

CDA Validation Plus Version 3.0

Released on November 20, 2015

This release includes bug fixes, enhancements and improvements to CDA Validation Plus.

1. Updated the following tables:
 - a. SNOMED Body Site validation table
 - b. SMOMED Problem List validation table
 - c. TNM Edition validation table
2. Command Line
 - a. Fixed command line hanging after validating the last file
 - b. Specify an alternative report path while saving the reports
 - c. Identify a specific file to be processed instead of a folder from Command Line Interface
 - d. Add XML output option in addition to Excel output for Command Line Interface
3. Added functionality to validate data elements with multiple occurrences (repeating fields)
4. Added validation for date formatting
5. Added valid OID and validation table for Payer Type: 2.16.840.1.113883.5.4 (HL7 ActCode code system) to CDAMAP Table
6. Added valid Code System OIDs for Medication Product Code System OID and Medication Administered Product Code System OID
7. Changed error message to indicate that a value is not a valid value in a Value Set (instead of Code System) when values are selected from Value Sets
8. For the "get value" function: added ability to clear the Xpath
9. Provided configuration option so users can choose to either have the files moved or kept in the Imports folder
10. Included the version number of the tool in the header of the saved Excel and PDF reports
11. Fixed error messages indicating invalid value instead of null flavor or no error
12. Fixed error messages indicating missing/structurally incorrect instead of null flavor or no error
13. Fixed issue with the "get value" function in the raw message tree view
14. Fixed Author Organization NPI Xpath
15. Removed validation for Type of Primary Payer at Diagnosis (X12 payer table)
16. Removed error check for Organization NPI Service Event
