

Chapter 10 - Food Safety

Healthy People 2010 Operational Definition

10-7. (Developmental) Reduce human exposure to organophosphate pesticides from food.

Comments

This objective was deleted during the Healthy People 2010 Midcourse Review. Recent research has demonstrated that the absolute amounts of these substances in food are negligible. A 2002 analysis of the Total Dietary Survey results for organophosphates for the period 1997-99 indicated very few detectable levels of organophosphate residues in foods.

See Appendix A for focus area contact information.
