

Table 18. Number of deaths, death rates, and age-adjusted death rates for injury deaths according to mechanism and intent of death: United States, 2007

[Totals for selected causes of death differ from those shown in other tables that utilize standard mortality tabulation lists, see "Technical Notes." Populations used for computing death rates are postcensal estimates based on the 2000 census, estimated as of July 1, 2007. Rates are per 100,000 population; age-adjusted rates are per 100,000 U.S. standard population; see "Technical Notes." Figure(s) in brackets [] applies to the code or range of codes preceding it. For explanation of asterisks preceding cause-of-death codes, see "Technical Notes"]
