Introduction

To protect confidentiality, detailed information for some variables are not available on the NHIS public-use data files. Researchers interested in working with variables that were suppressed or edited to protect confidentiality may submit a proposal to the NCHS Research Data Center (RDC). The RDC is responsible for protecting the confidentiality of survey respondents, study subjects, or institutions while providing access to the restricted-use data for statistical purposes. Additional information is available at: https://www.cdc.gov/rdc/.

Notes: Urban or rural refers to track\block as defined by the U.S. Census Bureau for

the 2010 Census. Main elements for deciding if a track/block is urban is density, land use, and distance. Tracks/blocks that do not meet the criteria

for urban are classified as rural. For more information, see

Notes: Information about the 2013 NCHS Urban-Rural classification scheme for counties

is available at https://www.cdc.gov/nchs/data_access/urban_rural.htm. Large central metro are counties (or county equivalents) in metropolitan statistical areas (MSA) of 1 million or more population that 1) contain the entire population of the largest principal city of the MSA, or 2) are completely contained in the largest principal city of the MSA, or 3) contain at least 250,000 residents of any principal city of the MSA. Large fringe metro are counties (or county equivalents) in MSAs of 1 million or more population that do not qualify as large central. Medium metro are counties (or county equivalents) in MSAs of 250,000 to 999,999 population, and small metro are counties (or county equivalents) in MSAs of less than 250,000 population.

Nonmetropolitan are counties (or county equivalents) in micropolitan

statistical areas and non-core counties.

Notes: Recode 1B_BMI. (1) BMI was calculated using the in-house version of the height

and weight variables, which contain the greater range of height and weight values than are available on the public use file. The range of possible BMI values listed (00.01-99.94) does not reflect actual calculated BMI values at the extremes of the range, but rather, allows for the theoretical possibility of such unlikely values. (2) BMI = [Weight (kg)/[Height(m) squared]] rounded to 2 decimal places. Conversion factors: 1 kg = 2.20462 pounds; 1 meter (m) = 39.37008 inches. For both men and women, underweight is BMI < 18.5; healthy weight is BMI 18.5 to <25; overweight is BMI > = 25 to <30; obese is BMI > =
