14-23. Maintain vaccination coverage levels for children in licensed day care facilities and children in kindergarten.

Children in day care

14-23a. Diphtheria-tetanus-acellular pertussis (DTaP) vaccine.

National Data Source	Annual Immunization Assessment Reports, CDC, NCIRD.
State Data Source	Annual Immunization Assessment Reports, CDC, NCIRD.
Healthy People 2000 Objective	Adapted from 20.11 (Immunization and Infectious Diseases).
Changes since the 2000 Publication	None.
Measure	Percent.
Baseline (Year)	96 (1997-98)
Target	95
Target-Setting Method	Consistent with the year 2000 target.
	For a discussion of target-setting methods, see Part A, section 4.
Numerator	Number of surveyed enrollees in day care centers who received the combination of diphtheria, tetanus, and either acellular pertussis or pertussis antigens.
Denominator	Number of surveyed enrollees in day care centers.
Population Targeted	U.S. day care center population.
Questions Used To Obtain the National Baseline Data	CDC Annual Immunization Assessment Report: Day Care Centers, Head Start Centers, and Schools.
Expected Periodicity	Annual.
Comments	Data are collected in the fall of each year. The baseline includes enrollees who received the combination of diphtheria, tetanus, and pertussis antigens.

States may collect and/or report data on selective antigens depending upon school entry requirements.

Overall (national) mean coverage levels are estimated by weighting the vaccine-specific coverage levels reported by States and territories to their respective birth cohorts.

Sampling methodology may vary by State.

Objective 14-23 was adapted from Healthy People 2000 objective 20.11, which tracked completion of the basic immunization series by children in licensed daycare facilities and children in grades K through 12. Objective 14-23 tracks the individual antigens in the basic series for children in day care and those in kindergarten.

See Appendix A for focus area contact information.
