing plus Census personal interviews added another 19 percent. Telephone followup plus late mail returns brought the total response to 87 percent. Of the 2,375 nonresponding homes, the majority were those with less than 25 beds (table I). Nonresponse decreased as bed size increased.

The Wolf Corporation hand-edited and coded the completed questionnaires in accordance with specifications established by the Center. If the returned ques-

tionnaire did not contain data for certain key items, a further mail inquiry was made specifically for these items. Approximately 10 percent of the returned questionnaires did not pass editing criteria for one or more key items and required this "fail-edit" mailing.

After the edited and coded data were recorded on magnetic tape, the staff of the Health Facilities

Statistics Branch of the Division of Health Resources Statistics processed the data on the Center's electronic computer. Processing included matching each institution with basic identifying information contained in the 1967 MFI Survey as well as carrying out internal edits and consistency checks to eliminate "impossible" responses and errors in editing, coding, or processing.

Table I. Number and percent distributions of nursing homes by response status and bed size: United States, April-September 1968

[Due to rounding to nearest tenth, figures may not add to 100 percent]

APPENDIX II

QUALIFICATIONS OF THE DATA

General Qualifications

Certain qualifications should be kept in mind regarding the MFI, which was the universe for the 1968 Nursing Home Survey. The data in this report can be no more representative of nursing homes in the United States than the universe on which the survey was based. The 1967 MFI Survey included approximately 89 percent of the nursing homes in the United States. Indications are that nursing homes not on the MFI were relatively small, possibly no more than half as large on the average as those listed.

Special attention is called to the procedure for classifying institutions described in appendix IV. Nursing homes, i.e., homes for the aged, rest homes, and related types of places, were classified according to the type of service provided in the home rather than on State licensure laws or on what the home may call itself. This criterion for classification was chosen in the absence of commonly accepted definitions of nursing homes or other institutions of this type.

Since the 1968 Nursing Home Survey was a census of "all" nursing homes in the United States, the data presented in this report are *not* subject to sampling variability. The data are, however, subject to reporting and measurement errors. The accuracy of the data depends on the dependability of personnel and business records and, to some extent, on the accuracy of the respondent's replies based on his memory and his willingness to report correct answers.

In an attempt to keep measurement errors to a minimum, the questionnaire was made as self-explanatory as possible. Not only were definitions and explanations included as part of each question, but a separate Definition Sheet regarding staff was enclosed.

Time Interval Between Establishing the Universe and Conducting the Survey

The time interval between the 1967 MFI Survey (April-October 1967), in which the universe of nursing homes was established, and the 1968 Nursing Home Survey (April-September 1968) was 1 year. Basic classification data collected in the 1967 MFI Survey were not collected in the 1968 Nursing Home Survey.

Instead, the 1968 data were assumed to be the same as the 1967 data, and the 1967 data were used to classify the homes. Thus the classification of institutions for the 1968 Nursing Home Survey was based on type of service and type of ownership information collected in the 1967 MFI Survey.

During this 1-year interval the type of ownership and type of service probably changed for some of the institutions. Because of the short time period, however, any changes which occurred should have only a negligible effect on the distribution of institutions by either type of service or type of ownership.

During the 1-year interval between establishing the universe and conducting the 1968 survey, 399 nursing homes closed and 1,355 nursing homes opened for business. Those which opened for business were not included in the 1968 survey because of a time lag in receiving the names and addresses of new homes from the Agency Reporting System, the mechanism which updates the MFI mailing list. They were, however, included in the 1969 MFI Survey.

Percent distributions of these 1,355 new homes are presented according to 1969 MFI data on type of ownership and bed size (table II) and type of service and region (table III). The majority of new nursing homes (79 percent) were proprietary-owned (table II) and most (72 percent) provided nursing care, the highest level of nursing service (table III).

Care should be taken when interpreting the data in this report to remember that information about the 1,355 nursing homes which opened during the 1-year interval is not included in the detailed or text tables.

Rounding of Numbers

Data on charges for care were collected in dollars and cents but were rounded to the nearest dollar before any calculations were made.

Nonresponse and Imputation of Missing Data

Of the 18,858 institutions comprising the universe of nursing homes, 673 were found to be either out of business, out of scope, or duplicates, leaving 18,185

homes in scope of the survey. A total of 2,375 nursing homes, or 13 percent, refused to respond to the survey after all followup procedures were completed. Additional information on the response rate is presented in table I of appendix I.

Statistics in this report were adjusted for an institution's nonresponse by using classification data collected in the 1967 MFI Survey for that particular nursing home and imputing all items. When nursing homes did not return questionnaires or left items blank, the items were imputed in one of four ways. A "no" response was assigned to blanks in the following items: minimum age for admission, admission physical, yearly physical, availability of recreation therapy or outpatient therapy. If the missing data for a particular home had been collected in the 1967 MFI Survey, they

were used. The items imputed in this way were number of full-time registered nurses, number of full-time licensed practical nurses, and number of patients. If the missing data had not been collected in the 1967 MFI Survey, data were used from the preceding questionnaire from another nursing home having the same type of service (nursing care, personal care with nursing, or personal care) and the same bed size group (less than 25 beds, 25-49 beds, 50-99 beds, 100 beds or more). Items imputed this way were charges for care, number of admissions, number of employees in selected occupations, physician arrangements to visit patients, and level of the nurse in charge of the shift.

For items related to patient census, special imputation tables were used which gave the ratio of the item to the patient census by type of service and bed

Table II. Percent distribution of nursing homes opened for business between April-October 1967 and April-September 1968 by type of ownership and bed size: United States

[Due to rounding to nearest tenth, figures may not add to 100 percent]

Type of ownership and bed size	Nursing homes opened for business between April-October 1967 and April-September 1968
	Number
Total homes-----	1,355
	Percent distribution
All types of ownership-----	100.0
Proprietary-----	78.9
Less than 25 beds-----	31.4
25-49 beds-----	12.3
50-99 beds-----	22.3
100 beds or more-----	12.9
Church and other non-profit-----	14.1
Less than 25 beds-----	2.3
25-49 beds-----	3.2
50-99 beds-----	5.2
100 beds or more-----	3.4
Government-----	6.9
Less than 25 beds-----	3.4
25-49 beds-----	1.3
50-99 beds-----	1.4
100 beds or more-----	0.8

Table III. Percent distribution of nursing homes opened for business between April-October 1967 and April-September 1968 by type of service and region: United States

[Due to rounding to nearest tenth, figures may not add to 100 percent]

Type of service and region	Nursing homes opened for business between April-October 1967 and April-September 1968
	Number
Total homes-----	1,355
	Percent distribution
All types of service---	100.0
Nursing care-----	71.7
Personal care with nursing---	12.5
Personal care-----	15.8
	Number
Total homes-----	1,355
	Percent distribution
All regions-----	100.0
Northeast-----	15.0
North Central-----	28.3
South-----	37.9
West-----	18.9

size group or by type of ownership. These items were number of discharges, number of deaths, number of male and female patients, number of patients receiving rehabilitation services, and number of patients receiving medical assistance benefits.

The percent of nursing homes with a particular item imputed for unknown responses ranged from 13.6 percent for patients receiving medical assistance payments to 26.7 percent for employees in selected occupations (table IV). The percentages in table IV are based on the 18,185 homes in scope. The two components of the percentages are the 2,375 homes which did not respond to the survey plus the homes which did respond but left a particular item blank.

The high percentage of imputed answers dealing with rehabilitation services and employees may be due to respondents' unwillingness to take the time to gather information from business records in the detailed breakdowns requested.

Table IV. Percent of nursing homes with various items imputed for unknown responses, by type of item: 1968 Nursing Home Survey

Type of item	Percent imputed
Patient receiving medical assistance benefits-----	13.6
Charges for care-----	15.2
Arrangement for physician services---	15.4
Patients receiving rehabilitation services-----	24.7
Number of employees in selected occupations-----	26.7

APPENDIX III

DEFINITIONS OF CERTAIN TERMS USED IN THIS REPORT

Terms Relating to Homes or Residents

Nursing home.—This term refers to all institutions that were within the scope of the 1968 Nursing Home Survey. It includes nursing homes, convalescent homes, homes for the aged, and related institutions which provide nursing care to the aged or chronically ill and maintain three beds or more.

Type of service.—The classification of nursing institutions according to type of service is described in appendix IV.

Type of ownership.—Institutions are classified by type of ownership into the following categories:

Proprietary institution—an institution operated under private commercial ownership.

Church or other nonprofit institution—an institution operated under voluntary or nonprofit auspices. This classification includes both church-related and other nonprofit institutions.

Government institution—an institution operated under Federal, State, or local government auspices.

Bed.—Any bed set up and regularly maintained for use by a resident or patient, whether or not the bed was in use at the time of the survey, is included. Beds used by staff or for emergency services only are excluded.

Most frequent charge.—This is the most frequent amount per month the home charges its residents for all services and is also referred to as the modal charge. It includes the resident's total charges for the month for lodging, meals, nursing care, drugs, and any personal services. Charge data were collected in dollars and cents but were rounded to the nearest dollar before any calculations were made.

Lowest charge.—This is the lowest amount per month the home charges its residents for all services. It includes the resident's total charges for the month for lodging, meals, nursing care, drugs, and any personal services. Charge data were collected in dollars and cents but were rounded to the nearest dollar before any calculations were made.

Highest charge.—This is the highest amount per month the home charges its residents for all services.

It includes the resident's total charges for the month for lodging, meals, nursing care, drugs, and any personal services. Charge data were collected in dollars and cents but were rounded to the nearest dollar before any calculations were made.

Resident.—A resident, or patient, is any person who has been formally admitted to the home and is currently on its register. Included are residents who are temporarily away, for instance in a short-stay hospital or visiting with friends or relatives, etc., but whose beds are maintained for them in the home.

Public assistance.—This term includes Old Age Assistance, Aid to the Blind, Aid to the Permanently and Totally Disabled, Aid to Families with Dependent Children, Medicaid, and Medicare.

Medicaid.—This term refers to the medical assistance provided in Title XIX of the Social Security Act. Medicaid is a State-administered program for the medically indigent.

Medicare.—This term refers to the medical assistance provided in Title XVIII of the Social Security Act. Medicare is a health insurance program administered by the Social Security Administration for persons aged 65 and older who are eligible for benefits.

Terms Relating to Employees

Employee.—Any person who worked in the institution at the time of the survey is an employee. Included are paid workers, proprietors, and members of a religious order who contributed their services.

Full-time employee.—Employees who worked 35 hours or more in the week prior to the survey are designated "full-time."

Part-time employee.—Employees who worked less than 35 hours in the week prior to the survey are designated "part-time."

Job categories.—Job categories are listed in appendix V.

Terms Relating to Demographic Classifications

Region.—States are grouped into regions for geographic classification. These regions, which correspond to those used by the U.S. Bureau of the Census, are:

<i>Region</i>	<i>States Included</i>
Northeast -----	Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania
North Central ---	Michigan, Ohio, Indiana, Illinois, Wisconsin, Minnesota, Iowa,

Missouri, North Dakota, South
Dakota, Nebraska, Kansas

South -----	Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, Texas
West -----	Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Alaska, Washington, Oregon, Cali- fornia, Hawaii

APPENDIX IV

CLASSIFICATION OF NURSING HOMES BY TYPE OF SERVICE

Institutions in the 1968 Nursing Home Survey are classified by type of service as nursing care, personal care with nursing, or personal care homes according to data collected in the 1967 Master Facility Inventory Survey (MFI). (A brief description of the MFI is given in appendix I and pertinent parts of the 1967 MFI Survey questionnaire are reproduced in appendix V.) The classification scheme for type of service is based on four criteria.

1. The number of persons receiving nursing care during the week prior to survey. Nursing care is defined as the provision of one or more of the following services:

Taking temperature-pulse-respiration or blood pressure
Full bed bath
Application of dressings or bandages
Catheterization
Intravenous injection
Intramuscular injection
Nasal feeding
Irrigation
Bowel and bladder retraining
Hypodermic injection
Oxygen therapy
Enema

2. The presence or absence of nurses on the staff.
3. Whether or not the institution provides administration of medications or supervision over self-administered medications.
4. Assistance in a certain number of activities for daily living. These include rub and massage; help with tub bath or shower; help with dressing, correspondence, or shopping; help with walking or getting about; and help with eating.

The three classes of nursing homes by type of service were defined as follows:

Nursing care home

- Fifty percent or more of the residents received nursing care during the week prior to the survey.

- At least one full-time (35 or more hours per week) registered nurse (RN) or licensed practical nurse (LPN) was employed.

Personal care with nursing home

- Some, but less than 50 percent, of the residents received nursing care during the week prior to the survey.
- At least one full-time RN or LPN was employed.
or
- Some of the residents received nursing care during the week prior to the survey.
- No full-time RN or LPN was employed.
- The institution either
Provided administration of medicines or supervision over self-administered medicines.
or
Provided assistance with three or more activities for daily living.

Personal care home

- Some of the residents received nursing care during the week prior to the survey.
- No full-time RN or LPN was employed.
- The institution did not provide administration of medicines or supervision over self-administered medicines.
- The institution provided assistance with one or two activities for daily living.
or
- None of the residents received nursing care during the week prior to the survey.
- At least one full-time RN or LPN was employed.
- The institution either

Provided administration of medicines or supervision over self-administered medicines.

or

Provided assistance with three or more activities for daily living.

Institutions which provided assistance with one or two activities for daily living or offered room and board as the only service were classified as out of scope of the 1968 Nursing Home Survey.

Table V shows in detail the scheme for classifying institutions according to type of service.

Table V. Classification of institutions by type of service: 1968 Nursing Home Survey

Classification variables	Classification criteria													
	50 percent or more					Some but less than 50 percent					None			
Percent of total residents who received nursing care during the week prior to day of survey														
Number of registered or licensed practical nurses	1+	None				1+	None				0+			
Does the institution provide: (a) Administration of medicine or treatments according to doctor's orders or (b) Supervision over self-administered medicine?	...	Yes	No			...	Yes	No			Yes	No		
Does the institution offer assistance with three activities or more for daily living?	Yes	No		Yes	No		...	Yes	No	
Does the institution offer assistance with one or two activities for daily living?	Yes	No	Yes	No	Yes	No
Does the institution offer room and/or board as its only service?	Yes	Yes	Yes
Institution ¹	Nc	Pcn	Pcn	Pc	D	Pcn	Pcn	Pcn	Pc	D	Pc	Pc	D	B

¹Nc=Nursing care home
Pcn=Personal care with nursing home
Pc=Personal care home
D=Domiciliary care home (out of scope)
B=Boarding or rooming house (out of scope)

APPENDIX V
FORMS USED IN THE SURVEY

1968 NURSING HOME QUESTIONNAIRE

BUDGET BUREAU NO. 65 545017 APPROVAL EXPIRES 8-31-68	FORM PHS-5080 (1-68)
U.S. DEPARTMENT OF HEALTH, EDUCATION AND WELFARE PUBLIC HEALTH SERVICE NATIONAL CENTER FOR HEALTH STATISTICS WASHINGTON, D.C. 20201	
NURSING AND PERSONAL CARE FACILITIES SURVEY	

March 1968

Dear Sir:

The National Center for Health Statistics (NCHS) of the U.S. Public Health Service is conducting a survey of all resident facilities providing nursing and personal care to obtain basic data on their policies, services and staff. This program is being conducted as a part of the U.S. National Health Survey. This information will be used to compile statistics on the number and kinds of such facilities in the United States. These statistics will be used to meet the needs of Congress, State legislatures, Federal, regional and local health planners, national health associations, and many others who plan and provide health services to the aged. We wish to assure you that any information which permits the identification of your facility will be held strictly confidential, will be used solely by persons engaged in, and only for the purposes of the survey and will not be disclosed or released to other persons or for any other reason.

Enclosed is a report from an earlier survey which we hope you will find informative. You can receive other publications by using the enclosed order blank and returning it, along with the completed questionnaire, in the postage-paid envelope. We would appreciate your cooperation in completing this questionnaire within one week.

Thank you.

Sincerely yours,

Theodore D. Woolsey
Director,
National Center for Health
Statistics

GENERAL INSTRUCTIONS FOR COMPLETING QUESTIONNAIRE

- a. ANSWER ALL QUESTIONS, please. Definitions and instructions are given with the questions when needed.
- b. INCLUDE IN THIS REPORT information for the facility named in the mailing label or for its successor if the name or owner has changed. Include information for ONE FACILITY ONLY, but report for the ENTIRE facility, including any sub-units.
- c. RETURN THE COMPLETED QUESTIONNAIRE in the postage-paid envelope provided, to:
National Center for Health Statistics, P.O. Box 348, Bladensburg, Maryland 20710

A. OWNERSHIP OF FACILITY

1. When did this facility first begin its operation at THIS ADDRESS? (Give the date it first opened at this address as a nursing home, convalescent home, etc., even though the ownership or control may have since changed, and the specific services may now be different.)

Month	Year
2. How many times has the ownership of this facility changed hands since it was first opened at this address?

No. of Times	Never
3. When did this facility first begin its operation under its PRESENT OWNERSHIP?

Month	Year

B. ADMISSION POLICY

4. As a general policy, do you accept the following types of persons? (Mark (X) "Yes" or "No" for each item.)

	Yes	No
a. Bedfast patients		
b. Post surgical recovery patients		
c. Patients transferred from psychiatric facilities (such as mental hospital or clinic, etc.)		
d. Mentally retarded patients		
e. Persons with:		
(1) Heart disease		
(2) Ill effects of a stroke		
(3) Diabetes		
(4) Fractured hips		
(5) Crippling arthritis		
(6) Cancer		
(7) Blindness		
(8) Alcoholism		
(9) Mental illness (that is, diagnosed by a physician as mentally ill, not senile or mentally retarded)		

5. What is the minimum age for admittance into this facility?

Minimum Age	
Mark (X) if no minimum age	

6. What is your most frequent, your highest, and your lowest charge per month for lodging, meals, nursing care, and other personal services?

Most frequent	
Highest	
Lowest	
Charge per month	

- a. If you do not make monthly charges, please check the appropriate box.

Initial Payment/Life care plan	
Other (Specify) _____	

7. Are all persons admitted to this facility required to be examined by a physician within the month prior to or after admission?

--

1. Yes
2. No (Skip to 8)

- a. Which of the following types of physician usually performs the admitting examination for most patients? (Check ONE box only.)

Patient's personal physician	
Hospital staff physician	
Staff physician of this facility	
Consulting physician of this facility	
Other (Specify) _____	

C. SERVICES

8. Does a physician give a routine physical examination to all patients at least annually after admission? Yes No

--	--

9. Which of the following recreational activities do you have for patients? (Mark (X) all that apply.)

Arts and crafts program	□
Planned social activities (such as birthday parties, card games, etc.) ...	□
Trips to concerts, plays, etc.	□
Other (Specify)	□
None	□

10. Does this facility provide professional rehabilitation services at this address?

Yes No (Skip to 11) □

a. Which of the following do you provide? (Mark (X) all that apply.)	b. LAST MONTH, what was the AVERAGE DAILY number of patients receiving these services?
<input type="checkbox"/> Physical therapy	□
<input type="checkbox"/> Occupational therapy	□
<input type="checkbox"/> Speech and hearing therapy	□
<input type="checkbox"/> Other (Specify)	□

11. Do your patients use any services of out-patient care clinics?

Yes No (Skip to 12) □

a. Check the types of services your patients use

Physical therapy	□
Diagnostic clinic	□
Medical clinic	□
Other (Specify)	□

D. PATIENT TURNOVER AND CHARACTERISTICS

12. How many admissions did you have during 1967? □

a. How many of the admissions during 1967 were from:

(1) Mental hospitals	□
(2) General hospitals	□
(3) Other hospitals	□
(4) Patient's home	□
(5) Another nursing home	□
(6) Other places (Specify)	□

Total

13. How many discharges did you have during 1967, excluding deaths? Total

a. How many of these patients discharged were admitted during 1967? Number

	□
--	---

14. How many persons died during 1967 while patients of this facility? (Include all who died while on your register.) Number

	□
--	---

15. What was your patient census last night? (Include all patients, even though they may have been temporarily away; exclude employees and proprietors.)

Males	□
Females	□
Total	□

16. Do you participate in any of the Federal or State public assistance or medical assistance programs? (This includes Old Age Assistance, Aid to the Blind, Aid to the Permanently and Totally Disabled, Aid to Families with Dependent Children, Medicaid (XIX), or Medicare (Title XVIII).)

1. Yes 2. No (Skip to 17) □

a. How many patients are currently receiving Public Assistance or Medical Assistance? (Include all programs EXCEPT Medicare.)

b. For how many patients are you NOW RECEIVING Medicare (Part A) payments?

c. For how many patients are you NOT NOW receiving Medicare (Part A) payments because they have exhausted their benefit rights? Number

	□
--	---

E. STAFF

17. Is there at least one Registered Nurse (RN) ON DUTY (that is, on the premises and routinely serving the patients) for EVERY shift? Yes (Skip to 19) No (Answer 18)

18. Please check the box that indicates the level of skill of the "charge nurse" who is ON DUTY (that is, on the premises and routinely serving the patients) for each shift. (If you do not have all of the shifts indicated below, please check the "No such shift" box next to the particular column.)

Shift # 1	Shift # 2 <input type="checkbox"/> No such shift	Shift # 3 <input type="checkbox"/> No such shift
a. <input type="checkbox"/> RN	a. <input type="checkbox"/> RN	a. <input type="checkbox"/> RN
b. <input type="checkbox"/> LPN	b. <input type="checkbox"/> LPN	b. <input type="checkbox"/> LPN
c. <input type="checkbox"/> Nurse's Aide	c. <input type="checkbox"/> Nurse's Aide	c. <input type="checkbox"/> Nurse's Aide
d. <input type="checkbox"/> Other (Specify) _____	d. <input type="checkbox"/> Other (Specify) _____	d. <input type="checkbox"/> Other (Specify) _____

19. Does this facility employ a full-time staff physician for the care of the patients? NO (Skip to 19a) YES

How many are employed? Number

a. Does this facility have an arrangement with a physician to come to this facility? (Mark (X), one only.) At regular intervals (Skip to 20) When needed, but NOT at regular intervals (Skip to 20) Neither of the above

b. Does this facility have an arrangement with a physician to give medical care to the patients in HIS office?

Yes	No
<input type="checkbox"/>	<input type="checkbox"/>

20. Please enter the number of full-time and part-time employees in this facility. (Full-time means 35 or more hours a week.) Count each employee only once, in the occupation at which he spends most of his time. Also include all members of religious organizations who contribute their services. (Please consult the enclosed Definition of Employees to determine the appropriate classification of personnel.)

EMPLOYEE	Number Full Time	Number Part Time
Registered Nurses		
LPN or Vocational Nurses		
Nurse's Aides, Orderlies, Student Nurses, and Attendants

DEFINITION SHEET

DEFINITION OF EMPLOYEES

Professional and Technical Nursing Personnel

1. Registered nurse - a graduate of a State-approved school of professional nursing who is currently licensed as a registered nurse (R.N.) or is awaiting licensure to practice in your State; i.e., a recent graduate of a school of professional nursing, or a graduate nurse licensed in another State who recently moved to your State.
2. Licensed practical/vocational nurse - a graduate of a State-approved school of practical nursing who is currently licensed as a licensed practical or vocational nurse (L.P.N. or L.V.N.) or awaiting licensure to practice, or an individual granted a license by waiver on the basis of experience or endorsement rather than upon completion of a prescribed course of study.
3. Nursing aide, orderly, and attendant - one who assists the nursing staff by performing routine duties in caring for patients, under the direct supervision of professional or practical nurses.

Other Professional and Technical Personnel

4. Dietitian - one who plans nutritionally adequate menus, including modified diets, and supervises the preparation and service of meals for patients and personnel. Report only those dietitians who meet the educational qualifications of the American Dietetic Association.
5. Occupational therapist - one who selects and directs physical, educational, social, and daily living activities designed to meet specific needs of mentally or physically disabled patients.
6. Occupational therapy assistants - those who work under the supervision of the occupational therapist. Duties may include instructing patients in manual and creative arts and making special orthopedic devices such as splints and braces.
7. Physical therapist - (report only those registered by the American Physical Therapy Association.)
8. Physical therapy assistants - (report all other persons engaged in physical therapy service.)
9. Recreation therapist - one who develops programs involving sports, crafts, trips, and music for rehabilitation and restoration of patients.
10. Registered medical records librarian - (report only those registered by the American Association of Medical Records Librarians.)
11. Other medical records librarians and technicians - (report all other persons engaged in medical records work.)
12. Medical social worker - one who is professionally trained in a school of social work or who is "agency-trained" (as in public welfare departments) or is qualified by related experience and who is capable of making a social evaluation of patients' situations and of identifying social problems requiring service.
13. Speech therapist - one who applies skills to help handicapped persons speak in as normal a fashion as possible and understand the speech of others.
14. All other professional and technical personnel - (include all other professional and technical personnel not reported in categories 1 to 13. Include also those individuals serving as Administrators.)

NURSING AND PERSONAL CARE
FACILITIES SURVEY

June 1968

Dear Sir:

Thank you for your cooperation during our earlier telephone conversation regarding the National Center for Health Statistics' survey of all resident facilities providing nursing and personal care. The abbreviated questionnaire to which we referred in our conversation is on the back of this letter. It deals with statistics on the numbers of patients admitted and discharged from your facility and the number of people you employ. Also in cooperation with the Veterans Administration, we are conducting a census of all male veteran patients. Please complete both forms within one week and return them in the enclosed postage-paid envelope.

We wish to assure you that any information which permits the identification of your facility will be held strictly confidential, will be used solely by persons engaged in, and only for the purposes of the survey and will not be disclosed or released to other persons or for any other reason.

We greatly appreciate your cooperation in this survey.

Sincerely yours,

Theodore D. Woolsey

1967 MFI NURSING HOME QUESTIONNAIRE

FORM NHS-HRS-5(N) (6-19-67) U.S. DEPARTMENT OF COMMERCE BUREAU OF THE CENSUS ACTING AS COLLECTING AGENT FOR THE U.S. PUBLIC HEALTH SERVICE NATIONAL CENTER FOR HEALTH STATISTICS MASTER FACILITY INVENTORY	FORM APPROVED BUDGET BUREAU NO. 68-S67036
--	--

Dear Sir:

The National Center for Health Statistics (NCHS) of the U.S. Public Health Service is assembling an up-to-date list of all facilities in the United States which provide some kind of medical, nursing, personal, domiciliary or custodial care.

This program is being conducted as a part of the U.S. National Health Survey, authorized by Public Law 652, 84th Congress. The Bureau of the Census has been requested to act as collecting agent for the NCHS in compiling the list.

The purpose of this survey, in which you are being asked to participate, is to obtain current information, such as number of beds, staff size, and types of services provided, from each facility on the list. The information will be used to compile statistics on the number and kinds of such facilities in the United States.

Sections A and B of this form request verification of the name and address of the facility, type of service, type of ownership, staff size and capacity. Section C asks for additional information which is needed for detailed statistics on other characteristics of the facility. All information provided in Section C will be accorded confidential treatment by the Bureau of the Census and the Public Health Service and the statistics will be presented in such a manner that no individual facility can be identified.

For this purpose we are requesting that you complete this questionnaire for your facility and return it within five days in the enclosed postage-paid envelope. The questionnaire is very brief and should take only a few minutes to complete.

Thank you for your cooperation.

Sincerely yours,
A. Ross Eckler
A. Ross Eckler
Director
Bureau of the Census

Section A - IDENTIFICATION OF FACILITY

Please refer to the mailing label above, then make all additions and corrections according to the questions below. Detailed identification information is needed to prevent duplicate listings and to assure that your facility is properly represented in our files. *(Please type or print)*

① Is the NAME shown in the label above correct for your facility? 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No → <i>Please line through name in label and enter correct name</i> →	Correct name of facility if different from above									
② Is your facility known by any other NAMES(S)? 1 <input type="checkbox"/> Yes → <i>Please give other name(s)</i> → 2 <input type="checkbox"/> No	Other names of your facility ----- -----									
③ Is the address shown in the label above the correct mailing address for your facility? 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No → <i>Please line through address on label and give your entire correct mailing address.</i>	<table border="1" style="width:100%; border-collapse: collapse;"> <tr> <td style="width:25%;">Number</td> <td style="width:40%;">Street</td> <td style="width:35%;">P.O. Box, route, etc.</td> </tr> <tr> <td colspan="3">City or town</td> </tr> <tr> <td>County</td> <td>State</td> <td>ZIP Code</td> </tr> </table>	Number	Street	P.O. Box, route, etc.	City or town			County	State	ZIP Code
Number	Street	P.O. Box, route, etc.								
City or town										
County	State	ZIP Code								
④ Is your mailing address also the ACTUAL LOCATION of your facility? 1 <input type="checkbox"/> Yes 2 <input type="checkbox"/> No → <i>Please give complete address for actual location of your facility.</i>	<table border="1" style="width:100%; border-collapse: collapse;"> <tr> <td style="width:25%;">Number</td> <td style="width:40%;">Street</td> <td style="width:35%;"></td> </tr> <tr> <td colspan="3">City or town</td> </tr> <tr> <td>County</td> <td>State</td> <td>ZIP Code</td> </tr> </table>	Number	Street		City or town			County	State	ZIP Code
Number	Street									
City or town										
County	State	ZIP Code								
⑤ What is the telephone number of your facility?	<table border="1" style="width:100%; border-collapse: collapse;"> <tr> <td style="width:30%;">Area code</td> <td style="width:40%;">Number</td> <td style="width:30%;"></td> </tr> </table>	Area code	Number							
Area code	Number									

GENERAL INSTRUCTIONS FOR COMPLETING QUESTIONNAIRE

- a. Include in this report information for the facility named in the mailing label or for its successor if the name or owner has changed. Include information for one facility only, but report for the entire facility including infirmaries and other subunits.
- b. Due to name and address changes, duplicate listings in our file, or other reasons, you may have been sent more than one questionnaire under different names or addresses. If you receive more than one form for the same facility, complete one only and return all others with the notation "Completed and returned under . . . (give name of facility on completed form)."
- c. Answer all questions, please. Definitions and special instructions are given with the questions when needed.
- d. Return the completed questionnaire in the postage paid envelope provided, to: Jeffersonville Census Operations Office, 1201 East 10th Street, Jeffersonville, Indiana 47130.

Section B - CLASSIFICATION INFORMATION

<p>6 Please place an "X" in only ONE box for the type of organization operating your facility. Yes

No → Go to 17

Please provide the following information for all other facilities owned. Use the "Comments" section if additional space is needed or attach a separate listing when available.

Name of facility

Type of facility

Address - Number and street

City

State

ZIP code

15 What is the NAME of the person, corporation, or other organization which owns this facility?

Name

17 Name of person completing this form

Date

Title

COMMENTS – General comments are invited as well as comments on specific items.

VITAL AND HEALTH STATISTICS PUBLICATION SERIES

Formerly Public Health Service Publication No. 1000

- Series 1. Programs and collection procedures.*—Reports which describe the general programs of the National Center for Health Statistics and its offices and divisions, data collection methods used, definitions, and other material necessary for understanding the data.
- Series 2. Data evaluation and methods research.*—Studies of new statistical methodology including: experimental tests of new survey methods, studies of vital statistics collection methods, new analytical techniques, objective evaluations of reliability of collected data, contributions to statistical theory.
- Series 3. Analytical studies.*—Reports presenting analytical or interpretive studies based on vital and health statistics, carrying the analysis further than the expository types of reports in the other series.
- Series 4. Documents and committee reports.*—Final reports of major committees concerned with vital and health statistics, and documents such as recommended model vital registration laws and revised birth and death certificates.
- Series 10. Data from the Health Interview Survey.*—Statistics on illness, accidental injuries, disability, use of hospital, medical, dental, and other services, and other health-related topics, based on data collected in a continuing national household interview survey.
- Series 11. Data from the Health Examination Survey.*—Data from direct examination, testing, and measurement of national samples of the civilian, noninstitutional population provide the basis for two types of reports: (1) estimates of the medically defined prevalence of specific diseases in the United States and the distributions of the population with respect to physical, physiological, and psychological characteristics; and (2) analysis of relationships among the various measurements without reference to an explicit finite universe of persons.
- Series 12. Data from the Institutional Population Surveys.*—Statistics relating to the health characteristics of persons in institutions, and their medical, nursing, and personal care received, based on national samples of establishments providing these services and samples of the residents or patients.
- Series 13. Data from the Hospital Discharge Survey.*—Statistics relating to discharged patients in short-stay hospitals, based on a sample of patient records in a national sample of hospitals.
- Series 14. Data on health resources: manpower and facilities.*—Statistics on the numbers, geographic distribution, and characteristics of health resources including physicians, dentists, nurses, other health occupations, hospitals, nursing homes, and outpatient facilities.
- Series 20. Data on mortality.*—Various statistics on mortality other than as included in regular annual or monthly reports—special analyses by cause of death, age, and other demographic variables, also geographic and time series analyses.
- Series 21. Data on natality, marriage, and divorce.*—Various statistics on natality, marriage, and divorce other than as included in regular annual or monthly reports—special analyses by demographic variables, also geographic and time series analyses, studies of fertility.
- Series 22. Data from the National Natality and Mortality Surveys.*—Statistics on characteristics of births and deaths not available from the vital records, based on sample surveys stemming from these records, including such topics as mortality by socioeconomic class, hospital experience in the last year of life, medical care during pregnancy, health insurance coverage, etc.
