

Table 7. Birth rates, by age of mother, live-birth order, and Hispanic origin of mother, and by race for mothers of non-Hispanic origin: United States, 2005

[Fertility rates are computed by relating total births, regardless of age of mother, to women aged 15–44 years. Birth rates are births per 1,000 women in specified age and racial group. Populations estimated as of July 1. Rates have been revised using population estimates based on the 2010 census, and may differ from rates previously published; see "Technical Notes" of "Births: Final Data for 2011." Live-birth order refers to number of children born alive to mother. Figures for live-birth order not stated are distributed]

0.0 Quantity more than zero but less than 0.05.

* Figure does not meet standards of reliability or precision; based on fewer than 20 births in the numerator or, for the Hispanic subgroups, fewer than 75,000 women in the denominator; see "Technical Notes" of "Births: Final Data for 2005." Guidelines for denominator size follow U.S. Census Bureau recommendations.

¹Fertility rates computed by relating total births, regardless of age of mother, to women aged 15–44 years.

²Birth rates computed by relating births to women aged 45 years and over to women aged 45–49 years; see "Technical Notes" of "Births: Final Data for 2005."

³Includes Central and South American and other and unknown Hispanic.

⁴Includes origin not stated.

⁵Includes races other than white and black.

NOTES: Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with 1977 Office of Management and Budget standards. Nineteen states reported multiple-race data for 2005 that were bridged to single-race categories for comparability with other states; see "Technical Notes." Persons of Hispanic origin may be of any race. In this table, Hispanic women are classified only by place of origin; non-Hispanic women are classified by race; see "Technical Notes" of "Births: Final Data for 2005."
