## **Detailed Diagnoses and Surgical Procedures for Patients Discharged From Short-Stay Hospitals United States, 1983**

---

This report presents statistics on conditions diagnosed and surgical and nonsurgical procedures performed in non-Federal short-stay hospitals. The statistics are based on data collected through the National Hospital Discharge Survey from a national sample of the hospital records of discharged inpatients. Estimates of first-listed diagnoses, all-listed diagnoses, days of care for first-listed diagnoses, and all-listed procedures are shown by sex and age of patient and geographic region of hospital.

# Detailed Diagnoses and Procedures for Patients Discharged From Short-Stay Hospitals

by Lola Jean Kozak and Mary Moien,  
Division of Health Care Statistics

## Introduction

The purpose of this report is to improve access to medical data available from the National Hospital Discharge Survey (NHDS) of the National Center for Health Statistics (NCHS). Data for 1983 are shown by age and sex of the patient and geographic region of the hospital for conditions diagnosed and surgical and nonsurgical procedures performed. The report is intended as a source document for researchers and others who need data for detailed diagnostic and procedure categories. Similar reports have been published with data for 1977,<sup>1</sup> 1978,<sup>2</sup> and 1979.<sup>3</sup>

NHDS data are also published by the National Center for Health Statistics in other reports in Series 13 of *Vital and Health Statistics* and in *Advance Data*. A brief summary of hospital utilization data for 1983 has been published,<sup>4</sup> and a report that will include analysis of 1983 diagnostic, procedure, and nonmedical hospital use statistics is in preparation. However, the diagnostic and procedure information is presented in substantially more detail in this report. Information about newborn infants, although collected through the survey, is excluded from this report.

The survey data are obtained from the face sheets of a sample of the medical records of inpatients discharged from a national sample of short-stay general and specialty hospitals in the United States. The estimates, therefore, are subject

to sampling as well as nonsampling errors. The sample for 1983 included approximately 206,000 medical records from 418 hospitals that participated in the survey. Descriptions of the survey design, data collection procedures, estimation process, and relative standard error curves are found in appendix I. A detailed report on the design of the survey has been published.<sup>5</sup>

Familiarity with NHDS definitions is important to interpret the data properly and to compare them with statistical data on short-stay hospital utilization that are available from other sources. Definitions of the terms used in this report are presented in appendix II. The medical data for hospitalized patients are coded according to the *International Classification of Diseases, 9th Revision, Clinical Modification*<sup>6</sup> (ICD-9-CM—see appendix III).

Information on short-stay hospital utilization is also collected through the National Health Interview Survey (NHIS) of the National Center for Health Statistics. Estimates from that survey generally differ from NHDS estimates because of differences in collection procedures, populations sampled, and definitions. Data from the National Health Interview Survey are published in Series 10 of *Vital and Health Statistics*. However, data on the detailed diagnoses and procedures published in this report are not available through NHIS.

# Use of tables

The detailed tables in this report show the conditions diagnosed and procedures performed by the detailed code numbers of the *International Classification of Diseases, 9th Revision, Clinical Modification*.<sup>6</sup> Measurements of hospital utilization are shown in terms of numbers of first-listed and all-listed diagnoses, of days of care for first-listed diagnoses, and of procedures performed for the individuals discharged.

## Presentation of estimates

Detailed tables 1-3 provide information by ICD-9-CM 3-, 4-, and 5-digit diagnostic codes. Table 4 shows 2-, 3-, and 4-digit procedure codes. A specific code appears in the tables if the estimate of the total for the code has a relative standard error (a measure of the reliability of the data) no larger than 30 percent. The codes that appear in table 2 for days of care are identical to those in table 1 for first-listed diagnoses. If the relative standard error of an estimate for a sex or age group or region is larger than 30 percent, the estimate is not reported. Only an asterisk (\*) is shown in the tables.

In addition, all estimates of diagnoses and procedures less than 10,000 are preceded by an asterisk to indicate that they are based on a relatively small number of actual discharge records. Days of care estimates based on small numbers of records are also indicated by asterisks.

Estimates of diagnoses and procedures that are less than 5,000 are based on fewer than 30 records and are considered too unreliable to be used by themselves. However, these estimates can be added to form a group with a value greater than 5,000 that can be used. For example, the estimates in table 3 for all-listed diagnosis code 003 by age group are: under 15 years, 9,000; 15-44 years, 5,000; 45-64 years, 3,000; and 65 years and over, 3,000. The two estimates under 5,000 should not be used individually but could be used if added together to form the estimate of 6,000 for patients 45 years and over. The estimate of 11,000 for patients 15 years and over (5,000 plus 3,000 plus 3,000) could also be used.

Days of care estimates based on fewer than 30 discharge records also should not be used by themselves. In general, these estimates can be expected to be less than 35,000. To evaluate the sample size of any specific days of care estimate in table 2, check the corresponding discharge estimate in table 1. If the discharge estimate is less than 5,000, the days of care estimate should not be used by itself. For example,

the days of care estimate for patients with diagnosis code 004 discharged from hospitals in the South is 26,000, but the estimate of discharges for this group is 6,000; therefore the days of care estimate could be used by itself. On the other hand, there were an estimated 38,000 days of care for patients 65 years and over with diagnosis code 153.0, but only 3,000 estimated discharges, so the days of care estimate should not be used alone.

The days of care estimates that should not be used alone can be grouped with other estimates. To check the reliability of the groupings, the corresponding discharge estimates would be added. For instance, under diagnosis code 263, the days of care estimate of 33,000 for patients 45-64 years could be added to the estimate of 192,000 for patients 65 years and over (3,000 plus 9,000 estimated discharges), or to the estimates of 21,000 and 24,000 for patients under 15 years and 15-44 years (3,000 plus 2,000 plus 2,000 estimated discharges).

Estimates of diagnoses and procedures that are 5,000-10,000 are based on approximately 30-60 records and should be used with caution because of the small sample size. For the same reason, days of care estimates derived from 5,000-10,000 estimated discharges should be used with caution. These estimates will generally range from about 35,000 to 70,000. Further information about sample size and relative standard error is presented in "Reliability of estimates," appendix I.

The total for all codes presented at the beginning of each table includes estimates for codes not shown in the table. Likewise, the total for each diagnostic chapter or procedure category includes estimates for all the codes in the chapter or category, whether or not they are shown individually. Estimates for 5-digit codes may not add to the 4-digit total, 4-digit codes to the 3-digit total, or, for procedures, 3-digit codes to the 2-digit total because the totals include estimates for codes not shown or because the data were rounded to the nearest thousand for presentation.

Although 4- and 5-digit diagnostic codes are presented together under the 3-digit codes of which they are a part, the estimates for 4- and 5-digit codes cannot be added to obtain the estimate for the 3-digit code. For example, in table 1 the estimate for first-listed diagnosis code 008 is 119,000. If the estimates for the 4- and 5-digit codes included in 008 are added, the total would come to 129,000. This occurs because the estimate of 10,000 for 008.49 is part of the estimate of 11,000 for code 008.4 and thus cannot

be added to it. Similarly, estimates for 3- and 4-digit procedure codes cannot be added together to obtain the estimate for a 2-digit code.

### Diagnostic data

The first-listed diagnosis is the diagnosis identified as the principal diagnosis or listed first on the face sheet of the medical record. The number of all-listed diagnoses includes first-listed diagnoses and other diagnoses appearing on the medical record. At present, up to a maximum of seven diagnoses are coded, though before 1979 the maximum number was five.

With regard to all-listed diagnoses, it should be pointed out that there is a certain amount of "double coding" inherent in the ICD-9-CM; that is, certain diagnoses require the coding of two diagnostic codes. For example, females with deliveries all have one additional diagnostic code that indicates the outcome of their delivery (single liveborn; twins, both liveborn; and the like). A list of codes that require double coding is presented in appendix I.

### Procedure data

Procedures include surgical and nonsurgical operations, diagnostic procedures, and special treatments. Since the beginning of 1979, up to four procedures have been coded for each discharge, an increase from the maximum of three procedures coded in preceding years. In addition, before 1979 only figures for "surgical" operations, excluding some obstetrical procedures, were published.<sup>7,8</sup> Since then data on many diagnostic, nonsurgical, and obstetric procedures have been published. Appendix I ("Medical coding and edit") includes a list of the obstetric codes that were not coded prior to 1979. See appendix II for a list of the ICD-9-CM nonsurgical procedure codes.

Procedures in the ICD-9-CM have been categorized into four classes by a Technical Consultant Panel of the United States National Committee on Vital and Health Statistics.<sup>9</sup> In general, "surgery" is considered to be in Class 1. However, Class 1 procedures are not identical with the "surgical" procedures published by the National Hospital Discharge Survey

(NHDS) prior to 1979.<sup>7,8</sup> Only three Class 4 procedures, circumcision (code 64.0), episiotomy (code 73.6), and removal of intrauterine contraceptive device (code 97.71), were coded for the survey between 1979 and 1983. During 1983 additional Class 4 procedures were coded, but because the change was made in the middle of the year, these procedures are underestimated for 1983. Appendix II contains lists of the Class 2, Class 3, and the two groups of Class 4 procedure codes, those that are coded and those that are not.

Prior to 1979, all biopsies were coded under a separate category. The ICD-9-CM, however, has redistributed biopsies into the appropriate body system categories. For convenience, a list of the biopsy codes in the ICD-9-CM is included in appendix II.

### Computation of other statistics

The data in tables 1-4 can be used to compute other hospital use statistics, such as rates of diagnoses and average lengths of stay for diagnoses. In general, a rate is the ratio between one statistic (for example, number of discharges) and another statistic (for example, the population) for a given period of time (such as 1 year). Usually the resulting figure is multiplied by some constant (for example, 100, 1,000, or 10,000) to avoid working with cumbersome decimals. The rates shown in most NHDS publications are rates of discharges, diagnoses, and procedures per 1,000, 10,000, or 100,000 civilian population for a given year.

Based on data in tables 1-4, rates were calculated for the major diagnostic and procedure groups for first-listed diagnoses and days of care, all-listed diagnoses, and all-listed procedures. These rates are shown in tables A-D. The population used in computing these rates is shown in appendix I.

The average length of stay is calculated by dividing the total number of days of care by the total number of patients. This statistic can be calculated for first-listed diagnoses by dividing the days of care of patients with a diagnosis from table 2 by the number of patients with the diagnosis from table 1. The average lengths of stay for major diagnostic groups are presented in table E.

## Technical notes on methods

### Statistical design of the National Hospital Discharge Survey

*Scope of the survey*—The National Hospital Discharge Survey (NHDS) consists of patients discharged from noninstitutional hospitals, exclusive of military and Veterans Administration hospitals, located in the 50 States and the District of Columbia. Only hospitals with six beds or more for patient use and those in which the average length of stay for all patients is less than 30 days are included in the survey. Discharges of all patients from Federal hospitals are excluded.

*Sample size*—The National Master Facility Inventory (NMFI) is the universe from which the NHDS sample is drawn. A detailed description of the development, contents, maintenance plans, and procedures for assessing completeness of coverage of the NMFI was published in 1965.<sup>10</sup>

The original universe for the survey consisted of 6,965 short-stay hospitals contained in the 1963 NMFI. This universe is periodically updated (table I). The distribution of the hospitals in the NHDS universe and sample for 1983 is given by bed size and geographic regions in table II.

**Table I. Number of hospitals in the National Hospital Discharge Survey (NHDS) universe and number of hospitals added to the NHDS universe, by year of addition and year of National Master Facility Inventory (NMFI) used: United States, 1963–81**

NMFI data year	NHDS universe		
	Year added	Number added	Total universe
1963 . . . . .	1965	6,965	6,965
1969 . . . . .	1972	442	7,407
1972 . . . . .	1975	223	7,630
1975 . . . . .	1977	273	7,903
1977 . . . . .	1979	114	8,017
1979 . . . . .	1981	63	8,080
1981 . . . . .	1983	50	8,130

The sample for 1983 consisted of 553 hospitals. Of these, 78 refused to participate, and 57 were out of scope either

because the hospital had gone out of business or because it failed to meet the definition of a short-stay hospital. Thus 418 hospitals participated in the survey during 1983 and provided approximately 206,000 abstracts of medical records.

*Sample design*—All hospitals with 1,000 beds or more in the universe of short-stay hospitals were selected with certainty in the sample. All hospitals with fewer than 1,000 beds were stratified, the primary strata being the 24 size-by-region classes shown in table II. Within each primary stratum, the allocation of hospitals was made through a controlled selection technique so that hospitals in the sample would be properly distributed with regard to ownership and geographic division. Sample hospitals were drawn with probabilities ranging from certainty for the largest hospitals to 1 in 40 for the smallest hospitals.

The within-hospital sampling ratio for selecting sample discharges varied inversely with the probability of hospital selection. The smallest sampling fraction of discharged patients was taken in the largest hospitals, and the largest fraction was taken in the smallest hospitals. This sampling was done to compensate for hospitals that were selected with probabilities proportionate to their size class and to ensure that the overall probability of selecting a discharge would be approximately the same in each size class.

In nearly all sample hospitals, the daily listing sheet of discharges was the frame from which the subsamples of discharges were selected. The sample discharges were selected by a random technique, usually on the basis of the terminal digit(s) of the patient's medical record number that was assigned when the patient was admitted to the hospital. If the hospital's daily discharge listing did not show the medical record numbers, the sample was selected by starting with a randomly selected discharge and taking every *k*th discharge thereafter.

## Data collection and processing

*Data collection*—Depending on the study procedure agreed on with the hospital administrator, the sample selection and the transcription of information from the hospital records to abstract forms were performed either by the hospital staff or by representatives of the National Center for Health Statistics (NCHS) or by both. In about 50 percent of the hospitals that participated in NHDS during the year, this work was performed by the medical records department of the hospital. In the remaining hospitals, the work was performed by personnel of the U.S. Bureau of the Census acting for NCHS.

Survey hospitals used an abstract form to transcribe data from the hospital records. The form provides space for recording demographic data, admission and discharge dates, zip code of the patient's residence, expected sources of payment, disposition of the patient at discharge, and information on discharge diagnoses and surgical operations or procedures (figure I). All discharge diagnoses and procedures were listed on the abstract in the order of the principal one, or the

first-listed one if the principal one was not identified, followed by the order in which all other diagnoses or procedures were entered on the face sheet of the medical record.

Completed abstract forms for each sample hospital were shipped, along with sample selection control sheets, to a Census Regional Office. Every shipment of abstracts was reviewed and each abstract form was checked for completeness. Abstracts were then sent to NCHS for processing.

*Medical coding and edit*—The medical information recorded on the sample patient abstracts was coded centrally by NCHS staff. A maximum of seven diagnostic codes was assigned for each sample abstract; in addition, if the medical information included surgical or nonsurgical procedures, a maximum of four codes for these procedures was assigned. Following conversion of the data on the medical abstract to computer tape, a final medical edit was accomplished by computer inspection runs and a review of rejected abstracts. If the sex or age of the patient was incompatible with the

recorded medical information, priority was given to the medical information in the editing decision.

NHDS medical coders code from abstracts of medical records in the order in which the diagnoses and procedures are entered. For most abstracts, this coding procedure is relatively free of problems. It was noted, however, that acute myocardial infarction was frequently not the lead entry in a group of circulatory diagnoses. For example, the patient's record may have arteriosclerosis listed first and arteriosclerotic heart disease listed second with acute myocardial infarction listed third. If the usual procedure were followed, as it was until 1982, acute myocardial infarction would be coded in third place and retrievable only under the heading of all-listed diagnoses. A decision was made to reorder some acute myocardial infarction diagnoses. The new procedure, based on accepted medical coding practice, states that whenever an acute myocardial infarction is encountered with other circulatory diagnoses and is other than the first entry, it should be reordered to first position.

The system currently used for coding the diagnoses and procedures on NHDS sample patient abstracts is the *International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM)*.<sup>6</sup> Earlier data for 1970-78 were coded according to the *Eighth Revision International Classification of Diseases, Adapted for Use in the United States (ICDA)*,<sup>11</sup> with some modifications. These modifications, which were necessary because of incomplete or ill-defined terminology in the abstracts, are presented elsewhere. It has not been necessary, however, to modify the ICD-9-CM for use in NHDS.

Both the ICDA and the ICD-9-CM are divided into two main sections: diseases and injuries, and surgical and nonsurgical procedures. However, many differences exist between the two classifications. These differences are discussed in a previous report.<sup>3</sup>

Some ICD-9-CM diagnostic codes cannot appear alone; they must appear with another diagnostic code. Specifically, the following codes cannot be first-listed:

320.7, 321.1-321.8, 323.0-323.4, 323.6-323.7, 330.2-330.3, 331.7, 334.4, 336.2-336.3, 337.1, 357.1-357.4, 358.1, 359.5-359.6, 362.01-362.02, 362.71-362.72, 364.11, 365.41-365.44, 366.41-366.44, 370.44, 372.15, 372.31-372.33, 373.4-373.6, 374.51, 376.13-376.22, 380.13, 380.15, 382.02, 420.0, 421.1, 422.0, 424.91, 425.7-425.8, 443.81, 456.20-456.21, 484.1-484.8, 516.1, 517.1-517.8, 567.0, 573.1-573.2, 580.81, 581.81, 582.81, 583.81, 590.81, 595.4, 598.01, 601.4, 604.91, 608.81, 616.11, 616.51, 628.1, 711.10-711.89, 712.10-712.39, 713.0-713.8, 720.81, 727.01, 730.70-730.89, 731.1, 731.8, 737.40-737.43, 774.0, 774.31, 774.5. In addition, all discharges with the diagnostic codes 640.0-643.9 and 645.0-676.9 with a fifth digit of 1 or 2 or 650 (indicating delivery) must have a code V27.0-V27.9 as a first-listed diagnosis. Conversely, every discharge with a first-listed diagnosis of V27.0-V27.9 must also have one of these delivery codes.

Prior to 1979, data on radiotherapy and physical medicine and rehabilitation (ICDA codes R1-R4) and some obstetrical procedures were not collected by means of NHDS. The obstetrical procedures not coded were artificial rupture of membranes (external, internal, and combined version); outlet and low forceps delivery with and without episiotomy; and episiotomy (ICDA codes 75.0-75.6 and 75.9). In addition, data for diagnostic endoscopy, radiography, and other nonsurgical procedures (ICDA codes A4-A9 and R9), although coded, were not published. Starting with 1979 data, however, the procedures coding has followed the guidelines of the Uniform Hospital Discharge Data Set (UHDDS).<sup>9,12</sup> The UHDDS is a minimum data set of items uniformly defined and abstracted from hospital medical records. These items were selected on the basis of their continuous usefulness to organizations and agencies requiring hospital information.

According to UHDDS guidelines, all procedures are allocated into one of four classes. Classes 1-3 consist of procedures that carry an operative or anesthetic risk or require highly trained personnel, special facilities, or special equipment. Class 4 procedures do not meet these criteria. See appendix II for the procedure codes included in these classes.

Until 1983, the only Class 4 procedures coded in NHDS were circumcision (ICD-9-CM code 64.0), episiotomy (code 73.6), and removal of intrauterine contraceptive device (IUD) (code 97.71). The coding of additional Class 4 procedures, listed in appendix II, that are used in the assignment of diagnosis-related groupings (DRGs) was begun in mid-1983. Diagnosis-related groupings, developed at the Yale School of Organization and Management, are being used by the Health Care Financing Administration, some States, and some third-party payers to reimburse hospitals for inpatient care. A report has been published on the conversion of NHDS data to DRGs.<sup>13</sup>

## Presentation of estimates

*Grouping of diagnoses and procedures*—In this report the diagnostic chapters, the broadest groupings of diseases and injuries shown, correspond to ICD-9-CM chapters 1-17 and the supplementary classification of factors influencing health status and contact with health service. The procedure groupings used in this report are the categories numbered 1-16 of the ICD-9-CM section "Procedure Classification."

*Patient characteristics not stated*—The age and sex of the patient were not specified on the hospital records (the face sheet of the patient's medical record) for about one-half of 1 percent of the discharges. Imputations of these missing items were made by assigning the patient an age or sex consistent with the age or sex of other patients with the same diagnostic code.

If the dates of admission or discharge were not given and could not be obtained from the monthly sample listing sheet transmitted by the sample hospital, a length of stay was imputed by assigning the patient a length of stay characteristic of the stays of other patients of the same age. During 1983 only 0.13 percent of the records had a missing date of admission or discharge.

*Rounded numbers*—Estimates of the numbers of diagnoses, days of care, and all-listed procedures have been rounded to the nearest thousand for tabular presentation. For this reason, detailed figures within the tables do not always add to totals. Rates presented in the text tables were calculated on the basis of unrounded figures and do not necessarily agree with the computations made from the rounded data.

*Population estimates*—The population estimates used in computing rates are from published and unpublished estimates for the U.S. civilian population on July 1, 1983, provided by the U.S. Bureau of the Census. The estimates by age, sex, and geographic region are presented in table III and are consistent with the population estimates published in *Current Population Reports*, Series P-25.

Although the civilian noninstitutionalized population was used prior to 1981, it has been determined that the civilian population is more appropriate to use for the NHDS as persons in institutions are usually hospitalized in short-stay hospitals. This is especially true for elderly residents of nursing homes. A report comparing NHDS rates based on the civilian population with the civilian noninstitutionalized population has been published.<sup>14</sup>

### Reliability of estimates

*Estimation*—Statistics produced from NHDS are derived by a complex estimating procedure. The basic unit of estimation is the sample inpatient discharge abstract. The estimating procedure used to produce essentially unbiased national estimates in NHDS has three principal components: inflation by reciprocals of the probabilities of sample selection, adjustment for nonresponse, and ratio adjustment to fixed totals. These components of estimation are described in appendix I of two earlier publications.<sup>15,16</sup>

*Measurement errors*—As in any survey, results are subject to nonsampling or measurement errors, which include errors because of hospital nonresponse, missing abstracts, information

incompletely or inaccurately recorded on abstract forms, and processing errors. Some of these errors were discussed under the previous section entitled "Patient characteristics not stated."

The Institute of Medicine (IOM) has conducted three studies on the reliability of hospital abstract data collection; the most recent study was on NHDS. The IOM NHDS study was performed by using data coded according to ICDA, but some of the findings are relevant to the 1983 NHDS data, even though these data were coded according to the ICD-9-CM. Of special interest to this report is the finding that, in a number of cases, the first-listed diagnosis in NHDS was not the principal diagnosis as determined by IOM after a study of the entire medical record. For example, when diagnoses at the ICDA class level were examined, the principal diagnosis from IOM matched the first-listed diagnosis from NHDS in approximately 86 percent of the cases. Detailed accounts of this and other IOM findings have been published.<sup>17-19</sup>

*Sampling error*—The standard error is primarily a measure of the variability attributed to a value obtained from a sample as an estimate of a population value. In this report it also reflects part of the measurement error. The value that would have been obtained if a complete enumeration of the population had been made will be contained in an interval represented by the sample estimate plus or minus 1 standard error about 68 out of 100 times and plus or minus 2 standard errors about 95 times out of 100.

The relative standard error is obtained by dividing the standard error by the estimate. The resulting value is multiplied by 100, which expresses the standard error as a percent of the estimate.

The standard error of one statistic is generally different from that of another, even when the two come from the same survey. To derive standard errors that would be applicable to a wide variety of statistics that could be prepared at moderate cost, a number of approximations are required. As a result, the figures in this appendix provide general relative standard errors for a wide variety of estimates rather than the specific error for a particular statistic.

Approximate relative standard errors and standard errors have been prepared for measuring the variances applicable to: (1) estimates of the discharges or first-listed diagnoses, and days of care for patient characteristics (for example, age and sex) and for hospital characteristics (for example, region); and (2) estimates of all procedures performed by the specific procedure for patient characteristics and hospital characteristics.

The relative standard errors applicable to patients discharged for first-listed diagnoses, all-listed diagnoses, days of care, and all-listed procedures are provided in figures II-IV. The curves for relative standard errors of the estimates in each figure relate to the variables by which estimates are presented in this report. In figure III a separate curve is shown for the region variable because its relative standard errors are different from those in the curve for "All other variables."

The selection of the appropriate relative standard error curve is made as follows:

1. *Discharges or first-listed diagnoses and all-listed diagnoses for patient and hospital characteristics:* Relative standard errors of the estimated number of discharges and of all-listed diagnoses are obtained from the curve in figure II.
2. *Days of care for discharges or first-listed diagnoses for patient and hospital characteristics:* Relative standard errors of the estimated number of days of care are obtained from the curves in figure III.
3. *Procedures:* Relative standard errors of estimated numbers of procedures are obtained from the curve in figure IV.

The presentation of estimates for NHDS is based on both the relative standard error of the estimate and the number of sample records on which the estimate is based (referred to as the sample size). The Central Limit Theorem is used to determine the distribution of the sampling errors. The Central

Limit Theorem states that, given a sufficiently large sample size, the sample estimate is approximately normally distributed and approximates the population estimate.

Based on consideration of the complex sample design of NHDS, the following guidelines are used for presenting NHDS estimates in this report:

1. If the relative standard error of an estimate is larger than 30 percent, the estimate is not shown. Only an asterisk (\*) appears in the tables.
2. If the sample size is less than 30, the estimate is reported but only for use in combination with other estimates that together would represent more than 30 records (that is, more than 5,000 for diagnoses and procedures or more than approximately 35,000 for days of care). The estimate is preceded by an asterisk (\*) in the tables.
3. If the sample size is 30–59, the estimate is reported but should be used with caution. The estimate is preceded by an asterisk (\*) in the tables.

EXAMPLE: As shown in table 1, an estimated 43,000 patients under 15 years of age were discharged in 1983 from short-stay non-Federal hospitals with a first-listed diagnosis coded to ICD-9-CM diagnostic code 008. The relative standard error of this estimate, as read from the curve, is approximately 8.5 percent. Thus, the standard error is approximately 3,700 (8.5 percent of 43,000).

Figure II. Approximate relative standard errors of estimated numbers of patients discharged, or of first-listed diagnoses, and of all-listed diagnoses, by selected patient and hospital characteristics

EXAMPLE: As shown in table 2, an estimated 290,000 days of care were provided during 1983 to female patients discharged from short-stay hospitals with a first-listed diagnosis coded to ICD-9-CM diagnostic code 008. The relative standard error of this estimate, as read from the curve, is approximately 9.6 percent. Thus, the standard error is approximately 27,800 (9.6 percent of 290,000).

Figure III. Approximate relative standard errors of estimated numbers of days of care, by selected patient and hospital characteristics

EXAMPLE: As shown in table 4, an estimated 27,000 procedures coded to ICD-9-CM procedure code 01 were performed during 1983 on patients discharged from short-stay non-Federal hospitals in the North Central Region. The relative standard error of this estimate, as read from the curve, is approximately 10.7 percent. Thus, the standard error is approximately 2,900 (10.7 percent of 27,000).

## Definitions of certain terms used in this report

### Terms relating to hospitalization

**Hospitals**—Short-stay special and general hospitals have six beds or more for inpatient use and an average length of stay of less than 30 days. Federal hospitals and hospital units of institutions are not included.

**Patient**—A person who is formally admitted to the inpatient service of a short-stay hospital for observation, care, diagnosis, or treatment is considered a patient. In this report the number of patients refers to the number of discharges during the year, including any multiple discharges of the same individual from one short-stay hospital or more. Infants admitted on the day of birth, directly or by transfer from another medical facility, with or without mention of a disease, disorder, or immaturity are included. All newborn infants are excluded from the tables in this report. The terms “patient” and “inpatient” are used synonymously.

**Newborn infant**—A newborn infant is defined as a patient admitted by birth to a hospital.

**Discharge**—Discharge is the formal release of a patient by a hospital; that is, the termination of a period of hospitalization by death or by disposition to place of residence, nursing home, or another hospital. The terms “discharges” and “patients discharged” are used synonymously.

**Discharge rate**—The ratio of the number of hospital discharges during a year to the number of persons in the civilian population on July 1 of that year determines the discharge rate.

**Days of care**—The total number of patient days accumulated at the time of discharge by patients discharged from short-stay hospitals during a year constitutes days of care. A stay of less than 1 day (patient admission and discharge on the same day) is counted as 1 day in the summation of total days of care. For patients admitted and discharged on different days, the number of days of care is computed by counting all days from (and including) the date of admission to (but not including) the date of discharge.

**Rate of days of care**—The rate of days of care is the ratio of the number of patient days accumulated at the time of discharge by patients discharged from short-stay hospitals during a year to the number of persons in the civilian population on July 1 of that year.

**Average length of stay**—The average length of stay is the total number of patient days accumulated at the time of discharge by patients discharged during the year divided by the number of patients discharged.

### Terms relating to diagnoses

**Discharge diagnoses**—The discharge diagnoses are one or more diseases or injuries (or some factor that influences health status and contact with health services that is not itself a current illness or injury) listed by the attending physician on the medical record. In NHDS all discharge (or final) diagnoses listed on the face sheet (summary sheet) of the medical record for patients discharged from the inpatient service of short-stay hospitals are transcribed in the order listed. Each sample discharge is assigned a maximum of seven 5-digit codes according to ICD-9-CM.

**Principal diagnosis**—The condition established after study to be chiefly responsible for occasioning the admission of the patient to the hospital for care is called the principal diagnosis.

**First-listed diagnosis**—The coded diagnosis identified as the principal diagnosis or listed first on the face sheet of the medical record is the first-listed diagnosis. The number of first-listed diagnoses is equivalent to the number of discharges.

**All-listed diagnoses**—All-listed diagnoses are an estimated number of discharge (or final) diagnoses, up to a maximum of seven, that are listed on the face sheet of the medical record for inpatients discharged from non-Federal short-stay hospitals during the year.

### Terms relating to procedures

**Procedure**—A procedure is one or more surgical or nonsurgical operations, diagnostic procedures, or special treatments assigned by the physician to the medical record of patients discharged from the inpatient service of short-stay hospitals. In NHDS all terms listed on the face sheet of the medical record under captions such as “operation,” “operative procedures,” “operations and/or special treatments,” are transcribed in the order listed. A maximum of four 4-digit codes are assigned per sample discharge according to ICD-9-CM and NHDS directives. (See “Medical coding and edit” in the “Data collection and processing” section of appendix I for further details.)

**All-listed procedures**—All coded procedures that are listed on the face sheet of the medical record exclusive of certain Class 4 procedures are known as all-listed procedures.

**UHDDS classes of procedures**—Procedures are categorized into four classes according to UHDDS guidelines.

Classes 1–3 consist of procedures that carry an operative or anesthetic risk or require highly trained personnel, special facilities, or special equipment. Class 4 procedures do not meet these criteria.

**UHDDS Class 1 procedures**—All procedures not categorized as Class 2, 3, or 4 procedures are Class 1 procedures.

**UHDDS Class 2 procedures**—The following ICD–9–CM procedure codes identify Class 2 procedures as categorized by UHDDS:

03.31, 03.91–03.92, 04.80–04.89, 21.01, 24.7, 31.41–31.42, 34.91–34.92, 37.92–37.93, 42.22–42.23, 44.12–44.13, 45.12–45.13, 45.22–45.24, 48.22, 50.92, 54.91, 54.97–54.98, 57.31, 58.22, 59.95, 62.91, 66.8, 69.6–69.7, 69.93, 70.0, 73.01–73.1, 73.3, 73.51–73.59, 76.96, 81.91–81.92, 82.92–82.96, 83.94–83.98, 85.91–85.92, 86.01, 87.03–87.08, 87.13–87.15, 87.31–87.35, 87.38, 87.41–87.42, 87.51–87.52, 87.54–87.66, 87.71–87.73, 87.75, 87.77–87.78, 87.81–87.84, 87.91, 87.93–87.94, 88.01–88.03, 88.12–88.15, 88.38, 88.71–88.89, 89.14, 89.21–89.25, 89.32, 89.41–89.44, 89.54, 89.61–89.65, 89.8, 92.01–92.29, 93.45–93.54, 93.56–93.59, 93.92–93.93, 93.95, 93.97, 94.24, 94.26–94.27, 95.04, 95.12–95.13, 95.16–95.26, 96.01–96.08, 96.21–96.25, 96.31–96.33, 97.11–97.13, 98.02–98.04, 98.14–98.16, 98.19, 99.01, 99.60–99.69, 99.81.

**UHDDS Class 3 procedures**—The following ICD–9–CM procedure codes identify Class 3 procedures as categorized by the UHDDS:

29.11, 57.94–57.95, 60.19, 84.41–84.43, 84.45–84.47, 86.26, 93.98, 98.01, 98.05–98.13, 98.17–98.18, 98.20–98.29, 99.25.

**UHDDS Class 4 procedures**—From 1979 through the middle of 1983 only three Class 4 procedures were coded for NHDS: circumcision (ICD–9–CM code 64.0), episiotomy (code 73.6), and removal of intrauterine contraceptive device (code 97.71). The ICD–9–CM codes for the Class 4 procedures coded during the last half of 1983 are:

01.18–01.19, 03.39, 04.19, 05.19, 06.19, 07.19, 08.91–08.93, 09.19, 09.41–09.49, 10.29, 11.29, 12.29, 14.19, 15.09, 16.29, 20.39, 28.19, 33.28–33.29, 34.28–34.29, 38.29, 40.19, 50.19, 51.19, 52.19, 54.29, 55.29, 56.39, 57.39, 59.29, 60.18, 62.19, 63.09, 64.0, 65.19, 66.19, 67.19, 68.19, 70.29, 71.19, 73.6, 76.19, 78.8, 81.98, 83.29, 97.71.

The following ICD–9–CM procedure codes identify Class 4 procedures not coded by NHDS:

08.19, 16.21, 18.01, 18.11, 18.19, 21.21, 21.29, 22.19,

24.19, 25.09, 25.91, 26.19, 27.29, 27.91, 29.19, 31.48–31.49, 37.29, 41.38–41.39, 42.29, 44.19, 45.19, 45.28–45.29, 48.23, 48.29, 49.21, 49.29, 49.41, 58.29, 61.19, 64.19, 64.91, 64.94, 69.92, 70.21, 73.91–73.92, 75.35, 85.19, 86.19, 86.92, 87.09–87.12, 87.16–87.17, 87.22–87.29, 87.36–87.37, 87.39, 87.43–87.49, 87.69, 87.79, 87.85–87.89, 87.92, 87.95–87.99, 88.09, 88.16–88.31, 88.33, 88.35, 88.37, 88.39, 89.01–89.13, 89.15–89.16, 89.26–89.31, 89.33–89.39, 89.45–89.53, 89.55–89.59, 89.66, 89.7, 90.01–91.99, 93.01–93.25, 93.27–93.28, 93.31–93.39, 93.42–93.44, 93.61–93.91, 93.94, 93.96, 93.99–94.23, 94.25, 94.29–95.03, 95.05–95.11, 95.14–95.15, 95.31–95.49, 96.09–96.19, 96.26–96.28, 96.34–97.04, 97.14–97.69, 97.72–97.89, 99.02–99.24, 99.26–99.59, 99.71–99.79, 99.82–99.99.

**Biopsy**—Biopsy is excision of tissue for microscopic examination. The ICD–9–CM biopsy codes are:

01.11–01.15, 03.32, 04.11–04.12, 05.11, 06.11–06.13, 07.11–07.17, 08.11, 09.11–09.12, 10.21, 11.22, 12.22, 15.01, 16.23, 18.12, 20.32, 21.22, 22.11, 24.11–24.12, 25.01–25.02, 26.11, 27.21–27.24, 28.11, 29.12, 31.43–31.44, 33.24–33.27, 34.23–34.27, 37.24–37.25, 38.21, 40.11, 41.31–41.33, 42.24, 44.14–44.15, 45.14–45.15, 45.25–45.27, 48.24–48.26, 49.22–49.23, 50.11–50.12, 51.12–51.13, 52.11–52.12, 54.22–54.23, 55.23–55.24, 56.32–56.33, 57.33–57.34, 58.23–58.24, 59.21, 60.11–60.15, 61.11, 62.11–62.12, 63.01, 64.11, 65.11–65.12, 66.11, 67.11–67.12, 68.13–68.14, 70.23–70.24, 71.11, 76.11, 77.40–77.49, 80.30–80.39, 83.21, 85.11–85.12, 86.11.

**Nonsurgical procedures**—Procedures generally not considered to be surgical are listed as nonsurgical procedures. These include diagnostic endoscopy and radiography, radiotherapy and related therapies, physical medicine and rehabilitation, and other nonsurgical procedures (ICDA codes A4–A9 and R1–R9). The following ICD–9–CM codes are for diagnostic and nonsurgical procedures:

03.31, 11.21, 12.21, 14.11, 16.22, 20.31, 29.11, 31.41–31.42, 33.21–33.23, 34.21–34.22, 39.95, 42.21–42.23, 44.11–44.13, 45.11–45.13, 45.21–45.24, 48.21–48.22, 51.11, 54.21, 55.21–55.22, 56.31, 57.31–57.32, 58.21–58.22, 60.19, 68.11–68.12, 70.22, 80.20–80.29, 87.01–99.99.

**Rate of procedures**—The ratio of the number of all-listed procedures during a year to the number of persons in the civilian population on July 1 of that year determines the rate of procedures.

## Demographic terms

*Population*—Civilian population is the resident population excluding members of the Armed Forces. Civilian noninstitutionalized population is the civilian population not residing in institutions.

*Age*—Patient's age refers to age at birthday prior to admission to the hospital inpatient service.

*Geographic region*—Hospitals are classified by location in one of the four geographic regions of the United States that correspond to those used by the U.S. Bureau of the Census.

<i>Region</i>	<i>States included</i>
Northeast . . . . .	Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania
North Central . . . . .	Michigan, Ohio, Illinois, Indiana, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas
South . . . . .	Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, and Texas
West . . . . .	Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Washington, Oregon, California, Hawaii, and Alaska

## ICD-9-CM codes for the 1983 National Hospital Discharge Survey

Coding of the diagnostic and procedure data in the National Hospital Discharge Survey is based on the *International Classification of Diseases, 9th Revision, Clinical Modification* (ICD-9-CM).<sup>6</sup> This appendix presents a list of all diagnostic and procedure codes for which data were received by NHDS for 1983. Part A shows the classification of diseases and injuries and supplementary classifications and is to be used with tables 1-3. Part B includes the codes for surgical, nonsur-

gical, and diagnostic procedures and is to be used with table 4. It is important to consult the appropriate volume of ICD-9-CM for more detailed information about the coding scheme, such as the specific terms included in or excluded from a particular code.

The following abbreviations are used in the list of codes: N.E.C. (not elsewhere classified) and N.O.S. (not otherwise specified).

## PART A. CLASSIFICATION OF DISEASES AND INJURIES AND SUPPLEMENTARY CLASSIFICATION

001-139	INFECTIOUS AND PARASITIC DISEASES	013	TUBERCULOSIS OF MENINGES AND CENTRAL NERVOUS SYSTEM
001	CHOLERA	.0	TUBERCULOUS MENINGITIS
.1	CHOLERA DUE TO VIBRIO CHOLERAE EL TOR	.00	TUBERCULOUS MENINGITIS, UNSPECIFIED EXAMINATION
002	TYPHOID AND PARATYPHOID FEVERS	015	TUBERCULOSIS OF BONES AND JOINTS
.0	TYPHOID FEVER	.0	TUBERCULOSIS OF VERTEBRAL COLUMN
.9	PARATYPHOID FEVER, UNSPECIFIED	.00	TUBERCULOSIS OF VERTEBRAL COLUMN, UNSPECIFIED EXAMINATION
003	OTHER SALMONELLA INFECTIONS	.1	TUBERCULOSIS OF HIP
.0	SALMONELLA GASTROENTERITIS	.10	TUBERCULOSIS OF HIP, UNSPECIFIED EXAMINATION
.1	SALMONELLA SEPTICEMIA	.8	TUBERCULOSIS OF OTHER SPECIFIED JOINT
.2	LOCALIZED SALMONELLA INFECTIONS	.80	TUBERCULOSIS OF OTHER SPECIFIED JOINT, UNSPECIFIED EXAMINATION
.21	SALMONELLA MENINGITIS	.9	TUBERCULOSIS OF UNSPECIFIED BONES AND JOINTS
.22	SALMONELLA PNEUMONIA	.90	TUBERCULOSIS OF UNSPECIFIED BONES AND JOINTS, UNSPECIFIED EXAMINATION
.24	SALMONELLA OSTEOMYELITIS	016	TUBERCULOSIS OF GENITOURINARY SYSTEM
.29	OTHER LOCALIZED SALMONELLA INFECTIONS	.0	TUBERCULOSIS OF KIDNEY
.8	OTHER SPECIFIED SALMONELLA INFECTIONS	.00	TUBERCULOSIS OF KIDNEY, UNSPECIFIED EXAMINATION
.9	SALMONELLA INFECTION, UNSPECIFIED	017	TUBERCULOSIS OF OTHER ORGANS
004	SHIGELLOSIS	.0	TUBERCULOSIS OF SKIN AND SUBCUTANEOUS CELLULAR TISSUE
.0	SHIGELLA DYSENTERIAE	.00	TUBERCULOSIS OF SKIN AND SUBCUTANEOUS CELLULAR TISSUE, UNSPECIFIED EXAMINATION
.1	SHIGELLA FLEXNERI	.2	TUBERCULOSIS OF PERIPHERAL LYMPH NODES
.3	SHIGELLA SONNEI	.20	TUBERCULOSIS OF PERIPHERAL LYMPH NODES, UNSPECIFIED EXAMINATION
.8	OTHER SPECIFIED SHIGELLA INFECTIONS	.9	TUBERCULOSIS OF OTHER SPECIFIED ORGANS
.9	SHIGELLOSIS, UNSPECIFIED	.90	TUBERCULOSIS OF OTHER SPECIFIED ORGANS, UNSPECIFIED EXAMINATION
005	OTHER FOOD POISONING (BACTERIAL)	018	MILIARY TUBERCULOSIS
.0	STAPHYLOCOCCAL FOOD POISONING	.9	UNSPECIFIED MILIARY TUBERCULOSIS
.1	BOTULISM	.90	UNSPECIFIED MILIARY TUBERCULOSIS, UNSPECIFIED EXAMINATION
.8	OTHER BACTERIAL FOOD POISONING	020	PLAGUE
.9	FOOD POISONING, UNSPECIFIED	.5	PNEUMONIC PLAGUE, UNSPECIFIED
006	AMEBIASIS	021	TULAREMIA
.0	ACUTE AMEBIC DYSENTERY WITHOUT MENTION OF ABSCESS	.9	UNSPECIFIED TULAREMIA
.3	AMEBIC LIVER ABSCESS	023	BRUCELLSIS
.8	AMEBIC INFECTION OF OTHER SITES	.9	BRUCELLSIS, UNSPECIFIED
.9	AMEBIASIS, UNSPECIFIED	027	OTHER ZOOONOTIC BACTERIAL DISEASES
007	OTHER PROTOZOAL INTESTINAL DISEASES	.0	LISTERIOSIS
.1	GIARDIASIS	.1	ERYSIPELOTHRIX INFECTION
008	INTESTINAL INFECTIONS DUE TO OTHER ORGANISMS	.2	PASTURELLOSIS
.0	INTESTINAL INFECTION DUE TO ESCHERICHIA COLI (E. COLI)	.8	OTHER SPECIFIED ZOOONOTIC BACTERIAL DISEASES
.3	INTESTINAL INFECTION DUE TO PROTEUS (MIRABILIS) (MORGANII)	030	LEPROSY
.4	INTESTINAL INFECTION DUE TO OTHER SPECIFIED BACTERIA	.9	LEPROSY, UNSPECIFIED
.41	INTESTINAL INFECTION DUE TO STAPHYLOCOCCUS	031	DISEASES DUE TO OTHER MYCOBACTERIA
.42	INTESTINAL INFECTION DUE TO PSEUDOMONAS	.0	PULMONARY DISEASES DUE TO OTHER MYCOBACTERIA
.49	INTESTINAL INFECTION DUE TO OTHER SPECIFIED BACTERIA	.1	CUTANEOUS DISEASES DUE TO OTHER MYCOBACTERIA
.5	BACTERIAL ENTERITIS, UNSPECIFIED	.9	UNSPECIFIED DISEASES DUE TO MYCOBACTERIA
.6	ENTERITIS DUE TO SPECIFIED VIRUS	032	DIPHThERIA
.8	INTESTINAL INFECTION DUE TO OTHER ORGANISM, NOT ELSEWHERE CLASSIFIED	.8	OTHER SPECIFIED DIPHThERIA
009	ILL-DEFINED INTESTINAL INFECTIONS	.84	DIPHThERITIC CYSTITIS
.0	INFECTIOUS COLITIS, ENTERITIS, AND GASTROENTERITIS	.85	CUTANEOUS DIPHThERIA
.1	COLITIS, ENTERITIS, AND GASTROENTERITIS OF PRESUMED INFECTIOUS ORIGIN	.9	DIPHThERIA, UNSPECIFIED
.2	INFECTIOUS DIARRHEA	033	WHOOPING COUGH
010	PRIMARY TUBERCULOUS INFECTION	.0	WHOOPING COUGH DUE TO BORDETELLA PERTUSSIS (B. PERTUSSIS)
.0	PRIMARY TUBERCULOUS COMPLEX	.9	WHOOPING COUGH, UNSPECIFIED ORGANISM
.00	PRIMARY TUBERCULOUS COMPLEX, UNSPECIFIED EXAMINATION	034	STREPTOCOCCAL SORE THROAT AND SCARLET FEVER
011	PULMONARY TUBERCULOSIS	.0	STREPTOCOCCAL SORE THROAT
.0	TUBERCULOSIS OF LUNG, INFILTRATIVE	.1	SCARLET FEVER
.00	TUBERCULOSIS OF LUNG, INFILTRATIVE, UNSPECIFIED EXAMINATION	035	ERYSIPELAS
.2	TUBERCULOSIS OF LUNG WITH CAVITATION	036	MENINGOCOCCAL INFECTION
.20	TUBERCULOSIS OF LUNG WITH CAVITATION, UNSPECIFIED EXAMINATION	.0	MENINGOCOCCAL MENINGITIS
.4	TUBERCULOUS FIBROSIS OF LUNG	.2	MENINGOCOCCEMIA
.40	TUBERCULOUS FIBROSIS OF LUNG, UNSPECIFIED EXAMINATION	.9	MENINGOCOCCAL INFECTION, UNSPECIFIED
.9	UNSPECIFIED PULMONARY TUBERCULOSIS	037	TETANUS
.90	UNSPECIFIED PULMONARY TUBERCULOSIS, UNSPECIFIED EXAMINATION	038	SEPTICEMIA
.93	UNSPECIFIED PULMONARY TUBERCULOSIS, TUBERCLE BACILLI FOUND (IN SPUTUM) BY MICROSCOPY	.0	STREPTOCOCCAL SEPTICEMIA
012	OTHER RESPIRATORY TUBERCULOSIS	.1	STAPHYLOCOCCAL SEPTICEMIA
.0	TUBERCULOUS PLEURISY	.2	PNEUMOCOCCAL SEPTICEMIA
.00	TUBERCULOUS PLEURISY, UNSPECIFIED EXAMINATION	.3	SEPTICEMIA DUE TO ANAEROBES
.1	TUBERCULOSIS OF INTRATHORACIC LYMPH NODES	.4	SEPTICEMIA DUE TO OTHER GRAM-NEGATIVE ORGANISMS
.10	TUBERCULOSIS OF INTRATHORACIC LYMPH NODES, UNSPECIFIED EXAMINATION	.40	SEPTICEMIA DUE TO GRAM-NEGATIVE ORGANISM, UNSPECIFIED
.3	TUBERCULOUS LARYNGITIS	.41	SEPTICEMIA DUE TO HEMOPHILUS INFLUENZAE (H. INFLUENZAE)
.30	TUBERCULOUS LARYNGITIS, UNSPECIFIED EXAMINATION	.42	SEPTICEMIA DUE TO ESCHERICHIA COLI (E. COLI)
		.43	SEPTICEMIA DUE TO PSEUDOMONAS
		.44	SEPTICEMIA DUE TO SERRATIA

# Vital and Health Statistics series descriptions

- SERIES 1. Programs and Collection Procedures**—Reports describing the general programs of the National Center for Health Statistics and its offices and divisions and the data collection methods used. They also include definitions and other material necessary for understanding the data.
- SERIES 2. Data Evaluation and Methods Research**—Studies of new statistical methodology including experimental tests of new survey methods, studies of vital statistics collection methods, new analytical techniques, objective evaluations of reliability of collected data, and contributions to statistical theory. Studies also include comparison of U.S. methodology with those of other countries.
- SERIES 3. Analytical and Epidemiological Studies**—Reports presenting analytical or interpretive studies based on vital and health statistics, carrying the analysis further than the expository types of reports in the other series.
- SERIES 4. Documents and Committee Reports**—Final reports of major committees concerned with vital and health statistics and documents such as recommended model vital registration laws and revised birth and death certificates.
- SERIES 5. Comparative International Vital and Health Statistics Reports**—Analytical and descriptive reports comparing U.S. vital and health statistics with those of other countries.
- SERIES 10. Data From the National Health Interview Survey**—Statistics on illness, accidental injuries, disability, use of hospital, medical, dental, and other services, and other health-related topics, all based on data collected in the continuing national household interview survey.
- SERIES 11. Data From the National Health Examination Survey and the National Health and Nutrition Examination Survey**—Data from direct examination, testing, and measurement of national samples of the civilian noninstitutionalized population provide the basis for (1) estimates of the medically defined prevalence of specific diseases in the United States and the distributions of the population with respect to physical, physiological, and psychological characteristics and (2) analysis of relationships among the various measurements without reference to an explicit finite universe of persons.
- SERIES 12. Data From the Institutionalized Population Surveys**—Discontinued in 1975. Reports from these surveys are included in Series 13.
- SERIES 13. Data on Health Resources Utilization**—Statistics on the utilization of health manpower and facilities providing long-term care, ambulatory care, hospital care, and family planning services.
- SERIES 14. Data on Health Resources: Manpower and Facilities**—Statistics on the numbers, geographic distribution, and characteristics of health resources including physicians, dentists, nurses, other health occupations, hospitals, nursing homes, and outpatient facilities.
- SERIES 15. Data From Special Surveys**—Statistics on health and health-related topics collected in special surveys that are not a part of the continuing data systems of the National Center for Health Statistics.
- SERIES 20. Data on Mortality**—Various statistics on mortality other than as included in regular annual or monthly reports. Special analyses by cause of death, age, and other demographic variables; geographic and time series analyses; and statistics on characteristics of deaths not available from the vital records based on sample surveys of those records.
- SERIES 21. Data on Natality, Marriage, and Divorce**—Various statistics on natality, marriage, and divorce other than as included in regular annual or monthly reports. Special analyses by demographic variables; geographic and time series analyses; studies of fertility; and statistics on characteristics of births not available from the vital records based on sample surveys of those records.
- SERIES 22. Data From the National Mortality and Natality Surveys**—Discontinued in 1975. Reports from these sample surveys based on vital records are included in Series 20 and 21, respectively.
- SERIES 23. Data From the National Survey of Family Growth**—Statistics on fertility, family formation and dissolution, family planning, and related maternal and infant health topics derived from a periodic survey of a nationwide probability sample of ever-married women 15-44 years of age.
