Notes: This variable was calculated by subtracting the date of the injury/poisoning episode from the date the injury/poisoning questions were asked. Only the month, day, and year of the injury/poisoning episode provided by the respondent was used to create this variable. No additional date questions or imputed data were used in the creation of this variable. For more information about this variable see the Survey Description Document. Response code 524 also includes episodes that occurred more than 499 days or more than 24 months before the date the injury/poisoning questions were asked. An additional category has not been created for these episodes because respondents rarely (less than one per year) report injuries/poisonings that occurred more than 499 days or more than 24 months before the date the injury/poisoning questions were asked.
