VITAL STATISTICS OF THE UNITED STATES, 1962

VOLUME II- MORTALITY

A brief summary of the contents for each section is listed below for the convenience of the reader. A complete table of contents is shown at the beginning of each section and is identified by a narrow black edge which can be located easily by fanning the pages. Each section is paged independently, using the section number as the identifying prefix.

PART A

Section 1. General Mortality: Tables

Summary tables containing crude, age-specific, and age-adjusted death rates; death rates by cause; maternal mortality. Detailed tabulations of deaths by cause for the United States and each State. Data shown by age, sex, color and race, cause of death, and month.

Section 2. Infant Mortality: Tables

Tabulations of infant deaths and death rates by color, by sex, by cause of death, and by State. Additional frequency tables by month of death, urban and rural and metropolitan and nonmetropolitan areas.

Section 3. Fetal Mortality: Tables

Tabulations of numbers of deaths and ratios by age of mother, period of gestation, legitimacy, geographic areas; fetal death rates by plurality. Numbers of deaths by additional characteristics—month, birth order, attendant, birth weight.

Section 4. Accident Mortality: Tables

Deaths from motor-vehicle accidents by type of vehicle and from nontransport accidents by place of accident. Figures tabulated by age, color, and sex for the United States and by color and sex for each State.

Section 5. Life Tables

Text discussion of national trends in expectation of life. Abridged life tables and interpolated values of the l_x and $\overset{o}{e}_x$ by single years of age for the national population by color and sex.

Section 6. Technical Appendix

Text discussion of factors affecting the collection, classification, and interpretation of the mortality statistics in Volume II.

PART B

Section 7. Geographic Detail for Mortality: Tables

Total number of deaths, deaths from selected causes, infant deaths, neonatal deaths, fetal deaths, and selected rates and ratios. Tabulations shown by each State, county, specified urban places, metropolitan and nonmetropolitan counties, urban and rural areas, and standard metropolitan statistical areas.

Section 8. Puerto Rico and Virgin Islands: Tables

Trend of the crude death rate. Frequency tabulations for most variables shown in other sections in Volume II.

SYMBOLS USED IN TABLES

Data not available	---
Category not applicable	...
Quantity zero	-
Quantity more than 0 but less than 0.05	0.0
Figure does not meet standards of reliability or precision	*

Guide to tables in Section 1

(All data, except for table 27, are for deaths occurring in the United States. Excludes fetal deaths. Data for geographic areas within the United States are by place of residence unless otherwise noted)

Section 1. General Mortality

Tables		Page
1-1.	Deaths by color, and death rates by color and sex: Death-registration States, 1900-1932, and United States, 1933-62	1-3
1-2.	Age-adjusted death rates by color and sex: Death-registration States, 1900-1932, and United States, 1933-62	1-4
1-3.	Death rates by 10-year age groups, color, and sex: United States, 1953-62	1-5
1-4.	Death rates by 5-year age groups, color, and sex: United States, 1962	1-6
1-5.	Deaths at ages 85 years and over, by single years of age, color, and sex: United States, 1962	1-7
1-6.	Mortality from 15 leading causes of death: United States, 1962	1-7
1-7.	Age-adjusted death rates for specified causes, by color and sex: United States, 1962	1-7
1-8.	Death rates for 60 selected causes: United States, 1953-62	1-8
1-9.	Death rates for 60 selected causes, by 10-year age groups, color, and sex: United States, 1962	1-9
1-10.	Death rates for geographic divisions by place of occurrence: United States, 1900-1962	1-16
1-11.	Death rates: United States, each division and State, 1953-62	1-17
1-12.	Deaths from 60 selected causes: United States, each division and State, 1962	1-18
1-13.	Death rates for 60 selected causes: United States, each division and State, 1962	1-22
1-14.	Maternal mortality rates by color: Birth-registration States or United States, 1915-62	1-26
1-15.	Maternal mortality rates by color: United States, each division and State, 1960-62 (3-year average)	1-27
1-16.	Deaths by State of occurrence distributed according to State of residence: United States and each State, 1962	1-28
1-17.	Deaths by month and State of occurrence: United States and each State, 1962	1-31
1-18.	Deaths by month, color, and sex: United States and each State, 1962	1-32
1-19.	Deaths by specified race and sex: United States and each State, 1962	1-38
1-20.	Deaths and death rates for each cause, by color and sex: United States, 1962	1-39
1-21.	Deaths from 258 selected causes, by month: United States, 1962	1-73
1-22.	Deaths from 258 selected causes, by specified race and sex: United States, 1962	1-78
1-23.	Deaths from 258 selected causes, by 5-year age groups, race, and sex: United States, 1962	1-86
1-24.	Deaths from 258 selected causes, by color and sex: United States and each State, 1962	1-148
1-25.	Deaths from 60 selected causes, by 5-year age groups, color, and sex: United States, 1962	1-236
1-26.	Death rates for 60 selected causes, by 5-year age groups, color, and sex: United States, 1962	1-248
1-27.	Deaths from selected causes among Armed Forces abroad, by 5-year age groups: United States, 1962	1-262

Table 1-1. Deaths by Color, and Death Rates by Color and Sex: Death-Registration States, 1900-1932, and United States, 1933-62

(Data refer only to deaths occurring within the specified area. Excludes fetal deaths. Rates per 1,000 population residing in area for specified group, enumerated as of April 1, for 1940, 1950, and 1960 and estimated as of July 1 for all other years)

[1] Alaska included beginning 1959, and Hawaii, 1960.
[2] Figures by color exclude data for residents of New Jersey because this State did not require reporting of the item; see Technical Appendix.
[3] Increased in number from 10 States and the District of Columbia in 1900 to the entire conterminous United States in 1933.

Table 1-2. Age-Adjusted Death Rates by Color and Sex: Death-Registration States, 1900-1932, and United States, 1933-62

(Data refer only to deaths occurring within the specified area. Excludes fetal deaths. Rates per 1,000 population. Computed by the direct method, using as the standard population the age distribution of the total population of the United States as enumerated in 1940; see Technical Appendix)

Table 1-7. Age-Adjusted Death Rates for Specified Causes, by Color and Sex: United States, 1962

(Data refer only to deaths occurring within the United States. Excludes fetal deaths. Based on age-specific death rates per 100,000 estimated midyear population in specified group. Computed by the direct method using as the standard population the age distribution of the total population of the United States as enumerated in 1940. Numbers after causes of death are category numbers of the Seventh Revision of the International Lists, 1955. Figures by color exclude data for residents of New Jersey because this State did not require reporting of the item; see Technical Appendix)

CAUSE OF DEATH	TOTAL			WHITE			NONWHITE		
	Both sexes	Male	Female	Both sexes	Male	Female	Both sexes	Male	Female

Table 1-10. Death Rates for Geographic Divisions by Place of Occurrence: United States, 1900-1962

(Excludes fetal deaths. Prior to 1933, data for death-registration States only. Rates per 1,000 population in each area, enumerated as of April 1 for 1940, 1950, and 1960 and estimated as of July 1 for all other years. Average rates computed from 5-year totals of deaths occurring in the area and corresponding population. Rates are shown for each division from the period when the division as a whole became part of the area)

Table 1-14. Maternal Mortality Rates by Color: Birth-Registration States or United States, 1915-62

(Data refer only to deaths occurring within the specified area. Alaska included beginning 1959, and Hawaii, 1960. Prior to 1933, data are for birth-registration States only. Rates per 100,000 live births in specified group. Deaths are classified according to the International Lists used at the time; for discussion of comparability, see Technical Appendix)

YEAR	Total	White	Nonwhite	YEAR	Total	White	Nonwhite

Table 1-18. Deaths by Month, Color, and Sex: United States and Each State, 1962—Continued

(By place of residence. Data refer only to deaths occurring within the United States. Excludes fetal deaths. Figures by color for the United States exclude data for residents of New Jersey because this State did not require reporting of the item; see Technical Appendix)

[1]Includes 25 deaths among Aleuts and 123 deaths among Eskimos. (In addition there were 4 deaths among Aleuts and Eskimos residing in other States.)
[2]Includes 17 deaths among Aleuts and 101 deaths among Eskimos. (In addition there were 4 deaths among Aleuts and Eskimos residing in other States.)
[3]Includes 366 deaths among Hawaiians and Part-Hawaiians. (In addition there were 20 deaths among Hawaiians and Part-Hawaiians residing in other States.)
[4]Includes 300 deaths among Hawaiians and Part-Hawaiians. (In addition there were 14 deaths among Hawaiians and Part-Hawaiians residing in other States.)
[5]New Jersey did not require reporting of race; see Technical Appendix.

Table 1-20. Deaths and Death Rates for Each Cause, by Color and Sex: United States, 1962

(Data refer only to deaths occurring within the United States. Excludes fetal deaths. Rates per 100,000 estimated midyear population residing in area for specified group. Includes each three-digit category of the Detailed List to which deaths may be assigned and selected four-digit subcategories. Figures by color exclude data for residents of New Jersey because this State did not require reporting of the item; see Technical Appendix)

Other diseases of nervous system and sense organs------341-344,352,354-369,380-384,386,388-390,394-398	4,945	445	446	423	415	392	397	419	410	355	384	420	439
VII. Diseases of the circulatory system----------	759,986	72,110	64,520	69,462	64,743	63,575	58,333	58,747	56,879	56,037	61,912	63,165	70,503
Diseases of heart---------400-402,410-443	688,009	65,300	58,317	62,860	58,658	57,486	52,784	53,135	51,446	50,787	55,999	57,252	63,985
Rheumatic fever---------400-402	550	65	45	59	42	43	57	36	36	35	39	46	47
Chronic rheumatic heart disease---------410-416	17,201	1,563	1,473	1,590	1,511	1,460	1,302	1,290	1,284	1,298	1,457	1,371	1,602
Diseases of mitral valve---------410	6,234	599	502	594	552	525	485	495	439	435	541	505	562
Diseases of aortic valve specified as rheumatic------411	1,984	140	173	198	156	165	142	147	149	173	193	169	177
Diseases of pulmonary valve and other endocarditis, specified as rheumatic---------413,414	820	102	84	76	60	73	49	52	49	61	73	63	78
Other rheumatic heart diseases---------412,415,416	8,163	722	714	722	741	697	626	596	647	629	650	634	785
Arteriosclerotic heart disease, including coronary disease---------420	527,561	49,701	44,164	47,867	44,702	44,243	40,592	40,892	39,689	39,204	43,184	44,013	49,310
Arteriosclerotic heart disease so described--------420.0	229,700	21,719	19,889	21,361	19,741	19,210	17,467	17,427	17,055	16,715	18,650	19,152	21,314
Heart disease specified as involving coronary arteries---------420.1	297,468	27,942	24,237	26,479	24,924	24,999	23,093	23,442	22,609	22,465	24,499	24,832	27,947
Angina pectoris without mention of coronary disease---------420.2	393	40	38	27	37	34	32	23	25	24	35	29	49
Chronic endocarditis not specified as rheumatic--------421	4,288	421	340	413	363	354	328	348	310	312	327	385	387
Of mitral valve, specified as nonrheumatic---------421.0	201	21	15	20	16	14	16	12	11	19	13	27	17
Of aortic valve, not specified as rheumatic---------421.1	2,184	201	159	216	188	190	156	181	162	160	179	183	209
Of other valves, not specified as rheumatic---------421.2-421.4	1,903	199	166	177	159	150	156	155	137	133	135	175	161
Other myocardial degeneration---------422	50,357	5,004	4,670	4,808	4,392	4,044	3,630	3,825	3,574	3,580	4,099	4,093	4,638
With arteriosclerosis---------422.1	39,118	3,773	3,574	3,714	3,377	3,147	2,819	2,974	2,788	2,821	3,252	3,227	3,652
Without mention of arteriosclerosis----------422.0,422.2	11,239	1,231	1,096	1,094	1,015	897	811	851	786	759	847	866	986
Other diseases of heart---------430-434	25,876	2,456	2,199	2,307	2,159	2,049	2,002	2,044	2,027	1,969	2,164	2,156	2,344
Acute and subacute endocarditis---------430	737	66	56	68	67	64	59	53	58	59	64	59	64
Acute myocarditis and acute pericarditis, not specified as rheumatic---------431,432	1,041	88	84	111	94	96	62	88	80	63	87	85	103
Functional disease of heart---------433	6,561	586	555	583	528	501	494	498	555	500	583	562	616
Other and unspecified diseases of heart---------434	17,537	1,716	1,504	1,545	1,470	1,388	1,387	1,405	1,334	1,347	1,430	1,450	1,561
Hypertensive heart disease---------440-443	62,176	6,090	5,426	5,836	5,489	5,293	4,873	4,700	4,526	4,389	4,729	5,188	5,637
Hypertensive heart disease with arteriolar nephrosclerosis---------442	14,202	1,349	1,259	1,413	1,265	1,270	1,053	1,013	1,016	1,085	1,063	1,135	1,281
Other hypertensive heart disease----------440,441,443	47,974	4,741	4,167	4,423	4,224	4,023	3,820	3,687	3,510	3,304	3,666	4,053	4,356
Other hypertensive disease---------444-447	12,497	1,211	1,094	1,136	1,069	1,030	1,015	994	927	874	1,007	1,000	1,140
Hypertension with arteriolar nephrosclerosis----------446	6,987	681	628	637	598	592	566	550	500	499	547	544	645
Essential hypertension and other hypertensive disease without mention of heart---------444,445,447	5,510	530	466	499	471	438	449	444	427	375	460	456	495
Diseases of arteries---------450-456	49,715	4,709	4,338	4,579	4,188	4,223	3,801	3,858	3,759	3,643	4,028	4,059	4,530
General arteriosclerosis---------450	36,848	3,555	3,259	3,421	3,121	3,140	2,835	2,878	2,815	2,623	2,904	2,975	3,322
Aortic aneurysm, nonsyphilitic, and dissecting aneurysm---------451	9,544	851	801	835	795	755	712	714	709	773	867	828	904
Gangrene of unspecified cause---------455	243	23	29	27	18	22	11	12	12	16	21	18	34
Other arterial diseases----------452-454,456	3,080	280	249	296	254	306	243	254	223	231	236	238	270
Diseases of veins and other diseases of circulatory system---------460-468	9,765	890	771	867	828	836	733	760	747	733	878	854	868
VIII. Diseases of the respiratory system----------	90,152	10,905	9,756	9,691	7,576	6,661	5,663	5,584	5,594	5,408	6,982	7,393	8,939
Acute upper respiratory infections---------470-475	820	117	111	103	74	52	45	35	34	43	66	66	74
Influenza---------480-483	3,431	716	938	589	228	96	73	49	57	85	164	196	240
Pneumonia, except pneumonia of newborn---------490-493	56,564	7,078	6,155	6,163	4,856	4,138	3,380	3,356	3,463	3,290	4,273	4,615	5,797
Lobar pneumonia---------490	8,784	1,196	982	1,043	753	617	512	496	436	472	625	697	955
Bronchopneumonia---------491	32,455	3,862	3,512	3,580	2,847	2,481	2,009	1,974	2,095	1,960	2,463	2,543	3,129
Primary atypical pneumonia---------492	5,429	716	619	555	424	362	271	325	301	310	471	463	612
Pneumonia, other and unspecified---------493	9,896	1,304	1,042	985	832	678	588	561	631	548	714	912	1,101
Acute bronchitis---------500	1,118	147	114	128	108	70	74	40	52	59	91	114	123
Bronchitis, chronic and unqualified---------501,502	3,547	394	348	333	325	304	232	224	213	214	311	312	337
Hypertrophy of tonsils and adenoids---------510	108	10	3	10	10	14	18	7	5	9	9	9	4
Empyema and abscess of lung---------518,521	835	90	74	76	63	63	56	73	60	74	76	60	70
Pleurisy---------519	134	17	8	9	11	16	14	10	13	5	8	11	12
Other chronic interstitial pneumonia---------525	4,097	399	342	403	332	366	290	295	280	285	324	359	422
Bronchiectasis---------526	2,105	228	174	237	186	170	165	158	138	127	174	170	178
Other diseases of lung and pleural cavity---------527	13,870	1,384	1,184	1,280	1,091	1,092	1,038	1,063	1,033	942	1,197	1,193	1,373
Emphysema without mention of bronchitis---------527.1	12,368	1,196	1,046	1,144	974	975	928	964	925	847	1,079	1,075	1,215
All other diseases of lung and pleural cavity--527.0,527.2	1,502	188	138	136	117	117	110	99	108	95	118	118	158
Other respiratory diseases----------511-517,520,522-524	3,523	325	305	360	294	280	278	274	246	275	289	288	309
IX. Diseases of the digestive system----------	70,350	6,426	5,614	6,054	5,764	5,792	5,397	5,662	5,795	5,615	6,003	5,904	6,324
Diseases of teeth and supporting structures----------530-535	79	7	7	6	9	8	9	5	10	2	7	5	4
Ulcer of stomach---------540	6,416	608	502	566	517	482	471	509	555	462	578	571	595
Ulcer of duodenum---------541	5,812	540	482	499	496	474	446	439	451	458	517	474	536
Gastritis and duodenitis---------543	427	41	38	47	42	34	36	32	37	35	29	25	31
Appendicitis---------550-553	1,800	151	150	132	143	151	157	164	173	151	132	133	163
Hernia and intestinal obstruction----------560,561,570	9,723	838	724	833	797	837	773	803	816	809	790	853	850
Gastroenteritis and colitis, except ulcerative, age 4 weeks and over---------571	4,161	503	372	344	285	274	264	349	351	365	357	352	345

Table 1-21. Deaths From 258 Selected Causes, by Month: United States, 1962—Con.

(Data refer only to deaths occurring within the United States. Excludes fetal deaths. Numbers after causes of death are category numbers of the Seventh Revision of the International Lists, 1955)

CAUSE OF DEATH	Total	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
IX. Diseases of the digestive system—Con.													
Chronic enteritis and ulcerative colitis---572	3,606	295	285	297	293	324	321	306	302	309	302	296	306
Cirrhosis of liver---581	21,824	2,027	1,751	1,946	1,810	1,796	1,662	1,694	1,734	1,731	1,866	1,806	2,001
Without mention of alcoholism---581.0	14,612	1,355	1,181	1,332	1,219	1,193	1,098	1,141	1,138	1,164	1,227	1,217	1,347
With alcoholism---581.1	7,212	672	570	614	591	603	564	553	596	567	639	589	654
Cholelithiasis, cholecystitis, and cholangitis---584,585	4,831	363	391	400	448	447	377	413	420	390	374	387	411
Fibrocystic disease of pancreas---587B	639	56	17	41	50	51	44	19	41	58	64	58	70
Other diseases of digestive system---536-569,582,584, 585,573-580,582,583,586,587.0,587.1,587A----	11,032	997	865	933	904	914	837	899	895	945	987	944	1,012
X. Diseases of the genitourinary system----	30,609	2,762	2,554	2,782	2,536	2,632	2,490	2,442	2,495	2,423	2,542	2,502	2,648
Nephritis and nephrosis---590-594	12,945	1,213	1,105	1,198	1,090	1,107	1,023	1,000	1,009	981	1,046	1,035	1,148
Acute nephritis---590	721	66	51	61	58	56	54	44	57	53	70	55	56
Nephritis with edema, including nephrosis---591	852	90	75	84	70	84	64	57	55	85	50	55	73
Chronic and unspecified nephritis and other renal sclerosis---592-594	11,372	1,057	969	1,053	962	967	905	879	897	843	926	925	1,019
Infections of kidney---600	8,744	770	689	788	691	746	718	710	719	717	724	763	727
Calculi of urinary system---592,594	1,900	119	103	132	109	91	104	107	84	110	129	105	106
Other diseases of urinary system---601,603,605-609	2,367	190	178	198	198	210	181	207	210	188	202	177	227
Hyperplasia of prostate---610	4,282	371	361	383	365	389	365	340	376	346	348	319	340
Diseases of breast---620,621	13	1	2	2	1	1	-	-	1	1	1	2	1
Other diseases of genital organs---611-617,622-637	1,167	98	97	110	92	104	98	98	96	80	92	101	99
XI. Deliveries and complications of pregnancy, childbirth, and the puerperium----	1,463	105	134	143	125	130	123	123	125	137	100	106	109
Sepsis of pregnancy, childbirth, and puerperium---640,641,681,682,684	170	9	18	13	11	14	7	13	14	17	13	13	22
Toxemias of pregnancy and puerperium, except abortion with toxemia---642,680,686	234	22	21	28	20	12	18	17	13	22	14	17	22
Hemorrhage of pregnancy and childbirth---643,644,670-672	259	23	30	28	19	21	23	13	30	24	17	11	14
Ectopic pregnancy---645	99	7	8	12	10	9	11	13	4	5	7	6	7
Abortion without mention of sepsis or toxemia---650	70	3	4	10	7	7	7	8	7	14	1	7	4
Abortion with sepsis---651	213	15	15	22	26	26	20	15	19	16	11	13	15
Abortion with toxemia, without mention of sepsis---652	13	1	1	-	3	1	4	-	1	-	-	-	2
Other complications of pregnancy, childbirth, and puerperium, and delivery without mention of complication---646-649,660,673-680,683,687-689----	309	25	34	37	27	40	33	48	28	39	37	39	23
XII. Diseases of the skin and cellular tissue----	2,219	138	194	201	193	184	195	179	166	169	181	199	213
Infections of skin and subcutaneous tissue---690-698	570	45	46	59	47	59	49	54	44	34	41	38	51
Other diseases of skin and subcutaneous tissue---700-716	1,649	152	148	142	146	125	116	125	122	131	140	160	162
XIII. Diseases of the bones and organs of movement--	2,593	324	294	306	334	331	264	290	269	267	284	304	327
Arthritis and spondylitis---720-725	1,964	191	157	173	191	187	178	155	150	141	180	144	179
Muscular rheumatism and rheumatism unspecified---726,727	37	-	3	2	2	1	1	1	2	4	4	4	3
Osteomyelitis and periostitis---730	190	14	12	11	19	20	16	19	20	13	14	19	17
Ankylosis and acquired musculoskeletal deformities---737,745-749	99	9	6	5	12	10	6	12	6	3	5	13	11
Inborn defect of muscle---744.1	555	52	56	45	50	43	32	30	40	48	41	54	44
Other diseases of musculoskeletal system---731-736,738-744.0,744.2	748	68	60	71	58	70	64	68	71	59	60	70	73
XIV. Congenital malformations----	21,192	1,905	1,605	1,861	1,703	1,778	1,673	1,716	1,778	1,700	1,803	1,750	1,876
Spina bifida and meningocele---751	1,511	146	110	124	121	99	121	114	143	131	138	127	137
Congenital hydrocephalus and other congenital malformations of nervous system and sense organs---752,753	2,153	201	157	199	176	172	170	176	194	167	191	162	198
Congenital malformations of circulatory system---754	10,653	952	870	961	876	852	841	862	847	823	960	869	958
Other congenital malformations---750,755-759	6,875	606	471	577	525	585	541	564	574	579	514	592	583
XV. Certain diseases of early infancy----	64,205	5,267	4,832	5,204	5,062	5,564	5,419	5,789	5,703	5,463	5,426	5,124	5,302
XVI. Symptoms, senility, and ill-defined conditions-	19,730	2,034	1,560	1,701	1,485	1,467	1,348	1,497	1,601	1,527	1,645	1,755	2,114
Senility without mention of psychosis---794	2,426	297	218	221	177	193	173	198	199	154	184	214	210
Symptoms, ill-defined, and unknown causes---780-793,795	17,304	1,737	1,342	1,480	1,308	1,274	1,175	1,299	1,402	1,373	1,461	1,541	1,904

	Intermediate List number[1]	CAUSE OF DEATH	ALL RACES		
			Total	Male	Female
1		ALL CAUSES	1,756,720	994,789	761,931
2		I. Infective and parasitic diseases	19,774	12,838	6,936
3		Tuberculosis, all forms---001-019	9,506	6,942	2,564
4	A 1	Tuberculosis of respiratory system---001-008	8,792	6,531	2,261
5	A 2	Tuberculosis of meninges and central nervous system---010	225	119	106
6	A 3	Tuberculosis of intestines, peritoneum, and mesenteric glands---011	51	32	19
7	A 4	Tuberculosis of bones and joints---012,013	80	39	41
8	A 5 pt.	Tuberculosis of other organs and systems---014-018	143	83	60
9	A 5 pt.	Disseminated tuberculosis---019	215	138	77
10		Syphilis and its sequelae---020-029	2,811	1,998	813
11	A 6	Congenital syphilis---020	50	32	18
12	A 7	Early syphilis---021	1	1	-
13	A 10 pt.	Aneurysm of aorta---022	1,440	1,019	421
14	A 10 pt.	Other cardiovascular syphilis---023	836	589	247
15	A 8	Tabes dorsalis---024	59	49	10
16	A 9	General paralysis of insane---025	145	107	38
17	A 10 pt.	Other syphilis of central nervous system---026	222	167	55
18	A 10 pt.	All other syphilis---027-029	58	34	24
19	A 11	Gonococcal infection---030-035	23	20	3
20	A 12	Typhoid fever---040	15	11	4
21	A 13	Paratyphoid fever and other Salmonella infections---041,042	62	36	26
22	A 14	Cholera---043	-	-	-
23	A 15	Brucellosis (undulant fever)---044	12	9	3
24	A 16	Dysentery, all forms---045-048	323	183	140
25	A 43 pt.	Food poisoning (infection and intoxication)---049	39	18	21
26	A 17	Scarlet fever---050	10	4	6
27	A 18	Streptococcal sore throat---051	92	47	45
28	A 19	Erysipelas---052	25	11	14
29	A 20	Septicemia and pyemia---053	2,064	1,126	958
30	A 21	Diphtheria---055	41	23	18
31	A 22	Whooping cough---056	83	45	38
32	A 23	Meningococcal infections---057	649	366	283
33	A 24	Plague---058	-	-	-
34	A 25	Leprosy---060	8	5	3
35	A 26	Tetanus---061	215	123	92
36	A 27	Anthrax---062	-	-	-
37	A 28	Acute poliomyelitis---080	60	37	23
38	A 30 pt.	Late effects of acute poliomyelitis---081	123	57	66
39	A 29	Acute infectious encephalitis---082	582	283	299
40	A 30 pt.	Late effects of acute infectious encephalitis---083	80	52	28
41	A 31	Smallpox---084	-	-	-
42	A 32	Measles---085	408	180	228
43	A 33	Yellow fever---091	-	-	-
44	A 34	Infectious hepatitis---092	911	386	525
45	A 35	Rabies---094	1	1	-
46	A 36 pt.	Tick-borne typhus---104	12	7	5
47	A 36 pt.	All other rickettsial diseases---100-103,105-109	4	3	1
48	A 37	Malaria---110-117	12	10	2
49	A 38	Schistosomiasis---123	2	1	1
50	A 39	Hydatid disease---125	7	4	3
51	A 40	Filariasis---127	1	1	-
52	A 41	Ancylostomiasis---129	6	3	3
53	A 42	Other diseases due to helmintns---124,126,128,130	60	24	36
54	A 43 pt.	All other infective and parasitic diseases---036-039,054,059,063-074,086-090,093,095,096,120-122,131-138	1,507	822	685
55		II. Neoplasms	283,243	152,146	131,097
56		Malignant neoplasms, including neoplasms of lymphatic and hematopoietic tissues---140-205	278,562	150,009	128,553
57	A 44	Malignant neoplasm of buccal cavity and pharynx---140-148	6,481	4,920	1,561
58		Of lip---140	219	199	20
59		Of tongue---141	1,552	1,181	371
60		Of other and unspecified parts of buccal cavity---142-144	2,092	1,443	649
61		Of pharynx---145-148	2,618	2,097	521
62		Malignant neoplasm of digestive organs and peritoneum, not specified as secondary---150-156A,157-159	92,047	49,936	42,111
63	A 45	Of esophagus---150	5,088	3,973	1,115
64	A 46	Of stomach---151	19,378	11,947	7,431
65	A 47 pt.	Of small intestine, including duodenum---152	745	388	357
66	A 47 pt.	Of large intestine, except rectum---153	29,837	13,561	16,276
67		Cecum, appendix, and ascending colon---153.0	4,264	1,812	2,452
68		Transverse colon, including hepatic and splenic flexures---153.1	1,608	745	863
69		Descending colon---153.2	1,256	533	723
70		Sigmoid colon---153.3	6,188	3,000	3,188
71		Multiple parts of large intestine---153.7	74	37	37
72		Large intestine (including colon), part unspecified---153.8	14,929	6,823	8,106
73		Intestinal tract, part unspecified---153.9	1,518	611	907
74	A 48	Of rectum---154	10,853	6,131	4,722
75	A 57 pt.	Of biliary passages and of liver (stated to be primary site)---155	6,423	2,822	3,601
76		Liver---155.0	2,145	1,384	761
77		Other and multiple sites of biliary passages---155.1,155.8	4,278	1,438	2,840
78	A 57 pt.	Of liver not stated whether primary or secondary---156A	2,958	1,533	1,425
79	A 57 pt.	Of pancreas---157	15,019	8,725	6,294
80	A 57 pt.	Of peritoneum and of unspecified digestive organs---158,159	1,746	856	890
81		Malignant neoplasm of respiratory system, not specified as secondary---160-164	44,644	38,050	6,594
82	A 49	Of larynx---161	2,417	2,172	245
83	A 50 pt.	Of bronchus and trachea, and of lung specified as primary---162	18,866	16,499	2,367
84	A 50 pt.	Of lung, unspecified as to whether primary or secondary---163	22,510	18,813	3,697
85	A 57 pt.	Of other parts of respiratory system---160,164	851	566	285
86	A 51	Malignant neoplasm of breast---170	24,958	225	24,733

Table 1-22. Deaths From 258 Selected Causes,

(Data refer only to deaths occurring within the United States Excludes fetal deaths. Numbers after causes of death are category numbers of the Seventh Revision of the In-

	Intermediate List number[1]	CAUSE OF DEATH	ALL RACES		
			Total	Male	Female
		II. Neoplasms--Continued			
		Malignant neoplasms, including neoplasms of lymphatic and hematopoietic tissues--Continued			
1		Malignant neoplasm of genital organs---171-179	39,590	16,111	23,479
2	A 52	Of cervix uteri---171	8,349	...	8,349
3	A 53	Of other and unspecified parts of uterus---172-174	5,941	...	5,941
4	A 57 pt.	Of ovary, fallopian tube, and broad ligament---175	8,340	...	8,340
5	A 57 pt.	Of other and unspecified female genital organs---176	849	...	849
6	A 54	Of prostate---177	15,173	15,173	...
7	A 57 pt.	Of all other and unspecified male organs---178,179	938	938	...
8	A 57 pt.	Malignant neoplasm of urinary organs---180,181	13,299	8,818	4,481
9		Of kidney---180	5,218	3,243	1,975
10		Of bladder and other urinary organs---181	8,081	5,575	2,506
11		Malignant neoplasm of other and unspecified sites---156B,165,190-199	30,791	16,560	14,231
12	A 55	Of skin---190,191	4,158	2,487	1,671
13	A 57 pt.	Of eye---192	375	188	187
14	A 57 pt.	Of brain and other parts of nervous system---193	6,512	3,832	2,680
15	A 57 pt.	Of thyroid gland---194	1,018	341	677
16	A 56 pt.	Of bone---196	1,833	1,026	807
17	A 56 pt.	Of connective tissue---197	1,087	572	515
18	A 57 pt.	Of other specified sites, not stated to be secondary---195,199A	1,453	896	557
19	A 57 pt.	Of unspecified sites---156B,165,198,199B	14,355	7,218	7,137
20	A 58	Leukemia and aleukemia---204	12,997	7,493	5,504
21	A 59	Lymphosarcoma and other neoplasms of lymphatic and hematopoietic tissues---200-203,205	13,755	7,896	5,859
22		Lymphosarcoma and reticulosarcoma---200	8,401	5,625	2,776
23		Hodgkin's disease---201	3,200	1,984	1,216
24		Other neoplasms of lymphatic and hematopoietic tissues---202,203,205	4,154	2,287	1,867
25	A 60	Benign neoplasms and neoplasms of unspecified nature---210-239	4,681	2,137	2,544
26		Benign neoplasms of female genital organs---214-217	433	...	433
27		Benign neoplasm of brain and other parts of nervous system---223	958	417	521
28		Other benign neoplasms---210-213,218-222,224-229	973	508	465
29		Neoplasm of unspecified nature of female genital organs---233-235	29	..	29
30		Neoplasm of unspecified nature of brain and other parts of nervous system---237	1,514	777	737
31		Other neoplasms of unspecified nature---230-232,236,238,239	794	435	359
32		III. Allergic, endocrine system, metabolic, and nutritional diseases----	41,914	18,506	23,408
33	A 66 pt.	Asthma---241	4,896	3,102	1,794
34	A 61	Nontoxic goiter---250,251	79	14	65
35	A 62	Thyrotoxicosis with or without goiter---252	500	83	417
36	A 66 pt.	All other diseases of thyroid gland---253,254	342	76	266
37	A 63	Diabetes mellitus---260	31,822	13,981	18,341
38	A 66 pt.	Diseases of thymus gland---273	130	81	49
39	A 66 pt.	Diseases of adrenal glands---274	449	218	231
40	A 64 pt.	Pellagra---281	41	10	31
41	A 64 pt.	Other avitaminoses and nutritional deficiency states---280,282-286	1,586	787	799
42	A 66 pt.	All other allergic, endocrine, and metabolic diseases---240,242-246,270-272,275-277,287-289	2,669	1,254	1,415
43		IV. Diseases of the blood and blood-forming organs----	5,311	2,628	2,582
44	A 65	Anemias---290-293	3,399	1,620	1,778
45		Pernicious and other hyperchromic anemias---290	552	214	338
46		Anemias of other and unspecified type---291-293	2,846	1,406	1,440
47	A 66 pt.	Purpura and other hemorrhagic conditions---296	689	336	353
48	A 66 pt.	Other diseases of blood and blood-forming organs---294,295,297-299	1,123	672	451
49		V. Mental, psychoneurotic, and personality disorders----	4,375	2,984	1,391
50	A 67 pt.	Senile psychosis---304	273	110	163
51	A 67 pt.	Alcoholic psychosis---307	436	386	50
52	A 67 pt	Other psychoses---300-303,305,306,308,309	665	291	344
53	A 68 pt	Alcoholism---322	2,311	1,800	511
54	A 69	Mental deficiency---325	498	267	231
55	A 68 pt.	Other disorders of personality---310-311,323,324,326	222	130	92
56		VI. Diseases of the nervous system and sense organs----	212,119	100,559	111,560
57	A 70	Vascular lesions affecting central nervous system---330-334	197,451	92,595	104,856
58		Subarachnoid hemorrhage---330	7,649	3,452	4,197
59		Cerebral hemorrhage---331	109,419	51,492	57,927
60		Cerebral embolism and thrombosis---332	61,759	29,186	32,573
61		Other vascular lesions affecting central nervous system---333,334	18,624	8,465	10,159
62	A 71	Meningitis, except meningococcal and tuberculous---340	2,322	1,315	1,007
63	A 72	Multiple sclerosis---345	1,487	803	684
64	A 78 pt.	Paralysis agitans---350	2,816	1,488	1,328
65	A 78 pt.	Cerebral spastic infantile paralysis---351	752	416	336
66	A 73	Epilepsy---352	2,048	1,198	850
67	A 74	Inflammatory diseases of eye---370-379	9	1	8
68	A 75	Cataract---385	26	5	21
69	A 76	Glaucoma---387	4	2	2
70	A 77	Otitis media and mastoiditis---381-383	259	147	112
71	A 78 pt.	Other diseases of nervous system and sense organs---341-344,352,354-369,380-384,386,388-390,394-398	4,945	2,789	2,156
72		VII. Diseases of the circulatory system----	759,986	437,560	322,426
73		Diseases of heart---400-402,410-443	698,009	410,672	287,337
74	A 79	Rheumatic fever---400-402	550	285	265
75	A 80	Chronic rheumatic heart disease---410-416	17,201	7,681	9,520
76		Diseases of mitral valve---410	6,234	2,584	3,650
77		Diseases of aortic valve specified as rheumatic---411	1,984	1,369	615
78		Diseases of pulmonary valve and other endocarditis, specified as rheumatic---412,414	820	391	429
79		Other rheumatic heart diseases---413,415,416	9,163	5,537	4,626

Table 1-22. Deaths From 258 Selected Causes,

(Data refer only to deaths occurring within the United States. Excludes fetal deaths. Numbers after causes of death are category numbers of the Seventh Revision of the In-

	Intermediate List number[1]	CAUSE OF DEATH	ALL RACES		
			Total	Male	Female
		VII. Diseases of the circulatory system--Continued			
		Diseases of heart--Continued			
1	A 81 pt.	Arteriosclerotic heart disease, including coronary disease--420	527,561	324,183	203,378
2		Arteriosclerotic heart disease so described--420.0	229,700	125,471	104,229
3		Heart disease specified as involving coronary arteries--420.1	297,468	198,462	99,006
4		Angina pectoris without mention of coronary disease--420.2	393	250	143
5	A 81 pt.	Chronic endocarditis not specified as rheumatic--421	4,288	2,494	1,794
6		Of mitral valve, specified as nonrheumatic--421.0	201	90	111
7		Of aortic valve, not specified as rheumatic--421.1	2,184	1,470	714
8		Of other valves, not specified as rheumatic--421.2-421.4	1,903	934	969
9	A 81 pt	Other myocardial degeneration--422	50,357	24,421	25,936
10		With arteriosclerosis--422.1	39,118	18,676	20,442
11		Without mention of arteriosclerosis--422.0,422.2	11,239	5,745	5,494
12	A 82	Other diseases of heart--430-434	25,876	14,754	11,122
13		Acute and subacute endocarditis--430	737	468	269
14		Acute myocarditis and acute pericarditis, not specified as rheumatic--431,432	1,041	626	415
15		Functional disease of heart--433	6,561	3,174	3,387
16		Other and unspecified diseases of heart--434	17,537	10,486	7,051
17	A 83	Hypertensive heart disease--440-443	62,176	26,654	35,522
18		Hypertensive heart disease with arteriolar nephrosclerosis--442	14,202	6,821	7,381
19		Other hypertensive heart disease--440,441,443	47,974	19,833	28,141
20	A 84	Other hypertensive disease--444-447	12,497	6,296	6,201
21		Hypertension with arteriolar nephrosclerosis--446	6,987	3,865	3,122
22		Essential hypertension and other hypertensive disease without mention of heart--444,445,447	5,510	2,431	3,079
23	A 85	Diseases of arteries--450-456	49,715	25,511	24,204
24		General arteriosclerosis--450	36,848	16,855	19,993
25		Aortic aneurysm, nonsyphilitic, and dissecting aneurysm--451	9,344	6,954	2,390
26		Gangrene of unspecified cause--455	243	127	116
27		Other arterial diseases--452-454,456	3,080	1,575	1,505
28	A 86	Diseases of veins and other diseases of circulatory system--460-468	9,765	5,081	4,684
29		VIII. Diseases of the respiratory system	90,152	56,438	33,714
30	A 87	Acute upper respiratory infections--470-475	820	462	358
31	A 88	Influenza--480-483	3,431	1,664	1,767
32		Pneumonia, except pneumonia of newborn--490-493	56,564	31,853	24,711
33	A 89	Lobar pneumonia--490	8,784	5,289	3,495
34	A 90	Bronchopneumonia--491	32,455	18,038	14,417
35	A 91 pt.	Primary atypical pneumonia--492	5,429	3,022	2,407
36	A 91 pt.	Pneumonia, other and unspecified--493	9,896	5,504	4,392
37	A 92	Acute bronchitis--500	1,118	664	454
38	A 93	Bronchitis, chronic and unqualified--501,502	3,547	2,657	890
39	A 94	Hypertrophy of tonsils and adenoids--510	108	64	44
40	A 95	Empyema and abscess of lung--518,521	835	612	223
41	A 96	Pleurisy--519	134	88	46
42	A 97 pt.	Other chronic interstitial pneumonia--525	4,097	2,751	1,346
43	A 97 pt.	Bronchiectasis--526	2,105	1,378	727
44	A 97 pt.	Other diseases of lung and pleural cavity--527	13,870	11,709	2,161
45	A 97 pt.	Emphysema without mention of bronchitis--527.1	12,368	10,752	1,616
46		All other diseases of lung and pleural cavity--527.0,527.2	1,502	957	545
47	A 97 pt.	Other respiratory diseases--511-517,520,522-524	3,523	2,536	987
48		IX. Diseases of the digestive system	70,350	41,478	28,872
49	A 98	Diseases of teeth and supporting structures--530-535	79	37	42
50	A 99	Ulcer of stomach--540	6,416	4,467	1,949
51	A 100	Ulcer of duodenum--541	5,812	4,369	1,443
52	A 101	Gastritis and duodenitis--543	427	285	142
53	A 102	Appendicitis--550-553	1,800	1,095	705
54	A 103	Hernia and intestinal obstruction--560,561,570	9,723	4,715	5,008
55	A 104 pt.	Gastroenteritis and colitis, except ulcerative, age 4 weeks and over--571	4,161	2,174	1,987
56	A 104 pt.	Chronic enteritis and ulcerative colitis--572	3,606	1,604	2,002
57	A 105	Cirrhosis of liver--581	21,824	14,329	7,495
58		Without mention of alcoholism--581.0	14,612	9,308	5,304
59		With alcoholism--581.1	7,212	5,021	2,191
60	A 106	Cholelithiasis, cholecystitis, and cholangitis--584,585	4,831	2,014	2,817
61	A 107 pt.	Fibrocystic disease of pancreas--587B	639	314	325
62	A 107 pt.	Other diseases of digestive system--536-539,542,544,545,573-580,582,583,586,587.0,587.1,587A	11,032	6,075	4,957
63		X. Diseases of the genitourinary system	30,809	18,563	12,246
64		Nephritis and nephrosis--590-594	12,945	7,232	5,713
65	A 108	Acute nephritis--590	721	412	309
66	A 109 pt.	Nephritis with edema, including nephrosis--591	852	489	363
67	A 109 pt.	Chronic and unspecified nephritis and other renal sclerosis--592-594	11,372	6,331	5,041
68	A 110	Infections of kidney--600	8,744	4,306	4,438
69	A 111	Calculi of urinary system--602,604	1,300	687	613
70	A 114 pt.	Other diseases of urinary system--601,603,605-609	2,357	1,549	808
71	A 112	Hyperplasia of prostate--610	4,283	4,283	...
72	A 113	Diseases of breast--620,621	13	-	13
73	A 114 pt.	Other diseases of genital organs--611-617,622-637	1,167	506	661
74		XI. Deliveries and complications of pregnancy, childbirth, and the puerperium	1,465	...	1,465
75	A 115	Sepsis of pregnancy, childbirth, and puerperium--640,641,691,692,684	170	...	170
76	A 116 pt.	Toxemias of pregnancy and puerperium, except abortion with toxemia--642,685,686	234	...	234
77	A 117	Hemorrhage of pregnancy and childbirth--643,644,670-672	259	...	259
78	A 120 pt.	Ectopic pregnancy--645	99	...	99
79	A 118	Abortion without mention of sepsis or toxemia--650	79	...	79
80	A 119	Abortion with sepsis--651	213	...	213
81	A 116 pt.	Abortion with toxemia, without mention of sepsis--652	13	...	13
82	A 120 pt.	Other complications of pregnancy, childbirth, and puerperium, and delivery without mention of complication--646-649,660,673-680,683,687-689	398	...	398

by Specified Race and Sex: United States, 1962—Con.

ternational Lists, 1955. Figures by specified race exclude data for residents of New Jersey because this State did not require reporting of the item; see Technical Appendix)

Table 1-22. Deaths From 258 Selected Causes,

(Data refer only to deaths occurring within the United States. Excludes fetal deaths. Numbers after causes of death are category numbers of the Seventh Revision of the In-

	Intermediate List number[1]	CAUSE OF DEATH	ALL RACES		
			Total	Male	Female
1		XII. Diseases of the skin and cellular tissue	2,219	840	1,379
2	A 121	Infections of skin and subcutaneous tissue---690-698	570	303	267
3	A 126 pt.	Other diseases of skin and subcutaneous tissue---700-716	1,649	537	1,112
4		XIII. Diseases of the bones and organs of movement	3,593	1,610	1,983
5	A 122	Arthritis and spondylitis---720-725	1,963	711	1,252
6	A 123	Muscular rheumatism and rheumatism unspecified---726,727	37	18	19
7	A 124	Osteomyelitis and periostitis---730	190	112	78
8	A 125	Ankylosis and acquired musculoskeletal deformities---737,745-749	99	45	54
9	A 126 pt.	Inborn defect of muscle---744.1	555	415	140
10	A 126 pt.	Other diseases of musculoskeletal system---731-736,738-744.0,744.2	749	309	440
11		XIV. Congenital malformations	21,192	11,562	9,630
12	A 127	Spina bifida and meningocele---751	1,511	645	866
13	A 129 pt.	Congenital hydrocephalus and other congenital malformations of nervous system and sense organs---752,753	2,153	1,101	1,052
14	A 128	Congenital malformations of circulatory system---754	10,653	6,000	4,653
15	A 129 pt.	Other congenital malformations---750,755-759	6,875	3,816	3,059
16	A 130-A 135	XV. Certain diseases of early infancy	64,205	37,741	26,464
17		XVI. Symptoms, senility, and ill-defined conditions	19,730	11,468	8,262
18	A 136	Senility without mention of psychosis---794	2,426	977	1,449
19	A 137	Symptoms, ill-defined, and unknown causes---780-793,795	17,304	10,491	6,813
20		XVII. Accidents, poisonings, and violence	126,384	87,868	38,516
21		Accidents---E800-E962	97,139	66,074	31,065
22	AE 139 pt.	Railway accidents---E800-E802	964	857	107
23	AE 138	Motor vehicle accidents---E810-E835	40,804	29,639	11,165
24		Motor vehicle traffic accidents---E810-E825	39,775	28,888	10,887
25		Motor vehicle traffic accident involving collision with railway train---E810	1,245	885	360
26		Motor vehicle traffic accident to pedestrian---E812	7,410	5,335	2,075
27		Other motor vehicle traffic accidents involving collision---E811,E813-E819	16,986	11,747	5,239
28		Motor vehicle noncollision traffic accidents---E820-E824	11,173	8,782	2,391
29		Motor vehicle traffic accident of unspecified nature---E825	2,961	2,139	822
30		Motor vehicle nontraffic accidents---E830-E835	1,029	751	278
31	AE 139 pt.	Other road vehicle accidents---E840-E845	263	197	66
32	AE 139 pt.	Water transport accidents---E850-E858	1,445	1,319	126
33	AE 139 pt.	Aircraft accidents---E860-E866	1,435	1,254	181
34	AE 140 pt.	Accidental poisoning by solid and liquid substances---E870-E888	1,833	1,098	735
35	AE 140 pt.	Accidental poisoning by gases and vapors---E890-E895	1,376	1,023	353
36	AE 141	Accidental falls---E900-E904	19,589	9,662	9,927
37		Fall from one level to another---E900-E902	5,901	3,846	2,055
38		Fall on same level---E903	5,589	2,451	3,138
39		Unspecified falls---E904	8,099	3,365	4,734
40	AE 147 pt.	Blow from falling or projected object or missile---E910	1,515	1,438	77
41	AE 142	Accident caused by machinery---E912	1,922	1,856	66
42	AE 147 pt.	Accident caused by electric current---E914	849	787	62
43	AE 143	Accident caused by fire and explosion of combustible material---E916	7,534	4,241	3,293
44	AE 144	Accident caused by hot substance, corrosive liquid, steam, and radiation---E917,E918	414	226	188
45	AE 145	Accident caused by firearm---E919	2,092	1,854	238
46	AE 147 pt.	Inhalation and ingestion of food or other object causing obstruction or suffocation---E921,E922	1,813	1,087	726
47	AE 146	Accidental drowning---E929	5,161	4,277	884
48	AE 147 pt.	Excessive heat and insolation---E931	154	121	33
49	AE 147 pt.	Complications due to nontherapeutic medical and surgical procedures, therapeutic misadventure, and late complications of therapeutic procedures---E940-E959	1,291	616	675
50	AE 147 pt.	All other accidents---E911,E913,E915,E920,E923-E928,E930,E932-E936,E960-E962	6,685	4,522	2,163
51	AE 148	Suicide---E963,E970-E979	20,207	15,062	5,145
52		Suicide by poisoning---E970-E973	5,126	2,922	2,204
53		Suicide by hanging and strangulation---E974	3,154	2,452	702
54		Suicide by firearm and explosive---E976	9,487	8,201	1,286
55		Suicide by all other means---E963,E975,E977-E979	2,440	1,487	953
56	AE 149	Homicide---E964,E980-E985	9,013	6,707	2,306
57		Assault by firearm and explosive---E981	4,954	3,805	1,149
58		Assault by cutting and piercing instruments---E982	1,978	1,561	417
59		Assault by other means---E964,E980,E983	1,847	1,110	737
60		Injury by intervention of police---E984	187	185	2
61		Execution---E985	47	46	1
62	AE 150	Injury resulting from operations of war---E965,E990-E999	25	25	

↓ See Intermediate (A) List of 150 Causes for Tabulations of Mortality, Manual of the International Statistical Classification of Diseases, Injuries and Causes of Death, Volume 1, World Health Organization, Geneva, Switzerland, 1957.

by Specified Race and Sex: United States, 1962—Con.

ternational Lists, 1955. Figures by specified race exclude data for residents of New Jersey because this State did not require reporting of the item; see Technical Appendix)

Table 1-27. Deaths From Selected Causes Among Armed Forces Abroad, by 5-Year Age Groups: United States, 1962

(Excludes all deaths occurring among Armed Forces in the United States, Virgin Islands, and Puerto Rico. Data represent deaths among males only; no deaths were reported among female Armed Forces abroad. Numbers after causes of death are category numbers of the Seventh Revision of the International Lists, 1955)

CAUSE OF DEATH	Total	15-19 years	20-24 years	25-29 years	30-34 years	35-39 years	40-44 years	45 years and over
ALL CAUSES	1,120	120	331	213	151	116	118	71
Arteriosclerotic heart disease, including coronary disease--420	122	3	3	5	12	18	45	36
Symptoms, senility, and ill-defined conditions--780-795	9	1	4	2	-	2	-	-
All other diseases--Residual	93	4	16	12	10	13	17	21
Accidents--E800-E962	836	102	295	189	117	74	46	13

Section 2. Infant Mortality

Tables

		Page
2-1.	Infant and neonatal mortality rates, by color: Birth-registration States or United States, 1915-62	2-3
2-2.	Infant mortality rates by age, color, and sex: United States, 1962	2-3
2-3.	Infant mortality rates by age and color: United States, 1953-62	2-4
2-4.	Infant mortality rates for 55 selected causes: United States, 1953-62	2-5
2-5.	Infant mortality rates by color: United States, each division and State, 1958-62	2-6
2-6.	Neonatal mortality rates by color: United States, each division and State, 1958-62	2-7
2-7.	Deaths under 1 year, by age, race, and sex: United States and each State, 1962	2-8
2-8.	Deaths under 1 year and under 28 days, by month and color, for the United States and each State; and by age and sex for the United States: 1962	2-22
2-9.	Deaths under 1 year, under 28 days, and 28 days to 11 months, from 55 selected causes, by month: United States, 1962	2-29
2-10.	Deaths under 1 year and under 28 days, from 55 selected causes, by color, for urban and rural areas in metropolitan and nonmetropolitan counties: United States, 1962	2-32
2-11.	Deaths under 1 year from 55 selected causes, by age, color, and sex: United States, 1962	2-38
2-12.	Deaths under 1 year, under 28 days, and 28 days to 11 months, from 55 selected causes, by color: United States and each State, 1962	2-56

Table 2-1. Infant and Neonatal Mortality Rates, by Color: Birth-Registration States or United States, 1915-62

(Data refer only to deaths occurring within the specified area. Alaska included beginning 1959, and Hawaii, 1960. Prior to 1933, data are for birth-registration States only. Excludes fetal deaths. Rates are deaths under 1 year and under 28 days per 1,000 live births in specified color group)

Table 2-4. Infant Mortality Rates for 55 Selected Causes: United States, 1953-62

(Data refer only to deaths occurring within the United States. Alaska included beginning 1959, and Hawaii, 1960. Excludes fetal deaths. Rates are deaths under 1 year per 100,000 live births. Numbers after causes of death are category numbers of the Seventh Revision of the International Lists, 1955. Deaths are classified according to the Sixth Revision for 1953-57 and according to the Seventh Revision for 1958-62. Asterisk indicates rate based on a frequency of less than 20)

CAUSE OF DEATH	1962	1961	1960	1959	1958	1957	1956	1955	1954	1953

[1] Figures by color for 1962 exclude data for residents of New Jersey because this State did not require reporting of the item; see Technical Appendix.
[2] Excludes Alaska prior to 1959 and Hawaii prior to 1960.
[3] Figures for 1959 are by place of occurrence.
[4] Figures for 1958 and 1959 are by place of occurrence.

Table 2-6. Neonatal Mortality Rates by Color: United States, Each Division and State, 1958-62

(By place of residence. Data refer only to deaths occurring within the United States. Excludes fetal deaths. Rates are deaths under 28 days per 1,000 live births in specified group. Asterisk indicates rate based on a frequency of less than 20)

Table 2-10. Deaths Under 1 Year and Under 28 Days, From 55 Selected Causes, by Color, for Urban and Rural Areas in Metropolitan and Nonmetropolitan Counties: United States, 1962

(By place of residence. Data refer only to deaths occurring within the United States. Excludes fetal deaths. Numbers after causes of death are category numbers of the Seventh Revision of the International Lists, 1955. Figures by color exclude data for residents of New Jersey because this State did not require reporting of the item. For discussion of color item for New Jersey and definitions of areas, see Technical Appendix)

Section 3. Fetal Mortality

Tables — Page

3-1. Minimum period of gestation for which fetal death registration is required and fetal deaths by period of gestation: United States and each State, 1962 ---- 3-3

3-2. Fetal deaths and fetal death ratios by color: Birth-registration States, 1922-32, and United States, 1933-62- 3-4

3-3. Number and percentage distribution of fetal deaths, by age of mother, for specified periods of gestation: Selected areas combined, 1962 ---- 3-4

3-4. Fetal deaths and fetal death ratios, by legitimacy status, age of mother, and color: Total of 34 reporting States, 1962 ---- 3-5

3-5. Fetal deaths and fetal death rates, by plurality of birth, color, and sex: United States, 1962 ---- 3-5

3-6. Fetal deaths and fetal death ratios, by period of gestation and color, for metropolitan and nonmetropolitan counties in the United States and each geographic division; and for urban and rural areas in the United States: 1962 ---- 3-6

3-7. Fetal death ratios by color: United States, each division and State, 1958-62 ---- 3-8

3-8. Fetal deaths by State of occurrence distributed according to State of residence: United States and each State, 1962 ---- 3-9

3-9. Fetal deaths by month and color: United States and each State, 1962 ---- 3-12

3-10. Fetal deaths by age of mother, total-birth order, color, and sex of child: United States, 1962 ---- 3-14

3-11. Fetal deaths by age of mother and color: United States and each State, 1962 ---- 3-16

3-12. Fetal deaths by total-birth order and color: United States and each State, 1962 ---- 3-19

3-13. Fetal deaths by attendant, gestation group, and color: United States and each State, 1962 ---- 3-21

3-14. Fetal deaths by birth weight, plurality of birth, color, and sex: United States, 1962 ---- 3-24

3-15. Fetal deaths by period of gestation, plurality of birth, color, and sex: United States, 1962 ---- 3-25

3-16. Fetal deaths by birth weight and color for the United States and each State; and by sex for the United States: 1962 ---- 3-26

3-17. Fetal deaths by period of gestation and color for the United States and each State; and by sex for the United States: 1962 ---- 3-29

Table 3-1. Minimum Period of Gestation for Which Fetal Death Registration is Required and Fetal Deaths by Period of Gestation: United States and Each State, 1962

(By place of occurrence)

AREA	Minimum period of gestation for which fetal death registration is required	Total fetal deaths	PERIOD OF GESTATION[1]

West Virginia	5 months[5]	627	-	6	61	68	62	74	40	71	190	22	4	29
Wisconsin	After 20 weeks	1,111	1	-	119	128	143	171	91	151	218	46	16	27
Wyoming	After 20 weeks	88	-	1	10	9	8	11	13	12	20	-	-	4

[1]Period of gestation reported in months allocated to gestation interval in weeks as follows: 1-3 months to "Under 16 weeks"; 4 months to "16-19 weeks"; 5 months to "20-23 weeks"; 6 months to "24-27 weeks"; 7 months to "28-31 weeks"; 8 months to "32-35 weeks"; 9 months to "40 weeks"; 10 months to "43 weeks and over."

[2]For areas which require reporting of fetal deaths at all periods of gestation, those at gestations of under 16 weeks are distributed as follows:

	Under 4 weeks	4-7 weeks	8-11 weeks	12-15 weeks
Arkansas	2	27	55	54
Colorado	11	234	661	429
Georgia	7	195	522	338
Hawaii	4	153	457	290
Maine	-	8	8	19
Mississippi	21	247	410	294
New York City	393	2,454	6,667	4,996
Oregon	3	87	215	195
Vermont	-	14	96	60
Virginia	61	1,069	2,147	1,191

[3]Asks but does not require that all fetal deaths be reported irrespective of the month of uterogestation.

[4]Further specifies that at 20 weeks "fetus averages 10 inches in length, 9 ounces in weight."

[5]Further specifies "or total length of 10 inches."

Table 3-2. Fetal Deaths and Fetal Death Ratios by Color: Birth-Registration States, 1922-32, and United States, 1933-62

(Data refer only to fetal deaths occurring within the specified area. Ratios per 1,000 live births in specified group)

[1]Figures by color for 1962 exclude data for residents of New Jersey because this State did not require reporting of the item; see Technical Appendix.
[2]Excludes Alaska prior to 1959 and Hawaii prior to 1960.
[3]Maine, Vermont, New York City, Virginia (effective July 1, 1960), Georgia, Mississippi, Arkansas, Colorado, Oregon, and Hawaii required reporting of all fetal deaths regardless of gestation period. Since fetal deaths for which gestation was not stated are included in computing the ratios in this table, ratios for these areas may be overstated as a result of inclusion of some early fetal deaths from the "not stated" group.
[4]Required reporting of all fetal deaths through June 1959, after which the registration requirement was limited to fetal deaths at gestations of 20 weeks or more.
[5]Figures for 1958 are by place of occurrence.
[6]Figures for 1958 and 1959 are by place of occurrence.

Table 3-8. Fetal Deaths by State of Occurrence Distributed According to State of Residence: United States and Each State, 1962

(Data refer only to fetal deaths for which the period of gestation was given as 20 weeks or more or was not stated. Unit of residence is defined as the county or county equivalent of which the mother was a resident)

Table 3-10. Fetal Deaths by Age of Mother, Total-Birth Order, Color, and Sex of Child: United States, 1962

(Data refer only to fetal deaths occurring within the United States for which the period of gestation was given as 20 weeks or more or was not stated. Total-birth order refers to number of children ever born to mother, including fetal deaths. Figures for age of mother not stated are distributed. Figures by color exclude data for residents of New Jersey because this State did not require reporting of the item; see Technical Appendix)

Table 3-11. Fetal Deaths by Age of Mother and Color: United States and Each State, 1962—Con.

(By place of residence. Data refer only to fetal deaths occurring within the United States for which the period of gestation was given as 20 weeks or more or was not stated. Figures for age of mother not stated are distributed. Figures by color for the United States exclude data for residents of New Jersey because this State did not require reporting of the item; see Technical Appendix)

[1]New Jersey did not require reporting of color; see Technical Appendix.

Table 3-13. Fetal Deaths by Attendant, Gestation Group, and Color: United States and Each State, 1962

(By place of residence. Data refer only to fetal deaths occurring within the United States for which the period of gestation was given as 20 weeks or more (Groups II and III) or was not stated (Group IV). Figures by color for the United States exclude data for residents of New Jersey because this State did not require reporting of the item; see Technical Appendix)

[1]Fetal deaths attended by other and not specified persons are not shown separately but are included in "Total."
[2]It is assumed that all fetal deaths in hospitals or institutions are attended by physicians.
[3]Period of gestation reported in months allocated to gestation interval in weeks as follows: 5 and 6 months to "20-27 weeks"; 7 months or more to "28 weeks or more."
[4]New Jersey did not require reporting of color; see Technical Appendix.

Table 3-14. Fetal Deaths by Birth Weight, Plurality of Birth, Color, and Sex: United States, 1962

(Data refer only to fetal deaths occurring within the United States for which the period of gestation was given as 20 weeks or more or was not stated. Figures by color exclude data for residents of New Jersey because this State did not require reporting of the item; see Technical Appendix)

[1]Equivalents of the gram weights in terms of pounds and ounces are as follows:

500 grams or less = 1 lb. 1 oz. or less
501-1,000 grams = 1 lb. 2 oz.-2 lb. 3 oz.
1,001-1,500 grams = 2 lb. 4 oz.-3 lb. 4 oz.
1,501-2,000 grams = 3 lb. 5 oz.-4 lb. 6 oz.
2,001-2,500 grams = 4 lb. 7 oz.-5 lb. 8 oz.
2,501-3,000 grams = 5 lb. 9 oz.-6 lb. 9 oz.
3,001-3,500 grams 6 lb. 10 oz.-7 lb. 11 oz.
3,501-4,000 grams 7 lb. 12 oz.-8 lb. 13 oz.
4,001-4,500 grams 8 lb. 14 oz.-9 lb. 14 oz.
4,501-5,000 grams 9 lb. 15 oz.-11 lb. 0 oz.
5,001 grams or more = 11 lb. 1 oz. or more

Table 3-15. Fetal Deaths by Period of Gestation, Plurality of Birth, Color, and Sex: United States, 1962

(Data refer only to fetal deaths occurring within the United States for which the period of gestation was given as 20 weeks or more or was not stated. Figures by color exclude data for residents of New Jersey because this State did not require reporting of the item; see Technical Appendix)

Table 4-2. Deaths From Nontransport Accidents, by Place of Accident, Cause of Death, Color, and Sex: United States, 1962

(Data refer only to deaths occurring within the United States. Includes each three-digit category from E870 to E936. Numbers under places of accident are fourth-digit subcategory numbers of the International Lists, 1955. Figures by color exclude data for residents of New Jersey because this State did not require reporting of the item; see Technical Appendix)

Table 4-6. Deaths From Nontransport Accidents, by Place of Accident, Color, and Sex: United States and Each State, 1962

(By place of residence. Data refer only to deaths occurring within the United States. Deaths are those assigned to category numbers E870-E936 of the Seventh Revision of the International Lists, 1955. Numbers under places of accident are fourth-digit subcategory numbers. Figures by color for the United States exclude data for residents of New Jersey because this State did not require reporting of the item; see Technical Appendix)

Explanation of the columns of the life table---------- 5-2

Tables

5-1. Abridged life tables for total, male, and female population: United States, 1962---------- 5-3

5-2. Abridged life tables by color and sex: United States, 1962---------- 5-4

5-3. Number of survivors at single years of age, out of 100,000 born alive, by color and sex: United States, 1962---------- 5-5

5-4. Expectation of life at single years of age, by color and sex: United States, 1962---------- 5-6

5-5. Life table values by color and sex: Death-registration States, 1900-1902 to 1919-21, and United States, 1929-31 to 1962---------- 5-7

5-6. Estimated average length of life in years, by color and sex: Death-registration States, 1900-1928, and United States, 1929-62---------- 5-8

Explanation of the Columns of the Life Table

Column 1—Age interval (x to x + n).—The age interval shown in column 1 is the interval between the two exact ages indicated. For instance, "20-25" means the 5-year interval between the 20th birthday and the 25th.

Column 2—Proportion dying ($_nq_x$).—This column shows the proportion of the cohort who are alive at the beginning of an indicated age interval and who will die before reaching the end of that age interval. For example, for white males in the age interval 20-25, the proportion dying is 0.0082—out of every 1,000 white males alive and exactly 20 years old at the beginning of the period, 8.2 will die before reaching their 25th birthday. In other words, the $_nq_x$ values represent *probabilities* that persons who are alive at the beginning of a specific age interval will die before reaching the beginning of the next age interval. The "proportion dying" column forms the basis of the life table; the life table is so constructed that all other columns are derived from it.

Column 3—Number surviving (l_x).—This column shows the number of persons, starting with a cohort of 100,000 live births, who survive to the exact age marking the beginning of each age interval. The l_x values are computed from the $_nq_x$ values, which are successively applied to the remainder of the original 100,000 persons still alive at the beginning of each age interval. Thus, out of 100,000 white male babies born alive, 97,462 will complete the first year of life and enter the second; 97,106 will begin the sixth year; 96,051 will reach age 20; and 13,309 will live to age 85.

Column 4—Number dying ($_nd_x$).—This column shows the number dying in each successive age interval out of 100,000 live births. Out of 100,000 white males born alive, 2,538 die in the first year of life, 356 in the succeeding 4 years, 787 in the 5-year period between exact ages 20 and 25, and 13,309 die after reaching age 85. Each figure in column 4 is the difference between two successive figures in column 3.

Columns 5 and 6—Stationary population ($_nL_x$ *and* T_x).—Suppose that a group of 100,000 individuals like that assumed in columns 3 and 4 is born every year and that the proportions dying in each such group in each age interval throughout the lives of the members are exactly those shown in column 2. If there were no migration and if the births were evenly distributed over the calendar year, the survivors of these births would make up what is called a stationary population—stationary because in such a population the number of persons living in any given age group would never change. When an individual left the group, either by death or by growing older and entering the next higher age group, his place would immediately be taken by someone entering from the next lower age group. Thus, a census taken at any time in such a stationary community would always show the same total population and the same numerical distribution of that population among the various age groups. In such a stationary population supported by 100,000 annual births, column 3 shows the number of persons who, each year, reach the birthday which marks the beginning of the age interval indicated in column 1, and column 4 shows the number of persons who die each year in the indicated age interval.

Column 5 shows the number of persons in the stationary population in the indicated age interval. For example, the figure given for white males in the age interval 20-25 is 478,312. This means that in a stationary population of white males supported by 100,000 annual births and with proportions dying in each age group always in accordance with column 2, a census taken on any date would show 478,312 persons between exact ages 20 and 25.

Column 6 shows the total number of persons in the stationary population (column 5) in the indicated age interval and all subsequent age intervals. For example, in the stationary population of white males referred to in the last illustration, column 6 shows that there would be at any given moment a total of 4,825,961 persons who have passed their 20th birthday. The population at all ages 0 and above (in other words, the total population of the stationary community) would be 6,763,164.

Column 7—Average remaining lifetime ($\mathring{e}_x$).—The average remaining lifetime (also called expectation of life) at any given age is the average number of years remaining to be lived by those surviving to that age on the basis of a given set of age-specific rates of dying. In order to arrive at this value, it is first necessary to observe that the figures in column 5 of the life table can also be interpreted in terms of a single life table cohort without introducing the concept of the stationary population. From this point of view, each figure in column 5 represents the total time (in years) lived between two indicated birthdays by all those reaching the earlier birthday among the survivors of a cohort of 100,000 live births. Thus, the figure 478,312 for white males in the age interval 20-25 is the total number of years lived between the 20th and 25th birthdays by the 96,051 (column 3) who reached the 20th birthday out of 100,000 white males born alive. The corresponding figure (4,825,961) in column 6 is the total number of years lived after attaining age 20 by the 96,051 reaching that age. This number of years divided by the number of persons (4,825,961 divided by 96,051) gives 50.2 years as the average remaining lifetime of white males at age 20.

Care must be exercised in drawing conclusions from the figures in column 7. Thus, in observing that the average remaining lifetime of white persons is greater than that of nonwhite, one should not conclude that the oldest ages reached by white persons necessarily exceed those attained by the most long-lived nonwhite. The difference in the average length of life results from the fact that a greater proportion of nonwhite persons die before reaching old age. For example, the number surviving to age 65 out of 100,000 born alive is far greater among whites than among nonwhites; yet the average length of life remaining at age 65 is nearly the same for both groups.

Table 5-1. Abridged Life Tables for Total, Male, and Female Population: United States, 1962

AGE INTERVAL	PROPORTION DYING	OF 100,000 BORN ALIVE		STATIONARY POPULATION		AVERAGE REMAINING LIFETIME
Period of life between two exact ages stated in years	Proportion of persons alive at beginning of age interval dying during interval	Number living at beginning of age interval	Number dying during age interval	In the age interval	In this and all subsequent age intervals	Average number of years of life remaining at beginning of age intervals
(1)	(2)	(3)	(4)	(5)	(6)	(7)

Table 5-5. Life Table Values by Color and Sex: Death-Registration States, 1900-1902 to 1919-21, and United States, 1929-31 to 1962

(Alaska included beginning 1959, and Hawaii, 1960. For decennial periods prior to 1929-31, data are for groups of registration States as follows: 1900-1902 and 1909-11, 10 States and the District of Columbia; 1919-21, 34 States and the District of Columbia. For 1900-1902 to 1929-31, figures for nonwhites cover only Negroes. However, in no case did the Negro population comprise less than 95 percent of the corresponding nonwhite population)

AGE, COLOR, AND SEX	NUMBER OF SURVIVORS OUT OF 100,000 BORN ALIVE (l_x)								AVERAGE NUMBER OF YEARS OF LIFE REMAINING ($\mathring{e}_x$)

SECTION 6. TECHNICAL APPENDIX

SOURCES OF DATA

Death and fetal death statistics

With the exception noted in the next paragraph, tabulations of deaths and fetal deaths for 1962 are based on information obtained from microfilm copies of the original certificates. These copies are received from the registration offices of all States, certain cities, the District of Columbia, Puerto Rico, and the Virgin Islands. The statistical information on these records is edited, classified, placed on punchcards, transferred to a tape for computer processing, and tabulated in the National Vital Statistics Division (NVSD).

The 1962 death statistics for California were produced by a somewhat different procedure. The vital statistics office of this State coded the information on its certificates according to the rules followed in NVSD. From punchcards prepared for its own use, California reproduced the information required for national tabulations on uniform punchcard forms. The reproduced cards were verified and tabulated with the cards for all the other areas.

The United States vital statistics system covers the 50 States, the District of Columbia, Puerto Rico, and the Virgin Islands. However, in the statistical tabulations *United States* refers only to the aggregate of the 50 States and the District of Columbia. Tabulations for Puerto Rico and the Virgin Islands are shown separately in Section 8, Part B, Volume II, *Vital Statistics of the United States, 1962.*

Mortality data for the United States are confined to events registered within the United States and include events occurring to nonresident aliens. The data do not cover vital events for U.S. citizens occurring outside the United States. Similarly, the data for Puerto Rico and the Virgin Islands are confined to events registered in these areas.

However, beginning with the 1962 data year, NVSD has received individual copies of death reports of members of the Armed Forces of the United States whose deaths were recorded in other than the 50 States, the District of Columbia, Puerto Rico, or the Virgin Islands. These reports were coded and tabulated and the data are shown in Section I in table 1-27, "Deaths from selected causes among Armed Forces abroad, by 5-year age groups: United States, 1962."

Standard certificates

Standard certificates of death and fetal death, issued by the National Vital Statistics Division, have served for many years as the principal means of attaining uniformity in the content of the documents used to collect information on these events. They have been modified in each State to the extent necessitated by the particular needs of the State or by special provisions of the State vital statistics law. However, the certificates of most States conform closely in content and arrangement to the standard certificates.

The first issue of the Standard Certificate of Death appeared shortly before the formation of the registration area. Since then it has been revised periodically by the national vital statistics agency through consultation with State health officers and registrars; Federal agencies concerned with vital statistics; national, State, and county medical societies; and others working in the fields of public health, social welfare, demography, and insurance. This revision procedure has assured careful evaluation of each item in terms of its current and future usefulness for registration, identification, legal, medical, and research purposes. New items have been added when necessary, and old items have been modified to ensure better reporting or in some cases have been dropped when their usefulness appeared to be limited.

The most recent revision of the Standard Certificate of Death occurred in 1955. It was made in close collaboration with the Public Health Conference on Records and Statistics and was recommended to the States for adoption as of January 1, 1956.

The current standard certificates of death and fetal death are shown in figures 6-A and 6-B. A major revision of the certificate of fetal death occurred in 1954 and was recommended as of January 1, 1955. However, additional changes were recommended in 1955 to make the certificate conform to the new certificates of live birth and death.

With a few exceptions, only minor changes in content and format were made in the 1956 revision of the standard certificates. In an effort to obtain a more accurate designation for place of residence, the question "Is residence inside city limits?" was added. Studies conducted in a few States had indicated that this question helped to correctly locate the residence of persons who had lived near but outside the corporate limits of cities. Table 6-1 indicates the States that did and those that did not include the checkbox item on city of residence on all or some of the certificate forms used during 1962.

The wording of the cause-of-death item on the death certificate was changed to improve its clarity. The separate questions on operations were dropped.

The cause item on the fetal death certificate was revised to conform to the wording used on the death certificate.

HISTORY

The first death statistics published by the Federal Government concerned events in 1850 and included the entire United States. These statistics were based on information collected during the decennial census of that year. Similar decennial collections were made by census enumerators at each census up to and including the census of 1900, but because of the time interval between the occurrence of a death and the census enumeration, these reports were inaccurate and incomplete.

In 1880 the Bureau of the Census established a national "registration area" for deaths. This original area consisted of only two States—Massachusetts and New Jersey—the District of Columbia, and several large cities which had efficient systems for the registration of deaths, but by 1900 eight other States had been admitted. For the years 1880, 1890, and 1900, mortality data were received from the States

and cities included in this expanding area, but death figures for the entire country were still compiled from the reports of census enumerators.

The annual collection of mortality statistics for the registration area began with the calendar year 1900. In 1902 the Bureau of the Census, which had previously functioned only in census years, was made a permanent agency by an act of Congress. This act authorized the Director of the Bureau of the Census to obtain annually copies of records filed in the vital statistics offices of those States and cities having adequate death-registration systems. At that time not all States had enacted laws requiring the registration of deaths, and in many States the existing laws were poorly enforced. The growth of the registration area is indicated in table 6-3.

The death-registration area for 1900 consisted of 10 States, the District of Columbia, and a number of cities located in nonregistration States. In 1900 the registration

area included 40.5 percent of the population of the continental United States. The original registration area was predominantly urban and was characterized by a high proportion of white persons. If those reporting cities located in nonregistration States are excluded, the population coverage of the death-registration States was much lower, representing 26.2 percent of the total population of the United States.

Statistics of fetal deaths (the term "stillbirth" was used for many years) were first published for the birth-registration area in 1918. However, they were not included in the reports issued for the succeeding 3 years. Beginning with 1922, statistics of fetal deaths (stillbirths) have been published each year for the birth-registration areas.

Table 6-3 presents for each year through 1933 the estimated midyear population of the United States and the estimated midyear population of those States included in the registration system.

Prior to 1940 most of the national mortality tabulations published by the Bureau of the Census were based on data collected from the registration areas, but beginning with 1940 all published material given in statistical series for the United States prior to the completion of the death-registration area in 1933 omits data for registration cities located in nonregistration States and includes only statistics for the registration States. This change decreases the mortality statistics coverage of the United States by the exclusion of

cities in nonregistration States, but it has its advantages in that more reliable population estimates are available for the registration States than for the registration areas.

Rates for the expanding group of death-registration States are approximations of rates for the entire Nation, and general comparisons over a long period of time can be made. More exact trends for parts of the United States can be secured through the use of some constant area such as the orginial registration States or the registration States of 1920.

CLASSIFICATION OF DATA

The principal value of vital statistics data is obtained through the presentation of such data in the form of rates, which are computed by relating the vital events of a class to the population of a similarly defined class. Vital statistics and population statistics must, therefore, be classified according to similarly defined systems and tabulated in comparable groups. Even when the variables common to both, such as geographic area, age, race, and sex, have been similarly classified and tabulated, differences between the enumeration method of obtaining population data and the registration method of obtaining vital statistics data may result in significant discrepancies.

The complete rules used in the classification of geographic and personal items for deaths are set forth in the *Vital Statistics Instruction Manual* "Coding and Punching Geographic and Personal Particulars for Deaths Occurring in 1962," 1962. Comparable rules for coding and punching fetal deaths are outlined in two other manuals—"Coding and Punching Geographic and Personal Particulars for Births Occurring in 1962," 1962, and "Coding and Punching Geographic and Personal Particulars for Fetal Deaths Occurring in 1962," 1963. The classification of certain important items is discussed on the following pages.

Classification by occurrence and residence

For the 1962 statistics by place of occurrence, events are classified according to the county in which the vital event took place but are not classified to any smaller geographic unit. In the vital statistics for years prior to 1960, place of occurrence was classified by smaller units within the county in the same detail as are statistics by place of residence.

Tabulations by place of occurrence include all deaths occurring in a given county. In residence tabulations, all deaths are allocated to the usual place of residence of the decedent as reported on the death certificate.

The data by place of residence are classified to units within a county as follows: (1) each incorporated place of 10,000 inhabitants or more, (2) each unincorporated place of 10,000 inhabitants or more classified as urban under special rule, (3) the aggregate of incorporated places of 2,500 to 10,000 inhabitants and unincorporated places of this size defined as urban under special rule, and (4) the residual part of the county. For vital statistics purposes, the residual part of the county is referred to as rural.

Deaths of residents and nonresidents occurring within a State are compared with deaths of residents of the same State which occurred within or outside of the State in table 1-16 in Section 1. For most States the number of deaths of residents occurring outside of a State is about the same as the number of deaths of nonresidents occurring within the State.

For residence statistics, all events occurring within the United States, that is, the 50 States and the District of Columbia, are allocated to a place of residence within the United States. For nonresident aliens, the place of residence is considered to be the same as the place of occurrence.

Residence error.—A nationwide test of birth registration completeness in 1950 has provided measures of residence error for natality statistics. Comparable measures are not available for deaths. However, many of the qualifications of residence data noted in the birth registration test apply to mortality statistics.

The 1950 test indicates that for the country as a whole, errors in residence reporting result in a significant overstatement of births to residents of urban places and a corresponding understatement in the number to residents of areas classified as rural. The extent of bias varies from State to State and from city to city in the same State. Residence errors occur largely because of the major growth in population areas close to cities. Frequently, parts of these surrounding areas have city mailing addresses, and unless special care is taken in asking for residence information, they could be identified as being inside the cities. This situation has assumed special importance because of a concomitant development, the increased utilization of hospitals in cities by residents of nearby places. Misstatements of residence are more likely to remain undetected in such cases than when the birth occurs in the place of residence.

With respect to this latter type of error, the amount of movement for hospitalization from place of residence to place of occurrence is smaller for deaths than for births.[1] Therefore the error may be assumed to be less for deaths than for births.

As a result of the findings of the 1950 test, an effort was made to obtain a more accurate designation of place of residence by incorporating in the 1956 revisions of standard certificates of birth, death, and fetal death the question "Is residence inside city limits?" Studies conducted in a few States indicate that this question on city limits helped to locate correctly the residence of persons living near cities but outside their corporate limits. Even with the improvement in accuracy stemming from the addition of the checkbox item, the problem of correctly allocating residence still exists.

There is the question of the consistency of residence reporting for live births on one hand and infant or fetal deaths on the other. For those States in which the checkbox item is carried on one type of certificate but not on the other, the possibility of error is obvious. In some instances, the unusually high or low infant death rate shown for rural areas of metropolitan counties may be due to this factor.

[1] See table 1-16 in Section 1 of this volume and table 1-29 in Section 1 of Volume I.

Geographic classification[2]

Standard metropolitan statistical areas.—The standard metropolitan statistical areas (SMSA's) used in this report are the same as those established by the Bureau of the Budget and used by the Bureau of the Census except in the new England States.

In the other 44 States, an SMSA is a county or a group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000 in the 1960 census. In addition, contiguous counties are included in an SMSA if, according to specified criteria, they are (a) essentially metropolitan in character and (b) socially and economically integrated with the central city or cities.[3]

In New England the Bureau of the Budget uses as geographic components of the SMSA, towns and cities rather than counties. The National Vital Statistics Division cannot use the SMSA classification in these States because its data are not coded to identify all towns. Instead, the metropolitan State economic area (MSEA) established by the Bureau of the Census, which is made up of county units, is used.[4]

Standard consolidated areas.—For the metropolitan complexes around New York and Chicago, several contiguous SMSA's and additional counties that do not appear to meet the formal integration criteria for SMSA's but do have strong interrelationships of other kinds have been combined into the New York-Northeastern New Jersey and the Chicago-Northwestern Indiana Standard Consolidated Areas.[5]

Metropolitan and nonmetropolitan counties.—Counties which are included in SMSA's or in New England MSEA's are called metropolitan counties; all other counties are classified as nonmetropolitan.

Urban and rural areas.—Vital statistics data for 1962 are classified as urban or rural according to the population of the area enumerated in the 1960 census. The urban population consists of inhabitants residing in the following places:

1. Each incorporated city, borough, village, and town of 2,500 inhabitants or more (except towns in New England, New York, and Wisconsin).
2. Each town in New England and each township in New Jersey and Pennsylvania that has no incorporated municipality as a subdivision and has either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile.[6]
3. Each county in States other than the New England States, New Jersey, and Pennsylvania that has no incorporated municipality within its boundary and has a density of 1,500 persons or more per square mile.[7]

The rural population consists of inhabitants residing in all other areas.

This classification differs from the 1960 census definition of urban population. The latter definition includes, in addition, persons living in (a) unincorporated places of 2,500 inhabitants or more not included in the above definition of "urban" and (b) incorporated and unincorporated places of less than 2,500 inhabitants located within urban fringes of urbanized areas.

It was not feasible to use the 1960 census definitions of urban and rural for classifying vital statistics data since (a) boundary delineations for many urban unincorporated places were made by the Bureau of the Census for enumeration purposes only; many unincorporated places do not conform to political units and their boundaries change with population growth; in most instances the residence information on vital records is insufficient to allocate residence to arbitrary delimitations of unincorporated areas; and (b) vital statistics were not tabulated separately for places of less than 2,500 inhabitants. The difference in the percent distribution of the population in 1960 according to NVSD and the Bureau of the Census is as follows:

	Census	*NVSD*	*Percent difference*[8]
Total	100.0	100.0	...
Urban	69.9	61.1	-12.6
Rural	30.1	38.9	+29.2

Age

The age reported on vital records is the age at last birthday. It has been found that a characteristic error in reported age is an excess of ages ending in 0 or 5. To minimize the effect of this error, age is usually tabulated in 5- or 10-year groups.

With respect to computation of death rates, the age classification used by the Bureau of the Census is also based on the age of the person in completed years. The results of the 1960 census show that there is less heaping than in

[2]The rules followed in the classification of geographic areas for deaths are set forth in the instruction manuals cited previously. The geographic code structure is given in *Vital Statistics Instruction Manual*, Part II, Section C, "Geographic Code—Final—Births, Deaths, and Fetal Deaths Occurring in 1960-61," National Office of Vital Statistics, 1961; and supplements for use with the 1962 data.

Washington, U.S. Government Printing Office, 1960; and *Standard Metropolitan Statistical Areas*, Bureau of the Budget. Washington, U.S. Government Printing Office, 1961.

[4]For discussion of MSEA's, see *State Economic Areas*, U.S. Bureau of the Census. Washington, U.S. Government Printing Office, 1951; and the first reference cited in footnote 3. For the 1960 listing of MSEA's used for New England, see *Vital Statistics Instruction Manual*, Part II, Supplement No. 3 to Section C, "Geographic Code—1960-61 (Final)," National Vital Statistics Division, 1961.

[5]See footnote 3.

[6]These areas are identified by the symbol (UT) in table 30 of the U.S. Bureau of the Census publication cited in footnote 3.

[7]Arlington County, Virginia, is the only county in this category.

[8]Census figures used as the base.

earlier census years in the population base at digits 0 and 5.[9]

Race and color

Deaths in the United States in 1962 are classified for vital statistics into white, Negro, American Indian, Chinese, Japanese, Aleut, Eskimo, Hawaiian and Part-Hawaiian (combined), and "other nonwhite."

The category "white" includes, in addition to persons reported as "white," those reported as Mexican or Puerto Rican. If the racial entry on the death record indicates a mixture of Hawaiian and any other race, the race is classified as Part-Hawaiian. If race is given as a mixture of Negro with any other race, except Hawaiian, the race is classified as Negro. Entries of other racial mixtures are classified as " other nonwhite."

In some tables an extended classification is not needed and the divisions are "white," "Negro," and "other." In tables where the main purpose is to isolate the major group, the classifications are simply "white" and "nonwhite."

The correct designation of race is a difficult and complex problem, but classification from vital statistics records into the broad groups used in this volume is relatively simple. Difficulties may arise in computing rates based on populations classified by race or color because of differences resulting from the registration and enumeration methods used to collect this information.

The 1960 census was the first in which respondents classified themselves with respect to race—in the past censuses the racial classification was generally made by the enumerator on the basis of observation. Since the distribution of the population by white and nonwhite in 1960 was nearly the same as that shown by the postcensal estimates for 1960 it appears that the self-enumeration procedure may have had no effect on the comparability of vital rates for the white and nonwhite groups between 1960 and previous years. Likewise, the increase in the Negro population was consistent with statistics on its natural increase during the past 10 years. Increases in both the Chinese and Japanese populations were large, but high rates of natural increase and substantial immigration during the decade obscure any effects of self-enumeration.

Self-enumeration procedures may have increased the accuracy of the count of the Indian population in 1960. In past censuses the enumerator often failed to identify off-reservation Indians. In several Southern States, groups of persons of mixed stock of Indian and other races who for the purpose of reporting vital events consider themselves Indian had been classified in the 1950 census as "other nonwhite." In censuses prior to 1950, these groups have been variously classified as Negro or Indian. In 1960, the groups in question, with minor exceptions, were classified as Indian.[10]

Observed differences in vital statistics rates for various racial groups should not be interpreted as being necessarily due to inherent racial causes. Race is not independent of other factors, and the economic, social, and medical circumstances of one racial group may be quite different from those of another. For example, an observed difference in mortality by race may be no more than a difference of mortality for different economic classes.

New Jersey.—The State of New Jersey omitted the item on color or race from its certificates of live birth, death, and fetal death in 1962. Therefore, it was necessary to make certain changes in processing and publishing the statistics.

In all tables giving data for individual States or their geographic subdivisions, the "color or race" classification is not shown for New Jersey.

In tables by place of residence all events for residents of States other than New Jersey have been classified by color or race. In the relatively infrequent cases where the event occurred in New Jersey to a resident of another State it was arbitrarily classified as "white." This was done to eliminate the "not stated" category in the many tables by place of residence.

In tables by place of occurrence the figures for "white" and "nonwhite" do not add to the total for some areas. This results from a decision to classify all residents of New Jersey as "color or race not stated," including cases in which the birth, death, or fetal death occurred in another State.

All statistics for the United States as a whole by color or race are affected by the lack of this information for New Jersey residents. As stated previously, all events to residents of New Jersey were classified as "color or race not stated." In the annual volume tables this "not stated" category is not shown in the interest of space conservation; however, the frequencies of events classified as "color or race not stated" can be obtained in each table by subtracting from the totals for all races the sum of the events classified by color or race. For example, in table 1-1 in Section 1 the total number of deaths for the United States is 1,756,720, of which 1,694,696 are classified by color—1,488,113 as white and 206,583 as nonwhite. The difference between the sum of the events classified by color and the total events—62,024—represents the deaths to residents of New Jersey, events which were classified as "color or race not stated."

The absence of color or race information for New Jersey deaths affects all death rates and life table values classified by color or race for the total United States. This results from the fact that it was not possible to obtain denominators by color to correspond to the mortality data with New Jersey excluded because intercensal population estimates by age, color, and sex are not available for individual States. Therefore, in order to prepare death rates by color for the

[9] For a further discussion of age heaping and digit preference in the population, see the U.S. Bureau of the Census publication *United States Census of Population: 1960, Detailed Characteristics, United States Summary*, Final Report PC(1)-1D. Washington, U.S. Government Printing Office, 1963.

[10] U.S. Bureau of the Census, *United States Census of Population: 1960, General Population Characteristics, United States Summary*, Final Report PC(1)-1B. Washington, U.S. Government Printing Office, 1961.

United States it was necessary to make estimates of the United States population by age, color, and sex excluding New Jersey. The procedure used to make these estimates rests on the assumption that the ratio of the population of the United States excluding New Jersey in 1962 classified by age, color, and sex to the total population of the United States in 1962 classified by age, color, and sex can be represented by a ratio based on corresponding data from the 1960 Census of Population.

Ratios derived in this manner were applied to the 1962 U.S. population in each specific age, sex, and color group to obtain the population denominators which exclude New Jersey. The estimated 1962 populations used to compute death rates and life table values for each color group are shown in table 6-6. Consideration of the relatively small proportion of the United States population contributed by New Jersey and the maximum probable degree of error in the estimation procedure justified the conclusion that these measures approximate closely those that would have been obtained if mortality data by color had been available for New Jersey.

Fetal deaths

In May 1950 the World Health Organization recommended for adoption the definition of fetal death as "death prior to the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy. . . ." The term "fetal death" was defined on an all-inclusive basis to end confusion arising from the use of a variety of terms such as stillbirth, abortion, and miscarriage. The definition has been adopted by nearly half the States.[11] In most of the other States, a fetal death is defined as a birth of a minimum gestation period which is not a live birth, and live births are defined in varying detail.

As another step toward increasing the comparability of data on fetal deaths for different countries, the World Health Organization recommended that in classifying fetal deaths for statistical purposes they be grouped as early, intermediate, and late. These groups are defined as follows:

Less than 20 completed weeks of gestation (early fetal deaths)	Group I
20 completed weeks of gestation but less than 28 (intermediate fetal deaths)	Group II
28 completed weeks of gestation and over (late fetal deaths)	Group III
Gestation period not classifiable in Groups I, II, and III	Group IV

Until 1939 the nationally recommended procedure for registration of a fetal death required the filing of both a live birth and death certificate. In 1939 a separate Standard Certificate of Stillbirth (fetal death) was introduced. This was revised in 1949 and 1955 and amended in 1956 (see figure 6-B). Separate certificates of fetal death are now in use in all States.

Comparability and completeness of data.—State requirements for registration of fetal deaths vary. The majority of States require registration of fetal deaths of gestations of 20 weeks or more. Table 3-1 in Section 3 shows the minimum period of gestation for which fetal death registration is required by each State.

There is substantial evidence that not all fetal deaths for which registration is required are reported.[12]

Underregistration is more of a problem near the lower limit for those States having a minimum gestation period requirement. Failure to register fetal deaths near the lower limit results to a large degree from underestimation of the gestation period. This is illustrated by the fact that for areas requiring registration of all fetal deaths, the total number reported for 20-23 weeks is higher than the numbers reported for 24-27 and 28-31 weeks. For most of the other areas, however, the opposite is true.

It is evident from the data in tables 3-1, 3-15, and 3-17 that there are certain inaccuracies in the reporting of length of gestation. The comparatively large proportion of fetal deaths at 36 weeks of gestation is believed to result from erroneous conversion of 9-month gestations to 36 weeks. In addition, the heavy concentrations at 40 weeks result partly from failure to calculate the exact period of gestation for fetuses of normal size. In an effort to eliminate these inaccuracies, four areas—California, the District of Columbia, Maryland (including Baltimore), and New York City—specify "date of last menses" on their certificate in place of the usual "length of pregnancy" item or its equivalent.

In order to obtain data which are more nearly comparable from year to year and from State to State, most of the tables in Section 3 are based on deaths at gestations of 20 weeks or more. These tables include fetal deaths of not stated gestation, for it is assumed that most of these occurred at gestation periods of 20 weeks or more. This would not be true of States requiring registration of all fetal deaths. Inclusion of all fetal deaths of not stated gestation for these areas results in some degree of incomparability.

It is possible that some liveborn infants who die shortly after birth, particularly those who are born prematurely and die before the umbilical cord is severed or while the placenta is still attached, may be erroneously reported as fetal deaths. This type of error may be more of a problem in States which lack a precise definition of fetal death.

In the 1956 revision of the Standard Certificate of Fetal Death, the item on previous fetal loss was changed to include all fetal deaths regardless of gestation period. The majority of States have adopted this change on their certificates of birth and of fetal death. For these States,

[11] Prior to the adoption of this definition the nationally recommended definition of a fetal death (stillbirth) for registration purposes was as follows: "A fetus showing no evidence of life after complete birth (no action of heart, breathing, or movement of voluntary muscle), if the 20th week of gestation has been reached, should be registered as a stillbirth."

[12] Unpublished fetal mortality data—derived from work sheets used in preparing a thesis for Harvard School of Public Health, April 1962—supplied in a letter of August 9, 1962, from Carl L. Erhardt, Sc.D., Director, Bureau of Records and Statistics, Department of Health, New York, N.Y.

transposed

the proportion of mothers of first liveborn children reported as having had previous fetal loss has increased because of this change. For this reason, the data in tables 3-10 and 3-12 are not completely comparable with similar data published for the years prior to 1956.

The following States requested information on all previous fetal deaths (fetuses born dead at any time after conception) on certificates of both live birth and fetal death for the 1962 data year:

Alabama	Nevada
Alaska	New Jersey
Delaware	North Carolina
District of Columbia	North Dakota
Florida	Ohio
Hawaii	Oregon
Illinois	Pennsylvania
Indiana	Rhode Island
Iowa	South Carolina
Kansas	South Dakota
Kentucky	Tennessee
Louisiana	Texas
Maine	Utah
Michigan	Washington
Minnesota	West Virginia
Mississippi	Wisconsin
Missouri	Wyoming

Alaska, Maryland, Massachusetts, Nebraska, Pennsylvania, and Wisconsin require this information only on the certificates of fetal deaths. Pennsylvania requires reporting on the birth record of all fetal deaths of gestations of more than 16 weeks. New York City has for many years required reporting of all previous fetal deaths on certificates of both live birth and fetal death. The other States require reporting for fetal deaths at gestations of 20 weeks or more. Massachusetts is the only State for which the birth record does not request previous fetal loss.

Period of gestation.—The period of gestation is the number of completed weeks which have elapsed between the first day of the last menstrual period and the date of delivery, irrespective of whether the product of conception was liveborn or born without evidence of life.

Total-birth order.—The number of a birth or fetal death in the total-birth order is the sum of the births and fetal deaths which a mother has had. For example, if a mother has previously given birth to two live babies and to one born dead, the next event to occur, whether a live birth or fetal death, is counted as number four in the total-birth order.

Legitimacy status.—Tabulations which include legitimacy as a factor exclude those States which did not provide for the reporting of this item. The following States included this item on their birth and fetal death certificates in 1962:

Arkansas	Montana
Colorado	Nevada
Connecticut	North Carolina
Delaware	Ohio
Florida	Oklahoma
Georgia	Oregon
Hawaii	Rhode Island
Indiana	South Carolina
Iowa	South Dakota
Kansas	Utah
Louisiana	Vermont
Maine	Virginia
Minnesota	Washington
Mississippi	West Virginia
Missouri	Wyoming

There are no quantitative data on the characteristics of the unwed mothers who may be misreporting legitimacy status. Another source of error is the failure to register fetal deaths at all. It may well be that underregistration is greater in the illegitimate group than in the legitimate.

Cause of death

Beginning with 1958, the cause-of-death statistics published by the National Vital Statistics Division have been classified in accordance with the Seventh Revision of the International Lists of Diseases and Causes of Death (1955).[13]

The Manual of the International Statistical Classification of Diseases, Injuries, and Causes of Death includes special lists of causes recommended for mortality tabulations—the Detailed List, consisting of all three-digit categories; List A, the Intermediate List of 150 Causes for Tabulation of Morbidity and Mortality; and List B, the Abbreviated List of 50 Causes for Tabulation of Mortality. These lists have been adapted for use in NVSD.

The List of 258 Selected Causes of Death is an extension of List A designed so that the original groups can be obtained by a simple addition of titles. The List of 60 Selected Causes of Death is an extension of List B, except that certain causes of very low frequency in this country (typhoid fever, cholera, plague, smallpox, typhus and other rickettsial diseases, and malaria) are not shown in this list and four categories were added (asthma, other bronchopulmonic diseases, infections of kidney, and cholelithiasis, cholecystitis, and cholangitis). In addition, rheumatic fever

[13] For a history and description of both the Sixth and Seventh Revisions, see *Manual of the International Statistical Classification of Diseases, Injuries, and Causes of Death*, Based on the Recommendations of the Seventh Revision Conference, 1955, Volume 1, World Health Organization. Geneva, Switzerland, 1957.

was included under the rubric diseases of heart for the first time in 1958. The List of 55 Selected Causes of Infant Death was taken by the National Vital Statistics Division from the Detailed List.

Effect of decennial list revisions.—The International Lists, in use in this country since 1900, have been revised decennially in order that the disease classification may be consistent with advances in medical science and changes in diagnostic practice. Each decennial revision of the International Lists has produced some break in comparability of cause-of-death statistics. For the most part, the continuity in the mortality trends has not been considered a problem of great concern. Van Buren[14] described some of the major shifts in the cause-of-death statistics up to the Fifth Revision (1938) due to changes in the classification of causes of death. Dunn and Shackley[15] measured the change in mortality by cause due to the Fifth Revision. This was done by coding mortality data for 1940 by the 1929 and 1938 revisions. The results of the study have been useful in evaluating the effects of the Fifth Revision and changes in the joint-cause selection procedure.

The Sixth Revision of the International Lists of Diseases and Causes of Death adopted by the World Health Organization in July 1948 was used for mortality data in the United States from 1949 to 1957. This revision represented a more sweeping change than any of the previous revisions. The classification scheme was expanded considerably to provide specific categories for nonfatal diseases and injuries in order to provide a classification which could be used for morbidity as well as for mortality.

In addition to the sweeping change in the International Classification itself, there was a major change in the methods of selection of the cause of death for primary tabulations for use with the Sixth Revision. A large proportion of the death certificates filed annually in the United States report two or more diseases or conditions as causes of death. General statistical practice requires that cases involving more than one cause of death be assigned to a single cause, and it is necessary to employ a selection process to determine the one cause to which the death will be assigned. The method of selection used has an important effect upon the resulting statistics.

In 1948 the World Health Assembly adopted, along with the Sixth Revision of the International Lists, a form of medical certification and rules for classification of the underlying cause of death to be used internationally. The form of medical certification is shown in the Standard Certificate of Death (figure 6-A). It is designed to elicit information which will facilitate the selection of the underlying cause of death when two or more causes are jointly recorded. In general, if the certification is completed properly, the underlying cause of death indicated by the physician is the cause to be tabulated. This procedure, used in the United States beginning with deaths in 1949, differs sharply from that used in previous years. Formerly definite priority relationships were set up for combinations of causes reported on the death certificate. The single cause to be tabulated was chosen according to these fixed rules.

In order to make it possible to maintain a comparable time series of mortality rates by cause, the International Conference for the Sixth Revision of the International Lists recommended that deaths for a country as a whole in the year 1949 or 1950 should be coded according to both the Sixth and Fifth Revisions. In the United States deaths in 1950 were used for dual coding. The differences resulting from the use of the two revisions are expressed by a factor termed the comparability ratio. This is the number of deaths assigned to a particular cause under the Sixth Revision divided by the number of deaths assigned to that cause by the Fifth Revision. All data for 1950 are classified by both revisions, and the results are shown in two reports in Volume 51 of *Vital Statistics—Special Reports* now in preparation —"Comparability of Mortality Statistics for the Fifth and Sixth Revisions" and "Comparability Ratios Based on Mortality Statistics for the Fifth and Sixth Revisions."

Beginning with 1955, the decennial conferences for revision of the International Lists are to be held in years ending in 5, rather than later in the decade, as had been done previously. This is to make possible the use of the revised classification for mortality data at the beginning of years ending in 8. The new cycle provides time for sufficient experience with the new classification for fluctuations resulting from variations in interpretations of new provisions to level off by the year ending in 0. Thus, stable mortality data will be available for comparison with population figures from the decennial censuses.

In compliance with a recommendation of the Expert Committee on Health Statistics, the Seventh Revision of the International Lists was of limited scope, consisting of essential changes and amendments of errors and inconsistencies. This restriction was set forth because the change in the revision cycle resulted in a relatively short period between the effective date (1949) of the Sixth Revision and the Seventh Revision Conference in 1955 and thus resulted in limited experience with the Sixth Revision.

The amendments of the Seventh Revision included the integration into the manual of the provisions contained in an addendum[16] which, having been used with the Sixth Revision, did not represent classification changes. The only change made in the three-digit categories consisted of the rewording of a few titles. In a few cases the rewording included redefining the morbid conditions classifiable to these categories and the transfer of certain terms from one category to another. The three-digit categories affected are listed in Section 1, Volume I, *Vital Statistics of the United States, 1958*. There were also a number of alterations in four-digit categories, mostly consisting of the addition of

(Includes only deaths occurring within the United States. Excludes fetal deaths. The sample consists of one-tenth of the death certificates received in State vital statistics offices)

CAUSE OF DEATH		NUMBER OF DEATHS ASSIGNED ACCORDING TO RULES FOR—		Comparability ratio
		1962	1961	
Tuberculosis, all forms	001-019	951	957	0.99
Tuberculosis of respiratory system	001-008	881	888	0.99
Tuberculosis, other forms	010-019	70	69	1.01
Syphilis and its sequelae	020-029	293	293	1.00
Dysentery, all forms	045-048	44	44	1.00
Scarlet fever and streptococcal sore throat	050,051	7	7	1.00
Diphtheria	055	2	2	1.00
Whooping cough	056	10	10	1.00
Meningococcal infections	057	74	74	1.00
Acute poliomyelitis	080	6	6	1.00
Measles	085	38	38	1.00
Infectious hepatitis	092	108	106	1.02
Other infective and parasitic diseases	030-044,049,052-054,058-074,081-084,086-091,093-138	517	520	0.99
Malignant neoplasms, including neoplasms of lymphatic and hematopoietic tissues	140-205	27,668	27,656	1.00
Malignant neoplasm of buccal cavity and pharynx	140-148	635	635	1.00
Malignant neoplasm of digestive organs and peritoneum, not specified as secondary	150-156A,157-159	9,044	9,037	1.00
Malignant neoplasm of respiratory system, not specified as secondary	160-164	4,427	4,426	1.00
Malignant neoplasm of breast	170	2,413	2,411	1.00
Malignant neoplasm of genital organs	171-179	3,954	3,952	1.00
Malignant neoplasm of urinary organs	180,181	1,247	1,247	1.00
Malignant neoplasm of other and unspecified sites	156B,165,190-199	3,176	3,181	1.00
Leukemia and aleukemia	204	1,333	1,332	1.00
Lymphosarcoma and other neoplasms of lymphatic and hematopoietic tissues	200-203,205	1,437	1,435	1.00
Benign neoplasms and neoplasms of unspecified nature	210-239	495	495	1.00
Asthma	241	491	487	1.01
Diabetes mellitus	260	3,147	3,138	1.00
Anemias	290-293	363	361	1.01
Meningitis, except meningococcal and tuberculous	340	225	218	1.03
Major cardiovascular-renal diseases	330-334,400-468,592-594	96,454	96,425	1.00
Diseases of cardiovascular system	330-334,400-468	95,285	95,255	1.00
Vascular lesions affecting central nervous system	330-334	19,717	19,680	1.00
Diseases of heart	400-402,410-443	68,390	68,394	1.00
Rheumatic fever and chronic rheumatic heart disease	400-402,410-416	1,724	1,757	0.98
Arteriosclerotic heart disease, including coronary disease	420	52,343	52,183	1.00
Nonrheumatic chronic endocarditis and other myocardial degeneration	421,422	5,480	5,531	0.99
Other diseases of heart	430-434	2,610	2,694	0.97
Hypertensive heart disease	440-443	6,233	6,228	1.00
Other hypertensive disease	444-447	1,274	1,276	1.00
General arteriosclerosis	450	3,665	3,674	1.00
Other diseases of circulatory system	451-468	2,239	2,231	1.00
Chronic and unspecified nephritis and other renal sclerosis	592-594	1,169	1,170	1.00
Influenza and pneumonia, except pneumonia of newborn	480-493	6,074	6,157	0.99
Influenza	480-483	356	354	1.01
Pneumonia, except pneumonia of newborn	490-493	5,718	5,803	0.99
Bronchitis	500-502	449	447	1.00
Other bronchopulmonic diseases	525-527	1,940	1,952	0.99
Ulcer of stomach and duodenum	540,541	1,189	1,177	1.01
Appendicitis	550-553	157	157	1.00
Hernia and intestinal obstruction	560,561,570	1,002	1,003	1.00
Gastritis, duodenitis, enteritis, and colitis, except diarrhea of newborn	543,571,572	830	828	1.00
Cirrhosis of liver	581	2,127	2,114	1.01
Cholelithiasis, cholecystitis, and cholangitis	584,585	448	449	1.00
Acute nephritis, and nephritis with edema including nephrosis	590,591	145	142	1.02
Infections of kidney	600	798	798	1.00
Hyperplasia of prostate	610	413	413	1.00
Deliveries and complications of pregnancy, childbirth, and the puerperium	640-689	128	125	1.02
Abortion	650-652	28	28	1.00
Other complications	640-649,660-689	100	97	1.03
Congenital malformations	750-759	2,103	2,092	1.01
Certain diseases of early infancy	760-776	6,538	6,517	1.00
Birth injuries, postnatal asphyxia, and atelectasis	760-762	2,916	2,862	1.02
Infections of newborn	763-768	441	434	1.02
Other diseases peculiar to early infancy, and immaturity unqualified	769-776	3,181	3,221	0.99
Symptoms, senility, and ill-defined conditions	780-795	2,337	2,356	0.99
Accidents	E800-E962	9,699	9,636	1.01
Motor vehicle accidents	E810-E835	3,961	3,959	1.00
Nonmotor vehicle accidents	E800-E802,E840-E962	5,738	5,677	1.01
Accidents in the home	E870-E936(.0)	2,275	2,262	1.01
Other nonmotor vehicle accidents	E800-E802,E840-E866,E870-E936(.1-.9),E940-E962	3,463	3,415	1.01
Suicide	E963,E970-E979	2,018	2,018	1.00
Homicide	E964,E980-E985	894	894	1.00

[1] Ratio between deaths assigned according to the 1962 rules and deaths assigned according to the 1961 rules, based on the 10-percent sample for 1962.

716 - 533 O - 64 - 28

four-digit subdivisions providing more detailed classification of malignant neoplasms of specified sites. The three-digit categories for which there were additions, deletions, or changes in four-digit subcategories are also listed in Section 1 of the 1958 report.

The international rules for the selection of the cause of death for primary mortality classification were recast for use with the Seventh Revision in order to simplify the prior rules and to organize them from the point of view of the steps which a coder must take in making the cause-of-death assignment. The intent of the rules remains the same, that is, to code the cause which the medical certifier judged to be the underlying cause which started the train of events leading directly to death. In recasting the rules, some modifications of interpretations were made. These mainly involved the selection of the underlying cause for improperly completed certifications. There have been some changes in interpretations for use in adapting coding procedures to reporting practices in the United States.

In the majority of cases, application of the rules for the Seventh Revision results in the same code assignment as that of the Sixth Revision rules. There are some differences in individual assignments affecting a number of categories. Many of these individual assignments are compensatory and result in no break in continuity of trends for various causes of death; the comparability of a number of categories is affected to a limited extent.

In order to estimate the magnitude of the effect of the Seventh Revision upon the comparability of mortality trends for various causes, a 10-percent sample of deaths in 1958 was classified by both the Sixth and Seventh Revisions. The comparability ratios for selected causes are shown in table 1-H, Section I, Volume I, *Vital Statistics of the United States, 1958*, and the results are discussed on pages 1-19 to 1-21 of the same report.

Coding in 1962.—The National Vital Statistics Division annually prepares for its cause-of-death coding clerks an instruction manual which contains decisions and interpretations that will apply in that year. For 1960 and 1961 no revisions were made in coding procedures which affected code assignments. For prior years changes which may have affected code assignments are noted in the introduction to *Vital Statistics of the United States* for the appropriate years.

The 1962 revision of the instruction manual for coding causes of death incorporated a number of procedures which differed slightly from rules used in coding causes for deaths occurring in 1961. These changes were made chiefly to bring coding procedures into alinement with new developments in reporting practices and in medical opinions as to the etiology and causal relationship of diseases and to eliminate some inconsistencies in coding procedures. Procedures which changed for 1962 are indicated in *Vital Statistics Instruction Manual*, Part II, Section D, "Cause-of-Death Coding for Deaths Occurring in 1962."

In order to evaluate the effect of the changes, causes of death for a 10-percent sample of deaths in 1962 were coded by the 1962 procedures and also by the procedures in effect for deaths occurring in 1961. The sample used for this dual coding was comprised of 175,416 death certificates submitted by the registration areas for the *Monthly Vital Statistics Report*. There were differences in cause-of-death classification resulting from coding by the two sets of rules for 1,078 of these certificates, slightly more than 0.61 percent. This does not include deaths classified to new four-digit subdivisions of 002, 008, and 751 for 1962 which were assigned to these three-digit categories by the 1961 procedures.

Comparability ratios were computed for causes in a selected list by dividing the number of deaths assigned to a particular cause using the 1962 procedures by the number of deaths assigned to that cause using the 1961 procedures. The resulting ratios, shown in table 6-2, reflect the net change in cause-of-death assignments for the listed causes produced by the differences in coding procedures. The causes included are those in the List of 60 Selected Causes of Death with the following exceptions: Infectious hepatitis (092) is shown separately instead of being included with other infective and parasitic diseases; the residual "All other diseases" has been omitted; and the category nonmotor vehicle accidents is shown in two parts—accidents in the home and other nonmotor vehicle accidents.

The results of the dual coding indicate that a majority of the differences were either compensatory or were widely scattered throughout the classification. The comparability ratios for a large majority of causes as grouped for table 6-2 are very close to 1.00 with no ratio differing from 1.00 by more than .03. The dual coding shows differences for many of the more detailed causes and for many of the causes as grouped for the List of 258 Selected Causes of Death. However, comparability ratios are estimated to differ from 1.00 by less than 0.1 for most causes with the majority differing from 1.00 by less than .03. On the other hand, for a few causes the ratios differ from 1.00 by somewhat larger magnitudes.

The net differences and the ratios for causes of death computed from the dual coding are, of course, subject to sampling variability since they are based on a 10-percent sample of deaths occurring in 1962. Hence, the differences for some of the causes may be explained by sampling variability. This is particularly true for causes resulting in relatively few deaths with small numbers of differences resulting from the use of the two sets of rules, even though the ratios may differ from 1.00 by relatively large magnitudes.

The changes in coding procedures outlined below are those which resulted in a comparability ratio estimated from the dual coding to differ from 1.00 by at least 0.1 for a cause of death category in either the Detailed List or the 258-cause list. The causes of death included in the discussion are those to which 200 or more of the total deaths for 1962 were assigned and which showed a net difference of at least 5 cases in the 10-percent sample which was coded by the two sets of rules. Some causes with fewer differences and/or fewer deaths are also mentioned incidental to the explanation.

Causes of death with estimated comparability ratios of 0.90 or less:

193.9, Malignant neoplasm of brain and other parts of nervous system, site unspecified: For 1962, malignant neoplasms whose histological type indicates origin in the nervous

system qualified only by an adjective, such as frontal, prefrontal, parietal, temporal, or occipital, which indicates intracranial, were classified under malignant neoplasm of brain (193.0). For 1961, these neoplasms were classified under 193.9.

344, Late effects of intracranial abscess or pyogenic infection: See 344A.

344A, Hydrocephalus (internal) (external) NOS (ages 4 weeks and over): See 751 under causes with comparability ratios of 1.10 or more.

355, Other diseases of brain: For 1962, "cerebral damage" without indication of cause in decedents under 4 weeks of age was assigned to 760, Intracranial and spinal injury at birth, and to 351, Cerebral spastic infantile paralysis, in decedents 4 weeks of age and over. For 1961, this diagnosis was assigned to 355 regardless of age.

390-398, Diseases of ear and mastoid process: See 391-393.

391-393, Otitis media and mastoiditis: For 1962, assignment for meningitis due to otitis media was made to the resulting meningitis, that is, to 340, Meningitis, except meningococcal and tuberculous. For 1961, assignment for this sequence was made to the presumptive underlying cause, 391, Otitis media without mention of mastoiditis.

421, Chronic endocarditis not specified as rheumatic: For 1962, reports of coronary disease (any) due to valvular heart disease or endocarditis except bacterial endocarditis underlying coronary embolism, occlusion, infarction, or thrombosis were classified to 420.1, Heart disease specified as involving coronary arteries. For 1961, endocarditis and valvular heart conditions were coded as the underlying cause of certain coronary diseases, for example, occlusion, embolism, thrombosis, and infarction. This change in procedure affected the ratios for rheumatic endocarditis (410-414) to a lesser extent.

421.1, Chronic endocarditis of aortic valve, not specified as rheumatic: See 421.

421.4, Other and ill-defined chronic endocarditis, not specified as rheumatic: See 421.

421.2-421.4, Chronic endocarditis of other valves not specified as rheumatic: See 421.

434.4, Unspecified disease of heart: For 1962, the interpretation of a rule whereby a more precise description of a disease is preferred to a selected underlying cause which describes the disease in general terms was expanded. This expansion resulted in the classification of causes of death to the more specific heart conditions, for example, to 420.1, Heart disease specified as involving coronary arteries, 433.1, Other disorders of heart rhythm, and 434.1, Congestive heart failure, which under procedures for previous years were classified under 434.4. This change in interpretation brought about decreases in the residual categories for other organs and systems, for example, 527.2, Other diseases of lung and pleural cavity, with an estimated effect upon the comparability ratio of less than 0.10.

542, Gastrojejunal ulcer: For 1962, an internal ulcer with site unspecified was classified to 540, Ulcer of stomach. For 1961, these ulcers were classified to 542.

752, Congenital hydrocephalus: See 751 under causes with comparability ratios of 1.10 or more.

759.3, Other and unspecified congenital malformations: For 1962, an expansion of the interpretation of a rule pertaining to precise descriptions of a disease compared with a general description resulted in decreases for a number of residual categories for organs or systems. Some causes of death were classified to categories for specific congenital malformations in 1962, for example, to 757, Congenital malformation of genitourinary system, and 756, Congenital malformation of digestive system, which had been classified to 759.3 in 1961.

774, Immaturity with mention of any other subsidiary condition: For 1962, cerebral anoxia with prematurity was classified to 762.5, Postnatal asphyxia and atelectasis with prematurity; for 1961, this diagnosis was coded to 774. For 1962, "cerebral damage" with mention of immaturity was assigned to 760.5, Intracranial and spinal injury at birth with immaturity; for 1961, assignment was usually made to 774.

795.0, Other ill-defined conditions: For 1962, "cerebral anoxia" NOS in decedents under 1 year of age was classified to 762.0, Postnatal asphyxia and atelectasis without mention of immaturity. For 1961, classification was made to 795.0 regardless of age.

E904, Unspecified falls: See E903 under causes with comparability ratios of 1.10 or more.

E921 and E922, Inhalation and ingestion of food and of other objects causing obstruction or suffocation: See E923 under causes with comparability ratios of 1.10 or more.

Causes of death with estimated comparability ratios of 1.10 or more:

351, Cerebral spastic infantile paralysis: See 355 under causes with comparability ratios of 0.90 or less.

462, Varicose veins of other specified sites: See 462.1.

462.1, Varicose veins of esophagus: For 1962, esophageal varices reported as due to arteriosclerosis, heart disease, or diabetes are considered as "highly improbable" sequences, with assignment to varicose veins of the esophagus. For 1961, the presumptive underlying cause as reported was coded.

587B, Cystic fibrosis: For 1962, "meconium ileus" was assigned to cystic fibrosis. For 1961, this diagnosis was coded to 587A, Other diseases of pancreas, except fibrocystic disease.

751, Spina bifida and meningocele: For 1962, this category was subdivided into four-digit subcategories providing a special subdivision (751B) for spina bifida and meningocele with mention of hydrocephalus. This resulted in the assignment to this subcategory of combinations of these conditions which in prior years were coded to 752, Congenital hydrocephalus, or to 344A, Hydrocephalus not specified as to whether congenital or acquired.

768, Other sepsis of newborn: For 1962, "amnionitis" as a cause of infant death was coded under this category. For 1961, this diagnosis for an infant was coded to 769, Neonatal disorders arising from certain diseases of the mother during pregnancy.

768.5, Other sepsis of newborn with immaturity: See 768.

E903, Fall on same level: For 1962, falls with certain

qualifications, for example, "to floor" or "slipped and fell" without evidence of a difference in level, were assumed to be on the same level and classified to this category. For 1961, such falls were classified under E904, Unspecified falls.

E923, Foreign body entering other orifice: For 1962, this category was defined to include injuries from accidental entrance of any foreign body, including food, into any orifice of the body except the eye and adnexa *unless* asphyxia, obstruction, or suffocation was specifically mentioned. This resulted in classification to this category of some causes of death which in previous years would have been coded to E921, Inhalation and ingestion of food causing obstruction or suffocation, or to E922, Inhalation and ingestion of other object causing obstruction or suffocation.

E911, E913, E915, E920, E923-E928, E930, E932-E936, E960-E962, All other accidents: See E923.

The causes listed below are taken from either the Detailed List or the 258-cause list. They are the causes to which 200 or more of the total deaths for 1962 were assigned and which showed a net difference of at least 5 cases in the 10-percent sample coded by the two sets of rules with comparability ratios falling between 0.97 and 0.91 inclusive and between 1.03 and 1.09 inclusive. A cause is not shown here if it appears in table 6-2.

Causes with comparability ratios falling between 0.97 and 0.91 inclusive:

082.3, Other and unspecified infectious encephalitis.
286, Other avitaminosis and nutritional deficiency states.
286.5, Malnutrition, unqualified.
280, 282-286, Other avitaminosis and nutritional deficiency states.
350-357, Other diseases of central nervous system.
350, Paralysis agitans.
341-344,352,354-369,380-384,386, 388-390, 394-398, Other diseases of nervous system and sense organs.
410, Diseases of mitral valve.
413, 414, Diseases of pulmonary valve and other endocarditis, specified as rheumatic.
414, Other endocarditis specified as rheumatic.
430-434, Other diseases of heart.
434, Other and unspecified diseases of heart.
527.2, Other diseases of lung and pleural cavity.
527.0, 527.2, All other diseases of lung and pleural cavity.
583, Other diseases of liver.
536-539, 542, 544, 545,573-580, 582, 583, 586, 587.0, 587.1, 587A, Other diseases of digestive system.
752, 753, Congenital hydrocephalus and other congenital malformations of nervous system and sense organs.
759, Other and unspecified congenital malformations not elsewhere classified.
769, Neonatal disorders arising from certain diseases of the mother during pregnancy.
769 (.5-.9), Neonatal disorders arising from certain diseases of mother during pregnancy with immaturity.

Causes with comparability ratios falling between 1.03 and 1.09 inclusive:

340.3, Meningitis with no organism specified as cause.
353, Epilepsy.
353.3, Epilepsy, other and unspecified.
433, Functional disease of heart.
433.1, Other disorders of heart rhythm.
540.1, Ulcer of stomach with perforation.
762, Postnatal asphyxia and atelectasis.
762.0, Postnatal asphyxia and atelectasis without mention of immaturity.
E900-E904, Accidental falls.

Medical certification.—The use of a standard classification list, although essential for State, regional, and international comparison, does not assure strict comparability of the tabulated figures. A high degree of comparability could be attained only if all of the data on cause of death were reported with equal accuracy and completeness. Since the medical certification of death can be made only by a qualified person, usually a physician or a coroner, the reliability and accuracy of cause-of-death statistics are, to a large extent, governed by the acumen and ability of the medical attendant to make the proper diagnosis and by the care with which the death certificate is filled out.

The quality of the basic data reported on the death certificate is, of course, of fundamental importance in the interpretation of cause-of-death statistics. Although a number of notable studies have been made on the accuracy of medical diagnoses, there is an unfortunate lack of national statistics on the subject. The studies on the accuracy of cause-of-death statements have taken clinical or pathological reports as the point of departure for comparison with the medical returns on the death certificate. By necessity, these studies have been limited to deaths on which hospital records or autopsy reports were available. Since less than two-thirds of all deaths in 1958 occurred in hospitals and autopsies were reported as having been performed on only about 19 percent of all cases (see table 6-0, Section 6, in Volume I, *Vital Statistics of the United States, 1958,* and table 68 in Volume II), studies based on such data may be subject to considerable bias.

A more satisfactory evaluation of the quality of the cause-of-death statement may be made by including all deaths in the study rather than hospital deaths only. Such a pilot study was based on a sample of deaths occurring in Pennsylvania during 3 months of 1956.[17] For particular causes of death, a representative sample of certificates was selected. Questionnaires were sent to the physicians signing the certificates selected asking for the diagnostic methods, with pertinent findings, on which the medical certification of death was based. The returns were reviewed along with the original cause-of-death statement and rated for quality (type and amount) of supporting diagnostic information. For 39 percent of the cases the diagnostic data given were sketchy and for 58 percent the information was considered good or very good. The quality of the diagnostic information varied considerably with the cause

[17] For a more complete report, see "Inquiry Into diagnostic Evidence Supporting Medical Certifications of Death," by Iwao M. Moriyama, William S. Baum, William M. Haenszel, and Berwyn F. Mattison, *American Journal of Public Health,* Vol. 48, No. 10, October 1958, pp. 1376-1387.

of death. The authors concluded that in Pennsylvania the diagnostic data for many disease categories provided an adequate base for medical certification of the cause of death.

One index of the quality of reporting of causes of death is the proportion of death certificates coded to the Seventh Revision category numbers 780-793 and 795, which are the rubrics for ill-defined and unknown causes of death. While there are cases for which it is not possible to determine the cause of death, this proportion does indicate the care and consideration given to the certification of causes of death by the attending physician. It may also be used as a rough measure of the specificity of the medical diagnosis made by the physicians in various areas. In 1962 only 1.0 percent of all reported deaths in the United States were assigned to ill-defined or unknown causes. However, this percentage varied among the States from 0.2 to 7.8 percent, reflecting differences in the quality of reporting.

Ranking causes of death.—The causes included in the List of 60 Selected Causes of Death have been ranked on the basis of the number of deaths assigned to each. Two group titles, major cardiovascular-renal diseases and diseases of the cardiovascular system, and the single title symptoms, senility, and ill-defined conditions, are not ranked. The remaining titles are ranked to determine the leading causes of death. When one of the titles that represents a subtotal is ranked, as in the case of tuberculosis, all forms, its component parts (in this case, tuberculosis of respiratory system and tuberculosis, other forms), are not ranked.

Ranking causes of death is a popular method of presenting mortality statistics. The list of causes and the rules of ranking used were recommended by the Public Health Conference on Records and Statistics at its 1951 meeting. To obtain results that are comparable, the same basic list of causes and rules of ranking must be used in comparisons of areas or of years.

Quality control procedures

The underlying cause of death was coded separately from all other items on the death certificate. For 70 percent of the records the initial cause-of-death codes were assigned in the registration areas. For the remaining 30 percent of the records the original coding was done in the NVSD. Seventy-four percent of the codes assigned in the registration area and in the NVSD were verified on a 100-percent basis. The remaining 26 percent were verified by inspecting a 10-percent systematic sample of the work.

The coding of all other death data was done simultaneously with card punching from microfilm images (transcripts for the Virgin Islands) of the original certificates. Approximately 52 percent of all cards punched were verified using an independently coded and punched 10-percent systematic sample. The expected result from this system of sampling inspection is that on the average 2.25 percent of the cards will contain one or more errors. The rest of the cards were verified completely and the errors remaining are presumably very few.

Except for cause-of-death coding, both systems of verification involve controlling two types of error, coding and punching, at the same time. The error rates are a combined measure of both types. While it may be assumed that punching errors are randomly distributed across all items on the card, this assumption cannot be made as readily for coding errors. It is possible for systematic errors in coding rare events to escape detection during sample verification. For cause-of-death coding, this is controlled by listing out the rare and impossible codes from the computer and reverifying the cause-of-death assignment. This is partially controlled for the other items by re-verification of randomly selected lots from each operator's work.

The coding and simultaneous punching of fetal deaths was verified completely because of their relatively small number.

After completion of the coding and punching, card counts are balanced against checklists for each registration area which gives county totals for each month. Impossible codes, including missing items, are selected out during the card-to-tape conversion on the computer. Most of these (except for causes of death) are adjusted by arbitrary code assignments. All subsequent operations involved in tabulating and table preparation are verified either by the computer or by statistical clerks.

INTERPRETATION OF DATA

While vital statistics data are useful for a variety of administrative and scientific purposes, they cannot be correctly interpreted unless various qualifying factors, in addition to methods of classification, are taken into account. The factors to be considered depend upon the specific purposes for which the data are to be used. It is not feasible to discuss all of the pertinent factors in the use of vital statistics tabulations, but some of the more important ones should be mentioned.

Most of the factors limiting the use of the data arise from imperfections in the original records or from the impracticability of tabulating these data in very detailed categories. These defects should not be ignored, but their existence does not vitiate the value of the data for most general purposes. Analysis of small differences or exact evaluation of vital statistics requires careful study of many related elements. However, the major trends and differences will not usually be changed materially by finer analysis.

Completeness of registration

Although every State has adopted a law requiring the registration of births, deaths, and fetal deaths, these laws are not uniformly observed. In most areas practically all births and deaths are registered. For some areas, however, there is enough underregistration to affect the use of the statistics for certain purposes.

Quantitative information on completeness of death registration is not available. One condition for admission to the national registration areas was a demonstrated registration completeness of at least 90 percent, although the method used in testing completeness was subject to considerable error. It is believed that in the past death registration for the United States has been more complete

than birth registration, but the difference now may be rather small. There is evidence, however, that in certain isolated areas, incomplete registration is still a problem. For example, a study made in a few selected counties of Tennessee, where the death rates for 1949 to 1951 were unusually low, served to locate a number of unregistered deaths.[18] A similar situation may exist in other States.

Population bases

Death rates shown in this report for the United States and the individual States are based on the populations present in the respective areas. These populations exclude the Armed Forces overseas and persons living abroad but include the Armed Forces stationed in each area.

The estimates of the total population of the United States by age, color, and sex in 1962 are published in *Current Population Reports,* Series P-25, No. 265, by the Bureau of the Census and are shown in tables 6-4 and 6-5. These figures are based on data from the 1960 census, final counts of births and deaths for 1960 and preliminary counts through June 1962, statistics on the number of immigrant aliens admitted to the United States as reported by the Immigration and Naturalization Service, and data on the size and distribution of the Armed Forces.

Estimates of the total resident population in each State for 1962 are shown in table 6-7. These estimates are consistent with the 1960 census counts, and with the revised estimates of these areas for July 1, 1961, and with the national estimates in P-25, No. 265.

Population estimates for 1962 excluding New Jersey.—As indicated in the section on race and color, the birth, death, and fetal death records of the State of New Jersey did not contain the race item in 1962. Therefore, this office estimated a comparable population base by color which excluded New Jersey. These estimates are shown in table 6-6. The procedure used to make these estimates rests on the assumption that the ratio of the population of the United States excluding New Jersey in 1962 classified by age, color, and sex to the total population of the United States in 1962 classified by age, color, and sex can be represented by a ratio based on corresponding data from the 1960 Census of Population. Ratios derived in this manner were applied to the 1962 U.S. population in each specific age, sex, and color group[19] to obtain the population denominators which exclude New Jersey.

Revised rates for 1961.—Death rates for 1961 in this report differ from those shown in *Vital Statistics of the United States, 1961,* Volume II, because the 1961 rates in this report are based on revised populations. Although the differences in the U.S. total and the differences by age between the provisional series (P-25, No. 246) used in the 1961 annual report and the revised series (P-25, No. 265) are negligible, changes in a few State estimates are about 5 percent. The revised State estimates appear in Nos. 259 and 267, P-25, and the provisional figures used for computing rates in the 1961 report appear in No. 239, P-25.

Age-adjusted death rates

Age-adjusted death rates shown in this report are the death rates that would have been obtained if the age-specific rates for 1962, computed for 10 year-age intervals, prevailed in a standard population whose age distribution was the same as that of the enumerated population in 1940. The rates for the total population and for each color-sex group were adjusted separately, using the same standard population. It is important not to compare directly age-adjusted death rates with the crude rates shown in other tables.
