

```
/*SAS Input Statements for External Cause of Injury Morbidity Matrix */
```

/*Following are the SAS statements containing ICD-9 CM codes to be used to program the external cause of injury morbidity matrix. Please cut and paste the SAS codes provided into your SAS programs.

The following 2 modifications were made on March 15,2007: 1) E979.6 and E979.7 were moved to the Poisoning, assault category and removed from "Other specifiable and classifiable" to be consistent with the placement of similar terrorism codes used in ICD-10 external cause mortality matrix, and 2) E999 was separated into E999.0 and E999.1 with E999.1,"late effects of injury due to terrorism", moved to the assault category where the other terrorism codes, E979.0-.9, are located from the "Other" category.

On Jan 29,2009, the SAS code has been checked against the December 1, 2008 updated Martix. (accessed on line at <http://www.cdc.gov/ncipc/osp/matrix2.htm>) The following modification was made: E928.6 "Environmental exposure to harmful algae and toxins" was added to other specified and classifiable.

Variable names used in the SAS statements
CAUSEDET: 3 DIGIT ICD CODE fields for morbidity data
CAUSEDT4: 4 DIGIT ICD CODE field for morbidity data
PERSINJ: 4TH DIGIT OF THE ICD CODE - ONLY FOR MVT (810-819 CODES) */
