

Healthy People 2010 Operational Definition

10-1. Reduce infections caused by key foodborne pathogens.

10-1e. (Developmental) *Cyclospora cayetanensis*.

Comments

This subobjective was deleted during the Healthy People 2010 Midcourse Review because of the very low incidence and variable occurrence of Cyclosporiasis, and in order to focus on higher incidence pathogens. In 2002, the United States had only 0.1 cases per 100,000 population of cyclosporiasis.

See Appendix A for focus area contact information.
