## Preface

---

This seventh edition of the *International Health Data Reference Guide* provides information collected in mid-1995 on the availability of selected national vital, hospital, health manpower resources, and population-based health survey statistics. Information for the 44 nations included in this guide was obtained from the government and official agencies that are listed in the guide for further reference.

The main purpose of the guide is to provide information not readily available in published form. It is not designed to provide information on the availability of measures considered universally documented, such as crude birth and death rates or life expectancy at birth. A secondary purpose is to support the World Health Organization's goal of developing a common basis for international data comparison.

The reader should carefully note the listed qualifications in the footnotes concerning the availability of data in several countries.

The user of this guide is encouraged to contact the listed government and official agencies to obtain specific data.

---

## Acknowledgments

---

*The International Health Data Reference Guide, 1995*, was coordinated and prepared in the Office of International Statistics, National Center for Health Statistics, by Jacqueline P. Davis with assistance from Ginger Richards. Linda McCleary assisted with the verification of data and proofreading.

Publications Branch, Division of Data Services, staff members Demarius V. Miller and Rolfe W. Larson provided publications management and editorial review. Production was managed by Zung Le, Jarmila G. Frazier was the designer, and Patricia L. Wilson managed the printing.

The continued cooperation and contributions provided by the many individuals of the government and official agencies of the countries represented in this publication are gratefully acknowledged.

# Australia

<b>Title</b>	Australian Health Survey
<b>Responsible agency or ministry</b>	Australian Bureau of Statistics
<b>Objective</b>	To provide information about the health of Australians and their use and need of various health services and facilities.
<b>Scope</b>	Sample of 18,000 private and nonprivate dwellings selected throughout Australia covering about one-third of 1 percent of the population. All persons 15 years of age and older were interviewed (mother was usual respondent for children less than 15 years of age).
<b>Collection method</b>	Interviewer-administered questionnaire.
<b>Data content</b>	Health-related actions, acute illness conditions, hospitalizations, reduced activity, consultations with health professionals, medications taken, and demographic and socioeconomic characteristics.
<b>Frequency</b>	Conducted in 1977–78 and 1983 (replaced by National Health Survey Series).
<b>Availability of data</b>	Sample data file and statistical reports of survey findings (charges apply).
<b>Contact</b>	Information Services or Health Section Australian Bureau of Statistics P.O. Box 10 Belconnen, Australia 2616 Phone: (61) (6) 252 5249 FAX: (61) (6) 253 1404

---

## Australia

---

<b>Title</b>	National Aboriginal and Torres Strait Islander Survey
<b>Responsible agency or ministry</b>	Australian Bureau of Statistics
<b>Objective</b>	To provide comparable information across Australia about Aboriginal and Torres Strait Islander people.
<b>Scope</b>	A sample of approximately 5,000 dwellings or 17,500 Aboriginal and Torres Strait Islander people. Households were selected at random using a multistage sample design stratified by the 35 Aboriginal and Torres Strait Islander Commission regions and the Torres Strait Area.
<b>Collection method</b>	Interviewer-administered questionnaire.
<b>Data content</b>	Family and culture, housing, education and training, employment and income, law and justice, health data including health actions, attitudes to health, health status, illness conditions, health-risk factors, disability, and access and attitudes to health services and facilities.
<b>Frequency</b>	Irregular. First conducted in 1994.
<b>Availability of data</b>	Standard publications and consultancy service (charges apply).
<b>Contact</b>	National Centre for Aboriginal and Torres Strait Islander Statistics Australian Bureau of Statistics GPO Box 3796 Darwin NT Australia 0801 Phone: (61) (89) 432 190 FAX: (61) (89) 410 715

## Australia

<b>Title</b>	Survey of Disability, Ageing, and Carers
<b>Responsible agency or ministry</b>	Australian Bureau of Statistics
<b>Objective</b>	To provide national data on persons with one or more long-term health conditions and on older persons living in households and health establishments.
<b>Scope</b>	Multistage sample of 42,000 persons in 16,000 residential dwellings and 5,000 patients or residents from approximately 600 randomly selected establishments. All persons in selected dwellings aged 18 years and over are interviewed.
<b>Collection method</b>	Household component—interviewer administered questionnaire. Persons identified as having one or more long-term health conditions, aged 60 years or older, or the principal carers of these two populations are interviewed. Any responsible adult in the household may provide data for persons without a health condition, for persons not at home, and for children under 17 years of age with a condition. Health establishment component—questionnaire completed by administrator of establishment. Carer component—self-enumeration form completed by persons identified as principal carers by recipient of care or who self-identify as providing a comparable level of care to a recipient in another household.
<b>Data content</b>	Household component—chronic conditions, difficulties and help required for personal care, communications and mobility, amount of help required for specific tasks, types of aids to perform everyday tasks, carers, and demographic and socioeconomic characteristics. Health establishment component—same as above in less detail, excluding socioeconomic data.
<b>Frequency</b>	Previously irregular. Similar surveys conducted in 1981 and 1988. Beginning in 1993, conducted at 5-year intervals. Next survey proposed for 1998.
<b>Availability of data</b>	Statistical reports of survey findings, public-use files, special-purpose tabulations, and statistical analysis will be available (charges apply).
<b>Contact</b>	Australian Bureau of Statistics P.O. Box 10 Belconnen, Australia 2616 Phone: (61) (6) 252 7430 FAX: (61) (6) 253 1673

## Australia

---

<b>Title</b>	National Health Survey
<b>Responsible agency or ministry</b>	Australian Bureau of Statistics
<b>Objective</b>	To provide baseline and trend data on a broad range of health status indicators and health-related behaviors of Australians.
<b>Scope</b>	Sample of approximately 22,000 private and nonprivate dwellings selected throughout Australia covering about 55,000 persons. All persons aged 18 years and over in selected households were interviewed. Children aged 15 to 17 years were interviewed with the consent of the parents or guardians. Parents or guardians were asked to provide data for children under 15 years of age.
<b>Collection method</b>	Interviewer-administered questionnaire and self-administered questionnaires for some topics.
<b>Data content</b>	Recent illness, chronic illness, general health and well-being, specific women's health issues, hospital episodes, medical consultations, use of medications, short-term disability, smoking, alcohol consumption, self-reported height and weight, accidents, exercise, breastfeeding, sun protection, and demographic and labor force characteristics.
<b>Frequency</b>	Conducted in 1989–90 and 1995. Planned every 5 years.
<b>Availability of data</b>	Public-use data tapes and statistical reports on survey findings (charges apply).
<b>Contact</b>	Information Services or Health Section Australian Bureau of Health P.O. Box 10 Belconnen, Australia 2616 Phone: (61) (6) 252 5249 FAX: (61) (6) 253 1404

## Australia

---

<b>Title</b>	National Nutrition Survey
<b>Responsible agency or ministry</b>	Australian Bureau of Statistics
<b>Objective</b>	To provide baseline data on food and nutrient intakes of Australians and their physical measurements.
<b>Scope</b>	Sample of approximately 14,000 persons 2 years of age and older, selected from respondents to the National Health Survey. Two or three persons per household will be selected.
<b>Collection method</b>	Qualified nutritionists have been employed as interviewers. Interviewer-administered individual Food Intake Questionnaire for all persons 2 years of age and older. Signed consent is requested for physical measurements including height, weight, waist and hip circumference. Blood pressure readings are taken of persons 16 years of age and older. Consent is given by parent or guardians for children under 18 years of age living at home. Mail-back Food Frequency Questionnaire is provided for selected persons 12 years of age and older.
<b>Data content</b>	Detailed food intake during previous 24 hours, physical measurements (blood pressure, height, weight, waist, and hip), dietary habits and attitudes, and average frequency of intake of foods over previous 12 months.
<b>Frequency</b>	Conducted in 1995, no proposal for next survey.
<b>Availability of data</b>	Demographic and health data will be available in public-use tapes and statistical reports of survey findings (charges apply).
<b>Contact</b>	Information Services or Health Section Australian Bureau of Statistics P.O. Box 10 Belconnen, Australia 2616 Phone: (61) (6) 252 5249 FAX: (61) (6) 253 1404

## Australia

<b>Title</b>	Time Use Survey
<b>Responsible agency or ministry</b>	Australian Bureau of Statistics
<b>Objective</b>	To provide national data on the patterns of time use of persons 15 years of age and over, living in households.
<b>Scope</b>	Multistage sample of 7,000 persons in 3,000 residential dwellings, providing 14,000 person-day records. All persons aged 15 years and over in households are interviewed.
<b>Collection method</b>	Household component: Responsible adult answers interviewer-administered questionnaire. Personal questionnaire: Responsible adult answers interviewer-administered questionnaire for all persons in scope. Personal diary: Left to be completed by each person in scope, then collected by interviewer.
<b>Data content</b>	Identification of persons with disability and with severe handicap, identification of principal carers for the latter, type of activity, start and finish time of activity episode, location of activity episode, mode of travel, social context of activity episode, simultaneous activities, and demographic and socioeconomic characteristics.
<b>Frequency</b>	Pilot survey conducted in 1987. Full survey conducted in 1992, planned for 5-year intervals. Next survey scheduled for 1997.
<b>Availability of data</b>	Statistical reports of survey findings, public-use files, and special tabulations are available (charges apply).

<b>Title</b>	Aboriginal Peoples Survey
<b>Responsible agency or ministry</b>	Statistics Canada
<b>Objective</b>	To provide a comprehensive data source about Canada's Aboriginal Peoples, enable an assessment of their socioeconomic conditions, and provide information required to develop programs and services for Aboriginal Peoples in Canada.
<b>Scope</b>	Noninstitutionalized population (all ages) of Canada who indicated in the 1991 census that they have Aboriginal origins or that they are a registered Indian under the Indian Act of Canada and further indicated that they <i>identify</i> with an Aboriginal group (i.e., North American Indian, Metis, Inuit, or other Aboriginal group such as "Cree" or "Inuvialuit"), and are registered under the Indian Act of Canada. Excluded are 78 Indian reserves and settlements incompletely enumerated in the 1991 census (approximately 38,000 persons) and an additional 181 reserves and settlements incompletely enumerated during the Aboriginal Peoples Survey (approximately 20,000 persons).
<b>Collection method</b>	Interviewer-administered adult questionnaire and children questionnaire.
<b>Data content</b>	Identity, ancestry, registered Indian status, language and tradition, disability, health, lifestyles and social issues, mobility, schooling, work and related activities, income and expenditures, housing, and sociodemographic characteristics from the census.
<b>Frequency</b>	Conducted in 1991.
<b>Availability of data</b>	Microdata file, statistical reports, and custom tabulations.

<b>Title</b>	Canada Health Survey
<b>Responsible agency or ministry</b>	Statistics Canada
<b>Objective</b>	To gather data on the prevalence and nature of acute and chronic, mental, and physical illnesses, to permit an assessment of the health status and needs of Canadians, and to measure changes in status and needs.
<b>Scope</b>	Noninstitutionalized population of persons 15 years of age and older, excluding residents of the Northwest Territories, Indian reserves, and remote areas as defined by the Canadian Labour Force Survey. Exclusions account for about 3 percent of the entire population. Approximately 12,000 households (40,000 persons) interviewed. Medical examinations were administered to a subsample of one-third of these households.
<b>Collection method</b>	Interviewer-administered questionnaire, self-administered questionnaire, and physical measurement.
<b>Data content</b>	Activity limitations, short-term conditions, accidents and injuries, chronic conditions, impairments, hearing, vision and dental status, utilization of resources and medicines, disability days, alcohol and tobacco use, physical activity, seatbelt use, family disease history, physical measurement of blood pressure, cardiorespiratory fitness, height, weight and skinfold, and demographic and socioeconomic characteristics.
<b>Frequency</b>	Conducted in 1978–79.
<b>Availability of data</b>	Data tapes and statistical reports.

<b>Title</b>	Health and Activity Limitation Survey
<b>Responsible agency or ministry</b>	Statistics Canada
<b>Objective</b>	To gather data on the prevalence of disability according to the functional definitions of disability and handicap accepted by the World Health Organization. These data are to aid in the building of a national database on disability.
<b>Scope</b>	All persons with a physical or psychological disability who were living in Canada at the time of the 1986 census. These persons were identified by a review of the responses to the disability question on the census form. The household survey sample was approximately 184,500 persons. Of the 1,100 institutions surveyed, a sample of 19,100 persons was selected.
<b>Collection method</b>	Interviewer-administered questionnaire and telephone interviews for some screening questions.
<b>Data content</b>	Activity limitations, nature and prevalence of disability or handicap, special aids used or required, transportation, education and employment status and needs for special accommodations, recreation and lifestyle, and economic characteristics.
<b>Frequency</b>	Conducted in 1991.
<b>Availability of data</b>	Data tapes and statistical reports (charges apply).
<b>Contact</b>	Statistics Canada, Post-Censual Surveys Program 9C-8 Jean Talon Building Ottawa, K1A 0T6, Canada Phone: (613) 951-4414 FAX: (613) 951-2906

<b>Title</b>	National Population Health Survey
<b>Responsible agency or ministry</b>	Statistics Canada
<b>Objective</b>	To aid in the development of public policies designed to improve health, to provide data for analysis of the determinants of health, to collect data on the correlates of health, to increase understanding about health status in relation to services, to provide panel data and periodic cross-sectional estimates, to provide data users with the capacity to supplement sample or content in a health survey, and to allow linkage to other health data sources.
<b>Scope</b>	Noninstitutionalized population, 10 provinces and 2 territories (all ages), excluding natives on reserves. Exclusions account for approximately 3 percent of total population. Approximately 22,000 households will be sampled. One person in each household will be randomly selected to participate in the longitudinal portion of the survey.
<b>Collection method</b>	Computer-assisted personal interview.
<b>Data content</b>	Health care utilization, injuries, restriction of activities, chronic conditions, preventive health practices, health status, smoking, alcohol, drug use, stress (ongoing, childhood, adult, recent life events, and work), mastery, social support, self-esteem, mental health, physical activities, height and weight, pets and safety, income, and sociodemographic characteristics.
<b>Frequency</b>	Biennial, starting in 1994. For some data from previous years, see The General Social Survey.
<b>Availability of data</b>	Microdata file and statistical reports in mid-1995.
<b>Contact</b>	Statistics Canada National Population Health Survey R.H. Coats Building, 24th Floor Ottawa, K1A 0T6, Canada Phone: (613) 951-3830 FAX: (613) 951-4198

<b>Title</b>	Questions on Health—Microcensus Supplementary Survey
<b>Responsible agency or ministry</b>	Federal Statistical Office
<b>Objective</b>	To provide national data on illness and accidental injury rates of the population.
<b>Scope</b>	Representative sample survey of the population of the entire country. The yearly microcensus basic program is a 1 percent sample survey (households included institutionalized population) with a compulsory response. The supplementary program entitled <i>Questions on Health</i> is a 0.5 percent sample survey with voluntary response. The microcensus basic program is composed of a large number of sociodemographic and socioeconomic variables as well as regional characteristics.
<b>Collection method</b>	Interviewer-administered questionnaire.
<b>Data content</b>	Since 1986 a "core data" component includes duration of illness or accidental injury, kind of accident, kind and duration of treatment, and duration of incapacity for work. Varying issues component includes health precautions and health risks. In 1989, 1992, and 1995, these questions concerned smoking habits and the use of iodized salt.
<b>Frequency</b>	Irregular intervals up to 1963. Every 3 years since 1986. Conducted in 1989, 1992, and 1995.
<b>Availability of data</b>	Public-use publications (papers, special editions) and special analyses on request (charges apply).

<b>Title</b>	National Health Survey
<b>Responsible agency or ministry</b>	Department of Health Studies and Planning Ministry of Health
<b>Objective</b>	To provide information on a number of major health problems.
<b>Scope</b>	Multistage probability sample of 20,000 households (1995–96 survey) covering noninstitutionalized persons living on the continent.
<b>Collection method</b>	Interviewer-administered questionnaire.
<b>Data content</b>	Fixed “core data” component—perceived general health, prevalence of some chronic conditions, disability, general health care, doctor visits, health expenses and income, physical activity, tobacco consumption, food and beverage consumption, child health, and demographic and socioeconomic characteristics. Supplementary component—varies with needs of information.
<b>Frequency</b>	All countries, 1987, 1995–96. Conducted in the Lisbon area in 1989; North area, 1990; Alentejo area, 1991; and Algarve area, 1993. Probability of surveys every 5 years at the national level, with regional surveys yearly.
<b>Availability of data</b>	Data files and main data tables presented in publication.

<b>Title</b>	Behavioral Risk Factor Survey
<b>Responsible agency or ministry</b>	Research and Evaluation Department Ministry of Health
<b>Objective</b>	This survey is part of a comprehensive national surveillance system to monitor lifestyle risk factor levels related to the noncommunicable diseases that are the current diseases of importance.
<b>Scope</b>	Multistage sample of 2,530 Singapore residents 18 to 64 years of age in 7,100 households units.
<b>Collection method</b>	Interviewer-administered questionnaire.
<b>Data content</b>	Core questionnaire: Physical activity, alcohol consumption, self-reported height and weight, weight control, and demographic and socioeconomic characteristics. Supplementary questionnaire: Use of medical services, utilization of traditional medicine, public awareness, and assessment of the national health financing scheme (Medisave).
<b>Frequency</b>	Conducted in 1994 (to be repeated every 2 years). Next survey scheduled for 1996.
<b>Availability of data</b>	Statistical tabulations and highlights of survey findings (on request).

<b>Title</b>	Morbidity Survey of Outpatients
<b>Responsible agency or ministry</b>	Research and Evaluation Department Ministry of Health and College of Family Physicians
<b>Objective</b>	To provide information on the diseases treated at the outpatient level in both the private and public sectors to maximize the role of the public and private sectors in primary health care provision. Also to gather data on the patient-load of the public sector versus the private sector in primary health care provision in order to provide enhanced care for the leading diseases.
<b>Scope</b>	All 1,106 private general practitioners and all doctors working in the government primary health care clinics. A total of 23,000 patients were covered during the survey.
<b>Collection method</b>	Doctor- and nurse-administered questionnaire.
<b>Data content</b>	Diagnosis or medical complaints, request for medical leave certificate, employment status, type of housing, residential status, and other demographic characteristics.
<b>Frequency</b>	Conducted every 5 years beginning in 1988.
<b>Availability of data</b>	Statistical report on survey findings.

<b>Title</b>	Survey on Cigarette Smoking Among Singaporeans
<b>Responsible agency or ministry</b>	Research and Evaluation Department Ministry of Health
<b>Objective</b>	As smoking is an important risk factor in the current diseases of importance and in view of the rising trend in smoking, this in-depth survey on smoking is carried out to determine the smoking prevalence and attitude and behavior of smokers in the Singapore population.
<b>Scope</b>	Multistage sample of 5,000 Singapore residents 18 to 64 years of age.
<b>Collection method</b>	Interviewer-administered questionnaire.
<b>Data content</b>	Frequency, duration, age of onset of smoking, reasons for picking up the smoking habit, whether any intention to quit smoking, nonsmokers' impression of a smoker, harmful effects of smoking, and other demographic and socioeconomic characteristics.
<b>Frequency</b>	Conducted in 1995.
<b>Availability of data</b>	Survey highlights and tabulations (on request).
<b>Contact</b>	Dr. S.C. Emmanuel Research and Evaluation Department Ministry of Health College of Medicine Building 16 College Road Singapore 0316 FAX: (65) 224 1677

## Spain

<b>Title</b>	Survey on Impairments, Disabilities, and Handicaps
<b>Responsible agency or ministry</b>	National Institute of Statistics
<b>Objective</b>	To estimate the total number of people suffering from any disability, and to know the nature and impairment that originated the disability, and to estimate the number of people suffering from any handicaps.
<b>Scope</b>	Sample survey of 75,000 households covering about 275,000 persons of the noninstitutionalized population of Spain.
<b>Collection method</b>	Interviewer-administered questionnaires.
<b>Data content</b>	Impairments; disabilities; handicaps; number, cause, and duration of impairments; type of rehabilitation therapy received; financing source of the rehabilitation therapy; type of rehabilitation center; any source of economic subsidy; and demographic and socioeconomic characteristics.
<b>Frequency</b>	Conducted in 1986.
<b>Availability of data</b>	Data files and statistical tables and publications of survey findings.
<b>Contact</b>	Sr. Jose Quevedo Instituto Nacional de Estadística Area de Estadística Sanitarias Paseo de la Castellana, 183 28046, Madrid, Spain Phone: (34) (1) 583 92 71 FAX: (34) (1) 579 27 13

<b>Title</b>	General Household Survey
<b>Responsible agency or ministry</b>	Office of Population Censuses and Surveys
<b>Objective</b>	To examine relationships between the main variables with which social policy is concerned, and to monitor changes in these associations over time.
<b>Scope</b>	Sample of approximately 10,000 households covering about 20,000 persons per year. General population resident in private (noninstitutional) households in England, Scotland, and Wales 16 years of age and over, obtained either in person or occasionally by proxy. Health information is obtained for children under 16 years of age from the person responsible for them, usually the mother.
<b>Collection method</b>	Computer-Assisted Personal Interviewing (CAPI).
<b>Data content</b>	Survey covers five main areas—population, housing, employment, education, and health. The fixed core data in the health component include data on health measures (covering the prevalence of chronic and acute problems, utilization of health care services, doctor visits, and hospitalizations), and demographic and socioeconomic characteristics. Supplementary component—varies from year to year but for health has covered dental health, sight and hearing, accidents, smoking, and drinking.
<b>Frequency</b>	Continuous since 1971.
<b>Availability of data</b>	Data tapes and an annual report, unpublished data is also available.

<b>Title</b>	National Health and Nutrition Examination Survey I—Epidemiologic Followup Study (NHEFS)
<b>Responsible agency or ministry</b>	National Center for Health Statistics Centers for Disease Control and Prevention Department of Health and Human Services
<b>Objective</b>	To investigate the association between clinical, nutritional, and behavioral factors assessed in the first National Health and Nutrition Examination Survey (NHANES I) and subsequent morbidity, mortality, hospital utilization, changes in risk factors, functional limitation, and institutionalization.
<b>Scope</b>	The NHEFS is a series of followup surveys to all adult persons 25–74 years of age who completed a medical examination at the first NHANES I in 1971–75 (n=14,407). The first followup survey from 1982–84 included all 14,407 persons. The second wave in 1986 was restricted to persons who were 55 years of age and over at the time of the first NHANES I examination (n=3,980). The third wave in 1987 included 11,750 persons and the fourth wave in 1992 included 11,195 persons.
<b>Collection method</b>	The first wave of data collection, traced the cohort; conducted personal interviews with subjects or their proxies; measured pulse rate, weight, and blood pressure of surviving participants; collected hospital and nursing home records of overnight stays; and collected death certificates of decedents. Subsequent waves used a 30-minute computer-assisted telephone interview (CATI) and did not collect physical measurements.
<b>Data content</b>	Medical conditions, hospitalization and institutionalization, functional status, vision and hearing problems, and smoking and drinking habits; physical activity, physical measurements of pulse, blood pressure, and weight (in 1982–84 only), cause of death information for decedents, and demographic and socioeconomic characteristics.
<b>Frequency</b>	Conducted in 1982–84, 1986, 1987, and 1992.
<b>Availability of data</b>	Public-use data files and statistical reports presenting the study findings (charges apply).
<b>Contact</b>	Ms. Christine Cox Office of Analysis, Epidemiology, and Health Promotion National Center for Health Statistics 6525 Belcrest Road, Room 730 Hyattsville, Maryland 20782 Phone: (1) (301) 436-5979, ext. 115 FAX: (1) (301) 436-8459

<b>Title</b>	National Health Interview Survey (NHIS)
<b>Responsible agency or ministry</b>	National Center for Health Statistics Centers for Disease Control and Prevention Department of Health and Human Services
<b>Objective</b>	To provide national data on the health, illness, and disability status of the civilian noninstitutionalized population of the United States.
<b>Scope</b>	Multistage probability sample of 50,000 households covering about 135,000 persons per year. Civilian noninstitutionalized population of all persons aged 17 years and over in selected dwellings are interviewed. Adult family member aged 19 years or over may provide data for persons not home and for children under 17 years of age.
<b>Collection method</b>	Interviewer-administered questionnaire.
<b>Data content</b>	Fixed core data component—incidence of acute illness and accidental injuries, prevalence of chronic diseases and impairments, disability, physician visits, hospital episodes, work loss, exercise, and demographic and socioeconomic characteristics. Supplementary component—varies from year to year.
<b>Frequency</b>	Continuous since 1957.
<b>Availability of data</b>	Public-use data files and statistical reports presenting the survey findings (charges apply).

<b>Title</b>	Longitudinal Study of Aging (LSOA)
<b>Responsible agency or ministry</b>	National Center for Health Statistics Centers for Disease Control and Prevention Department of Health and Human Services
<b>Objective</b>	To measure changes in functional status and living arrangements of older Americans; and to provide mortality rates for demographic, social, economic, and health characteristics that are not available from the vital statistics system.
<b>Scope</b>	Sampling frame developed from persons who were 70 years of age and over when they participated in the 1984 National Health Interview Survey, Supplement on Aging. The sample included 7,527 persons.
<b>Collection method</b>	Computer-assisted telephone interview (CATI) and mail questionnaires.
<b>Data content</b>	Living arrangements and change, physical limitations and change, use of medical care, hospitalizations, social interactions, and demographic and socioeconomic characteristics. Records of survey participants were matched against computerized files of information on hospitalization and death. This information was added to that of the interviews.
<b>Frequency</b>	Conducted in 1984, 1986, 1988, and 1990.
<b>Availability of data</b>	Public-use data files and statistical reports presenting the survey findings (charges apply).
