ABSTRACT

This material provides documentation for users of the Micro-Data tapes of the National Ambulatory Medical Care Survey (NAMCS) conducted by the National Center for Health Statistics. Section I, "Description of the National Ambulatory Medical Care Survey," includes information on the scope of the survey, the sample, field activities, data collection procedures, medical coding procedures, population estimates, and sampling errors. Section II provides technical details of the tape (number of tracks, record length, etc.), and a detailed description of the contents of each data record by location. Section III contains marginal data or estimates for each item on the data record in Section II. The appendixes contain sampling errors, instructions and definitions for completing the Patient Record Form, and lists of codes used in the survey.

I. DESCRIPTION OF THE NATIONAL AMBULATORY MEDICAL CARE SURVEY

INTRODUCTION

This Micro-Data Tape comprises the data collected by the National Ambulatory Medical Care Survey (NAMCS) in 1992, conducted by the National Center for Health Statistics (NCHS). The National Ambulatory Medical Care Survey provides data from samples of patient records selected from a national sample of office-based physicians. These national estimates describe the utilization of ambulatory medical care services in the United States. In 1992 there were 34,606 patient records provided by 1,558 doctors that participated in the survey. For a brief description of the survey design and data collection procedures, see below. For a more detailed description of the survey design, data collection procedures, and the estimation process see references 1 and 9.

There are two important points relative to analyzing data from this micro-data tape that should be noted:

- 1-Micro-data tape users should be fully aware of the importance of the "patient visit weight" and how it must be used. Information about the patient visit weight is presented on page 13. If more information is needed the staff of the Ambulatory Care Statistics Branch can be consulted by calling 301/436-7132 during regular working hours.
- 2-Users should also be aware of the reliability or unreliability of certain estimates, particularly the smaller estimates. The National Center for Health Statistics, which conducts many health surveys of the American people, considers an estimate to be reliable if it has a relative standard error of 30% or less. Therefore, it is important to know the value of the lowest possible estimate in this survey that is considered reliable, so as not to present data in a journal article or paper that may be unreliable. Most data tape users can obtain an adequate working knowledge of the relative standard error from the information presented in the Appendix. If you would like more information, do not hesitate to consult the staff of the Ambulatory Care Statistics Branch.

SCOPE OF THE SURVEY

The basic sampling unit for the NAMCS is the physician-patient encounter or visit. Only visits in the offices of nonfederally employed physicians classified by the American Medical Association (AMA) or the American Osteopathic Association (AOA) as "office-based, patient care" were included in the 1992 NAMCS. In addition, physicians in the specialties of anesthesiology, pathology, and radiology were excluded from the physician universe. Major types of ambulatory encounters not included in the 1992 NAMCS were those made by telephone, those made outside of the physician's office, and those made in hospital or institutional settings.

SAMPLING FRAME AND SIZE OF SAMPLE

The sampling frame for the 1992 NAMCS was composed of all physicians contained in the master files maintained by the AMA and AOA as of December 31, 1991, who met the following criteria:

- Office-based, as defined by the AMA and AOA:

- Principally engaged in patient care activities;

- Nonfederally employed;

- Not in specialties of anesthesiology, pathology, and radiology.

The 1992 NAMCS sample included 3,000 physicians: 2,762 Medical Doctors and 238 Doctors of Osteopathy. Sample physicians were screened at the time of the survey to assure that they met the above-mentioned criteria. Eight hundred fifty-eight (858) physicians did not meet all of the criteria and were, therefore, ruled out of scope (ineligible) for the study. The most frequent reasons for being out of scope were that the physician was retired, deceased, or employed in teaching, research, or administration. Of the 2,142 in-scope (eligible) physicians, 73 percent participated in the study. The physician universe, sample size, and response rates by physician specialty are shown in table I. Of the participating physicians, 266 saw no patients during their assigned reporting period because of vacations, illness, or other reasons for being temporarily not in practice.

SAMPLE DESIGN

The 1992 NAMCS utilized a multistage probability design that involved probability samples of primary sampling units (PSU's), physician practices within PSU's, and patient visits within practices. The first-stage sample included 112 PSU's. A PSU is a county, a group of adjacent counties, or a standard metropolitan statistical area (SMSA).

The second stage consisted of a probability sample of practicing physicians selected from the master files maintained by the American Medical Association (AMA) and American Osteopathic Association (AOA). Within each PSU, all eligible physicians were stratified by fifteen specialty groups: general and family practice, osteopathy, internal medicine, pediatrics, general surgery, obstetrics and gynecology, orthopedic surgery, cardiovascular diseases, dermatology, urological surgery, psychiatry, neurology, ophthalmology, otolaryngology, and all other specialties.

The final stage was the selection of patient visits within the annual practices of sample physicians. This involved two steps. First, the total physician sample was divided into 52 random subsamples of approximately equal size, and each subsample was randomly assigned to 1 of the 52 weeks in the survey year. Second, a systematic random sample of visits was selected by the physician during the assigned week. The sampling rate varied for this final step from a 100-percent sample for very small practices to a 20-percent sample for very large practices as determined in a presurvey interview. The method by which the sampling rate was determined is described in reference 3.

POPULATION FIGURES

The base population used in computing annual visit rates is presented in table II. These figures are based on provisional estimates for the civilian noninstitutionalized population as of July 1, 1992, provided by the U.S. Bureau of the Census. The population estimates are presented here solely for the purpose of providing denominators for rate computation and should not be considered as official population estimates.

FIELD ACTIVITIES

The first contact with the sample physician was through a letter from the Director, NCHS. After the physician has received the introductory letter(s), the field representative telephones the physician to set up an appointment with him or her to discuss the survey and instruct the doctor on how to complete the forms.

DATA COLLECTION

The actual data collection for the NAMCS was carried out by the physician aided by his office staff when possible. Two data collection forms were employed by the physician: The Patient Log and the Patient Record Form (Figure 1). The Patient Log is used to sequentially list patients seen in the physician's office during his assigned reporting week. This list served as the sampling frame to indicate the visit for which data were to be recorded. A perforation between the patient names and patient visit characteristics permitted the physician to remove patient names and protect confidentiality.

Based on the physician's estimate of the expected number of office visits, each physician was assigned a patient-sampling ratio. These ratios were designed so that about 30 Patient Record Forms were completed during the assigned reporting week. Physicians expecting few visits each day recorded data for all of them, while those expecting more than a predetermined number of visits per day recorded data for every second, third, or fifth visit. These procedures minimized the data collection workload and maintained approximately equal reporting levels among sample physicians regardless of practice size. A random start was provided on the first page of the log, so that predesignated sample visits on each succeeding page of the log provided a systematic random sample of patient visits during the reporting period.

DATA PROCESSING

In addition to the completeness checks made by the field staff, clerical edits were performed upon receipt of the data for central processing. Item nonresponse rates were 5 percent or less for all data items with the following exceptions: duration (7 percent), ethnicity (11 percent), and whether the patient had been seen previously for the same condition, item 12 (11 percent).

Information from the Induction Interview and Patient Record Form was keyed, with 100-percent verification, to computer tape. Extensive computer consistency and edit checks were also performed. Data items still unanswered at this point were imputed by randomly assigning a value from a Patient Record Form with similar characteristics; imputations were based on physician specialty and broad diagnostic categories. Any data field imputed in this manner is so indicated by a code in one of columns 172-180 on the data tape.

MEDICAL CODING

The Patient Record Form contains four medical items requiring three separate coding systems. The three coding systems are described briefly below. A dependent verification procedure was used to control the medical coding operation. Differences between coders were adjudicated by a third coder. Definitions of the three medical items are on pages 39 and 41 of this documentation.

(A) Patient's Reason for Visit: Information contained in item 10 (patient's reason for visit) of the Patient Record Form was coded according to an updated version of A Reason for Visit Classification for Ambulatory Care (RVC).^{4/} The updated classification has not been published as of this writing but the list of codes is contained in Appendix II. The classification was updated to incorporate several new codes as well as changes to existing codes. The system continues to utilize a modular structure composed of seven modules. The digits 1 through 8 precede the 3-digit RVC codes to identify the various modules as follows:

<u>Prefix</u>	<u>Module</u>
"1"	= symptom module
"2"	= disease module .
"3"	= diagnostic, screening, and preventive module
"4"	= treatment module
"5"	= injuries and adverse effects module
"6"	= test results module
"7"	= administrative module
"8"	= Uncodable entries
"9"	= special code = blank

A maximum of 3 Reasons for Visit were coded from item 10, in sequence; coding instructions for the patient reason for visit are contained in the NAMCS Medical Coding Manual.^{5/} Copies are available upon request.

(B) Physician's Diagnoses: Diagnostic information in item 11 of the Patient Record Form was coded according to the International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM) Third Edition.^{5/} The 1992 NAMCS micro-data tape codes for diagnoses have the following characteristics:

1. The prefix "1" preceding the diagnostic codes has been added to identify all codes in the range 001.00-999.90, e.g. '138100' = '381.00' = Acute nonsupporative otitis media, unspecified.
2. The prefix "20" preceding diagnostic codes represents V code diagnoses V01.00-V82.90, e.g. '201081' = 'V10.81' = personal history of malignant neoplasm of bone.

NOTE: The use of prefixes facilitates the calculation of percent distributions, while substituting "20" for the letter "V" allows that all diagnostic fields on the data tape will contain numerical data.

3. In addition to the diagnostic codes from the ICD-9-CM there are 3 unique codes in the diagnostic fields that were developed by the NAMCS staff:

209900 = - noncodable diagnosis
- insufficient information for coding
- illegible diagnosis

209970 = diagnosis of "none"

900000 = blank diagnosis

A maximum of three diagnoses were coded in sequence: coding instructions concerning diagnoses are contained in the NAMCS Medical Coding Manual.^{5/}

Surgical Procedures: Surgical information in item 14 of the Patient Record Form was also coded according to the International Classification of Diseases (ICD-9-CM),^{5/} using the four digit surgical codes in Volume III. A maximum of two surgical procedures were coded for each form.

(C) Medication Therapy This Visit: The NAMCS drug data in item 17 have been classified and coded according to a unique classification scheme⁷⁷ developed at NCHS. A list of the drug codes are in Appendix III. The Patient Record Form allows for the recording of up to 5 drugs. The tape format includes a corresponding allocation of drug fields.

It should be noted that starting in 1992 the Ambulatory Care Statistics Branch will no longer produce separate public use tapes for patient visits and drug mentions. The data will be combined on one tape and the length of the record will be expanded to include the additional information on drugs that was previously available only on the public use tape for drug mentions. The additional information includes:

Generic name code: A unique, 5-digit code assigned to each official generic name assigned to every drug entity by the United States Pharmacopeia or other responsible authority.

Prescription status code: A code designed to identify the legal status (prescription or nonprescription) of the drug entry.

Controlled substance status code: A code used to denote the degree of potential abuse and federal control of a drug entry.

Composition status code: A code used to distinguish between single-ingredient and combination drugs.

Note: If the user is searching for single ingredient (or single entity) drugs, then he or she should utilize the composition status code = '1', in conjunction with the "generic name code" field. A single ingredient drug will have one generic code in the "generic name code" field, and blanks in the five "ingredient codes" fields. Ingredient codes should not be used when analyzing single entity drugs.

On the other hand, if the user is searching for combination drugs, then he or she should utilize composition status code = '2' in conjunction with the "ingredient codes" fields. A combination drug will have a blank generic code in the "generic name code" field, and from one to five generic codes in the "ingredient codes" fields. The "generic name code" field should not be used when analyzing combination drugs.

Ingredient codes: Codes used to identify the active generic ingredients of combination drugs. A maximum of 5 ingredients can be identified for each combination drug.

Drug class code: A code used to identify each of the 20 major classes to which the drug entry may belong. (Based on the Standard Drug Classifications used in National Drug Code Directory, 1985 edition ²¹).

Most data users are interested primarily in visit data so the combining of the tapes will have little or no effect on their particular needs.

For those users who are interested in analyzing drug data only they will need to isolate those records with drugs, or drug mentions, and create a subset of drug mentions. Each Patient Record Form can have anywhere from one to five drug mentions recorded, so whatever subset is created will need to include all of them. This documentation contains marginal data on drug mentions and appropriate relative standard errors. Should the data user need additional assistance in analyzing data on drug mentions the staff of the Ambulatory Care Statistics Branch is available on 301-436-7132.

ESTIMATION PROCEDURES

Statistics produced from the 1992 National Ambulatory Medical Care Survey were derived by a multistage estimating procedure. The procedure produces essentially unbiased national estimates and has basically three components: (1) inflation by reciprocals of the probabilities of selection, (2) adjustment for nonresponse, and (3) a ratio adjustment to fixed totals. Each of these components is described directly below.

(1) INFLATION BY RECIPROCAL OF SAMPLING PROBABILITIES.--Since the survey utilized a three-stage sample design, there were three probabilities: (A) The probability of selecting the PSU, (B) the probability of selecting a physician within the PSU, and (C) the probability of selecting a patient visit within the physician's practice. The last probability was defined to be the exact number of office visits during the physician's specified reporting week divided by the number of Patient Record Forms completed. All weekly estimates were inflated by a factor of 52 to derive annual estimates.

(2) ADJUSTMENT FOR NONRESPONSE--Estimates from the NAMCS data were adjusted to account for sample physicians who did not participate in the study. This was done in such a manner as to minimize the impact of nonresponse on final estimates by imputing to nonresponding physicians the practice characteristics of similar responding physicians. For this purpose, similar physicians were judged to be physicians having the same specialty designation and practicing in the same PSU.

(3) RATIO-ADJUSTMENT.--A poststratification adjustment was made within each of fifteen physician specialty groups. The ratio adjustment is a multiplication factor which had as its numerator the number of physicians in the universe in each physician specialty group, and as its denominator the estimated number of physicians in that particular specialty group. The numerator was based on figures obtained from the AMA-BOA master files, and the denominator was based on data from the sample.

SAMPLING ERRORS

Procedures for calculating sampling errors as well as estimates of standard errors of statistics derived from the NAMCS are described in the technical notes of references 2 and 9, as well as Appendix I of this document.

PATIENT VISIT WEIGHT

The "patient visit weight" is a vital component in the process of producing national estimates from sample data and its use should be clearly understood by all micro-data tape users. The statistics contained on the micro-data tape reflect data concerning only a sample of patient visits--and not a complete count of all the visits that occurred in the United States. Each record on the data tape represents one visit in the sample of 34,606 visits. In order to obtain national estimates from the sample, each record is assigned an inflation factor called the "patient visit weight".

By aggregating the "patient visit weights" on the 34,606 sample records for 1992 the user can obtain the total of 762,044,735 estimated visits made by all patients in the United States.

The marginal tables on pages 29 to 32 contain data on numbers of records for selected variables as well as the corresponding national estimated number of visits obtained by aggregating the "patient visit weights" on those records.

PHYSICIAN-PATIENT LINKING CODE

The purpose of this code is to allow for greater analytical depth by permitting the user to link individual Patient Record Forms on the public use tape with individual physicians' practices. This linking code will enable users to conduct more comprehensive analysis without violating the confidentiality of patients or physicians.

This section consists of a detailed breakdown of the data tape record, providing a brief description of each item of data included in the records. The data are arranged sequentially according to their physical location on the tape record. Unless otherwise stated in the "item description" column, the data are derived from the Patient Record Form (page 8). The AMA and the induction interview (reference 3) are alternate sources of data, while the computer generates other items by recoding selected data items.

APPENDIX I

Relative Standard Errors - Estimates of Office Visits

The standard error is primarily a measure of the sampling variability that occurs by chance because only a sample is surveyed, rather than the entire universe. The relative standard error (R.S.E.) of an estimate is obtained by dividing the standard error of the estimate by the estimate itself and is expressed as a percentage of the estimate. Table III provides relative standard errors for a wide range of estimates, including the lowest reliable estimate, for each of the most frequently visited specialties. In addition, the following formulas may be used to calculate relative standard errors for a variety of estimates.

For aggregate estimates, relative standard errors may be calculated using the following general formula, where "x" is the aggregate of patient visits or drug mentions in thousands, and coefficients "A" and "B" are obtained from Table IV.

$$RSE(x) = 100 \sqrt{A + \frac{B}{x}}$$

For estimates of percentages, relative standard errors may be calculated using the following general formula, where "p" is the percent of visits or mentions, "X" is the denominator of the percent in thousands, and coefficient "B" is obtained from Table IV.

$$RSE(p) = 100 \sqrt{\frac{B \cdot (1-p)}{p \cdot X}}$$

For estimates of visit rates, in which the numerator is the number of visits for a particular characteristic, and the denominator is the total United States population, the relative standard error is equivalent to the relative standard error of the numerator, as shown in the previous paragraph on aggregate estimates.

Relative Standard Errors - Estimates of Drug Mentions

For those users who may be interested in analyzing NAMCS data in terms of drug mentions only, irrespective of office visits, they will need to utilize relative standard errors that apply specifically to the universe of drug mentions. Although this documentation provides minimal information on the error rates for the drug mentions universe, Table V contains the relative standard error for the lowest reliable estimate of drug mentions for each of the most frequently visited specialties. For all other estimates of drug mentions, relative standard errors may be calculated using the appropriate coefficients for drug mentions in Table IV and applying the formulas listed at the beginning of Appendix I. If users would like more information about analyzing drug data as a separate universe, contact the staff of the Ambulatory Care Statistics Branch at 301-436-7132.

Patient Record Form Data Items
Instructions and Definitions

ITEM 1 - DATE OF VISIT

Self-explanatory

ITEM 2 - DATE OF BIRTH

Record exact date. Estimate year if date is unknown.

ITEM 3 - SEX

Self-explanatory

ITEM 4 - COLOR OR RACE

Record according to observation or knowledge of patient. If the patient's race is not obvious, the physician (or assistant) should mark the box which in his judgment is most appropriate.

1 - White: A person having origins in any of the original peoples of Europe, North Africa, or the Middle East.

2 - Black: A person having origins in any of the black racial groups of Africa.

3 - Asian/Pacific Islander: A person having origins in any of the original peoples of Far East, Southeast Asia, the Indian subcontinent, or the Pacific Islands. This area includes, for example, China, India, Japan, Korea, the Philippine Islands and Samoa.

4 - American Indian/Eskimo/Aleut: A person having origins in any of the original peoples of North America, and who maintains cultural identification through tribal affiliation or community recognition.

ITEM 5 - Ethnicity

Record according to observation or knowledge of patient. If the patient's ethnicity is not obvious, the physician (or assistant) should mark the box which in his/her judgment is most appropriate.

1 - Hispanic Origin: A person of Mexican, Puerto Rican, Cuban, Central or South America or other Spanish culture or origin, regardless of race.

2 - Not Hispanic: Check "Not Hispanic" for all persons who are not of Hispanic Origin.

Item 6 - EXPECTED SOURCE(S) OF PAYMENT

Check all sources which, to the best of your knowledge, will be the FINAL, UNREIMBURSED, PAYERS OF PART OR ALL of the charges incurred at THIS VISIT.

"HMO/OTHER PREPAID" includes health maintenance organizations (HMO's), independent practice organizations (IPA's), and all other prepaid health care plans.

"Medicare," "Medicaid," and "Private/commercial insurance" include payments made either directly to the physician or as reimbursement to the patient.

"Other government" includes payments made under any other local, state, or Federal health care program, such as workmen's compensation programs and CHAMPUS.

"Patient paid" includes insurance deductibles and co-payments, as well as full payments.

"No charge" excludes visits that are part of a "package," such as prenatal visits for which a flat fee was charged.

"Other" includes all payment sources not included in the preceding categories, such as private charitable organizations.

ITEM 7 - WAS PATIENT REFERRED FOR THIS VISIT BY ANOTHER PHYSICIAN?

This item is intended to provide an idea of the "flow" of ambulatory patients from one physician to another. This item concerns referral to the sample physician by a different physician. The counterpart to this item is box 5 of Item 18 which concerns referrals by the sample physician to another physician.

Check "Yes" if patient was referred by another physician for THIS VISIT, regardless of reason for referral. The interest is in referrals for this visit and not in referrals for any prior visit. Referrals are any visits that are made because of the advice or direction of a physician other than the one being visited.

ITEM 8 - IS THIS VISIT INJURY RELATED?

Check "Yes" if any part of this visit was for acute or follow-up care of an injury.

ITEM 9 - DOES PATIENT SMOKE CIGARETTES?

Check "yes" if the patient currently smokes cigarettes in any quantity.

Check "No" if the patient currently does not smoke cigarettes.

ITEM 10 - PATIENT'S COMPLAINT(S), SYMPTOM(S) OR OTHER REASON(S) FOR THIS VISIT (in patient's own words)

- (1) Record the patient's principal complaint, symptom or other reason as it seems to the patient. The physician may recognize right away, or may find out after examination, that the real problem is something entirely different, but record here the patient's words to describe how the patient defines his trouble.
- (2) This item, like all other items on the Patient Record Form, refers to patient's complaint, symptom or other reason for this visit. Conceivably, the patient may be in treatment for a serious illness, but if his problem on this visit is a cut finger or a twisted ankle, that latter problem is the information to be recorded.
- (3) The complaint or symptom should be described in the patient's own key words. The physician's diagnosis is recorded in Item 11 and should not be recorded here. Example: "pain in chest," "cramps after eating,".

Space has been allotted for: "Most important" (10a), and others 10b and 10c. "Most important" (10A) refers to the reason which, in the physician's judgment, was most responsible for causing the patient to make this visit. Up to three patient problems are coded in the order they are listed.

There will, of course, be visits by patients for reasons other than some complaint or symptom. Examples might be: annual checkup, routine prenatal or postnatal care. In such cases, the physician should simply enter the reason for the visit. (If the reason for patient visit was only to pay a bill or ask the physician to fill out an insurance form or to drop off a specimen, no Patient Record Form should be completed.)

Item 11 - PHYSICIAN'S DIAGNOSES

This item should never be blank.

- a. Under "PRINCIPAL DIAGNOSIS" record best assessment of diagnosis associated with Item 10a.

If possible, enter a final or provisional diagnosis; otherwise diagnosis may be expressed in "problem" terms. Do not enter "rule out" diagnosis.

If no diagnosis exists for the reason in Item 10 (e.g., visits for well-person exam), enter "well person" or other appropriate description of the situation.

For post-operative visits, specify the post-op diagnosis as "P.O. (Dx)". Do not enter the operative or surgical procedure.

- b. Enter up to two other Dx's which exist at time of visit, whether or not they are of direct concern to this visit.

ITEM 12 - HAVE YOU OR ANYONE IN YOUR PRACTICE SEEN PATIENT BEFORE?

"Seen" means "provided care for" at any time in the past. If no (never saw patient before), the physician marks that box and goes on to Item 13. If "Yes," also answer the sub-question: Has this patient been seen before for the condition diagnosed in Item 11?

ITEM 13 - DOES PATIENT NOW HAVE:

Check all that apply regardless of diagnosis in Item 11.

- | | |
|------------------|-------------------------|
| 1. None of below | 4. Hypercholesterolemia |
| 2. Depression | 5. Obesity |
| 3. Hypertension | |

Item 14 - AMBULATORY SURGICAL PROCEDURES(S)

Record up to two outpatient surgical procedures that were SCHEDULED OR PERFORMED this visit.

Record procedures that were PERFORMED BEFORE procedures that were SCHEDULED. When reporting two procedures that were performed, or two that were scheduled, record the MORE COMPLEX PROCEDURE FIRST.

For the first procedure, check whether it was scheduled or actually performed during this visit. Also, check which type of anesthesia, if any, was used or will be used.

ITEM 15 - DIAGNOSTIC/SCREENING SERVICES

Check ALL appropriate boxes for services ORDERED OR PROVIDED. If a general examination was performed, check appropriate boxes for EACH INDIVIDUAL SERVICE included.

If serum cholesterol level was included in a panel of blood tests, check "Cholesterol measure," AND "Other lab test."

Check "Other" for any diagnostic/screening test or service ordered or provided but not included in the preceding categories, and describe the service on the line provided.

- | | |
|--------------------|-------------------------|
| 1. None | 11. Pap test |
| 2. Blood pressure | 12. Strep throat test |
| 3. Urinalysis | 13. HIV serology |
| 4. EKG - resting | 14. Cholesterol measure |
| 5. EKG - exercise | 15. Other lab test |
| 6. Mammogram | 16. Hearing test |
| 7. Chest x-ray | 17. Visual acuity |
| 8. Other radiology | 18. Mental status exam |
| 9. Allergy testing | 19. Other (specify) |
| 10. Spirometry | |

Item 16 - THERAPEUTIC SERVICES

Check ALL appropriate boxes for counseling/education AND other therapeutic services ORDERED OR PROVIDED..

Check "OTHER COUNSELING" for counseling regarding a current or potential health problem not included in the preceding categories, e.g., instruction on proper use of drugs and devices.

Check "OTHER THERAPY" for any treatment or therapeutic services, EXCLUDING MEDICATION, ordered or provided and not included in the specific categories listed.

1. None

Counseling/education:

2. Diet

8. Smoking cessation

3. Exercise

9. Family/social

4. Cholesterol reduction

10. Growth/development

5. Weight reduction

11. Family planning

6. Drug abuse

12. Other counseling

7. Alcohol abuse

Other therapy:

13. Psychotherapy

16. Physiotherapy

14. Corrective lenses

17. Other therapy (specify)

15. Hearing aid

ITEM 17 - MEDICATION THERAPY

List ALL prescription and non-prescription drugs ORDERED OR PROVIDED--by any route of administration--at THIS VISIT. Include immunization agents, desensitization agents, and other biologicals.

Include drugs prescribed at previous visit if patient was instructed at THIS VISIT to continue the medication.

Use SPECIFIC BRAND OR GENERIC DRUG NAMES as entered on prescription or medical records. Do NOT enter broad drug classes, such as "pain medication."

Limit entries to DRUG NAME ONLY. Additional information, such as route of administration, dosage, form, strength, or regimen is not required.

ITEM 18 - DISPOSITION THIS VISIT

Eight codes are provided to describe the physician's disposition of the case on this visit. The physician should mark as many categories as apply.

<u>DISPOSITION</u>	<u>DEFINITION</u>
1. <u>No Follow-up Planned</u>	No return visit or telephone contact is scheduled for the patient's problem on this visit.
2. <u>Return at Specified Time</u>	The patient is told to schedule an appointment or is instructed to return at a particular time.
3. <u>Return if Needed, P.R.N.</u>	No future appointment is made, but the patient is instructed to make an appointment with the physician if the patient considers it necessary. (P.R.N., <u>pro re nata</u> , as necessary, as the occasion arises.)
4. <u>Telephone Follow-up Planned</u>	The patient is instructed to telephone the physician on a particular day.
5. <u>Referred to Other Physician</u>	The patient is instructed to consult or seek care from another physician. The patient may or may not return to this physician at a later date.
6. <u>Returned to Referring Physician</u>	Patient was referred to this physician and is now instructed to consult again with the physician who referred him.
7. <u>Admit to Hospital</u>	Patient is instructed that further care or treatment will be provided in a hospital. No further office visits are expected prior to that admission.
8. <u>Other (Specify)</u>	Any other disposition of the case not included in the above categories. Any such "other" disposition should be described on the line provided.

ITEM 19 - DURATION OF THIS VISIT

Include here the entire time the doctor spent with the patient. DO NOT include the time patient spent waiting to see the doctor. DO NOT include the time patient spent receiving care from someone other than the doctor.

For example, the nurse gave the patient an inoculation, or a technician administered an electrocardiogram. If the patient did not see the doctor at all, zero minutes should be entered in Item 19. The intent of this item is to get the total time spent in face-to-face contact with the doctor.

If more than one patient is seen by the doctor at the same time, apply the following rule:

If the doctor can easily segregate the time spent with each (e.g., 3 minutes with one and 27 minutes with the other), he should record that on the Patient Record Forms. If he cannot estimate how much time was spent with each, he should divide the total time equally among the patients seen together.

DEFINITIONS OF CERTAIN TERMS USED IN THIS DOCUMENT

Office(s).--Premises that the physician identifies as locations for his ambulatory practice. Responsibility over time for patient care and professional services rendered there generally resides with the individual physician rather than with any institution.

Visit.--A direct, personal exchange between ambulatory patient and the physician (or members of his staff) for the purpose of seeking care and rendering health services.

Ambulatory patient.--An individual presenting for personal health services, neither bedridden nor currently admitted to any health care institution on the premises.

Drug mention(s).--The physician's entry of a pharmaceutical agent ordered or provided--by any route of administration--for prevention, diagnosis, or treatment. Generic as well as brand-name drugs are included. Along with all new drugs, the physician also records continued medications if the patient was specifically instructed or expected to continue the medication.

PATIENTS

In-scope: All patients seen by the physician or member of his staff in his office(s).

Out-of-scope: Patients seen by the physician in a hospital, nursing home, or other extended care institution, or the patient's home. Note: If the doctor has a **private** office (which fits definition of "office") located in a hospital, the ambulatory patients seen there would be considered "in-scope." The following types of patients are also considered out-of-scope:

patients seen by the physician in any institution (including outpatient clinics of hospitals) for which the institution has the primary responsibility for the care of the patient over time

patients who telephone and receive advice from the physician

patients who come to the office only to leave a specimen, pick up insurance forms, or pay their bills

patients who come to the office only to pick up medications previously prescribed by the physician

PHYSICIANS

In-Scope: All duly licensed doctors of medicine and doctors of osteopathy currently in practice who have regularly scheduled time for seeing ambulatory patients at an office location.

Out-of-Scope: Those physicians who treat patients only indirectly, including specialists in anesthesiology, pathology, forensic pathology, radiology, therapeutic radiology, and diagnostic radiology, and the following physicians.

physicians who are federally employed or who are in military service

physicians who treat patients only in an institutional setting (e.g., patients in nursing homes and hospitals)

physicians employed full time by an industry or institution and having no private practice (e.g., physicians who work for the VA, the Ford Motor Company, etc.)

physicians who spend no time seeing ambulatory patients.

Physician specialty.--Principal specialty (including general practice) as designated by the physician at the time of the survey. Those physicians for whom a specialty was not obtained were assigned the principal specialty recorded in the Master Physician files maintained by the AMA or AOA.

Region of practice location.--The four geographic regions which correspond to those used by the U.S. Bureau of the Census, are as follows:

<u>Region</u>	<u>States Included</u>
Northeast.....	Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont
Midwest.....	Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, Wisconsin

1992 NAMCS USER QUESTIONNAIRE

In order to improve the NCHS Micro-Data Tape Release program, we would appreciate your assistance in regard to the following questionnaire.

Name: _____

Title: _____

Organization: _____

Address: _____

Date of tape purchase: _____

Type of organization (university, insurance, etc.): _____

1. Have you used this tape? (If not, please indicate why.)
2. Did you have any computer problems using the data?
3. Did you have any analytic problems with the data?
4. What output was produced using the tape?
5. How was this output used?
6. How was the overall quality of the documentation?
7. Did you find the explanation of the survey helpful? Was it clear, concise, etc.?
8. Was the description of the tape record format easy to use? Were the item descriptions understandable? Did you find any errors?
9. Do you have any other comments or complaints?

Return this questionnaire to the address on back. Please feel free to include additional comments. Thank you very much for your assistance.
