## Figures

1. Percent distribution of family structure for children under age 18: United States, 2001–2007 .....	7
2. Percent distribution of family structure for non-Hispanic black children under age 18: United States, 2001–2007 .....	7
3. Percent distribution of family structure for Hispanic children under age 18: United States, 2001–2007 .....	8
4. Percent distribution of family structure for non-Hispanic white children under age 18: United States, 2001–2007 .....	8
5. Percent distribution of family structure for poor children under age 18: United States, 2001–2007 .....	9
6. Percent distribution of family structure for near poor children under age 18: United States, 2001–2007 .....	9
7. Percent distribution of family structure for not poor children under age 18: United States, 2001–2007 .....	10
8. Percent distribution of family structure across the study period for children under age 18: United States, 2001–2007 .....	10
9. Percentages of children under age 18 in good, fair, or poor health, by family structure: United States, 2001–2007 .....	11
10. Percentages of children under age 18 with one or more selected chronic conditions, by family structure: United States, 2001–2007 .....	11
11. Percentages of children under age 18 who ever had asthma, by family structure: United States, 2001–2007 .....	12
12. Percentages of children under age 18 who had hay fever in the past 12 months, by family structure: United States, 2001–2007 .....	12
13. Percentages of children under age 18 who had respiratory allergies in the past 12 months, by family structure: United States, 2001–2007 .....	13
14. Percentages of children aged 4–17 who have a basic action disability, by family structure: United States, 2001–2007 .....	13

15.	Percentages of children aged 3–17 who had ever been told of having a learning disability or ADHD, by family structure: United States, 2001–2007 . . . . .	16
16.	Percentages of children aged 5–17 who missed 6 or more days of school in the past 12 months due to illness or injury, by family structure: United States, 2001–2007 . . . . .	16
17.	Percentages of children under age 18 who did not have health insurance, by family structure: United States, 2001–2007 . . . . .	17
18.	Percentages of children under age 18 without a usual place of health care, by family structure: United States, 2001–2007 . . . . .	17
19.	Percentages of children under age 18 with a problem for which prescription medications were used for at least 3 months, by family structure: United States, 2001–2007 . . . . .	19
20.	Percentages of children under age 18 who had two or more visits to the emergency room in the past 12 months, by family structure: United States, 2001–2007 . . . . .	19
21.	Percentages of children under age 18 who did not have a medical checkup in the past 12 months, by family structure: United States, 2001–2007 . . . . .	20
22.	Percentages of children under age 18 who had medical care delayed during the past 12 months due to concerns over cost, by family structure: United States, 2001–2007 . . . . .	21
23.	Percentages of children aged 2–17 who did not see a dentist in the past 12 months, by family structure: United States, 2001–2007 . . . . .	22
24.	Percentages of children aged 2–17 who did not receive needed dental care in the past 12 months due to cost, by family structure: United States, 2001–2007 . . . . .	23
25.	Percentages of children aged 4–17 who were generally not well-behaved or did not usually do what adults requested in the past 6 months, by family structure: United States, 2001–2007 . . . . .	24
26.	Percentages of children aged 4–17 who had many worries or often seemed worried in the past 6 months, by family structure: United States, 2001–2007 . . . . .	25
27.	Percentages of children aged 4–17 who had definite or severe emotional or behavioral difficulties, by family structure: United States, 2001–2007 . . . . .	26

**Detailed Tables**

1.	Frequencies of children under age 18 who were in good, fair, or poor health, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	30
2.	Percentages (with standard errors) of children under age 18 who were in good, fair, or poor health, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	32
3.	Frequencies of children under age 18 who have ever been told they have one or more chronic conditions, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	34
4.	Percentages (with standard errors) of children under age 18 who have ever been told they had one or more chronic conditions, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	36
5.	Frequencies of children under age 18 who have ever been told they have asthma, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	38
6.	Percentages (with standard errors) of children under age 18 who have ever been told they have asthma, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	40
7.	Frequencies of children under age 18 with hay fever in the past 12 months, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	42
8.	Percentages (with standard errors) of children under age 18 with hay fever in the past 12 months, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	44
9.	Frequencies of children under age 18 with respiratory allergies in the past 12 months, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	46
10.	Percentages (with standard errors) of children under age 18 with respiratory allergies in the past 12 months, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	48
11.	Frequencies of children under age 18 with digestive or skin allergies in the past 12 months, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	50
12.	Percentages (with standard errors) of children under age 18 with digestive or skin allergies in the past 12 months, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	52
13.	Frequencies of children aged 3–17 with frequent headaches or migraines in the past 12 months, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	54
14.	Percentages (with standard errors) of children aged 3–17 with frequent headaches or migraines in the past 12 months, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	56
15.	Frequencies of children under age 18 with three or more ear infections in the past 12 months, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	58

16.	Percentages (with standard errors) of children under age 18 with three or more ear infections in the past 12 months, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	60
17.	Frequencies of children under age 18 who have ever been told they have mental retardation or any developmental delay, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	62
18.	Percentages (with standard errors) of children under age 18 who have ever been told they have mental retardation or any developmental delay, by family structure and by selected characteristics: United States, 2001–2007. . . . .	64
19.	Frequencies of children under age 18 with an impairment or health problem that limits crawling, walking, running, or playing, by family structure and by selected characteristics: United States, 2001–2007. . . . .	66
20.	Percentages (with standard errors) of children under age 18 with an impairment or health problem that limits crawling, walking, running, or playing, by family structure and by selected characteristics: United States, 2001–2007. . . . .	68
21.	Frequencies of children under age 18 receiving special education or EIS for an emotional or behavioral problem, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	70
22.	Percentages (with standard errors) of children under age 18 receiving special education or EIS for an emotional or behavioral problem, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	72
23.	Frequencies of children under age 18 with vision problems, by family structure and by selected characteristics: United States, 2001–2007. . . . .	74
24.	Percentages (with standard errors) of children under age 18 with vision problems, by family structure and by selected characteristics: United States, 2001–2007. . . . .	76
25.	Frequencies of children aged 4–17 with a basic action disability, by family structure and by selected characteristics: United States, 2001–2007. . . . .	78
26.	Percentages (with standard errors) of children aged 4–17 with a basic action disability, by family structure and by selected characteristics: United States, 2001–2007. . . . .	80
27.	Frequencies of children aged 3–17 who have ever been told they have a learning disability or ADHD, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	82
28.	Percentages (with standard errors) of children aged 3–17 who have ever been told they have a learning disability or ADHD, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	84
29.	Frequencies of children aged 5–17 who missed 6 or more school days in the past 12 months due to illness or injury, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	86
30.	Percentages (with standard errors) of children aged 5–17 who missed 6 or more school days in the past 12 months due to illness or injury, by family structure and by selected characteristics: United States, 2001–2007. . . . .	88
31.	Frequencies of children under age 18 without any health insurance, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	90
32.	Percentages (with standard errors) of children under age 18 without any health insurance, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	92
33.	Frequencies of children under age 18 without a usual place of health care, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	94
34.	Percentages (with standard errors) of children under age 18 without a usual place of health care, by family structure and by selected characteristics: United States, 2001–2007. . . . .	96
35.	Frequencies of children under age 18 with a problem for which prescription medication has been used regularly for at least 3 months, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	98
36.	Percentages (with standard errors) of children under age 18 with a problem for which prescription medication has been used regularly for at least 3 months, by family structure and by selected characteristics: United States, 2001–2007. . . . .	100
37.	Frequencies of children under age 18 who made two or more visits to a hospital ER in the past 12 months, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	102
38.	Percentages (with standard errors) of children under age 18 who made two or more visits to a hospital ER in the past 12 months, by family structure and by selected characteristics: United States, 2001–2007. . . . .	104
39.	Frequencies of children aged 1–17 who did not have a medical checkup in the past 12 months, by family structure and by selected characteristics: United States, 2001–2007. . . . .	106
40.	Percentages (with standard errors) of children aged 1–17 who did not have a medical checkup in the past 12 months, by family structure and by selected characteristics: United States, 2001–2007. . . . .	108
41.	Frequencies of children aged 2–17 who saw or talked with an eye doctor during the past 12 months, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	110
42.	Percentages (with standard errors) of children aged 2–17 who saw or talked with an eye doctor during the past 12 months, by family structure and by selected characteristics: United States, 2001–2007. . . . .	112
43.	Frequencies of children under age 18 who had medical care delayed during the past 12 months due to concerns over cost, by family structure and by selected characteristics: United States, 2001–2007. . . . .	114

44.	Percentages (with standard errors) of children under age 18 who had medical care delayed during the past 12 months due to concerns over cost, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	116
45.	Frequencies of children aged 2–17 who did not receive needed prescription medication during the past 12 months due to lack of affordability, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	118
46.	Percentages (with standard errors) of children aged 2–17 who did not receive needed prescription medication during the past 12 months due to lack of affordability, by family structure and by selected characteristics: United States, 2001–2007. . . . .	120
47.	Frequencies of children aged 2–17 who needed but did not get eyeglasses during the past 12 months due to lack of affordability, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	122
48.	Percentages (with standard errors) of children aged 2–17 who needed but did not get eyeglasses during the past 12 months due to lack of affordability, by family structure and by selected characteristics: United States, 2001–2007. . . . .	124
49.	Frequencies of children aged 2–17 who did not see a dentist within the past 12 months, by family structure and by selected characteristics: United States, 2001–2007. . . . .	126
50.	Percentages (with standard errors) of children aged 2–17 who did not see a dentist within the past 12 months, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	128
51.	Frequencies of children aged 2–17 who did not receive needed dental care in the past 12 months due to cost, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	130
52.	Percentages (with standard errors) of children aged 2–17 who did not receive needed dental care in the past 12 months due to cost, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	132
53.	Frequencies of children aged 4–17 who were often unhappy, depressed, or tearful during the past 6 months, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	134
54.	Percentages (with standard errors) of children aged 4–17 who were often unhappy, depressed, or tearful during the past 6 months, by family structure and by selected characteristics: United States, 2001–2007. . . . .	136
55.	Frequencies of children aged 4–17 who were generally not well-behaved or did not usually do what adults requested during the past 6 months, by family structure and by selected characteristics: United States, 2001–2007. . . . .	138
56.	Percentages (with standard errors) of children aged 4–17 who were generally not well-behaved or did not usually do what adults requested during the past 6 months, by family structure and by selected characteristics: United States, 2001–2007. . . . .	140
57.	Frequencies of children aged 4–17 who had many worries or often seemed worried during the past 6 months, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	142
58.	Percentages (with standard errors) of children aged 4–17 who had many worries or often seemed worried during the past 6 months, by family structure and by selected characteristics: United States, 2001–2007. . . . .	144
59.	Frequencies of children aged 4–17 who generally exhibited a poor attention span or did not usually see chores and homework through to the end during the past 6 months, by family structure and by selected characteristics: United States, 2001–2007. . . . .	146
60.	Percentages (with standard errors) of children aged 4–17 who generally exhibited a poor attention span or did not usually see chores and homework through to the end during the past 6 months, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	148
61.	Frequencies of children aged 4–17 who certainly got along better with adults than children during the past 6 months, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	150
62.	Percentages (with standard errors) of children aged 4–17 who certainly got along better with adults than children during the past 6 months, by family structure and by selected characteristics: United States, 2001–2007. . . . .	152
63.	Frequencies of children aged 4–17 with definite or severe emotional or behavioral difficulties, by family structure and by selected characteristics: United States, 2001–2007. . . . .	154
64.	Percentages (with standard errors) of children aged 4–17 with definite or severe emotional or behavioral difficulties, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	156
65.	Frequencies of children aged 4–17 with definite or severe emotional or behavioral difficulties who had no contact with a mental health professional or general doctor for an emotional or behavioral problem during the last 12 months, by family structure and by selected characteristics: United States, 2001–2007. . . . .	158
66.	Percentages (with standard errors) of children aged 4–17 with definite or severe emotional or behavioral difficulties who had no contact with a mental health professional or general doctor for an emotional or behavioral problem during the last 12 months, by family structure and by selected characteristics: United States, 2001–2007 . . . . .	160

**Appendix Tables**

I.	Weighted counts and percentages of children with unknown information on health characteristics of interest, National Health Interview Survey, 2001–2007. . . . .	163
II.	Weighted counts and percentages of children aged 0–17 with unknown information on selected sociodemographic characteristics, National Health Interview Survey, 2001–2007 . . . . .	163

**Objectives**

This report presents statistics from the 2001–2007 National Health Interview Survey (NHIS) on selected measures of physical health and limitations, access to or utilization of health care, and behavior or emotional well-being for children under age 18 by family structure, sex, age, race, Hispanic origin, parent's education, family income, poverty status, home tenure status, health insurance coverage, place of residence, and region.

**Source of Data**

NHIS is a multistage probability sample survey conducted annually by interviewers of the U.S. Census Bureau for the Centers for Disease Control and Prevention's National Center for Health Statistics, and is representative of the civilian noninstitutionalized population of the United States. Information about one randomly selected child per family is collected in a face-to-face interview with an adult proxy respondent familiar with the child's health.

**Highlights**

Children in nuclear families were generally less likely than children in nonnuclear families to be in good, fair, or poor health; to have a basic action disability; to have learning disabilities or attention deficit hyperactivity disorder; to lack health insurance coverage; to have had two or more emergency room visits in the past 12 months; to have receipt of needed prescription medication delayed during the past 12 months due to lack of affordability; to have gone without needed dental care due to cost in the past 12 months; to be poorly behaved; and to have definite or severe emotional or behavioral difficulties during the past 6 months. Children living in single-parent families had higher prevalence rates than children in nuclear families for the various health conditions and indicators examined in this report. However, when compared with children living in other nonnuclear families, children in single-parent families generally exhibited similar rates with respect to child health, access to care, and emotional or behavioral difficulties.

**Keywords:** health and limitations • access to care • emotional or behavioral difficulties

# Family Structure and Children's Health in the United States: Findings From the National Health Interview Survey, 2001–2007

by Debra L. Blackwell, Ph.D., Division of Health Interview Statistics

## Introduction

As divorce rates remain high and cohabitation becomes more commonplace, an increasing number of U.S. children will spend a larger proportion of their lives in a nontraditional family. The proportion of U.S. children likely to live part of their childhood in a married stepfamily increased from about one-seventh in the early 1970s to one-quarter in the early 1980s; if unmarried stepfamilies are also included, the proportions would be higher (1). In 1990, 3.5% of U.S. children lived with a parent and his or her cohabiting partner (2), while in 2002, 6% lived with a cohabiting parent and partner (3). Graefe and Lichter estimated that about one of four children will live in a family headed by a cohabiting couple at some point during their childhood (4). Using different data, Bumpass and Lu concluded that 40% of children would live in a cohabiting couple family during childhood (5). Additionally, the U.S. Census Bureau estimated that in 2004, 10 million children under age 18, or 14% of all

children, were living in households consisting of a biological or adoptive parent and another unrelated adult (6), while the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (NCHS) reported that 35.8% of all births in 2004 were to unmarried women (7).

In view of the changing family structure distribution, new categories of families such as unmarried families or unmarried stepfamilies need to be studied so that the health characteristics of children in nontraditional families can be identified (1,8,9). Previous researchers have reported that children living in nontraditional families are disadvantaged financially, and are more likely to experience deleterious outcomes with respect to school (e.g., higher drop-out rates, poorer academic performance), behavior (e.g., delinquency, promiscuity), and mental health (9–17). A small number of published studies have found that children in two-parent families are more advantaged than children in other types of families with respect to health status or access to health care (18–21). However, these analyses were based on

---

This report was prepared under the general direction of Jane F. Gentleman, Director of NCHS's Division of Health Interview Statistics (DHIS), and Eve Powell-Griner, Chief of the Data Analysis and Quality Assurance Branch of DHIS. The author is also grateful for the helpful comments provided by Charlotte Schoenborn, DHIS, and Jennifer Madans, Associate Director for Science. This report was edited by Betsy M. Finley, Laura Drescher, and Demarius V. Miller, CDC/NCHM/Division of Creative Services, Writer-Editor Services Branch; typeset by Annette F. Holman, and graphics produced by Michael W. Jones (Contractor), CDC/OSELS/NCHS/OD/Office of Information Services, Information Design and Publishing Staff.

survey data that did not collect information on cohabitation and parent-child relationships (e.g., biological, step, etc.), making the identification of nontraditional family types impossible.

The National Health Interview Survey (NHIS), a multi-purpose health survey conducted by NCHS, initiated an important step in identifying nontraditional families with the implementation of a new household rostering system and marital status variables in 1997. Detailed family structure variables distinguished between married parent families (with biological or adoptive children), unmarried parent families (with biological or adoptive children), parent-stepparent families (with children), and parent-cohabiting partner families (with children). Thus, NHIS data provide an opportunity to investigate the association of family structure with the health status and characteristics of U.S. children.

This report presents national prevalence estimates for selected health status and access to health care indicators among children by type of family structure. Because the association between children's health and family structure is likely to be modified by personal (e.g., sex, age, race/ethnicity), social (parental education), and economic (e.g., family income, poverty status, home tenure status, and health insurance coverage) characteristics, these factors are also controlled for in the report's detailed tables.

The family structure indicator used in this report consists of seven mutually exclusive categories that take into account parental marital status as well as the type of relationship between children aged 0–17 and any parents present in the family. Because NHIS defines children as family members who are aged 0–17 and adults as family members who are aged 18 and over, adult children (those aged 18 and over) are considered related adults regardless of their relationship (biological, adoptive, step, or foster) to their parents.

- A *nuclear family* consists of one or more children living with two parents who are married to one another and are each biological or

adoptive parents to all children in the family.

- A *single-parent family* consists of one or more children living with a single adult (male or female, related or unrelated to the child or children).
- An *unmarried biological or adoptive family* consists of one or more children living with two parents who are not married to one another and are each biological or adoptive parents to all children in the family.
- A *blended family* consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another.
- A *cohabiting family* consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another.
- An *extended family* consists of one or more children living with at least one biological or adoptive parent and a related adult who is not a parent (e.g., a grandparent). Any of the previously described family types that contained an adult child are categorized as an extended family.
- An *“other” family* consists of one or more children living with related or unrelated adults who are not biological or adoptive parents. Children being raised by their grandparents are included in this category, as are foster children living with at least two adults.

## Data Source

Data from the 2001–2007 NHIS are pooled to provide national estimates for a broad range of health status indicators and measures of access to health care by family structure for the U.S. civilian noninstitutionalized population of children under age 18. Pooled analyses are typically done to increase sample sizes for small populations (e.g., unmarried biological or adoptive and cohabiting families). Weighted estimates from such an analysis can be interpreted as either an estimate for the midpoint of

the study period or as an “average” across the study period (22). Data from the 2001–2007 NHIS were selected for this analysis because the 2000 NHIS does not contain complete family structure information, and the 2008 NHIS was not available at the time these analyses were conducted. The family structure indicator used for this report is obtained from the 2001–2007 in-house Person or Family data files; a public-use version is also available but it combines all unmarried biological or adoptive families and cohabiting families into a single category. Most health estimates are derived from the 2001–2007 public-use Sample Child data files of the annual NHIS Basic Module; the remaining health estimates are derived from the 2001–2007 public-use Person data files. These estimates, which users can replicate with NHIS public-use data, are shown in [Tables 1–66](#) for various subgroups of the population, including those defined by sex, age, race and Hispanic origin, parent's education, family income, poverty status, home tenure status, health insurance coverage, place of residence, and region. [Appendix I](#) contains brief technical notes and [Appendix II](#) contains definitions of terms used in this report.

NHIS has been an important source of information about health and health care in the United States since it was first conducted in 1957. Its main objective is to monitor the health of the civilian noninstitutionalized U.S. population through the collection and analysis of data on a broad range of health topics. Persons in long-term care institutions (e.g., nursing homes; hospitals for the chronically ill, disabled, or mentally handicapped; wards for abused or neglected children), correctional facilities (e.g., prisons or jails, juvenile detention centers, halfway houses), active duty Armed Forces personnel (although their civilian family members are included), and U.S. nationals living in foreign countries are excluded from the sampling frame. More information on sample design can be found in “Design and Estimation for the National Health Interview Survey, 1995–2004” (23).

The NHIS questionnaire, called the Basic Module or Core, is repeated annually and consists of three main components: the Family Core, the Sample Child Core, and the Sample Adult Core (the latter is not used for this report). The Family Core collects information about all family members regarding household composition and sociodemographic characteristics, along with basic indicators of health status, activity limitations, and utilization of health care services. All members of the household aged 17 and over who are at home at the time of the interview are invited to participate and respond for themselves. For children and adults not at home during the interview, information is provided by a knowledgeable adult family member aged 18 and over residing in the household. Although considerable effort is made to ensure accurate reporting, the information from both proxies and self-respondents may be inaccurate because the respondent is unaware of relevant information, has forgotten it, does not wish to reveal it to an interviewer, or does not understand the intended meaning of the question. Note that NHIS does not obtain independent evaluations directly from doctors or other health care professionals.

The Sample Child Core obtains additional information on the health of one randomly selected child aged 0–17 in the family; a knowledgeable adult in the family (usually a parent) provides proxy responses for the sample child. The Sample Child Core is the primary data source for this report, while information regarding demographic characteristics is derived from the Family Core.

The interviewed sample for the 2001–2007 NHIS consisted of a total of 244,572 households, which yielded 630,884 persons in 249,570 families. There were 90,566 children aged 0–17 who were eligible for the Sample Child questionnaire. Data were collected for 82,553 children, a conditional response rate of 91.1%. The average final response rate for the Sample Child component during 2001–2007 was 79.3% (24–30). However, detailed family structure information was not available in the first and second quarters

of 2004, so these sample child cases were omitted, and case weights for the sample child observations in the third and fourth quarters of 2004 were doubled to obtain an appropriate estimate of the U.S. child population for 2004. This adjustment yields a total of 83,849 observations for analysis. This sample results in a weighted, annualized estimate of 73.2 million children in the United States during 2001–2007.

## Limitations of the Data

NHIS obtains information from respondents via an in-person interviewing process, with a typical interview averaging about 1 hour. No clinical measurements are taken. As a result, all NHIS data are based on subjective reports obtained from respondents who stated that they were knowledgeable about all family members' health status, access to medical care, and personal information. The NHIS interviewer has no way of verifying whether these family respondents are, in fact, knowledgeable. In addition, respondents may experience recall problems or have different cultural definitions of illness, either of which could result in inaccurate responses. Furthermore, as with all surveys, respondents may simply underreport characteristics or conditions that they consider undesirable. It is thus likely that some of the prevalence estimates presented in this report are conservative.

Despite the fact that multiple years of data were used for this analysis, cell counts in some of the more detailed cross-classification tables are small, particularly when a “rare” family structure is crossed with a “rare” health condition. The resulting percentages have relatively large standard errors that make the detection of statistically significant relationships difficult; some relationships between family structure and child health may thus go undetected as a result. Percentages with a relative standard error greater than 30% are identified by an asterisk in all tables; readers should use caution when attempting to interpret these statistics. For this reason, percentages indicated by an asterisk in the tables are not discussed in the text or shown in any figures in this report. In addition, frequencies may also be underestimates

due to item nonresponse and unknowns, both of which are excluded from the tables. See [Appendix I](#) for more information about the number of unknowns with respect to each health characteristic.

NHIS is a cross-sectional survey that does not obtain retrospective information from adult respondents regarding their marital histories or living arrangements. The family structure indicator used in this report cannot account for children's transitions into and out of different families, nor can it be used to estimate health outcomes for children who have ever lived in a particular type of family (e.g., cohabiting or single-parent families). Thus, we cannot distinguish between family structure *per se* and family instability, that is, repeated transitions into and out of different family types (15). Family structure, as measured in this report, is the type of family in which the sample child was living at the time of interview. Consequently, the tables in this report can only be used to understand the extent to which selected child health outcomes and family structure vary together; causality or directionality in the family structure and child health relationship cannot be determined from NHIS data. Lastly, while the tables show estimates by various age groups, the prevalence estimates presented in the tables are not age-adjusted.

## Methods

### Estimation Procedures

Estimates presented in this report were weighted to provide national health estimates; the record weight of the sample child was used to generate all estimates. These weights were calibrated by NCHS staff to produce numbers consistent with the population estimates of the United States by age, sex, and race/ethnicity, and are based on population projections from the U.S. Census Bureau for noninstitutionalized civilians. Because 7 years of NHIS data were utilized, each weight was divided by seven before analyzing the data, in

order to annualize the resulting estimates.

The weights from the 2001 and 2002 NHIS were based on projections from the 1990 census, while the weights from the 2003–2007 NHIS were based on projections from the 2000 census. Prior to the release of the 2003 data, NCHS staff compared estimates for a number of health characteristics using the 1990 census-based weights and the 2000 census-based weights and found that health estimates were extremely consistent regardless of the weighting schema used (26). Thus, the change in the census-based population controls used to create the 2003–2007 NHIS case weights should have little impact on data analyses that utilize the combined 2001–2007 data.

For each health measure, weighted frequencies and weighted percentages are shown for all children according to their family structure. Estimates are further disaggregated by various sociodemographic characteristics, such as sex, age, race and Hispanic origin, parent’s education, family income, poverty status, home tenure status, health insurance coverage, place of residence, and region. All counts are expressed in thousands. Counts for children of unknown status with respect to family structure and each health characteristic of interest are not shown separately in the tables, nor are they included in the calculation of percentages, in order to make the presentation of the data more straightforward. In most instances, the percentage unknown is small (typically less than 1%).

Additionally, some of the sociodemographic variables that are used to delineate various subgroups of the population have unknown values. Again, for most of these variables, the percentage unknown is small. Health estimates for children with these unknown sociodemographic characteristics are not shown in the tables. Readers should refer to [Appendix I](#) for more information on the quantities of cases with unknown or missing values. The 2001–2007 NHIS Imputed Family Income/Personal Earnings Files were used to minimize the exclusion of cases with incomplete information

regarding family income and poverty status.

## Variance Estimation and Significance Testing

NHIS data are based on a sample of the population and are therefore subject to sampling error. Standard errors are reported to indicate the reliability of the estimates. Estimates and standard errors were calculated using SUDAAN software that takes into account the complex sampling design of NHIS. The Taylor series linearization method was used for variance estimation in SUDAAN (31).

Standard errors are shown for all percentages in the tables but not for the frequencies. Estimates with relative standard errors of greater than 30% are considered unreliable and are indicated with an asterisk. The statistical significance of differences between point estimates was evaluated using two-sided *t* tests at the 0.05 level and assuming independence. Terms such as “greater than,” “less than,” “more likely,” “less likely,” “increased,” “decreased,” “compared with,” or “opposed to” indicate a statistically significant difference between estimates, whereas “similar,” “no difference,” or “comparable” indicate that the estimates are not statistically different. A lack of commentary about any two estimates should not be interpreted to mean that a *t* test was performed and the difference found to be not significant. These statistical tests did not take multiple comparisons into account.

## Measurement of Family Structure

NHIS is a cross-sectional, household-based survey that obtains information from its respondents at a specific time. It does not obtain detailed relationship histories from respondents because this would be beyond the scope of the survey. The household composition portion of the survey contains several filter questions at the outset of the interview that ask whether

all persons in the household live and eat together or if any of them have another residence where they usually live.

Persons who do not routinely live and eat together as well as those who may regularly visit but maintain a residence elsewhere are not included in the interview. Individuals drift into and out of cohabiting unions gradually over time (32), so the use of these filter questions may result in more accurate estimates of some nontraditional families. A household roster is then completed and the relationships of all family members to the “family reference person”—typically the person who owns or rents the home—are established. To facilitate completion of the roster, respondents are given a flash card listing 17 possible family relationships; “spouse (husband/wife)” and “unmarried partner” are listed as separate items. Current marital status is obtained for all family members aged 14 and over; respondents self-report whether they are currently married, widowed, divorced, separated, never married, or living with a partner, and they identify which family member is their spouse or partner. Also, for each family member aged 17 and under, several questions ascertain whether one or both parents are present in the household and the nature of the relationship between the parent or parents and child (i.e., biological, adoptive, step, or foster).

Family structure is measured by a variable with seven mutually exclusive categories (see the family structure description in the Introduction) that takes into account parental marital status and the type of relationship (e.g., biological, adoptive, step) between children aged 0–17 and any parents present in the family. Children aged 17 and under who are emancipated minors are excluded from the analysis. A related family member is someone who is connected by ancestry, marriage, or legal adoption to the child or children. In the case of **nuclear** and **unmarried biological or adoptive families**, both parents must be biological or adoptive to all children in the family. **Single-parent families** may consist of one or more children living with a single parent (male or female) who may or may not be biologically related to the child or

children in the family. **Blended families** (i.e., parent and stepparent) are those in which the two adults present are married to one another and at least one child in the family is the biological or adopted child of one adult and the stepchild of the other adult. **Cohabiting families** consist of one or more children residing with a biological (or adoptive) parent and that parent's cohabiting partner who is unrelated to the child or children. Families with one or more children living with at least one biological or adoptive parent and one or more related adults, such as a grandparent or an adult sibling, are referred to as an **extended family**. Note that NHIS defines persons aged 18 and over as adults. As a result, any of the family types described previously with one or more adult children are considered extended families. This will result in smaller counts and percentages of the remaining family types, particularly nuclear families, and to a lesser extent, single-parent families. Lastly, a family with one or more children living with two or more related or unrelated adults (none of whom is a biological or adoptive parent to that child) is considered, for the purposes of this report, as an **“other” family**. Children being raised by their grandparents would be included in this category, as would foster children (as long as a minimum of two adults are present).

## Measurement of Health Outcomes

This report examines children's health in three broad categories: physical health or limitations, access to or utilization of health care, and behavior or emotional well-being. In all instances, a knowledgeable adult (typically a parent) provided information on behalf of all sample children aged 0–17. Note that the second footnote in each table contains the verbatim text of the survey question that was the source of the estimates in the table, along with other pertinent information. Unless otherwise noted, questionnaire items and response categories did not change across the 2001–2007 surveys.

Information regarding good, fair, or poor health status [i.e., less than optimal health (33–37)], and impairments that limited crawling, walking, running, or playing was obtained from separate questions in the Family Core that asked about the child's current (i.e., at the time of the interview) health. Information regarding receipt of special education or Early Intervention Services (EIS) was also obtained from the Family Core, and was based on current as well as previous enrollment. Chronic condition status was based on a series of separate questions in the Sample Child Core that asked whether a doctor or health professional had ever said that the sample child had Down syndrome, muscular dystrophy, cystic fibrosis, sickle cell anemia, autism, diabetes, arthritis, congenital heart disease, or any other heart condition. Likewise, prevalence estimates of ever having asthma, mental retardation, or any developmental delay were obtained from separate questions in the Sample Child Core that asked whether a doctor or other health professional had ever said that the sample child had these conditions. Frequency and percentage estimates of mental retardation and any developmental delay were combined for this analysis.

Information regarding hay fever, allergies (respiratory, skin, or digestive), and ear infections was obtained for sample children of all ages and was based on the 12-month period prior to the interview; information regarding frequent headaches or migraines was also based on the 12-month period prior to the interview, but was obtained only for sample children aged 3–17. Information on vision problems was obtained from a Sample Child Core question that asked whether the sample child had any “trouble seeing.” If the child was aged 2 and over, the interviewer added “even when wearing glasses or contact lenses.” Prevalence estimates of learning disabilities or attention deficit hyperactivity disorder (ADHD) were derived from separate questions in the Sample Child Core. Respondents were asked whether a representative from a school or a health professional had ever said that the sample child aged 3–17 had a learning

disability. Similarly, respondents were asked whether a doctor or health professional had ever said that the sample child aged 3–17 had ADHD or attention deficit disorder (ADD). Frequency and percentage estimates of learning disabilities and ADHD or ADD were combined for this analysis.

Basic action disability (Tables 27–28) is a new summary measure that takes into account four basic domains or functions that a child needs in order to participate in age-appropriate activities (38,39). These domains consist of sensory functions (e.g., hearing, vision), movement (e.g., walking, running, playing), cognitive functioning (e.g., ability to remember, learning disabilities, mental retardation, Down syndrome, autism), and emotional or behavioral functions (ADHD, emotional, or behavioral difficulties). Accordingly, children aged 4–17 were considered to have a basic action disability if they had any one of the following: a lot of trouble hearing or deafness; trouble seeing; limitations in their ability to crawl, walk, run, or play; difficulty remembering; mental retardation; Down syndrome; autism; a learning disability; ADHD; or definite or severe emotional or behavioral difficulties [from the Strengths and Difficulties Questionnaire (SDQ)]. Information regarding difficulty remembering came from a Family Core question; all other information was obtained from questions in the Sample Child Core.

Data on the number of school days missed were obtained from a question in the Sample Child Core that asked how many school days the sample child aged 5–17 missed in the past 12 months due to illness or injury. (Tables in this report utilize a cut-point of six or more days.) Information regarding use of prescription medications was based on a question in the Sample Child Core that asked whether the sample child aged 0–17 had a problem for which he or she had regularly taken prescription medication for at least 3 months.

Information regarding health care insurance coverage was obtained from various questions in the Family Core about type of coverage at the time of interview. Information about having a usual place of health care was obtained

from a question in the Sample Child Core that asked whether there was a place (e.g., doctor’s office, health clinic, etc.) that the sample child “usually” went when he or she was sick or the parent or guardian needed advice about the child’s health. Information regarding emergency room (ER) visits was obtained from a Sample Child Core question that asked the number of times during the past 12 months that the sample child had gone to a hospital ER about his or her health, including those times that resulted in a hospital admission. In addition, information regarding receipt of medical checkups was obtained from another question in the Sample Child Core that asked whether the sample child had received a “well-child check-up—that is, a general check-up when he or she was not sick or injured” during the past 12 months. Note that children under age 1 are not included in the tables showing medical checkups. The Sample Child Core also obtained information regarding the child’s contacts with “an optometrist, ophthalmologist, or eye doctor (someone who prescribes glasses)” during the past 12 months.

NHIS contains several questions that obtain information regarding delaying medical care during the past 12 months due to cost or affordability concerns. Having medical care delayed due to concerns over cost was obtained from a question in the Family Core; all children aged 0–17 are shown in the resulting tables. In addition, the Sample Child Core included questions that asked whether the child “needed prescription medication but didn’t get it because [the family] couldn’t afford it” and whether the child “needed eyeglasses but didn’t get them because [the family] couldn’t afford it.” These questions were asked of sample children aged 2–17.

Information regarding dental care was obtained from separate questions in the Sample Child Core that asked when the sample child had last visited any kind of dentist (including orthodontists, oral surgeons, or other dental specialists), and whether the sample child had needed dental care (including checkups) during the past 12 months but had not received it due to concerns over

cost. Note that only children aged 2–17 were included in the dental care tables. Information regarding behavior and emotional well-being was obtained from several questions from the SDQ that were included in the Sample Child Cores in 2001–2007. The SDQ is a behavioral screening questionnaire for children aged 4–17 that includes questions on both positive and negative behaviors as well as follow-up questions about the impact of these behaviors on the child and his or her family (40).

Data presented in this report are based only on those questions included in all 7 years of the 2001–2007 Sample Child Cores. Five behavior questions were asked of sample children aged 4–17 and were based on the 6-month period prior to the interview. Response categories for the five questions included “Not true,” “Somewhat true,” and “Certainly true” (as well as “Refused” or “Don’t know”). The tables in this report include those cases where it was “certainly true” that the sample child was often unhappy, depressed, or tearful; “not true” that the sample child was generally well-behaved and usually did what adults requested; “certainly true” that the sample child had many worries or often seemed worried; “not true” that the sample child had a good attention span and saw chores or homework through to the end; and “certainly true” that the sample child got along better with adults than with other (age-appropriate) children.

The final SDQ question asked whether, “overall,” the sample child had difficulties with emotions, concentration, behavior, or being able to get along with other people. Response categories included “No,” “Yes, minor difficulties,” “Yes, definite difficulties,” “Yes, severe difficulties,” “Refused,” or “Don’t know.” Tables 63–64 show children with definite or severe emotional or behavioral difficulties. Tables 65–66 are based on two questions in the Sample Child Core that asked, “During the past 12 months, have you seen or talked to a mental health professional such as a psychiatrist, psychologist, psychiatric nurse, or clinical social worker about [child’s name]’s health?” and, for sample

children who had seen or talked with a general doctor or pediatrician during the past 12 months, “Did you see or talk with this general doctor because of an emotional or behavioral problem that [child’s name] may have?” Only children with definite or severe emotional or behavioral difficulties are included in these tables.

## Further Information

Readers interested in NHIS data can obtain the latest information about NHIS by periodically checking the NCHS website: <http://www.cdc.gov/nchs/nhis.htm>. The website features downloadable public-use data and documentation for recent surveys, as well as important information about any modifications or updates to the data or documentation. Readers wishing access to in-house NHIS data should contact the NCHS Research Data Center via <http://www.cdc.gov/rdc/>.

Researchers may also wish to join the NHIS electronic mailing list. To do so, visit <http://www.cdc.gov/subscribe.html>. Fill in the appropriate information and click the “National Health Interview Survey (NHIS) researchers” box, followed by the “Subscribe” button at the bottom of the page. The list consists of approximately 3,000 persons worldwide who receive e-mail about NHIS surveys (e.g., new releases of data or modifications to existing data), publications, and conferences.

## Selected Results

This section includes selected graphs and a discussion of results based on the estimates shown in Figures 1–28 and Tables 1–66. Results are shown for three broad categories: physical health or limitations, access to or utilization of health care, and behavior or emotional well-being.

In addition, the results presented below utilize the following shorthand terms in describing mutually exclusive family types (see Appendix II):

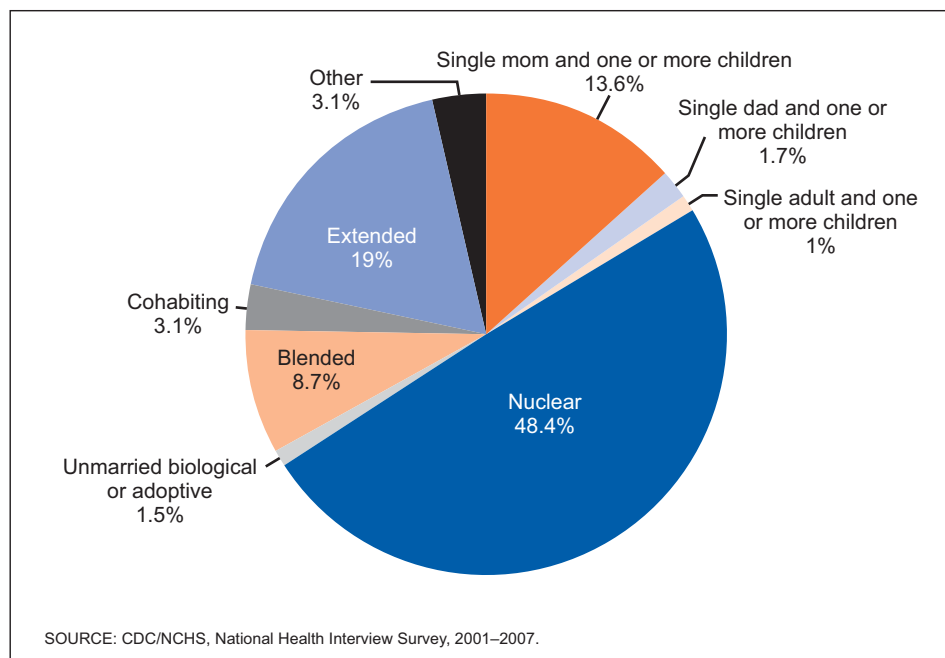

- A *nuclear family* consists of one or

more children living with two parents who are married to one another and are each biological or adoptive parents to all children in the family.

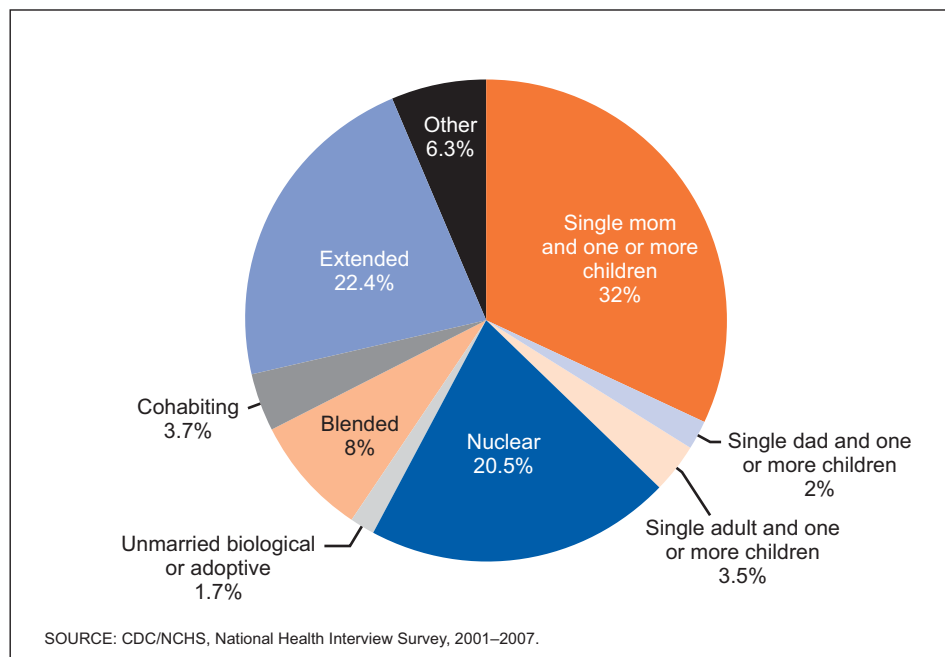

- A *single-parent family* consists of one or more children living with a single adult (male or female, related or unrelated to the child or children).
- An *unmarried biological or adoptive family* consists of one or more children living with two parents who are not married to one another and are each biological or adoptive parents to all children in the family.
- A *blended family* consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another.
- A *cohabiting family* consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another.
- An *extended family* consists of one or more children living with at least one biological or adoptive parent and a related adult who is not a parent (e.g., grandparent, adult sibling). Any of the previously described family types that contained an adult child are categorized as an extended family. As a result, counts and percentages of the remaining family types—in particular, nuclear families and single-parent families—will be smaller.
- An “*other*” family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents. Children being raised by their grandparents are included in this category, as well as foster children.

## Family Structure Characteristics

The percent distribution of family structure for U.S. children in 2001–2007 is shown in [Figure 1](#). These percentages can be interpreted as either an estimate for the midpoint of the study period or as an “average” across the study period.

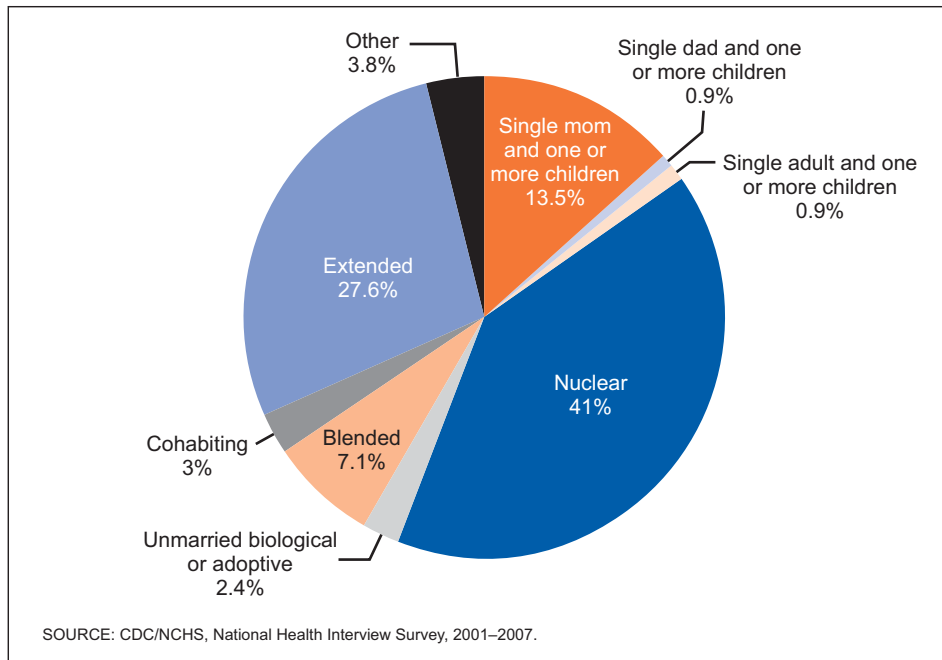

**Figure 1. Percent distribution of family structure for children under age 18: United States, 2001–2007**

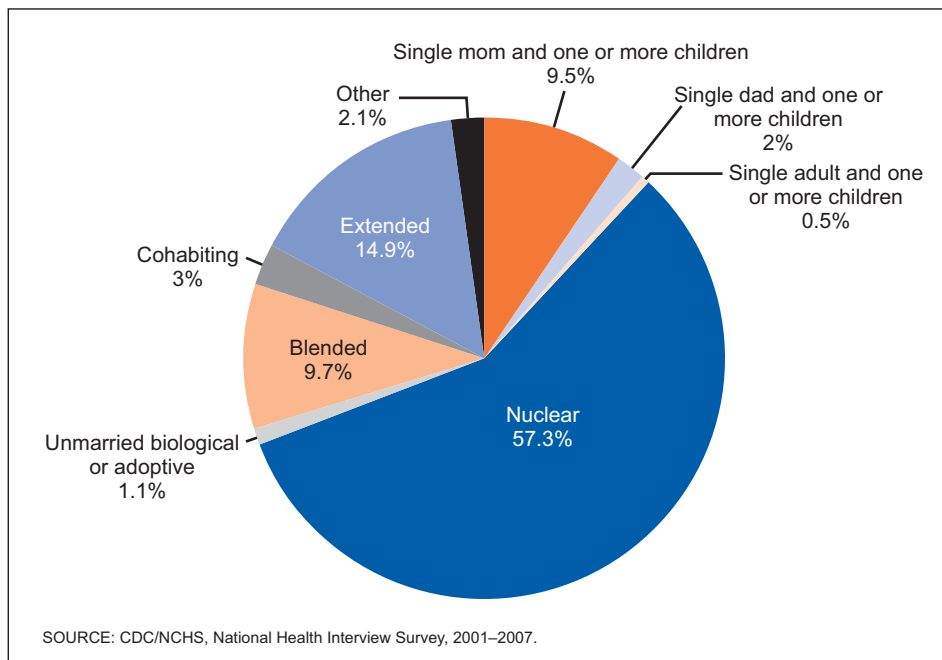

**Figure 2. Percent distribution of family structure for non-Hispanic black children under age 18: United States, 2001–2007**

Note that single-parent families are disaggregated into single mother, single father, and single adult (such as an adult sibling, aunt or uncle, or grandparent) in order to facilitate comparisons with previous publications. Roughly 48% of all children were living in a “traditional” nuclear family, and approximately 2% of children lived in

an unmarried biological or adoptive family. In other words, one-half of all children lived with two biological or adoptive parents in 2001–2007. In addition, roughly 14% of children lived with a single mother (either biological or adoptive) in 2001–2007, while nearly 2% lived with a single father and 1% lived with a related or unrelated single

**Figure 3. Percent distribution of family structure for Hispanic children under age 18: United States, 2001–2007**

**Figure 4. Percent distribution of family structure for non-Hispanic white children under age 18: United States, 2001–2007**

adult. Approximately 19% of children resided with a biological or adoptive parent and another adult relative (such as an adult sibling or a grandparent) in an extended family in 2001–2007, 9% resided with a biological or adoptive parent and stepparent in a blended family, and 3% lived with a biological

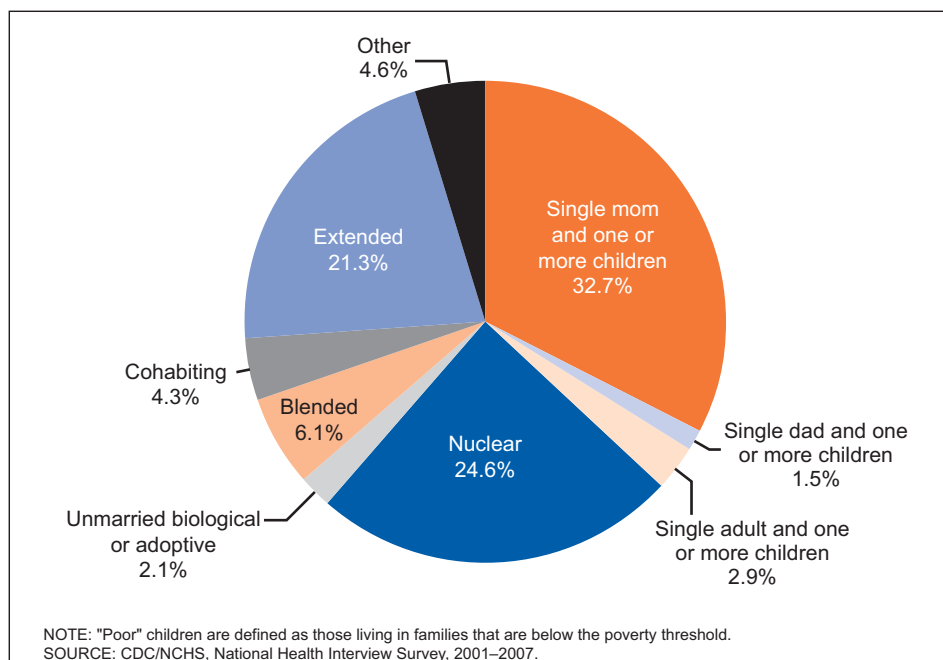

or adoptive parent and that parent’s cohabiting partner. Lastly, other families consisting of one or more children living with two or more related or unrelated adults who are not biological or adoptive parents made up approximately 3% of the distribution.

Only 0.1% of children could not be assigned to a designated category.

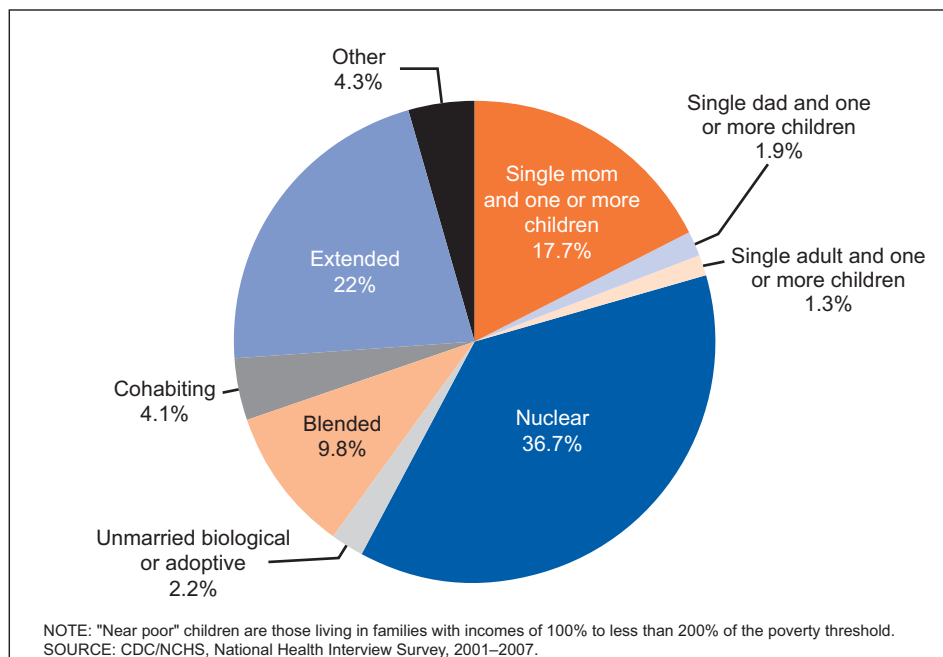

The results in [Figure 1](#) change considerably when the percent distribution of family structure is disaggregated by race/ethnicity or poverty status, the two correlates of family structure mentioned most commonly in the literature (41). [Figures 2–4](#) show percent distributions of family structure for non-Hispanic black, Hispanic, and non-Hispanic white children. Fifty-seven percent of non-Hispanic white children lived in nuclear families, compared with 21% of non-Hispanic black children and 41% of Hispanic children. In contrast, non-Hispanic black and Hispanic children were more likely than non-Hispanic white children to live in single-parent or extended families. For example, 10% of non-Hispanic white children lived with a single mother, compared with 14% of Hispanic children and 32% of non-Hispanic black children. A similar picture emerges if family structure is disaggregated by poverty status ([Figures 5–7](#)). Thirty-three percent of poor children (those in families with income below the poverty threshold) lived in single-mother families, compared with 18% of near poor children (those in families with income of 100% to less than 200% of the poverty threshold) and 6% of not poor children (those in families with income 200% of the poverty threshold or greater). Poor children were also much less likely to be living in nuclear families: 25% of poor children lived in nuclear families, while 37% of near poor, and 61% of not poor children lived in nuclear families.

[Figure 8](#) shows the percent distribution of family structure across the 7-year study period. Note that in this figure (and in the remainder of the report), children living with single mothers, single fathers, and single adults are combined into the single-parent category described in the Introduction. While the trend lines appear relatively flat, there are nevertheless measurable changes in the distributions during the study period. For example, the percentage of nuclear families declined

**Figure 5. Percent distribution of family structure for poor children under age 18: United States, 2001–2007**

**Figure 6. Percent distribution of family structure for near poor children under age 18: United States, 2001–2007**

from 49.6% in 2001 to 47.3% in 2007; blended families also declined from 9.8% in 2001 to 8.3% in 2007. On the other hand, the percentage of other families more than doubled during the study period, from 1.7% in 2001 to 3.7% in 2007.

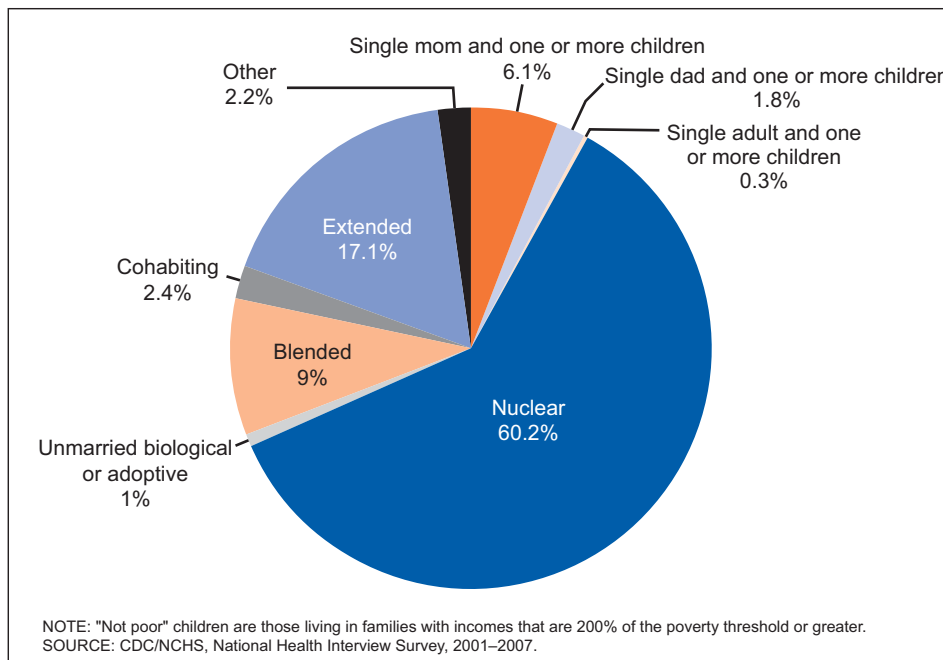

## Measures of Physical Health and Limitations

### Health status and chronic conditions

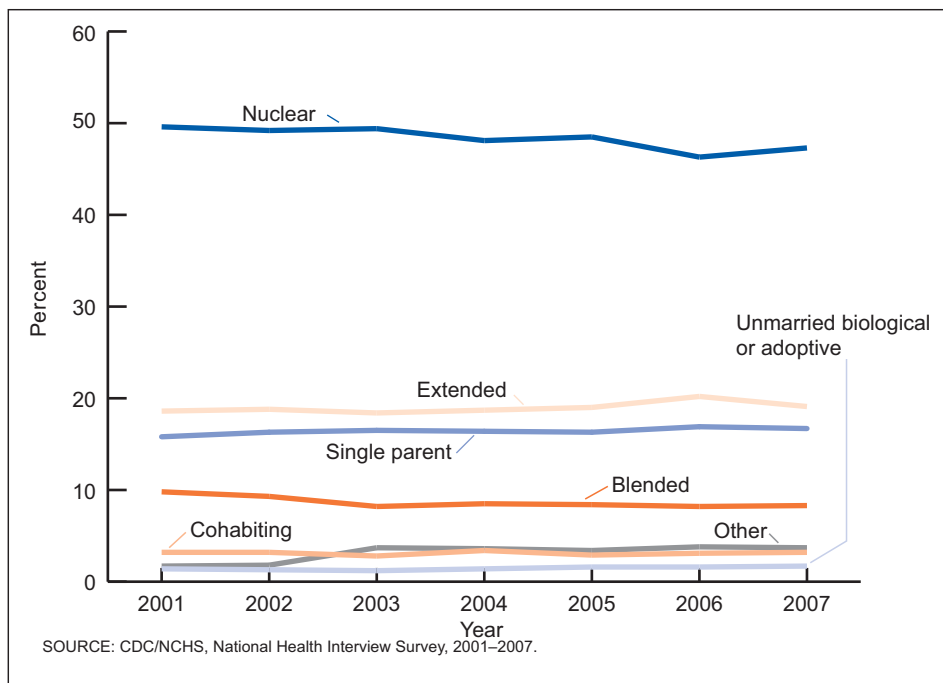

Overall, 12.6 million U.S. children under age 18 (17.2%) were in good,

fair, or poor health (Tables 1–2) and 1.8 million U.S. children under age 18 (2.5%) had one or more chronic conditions (Tables 3–4).

- As Figure 9 illustrates, children in nuclear (12%) and blended (17.5%) families were least likely to be in good, fair, or poor health, while children in other families (30%) were most likely to be in good, fair, or poor health. Children in single-parent families (3.2%) were more likely to have one or more chronic conditions than children in nuclear (2.2%), unmarried biological or adoptive (1.9%), or extended (2.4%) families, and were comparable to children living in the remaining family types (Figure 10).
- Nearly 22% of Hispanic children living in nuclear families were in good, fair, or poor health compared with Hispanic children living in single-parent (28.8%), unmarried biological or adoptive (27.8%), extended (30.8%), or other (35.4%) families. Non-Hispanic white children in nuclear families (9.2%) were least likely to be in good, fair, or poor health relative to non-Hispanic white children in the remaining family types. Likewise, non-Hispanic black children in nuclear families (16.7%) were least likely to be in good, fair, or poor health relative to non-Hispanic black children in the remaining family types.
- Among poor families, children in nuclear families (27.1%) were less likely to be in good, fair, or poor health than children in extended (36.4%) or other (40.4%) families. Among near poor families, 19.2% of children in nuclear families were in good, fair, or poor health compared with 22.5% of children in single-parent families, 23.3% in blended families, 26.4% in extended families, and 32.9% in other families. Among not poor families, children in nuclear families (8.5%) were least likely to be in good, fair, or poor health. Children living in not poor single-parent families (3.3%) were more likely to have one or more chronic conditions than

**Figure 7. Percent distribution of family structure for not poor children under age 18: United States, 2001–2007**

**Figure 8. Percent distribution of family structure across the study period for children under age 18: United States, 2001–2007**

children in not poor nuclear (2.3%) or extended (2.2%) families. Family structure was unrelated to the prevalence of chronic conditions among children living in poor or near poor families.

- Family structure was unrelated to the prevalence of chronic conditions

among children whose more highly educated parent was either a high school dropout or a high school graduate or equivalent. However, when at least one parent had more than a high school diploma, children in nuclear families (2.3%) were less likely than children in single-parent

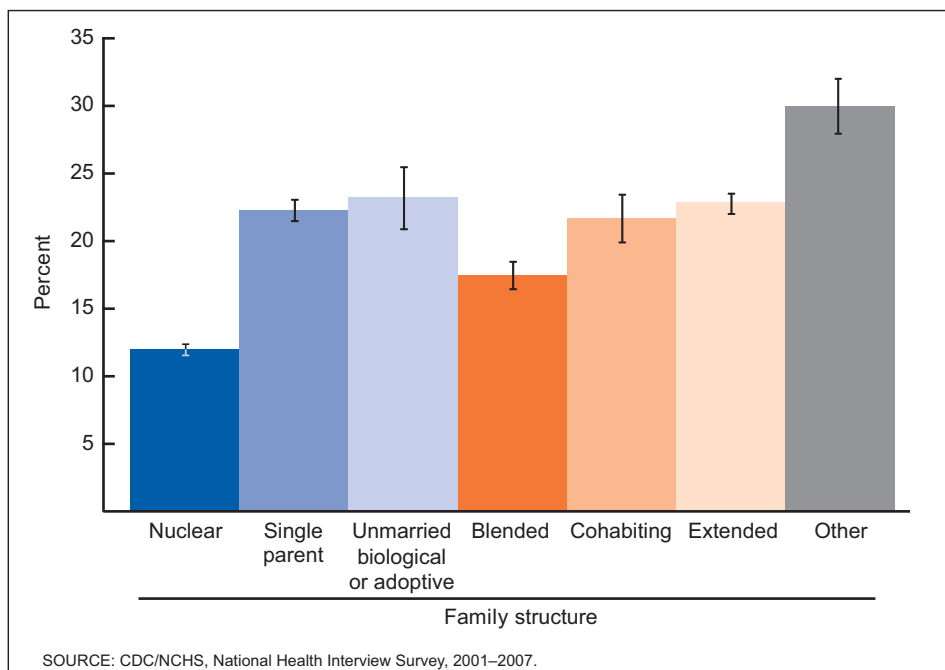

(3.6%) or cohabiting (4.3%) families to have one or more chronic conditions.

- Among children with private health insurance, those living in nuclear families (9%) were least likely to be in good, fair, or poor health. Among children with Medicaid, those living in extended (32.5%) and other (35.3%) families were most likely to be in good, fair, or poor health.

### Asthma, hay fever, and allergies

In the past 12 months, 9 million U.S. children under age 18 (12.7%) had ever had asthma, 7.2 million children (9.9%) had hay fever, 8.4 million U.S. children (11.6%) had respiratory allergies, and 8.8 million children (12%) had digestive or skin allergies (Tables 5–12).

- Children living with biological or adoptive parents—either in nuclear families or unmarried biological or adoptive families—were less likely to have ever suffered from asthma than children in the remaining family types (Figure 11).
- Children in single-parent families were more likely than children in nuclear families to have asthma regardless of their gender, race/ethnicity, parent’s education, family’s poverty status, place of residence, or region.
- Among children with private health insurance, those living in nuclear families (10.4%) were less likely to have asthma than children in single-parent (15.3%), unmarried biological or adoptive (15.5%), blended (13.7%), extended (13.9%), or other (18.7%) families. Among children with Medicaid, those living in nuclear (11.4%) and unmarried biological or adoptive (9.3%) families were less likely to have asthma than children in single-parent (20%), blended (15.3%), cohabiting (16.5%), extended (16.4%), or other (17%) families.
- Children living in unmarried biological or adoptive families (5.8%) were least likely to have hay fever in the past 12 months (Figure 12). Children in unmarried

**Figure 9. Percentages of children under age 18 in good, fair, or poor health, by family structure: United States, 2001–2007**

**Figure 10. Percentages of children under age 18 with one or more selected chronic conditions, by family structure: United States, 2001–2007**

biological or adoptive families (8.4%) were also less likely to have respiratory allergies in the past 12 months than children in nuclear (11.3%), single-parent (12.8%), blended (12%), extended (11.2%), or other (12.8%) families, and were comparable to children in cohabiting

families (Figure 13).

- Among Hispanic children, those in unmarried biological or adoptive families (5.6%) were less likely than children in single-parent (8.2%) or blended (8.8%) families to have hay fever. Among non-Hispanic white children, those in unmarried

biological or adoptive families (7.2%) were less likely than children in nuclear (11.2%), single-parent (12%), blended (10.9%), extended (12.2%), or other (11.4%) families to have hay fever. Family structure was unrelated to the prevalence of hay fever among non-Hispanic black children.

- Family structure was unrelated to the prevalence of hay fever among children whose more highly educated parent was a high school dropout. When at least one parent was either a high school graduate or had more than a high school diploma, children in unmarried biological or adoptive families were less likely to have hay fever than children in nuclear, single-parent, blended, or extended families.
- Among near poor families, children living in cohabiting families (5.4%) were less likely to have hay fever than children living in single-parent (9.2%), blended (8.7%), or other (10.4%) families. Among not poor families, children living in unmarried biological or adoptive families (5.8%) were least likely to have hay fever. Children living in unmarried biological or adoptive families that owned or were buying their homes were also least likely to have hay fever (6.3%). Among families that rented their homes, children in unmarried biological or adoptive families (5.7%) were less likely than children in single-parent (8.3%), blended (8.1%), or other (9.7%) families to have hay fever.
- Family structure was unrelated to the prevalence of respiratory allergies among Hispanic children. Non-Hispanic white children in unmarried biological or adoptive families (9%) were less likely to have respiratory allergies in the past 12 months than non-Hispanic white children in nuclear (12.2%), single-parent (15.5%), blended (13.4%), extended (14.1%), or other (15.3%) families. Among non-Hispanic black children, those in cohabiting families (7.7%) were less likely to have respiratory allergies than children in single-parent families (11.1%).

**Figure 11. Percentages of children under age 18 who ever had asthma, by family structure: United States, 2001–2007**

**Figure 12. Percentages of children under age 18 who had hay fever in the past 12 months, by family structure: United States, 2001–2007**

- When the more highly educated parent was a high school dropout, children in nuclear families (7.2%) were less likely to have respiratory allergies in the past 12 months than children in single-parent families (9.1%). When at least one parent was a high school graduate, children

in unmarried biological or adoptive families (7.1%) were less likely to have respiratory allergies than children in single-parent (11.2%) or extended (10.1%) families. When at least one parent had more than a high school diploma, children in unmarried biological or adoptive

families (10.8%) were less likely than children in single-parent (15.3%) or other (20%) families to have respiratory allergies.

- Among poor families, children in nuclear families (9.2%) were less likely to have respiratory allergies than children in single-parent families (11.8%). Among near poor families, children in unmarried biological or adoptive families (6.9%) were less likely to have respiratory allergies than children living in single-parent (12.9%), blended (10.6%), or other (13%) families. Among not poor families, children in unmarried biological or adoptive families (8.6%) were less likely to have respiratory allergies than children in the remaining family types, with the exception of other families.
- Among children living in large metropolitan statistical areas (MSAs), children in unmarried biological or adoptive families (5.4%) were least likely to have respiratory allergies. Among children living in small MSAs, children in unmarried biological or adoptive families (10%) were less likely to have respiratory allergies than children in single-parent families (14.1%). Family structure was unrelated to the prevalence of respiratory allergies among children who did not live in an MSA.
- Children in single-parent families (13.1%) were more likely to have digestive or skin allergies in the past 12 months than children in nuclear (11.8%) or extended (11.4%) families, and were comparable to children living in the remaining family types.
- Hispanic children living in single-parent families (10.4%) were more likely than Hispanic children in nuclear (8.7%) or extended (8.2%) families to have digestive or skin allergies. Family structure was unrelated to the prevalence of digestive or skin allergies among non-Hispanic children.
- Among poor families, children living in unmarried biological or adoptive families (6.2%) were less likely than children in single-parent

**Figure 13. Percentages of children under age 18 who had respiratory allergies in the past 12 months, by family structure: United States, 2001–2007**

**Figure 14. Percentages of children aged 4–17 who had a basic action disability, by family structure: United States, 2001–2007**

(13.2%), blended (12%), extended (11%), or other (11.1%) families to have digestive or skin allergies. Family structure was unrelated to the prevalence of digestive or skin allergies among children living in near poor or not poor families.

### Headaches or migraines and ear infections

Overall, nearly 3.7 million U.S. children aged 3–17 (6%) had frequent headaches or migraines in the past 12 months, while 4.2 million U.S. children

under age 18 (5.8%) had three or more ear infections the past 12 months (Tables 13–16).

- Children aged 3–17 in nuclear families (4.5%) were less likely to have frequent headaches or migraines in the past 12 months than children in single-parent (8%), blended (6.6%), cohabiting (7.6%), extended (7.1%), or other (7.6%) families, and were comparable to children living in unmarried biological or adoptive families.
- Among children aged 12–17, those in nuclear families (7.6%) were less likely to have headaches or migraines than children in single-parent (11.6%), cohabiting (12.8%), extended (9.7%), or other (11.4%) families.
- Hispanic children living in nuclear families (4%) were less likely to have frequent headaches or migraines than children in single-parent (7.9%), blended (5.9%), cohabiting (7.4%), or extended (5.8%) families. Non-Hispanic white children living in nuclear families (4.8%) were less likely to have frequent headaches or migraines than children in nonnuclear families, with the exception of unmarried biological or adoptive families. Non-Hispanic black children living in nuclear families (4.1%) were less likely to have frequent headaches or migraines than those in single-parent (7.7%), blended (6.5%), extended (7.2%), or other (9.5%) families.
- Among poor families, children in nuclear families (6.6%) were less likely to have frequent headaches or migraines than children in single-parent (8.8%) or other (13.2%) families. Among near poor families, children in nuclear families (5.4%) were less likely than children in single-parent (8.5%) or extended (7.3%) families to have frequent headaches or migraines. Among not poor families, children in nuclear families (4.1%) were less likely than children in single-parent (6.6%), blended (6.4%), cohabiting (7.3%),

or extended (6.7%) families to have frequent headaches or migraines.

- Among children of all ages, those in unmarried biological or adoptive families (8.3%) were more likely to have three or more ear infections in the past 12 months than children in nuclear (5.9%), single-parent (6%), blended (5.1%), extended (5.4%), or other (5.3%) families, and were comparable to children living in cohabiting families.
- Hispanic children living in unmarried biological or adoptive families (9.1%) were more likely than Hispanic children in nuclear (5.8%), single-parent (5.9%), blended (4.8%), or extended (5.6%) families to have three or more ear infections in the past 12 months. Non-Hispanic white children in unmarried biological or adoptive families (9.4%) were more likely than non-Hispanic white children in nuclear (6.4%), blended (5.4%), or extended (6%) families to have three or more ear infections. Family structure was unrelated to the prevalence of ear infections among non-Hispanic black children.
- Among children living in the Northeast, those in unmarried biological or adoptive families (12.9%) were more likely to have three or more ear infections in the past 12 months than children in nuclear (5.9%), single-parent (4.7%), blended (5.9%), extended (5%), or other (6%) families. Among children in the South, those in unmarried biological or adoptive families (8.8%) were more likely to have three or more ear infections than children in blended (5.4%) or other (4.9%) families. Family structure was unrelated to the prevalence of ear infections in the Midwest and West regions of the United States.

## Developmental delays and limitations

Overall, 2.6 million U.S. children under age 18 (3.6%) had mental retardation or any developmental delay; 1.4 million U.S. children under age 18 (1.9%) had an impairment or health problem that limited their crawling,

walking, running, or playing; and 1.3 million U.S. children under age 18 (1.8%) received special education or EIS for an emotional or behavioral problem. In addition, 1.7 million U.S. children under age 18 (2.3%) experienced vision problems and 9.7 million U.S. children aged 4–17 (17.2%) had a basic action disability (Tables 17–26).

- Children living in nuclear families (3%) were less likely than children in single-parent (4.6%), blended (3.8%), cohabiting (4.5%), extended (3.6%), or other (6.6%) families to have mental retardation or any developmental delay, and were comparable to children living in unmarried biological or adoptive families. Children in other families had the highest prevalence rates of mental retardation or any developmental delay.
- Among Hispanic children, those in nuclear families (2.4%) were less likely than children in single-parent (4.2%) or other (5.1%) families to have mental retardation or any developmental delay. Among non-Hispanic white children, those living in nuclear families (3.3%) were less likely to have mental retardation or any developmental delay than children living in single-parent (4.9%), cohabiting (5.5%), or other (7.7%) families. Among non-Hispanic black children, those in nuclear families (2.8%) were less likely than children in single-parent families (4.1%) to have mental retardation or any developmental delay.
- Children in nuclear families (1.4%) were less likely than children in single-parent (2.7%), blended (2.6%), extended (2%), or other (2.6%) families to have an impairment or health problem that limited their crawling, walking, running, or playing, and were comparable to children living in unmarried biological or adoptive families or cohabiting families.
- When the more highly educated parent was a high school dropout, children in nuclear families (1.1%) were less likely than children in single-parent families (3%) to have

an impairment or problem limiting activity. When at least one parent was a high school graduate, children in nuclear families (1.8%) were less likely than children in single-parent (2.6%) or blended (3.9%) families to have an impairment or problem limiting activity. When at least one parent had more than a high school diploma, children in nuclear families (1.4%) were less likely to have such an impairment or health problem than children in single-parent (2.7%), blended (2%), or extended (2.1%) families.

- Among poor families, children living in nuclear families (1.7%) were less likely to have impairments or health problems limiting activity than children in single-parent (3.2%), blended (4.5%), or extended (2.7%) families. Among near poor families, children in nuclear families (2%) were less likely to have impairments or health problems limiting activity than children in single-parent families (2.9%). Among not poor families, children living in nuclear families (1.3%) were less likely to have impairments or health problems limiting activity than children in single-parent (2%), blended (2%), or extended (1.7%) families.
- Less than 1% of children living in nuclear families received special education or EIS for an emotional or behavioral problem compared with 3.3% of children in single-parent families, 2.3% of children in blended families, 3.3% of children in cohabiting families, 2.1% of children in extended families, and 5.2% of children in other families. Children living in nuclear families were comparable to those living in unmarried biological or adoptive families regarding the receipt of special education or EIS. Children in other families were most likely to receive special education or EIS for an emotional or behavioral problem.
- Among children with Medicaid, those living in nuclear families (1.5%) were less likely to receive special education or EIS for emotional or behavioral problems

- than children in single-parent (4.4%), blended (3.7%), cohabiting (4.6%), extended (3.3%), or other (8%) families. With the exception of children living in unmarried biological or adoptive families, children with Medicaid living in other families were most likely to receive special education or EIS for an emotional or behavioral problem.
- Children living in nuclear families (1.8%) were less likely than children in single-parent (3.2%), blended (2.6%), cohabiting (3.6%), extended (2.6%), or other (3%) families to have vision problems, and were comparable to children living in unmarried biological or adoptive families. Among children aged 5–17, those in nuclear families (2.2%) were less likely than children in single-parent (3.8%), blended (3.2%), cohabiting (4.4%), extended (3.1%), or other (3.4%) families to have vision problems, even when wearing glasses or contact lenses.
  - Among poor families, children in nuclear families (2.6%) were less likely to have vision problems than children in single-parent families (4%). Family structure was not related to vision problems among children living in near poor families. Among not poor families, children in nuclear families (1.6%) were less likely than children in single-parent (2.5%), blended (2.4%), or extended (2.5%) families to have vision problems.
  - Children aged 4–17 living in nuclear families (12.5%) were less likely than children in single-parent (22.7%), unmarried biological or adoptive (17.7%), blended (23.4%), cohabiting (23.9%), extended (18.1%), or other (25.8%) families to have a basic action disability (Figure 14).
  - When the more highly educated parent was a high school dropout, children in nuclear families (11.3%) were less likely than children in single-parent (23.9%), blended (21.5%), cohabiting (25.8%), or extended (15.9%) families to have a basic action disability. When at least one parent was a high school graduate, children in nuclear families (14.4%) were less likely than children in single-parent (22.7%), blended (25.4%), cohabiting (22.4%), or extended (19.4%) families to have a basic action disability. When at least one parent had more than a high school diploma, children in nuclear families (12.3%) were least likely to have such a disability.
  - Among children with Medicaid health insurance, those living in nuclear families (16.8%) were less likely to have a basic action disability than children in single-parent (26.7%), blended (28.1%), cohabiting (25.5%), extended (22.8%), or other (32.3%) families.
- ### Learning disabilities and missed school days
- Overall, 6.9 million U.S. children aged 3–17 (11.4%) had a learning disability or ADHD. In addition, 8.1 million U.S. children aged 5–17 (15.8%) missed 6 or more days of school in the past 12 months due to illness or injury (Tables 27–30).
- Children aged 3–17 living in nuclear families (8.1%) were less likely than children in single-parent (14.9%), blended (16.1%), cohabiting (15.6%), extended (12.1%), or other (19%) families to have a learning disability or ADHD (Figure 15), and were comparable to those living in unmarried biological or adoptive families.
  - Roughly 11% of boys living in nuclear families had a learning disability or ADHD compared with 20.4% of boys in single-parent families, 21.5% in blended families, 19.9% in cohabiting families, 15.7% in extended families, and 22.7% in other families. Five percent of girls living in nuclear families had a learning disability or ADHD compared with 9.5% of girls in single-parent families, 10.5% in blended families, 11% in cohabiting families, 8.1% in extended families, and 15% in other families.
  - Among Hispanic children, those in nuclear families (6.6%) were less likely than children in single-parent (11.3%), blended (11.7%), extended (8.1%), or other (11.4%) families to have a learning disability or ADHD.
  - Among non-Hispanic white children, those living in nuclear families (9%) were less likely to have a learning disability or ADHD than children living in single-parent (17.4%), blended (18%), cohabiting (18.2%), extended (15.1%), or other (22.3%) families. Among non-Hispanic black children, those in nuclear families (5.8%) were less likely than children in single-parent (13.2%), blended (12.1%), cohabiting (13.7%), extended (11.4%), or other (20.2%) families to have a learning disability or ADHD.
  - Children with private health insurance living in nuclear families (7.8%) were less likely to have a learning disability or ADHD than children with private health insurance living in single-parent (13%), blended (15.6%), cohabiting (15.6%), extended (10.8%), or other (14.1%) families. Children with Medicaid living in nuclear families (11.1%) were less likely to have a learning disability or ADHD than children with Medicaid living in single-parent (17.3%), blended (19.5%), cohabiting (16.4%), extended (15.9%), or other (24.6%) families. Similarly, 5.7% of uninsured children living in nuclear families had a learning disability or ADHD compared with 14.1% of uninsured children living in single-parent families, 12.9% in blended families, 13.2% in cohabiting families, 9.8% in extended families, and 12.2% in other families.
  - Children in nuclear families were generally less likely than children in the remaining family types to have a learning disability or ADHD regardless of parent’s education, income, poverty status, place of residence, or region.
  - Children aged 5–17 living in nuclear families (13.3%) were less likely to miss school for 6 or more days in the past 12 months due to illness or injury than children aged 5–17 living in single-parent (19.7%),

**Figure 15. Percentages of children aged 3-17 who had ever been told of having a learning disability or ADHD, by family structure: United States, 2001-2007**

**Figure 16. Percentages of children aged 5-17 who missed 6 or more days of school in the past 12 months due to illness or injury, by family structure: United States, 2001-2007**

blended (16.1%), cohabiting (19%), extended (17.4%), or other (15.8%) families, and were comparable to children living in unmarried biological or adoptive families (Figure 16).

cohabiting families, and 13.5% in extended families. Among non-Hispanic white children, 14.8% of those in nuclear families missed 6 or more school days in the past 12 months compared with 23.5% of children in single-parent families, 18% in blended families, 21.2% in cohabiting families, 21.5% in extended families, and 19.3% in other families. Among non-Hispanic black children, 7.6% of those in nuclear families missed 6 or more school days in the past 12 months compared with 14.2% of children in single-parent families, 11.1% in blended families, 14.1% in extended families, and 12.8% in other families.

- When the more highly educated parent was a high school dropout, 13.1% of children living in nuclear families missed 6 or more days of school in the past 12 months compared with 24.4% of children in single-parent families, 22.3% in blended families, and 19.9% in cohabiting families. When at least one parent was a high school graduate, children in nuclear families (16%) were less likely than children in extended families (20.1%) to miss 6 or more school days. When at least one parent had more than a high school diploma, 12.7% of children in nuclear families missed 6 or more days of school compared with 18.9% of children in single-parent families, 21% in unmarried biological or adoptive families, 15.2% in blended families, 17.8% in cohabiting families, and 17.3% in extended families.
- Among poor families, children in nuclear families (16.3%) were less likely than children in single-parent (22.3%) or blended families (22.3%) to miss 6 or more days of school in the past 12 months. Among near poor families, children in nuclear families (13.9%) were less likely than children in single-parent (20.6%), blended (18.2%), cohabiting (19.3%), or extended (17.5%) families to miss 6 or more days of school. Among not poor families, children in nuclear families

- Among Hispanic children, 10.5% of those in nuclear families missed 6 or more school days in the past 12 months compared with 19.9% of children in single-parent families, 13.5% in blended families, 17.7% in

**Figure 17. Percentages of children under age 18 who did not have health insurance, by family structure: United States, 2001–2007**

**Figure 18. Percentages of children under age 18 without a usual place of health care, by family structure: United States, 2001–2007**

(12.8%) were less likely than children in single-parent (15.9%), cohabiting (18%), or extended (17.1%) families to miss 6 or more school days.

## Measures of Access to or Utilization of Health Care

### Lack of health insurance coverage

Overall, 7 million U.S. children under age 18 (9.6%) lacked health

insurance coverage (Tables 31–32).

- Children living in nuclear families (8%) were less likely than children in single-parent (9.1%), unmarried biological or adoptive (10.8%), blended (9.4%), cohabiting (14.2%), extended (12.6%), or other (15.2%) families to lack health insurance coverage (Figure 17).
- Among children under age 5, 6% of those living in nuclear families lacked health insurance coverage compared with 8.9% of children in unmarried biological or adoptive families, 12.6% of children in cohabiting families, 11.6% of children in extended families, and 12.6% of children in other families. Among children aged 5–17, 8.9% of children living in nuclear families lacked health insurance coverage compared with 13.9% of children in unmarried biological or adoptive families, 14.8% of children in cohabiting families, 12.8% of children in extended families, and 16% of children in other families.
- Hispanic children in single-parent families (12.5%) were less likely to lack health insurance coverage than Hispanic children in nuclear (19.9%), unmarried biological or adoptive (18.8%), blended (17.6%), cohabiting (18.5%), extended (22.9%), or other (26.3%) families. However, non-Hispanic children in nuclear families (5.7%) were less likely to lack health insurance coverage than non-Hispanic children in single-parent (8.4%), blended (7.9%), cohabiting (13.3%), extended (8.6%), or other (12%) families.
- Among children living in families with a combined family income less than \$20,000 in the previous calendar year, 9.7% in single-parent families did not have health insurance coverage compared with 20.8% in nuclear families, 15.6% in blended families, 14.9% in cohabiting families, 16.9% in extended families, and 16.1% in other families. Similar percents with respect to lacking health insurance coverage were obtained for children living in poor families or when the

more highly educated parent did not graduate from high school.

- Among children living in the West, those in unmarried biological or adoptive families (16.7%) were more likely than children in nuclear (10.2%), single-parent (11.5%), or blended (11%) families to lack health insurance coverage. This pattern was not apparent in the remaining three regions of the United States.

### Lack of usual place of care

Overall, 3.7 million U.S. children under age 18 (5%) lacked a usual place of health care (Tables 33–34).

- Children living in nuclear families (3.8%) were less likely than children in single-parent (5.8%), blended (4.8%), cohabiting (7.8%), extended (6.8%), or other (8.4%) families to lack a usual place of health care, and were comparable to children living in unmarried biological or adoptive families (Figure 18).
- Hispanic children living in nuclear families (9.9%) were less likely than Hispanic children in cohabiting (13.9%), extended (13.2%), or other (15.9%) families to lack a usual place of health care. Non-Hispanic white children living in nuclear families (2.2%) were less likely than non-Hispanic white children in single-parent (5.3%), blended (3.6%), cohabiting (7.6%), extended (3.4%), or other (6.6%) families to lack a usual place of health care. Family structure was unrelated to lacking a usual place of health care among non-Hispanic black children.
- When the more highly educated parent was a high school dropout, children living in nuclear families (14.5%) were more likely to lack a usual place of health care than children in single-parent (8.3%), unmarried biological or adoptive (6.8%), or blended (7%) families. However, when at least one parent was a high school graduate, children in nuclear families (5%) were less likely to lack a usual place of health care than children in cohabiting (7.5%) or extended (6.3%) families.

Similarly, when at least one parent had more than a high school diploma, children in nuclear families (2.4%) were less likely to lack a usual place of care than children in single-parent (4.4%), blended (4.3%), cohabiting (6.2%), or extended (3.9%) families. Similar patterns of percentages with respect to lacking a usual place of health care were obtained for children living in poor, near poor, and not poor families.

- Children living in nuclear families that owned or were buying their homes (2.6%) were less likely to lack a usual place of health care than children in single-parent (4.8%), blended (3.6%), cohabiting (6.6%), extended (5.1%) or other (6.4%) families that owned or were buying their homes. Children living in nuclear families that rented their homes (8.5%) were more likely to lack a usual place of health care than children in single-parent (6.3%) or unmarried biological or adoptive (4.5%) families that rented, but were less likely to lack a usual place of health care than children in extended (10.7%) or other (13.2%) families that rented their homes.
- Among children living in the Northeast, 1.3% of those in nuclear families lacked a usual place of health care compared with 2.5% of children in extended families. Among children living in the Midwest, 2.6% of those in nuclear families lacked a usual place of health care compared with 4.2% of children in single-parent families, 5.5% of children in cohabiting families, and 4.6% of children in extended families. Among children living in the South, 4.7% of those in nuclear families lacked a usual place of health care compared with 7.3% of children in single-parent families, 10.2% of children in cohabiting families, 8.1% of children in extended families, and 9.8% of children in other families. Among children living in the West, 5.7% of those in nuclear families lacked a usual place of health care compared with 8.2% of single-parent families, 8.7% of children in blended

families, 9.8% of children in cohabiting families, 9.6% of children in extended families, and 12% of children in other families.

### Prescription medication usage

Overall, 9.4 million U.S. children under age 18 (12.9%) had a problem that required regular use of a prescription medication for at least 3 months (Tables 35–36).

- Children in unmarried biological or adoptive families (9.2%) were least likely to have had a problem requiring the regular use of a prescription medication for at least 3 months (Figure 19).
- Among young children under age 5, 11% of those living in single-parent families had a problem that required regular use of a prescription medication for at least 3 months compared with 7.2% of children in nuclear families, 6.1% in unmarried biological or adoptive families, 6.8% in blended families, and 7.5% in extended families.
- Hispanic children living in unmarried biological or adoptive families (6.2%) were less likely to have a problem requiring regular use of a prescription medication than Hispanic children in single-parent (11%), blended (9.5%), or other (11.9%) families. Among non-Hispanic white children, those living in unmarried biological or adoptive families (11.4%) were less likely to have a problem requiring regular use of a prescription medication than children in single-parent (18.6%), blended (17.7%), extended (17.1%), or other (19%) families. Non-Hispanic black children living in nuclear families (10.2%) were less likely to have a problem requiring prescription medication than non-Hispanic black children in other families (15.1%).
- Among poor families, children in nuclear families (9.1%) were less likely than children in single-parent (15.5%), blended (15%), extended (11.6%), or other (14.5%) families to have a problem requiring prescription medication. Among near

**Figure 19. Percentages of children under age 18 with a problem for which prescription medications were used for at least 3 months, by family structure: United States, 2001–2007**

**Figure 20. Percentages of children under age 18 who had two or more visits to the emergency room in the past 12 months, by family structure: United States, 2001–2007**

poor families, children in nuclear families (9.7%) were less likely than children in single-parent (15.7%), blended (15.3%), cohabiting (15.1%), or other (16.9%) families to have a problem requiring prescription medication. Among not poor families, children in unmarried

biological or adoptive families (7.9%) were least likely to have a problem requiring prescription medication.

- Children living in unmarried biological or adoptive families that owned or were buying their homes (10.6%) were less likely to have a

problem requiring prescription medication than children in single-parent (16.3%), blended (15.7%), or other (19.2%) families that owned or were buying their homes. Children living in unmarried biological or adoptive families that rented their homes (8%) were less likely to have a problem requiring prescription medication than children in single-parent (15%), blended (14%), cohabiting (13.5%), or extended (11%) families that rented their homes.

- Among children with private health insurance, children in unmarried biological or adoptive families were least likely to have a problem requiring prescription medication. Among children with Medicaid, 12% of children in nuclear families had a problem that required prescription medication compared with 17.1% of children in single-parent families, 16.5% in blended families, 15.5% in cohabiting families, 14.3% in extended families, and 20.3% in other families.

### Receipt of medical care

Overall, 5.2 million U.S. children under age 18 (7.2%) had two or more visits to a hospital ER in the past 12 months; 19.4 million U.S. children aged 1–17 (28.4%) did not have a medical checkup in the past 12 months; and 14.9 million U.S. children aged 2–17 (23%) saw or talked with an eye doctor during the past 12 months. In addition, nearly 2.8 million U.S. children under age 18 (3.8%) had medical care delayed during the past 12 months due to concerns over the cost, 1.8 million U.S. children aged 2–17 (2.8%) did not receive needed prescription medication due to lack of affordability, and 1.4 million U.S. children aged 2–17 (2.2%) did not get needed eyeglasses due to lack of affordability (Tables 37–48).

- Children living in nuclear families (5.7%) were least likely to have two or more ER visits in the past 12 months (Figure 20).
- Among children under age 5, 7.2% of those in nuclear families had two

**Figure 21. Percentages of children under age 18 who did not have a medical checkup in the past 12 months, by family structure: United States, 2001–2007**

or more ER visits in the past 12 months compared with 17% of children in single-parent families, 13.1% in unmarried biological or adoptive families, 10.4% in blended families, 15% in cohabiting families, 12% in extended families, and 15% in other families. Among older children aged 12–17, 4.9% of those in nuclear families had two or more ER visits in the past 12 months compared with 8.3% of children in single-parent families, 8.5% in cohabiting families, 5.8% in extended families, and 9.4% in other families.

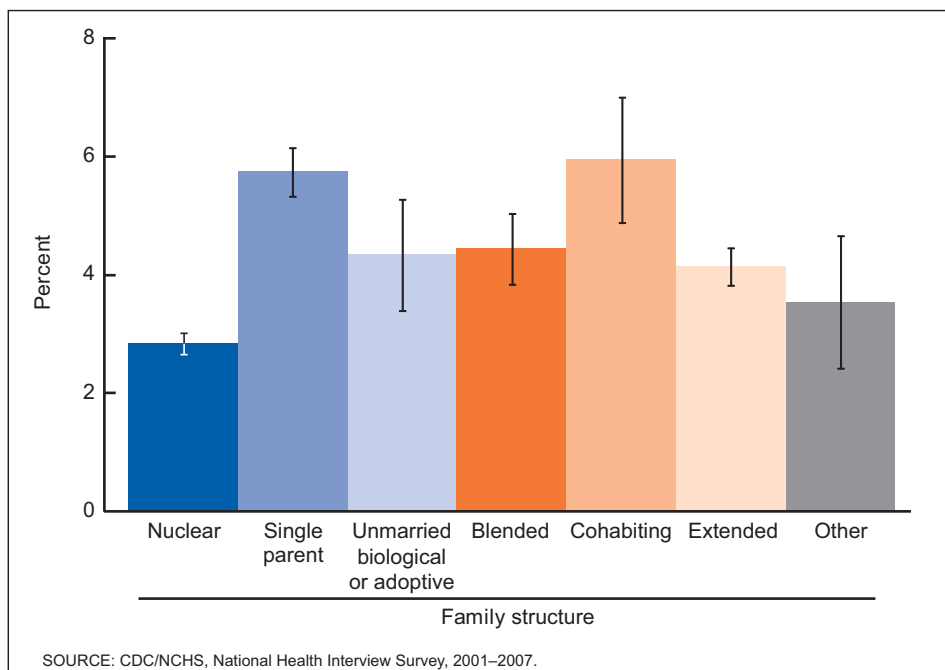

- Among children with private health care insurance, 5% of those in nuclear families had two or more ER visits in the past 12 months compared with 6.7% of children in single-parent families, 10.9% in unmarried biological or adoptive families, and 5.8% in extended families. Among children covered by Medicaid, 8.8% of those in nuclear families had two or more ER visits in the past 12 months compared with 13.5% of children in single-parent families, 12.7% in unmarried biological or adoptive families, 13.8% in cohabiting families, and 11.3% in extended

families.

- Children living in nuclear families (26.2%) were less likely to lack a medical checkup in the past 12 months than children in single-parent (28.7%), blended (30.2%), cohabiting (30.8%), extended (31.9%), or other (32.6%) families, and were comparable to children living in unmarried biological or adoptive families (Figure 21).
- Nearly 15% of children under age 5 living in nuclear families did not have a medical checkup in the past 12 months compared with 19.8% of children in the same age group living in cohabiting families and 19.3% of children in the same age group living in extended families.
- Among Hispanic children, those in single-parent families (30.2%) were less likely to lack a medical checkup in the past 12 months than children in nuclear (34%), cohabiting (37.4%), extended (38.3%), or other (39.3%) families. Among non-Hispanic white children, those in unmarried biological or adoptive families (23.3%) were less likely to lack a medical checkup than children in single-parent (32.9%), blended (31.5%), cohabiting (32.6%), extended (31%), or other

(34.8%) families. Among non-Hispanic black children, those in unmarried biological or adoptive families (14.4%) were less likely to lack a medical checkup than children in nuclear (21.1%), single-parent (22.4%), blended (23.5%), extended (24.5%), or other (24.9%) families.

- Among poor families, 26.5% of children living in unmarried biological or adoptive families did not have a medical checkup in the past 12 months compared with 37.1% of children living in nuclear families, 35.9% in extended families, and 36% in other families. Among not poor families, 23% of children living in nuclear families did not have a medical checkup in the past 12 months compared with 28% of children in single-parent families, 29.9% in blended families, 29.9% in cohabiting families, 28.5% in extended families, and 28.3% in other families.
- Children living in unmarried biological or adoptive families (12.5%) were less likely to have seen or spoken with an eye doctor during the past 12 months than children in nuclear (22.7%), single-parent (23.6%), blended (23.8%), cohabiting (20.4%), extended (24%), or other (22.3%) families.
- Among young children aged 2–4, 4% of those living in unmarried biological or adoptive families had seen an eye doctor in the past 12 months compared with 6.4% of children in nuclear families and 6.9% of children in single-parent families. Among children aged 5–11, 13.5% of those in unmarried biological or adoptive families had seen an eye doctor in the past 12 months compared with 23% of children in nuclear families, 23.7% in single-parent families, 24.8% in blended families, 21.1% in cohabiting families, 20% in extended families, and 23.1% in other families. Among older children aged 12–17, children in nuclear families (34%) were more likely to have seen an eye doctor in the past 12 months than children in

**Figure 22. Percentages of children under age 18 who had medical care delayed during the past 12 months due to concerns over cost, by family structure: United States, 2001–2007**

- single-parent (29.7%), blended (28.6%), cohabiting (27%), extended (31.7%), or other (26.7%) families.
- Children living in cohabiting families (5.9%) were more likely to have medical care delayed during the past 12 months due to concerns over cost than children in nuclear (2.8%), blended (4.4%), extended (4.1%), or other (3.5%) families, and were comparable to children living in single-parent or unmarried biological or adoptive families (Figure 22).
  - Family structure was unrelated to delays in receiving medical care due to concerns over cost among children whose more highly educated parent was a high school dropout. When at least one parent had more than a high school diploma, children in nuclear families (2.4%) were less likely to have medical care delayed due to cost than children in single-parent (6.8%), unmarried biological or adoptive (5.2%), blended (3.7%), cohabiting (5.8%), or extended (3.9%) families.
  - Among children with private health insurance, those in nuclear families (1.7%) were less likely than children in single-parent (4.1%), blended (2.4%), or extended (2.4%) families to have medical care delayed due to concerns over cost. Among children with Medicaid, family structure was unrelated to delays in receiving medical care due to concerns over cost. Among uninsured children, those in other families (9.9%) were less likely to have medical care delayed due to concerns over cost than children in nuclear (14.2%), single-parent (25.5%), blended (20.6%), cohabiting (18.1%), or extended (15.2%) families.
  - Children aged 2–17 living in nuclear families (1.8%) were least likely to have receipt of needed prescription medication delayed during the past 12 months due to lack of affordability.
  - Among Hispanic children, those in nuclear families (3.5%) were less likely to have receipt of needed prescription medication delayed due to lack of affordability than children in single-parent (5%), cohabiting (6.7%), or extended (5%) families. Among non-Hispanic white children, those in nuclear families (1.4%) were less likely to have receipt of needed prescription medication delayed due to lack of affordability than children in single-parent (5%), cohabiting (6.7%), or extended (5%) families.
  - Children aged 2–17 living in nuclear families (1.3%) were less likely to have receipt of needed prescription medication delayed due to lack of affordability than children in single-parent (3.4%), blended (2.3%), cohabiting (4.1%), or extended (2.8%) families that owned or were buying their homes. Children living in unmarried biological or adoptive families that rented their homes (2.6%) were less likely to have prescription medication delayed due to lack of affordability than children in single-parent (5.1%), blended (4.7%), cohabiting (4.6%), or extended (5.5%) families that rented their homes.
  - Among children with private health insurance coverage, 1% of those in nuclear families had prescription medication delayed due to lack of affordability compared with 3.2% of children in single-parent families, 1.9% of children in blended families, and 2% of children in extended families. Among children covered by Medicaid, 1.6% of those in other families had prescription medication delayed due to lack of affordability compared with 2.6% of children in nuclear families, 3.8% of children in single-parent families, 3.7% of children in blended families, 3.6% of children in cohabiting families, and 4% of children in extended families. Among uninsured children, 14.8% of those in single-parent families had prescription medication delayed due to lack of affordability compared with 8.2% of children in nuclear families, 9.3% of children in blended families, 10% of children in extended families, and 9.7% of children in other families.
  - Children aged 2–17 living in nuclear families (1.3%) were less likely to

**Figure 23. Percentages of children aged 2–17 who did not see a dentist in the past 12 months, by family structure: United States, 2001–2007**

have receipt of needed eyeglasses delayed during the past 12 months due to lack of affordability than children living in single-parent (3.4%), blended (2.7%), cohabiting (2.8%), extended (2.9%), or other (2.5%) families, and were comparable to children living in unmarried biological or adoptive families.

- Among Hispanic children, 2.5% of those living in nuclear families were delayed in receiving needed eyeglasses in the past 12 months compared with 3.7% of children in extended families. Among non-Hispanic white children, 1.1% of those in nuclear families were delayed in receiving needed eyeglasses compared with 3.7% of children in single-parent families, 2.4% in blended families, 2.7% in cohabiting families, and 2.3% in extended families.
- Among children with private health insurance coverage, 2.9% of those in

single-parent families were delayed in receiving needed eyeglasses in the past 12 months compared with 0.7% of children in nuclear families, 1.8% of children in blended families, and 1.7% of children in extended families. Among children covered by Medicaid, 3.4% of those in extended families were delayed in receiving needed eyeglasses compared with 1.9% of children in nuclear and 1.9% in other families. Among uninsured children, 9.1% of those in single-parent and also in blended families were delayed in receiving needed eyeglasses compared with 5.7% of children in nuclear families; children in single-parent families (but not those in blended families) were also more likely to experience delays in receiving needed eyeglasses than children in cohabiting families (5.6%).

### Dental care

Overall, 15.9 million U.S. children aged 2–17 (24.6%) had not seen a dentist in the past 12 months, and 4.2 million U.S. children aged 2–17 (6.4%) did not receive needed dental care in the past 12 months due to cost (Tables 49–52).

- Children aged 2–17 living in unmarried biological or adoptive families (39.6%) were least likely to have seen a dentist in the past 12 months (Figure 23).
- Among children aged 12–17, 13.3% of those in nuclear families had not seen a dentist in the past 12 months compared with 22.3% of children in single-parent families, 22% in unmarried biological or adoptive families, 18.1% in blended families, 25.1% in cohabiting families, 20.9% in extended families, and 25.3% in other families.
- Among Hispanic children aged 2–17, 29.9% of those in single-parent families had not seen a dentist in the past 12 months compared with 35% of children in nuclear families, 41.2% in unmarried biological or adoptive families, 37.2% in cohabiting families, 36.8% in extended families, and 40.2% in other families. Among non-Hispanic white children aged 2–17, 18.8% of those in nuclear families had not seen a dentist in the past 12 months compared with 24.4% of children in single-parent families, 43.1% in unmarried biological or adoptive families, 22.4% in blended families, 27.8% in cohabiting families, and 23.6% in other families. Among non-Hispanic black children, 26.7% of those living in nuclear families had not seen a dentist in the past 12 months compared with 31.5% of children in extended families.
- Among children with private health insurance, 18.2% of those in nuclear families did not see a dentist within the past 12 months compared with 19.9% of children in single-parent families, 35.6% of children in unmarried biological or adoptive families, and 20.2% of children in blended families. Among children with Medicaid, 23.4% of those in other families did not see a dentist within the past 12 months compared with 30% of children in nuclear families, 29% of children in single-parent families, 38.3% of children in unmarried biological or adoptive families, 31.1% of children in cohabiting families, and 30.6% of

**Figure 24. Percentages of children aged 2–17 who did not receive needed dental care in the past 12 months due to cost, by family structure: United States, 2001–2007**

children in extended families.

Among uninsured children, 42.9% of those in blended families did not see a dentist within the past 12 months compared with 49.4% of children in nuclear families, 55% of children in unmarried biological or adoptive families, 54.6% of children in extended families, and 55.3% of children in other families. Overall, 50% of uninsured children did not see a dentist within the past 12 months.

- Children aged 2–17 living in nuclear families (4.6%) were less likely than children of the same age in single-parent (8.8%), unmarried biological or adoptive (7.5%), blended (8.1%), cohabiting (9.1%), or extended (7.5%) families to lack receipt of needed dental care in the past 12 months due to cost, and were comparable to children living in other families (Figure 24).
- Nearly 8% of Hispanic children living in nuclear families did not receive needed dental care due to cost compared with 10.7% of Hispanic children living in blended families and 9.3% in extended families. Among non-Hispanic white children, 3.9% of those living in nuclear families did not receive

needed dental care due to cost compared with 10.3% of children in single-parent families, 7.2% in unmarried biological or adoptive families, 8.1% in blended families, 10.4% in cohabiting families, and 6.6% in extended families. Among non-Hispanic black children, 3.4% of those living in cohabiting families did not receive needed dental care due to cost compared with 6.7% of children in single-parent families, 6.5% in blended families, and 6.5% in extended families.

- Among poor families, 5.3% of children living in other families did not receive needed dental care due to cost compared with 9.3% of children in nuclear families, 9.1% in single-parent families, 11.5% in blended families, 11.8% in cohabiting families, and 10.3% in extended families. Among near poor families, 8.7% of children living in nuclear families did not receive needed dental care due to cost compared with 10.6% of children in single-parent families, 12.1% in blended families, and 10.9% in extended families. Among not poor families, 3.1% of children living in nuclear families did not receive needed dental care due to cost

compared with 6.9% of children in single-parent families, 5.9% in blended families, 8.1% in cohabiting families, and 4.9% in extended families.

## Measures of Behavior or Emotional Well-being

During the past 6 months, approximately 1.7 million U.S. children aged 4–17 (3%) were often unhappy, depressed, or tearful; 2 million U.S. children aged 4–17 (3.6%) were generally not well-behaved or did not usually do what adults requested; 3.3 million U.S. children aged 4–17 (5.9%) had many worries or often seemed worried; 6.2 million U.S. children aged 4–17 (11.2%) generally exhibited a poor attention span or did not usually see chores and homework through to the end; and 6.3 million U.S. children aged 4–17 (11.3%) certainly got along better with adults than children. Lastly, 2.9 million U.S. children aged 4–17 (5.1%) had definite or severe emotional or behavioral difficulties and 1.1 million U.S. children aged 4–17 with definite or severe emotional or behavioral difficulties had no contact with a mental health professional or general doctor for an emotional or behavioral problem during the last 12 months (39.9%) (Tables 53–66).

- Two percent of children aged 4–17 living in nuclear families were often unhappy, depressed, or tearful during the past 6 months compared with 4.4% of children in single-parent families, 3.7% of children in blended families, 3.4% of children in extended families, and 4.9% of children in other families, and were comparable to children living in unmarried biological or adoptive families or cohabiting families.
- Among Hispanic children, 3% of those in nuclear families were often unhappy, depressed, or tearful during the past 6 months compared with 4.9% of children in single-parent families and 5.6% in blended families. Among non-Hispanic white children, 1.7% of those in nuclear families were often unhappy, depressed, or tearful during the past

**Figure 25. Percentages of children aged 4–17 who were generally not well behaved or did not usually do what adults requested in the past 6 months, by family structure: United States, 2001–2007**

6 months compared with 4.1% of children in single-parent families, 3.1% in blended families, and 3.3% in extended families. Among non-Hispanic black children, 2.2% of those in nuclear families were often unhappy, depressed, or tearful during the past 6 months compared with 4.2% of children in single-parent families and 5.1% in other families.

- When the more highly educated parent was a high school dropout, 3.7% of children living in nuclear families were often unhappy, depressed, or tearful during the past 6 months compared with 6.7% of children in single-parent families and 7.7% in blended families. When at least one parent was a high school graduate, children in nuclear families (2.3%) were less likely than children in single-parent (3.7%), blended (4.2%), or extended (3.4%) families to often exhibit unhappy, depressed, or tearful behavior. When at least one parent had more than a high school diploma, 1.8% of children in nuclear families were often unhappy, depressed, or tearful compared with 3.7% of children in single-parent families, 2.9% in

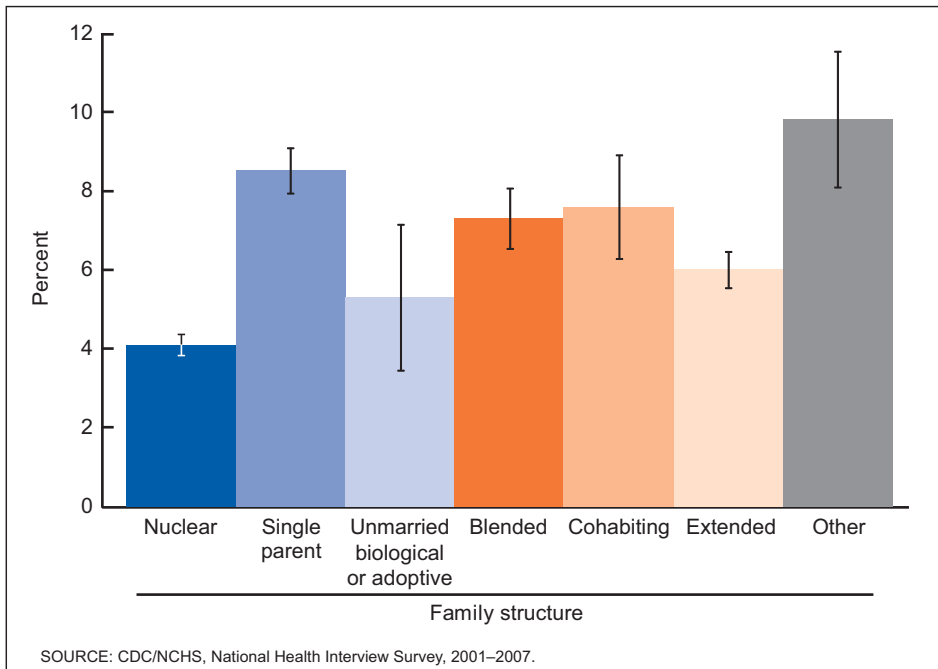

blended families, and 3.1% in extended families. Similar percentages for often exhibiting unhappy, depressed, or tearful behavior are obtained when family structure is disaggregated by poverty status.

- About 2% of children aged 4–17 in nuclear families were generally not well-behaved or did not usually do what adults requested during the past 6 months compared with 5% of children in single-parent families, 4.7% of children in unmarried biological or adoptive families, 5.1% of children in blended families, 4.9% of children in cohabiting families, 4.7% of children in extended families, and 5.3% of children in other families (Figure 25).
- Among Hispanic children, 3.5% of those in nuclear families were generally not well-behaved or did not usually do what adults requested during the past 6 months compared with 6% of children in single-parent families, 5.7% in blended families, and 5.1% in extended families. Among non-Hispanic white children, 1.8% of those in nuclear families were generally not well-behaved or

did not usually do what adults requested during the past 6 months compared with 4.1% of children in single-parent families, 5.1% in blended families, 3.7% in cohabiting families, 4.2% in extended families, and 4.9% in other families. Among non-Hispanic black children, 2% of those in nuclear families were generally not well-behaved or did not usually do what adults requested during the past 6 months compared with 5.9% of children in single-parent families, 4.5% in blended families, 8% in cohabiting families, 5.7% in extended families, and 6.8% in other families.

- Among poor families, 4.2% of children in nuclear families were generally not well-behaved or did not usually do what adults requested during the past 6 months compared with 6.8% of children in single-parent families, 8.3% in blended families, 7% in extended families, and 8.7% in other families. Among near poor families, 2.7% of children in nuclear families were generally not well-behaved or did not usually do what adults requested compared with 5% of children in single-parent families, 5.9% in blended families, 6.2% in cohabiting families, and 5.1% in extended families. Among not poor families, 1.8% of children in nuclear families were generally not well-behaved or did not usually do what adults requested compared with 3% of children in single-parent families, 4.2% in blended families, 3.4% in cohabiting families, 3.7% in extended families, and 3.7% in other families.
- Children aged 4–17 living in nuclear families (4.1%) were less likely than children in single-parent (8.5%), blended (7.3%), cohabiting (7.6%), extended (6%), or other (9.8%) families to have many worries or often seem worried during the past 6 months, and were comparable to children living in unmarried biological or adoptive families (Figure 26).
- Among Hispanic children, 4.5% of those in nuclear families had many worries or often seemed worried during the past 6 months compared

**Figure 26. Percentages of children aged 4–17 who had many worries or often seemed worried in the past 6 months, by family structure: United States, 2001–2007**

with 8.1% of children in single-parent families, 7.6% in blended families, 6.2% in extended families, and 7.9% in other families. Among non-Hispanic white children, 4.1% of those in nuclear families had many worries or often seemed worried compared with 10.5% of children in single-parent families, 7.7% in blended families, 8.4% in cohabiting families, 6.5% in extended families, and 12.4% in other families. Among non-Hispanic black children, 3.3% of those in nuclear families had many worries or often seemed worried compared with 5.5% of children in single-parent families, 5.2% in extended families, and 7.3% in other families.

- Children living in nuclear families that owned or were buying their homes (3.9%) were less likely to have many worries or often seem worried than children in single-parent (8.6%), blended (6.7%), cohabiting (8.5%), extended (5.2%), or other (10%) families that owned or were buying their homes. Children living in nuclear families that rented their homes (5.3%) were less likely to have many worries or often seem worried than children in single-parent (8.4%), blended

(8.6%), extended (8.3%), or other (8.6%) families that rented their homes.

- Nearly 8% of children aged 4–17 in nuclear families generally exhibited a poor attention span or did not usually see chores and homework through to the end during the past 6 months compared with 14.7% of children in single-parent families, 15.6% of children in blended families, 16% of children in cohabiting families, 11.9% of children in extended families, and 18% of children in other families, and were comparable to children living in unmarried biological or adoptive families.
- Ten percent of boys living in nuclear families generally exhibited a poor attention span or did not usually see chores and homework through to the end during the past 6 months compared with 18.1% of boys in single-parent families, 19.6% in blended families, 18.8% in cohabiting families, 14.4% in extended families, and 21.4% in other families. Nearly 6% of girls living in nuclear families generally exhibited a poor attention span or did not usually see chores and homework through to the end during

the past 6 months compared with 11.4% of girls in single-parent families, 11.4% in blended families, 12.9% in cohabiting families, 9.3% in extended families, and 14.4% in other families.

- When the more highly educated parent was a high school dropout, 8.4% of children living in nuclear families generally exhibited a poor attention span or did not usually see chores and homework through to the end compared with 15% of children in single-parent families, 17.5% in blended families, 16.2% in cohabiting families, and 11.3% in extended families. When at least one parent was a high school graduate, children in nuclear families (9.8%) were less likely than children in single-parent (14.9%), blended (16.6%), cohabiting (16.1%), or extended (13.9%) families to generally exhibit a poor attention span or not usually see chores and homework through to the end. When at least one parent had more than a high school diploma, 7.4% of children in nuclear families generally exhibited a poor attention span or did not usually see chores and homework through to the end compared with 14.2% of children in single-parent families, 14.9% in blended families, 15.9% in cohabiting families, 11.2% in extended families, and 24% in other families.
- About 9% of children aged 4–17 in nuclear families certainly got along better with adults than children during the past 6 months compared with 13.8% of children in single-parent families, 12.4% of children in blended families, 12.5% of children in cohabiting families, 13% of children in extended families, and 15.2% of children in other families, and were comparable to children living in unmarried biological or adoptive families.
- Among Hispanic children, 12.7% of those in nuclear families certainly got along better with adults than children during the past 6 months compared with 17.5% of children in single-parent families and 19.5% in other families. Among non-Hispanic

**Figure 27. Percentages of children aged 4–17 who had definite or severe emotional or behavioral difficulties, by family structure: United States, 2001–2007**

white children, 7.6% of those in nuclear families certainly got along better with adults than children during the past 6 months compared with 11.4% of children in single-parent families, 12.0% in blended families, 11.3% in cohabiting families, 11.7% in extended families, and 14% in other families. Family structure was not related to the extent to which non-Hispanic black children certainly got along better with adults than children during the past 6 months.

- When the more highly educated parent was a high school dropout, 13% of children living in nuclear families certainly got along better with adults than children during the past 6 months compared with 19.7% of children in single-parent families. When at least one parent was a high school graduate, 8.5% of children in unmarried biological or adoptive families certainly got along better with adults than children during the past 6 months compared with 13.6% of children in single-parent families, 14.2% in blended families, and 14% in extended families. When at least one parent had more than a high

school diploma, 8.1% of children living in nuclear families certainly got along better with adults than children during the past 6 months compared with 11.5% of children in single-parent families, 11.3% in blended families, 11.8% in extended families, and 15.1% in other families.

- As Figure 27 illustrates, children aged 4–17 living in nuclear families (3%) were less likely to have definite or severe emotional or behavioral difficulties than children in single-parent (7.4%), unmarried biological or adoptive (5.7%), blended (8.4%), cohabiting (7.6%), extended (5.1%), or other (9.6%) families.
- Nearly 4% of boys living in nuclear families had definite or severe emotional or behavioral difficulties compared with 9.3% of boys in single-parent families, 7.7% in unmarried biological or adoptive families, 10.8% in blended families, 9.6% in cohabiting families, 6.2% in extended families, and 9.7% in other families. Two percent of girls living in nuclear families had definite or severe emotional or behavioral difficulties compared with 5.5% of girls in single-parent families, 5.9%

in blended families, 5.4% in cohabiting families, 3.9% in extended families, and 9.5% in other families.

- Among Hispanic children, 2.1% of those in nuclear families had definite or severe emotional or behavioral difficulties compared with 5.8% of children in single-parent families, 6.8% in blended families, 5.7% in extended families, and 7.1% in other families. Among non-Hispanic white children, 3.3% of those in nuclear families had definite or severe emotional or behavioral difficulties compared with 8.2% of children in single-parent families, 8.5% in unmarried biological or adoptive families, 9% in blended families, 7.6% in cohabiting families, 6.4% in extended families, and 11.1% in other families. Among non-Hispanic black children, 2.3% of those in nuclear families had definite or severe emotional or behavioral difficulties compared with 6.4% of children in single-parent families, 6.8% in blended families, 7.3% in cohabiting families, 5.5% in extended families, and 9.4% in other families.
- Among children living in poor families, 3.8% of those in nuclear families had definite or severe emotional or behavioral difficulties during the past 6 months compared with 8.9% of children in single-parent families, 9.4% in blended families, 7.2% in cohabiting families, 6.6% in extended families, and 9.7% in other families. Among children living in near poor families, 3.1% of those in nuclear families had definite or severe emotional or behavioral difficulties compared with 7.6% of children in single-parent families, 11.1% in blended families, 9.5% in cohabiting families, 5.4% in extended families, and 11% in other families. Among children living in not poor families, 2.9% of those in nuclear families had definite or severe emotional or behavioral difficulties compared with 5.4% of children in single-parent families, 7.2% in blended families, 6.7% in cohabiting

- families, 4.5% in extended families, and 8.5% in other families.
- Among children with private health insurance, 2.8% of those living in nuclear families had definite or severe emotional or behavioral difficulties during the past 6 months compared with 5.6% of children in single-parent families, 7.4% in blended families, 5.8% in cohabiting families, and 4.2% in extended families. Among children with Medicaid, 4.6% of those living in nuclear families had definite or severe emotional or behavioral difficulties during the past 6 months compared with 9.5% of children in single-parent families, 11.3% in blended families, 10.1% in cohabiting families, 7.6% in extended families, and 13.4% in other families. Among uninsured children, 2% of those living in nuclear families had definite or severe emotional or behavioral difficulties during the past 6 months compared with 7.2% of children in single-parent families, 9.3% in blended families, 5.6% in cohabiting families, 4% in extended families, and 5.1% in other families.
  - Among children aged 4–17 with definite or severe emotional or behavioral difficulties, 27.8% of those in other families had no contact with a mental health professional or general doctor for an emotional or behavioral problem during the last 12 months compared with 39.9% of children with definite or severe emotional or behavioral difficulties in nuclear families, 40.2% of children with such difficulties in single-parent families, and 43.5% of children with such difficulties in extended families.

## Conclusion

---

The findings presented in this report indicate that children living in nuclear families—that is, in families consisting of two married adults who are the biological or adoptive parents of all children in the family—were generally healthier, more likely to have access to

health care, and less likely to have definite or severe emotional or behavioral difficulties than children living in nonnuclear families. For example, children in nuclear families were generally less likely than children in nonnuclear families to be in good, fair, or poor health; to have a basic action disability; or to have learning disabilities or ADHD. They were also less likely than children in nonnuclear families to lack health insurance coverage, to have had two or more ER visits in the past 12 months, to have receipt of needed prescription medication delayed during the past 12 months due to lack of affordability, or to have gone without needed dental care in the past 12 months due to cost. Additionally, children living in nuclear families were less likely to be poorly behaved or to have definite or severe emotional or behavioral difficulties during the past 6 months than children living in nonnuclear family types.

These findings are consistent with previous research that concluded that children living with two parents were advantaged relative to children living in other types of families (18–21). Using data from the Child Health Supplement of the 1988 NHIS, Dawson (18,19) reported that children living with two biological parents were less likely to experience behavioral or emotional problems than children living in other family types. Dawson found small and inconsistent differences in prevalence estimates by family structure for most chronic conditions and indicators of physical health, but noted that children living in households with two parents were less likely to have had chronic asthma in the past 12 months than children living in households without fathers (18). Heck and Parker (20) found that children in two-parent families were less likely than children living with single mothers to have unmet health care needs and more likely to have employer-sponsored health insurance. Bramlett and Blumberg (21) reported that children living with two biological parents were more likely than children in single-mother or grandparent-only families to be in excellent or very good health and less likely to have asthma-related health issues during the

past year, to have ADHD, or to have moderate to severe emotional or behavior problems.

Relative to children living in nuclear families, children in single-parent families clearly had higher prevalence rates for the various health conditions and indicators examined in this report. However, when compared to children living in other nonnuclear families, children living in single-parent families generally exhibited comparable prevalence rates with respect to child health, access to care, and emotional or behavioral difficulties. This report combined children living with single mothers, single fathers, or some other related single adult into one category because the vast majority of single adult families in 2001–2007 were headed by mothers. If single-parent families were disaggregated by type of parent (i.e., mother, father, or some other adult), it is possible that children living in single-mother families might have slightly higher rates of health problems and less access to health care than children in single-father families, as well as other nonnuclear families, as earlier research (18–21) has found.

Children living in blended (i.e., stepparent), cohabiting, unmarried biological or adoptive, extended, and other families were generally disadvantaged relative to children in nuclear families, and were, for the most part, comparable to children living in single-parent families regarding most health status and access to care measures. However, few, if any, consistent patterns emerged in the prevalence estimates of children living in nonnuclear families. Interestingly, children living in unmarried biological families share some of the health characteristics of both nuclear and cohabiting families. Results in this report suggest that children in unmarried biological families generally fared well in terms of the prevalence of asthma, hay fever, and allergies and they were also least likely to have had a problem requiring the regular use of a prescription medication for at least 3 months. Conversely, they were more likely than children in the remaining family types to have three or more ear infections in the past 12 months and

least likely to have seen a dentist or had contact with an eye doctor in the past 12 months. Regarding some health measures, however, results were inconclusive due to the relatively small number of children in unmarried biological families. Additional research is needed to determine whether this particular family type is consistently and positively associated with indicators of child health, access to care, and behavioral or emotional well-being.

The association of children's health status, access to or utilization of care, and emotional well-being with family structure was mitigated in some instances by the introduction of various personal, social, and economic characteristics. Yet differences in child health and access to care by family structure generally persisted regardless of population subgroup, with children living in nuclear families remaining advantaged relative to children in nonnuclear families.

The findings in this report cannot be used to infer that family structure "caused" a particular child health outcome or that a child health outcome "caused" family structure. In fact, previous research has shown that causality may flow in both directions; that is, family structure may have consequences for child health outcomes, while children's health may have consequences for family structure (42,43). Ideally, a methodological approach should be used that more accurately reflects how children's health may select them into particular family structures, which, in turn, may have ramifications for their health outcomes. However, the cross-sectional design of NHIS and the lack of information in the data about marriage or union onset or duration makes this task impossible. However, there are certainly different ways to model family structure that are beyond the scope of this report. For example, analysts may wish to distinguish between mother-stepfather and father-stepmother families. Moreover, although the date at which marriages or unions began cannot be determined from NHIS, it is possible to determine whether single mothers have ever been married. It may make a

difference whether children are living with a never- versus ever-married mother (44). A postdivorce mother may have more goods and resources (e.g., alimony and child support payments) available to her than a never-married mother. No attempt was made in the current analysis to determine the marital status of single parents (formerly married versus never married) or to distinguish between mother-stepfather, father-stepmother, mother-cohabiting male partner, or father-cohabiting female partner families. The 2001–2007 NHIS data do allow for these possibilities, however.

Despite the data limitations discussed previously, the findings summarized in this report remain important, particularly given the sweeping changes in family formation and living arrangements currently taking place in the United States. This report is based on 7 years of NHIS survey data that contain numerous child health and access to health care measures for a sample of nearly 84,000 children. In addition, this study incorporates a detailed indicator of family structure that takes into account both parental marital status and the nature of parent-child relationships (e.g., biological, step, etc.), making the identification of nontraditional families possible. Very few nationally representative data sources contain reliable measures of both family structure and child health. Thus, NHIS provides a unique opportunity to understand the complicated relationships that exist between family structure and child health in the United States today.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with

related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Respondent-assessed health status is obtained from a question in the Family Core section of the survey that asked, "Would you say [child's name] health in general was excellent, very good, good, fair, or poor?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to health status and family structure are not included in the column labeled "All children under age 18 in good, fair, or poor health" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category, "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Respondent-assessed health status is obtained from a question in the Family Core section of the survey that asked, "Would you say [child's name] health in general was excellent, very good, good, fair, or poor?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to health status and family structure are not included in the column labeled "All children under age 18 in good, fair, or poor health" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to is the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one

another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of one or more chronic conditions is based on a series of separate questions that asked whether a doctor or health professional had ever said that the selected child had Down syndrome, muscular dystrophy, cystic fibrosis, sickle cell anemia, autism, diabetes, arthritis, congenital heart disease, or any other heart condition. A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to chronic conditions and family structure are not included in the column labeled "All children under age 18 ever told of having one or more chronic conditions" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with

related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of one or more chronic conditions is based on a series of separate questions that asked whether a doctor or health professional had ever said that the selected child had Down syndrome, muscular dystrophy, cystic fibrosis, sickle cell anemia, autism, diabetes, arthritis, congenital heart disease, or any other heart condition. A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to chronic conditions and family structure are not included in the column labeled "All children under age 18 ever told of having one or more chronic conditions" (see Appendix I).

<sup>3</sup>Total includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one

another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Ever told had asthma is obtained from the question, "Has a doctor or other health professional ever told you that [child's name] had asthma?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to asthma and family structure are not included in the column labeled "All children under age 18 who have ever been told they have asthma" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with

related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of hay fever is based on the question, "During the past 12 months, has [child's name] had hay fever?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to hay fever and family structure are not included in the column labeled "All children under age 18 with hay fever in the past 12 months" (see Appendix I).

<sup>3</sup>Total includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of respiratory allergies is based on the question, "During the past 12 months, has [child's name] had any kind of respiratory allergy?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to respiratory allergies and family structure are not included in the column labeled "All children under age 18 with respiratory allergies in the past 12 months" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one

another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An “other” family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of digestive or skin allergies is based on separate questions, “During the past 12 months, has [child’s name] had any kind of food or digestive allergy?” and “During the past 12 months, has [child’s name] had eczema or any kind of skin allergy?” A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to digestive or skin allergies and family structure are not included in the column labeled “All children under age 18 with digestive or skin allergies in the past 12 months” (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent’s education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category “Not Hispanic or Latino black or African American, single race” in the tables is referred to as “non-Hispanic black” in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent’s age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family’s house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category “Uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. “Not in MSA” consists of persons not living in a metropolitan statistical area.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one

another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An “other” family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Having frequent headaches or migraines is based on a question that asked, “During the past 12 months, has [child’s name] had frequent or severe headaches, including migraines?” A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to frequent headaches or migraines and family structure are not included in the column labeled “All children aged 3–17 with frequent headaches or migraines in the past 12 months” (see Appendix I).

<sup>3</sup>Total includes other races not shown separately and children with unknown parent’s education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race. In order to be concise, the text uses shorter versions of the terms shown in the table. For example, the category “Not Hispanic or Latino black or African American, single race” in the tables is referred to as “non-Hispanic black” in the text.

<sup>5</sup>Parent’s education is the education level of the parent with the higher level of education, regardless of that parent’s age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–07 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Poverty status is based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Home tenure status is based on a question in the Family Core that asked whether the family’s house or apartment is owned or being bought, rented, or occupied by some other arrangement. See Appendix II for more information.

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category “Uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1,000,000 or more; small MSAs have a population size of less than 1,000,000. “Not in MSA” consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with

related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Having frequent headaches or migraines is based on a question that asked, "During the past 12 months, has [child's name] had frequent or severe headaches, including migraines?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to frequent headaches or migraines and family structure are not included in the column labeled "All children aged 3–17 with frequent headaches or migraines in the past 12 months" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an

unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of ear infections is based on a question that asked, "During the past 12 months, has [child's name] had three or more ear infections?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to ear infections and family structure are not included in the column labeled "All children under age 18 with three or more ear infections in the past 12 months" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

\* Estimate has a relative standard error of greater than 30% and should be used with caution because it does not meet the standards of reliability or precision.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family

consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of mental retardation or any developmental delay is based on separate questions, "Has a doctor or health professional ever told you that [child's name] had mental retardation?" and "Has a doctor or health professional ever told you that [child's name] had any other developmental delay?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to mental retardation or any developmental delay and family structure are not included in the column labeled "All children under age 18 ever told they have mental retardation or any developmental delay" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who

are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of mental retardation or any developmental delay is based on separate questions, "Has a doctor or health professional ever told you that [child's name] had mental retardation?" and "Has a doctor or health professional ever told you that [child's name] had any other developmental delay?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to mental retardation or any developmental delay and family structure are not included in the column labeled "All children under age 18 ever told they have mental retardation or any developmental delay" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of impairments or health problems resulting in activity limitations is based on a question that asked, "Does [child's name] have an impairment or health problem that limits [his/her] ability to crawl, walk, run, or play?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to impairments and family structure are not included in the column labeled "All children under age 18 with an impairment that limits crawling, walking, running, or playing." (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who

are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of impairments or health problems resulting in activity limitations is based on a question that asked, "Does [child's name] have an impairment or health problem that limits [his/her] ability to crawl, walk, run, or play?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to impairments and family structure are not included in the column labeled "All children under age 18 with an impairment that limits crawling, walking, running, or playing." (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Receipt of special education or early intervention services (EIS) is based on two questions in the Family Core that asked if any children under age 18 in the family received Special Education or EIS and, if so, whether he or she received these services because of an emotional or behavioral problem. A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to receipt of special education and family structure are not included in the column labeled "All children under age 18 receiving special education or EIS for an emotional or behavioral problem" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who

are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Receipt of special education or early intervention services (EIS) is based on two questions in the Family Core that asked if any children under age 18 in the family received Special Education or EIS and, if so, whether he or she received these services because of an emotional or behavioral problem. A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to receipt of special education and family structure are not included in the column labeled "All children under age 18 receiving special education or EIS for an emotional or behavioral problem" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Having vision problems is based on a question that asked, "Does [child's name] have any trouble seeing [if he/she is 2 or more years of age] even when wearing glasses or contact lenses?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to vision problems and family structure are not included in the column labeled "All children under age 18 with vision problems" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one

another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Having vision problems is based on a question that asked, "Does [child's name] have any trouble seeing [if he/she is 2 or more years of age] even when wearing glasses or contact lenses?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to vision problems and family structure are not included in the column labeled "All children under age 18 with vision problems" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Children were considered to have a basic action disability if they had any one of the following

problems: a lot of trouble hearing or deafness; trouble seeing; limitations in their ability to crawl, walk, run, or play; difficulty remembering; mental retardation; Down syndrome; autism; a learning disability; attention deficit hyperactivity disorder; or definite or severe emotional or behavioral difficulties. A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to this measure and family structure are not included in the column labeled "All children aged 4–17 with a basic action disability" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Children were considered to have a basic action disability if they had any one of the following

problems: a lot of trouble hearing or deafness; trouble seeing; limitations in their ability to crawl, walk, run, or play; difficulty remembering; mental retardation; Down syndrome; autism; a learning disability; attention deficit hyperactivity disorder; or definite or severe emotional or behavioral difficulties. A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to this measure and family structure are not included in the column labeled "All children aged 4–17 with a basic action disability" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an

unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of learning disability or ADHD is based on separate questions, "Has a representative from a school or a health professional ever told you that [child's name] had a learning disability?" and "Has a doctor or health professional ever told you that [child's name] had Attention Deficit Hyperactivity Disorder (ADHD) or Attention Deficit Disorder (ADD)?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to learning disability or ADHD and family structure are not included in the column labeled "All children aged 3–17 who have ever been told they have a learning disability or ADHD" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one

another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of learning disability or ADHD is based on separate questions, "Has a representative from a school or a health professional ever told you that [child's name] had a learning disability?" and "Has a doctor or health professional ever told you that [child's name] had Attention Deficit Hyperactivity Disorder (ADHD) or Attention Deficit Disorder (ADD)?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to learning disability or ADHD and family structure are not included in the column labeled "All children aged 3–17 who have ever been told they have a learning disability or ADHD" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Number of missed school days is obtained from a question that asked, "During the past 12 months, about how many days did [child's name] miss school because of illness or injury?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to missed school days and family structure are not included in the column labeled "All children aged 5–17 who missed 6 or more school days in the past 12 months due to illness or injury" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one

another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Number of missed school days is obtained from a question that asked, "During the past 12 months, about how many days did [child's name] miss school because of illness or injury?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to missed school days and family structure are not included in the column labeled "All children aged 5–17 who missed 6 or more school days in the past 12 months due to illness or injury" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Health insurance coverage is obtained from a question in the Family Core that asked, "[Are you/Is anyone] covered by health insurance or some other kind of health care plan?" A knowledgeable adult provided information on behalf of child respondents. Children with only Indian Health Service coverage are also considered uninsured (see Appendix II). Unknowns with respect to health insurance coverage and family structure are not included in the column labeled "All children under age 18 without health insurance" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category “Not Hispanic or Latino black or African American, single race” in the tables is referred to as “non-Hispanic black” in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent’s age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family’s house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. “Not in MSA” consists of persons not living in a metropolitan statistical area.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Health insurance coverage status is obtained from a question in the Family Core that asked, "[Are you/Is anyone] covered by health insurance or some other kind of health care plan?" A knowledgeable adult provided information on behalf of child respondents. Children with only Indian Health Service coverage are also considered uninsured (see Appendix II). Unknowns with respect to health insurance coverage and family structure are not included in the column labeled "All children under age 18 without health insurance" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category “Not Hispanic or Latino black or African American, single race” in the tables is referred to as “non-Hispanic black” in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent’s age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family’s house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. “Not in MSA” consists of persons not living in a metropolitan statistical area.

\* Estimate has a relative standard error of greater than 30% and should be used with caution because it does not meet the standards of reliability or precision.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one

another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Having a usual place of health care is obtained from a question that asked, "Is there a place that [child's name] USUALLY goes when [he/she] is sick or you need advice about [his/her] health?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to usual place of health care and family structure are not included in the column labeled "All children under age 18 without a usual place of health care" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an

unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Having a usual place of health care is obtained from a question that asked, "Is there a place that [child's name] USUALLY goes when [he/she] is sick or you need advice about [his/her] health?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to usual place of health care and family structure are not included in the column labeled "All children under age 18 without a usual place of health care" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family

consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Use of prescription medication is based on a question asked, "Does [child's name] now have a problem for which [he/she] has regularly taken prescription medication for at least three months?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to prescription medication usage and family structure are not included in the column labeled "All children under age 18 with a problem requiring prescription medication for at least 3 months" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an

unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An other family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Use of prescription medication is based on a question asked, "Does [child's name] now have a problem for which [he/she] has regularly taken prescription medication for at least three months?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to prescription medication usage and family structure are not included in the column labeled "All children under age 18 with a problem requiring prescription medication for at least 3 months" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an

unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Information regarding emergency room (ER) visits is obtained from a question that asked, "During the past 12 months, how many times has [child's name] gone to a hospital emergency room about [his/her] health? (This includes emergency room visits that resulted in a hospital admission.)" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to ER visits and family structure are not included in the column labeled "All children under age 18 who made two or more visits to hospital ER in the past 12 months" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family

consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Information regarding emergency room (ER) visits is obtained from a question that asked, "During the past 12 months, how many times has [child's name] gone to a hospital emergency room about [his/her] health? (This includes emergency room visits that resulted in a hospital admission.)" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to ER visits and family structure are not included in the column labeled "All children under age 18 who made two or more visits to hospital ER in the past 12 months" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an

unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Information regarding receipt of medical checkup is obtained from a question that asked, "During the past 12 months, did [child's name] receive a well child check-up—that is, a general check-up when [he/she] was not sick or injured?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to receipt of medical checkups and family structure are not included in the column labeled "All children aged 1–17 who did not have a medical checkup in the past 12 months" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

"Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an

unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Information regarding contacts with an eye doctor were obtained from a question that asked, "During the past 12 months, have you seen or talked with an optometrist, ophthalmologist, or eye doctor (someone who prescribes eye glasses) about [child's name]'s health?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to contacts with eye doctors and family structure are not included in the column labeled "All children aged 2–17 who saw or talked with an eye doctor in the past 12 months" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an

unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Information regarding the delay of medical care due to cost is obtained from a question in the Family Core that asked, "During the past 12 months, [have/has] [you/anyone in the family] delayed seeking medical care because of worry about the cost?" In the event of an affirmative response, the affected family member(s) was (were) identified. A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to delays in receipt of medical care due to cost and family structure are not included in the column labeled "All children under age 18 who had medical care delayed in the past 12 months due to concerns over cost" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Information regarding not receiving prescription medication due to lack of affordability is based on a question that asked, "During the past 12 months, was there any time when [child's name] needed prescription medication, but didn't get it because you couldn't afford it?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to not receiving prescription medication and family structure are not included in the column labeled "All children aged 2–17 who did not receive needed prescription medication in the past 12 months due to lack of affordability" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family

consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Information regarding not having eyeglasses due to lack of affordability is based on a question that asked, "During the past 12 months, was there any time when [child's name] needed eyeglasses, but didn't get them because you couldn't afford them?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to not having eyeglasses and family structure are not included in the column labeled "All children aged 2–17 who needed but did not get eyeglasses in the past 12 months due to lack of affordability" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one

another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Information regarding last dental visit is obtained from a question that asked, "About how long has it been since [child's name] last saw a dentist? Include all types of dentists, such as orthodontists, oral surgeons, and all other dental specialists, as well as dental hygienists." A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to last dental visit and family structure are not included in the column labeled "All children aged 2–17 who did not see a dentist in the past 12 months" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family

consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Information regarding receipt of dental care is obtained from a question that asked, "During the past 12 months, was there any time when [child's name] needed [dental care, including check-ups] but didn't get it because you couldn't afford it?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to receipt of dental care and family structure are not included in the column labeled "All children aged 2–17 who did not receive needed dental care in the past 12 months due to cost" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family

consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Information regarding receipt of dental care is obtained from a question that asked, "During the past 12 months, was there any time when [child's name] needed [dental care, including check-ups] but didn't get it because you couldn't afford it?" A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to receipt of dental care and family structure are not included in the column labeled "All children aged 2–17 who did not receive needed dental care in the past 12 months due to cost" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who

are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of the behavior shown in this table is obtained from a question that asked, "During the past 6 months, has [child's name] often been unhappy, depressed, or tearful?" Response categories included "not true," "somewhat true," "certainly true," "refused," and "don't know;" only "certainly true" cases are represented in this table. A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to this behavior and family structure are not included in the column labeled "All children aged 4–17 who were often unhappy, depressed, or tearful in the past 6 months" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an

unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of the behavior shown in this table is obtained from a question that asked, "During the past 6 months, has [child's name] often been unhappy, depressed, or tearful?" Response categories included "not true," "somewhat true," "certainly true," "refused," and "don't know;" only "certainly true" cases are represented in this table. A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to this behavior and family structure are not included in the column labeled "All children aged 4–17 who were often unhappy, depressed, or tearful in the past 6 months" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who

are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of the behavior shown in this table is obtained from a question that asked, "During the past 6 months, has [child's name] been generally well-behaved, usually does what adults request?" Response categories included "not true," "somewhat true," "certainly true," "refused," and "don't know;" only "not true" cases are represented in this table. A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to this behavior and family structure are not included in the column labeled "All children aged 4–17 who were generally not well-behaved in the past 6 months" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who

are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of the behavior shown in this table is obtained from a question that asked, "During the past 6 months, has [child's name] been generally well-behaved, usually does what adults request?" Response categories included "not true," "somewhat true," "certainly true," "refused," and "don't know;" only "not true" cases are represented in this table. A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to this behavior and family structure are not included in the column labeled "All children aged 4–17 who were generally not well-behaved in the past 6 months" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who

are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of the behavior shown in this table is obtained from a question that asked, "During the past 6 months, has [child's name] many worries, or often seems worried?" Response categories included "not true," "somewhat true," "certainly true," "refused," and "don't know;" only "certainly true" cases are represented in this table. A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to this behavior and family structure are not included in the column labeled "All children aged 4–17 who had many worries or often seemed worried in the past 6 months" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an

unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of the behavior shown in this table is obtained from a question that asked, "During the past 6 months, has [child's name] many worries, or often seems worried?" Response categories included "not true," "somewhat true," "certainly true," "refused," and "don't know;" only "certainly true" cases are represented in this table. A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to this behavior and family structure are not included in the column labeled "All children aged 4–17 who had many worries or often seemed worried in the past 6 months" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of the behavior shown in this table is obtained from a question that asked, "During the past 6 months, has [child's name] had a good attention span, sees chores or homework through to the end?" Response categories included "not true," "somewhat true," "certainly true," "refused," and "don't know;" only "not true" cases are represented in this table. A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to this behavior and family structure are not included in the column labeled "All children aged 4–17 who generally exhibited a poor attention span in the past 6 months" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who

are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of the behavior shown in this table is obtained from a question that asked, "During the past 6 months, has [child's name] had a good attention span, sees chores or homework through to the end?" Response categories included "not true," "somewhat true," "certainly true," "refused," and "don't know;" only "not true" cases are represented in this table. A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to this behavior and family structure are not included in the column labeled "All children aged 4–17 who generally exhibited a poor attention span in the past 6 months" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family

consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of the behavior shown in this table is obtained from a question that asked, "During the past 6 months, did [child's name] get along better with adults than with other [children ages 4–11/youth 12–17]?" Response categories included "not true," "somewhat true," "certainly true," "refused," and "don't know;" only "certainly true" cases are represented in this table. A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to this behavior and family structure are not included in the column labeled "All children aged 4–17 who certainly got along better with adults than children in the past 6 months" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one

another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An "other" family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of the behavior shown in this table is obtained from a question that asked, "Overall, do you think that [child's name] has difficulties in any of the following areas: emotions, concentration, behavior, or being able to get along with other people?" Response categories included "no," "yes, minor difficulties," "yes, definite difficulties," "yes, severe difficulties," "refused," and "don't know;" "yes, definite difficulties" and "yes, severe difficulties" are represented in this table. A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to this behavior and family structure are not included in the column labeled "All children aged 4–17 with definite or severe emotional or behavioral difficulties" (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent's education, family income, poverty status, or health insurance. Additionally, numbers within selected characteristics may not add to totals because of rounding.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category "Not Hispanic or Latino" refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category "Not Hispanic or Latino black or African American, single race" in the tables is referred to as "non-Hispanic black" in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent's age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau's poverty thresholds for the previous calendar year. "Poor" persons are defined as below the poverty threshold. "Near poor" persons have incomes of 100% to less than 200% of the poverty threshold. "Not poor" persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family's house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category "Uninsured" includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. "Not in MSA" consists of persons not living in a metropolitan statistical area.

West . . . . .	43.6 (2.66)	48.3 (4.86)	38.1 (5.31)	96.3 (4.00)	37.7 (7.54)	39.3 (9.94)	48.1 (5.25)	*31.5 (9.79)			

\* Estimate has a relative standard error of greater than 30% and should be used with caution because it does not meet the standards of reliability or precision.

– Quantity zero.

<sup>1</sup>A nuclear family consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A single-parent family consists of one or more children living with a single adult (male or female, related or unrelated). An unmarried biological or adoptive family consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A blended family consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A cohabiting family consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An extended family consists of one or more children living with at least one biological or adoptive parent and a related adult. An “other” family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents.

<sup>2</sup>Data are based on household interviews of a sample of the civilian noninstitutionalized population. Prevalence of having no contacts with either a mental health professional or a general doctor for an emotional or behavioral problem are based on two questions that asked, “During the past 12 months, have you seen or talked to a mental health professional such as a psychiatrist, psychologist, psychiatric nurse, or clinical social worker about [child’s name]’s health?” and, for sample children who had seen or talked with a general doctor or pediatrician during the past 12 months, “Did you see or talk with this general doctor because of an emotional or behavioral problem that [child’s name] may have?” Only sample children with definite or severe emotional or behavioral difficulties who lacked contacts with either a mental health professional or a general doctor for such a problem are represented in this table. A knowledgeable adult provided information on behalf of child respondents. Unknowns with respect to these contacts and family structure are not included in the column labeled “All children aged 4–17 with definite or severe emotional or behavioral difficulties who had no contact with a mental health professional or general doctor for this type of problem in the past 12 months” (see Appendix I).

<sup>3</sup>Includes other races not shown separately and children with unknown parent’s education, family income, poverty status, or health insurance.

<sup>4</sup>Persons of Hispanic or Latino origin may be of any race or combination of races. Similarly, the category “Not Hispanic or Latino” refers to all persons who are not of Hispanic or Latino origin, regardless of race. To be concise, the text uses shorter versions of the terms shown in the table. For example, the category “Not Hispanic or Latino black or African American, single race” in the tables is referred to as “non-Hispanic black” in the text.

<sup>5</sup>Refers to the education level of the parent with the higher level of education, regardless of that parent’s age.

<sup>6</sup>GED is General Educational Development high school equivalency diploma.

<sup>7</sup>Information on family income and poverty status is obtained from the 2001–2007 National Health Interview Survey Imputed Family Income/Personal Earnings Files.

<sup>8</sup>Based on family income and family size using the U.S. Census Bureau’s poverty thresholds for the previous calendar year. “Poor” persons are defined as below the poverty threshold. “Near poor” persons have incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have incomes that are 200% of the poverty threshold or greater.

<sup>9</sup>Based on a question in the Family Core that asked whether the family’s house or apartment is owned or being bought, rented, or occupied by some other arrangement (see Appendix II).

<sup>10</sup>Classification of health insurance coverage is based on a hierarchy of mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy. The category “Uninsured” includes persons who had no coverage as well as those who had only Indian Health Service coverage or had only a private plan that paid for one type of service such as accidents or dental care (see Appendix II).

<sup>11</sup>MSA is metropolitan statistical area. Large MSAs have a population size of 1 million or more; small MSAs have a population size of less than 1 million. “Not in MSA” consists of persons not living in a metropolitan statistical area.

SOURCE: CDC/NCHS, National Health Interview Survey, 2001–2007.

## Appendix I. Technical Notes on Methods

This report is based on pooled data from the 2001–2007 in-house Sample Child and Person files, which are derived from the Sample Child and Family Core components of the National Health Interview Survey (NHIS). Selected variables from various Household and Family files were also used, most notably the family structure variable used for this report. The latter variable was not available in the first and second quarters of 2004, so the Sample Child case weights for the third and fourth quarters of 2004 were doubled so as to obtain an appropriate estimate of the U.S. child population for that particular year. The Sample Child record weight in the combined 2001–2007 file was divided by 7 in order to obtain weighted estimates that are representative of the U.S. noninstitutionalized child population in a single year (during the study period). Detailed, in-house sample design information was used to produce the most accurate variance estimates possible. However, because a new NHIS sample design was implemented in 2006 (and continued in 2007), it was necessary to create new design effect variables in order to perform variance estimation across the two sample design periods (i.e., 2001–2005 and 2006–2007). These procedures are outlined in Appendix VII of the 2007 NHIS Survey Description (30).

Standard errors, produced by the SUDAAN statistical package, are shown for all percentages in the tables. Frequencies or percentages with relative standard errors greater than 30% are considered unreliable and are indicated with an asterisk. The relative standard errors are calculated as follows:

Relative standard error = (SE/Est)100,

where SE is the standard error of the estimate, and Est is the estimate (percentage or frequency). The reliability of frequencies and their percentages is determined independently, so that it is possible for a particular frequency to be reliable and its associated percentage unreliable, and

vice versa. In most instances, however, both estimates were reliable or unreliable simultaneously.

In the tables, all unknown values (respondents coded as “refused,” “don’t know,” or “not ascertained”) with respect to each table’s variables of interest were removed from the denominators when calculating row percentages. In most instances the overall number of unknowns is quite small, and would not have supported disaggregation by the demographic characteristics included in the table. Because these unknowns are not shown separately, users calculating their own percentages based on the frequencies and population counts presented in the tables may obtain slightly different results. To aid readers’ understanding of the data, weighted counts and percentages of unknowns (with respect to the health characteristics shown in each table) are presented in [Table I](#).

Unknowns with respect to several of the demographic characteristics used in each table are not shown due to small cell counts. [Table II](#) shows weighted counts and percentages of children in the U.S. population with unknown values with respect to family structure, parental education and home tenure status. Note that the 2001–2007 NHIS Imputed Family Income or Personal Earnings Files were used to minimize missing information with respect to family income and poverty status.

### Hypothesis Tests

Two-tailed tests of significance were performed on all the comparisons mentioned in the “Selected Highlights” section of this report (no adjustments were made for multiple comparisons). The test statistic used to determine statistical significance of the difference between two percentages was

$$Z = \frac{|X_a - X_b|}{\sqrt{S_a^2 + S_b^2}},$$

where  $X_a$  and  $X_b$  are the two percentages being compared, and  $S_a$  and

$S_b$  are the SUDAAN-calculated standard errors of those percentages. The critical value used for two-sided tests at the 0.05 level of significance was 1.96.

**Table I. Weighted counts and percentages of children with unknown information on health characteristics of interest, National Health Interview Survey, 2001–2007**

Variable	Count of children (in thousands)	Percent of children
Good, fair, or poor health (children under age 18), Tables 1–2 . . . . .	33	0.04%
Ever told had one or more chronic conditions (children under age 18), Tables 3–4 . . . . .	41	0.06%
Ever told had asthma (children under age 18), Table 5–6 . . . . .	135	0.18%
Hay fever in the past 12 months (children under age 18), Tables 7–8 . . . . .	225	0.31%
Respiratory allergies in the past 12 months (children under age 18), Tables 9–10 . . . . .	242	0.33%
Digestive or skin allergies in the past 12 months (children under age 18), Tables 11–12 . . . . .	176	0.24%
Frequent headaches or migraines in the past 12 months (children aged 3–17), Tables 13–14 . . . . .	68	0.11%
Three or more ear infections in the past 12 months (children under age 18), Tables 15–16 . . . . .	89	0.12%
Ever told had mental retardation or any developmental delay (children under age 18), Tables 17–18 . . . . .	91	0.12%
Had impairment or health problem that limited crawling, walking, running, or playing (children under age 18), Tables 19–20 . . . . .	41	0.06%
Received special education or early intervention services for an emotional or behavioral problem (children under age 18), Tables 21–22 . . . . .	35	0.05%
Vision problems (children under age 18), Tables 23–24 . . . . .	145	0.20%
Ever been told had learning disability or attention deficit hyperactivity disorder (children aged 3–17), Tables 25–26 . . . . .	164	0.27%
Basic actions disability (children aged 4–17), Tables 27–28 . . . . .	792	1.39%
Missed 6 or more school days in past 12 months (children aged 5–17), Tables 29–30 . . . . .	1,484	2.80%
Health insurance coverage (children under age 18), Tables 31–32 . . . . .	280	0.38%
Lacked a usual place of health care (children under age 18), Tables 33–34 . . . . .	180	0.25%
Prescription medication used regularly for at least 3 months (children under age 18), Tables 35–36 . . . . .	100	0.14%
Two or more visits to a hospital emergency room in the past 12 months (children under age 18), Tables 37–38 . . . . .	421	0.58%
No medical checkup in the past 12 months (children under age 18), Tables 39–40 . . . . .	754	1.09%
Saw or talked with an eye doctor in the past 12 months (children aged 2–17), Tables 41–42 . . . . .	377	0.58%
Medical care delayed due to concerns over cost (children under age 18), Tables 43–44 . . . . .	47	0.06%
Did not receive prescription medication during the past 12 months due to lack of affordability (children aged 2–17), Tables 45–46 . . . . .	163	0.25%
Did not get needed eyeglasses during the past 12 months due to lack of affordability (children aged 2–17), Tables 47–48 . . . . .	161	0.25%
Did not see dentist within the past 12 months (children aged 2–17), Tables 49–50 . . . . .	802	1.23%
Dental care delayed due to cost (children aged 2–17), Tables 51–52 . . . . .	163	0.25%
Often unhappy, depressed, or tearful behavior during the past 6 months (children aged 4–17), Tables 53–54 . . . . .	1,259	2.20%
Not well-behaved or did not usually do what adults requested during the past 6 months (children aged 4–17), Tables 55–56 . . . . .	1,204	2.11%
Had many worries or often seemed worried during the past 6 months (children aged 4–17), Tables 57–58 . . . . .	1,282	2.24%
Poor attention span or did not usually see chores and homework through to the end during the past 6 months (children aged 4–17), Tables 59–60 . . . . .	1,387	2.43%
Got along better with adults than children during the past 6 months (children aged 4–17), Tables 61–62 . . . . .	1,706	2.99%
Had definite or severe emotional or behavioral difficulties (children aged 4–17), Tables 63–64 . . . . .	697	1.22%
No contact with a mental health professional or general doctor for an emotional or behavioral problem during the last 12 months (children aged 4–17 with definite or several emotional or behavioral difficulties), Tables 65–66 . . . . .	88	0.31%

**Table II. Weighted counts and percentages of children aged 0–17 with unknown information on selected sociodemographic characteristics, National Health Interview Survey, 2001–2007**

Variable	Count of children (in thousands)	Percent of children
Family structure . . . . .	79	0.11%
Parental education . . . . .	2,408	3.30%
Home tenure status . . . . .	348	0.48%

NOTE: There are no missing cases with respect to either income or poverty status because the 2001–2007 NHIS Imputed Family Income/Personal Earnings Files were used for this analysis.

## Appendix II. Definitions of Selected Terms

---

### Sociodemographic characteristics

*Age*—The age recorded for each child is the age at the last birthday. Age is recorded in single years and grouped using a variety of age categories depending on the purpose of the table.

*Family income*—Each member of a family is classified according to the total income of all family members. Family members are all persons within the household related to each other by blood, marriage, cohabitation, or adoption. The income recorded is the total income received by all family members in the previous calendar year. Income from all sources—including wages, salaries, pensions, government payments, child support or alimony, dividends, help from relatives, etc.—is included. Unrelated individuals living in the same household (e.g., roommates) are considered to be separate families and are classified according to their own incomes.

*Family structure*—A *nuclear family* consists of one or more children living with two parents who are married to one another and are biological or adoptive parents to all children in the family. A *single-parent family* consists of one or more children living with a single adult (male or female, related or unrelated to the child or children). An *unmarried biological or adoptive family* consists of one or more children living with two parents who are not married to one another and are biological or adoptive parents to all children in the family. A *blended family* consists of one or more children living with a biological or adoptive parent and an unrelated stepparent who are married to one another. A *cohabiting family* consists of one or more children living with a biological or adoptive parent and an unrelated adult who are cohabiting with one another. An *extended family* consists of one or more children living with at least one biological or adoptive parent and a related adult who is not a parent (e.g., grandparent, adult sibling). Given

the NHIS definition of children as family members aged 0–17 and adults as family members aged 18 and over, adult children (those aged 18 and over) are considered related adults. This will result in smaller counts and percentages of the remaining family types, particularly nuclear families, and to a lesser extent, single-parent families (in part because they are numerically the largest family types). An “*other*” family consists of one or more children living with related or unrelated adults who are not biological or adoptive parents (foster children living with at least two adults as well as children being raised by their grandparents are included in this category). All categories are mutually exclusive.

*Health insurance coverage*—NHIS respondents were asked about their health insurance coverage at the time of interview. Respondents reported whether they were covered by private insurance (obtained through the employer or workplace, purchased directly, or through a local or community program), Medicare, Medigap (supplemental Medicare coverage), Medicaid, Children’s Health Insurance Program (CHIP), Indian Health Service (IHS), military coverage (including VA, TRICARE, or CHAMP–VA), a state-sponsored health plan, another government program, or single-service plans. This information was used to create a health insurance hierarchy for persons under age 65 with four mutually exclusive categories. Persons with more than one type of health insurance were assigned to the first appropriate category in the hierarchy listed below:

*Private coverage*—Includes persons who had any comprehensive private insurance plan [including health maintenance organizations (HMOs) and preferred provider organizations]. These plans include those obtained through an employer and those purchased directly or through local or community programs.

*Medicaid*—Includes persons who do not have private coverage, but who have

Medicaid and/or other state-sponsored health plans including CHIP.

*Other coverage*—Includes persons who do not have private or Medicaid (or other public coverage), but who have any type of military health plan (includes VA, TRICARE, and CHAMP–VA) or Medicare. This category also includes persons who are covered by other government programs.

*Uninsured*—Includes persons who have not indicated that they are covered at the time of interview under private health insurance (from employer or workplace, purchased directly, or through a state, local government or community program), Medicare, Medicaid, CHIP, a state-sponsored health plan, other government programs, or military health plan (includes VA, TRICARE, and CHAMP–VA). This category also includes persons who are only covered by IHS or only have a plan that pays for one type of service such as accidents or dental care.

Weighted frequencies indicate that 0.38% of children were missing information with respect to health insurance coverage.

*Hispanic origin and race*—The tables in this report are consistent with federal guidelines established in 1997 by the Office of Management and Budget (OMB) regarding the presentation of race and ethnicity statistics in U.S. government publications (45). Hispanic origin and race are two separate and distinct concepts. Hispanic persons may be of any race. Hispanic origin includes persons of Mexican, Puerto Rican, Cuban, Central and South American, or Spanish origins. All tables show Mexican or Mexican-American persons as a subset of Hispanic persons. Other groups are not shown for reasons of confidentiality or statistical reliability.

The category “Not Hispanic or Latino” includes the categories of “White, single race” and “Black or African American, single race.” Persons in these categories indicated only a single race group (see the definition of

“Race” in this Appendix for more information). Data are not shown separately for other “Not Hispanic or Latino” single-race persons or those reporting multiple race due to statistical unreliability as measured by the relative standard errors of the estimates, but are included in the total for “Not Hispanic or Latino.”

*Home tenure status*—Based on a question in the Family Core that asked whether the family’s house or apartment is owned or is being bought, rented, or occupied by some other arrangement. The latter category includes respondents who may live rent-free with relatives, provide a service (such as child care, maintenance, etc.) in return for rent, or live in group homes or assisted living accommodations. The number of families in this category is very small: in 2001–2007, 1.5% of all sample children lived in families that occupied homes “by some other arrangement” (or 2% of all U.S. children nationally).

*Parent’s education*—This reflects the highest grade in school completed by the sample child’s mother or father who are living in the household, regardless of that parent’s age. NHIS does not obtain information pertaining to parents not living in the household. If both parents reside in the household but information on one parent’s education is unknown, then the other parent’s education is used. If both parents reside in the household and education is unknown for both, then parent’s education (with respect to the child) is unknown. If neither parent resides in the household, then parent’s education is unknown.

Only years completed in a school that advances a person toward an elementary or high school diploma, General Educational Development high school equivalency diploma, college, university, or professional degree are included. Education in other schools and home schooling are counted only if the credits are accepted in a regular school system.

*Place of residence*—Classified as inside a metropolitan statistical area (MSA) or outside an MSA. Generally, an MSA consists of a county or group of counties containing at least one city or twin cities with a population of

50,000 or more, plus adjacent counties that are metropolitan in character and are economically and socially integrated with the central city. In New England, towns and cities rather than counties are the units used in defining MSAs. The number of adjacent counties included in an MSA is not limited, and boundaries may cross state lines.

OMB defines metropolitan areas according to published standards that are applied to U.S. Census Bureau data. Consequently, the definition of a metropolitan area is periodically revised. For the 2001–2005 NHIS data, the MSA definition was based on 1993 OMB standards using the 1990 census. For the 2006–2007 NHIS, the MSA definition is based on 2003 OMB standards using data from the 2000 census. In the tables for this report, place of residence is based on variables indicating MSA size from the 2001–2003 Person and 2004–2007 Household files. These variables are collapsed into three categories: MSAs with a population of 1 million or more, MSAs with a population of less than 1 million, and areas that are not within an MSA.

*Poverty status*—Based on family income and family size using the U.S. Census Bureau’s poverty thresholds. “Poor” persons are defined as persons whose family incomes are below the poverty threshold. “Near poor” persons have family incomes of 100% to less than 200% of the poverty threshold. “Not poor” persons have family incomes that are 200% of the poverty threshold or greater.

*Race*—The categories “White, single race” and “Black or African American, single race” refer to persons who indicated only a single race group. Estimates for multiple race combinations are not shown in this report because these generally do not meet the requirements for confidentiality and statistical reliability.

The text in this report uses shorter versions of the new OMB race and Hispanic origin terms for conciseness, while the tables use the complete terms. For example, the category “Not Hispanic or Latino, black or African American, single race” in the tables is referred to as “Non-Hispanic black” in the text.

*Region*—In the geographic classification of the U.S. population, states are grouped into the four regions used by the U.S. Census Bureau:

<i>Region</i>	<i>States included</i>
Northeast	Maine, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, and Pennsylvania;
Midwest	Ohio, Illinois, Indiana, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Kansas, and Nebraska;
South	Delaware, Maryland, District of Columbia, West Virginia, Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Oklahoma, Arkansas, and Texas;
West	Washington, Oregon, California, Nevada, New Mexico, Arizona, Idaho, Utah, Colorado, Montana, Wyoming, Alaska, and Hawaii.

## Health characteristics or outcomes

*Asthma*—Includes bronchial asthma, allergic asthma, etc. Asthma is indicated when a doctor or other health professional reported to the family that the sample child has asthma.

*Attention deficit hyperactivity disorder (ADHD)*—Indicated when a doctor or other health professional reported to the family that the sample child has ADHD. ADHD includes attention deficit disorder.

*Basic actions disability*—A new summary measure that takes into account four basic domains or functions that a child needs in order to participate in age-appropriate activities (38,39). These domains consist of sensory functions (e.g., hearing, vision), movement (e.g., walking, running, playing), cognitive functioning (e.g., ability to remember, learning disabilities,

mental retardation, Down syndrome, autism), and emotional or behavioral functions (ADHD, emotional or behavioral difficulties). Children aged 4–17 were considered to have a basic action disability if they had any one of the following problems: a lot of trouble hearing or deafness; trouble seeing; limitations in their ability to crawl, walk, run, or play; difficulty remembering; mental retardation; Down syndrome; autism; a learning disability; ADHD; or definite or severe emotional or behavioral difficulties (from the Strengths and Difficulties Questionnaire).

*Chronic conditions*—Conditions that are not cured, once acquired (such as heart disease, diabetes, and birth defects) are considered chronic from the date of onset. Other conditions must have been present 3 months or longer to be considered chronic. An exception is made for children less than age 1 who have had a condition since birth; these conditions are considered chronic. Questions in the 2001–2007 NHIS Sample Child Cores pertaining to chronic conditions ask whether these conditions were diagnosed by a doctor or a health professional.

*Contacts with health professionals*—Defined as a visit to or conversation with a doctor or other health professional by anyone in the family about the health of the sample child during the 2 weeks prior to interview. Contacts include home visits, office visits, or telephone calls for medical advice, prescriptions, or test results. A telephone call to schedule an appointment is not included as a contact. An emergency room visit and hospital stays are included as contacts.

*Doctor or other health professional*—Refers to medical doctors and osteopathic physicians, including general practitioners as well as specialists, psychologists, nurses, physical therapists, chiropractors, etc.

*Health status*—Obtained from a question in the survey that asked respondents, “Would you say your health in general was excellent, very good, good, fair, or poor?” Information was obtained from all respondents, with proxy responses allowed for adults not taking part in the interview and all

children under age 18. In this report, the categories “Good,” “Fair,” and “Poor” health are combined into a single category and shown in [Tables 1](#) and [2](#).

*Hospital emergency room (ER) visits*—Includes visits to a hospital ER only. Visits for emergency care received at an HMO, outpatient clinic, or urgent care center are not included.

*Prescription medicine*—Medication that can only be obtained with the approval of a licensed health care provider.

*Usual place of health care*—Based on a question that asked whether respondents had a place that they usually went to when they were sick or needed advice about their health. These places include a walk-in clinic, doctor’s office, clinic, health center, HMO, hospital emergency room or outpatient clinic, or a military or VA health care facility.

# Vital and Health Statistics Series Descriptions

## ACTIVE SERIES

- Series 1. **Programs and Collection Procedures**—This type of report describes the data collection programs of the National Center for Health Statistics. Series 1 includes descriptions of the methods used to collect and process the data, definitions, and other material necessary for understanding the data.
- Series 2. **Data Evaluation and Methods Research**—This type of report concerns statistical methods and includes analytical techniques, objective evaluations of reliability of collected data, and contributions to statistical theory. Also included are experimental tests of new survey methods, comparisons of U.S. methodologies with those of other countries, and as of 2009, studies of cognition and survey measurement, and final reports of major committees concerning vital and health statistics measurement and methods.
- Series 3. **Analytical and Epidemiological Studies**—This type of report presents analytical or interpretive studies based on vital and health statistics. As of 2009, Series 3 also includes studies based on surveys that are not part of continuing data systems of the National Center for Health Statistics and international vital and health statistics reports.
- Series 10. **Data From the National Health Interview Survey**—This type of report contains statistics on illness; unintentional injuries; disability; use of hospital, medical, and other health services; and a wide range of special current health topics covering many aspects of health behaviors, health status, and health care utilization. Series 10 is based on data collected in this continuing national household interview survey.
- Series 11. **Data From the National Health Examination Survey, the National Health and Nutrition Examination Surveys, and the Hispanic Health and Nutrition Examination Survey**—In this type of report, data from direct examination, testing, and measurement on representative samples of the civilian noninstitutionalized population provide the basis for (1) medically defined total prevalence of specific diseases or conditions in the United States and the distributions of the population with respect to physical, physiological, and psychological characteristics, and (2) analyses of trends and relationships among various measurements and between survey periods.
- Series 13. **Data From the National Health Care Survey**—This type of report contains statistics on health resources and the public's use of health care resources including ambulatory, hospital, and long-term care services based on data collected directly from health care providers and provider records.
- Series 20. **Data on Mortality**—This type of report contains statistics on mortality that are not included in regular, annual, or monthly reports. Special analyses by cause of death, age, other demographic variables, and geographic and trend analyses are included.
- Series 21. **Data on Natality, Marriage, and Divorce**—This type of report contains statistics on natality, marriage, and divorce that are not included in regular, annual, or monthly reports. Special analyses by health and demographic variables and geographic and trend analyses are included.
- Series 23. **Data From the National Survey of Family Growth**—These reports contain statistics on factors that affect birth rates, including contraception and infertility; factors affecting the formation and dissolution of families, including cohabitation, marriage, divorce, and remarriage; and behavior related to the risk of HIV and other sexually transmitted diseases. These statistics are based on national surveys of women and men of childbearing age.

## DISCONTINUED SERIES

- Series 4. **Documents and Committee Reports**—These are final reports of major committees concerned with vital and health statistics and documents. The last Series 4 report was published in 2002. As of 2009, this type of report is included in Series 2 or another appropriate series, depending on the report topic.
- Series 5. **International Vital and Health Statistics Reports**—This type of report compares U.S. vital and health statistics with those of other countries or presents other international data of relevance to the health statistics system of the United States. The last Series 5 report was published in 2003. As of 2009, this type of report is included in Series 3 or another series, depending on the report topic.
- Series 6. **Cognition and Survey Measurement**—This type of report uses methods of cognitive science to design, evaluate, and test survey instruments. The last Series 6 report was published in 1999. As of 2009, this type of report is included in Series 2.
- Series 12. **Data From the Institutionalized Population Surveys**—The last Series 12 report was published in 1974. Reports from these surveys are included in Series 13.
- Series 14. **Data on Health Resources: Manpower and Facilities**—The last Series 14 report was published in 1989. Reports on health resources are included in Series 13.
- Series 15. **Data From Special Surveys**—This type of report contains statistics on health and health-related topics collected in special surveys that are not part of the continuing data systems of the National Center for Health Statistics. The last Series 15 report was published in 2002. As of 2009, reports based on these surveys are included in Series 3.
- Series 16. **Compilations of Advance Data From Vital and Health Statistics**—The last Series 16 report was published in 1996. All reports are available online, and so compilations of Advance Data reports are no longer needed.
- Series 22. **Data From the National Mortality and Natality Surveys**—The last Series 22 report was published in 1973. Reports from these sample surveys, based on vital records, are published in Series 20 or 21.
- Series 24. **Compilations of Data on Natality, Mortality, Marriage, and Divorce**—The last Series 24 report was published in 1996. All reports are available online, and so compilations of reports are no longer needed.
