

1993 NHIS AIDS Knowledge and Attitudes Public Use Data Tape

In the 1993 NHIS, information on AIDS knowledge and attitudes was collected from one randomly selected adult respondent (18 years and older) from each NHIS family. The NHIS has included a supplement on AIDS since 1987. While many of the items have been asked repeatedly in most of the supplements, there have been changes and analysts are encouraged to review the questionnaire used for this survey before undertaking any analysis.

Analysts should also note that in 1993, the AIDS supplement was administered in only the third and fourth quarters of the year. If some of the items show a seasonal variation in responses, then the results for 1993 may differ from results in 1992.

The 1993 AIDS survey covered these topics:

1. Sources of AIDS information
2. Perceptions of discrimination against persons with AIDS
3. Knowledge about the modes of HIV transmission, clinical features of HIV infection and AIDS, and the HIV antibody test
4. Perceived likelihood of transmission by casual contact
5. Experience with blood donation and HIV antibody testing
6. Content of post-test counseling
7. Perceived effectiveness of condoms and mutual monogamy to prevent the spread of HIV
8. Perceived risk of acquiring HIV infection
9. Personal knowledge of someone with AIDS or HIV
10. Use of professional mental health counseling because of concern about AIDS

The response rate to the 1993 AIDS Survey was 80 percent and was calculated as follows:

The response rate to the NHIS Core questionnaire in quarters 3 and 4 was 94.7 percent. Of the adults eligible for the AIDS supplement, 84.5 percent responded. Multiplying these two response rates together yields the overall response rate to the AIDS Survey (80.0 percent).

Each record included in the AIDS file contains a final weight (tape locations 201-206). Weights must be used to make accurate estimates based on this data tape. Because the AIDS Survey

included only one adult per NHIS family, the weight on this tape is different from the weight for the same person on the NHIS Core Person tape.

1 1993 NATIONAL HEALTH INTERVIEW SURVEY (NHIS)

AIDS KNOWLEDGE AND ATTITUDES PUBLIC USE DATA FILE

Guidelines for Citation of Data

With the goal of mutual benefit, the National Center for Health Statistics (NCHS) requests that recipients of data files cooperate in certain actions related to their use.

Any published material derived from the data should acknowledge NCHS as the original source.

The suggested citation to appear at the bottom of all tables is as follows:

Source: National Center for Health Statistics (1993)

When cited in a bibliography, the suggested citation should read:

National Center for Health Statistics (1994). Public Use File Documentation, National Health Interview Survey of AIDS Knowledge and Attitudes, 1993 (machine readable data file and documentation), National Center for Health Statistics, Hyattsville, Maryland

The published material should also include a disclaimer that credits any analyses, interpretations, or conclusions reached to the author (recipient of the data file) and not to NCHS, which is responsible only for the initial data. Consumers who wish to publish a technical description of the data should make a reasonable effort to insure that the description is not inconsistent with that published by NCHS.
