

The National Inventory of Family Planning Services: 1975 Survey Results

Statistics from the 1975 survey of the National Inventory of Family Planning Services are presented on demographic and institutional characteristics of service sites that provide medical and nonmedical family planning services. Data are given on the physical location of the service sites, their primary purpose and operating responsibility, the number of patients served, medical and ancillary services provided, and the contraceptive methods available.

THE NATIONAL INVENTORY OF FAMILY PLANNING SERVICES: 1975 SURVEY RESULTS

Donna L. Morrow, *Division of Health Manpower and Facilities Statistics*

INTRODUCTION

This report presents findings from the 1975 survey of the National Inventory of Family Planning Services. The National Inventory is a comprehensive listing of family planning service sites in the United States and selected territories excluding private physicians' offices. These service sites may provide direct medical family planning services, or they may serve as referral or contributor agencies, thus being classified as providers of nonmedical family planning services.

The data presented in this report for the National Inventory of Family Planning Services will differ from those data obtained through the National Reporting System for Family Planning Services for the following reasons. The National Inventory is designed to collect information on the characteristics of the service sites themselves on a periodic basis; the National Reporting System obtains data on each patient receiving services at the time the services are provided. Additionally, the scope of coverage or the universes of these two data collection programs are not the same. The National Inventory attempts to include all sites providing family planning services, whether federally funded or not and whether provided to the public at large or to a special segment of the population such as college students or military personnel. The National Reporting System, however, is composed primarily of federally funded service sites and does not necessarily include all independent

sites or those providing services to these special populations. Because of these differences in their universes and methods of data collection, there will be variations in the data reported by the two programs.

The 1975 survey of the National Inventory of Family Planning Services is the second of the periodic surveys to be conducted among providers of family planning services. The first survey was conducted in 1974. These surveys have been designed to gather basic, general-purpose characteristics about providers of family planning services, such as number and distribution of service sites, physical location, operating responsibility, number of patients served, and services provided.

A total of 11,340 sites were surveyed in 1975. Of these, 5,898 were presumed to be medical providers, 4,036 nonmedical providers, and 1,406 were previously nonproviders of services whose current status was unknown. Completion of the survey yielded some changes in the mailing universe of the National Inventory. A total of 1,386 sites were deleted from the universe because they were either out of business, out of scope, duplicates, or postmaster returns. There were also changes in provider status—224 nonprovider sites reported that family planning services were now being provided, 156 medical sites reported a change to nonmedical status, and 201 sites changed from nonmedical to medical. The result of these deletions and additions was a revised provider universe of 8,828 service sites—5,636 medical providers and

3,192 nonmedical providers. A total of 7,234 service sites provided data for the 1975 survey for an overall response rate of 82 percent. These 7,234 responding sites included 4,660 medical providers and 2,574 nonmedical providers.

In presenting the data collected in the 1975 survey, only data from the 7,234 responding service sites were utilized. No effort was made to inflate these data to compensate for those service sites that did not respond to the survey. Therefore, all tabulations and figures presented are based solely on the data reported by the responding service sites.

MEDICAL FAMILY PLANNING SERVICE SITES

The medical family planning service site was the main object of interest of the survey. Medical service sites were requested to complete questions about a variety of characteristics including physical location, operating responsibility, primary purpose, number of patients served, number of visits, medical and ancillary services provided, contraceptive methods offered, and staffing.

Geographic Distribution

Table 1 shows the distribution of the responding 4,660 medical service sites by State and territory. In the previous (1974) survey, a total of 4,607 sites had responded as providing medical services, with 4,494 of these constituting the data base for tabulations from that earlier survey. The percent increase in the number of responding sites from 4,494 in 1974 to the 4,660 in 1975 is nearly 4 percent. Sixteen States and one territory in the 1975 survey had reductions in the number of sites responding, despite the overall national increase in total number of responding sites. The 16 States were Arkansas, Florida, Georgia, Idaho, Kentucky, Louisiana, Maryland, Michigan, New Mexico, Ohio, Rhode Island, South Carolina, Tennessee, Utah, Virginia, and West Virginia plus Puerto Rico. For 15 of these States and Puerto Rico, the average decrease was 6 sites. For Tennessee, however, the decrease in the number of responding sites was 132. (Rather than an indication of

an actual reduction in the number of sites, this decrease, in all probability, resulted from problems encountered in collecting data from that State. See appendix I.)

The geographic and regional distributions of the medical and nonmedical service sites are illustrated in table 2. As in the 1974 survey, the South again had a ratio of medical service sites of more than 2 to 1 when compared with the West and a ratio of nearly 3 to 1 when compared with the Northeast and North Central Regions. The North Central Region was also the only one of the four geographic regions that had more nonmedical than medical service sites. This occurred in only one of the four geographic areas; however, when the medical sites were grouped according to Federal regions, three showed this tendency—Region V, Region VII, and Region VIII. (See appendix II.)

Physical Location

As defined for this survey, the location of the service site is any location where family planning services are provided on a regularly scheduled basis. Responses to this item of the questionnaire are presented in table 3. These data and their comparison to 1974 National Inventory data are summarized in table A.

A large majority of the medical sites were located in health department buildings. As might

Table A. Percent distribution of responding medical family planning service sites, by location: United States and territories, 1974 and 1975

Location	Year of survey	
	1975	1974
	Percent distribution

Church.....	2.6	3.0
Mobile unit.....	2.6	2.4
Other.....	21.5	15.6

NOTE: For definition of "other" categories, see appendix II.

be expected, approximately 90 percent of the medical service sites located in health department buildings were operated by State or local government agencies. Comparison of location responses between 1974 and 1975 shows few major changes in location of the sites. The main changes were a 5-percent decrease of sites in health department buildings and an almost 6-percent increase in the "other" location category.

Operating Responsibility

In table 4, the responding medical service sites are distributed by State according to their operating responsibility. Table B shows the comparison between 1974 and 1975 data as far as operating responsibility is concerned. As can be seen by this summary distribution, the largest proportion of these sites was operated by government agencies, primarily State and county governments. Corporations also operated a large percent of the sites—nearly one-fourth.

The majority of these corporations were nonprofit operations and appeared to be primarily affiliates of Planned Parenthood. Though

Table B. Percent distribution of responding medical family planning service sites, by operating responsibility: United States and territories, 1974 and 1975

Operating responsibility	Year of survey

NOTE: For definition of "other" categories, see appendix II.

not stated specifically in these tables, profitmaking organizations accounted for only about 1 percent of the total responding service sites.

No large variations occurred in operating responsibility between 1974 and 1975. Although the family planning field is subject to much change, with frequent opening and closing of individual sites, this observation suggests that the basic nature of the sites does not change significantly.

Primary Purpose

As would be expected, the majority of the service sites reported medical family planning as their primary purpose (table 5). These data have been summarized and compared with 1974 data in table C.

The tendency to have medical family planning as the primary purpose spanned all levels of operating responsibility. Only those agencies or organizations whose prime health function is the provision of comprehensive health care, such as the Indian Health Service and universities, reported a lower number of sites with medical family planning as the primary purpose. When compared with 1974 figures, there were again only slight changes. The greatest change was the increase in the "other" category (primarily in general gynecologic services), from 3 percent of the respondents in 1974 to 6 percent of the respondents in 1975.

Table C. Percent distribution of responding medical family planning service sites, by primary purpose: United States and territories, 1974 and 1975

Primary purpose	Year of survey	
	1975	1974
	Percent distribution

Post partum and/or prenatal care.....	2.4	1.4
Venereal disease testing.....	0.4	0.3
Sterilization.....	0.1	0.2

NOTE: For definition of "other" categories, see appendix II.

Patients and Visits

Tables 6 and 7 show the number of patients, new patients, and visits as reported by the responding service sites in each State, territory, and geographic area. While other items of the questionnaire requested information current as of the response date, these items requested annual figures for calendar year 1974. Of the responding sites, 41 did not begin operation until 1975 and had no data for 1974. For this reason, the number of sites represented in these tables is less than the total number of responding sites given elsewhere in this report.

Table D shows the percent distribution of service sites by Federal region along with the corresponding distribution of patients served and visits reported. The table aptly illustrates that the percents of patients served and visits reported for each region compare closely with the percent of service sites located in each region. This would tend to indicate that when the average patient load per clinic within each region is considered, there are no great variations among the region averages or between each region's average and the national average.

A total of 5.1 million patients were reported served by these 4,619 service sites; these patients paid 8.3 million visits. This represents an average of 1.6 visits for each patient. Table E shows an increase of approximately 16 percent in both the total number of patients served and the total

Table D. Percent distribution of patients served and visits reported by responding medical family planning service sites, by Federal region: United States and territories, 1975

Federal region	Sites	Patients served	Visits reported
United States and territories.....	100.0	100.0	100.0
Percent distribution			
Region I.....	5.2	4.8	4.3
Region II.....	8.5	12.1	11.9

Region IX.....	12.4	17.2	17.2
Region X.....	4.0	4.0	4.1

Table E. Number of patients, visits, and new patients reported by responding medical family planning service sites, with percent increases: United States and territories, 1974 and 1975

Item	1975 survey (1974 data)	1974 survey (1973 data)	Increase over 1974 survey
	Number		Percent
Total patients.....	5,112,800	4,391,589	16.4
Total visits.....	8,282,118	7,158,015	15.7
New patients.....	2,159,711	1,745,886	23.7

number of visits reported in 1975 as compared with those in 1974. This increase is approximately 5 times the increase in the number of responding sites, 4,619 in 1975 and 4,494 in 1974. This ratio would seem to be too high for the patient and visit increases to be accounted

Table F. Percent of responding medical family planning service sites, by medical services provided: United States and territories, 1974 and 1975

Female sterilization.....	20.8	18.9
Male sterilization.....	18.5	14.4

NOTE: For definition of "other" categories, see appendix II.

for strictly by the increase in number of sites responding. It would appear, therefore, that increased patient loads of most sites contributed greatly to the increase in reported patients and visits. This assumption is verified to some extent by the large increase in new patients reported (nearly 24 percent).

Medical Services Provided

Medical services provided by the responding service sites are described in tables 8 and 9. Table F lists the 19 categories of medical services ranked according to the percent of clinics providing each service in the 1975 survey. The services are separated into those commonly provided by most clinics and those less commonly provided. Corresponding percents from the 1974 survey are also presented.

As illustrated by table F, the categories of medical services revealed a wide range of provision—from 99 percent for contraceptive prescription and taking of blood pressure to 18 percent for male sterilization.

A clear division in the type of services provided can also be seen in table F. Those

medical services that could be considered as standard services were provided by more than 80 percent of the sites. More specialized or unusual services were primarily offered by half or even fewer of the sites. Figure 1 represents the comparison of services provided in 1974 and 1975.

Ancillary Services Available

Ancillary services as defined by the survey are primarily those social and/or educational services that provide support for the medical services program of the service site. Of the 4,660 medical sites responding to the survey, 11 reported that they provided no ancillary services. Tables 8 and 9 show the relationship between provision of ancillary services and location and operating responsibility. A comparison of the percent of sites providing each service in 1975 and 1974 is shown in table G.

Two of the categories included in the 1975 survey are not part of the 1974 survey. Both of these (contracting or paying others and providing space and so forth) had relatively low percents of provision in 1975. The bar graph in

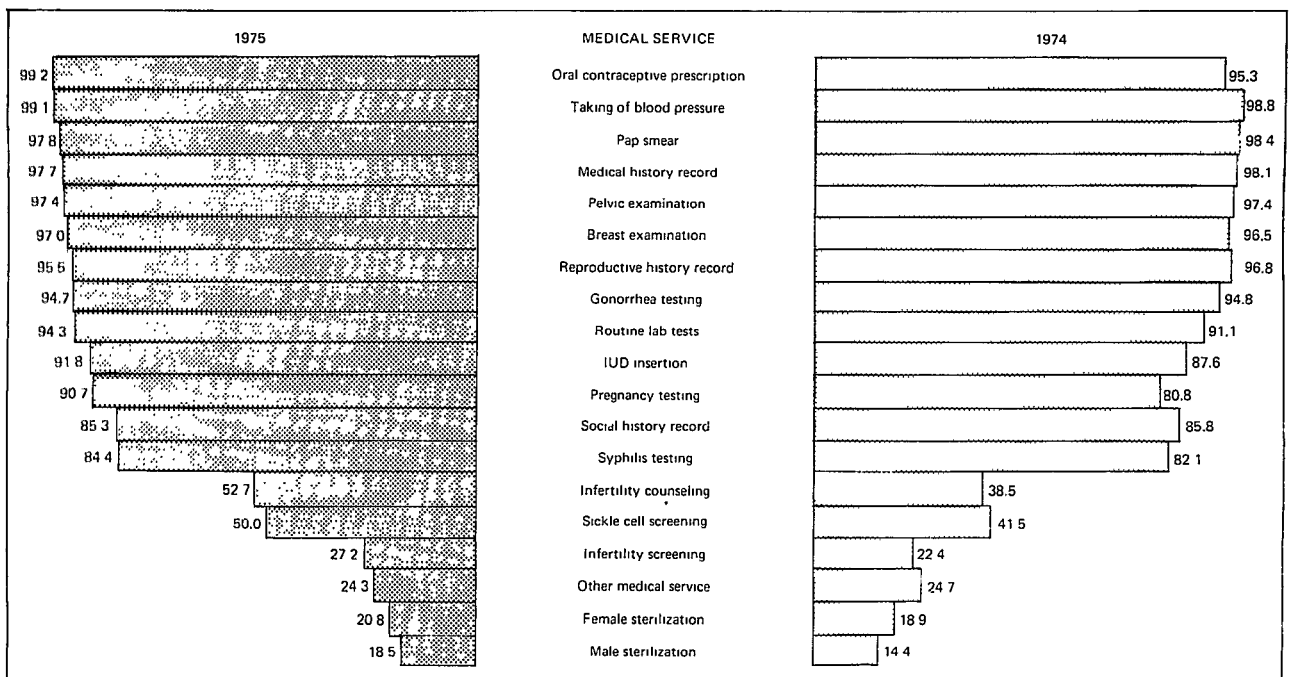

Figure 1. Comparison of percents of responding medical family planning service sites providing each type of medical service: United States and territories, 1974 and 1975

Table G. Percent of responding medical family planning service sites, by ancillary services provided: United States and territories, 1974 and 1975

Ancillary service	Year of survey	
	1975	1974

Other ancillary service.....	8.4	4.6

NOTE: For definition of "other" categories, see appendix II.

figure 2 illustrates the comparison of percents depicted in the previous table.

Contraceptive Methods Provided

Findings concerning the number of clinics that provided each of the various contraceptive

methods are presented in tables 8 and 9. A comparison of the 11 methods used by the clinics is shown in table H for 1974 and 1975.

Comparisons between 1974 and 1975 show substantial decreases in the number of sites providing sterilization and increases in the number of sites offering condoms and diaphragms. A major increase can also be seen in the number of sites offering natural family planning, with the

Table H. Percent of responding medical family planning service sites, by contraceptive methods provided: United States and territories, 1974 and 1975

Contraceptive method	Year of survey	
	1975	1974

Injection.....	5.6	3.8

NOTE: For definition of "other" categories, see appendix II.

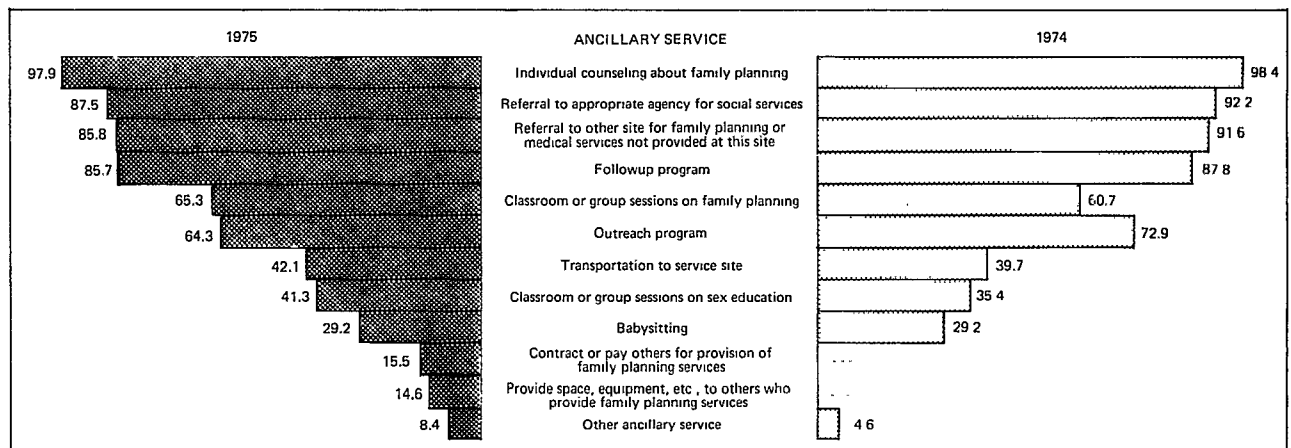

Figure 2. Comparison of percents of responding medical family planning service sites providing each type of ancillary service: United States and territories, 1974 and 1975

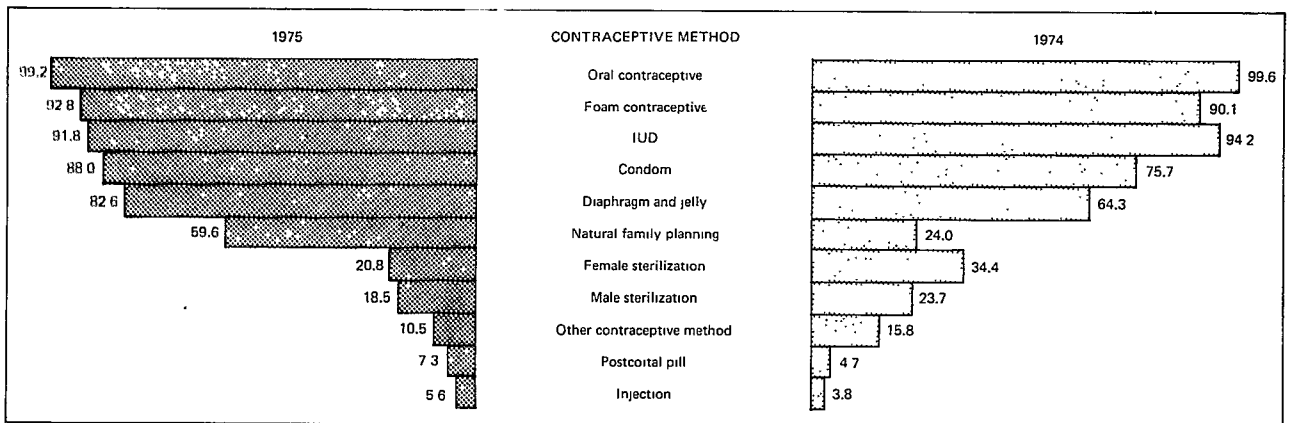

Figure 3. Comparison of percents of responding medical family planning service sites offering each type of contraceptive method: United States and territories, 1974 and 1975

percent of sites more than doubling in a year's time.

Although most sites usually offered the more effective means of nonpermanent contraception, in recent years there has been increased consumer concern about the physical side effects of both oral contraceptives and IUD's. These concerns were reflected in the increase in offerings of methods without these adverse side effects.

The substantial changes in the percent of service sites offering each of the contraceptive methods can be easily seen when a bar chart is developed as in figure 3.

Table J. Number of staff members reported by responding medical family planning service sites, by type of personnel: United States and territories, 1974 and 1975

Personnel on staff	Number
Total	43,674

Licensed practical nurse.....	2,212
Service support personnel:	
Clinic aide.....	5,227
Nutritionist.....	567
Health educator	950
Social worker.....	1,784
Outreach worker.....	2,959
All other professional and support personnel	10,138

Staffing

Of the 4,660 responding medical family planning service sites, 4,302 answered the question about the staff employed at the sites. A total of 43,674 paid and volunteer workers were reported. Table J categorizes these workers.

NONMEDICAL FAMILY PLANNING SERVICE SITES

Less information was requested from the nonmedical family planning service site than from the medical sites. Information was sought on such items as physical location, operating responsibility, and the types of nonmedical services the site provided.

Geographic Distribution

Tables 1 and 2 show the distribution of nonmedical service sites by State, territory, geographic area, and Federal region. As indicated in the section on distribution of medical sites, the North Central Region contained more nonmedical sites than medical sites, the only geographic region in which this occurred.

Physical Location and Operating Responsibility

Tables 10 and 11 present data about the location and operating responsibility of the nonmedical sites. Nearly half of the nonmedical sites were operated by State governments and

more than 85 percent were operated by either the State or county government. A majority (62 percent) of the nonmedical sites were located in State or local welfare department buildings.

Services Provided

The most frequently provided service as illustrated in tables 12 and 13 was referral to

another site for medical family planning services. About 97 percent of all responding nonmedical sites performed this service. To a lesser degree, contracting with or paying others to provide family planning services (about 36 percent) and providing space, equipment, and so forth to others who performed family planning services (about 8 percent) were also services performed at nonmedical sites.

LIST OF DETAILED TABLES

1. Number and percent distribution of responding medical and nonmedical family planning service sites, by State and territory: United States and territories, 1975	10
2. Number and percent distribution of responding medical and nonmedical family planning service sites, by geographic area: United States and territories, 1975	11
3. Number of responding medical family planning service sites, by operating responsibility and location of site: United States and territories, 1975	12
4. Number of responding medical family planning service sites, by operating responsibility, State, and territory: United States and territories, 1975	13

III. National Inventory of Family Planning Services 1975 Annual Survey Questionnaire	28

APPENDIX I

METHODOLOGY

The 1975 survey of the National Inventory of Family Planning Services is the second survey of family planning service providers to be conducted as part of this program. The survey is designed to acquire information on the facilities that provide family planning services in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, American Samoa, Guam, and the Canal Zone.

The data collection effort began in late June 1975 and consisted of a mail survey to a total of 11,340 known and potential providers of family planning services. These 11,340 facilities were divided into three groups—5,898 medical service providers, 4,036 nonmedical service providers, and 1,406 potential providers (nonproviders) whose status was unknown.

An initial mailing and two followup mailings were conducted on the universe. For the mailing phase of the data collection, each State was queried as to whether the questionnaires for that State should be mailed through a State agency. Fifteen of the States requested that this be done. The remaining States were surveyed by mailing questionnaires directly to the field. Of the 15 States requiring special handling, a unique situation arose with the State of Tennessee. Although this State previously indicated that the questionnaires would be completed by the State agency or forwarded to the service sites for completion, the State ultimately refused to do so. This created a large void in the responses from Tennessee as can be seen in the tables containing individual State data. Data reported for the State of Tennessee are the result of telephone and personal followup.

Telephone followup after the three mailings were completed was conducted with some of the nonresponding facilities. In addition, personal

contact by U.S. Bureau of the Census interviewers was conducted with a sample of nonresponding facilities. The actual data collection phase of the survey was completed in October 1975.

Responses to the survey resulted in 1,386 deletions from the original universe as being out of business, out of scope, duplicates, and postmaster returns. Additionally, changes in provider status occurred as follows:

201 nonmedical sites changed to medical sites.

156 medical sites changed to nonmedical sites.

127 nonprovider sites changed to medical sites.

97 nonprovider sites changed to nonmedical sites.

The combined effect of these deletions and changes in status produced a revised provider universe of 8,828 service sites—5,636 medical service providers and 3,192 nonmedical service providers.

Of the 5,636 medical service providers, 4,660 sites (83 percent) responded to the survey and provided data. Of the 3,192 nonmedical service providers, 2,574 (81 percent) responded to the survey. Medical service providers were asked to complete all 18 items on the questionnaire, while nonmedical service providers were asked to answer only items 1-10.

The total of 7,234 sites responding to the survey represent an overall response rate of 82 percent of the revised universe of 8,828 sites. The 7,234 responding sites form the data base

for this report. No attempt has been made to inflate the figures statistically in order to compensate for the total nonresponse by a site and thus agree with the universe of 8,828 sites.

Although no inflation of the data to represent the total universe was performed, a statistical adjustment or imputation was made for nonresponse to specific items on the questionnaire. Those items that were imputed if blank were:

Physical location.

Operating responsibility.

Primary purpose.

Total patients served, new patients, total visits.

Medical services provided.

Ancillary services provided.

Contraceptive methods provided.

For any questionnaire that contained a blank in one or more of the above items, the data file from the previous survey of that service site was accessed. The required data were then extracted and entered into the blank items.

For a small number of sites, data from the previous survey were not available. In those instances, data were entered into the blank items according to the following procedures:

Physical location—telephone contact with the service site.

Operating responsibility—telephone contact with the service site.

Primary purpose—no additional imputation required.

Total patients served, new patients, total visits—if at least one of these three items was present, the missing item(s) was obtained by using ratios based on the national figures from the previous survey. To obtain approximations when all three items were blank, the average figure for each item was determined by State from the previous survey. These figures were then entered into the blank items on the basis of the State of location of that service site.

Medical services provided.

Ancillary services provided.

Contraceptive methods provided.

For each category within the latter three items, the average number of service sites providing that service or method was determined from the previous survey. Any service or method provided by more than 75 percent of the service sites was used as an approximation.

APPENDIX II

DEFINITIONS AND GEOGRAPHIC AREAS

Family Planning Definitions

Some of these definitions appear on the survey form.

Family planning services.—Family planning services provide the means that enable individuals to meet their family planning objectives. These services are medical, social, and educational.

Medical family planning services refer to any of the following services provided by a physician, nurse-midwife, registered nurse, or other authorized personnel: medical history; physical examination; laboratory testing; testing, consultation, and treatment including continuing medical supervision; issuance of drugs and contraceptive supplies; and appropriate medical referral when indicated.

Nonmedical family planning services are those social and educational services such as provision of information and counseling about family planning; followup program; contraceptive education; outreach; or the provision of transportation and babysitting, both of which are provided to enable a person to attend a family planning clinic or to otherwise obtain medical family planning services.

Service site.—A clinic or service site is a place or facility at which any family planning services are provided on a regularly scheduled basis. It may be a hospital, health center, mobile unit, freestanding site, church, or storefront. For mobile units each stop is considered a clinic location; therefore, a separate questionnaire should be completed for each stop or location. Physicians' offices should be considered as clinic

locations only when there is a formal relationship with some project or agency which is responsible for providing family planning services. Physicians, nurses, volunteers, etc., who make home visits for the purpose of delivering a family planning service should count their home base of operations as the clinic location.

Family planning patient.—A family planning patient is a client who meets one of the following conditions during her/his visit:

- (1) The client receives a contraceptive method or continues a method of contraception.
- (2) The client receives counseling regarding sterilization, infertility, or contraception in conjunction with related medical services. (Pregnancy testing or venereal disease testing alone is not accepted as a medical service.)

Composition of "Other" Categories

Terms relating to "other" categories include:

Other physical location.—State, county, or local welfare department or government building including courthouse, city hall; military base or dispensary; freestanding clinic; dwelling including house, apartment housing project, semi-attached house; office building including bank building, rented office; privately owned, leased, or rented building; miscellaneous sites including visiting nurse association, adoption agency, Indian health office, medical center, maternity home, remodeled furniture store, bus station, health maintenance organization, YWCA, youth crisis center, rehabilitation center, model family practice unit, model cities facility, and Salvation Army home for girls.

Operating responsibility—other Federal Government.—Department of Defense (Army, Navy, Air Force, etc.), Veterans Administration, Public Health Service (not Indian Health Service), Urban League, National Institute of Mental Health, Agricultural Works Health Project, and Family Planning Council.

Operating responsibility—other non-Federal Government.—County hospital board.

Operating responsibility—other nongovernment.—Private mental health agency, nonprofit educational corporation, and students.

Other primary service or purpose.—General gynecologic services, abortion, thermorhythm clinic, mental retardation care, and child comprehensive health.

Other medical services provided.—Nutritional counseling; abortions; genetic counseling; sterilization counseling; prenatal care; treatment of vaginal infection; diagnosis and treatment of low

hematocrit; physical examination; purified protein derivative testing; rubella treatment; immunizations; chest X-ray; Mantoux test; non-routine laboratory tests; weight or diet counseling; tuberculosis screening; cautery; treatment of infections; white blood cell count; hypertension and diabetes screening; mental health care; radiological, heart and lung examination; endometrial biopsy; menstrual induction; colposcopy; electrocardiogram; treatment of cervicitis; and rubella testing.

Other ancillary services.—Dental care or referral, education on breast and cervical cancer, prenatal classes, “rap” sessions, films and visual aids, translation for Spanish- and Italian-speaking patients, recreation and social services programs, consumers’ advisory board, and training of medical students.

Other contraceptive methods.—Withdrawal, suppositories.

NATIONAL INVENTORY OF FAMILY PLANNING SERVICES 1975 ANNUAL SURVEY	NOTE: Clinic name and address goes here
--	--

Dear Director:

The rapid expansion of family planning services in the United States since the mid-sixties has brought to the forefront the need for accurate and current information on the extent to which these services are available nationally. Therefore, the National Center for Health Statistics (NCHS) conducts two complementary data collection programs in this area. On January 1, 1972, the first of these programs was implemented (the National Reporting System for Family Planning Services) to collect monthly data on family planning *patients* seen in public facilities and the services they receive. With the initiation of the National Inventory of Family Planning Services in 1974, the second program was established, which is a comprehensive inventory of all *facilities* providing family planning services in the United States. The Division of Health Manpower and Facilities Statistics of NCHS is now conducting this second annual survey of the National Inventory to update the information received in 1974 about each family planning clinic or service site such as name, location, caseload, services offered, and staff size.

If you participated in the 1974 survey, let me express our appreciation for your assistance and cooperation, which was largely responsible for the successful completion of the first annual survey. We look forward to your continued participation in this annual series of surveys, which are the only national source of information on all family planning service sites in the United States.

The information from this survey will be used by the National Center for Health Statistics for statistical reports on the characteristics of facilities providing family planning services. In addition, the data will be made available to other agencies to compile directories of available clinics or service sites, to plan for needed additional facilities, and to plan for future manpower needs.

This questionnaire is to be completed with the requested information for *only* the clinic or service site identified by the label above. Please do not enter information for any other clinic or service site on this form. Before completing the questionnaire, please read and familiarize yourself with the definitions on page 2. Return the questionnaire to us unless instructed by your central agency, project or program to forward the questionnaire to it for collection and return to us. Please have the questionnaire returned to the following address within one month:

National Center for Health Statistics—SRB
5600 Fishers Lane
Rockville, Maryland 20852

Sincerely yours,

Edward B. Perrin, Ph.D.
Director
National Center for Health Statistics

DEFINITIONS TO BE USED

FAMILY PLANNING SERVICES

Family planning services provide the means which enable individuals to meet their family planning objectives. These services are medical, social, and educational.

Medical family planning services refer to any of the following services provided by a physician, nurse-midwife, registered nurse, or other authorized personnel: medical history; physical examination; laboratory testing; testing, consultation, and treatment including continuing medical supervision; issuance of drugs and contraceptive supplies; and appropriate medical referral when indicated.

Social and educational family planning services are such services as provision of information and counseling about family planning; follow-up program; contraceptive education; outreach; or the provision of transportation and babysitting, both of which are provided to enable a person to attend a family planning clinic or to otherwise obtain medical family planning services.

CLINIC OR SERVICE SITE

A clinic or service site is a place or facility at which any family planning services are provided on a regularly sched-

uled basis. It may be a hospital, health center, mobile unit, free-standing site, church, or store front. For mobile units each stop is considered a clinic location; therefore, a separate questionnaire should be completed for each stop or location. Physicians' offices should be considered as clinic locations only when there is a formal relationship with some project or agency which is responsible for providing family planning services. Physicians, nurses, volunteers, etc., who make home visits for the purpose of delivering a family planning service should count their home base of operations as the clinic location.

FAMILY PLANNING PATIENT

A family planning patient is a client who meets one of the following conditions during her/his visit:

- (1) The client receives a contraceptive method or continues a method of contraception.
- (2) The client receives counseling regarding sterilization, infertility, or contraception in conjunction with related medical services. (Pregnancy testing or venereal disease testing alone is not accepted as a medical service.)

**IF DATA IS NOT AVAILABLE, INSERT N/A INTO THE RESPONSE BLOCK.
INSERT ZEROS WHERE APPLICABLE.**

HRA-106
(5-75)

CARD 3 12. We would like some information on your family planning clinic sessions. These are regularly scheduled periods of time during which medical family planning services are provided at this site.

In column (1), check the box to indicate the days of the week during which medical family planning services are provided.

In column (2), enter the time period during which medical family planning services are provided (e.g., 9-11 a.m.; 3-5 p.m.). If a split session is operated on any day, enter both time periods in the same box for that day. If this site is operated on a "by appointment only" basis, or your hours are varied each day by patient requirement, check the box under "No Regular Hours". If this is a comprehensive health center or HMO where family planning is provided only on an "as needed" basis, check the "as needed" box in column (2).

In column (3), check the box which best describes the type of clinic session being held. For the purposes of this study, a clinic session may be specialized (where only services related to medical family planning are provided) or combined (where family planning services are offered in conjunction with other health services such as maternity, post-partum,

maternal and child health, obstetrics and gynecology, comprehensive or other health care.)

In column (4), check the box which describes the frequency of these sessions—weekly, twice/month (e.g., every other week), monthly, or other.

VITAL AND HEALTH STATISTICS PUBLICATIONS SERIES

Formerly Public Health Service Publication No. 1000

- Series 1. Programs and Collection Procedures.*—Reports which describe the general programs of the National Center for Health Statistics and its offices and divisions, data collection methods used, definitions, and other material necessary for understanding the data.
- Series 2. Data Evaluation and Methods Research.*—Studies of new statistical methodology including experimental tests of new survey methods, studies of vital statistics collection methods, new analytical techniques, objective evaluations of reliability of collected data, contributions to statistical theory.
- Series 3. Analytical Studies.*—Reports presenting analytical or interpretive studies based on vital and health statistics, carrying the analysis further than the expository types of reports in the other series.
- Series 4. Documents and Committee Reports.*—Final reports of major committees concerned with vital and health statistics, and documents such as recommended model vital registration laws and revised birth and death certificates.
- Series 10. Data from the Health Interview Survey.*—Statistics on illness; accidental injuries; disability; use of hospital, medical, dental, and other services; and other health-related topics, based on data collected in a continuing national household interview survey.
- Series 11. Data from the Health Examination Survey.*—Data from direct examination, testing, and measurement of national samples of the civilian, noninstitutionalized population provide the basis for two types of reports: (1) estimates of the medically defined prevalence of specific diseases in the United States and the distributions of the population with respect to physical, physiological, and psychological characteristics; and (2) analysis of relationships among the various measurements without reference to an explicit finite universe of persons.
- Series 12. Data from the Institutionalized Population Surveys.*—Discontinued effective 1975. Future reports from these surveys will be in Series 13.
- Series 13. Data on Health Resources Utilization.*—Statistics on the utilization of health manpower and facilities providing long-term care, ambulatory care, hospital care, and family planning services.
- Series 14. Data on Health Resources: Manpower and Facilities.*—Statistics on the numbers, geographic distribution, and characteristics of health resources including physicians, dentists, nurses, other health occupations, hospitals, nursing homes, and outpatient facilities.
- Series 20. Data on Mortality.*—Various statistics on mortality other than as included in regular annual or monthly reports. Special analyses by cause of death, age, and other demographic variables; geographic and time series analyses; and statistics on characteristics of deaths not available from the vital records, based on sample surveys of those records.
- Series 21. Data on Natality, Marriage, and Divorce.*—Various statistics on natality, marriage, and divorce other than as included in regular annual or monthly reports. Special analyses by demographic variables; geographic and time series analyses; studies of fertility; and statistics on characteristics of births not available from the vital records, based on sample surveys of those records.
- Series 22. Data from the National Mortality and Natality Surveys.*—Discontinued effective 1975. Future reports from these sample surveys based on vital records will be included in Series 20 and 21, respectively.
- Series 23. Data from the National Survey of Family Growth.*—Statistics on fertility, family formation and dissolution, family planning, and related maternal and infant health topics derived from a biennial survey of a nationwide probability sample of ever-married women 15-44 years of age.
