

Healthy People 2010 Operational Definition

13-11. Increase the proportion of adults with tuberculosis (TB) who have been tested for HIV.

National Data Source	National TB Surveillance System, CDC, NCHHSTP.
State Data Source	State TB Surveillance Systems.
Healthy People 2000 Objective	Not applicable.
Changes since the 2000 Publication	Revised baseline (see Comments). Revised target (see Comments).
Measure	Percent.
Baseline (Year)	61 (1998)
Target	89
Target-Setting Method	Better than the best racial/ethnic subgroup. For a discussion of target-setting methods, see Part A, section 4.
Numerator	Number of reported TB cases among persons aged 25 to 44 years with a negative, positive or indeterminate HIV test result.
Denominator	Number of reported TB cases (based on TB case report forms) among persons aged 25 to 44 years.
Population Targeted	U.S. resident population.
Questions Used To Obtain the National Baseline Data	CDC Report of Verified Case of Tuberculosis, Form 72.9A, Rev. 5/93.
Expected Periodicity	Annual.
Comments	The numerator includes only those cases with negative, positive, and indeterminate HIV test results. The original baseline of 55 percent was revised to 61 percent after the Healthy People 2010 Midcourse Review. The target was proportionally adjusted from 85 percent to 89 percent to reflect the revised baseline using the original target-setting method.
