Comments From question 3, the number of units (semesters, quarters, etc.) of PE that students were required to take while attending the particular school were standardized to years of required PE. If the number of years of required PE (from question 9) equaled the number of grades in that school (from another database), and if the response to question 8 was all 5 days, students were considered to be required to take PE 5 days a week for each year they attended that school.

The original baseline was revised from 2 percent (1994) to 5.8 percent (2000) after the survey data were collected in 2000. The target was proportionally adjusted from 5 percent to 14.5 percent to reflect the revised baseline using the original target setting method.
