O. K. SAGEN, PH. D., *Assistant Director*

### DIVISION OF VITAL STATISTICS

ROBERT D. GROVE, PH. D., *Chief*

ANDERS S. LUNDE, PH. D., *Assistant Chief*

HUGH CARTER, PH. D., *Marriage and Divorce Statistics Branch*

HELEN CHASE, DR. P. H., *Mortality Statistics Branch*

ARTHUR A. CAMPBELL, *Natality Statistics Branch*

CHARLES R. COUNCIL, *Registration Methods Branch*

ALICE M. HETZEL, *Staff Assistant*

JOHN STORCK, PH. D., *Staff Assistant*

# VITAL STATISTICS OF THE UNITED STATES, 1963

## VOLUME I— NATALITY

A brief summary of the contents for each section is listed below for the convenience of the reader. A complete table of contents is shown at the beginning of each section and is identified by a narrow black edge which can be located easily by fanning the pages. Each section is paged independently, using the section number as the identifying prefix.

### Section 1. Natality—Rates and Characteristics

Summary tables containing period and cohort measures of fertility and characteristics of live births including plurality, birth weight, period of gestation, attendant at birth, sex ratio, seasonal variation, and legitimacy.

Detailed frequency tabulations for each State, each metropolitan area, and other geographic areas of the United States. Data are shown by color, sex, nativity of white mother, month, age of mother and of father, birth order, attendant, birth weight, period of gestation, plurality, and legitimacy.

### Section 2. Natality—Local Area Statistics

Frequency tabulations for each State, county, and city with a population of 10,000 or more by color and attendant and for urban and rural and metropolitan and nonmetropolitan areas within each State by color, attendant, and birth weight.

### Section 3. Natality—Puerto Rico and Virgin Islands

Trends of the crude birth rate. Frequency tabulations by color, sex, month, age of mother and of father, birth order, attendant, birth weight, period of gestation, and legitimacy.

### Section 4. Technical Appendix

Text discussion of factors affecting the collection, classification, and interpretation of the natality statistics published in this volume. Includes population tables for computing vital rates.

### Guide to tables in Section 1

(All data are for births occurring in the United States. Data for geographic areas within the United States are by place of residence unless otherwise noted)

## GENERAL PATTERN OF VITAL REGISTRATION AND STATISTICS IN THE UNITED STATES

RESPONSIBLE PERSON OR AGENCY	BIRTH CERTIFICATE	DEATH CERTIFICATE	FETAL DEATH CERTIFICATE (Stillbirth)	REPORTING OFFICIALS	MARRIAGE RECORD	DIVORCE OR ANNULMENT RECORD
Physician, Other Professional Attendant, or Hospital Authority	<ol style="list-style-type: none"> <li>1. Completes entire certificate in consultation with parent(s). Physician's signature required.</li> <li>2. Files certificate with local office of district in which birth occurred.</li> </ol>	<ol style="list-style-type: none"> <li>1. Completes medical certificate and signs certificate.</li> <li>2. Returns certificate to funeral director.</li> </ol>	<ol style="list-style-type: none"> <li>1. Certifies to the cause of fetal death and signs certificate.</li> <li>2. Returns certificate to funeral director.</li> </ol>	Clerk of Local Government	<ol style="list-style-type: none"> <li>1. Receives application for marriage license, and reviews application for completeness, accuracy, and compliance with law.</li> <li>2. Issues marriage license, and records date.</li> <li>3. Checks completeness of entries about the marriage ceremony.</li> <li>4. Sends specified information regarding marriage to State Registrar.</li> </ol>	
Funeral Director		<ol style="list-style-type: none"> <li>1. Obtains personal facts about deceased.</li> <li>2. Takes certificate to physician for medical certification.</li> <li>3. Delivers completed certificate to local office of district where death occurred and obtains burial permit.</li> </ol>	<ol style="list-style-type: none"> <li>1. Obtains the facts about fetal death.</li> <li>2. Takes certificate to physician for entry of causes of fetal death.</li> <li>3. Delivers completed certificate to local office of district where delivery occurred and obtains burial permit.</li> </ol>	Marriage Officiant	<ol style="list-style-type: none"> <li>1. Checks the validity of the marriage license.</li> <li>2. Performs the marriage ceremony.</li> <li>3. Certifies to the facts of the marriage ceremony.</li> <li>4. Returns the record to the license clerk within the legally prescribed time.</li> </ol>	
Local Office (may be Local Registrar or City or County Health Department)	<ol style="list-style-type: none"> <li>1. Verifies completeness and accuracy of certificate.</li> <li>2. Makes copy, ledger entry, or index for local use.</li> <li>3. Sends certificates to State Registrar.</li> </ol>	<ol style="list-style-type: none"> <li>1. Verifies completeness and accuracy of certificate.</li> <li>2. Makes copy, ledger entry, or index for local use.</li> <li>3. Issues burial permit to funeral director and verifies return of permit from cemetery attendant.</li> <li>4. Sends certificates to State Registrar.</li> </ol>		Clerk of Court		<ol style="list-style-type: none"> <li>1. Provides form for report to plaintiff or attorney, or makes entries on such form from petition for decree.</li> <li>2. Verifies entries on return form.</li> <li>3. Enters information on final decree.</li> <li>4. Sends completed report to State Registrar.</li> </ol>
City and county health departments use certificates in allocating medical and nursing services, followups on infectious diseases, planning programs, measuring effectiveness of services, and conducting research studies.				Attorney for Plaintiff		<ol style="list-style-type: none"> <li>1. Enters personal characteristics of spouses.</li> <li>2. Returns form to Clerk of Court.</li> </ol>
State Registrar, Bureau of Vital Statistics*	<ol style="list-style-type: none"> <li>1. Queries incomplete or inconsistent information.</li> <li>2. Maintains files for permanent reference and as the source of certified copies.</li> <li>3. Develops vital statistics for use in planning, evaluating, and administering State and local health activities and for research studies.</li> <li>4. Compiles health related statistics for State and civil divisions of State for use of the health department and other agencies and groups interested in the fields of medical science, public health, demography, and social welfare.</li> <li>5. Prepares copies of birth, death, fetal death, marriage, and divorce certificates or records for transmission to the National Center for Health Statistics.</li> </ol>					
Public Health Service National Center for Health Statistics	<ol style="list-style-type: none"> <li>1. Prepares and publishes national statistics of births, deaths, fetal deaths, marriages, and divorces; and constructs the official U.S. life tables and related actuarial tables.</li> <li>2. Conducts health and social-research studies based on vital records and on sampling surveys linked to records.</li> <li>3. Conducts research and methodological studies in vital statistics methods including the technical, administrative, and legal aspects of vital records registration and administration.</li> <li>4. Maintains a continuing technical assistance program to improve the quality and usefulness of vital statistics.</li> </ol>					

NOTE.—In some States there is no central file for marriage and divorce records at the State level.

\*In 49 States and the District of Columbia the Bureau is in the State Health Department. In Massachusetts the Bureau is in the Office of the Secretary of State.

Table	Page
1-1. Live births and birth rates, by color: Birth-registration States, 1915-32, and United States, 1933-63-----	1-3
1-2. Live births, birth rates, and fertility rates, by color: United States, 1909-63-----	1-4
1-3. Age-sex-adjusted birth rates, by color: United States, 1940-63-----	1-5
1-4. Gross and net reproduction rates, by color: United States, 1940-63-----	1-5
1-5. Intrinsic vital rates, by color: United States, 1940-63-----	1-6
1-6. Total fertility rates and birth rates by age of mother and color: United States, 1940-63-----	1-7
1-7. Estimated birth rates by age of mother, for married women: United States, 1950-63-----	1-8
1-8. Birth rates by age of father and color: United States, 1940, 1950, and 1959-63-----	1-9
1-9. Birth rates by live-birth order and color: United States, 1940-63-----	1-10
1-10. Birth rates by live-birth order, for native white women: United States, 1920-63-----	1-11
1-11. Birth rates by age of mother, live-birth order, and color: United States, 1963-----	1-12
1-12. Percentage distribution of live births by live-birth order, by age of mother and color: United States, 1963 -	1-12
1-13. Median age of mother, by live-birth order and color: United States, 1940, 1950, and 1960-63-----	1-13
1-14. Percentage distribution of women by parity and exact age in selected groups of cohorts from 1876-80 to 1945-49: United States, 1920-64-----	1-14
1-15. Birth probabilities by exact age and parity of mother: United States, 1940, 1950, and 1956-63-----	1-15
1-16. Annual central birth rates, by live-birth order for women, by current age, in groups of cohorts from 1914-18 to 1944-48: United States, 1958-63-----	1-16
1-17. Cumulative birth rates by live-birth order for women, by exact age, in groups of cohorts from 1905-09 to 1945-49: United States, 1959-64-----	1-17
1-18. Annual central birth rates by live-birth order for women, by current age, in each cohort from 1909 to 1949: United States, 1958-63-----	1-18
1-19. Cumulative birth rates by live-birth order for women, by exact age, in each cohort from 1909 to 1949: United States, 1959-64-----	1-21
1-20. Live births by color and sex: United States, 1940-63-----	1-24
1-21. Percent completeness of birth registration, by color: United States, 1933-63-----	1-24
1-22. Live births and birth rates, by month: United States, 1954-63-----	1-25
1-23. Birth rates and fertility rates, by month, adjusted for seasonal variation: United States, 1954-63-----	1-25
1-24. Number and percentage distribution of live births by attendant, by color: United States, 1940-63-----	1-26
1-25. Percentage distribution of live births by attendant, by color: United States, each division and State, 1963--	1-27
1-26. Estimated number of illegitimate live births and ratios, by color, and illegitimacy rates: United States, 1940-63 -----	1-28

Table	Page
1-27. Estimated illegitimacy rates by age of mother: United States, 1940, 1950, and 1960-63-----	1-28
1-28. Estimated number of illegitimate live births and ratios, by age of mother and color: United States, 1963---	1-29
1-29. Ratio of illegitimate live births, by color: 35 reporting States, 1960-63-----	1-29
1-30. Percentage distribution of live births by birth weight, by age of mother and color: United States, 1963-----	1-30
1-31. Percentage distribution of live births by birth weight, by color, for the United States and each geographic division; and by plurality for the United States: 1963-----	1-31
1-32. Percentage distribution of live births by birth weight, by period of gestation and color: United States, 1963-	1-32
1-33. Birth rates: United States, each division and State, 1950 and 1957-63-----	1-33
1-34. Live births by State of occurrence distributed according to State of residence: United States and each State, 1963 -----	1-34
1-35. Live births by month and State of occurrence: United States and each State, 1963-----	1-37
1-36. Live births by month and color: United States and each State, 1963-----	1-38
1-37. Live births by specified race and sex: United States and each State, 1963-----	1-40
1-38. Live births by plurality of birth and color: United States and each State, 1963-----	1-41
1-39. Live births by birth weight, plurality of birth, color, and sex: United States, 1963-----	1-42
1-40. Live births by birth weight, age of mother, plurality of birth, and color: United States, 1963-----	1-43
1-41. Live births by birth weight and color: United States and each State, 1963-----	1-45
1-42. Live births by birth weight, period of gestation, and color: United States, 1963-----	1-47
1-43. Live births by period of gestation, plurality of birth, and color, by sex of child and by age of mother: United States, 1963-----	1-48
1-44. Live births by period of gestation and color: United States and each State, 1963-----	1-50
1-45. Live births by month, age of mother, live-birth order, and color: United States, 1963-----	1-53
1-46. Live births by age of mother, live-birth order, sex of child, color, and nativity of white mother: United States, 1963-----	1-55
1-47. Live births by age of mother, live-birth order, color, and nativity of white mother: Each State, 1963-----	1-57
1-48. Live births by single year of age of mother, live-birth order, color, and nativity of white mother: United States, 1963-----	1-89
1-49. Live births by age of mother and color, for metropolitan and nonmetropolitan counties: United States and each State, 1963-----	1-92
1-50. Live births by age of mother and color, for standard metropolitan statistical areas of the United States: 1963 -----	1-98
1-51. Live births by live-birth order and color, for metropolitan and nonmetropolitan counties: United States and each State, 1963-----	1-107
1-52. Live births by live-birth order and color, for standard metropolitan statistical areas of the United States: 1963 -----	1-113
1-53. Live births by age of father, age of mother, sex of child, and color: United States, 1963-----	1-122
1-54. Live births by age of father, sex of child, and color: United States and each State, 1963-----	1-124
1-55. Illegitimate live births by age of mother and color, for urban and rural areas and specified urban places: 35 reporting States, 1963-----	1-130
1-56. Illegitimate live births by live-birth order and color: 35 reporting States, 1963-----	1-140

## SECTION 1 - NATALITY

1-3

Table 1-1. Live Births and Birth Rates, by Color: Birth-Registration States 1915-32, and United States, 1933-63  
 (Refers only to births occurring within the specified area. Rates per 1,000 population residing in area for specified group, except as noted. Rates for 1940, 1950, and 1960 based on population enumerated as of April 1; for all other years, estimated as of July 1)

1909	2,718,000	2,344,000	---	30.0	29.2	---	126.8	123.6	---

<sup>1</sup>For 1917-19 and 1941-46, based on population including Armed Forces abroad.

<sup>2</sup>Based on a 50-percent sample of births.

<sup>3</sup>Figures by color exclude data for residents of New Jersey; see Technical Appendix.

<sup>4</sup>Due to rounding to the nearest thousand, figures by color may not add to totals. For 1915-32, figures include adjustments for States not in the registration area; for years prior to 1915, figures are estimates based on the number of registered births in the 10 original registration States for the same period. Estimates for 1909-34 were prepared by P. K. Whelpton. See National Office of Vital Statistics, "Births and Birth Rates in the Entire United States, 1909 to 1948," Vital Statistics—Special Reports, Vol. 33, No. 8, 1950.

## SECTION 1 - NATALITY

1-5

Table 1-3. Age-Sex-Adjusted Birth Rates, by Color: United States, 1940-63

(Alaska included beginning 1959, and Hawaii, 1960. Rates per 1,000 population. Computed by the direct method, using as the standard population the age distribution of the female population aged 10-49 years as enumerated in 1940 and the total enumerated population of the United States for that year. Based on birth rates by age of mother and color shown in table 1-6)

YEAR	Total	White	Nonwhite	YEAR	Total	White	Nonwhite
<b>REGISTERED BIRTHS</b>				<b>BIRTHS ADJUSTED FOR UNDERREGISTRATION—Con.</b>

<sup>1</sup>Figures by color exclude data for residents of New Jersey; see Technical Appendix.

Table 1-4. Gross and Net Reproduction Rates, by Color: United States, 1940-63

(Refers only to births occurring within the United States. Alaska included beginning 1959, and Hawaii, 1960. Gross reproduction rates are the sum of birth rates by 5-year age groups of mothers multiplied by 5 and by the proportion of births that were female. Net reproduction rates are the sum of birth rates by 5-year age groups of mothers multiplied by 5 and by the probability (as determined from the life table for the year) of women surviving to a specified age group and by the proportion of births that were female)

YEAR	GROSS REPRODUCTION RATE			NET REPRODUCTION RATE			YEAR	GROSS REPRODUCTION RATE			NET REPRODUCTION RATE

<sup>1</sup>Based on a 50-percent sample of births.<sup>2</sup>Figures exclude data for residents of New Jersey; see Technical Appendix.<sup>3</sup>Includes adjustments for States not in the birth-registration area prior to 1933. For 1920-39, rates are estimates prepared by P. K. Whelpton. See National Office of Vital Statistics, "Births and Birth Rates in the Entire United States, 1909 to 1948," Vital Statistics—Special Reports, Vol. 33, No. 8, 1950.

SECTION 1 - NATALITY

Table 1-11. Birth Rates by Age of Mother, Live-Birth Order, and Color: United States, 1963

(Refers only to births occurring within the United States. Based on a 50-percent sample of births. Rates are live births per 1,000 female population in specified age and color group, estimated as of July 1. Live-birth order refers to number of children born alive to mother. Figures by color exclude data for residents of New Jersey; see Technical Appendix. Figures for both age of mother and births of order not stated are distributed)

<sup>1</sup>Based on a 50-percent sample of births.

<sup>2</sup>Figures exclude data for residents of New Jersey; see Technical Appendix.

SECTION 1 - NATALITY

Table 1-14. Percentage Distribution of Women by Parity and Exact Age in Selected Groups of Cohorts

From 1876-80 to 1945-49: United States, 1920-64

(Alaska included beginning 1959, and Hawaii, 1960. Parity refers to number of liveborn children borne by a woman as of a particular time. Based on cumulative rates shown in table 1-17 of this report and in table 2 of "Fertility Tables for Birth Cohorts of American Women, Part 1," by P. K. Whelpton and A. A. Campbell, National Office of Vital Statistics, Vital Statistics—Special Reports, Vol. 51, No. 1, 1960. For method of computation, see Technical Appendix)

EXACT AGE OF WOMAN AND COHORT	As of January 1	Total	PARITY							
			0	1	2	3	4	5	6	7 or higher

SECTION 1- NATALITY

Table 1-15. Birth Probabilities by Exact Age and Parity of Mother: United States, 1940, 1950, and 1956-63

(Alaska included beginning 1959, and Hawaii, 1960. Based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses. Parity refers to the number of liveborn children borne by a woman as of a particular time. Probabilities are the number of births per 1,000 women in specified parity and exact age group. Figures in the "0 parity" column show the probability of first births to "0 parity" women, those in the "1 parity" column show the probability of second births to "1 parity" women, etc.)

Table 1-16. Annual Central Birth Rates, by Live-Birth Order for Women, by Current Age, in Groups of Cohorts  
From 1914-18 to 1944-48: United States, 1958-63

(Alaska included beginning 1959, and Hawaii, 1960. Live-birth order refers to number of children born alive to mother. Rates are averages of the rates per 1,000 women for single cohorts shown in table 1-18; these rates are based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses. Comparable data for 1917-57 are shown in table 1 of the report cited in the headnote to table 1-14)

Table 1-18. Annual Central Birth Rates by Live-Birth Order for Women, by Current Age, in Each Cohort From 1909 to 1949: United States, 1958-63

(Alaska included beginning 1959, and Hawaii, 1960. Live-birth order refers to number of children born alive to mother. Rates are per 1,000 women and are based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses. Comparable data for 1917-57 are shown in table 3 of the report cited in the headnote to table 1-14; the method of computation is also shown in the report)

## SECTION 1 - NATALITY

1-21

Table 1-19. Cumulative Birth Rates by Live-Birth Order for Women, by Exact Age, in Each Cohort From 1909 to 1949: United States, 1959-64

(Alaska included beginning 1959, and Hawaii, 1960. Live-birth order refers to number of children born alive to mother. Rates are per 1,000 women and are based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses. Comparable data for 1917-58 are shown in table 4 of the report cited in the headnote to table 1-14; the method of computation is also shown in the report)

1941	95,700	41,900	53,800	38.1	19.0	174.5	7.8
1940	89,500	40,300	49,200	37.9	19.5	168.3	7.1

<sup>1</sup>Per 1,000 total live births in specified group.

<sup>2</sup>Per 1,000 unmarried female population aged 15-44 years, enumerated as of April 1 for 1940, 1950, and 1960 and estimated as of July 1 for all other years.

<sup>3</sup>Based on a 50-percent sample of births.

<sup>4</sup>Figures by color exclude data for residents of New Jersey; see Technical Appendix.

Table 1-27. Estimated Illegitimacy Rates by Age of Mother: United States, 1940, 1950, and 1960-63

(Refers only to births occurring within the United States. Alaska included beginning 1959, and Hawaii, 1960. Rates are illegitimate live births per 1,000 unmarried female population in specified group, enumerated as of April 1 for 1940, 1950, and 1960 and estimated as of July 1 for all other years. Figures for age of mother not stated are distributed)

YEAR	15-44 years <sup>1</sup>	AGE OF MOTHER						
		10-14 years	15-19 years	20-24 years	25-29 years	30-34 years	35-39 years	40-44 years <sup>2</sup>
1963 <sup>3</sup>	22.5	0.6	15.3	39.9	49.4	33.7	16.1	4.3
1962 <sup>3</sup>	21.5	0.6	14.9	41.8	46.4	27.0	13.5	3.4
1961 <sup>3</sup>	22.6	0.6	16.0	41.2	44.8	28.9	15.1	3.8
1960 <sup>3</sup>	21.8	0.6	15.7	40.3	42.0	27.5	13.9	3.6
1950	14.1	0.6	12.6	21.3	19.9	13.3	7.2	2.0
1940	7.1	0.4	7.4	9.5	7.2	5.1	3.4	1.2

<sup>1</sup>Rates computed by relating total births, regardless of age of mother, to unmarried female population aged 15-44 years.

<sup>2</sup>Rates computed by relating births to mothers aged 40 years and over to unmarried female population aged 40-44 years.

<sup>3</sup>Based on a 50-percent sample of births.

## SECTION 1 - NATALITY

1-29

Table 1-28. Estimated Number of Illegitimate Live Births and Ratios, by Age of Mother and Color:  
United States, 1963

(Refers only to births occurring within the United States. Based on a 50-percent sample. Due to rounding estimates to the nearest hundred, figures by color may not add to totals. Ratios per 1,000 total live births in specified group. Figures by color exclude data for residents of New Jersey; see Technical Appendix)

AGE OF MOTHER	NUMBER			RATIO		
	Total	White	Nonwhite	Total	White	Nonwhite
TOTAL-----	259,400	102,200	150,700	63.3	30.7	235.9
Under 15 years-----	5,400	1,200	4,000	711.1	464.4	830.9
15-19 years-----	101,800	39,800	59,300	173.6	89.8	454.4
15-17 years-----	51,100	17,900	31,800	283.0	146.6	579.8
18 and 19 years-----	50,700	21,900	27,500	124.9	69.2	363.5
20-24 years-----	82,600	35,900	44,400	56.8	29.8	213.8
25-29 years-----	35,400	12,800	21,800	34.6	15.2	152.7
30-34 years-----	19,800	6,900	12,600	32.4	13.9	140.3
35-39 years-----	10,900	4,100	6,600	33.8	15.7	135.4
40 years and over-----	5,500	1,500	2,000	37.3	19.7	137.5

Table 1-29. Ratio of Illegitimate Live Births, by Color: 35 Reporting States, 1960-63

(By place of residence. Based on a 50-percent sample. Refers only to illegitimate births occurring within the reporting area to residents of area. Ratios per 1,000 total live births in specified group. Asterisk indicates ratio based on frequency of less than 20)

<sup>1</sup>Totals by color for 1962 and 1963 exclude data for residents of New Jersey; see Technical Appendix.

<sup>2</sup>Figures for 1963 include an unknown number of illegitimate births erroneously allocated to this area due to incomplete residence reporting.

<sup>3</sup>Figures for 1963 exclude an unknown number of illegitimate births due to erroneous filing of a substitute record which did not include the item on legitimacy status.

<sup>4</sup>Figures for 1961 exclude a significant but unknown number of illegitimate births erroneously classified as legitimate.

SECTION 1 - NATALITY

Table 1-30. Percentage Distribution of Live Births by Birth Weight, by Age of Mother and Color: United States, 1963

(Refers only to births occurring within the United States. Based on a 50-percent sample. Figures by color exclude data for residents of New Jersey; see Technical Appendix. Figures for both age of mother and birth weight not stated are distributed)

AGE OF MOTHER AND COLOR	Median weight in grams <sup>1</sup>	PERCENTAGE DISTRIBUTION BY BIRTH WEIGHT <sup>2</sup>

<sup>1</sup>Computed to nearest 10 grams on basis of exact conversion of interval limits from pounds and ounces.<sup>2</sup>Equivalents of the gram weights in terms of pounds and ounces are as follows:

1,000 grams or less	= 2 lb. 3 oz. or less	3,001-3,500 grams	= 6 lb. 10 oz. - 7 lb. 11 oz.
1,001-1,500 grams	= 2 lb. 4 oz. - 3 lb. 4 oz.	3,501-4,000 grams	= 7 lb. 12 oz. - 8 lb. 13 oz.
1,501-2,000 grams	= 3 lb. 5 oz. - 4 lb. 6 oz.	4,001-4,500 grams	= 8 lb. 14 oz. - 9 lb. 14 oz.
2,001-2,500 grams	= 4 lb. 7 oz. - 5 lb. 8 oz.	4,501-5,000 grams	= 9 lb. 15 oz. - 11 lb. 0 oz.
2,501-3,000 grams	= 5 lb. 9 oz. - 6 lb. 9 oz.	5,001 grams or more	= 11 lb. 1 oz. or more

<sup>3</sup>Figures by color exclude data for residents of New Jersey; see Technical Appendix.

SECTION 1 - NATALITY

Table 1-32. Percentage Distribution of Live Births by Birth Weight, by Period of Gestation and Color: United States, 1963

(Refers only to births occurring within the United States. Based on a 50-percent sample. Figures by color exclude data for residents of New Jersey. Figures for both birth weight and period of gestation not stated are distributed. Births occurring in Maryland and Massachusetts are also distributed by period of gestation. For discussion of color and period of gestation items, see Technical Appendix)

PERIOD OF GESTATION <sup>1</sup> AND COLOR	Median weight in grams <sup>2</sup>	PERCENTAGE DISTRIBUTION BY BIRTH WEIGHT <sup>3</sup>												
		Total	500 grams or less	501-1,000 grams	1,001-1,500 grams	1,501-2,000 grams	2,001-2,500 grams	2,500 grams or less	2,501-3,000 grams	3,001-3,500 grams	3,501-4,000 grams	4,001-4,500 grams	4,501-5,000 grams	5,001 grams or more

<sup>1</sup>Period of gestation reported in months allocated to gestation intervals in weeks as follows: 4 months to "Under 20 weeks"; 5 and 6 months to "20-27 weeks"; 7 months to "28-31 weeks"; 8 months to "32-35 weeks"; 9 months to "40 weeks"; 10 months to "43 weeks and over."

<sup>2</sup>Computed to nearest 10 grams on basis of exact conversion of interval limits from pounds and ounces.

<sup>3</sup>Equivalents of the gram weights in terms of pounds and ounces are as follows:

500 grams or less = 1 lb. 1 oz. or less	3,001-3,500 grams = 6 lb. 10 oz. - 7 lb. 11 oz.
501-1,000 grams = 1 lb. 2 oz. - 2 lb. 3 oz.	3,501-4,000 grams = 7 lb. 12 oz. - 8 lb. 13 oz.
1,001-1,500 grams = 2 lb. 4 oz. - 3 lb. 4 oz.	4,001-4,500 grams = 8 lb. 14 oz. - 9 lb. 14 oz.
1,501-2,000 grams = 3 lb. 5 oz. - 4 lb. 6 oz.	4,501-5,000 grams = 9 lb. 15 oz. - 11 lb. 0 oz.
2,001-2,500 grams = 4 lb. 7 oz. - 5 lb. 8 oz.	5,001 grams or more = 11 lb. 1 oz. or more
2,501-3,000 grams = 5 lb. 9 oz. - 6 lb. 9 oz.	

## SECTION 1 - NATALITY

1-33

Table 1-33. Birth Rates: United States, Each Division and State, 1950 and 1957-63

(By place of residence. Refers only to births occurring within the United States. Based on a 50-percent sample for all years except 1950. Rates are live births per 1,000 population in each area, enumerated as of April 1 for 1950 and 1960 and estimated as of July 1 for all other years)

## SECTION 1 - NATALITY

1-39

Table 1-36. Live Births by Month and Color: United States and Each State, 1963—Con.

(By place of residence. Refers only to births occurring within the United States. Based on a 50-percent sample. Figures by color for the United States exclude data for residents of New Jersey; see Technical Appendix)

<sup>1</sup>Equivalents of the gram weights in terms of pounds and ounces are as follows:

- |                     |                             |                     |                               |
|---------------------|-----------------------------|---------------------|-------------------------------|
| 1,000 grams or less | = 2 lb. 3 oz. or less       | 3,001-3,500 grams   | = 6 lb. 10 oz. - 7 lb. 11 oz. |
| 1,001-1,500 grams   | = 2 lb. 4 oz. - 3 lb. 4 oz. | 3,501-4,000 grams   | = 7 lb. 12 oz. - 8 lb. 13 oz. |
| 1,501-2,000 grams   | = 3 lb. 5 oz. - 4 lb. 6 oz. | 4,001-4,500 grams   | = 8 lb. 14 oz. - 9 lb. 14 oz. |
| 2,001-2,500 grams   | = 4 lb. 7 oz. - 5 lb. 8 oz. | 4,501-5,000 grams   | = 9 lb. 15 oz. - 11 lb. 0 oz. |
| 2,501-3,000 grams   | = 5 lb. 9 oz. - 6 lb. 9 oz. | 5,001 grams or more | = 11 lb. 1 oz. or more        |

<sup>1</sup>Equivalents of the gram weights in terms of pounds and ounces are as follows:

1,000 grams or less	= 2 lb. 3 oz. or less	3,001-3,500 grams	= 6 lb. 10 oz. - 7 lb. 11 oz.
1,001-1,500 grams	= 2 lb. 4 oz. - 3 lb. 4 oz.	3,501-4,000 grams	= 7 lb. 12 oz. - 8 lb. 13 oz.
1,501-2,000 grams	= 3 lb. 5 oz. - 4 lb. 6 oz.	4,001-4,500 grams	= 8 lb. 14 oz. - 9 lb. 14 oz.
2,001-2,500 grams	= 4 lb. 7 oz. - 5 lb. 8 oz.	4,501-5,000 grams	= 9 lb. 15 oz. - 11 lb. 0 oz.
2,501-3,000 grams	= 5 lb. 9 oz. - 6 lb. 9 oz.	5,001 grams or more	= 11 lb. 1 oz. or more

<sup>2</sup>Figures by color are not shown because reporting was incomplete; see Technical Appendix.

Table 1-42. Live Births by Birth Weight, Period of Gestation, and Color: United States, 1963

(Refers only to births occurring within the United States. Based on a 50-percent sample. Maryland (except city of Baltimore) and Massachusetts did not require reporting of period of gestation; for this item, figures for these States are included in "Not stated." Figures by color exclude data for residents of New Jersey; see Technical Appendix)

## SECTION 1 - NATALITY

Table 1-44. Live Births by Period of Gestation and Color: United States and Each State, 1963

(By place of residence. Refers only to births occurring within the United States. Based on a 50-percent sample. Maryland (except city of Baltimore) and Massachusetts did not require reporting of period of gestation; for this item, figures for these States are included in "Not stated." Figures by color for the United States exclude data for residents of New Jersey; see Technical Appendix)

Nonwhite---	292	-	2	2	8	6	32	239	4

<sup>1</sup>Period of gestation reported in months allocated to gestation intervals in weeks as follows: 4 months to "Under 20 weeks"; 5 and 6 months to "20-27 weeks"; 7 months to "28-31 weeks"; 8 months to "32-35 weeks"; 9 months and over to "40 weeks and over."

<sup>2</sup>Data are for births in other States to residents of Maryland.

<sup>3</sup>Data are for births in other States to residents of Massachusetts.

<sup>4</sup>Figures by color are not shown because reporting was incomplete; see Technical Appendix.

SECTION 1 - NATALITY

Table 1-45. Live Births by Month, Age of Mother, Live-Birth Order, and Color: United States, 1963

(Refers only to births occurring within the United States. Based on a 50-percent sample. Live-birth order refers to number of children born alive to mother. Figures by color exclude data for residents of New Jersey; see Technical Appendix. Figures for age of mother not stated are distributed)

SECTION 1 - NATALITY

Table 1-46. Live Births by Age of Mother, Live-Birth Order, Sex of Child, Color, and Nativity of White Mother: United States, 1963—Con.

(Refers only to births occurring within the United States. Based on a 50-percent sample. Live-birth order refers to number of children born alive to mother. Figures by color exclude data for residents of New Jersey; see Technical Appendix. Figures for age of mother not stated and nativity of white mother not stated are distributed)

## SECTION 1 - NATALITY

1-91

Table 1-48. Live Births by Single Year of Age of Mother, Live-Birth Order, Color, and Nativity of White Mother: United States, 1963—Con.

(Refers only to births occurring within the United States. Based on a 50-percent sample. Live-birth order refers to number of children born alive to mother. Figures by color exclude data for residents of New Jersey; see Technical Appendix. Figures for age of mother not stated and nativity of white mother not stated are distributed)

Table 1-49. Live Births by Age of Mother and Color, for Metropolitan and Nonmetropolitan Counties: United States and Each State, 1963

(By place of residence. Refers only to births occurring within the United States. Based on a 50-percent sample. "Metropolitan counties" include all counties that are in standard metropolitan statistical areas (metropolitan State economic areas for New England). "Nonmetropolitan counties" include all other counties. Figures by color for the United States exclude data for residents of New Jersey. For discussion of color item for New Jersey and definitions of metropolitan and nonmetropolitan counties, see Technical Appendix. Figures for age of mother not stated are distributed)

## SECTION 1 - NATALITY

Table 1-50. Live Births by Age of Mother and Color, for Standard Metropolitan Statistical Areas of the United States: 1963

(By place of residence. Refers only to births occurring within the United States. Based on a 50-percent sample. Areas shown are those listed in Standard Metropolitan Statistical Areas issued in 1961 by the Bureau of the Budget, except for those in New England, where areas are metropolitan State economic areas established by the Bureau of the Census in 1960. For definitions of areas, see Technical Appendix. Figures for age of mother not stated are distributed)

Nonwhite--	1,070	-	172	356	262	168	76	34	2	-
STANDARD CONSOLIDATED AREAS										
New York-Northeastern New Jersey <sup>2</sup> s-----	307,508	458	28,010	101,692	86,604	55,320	28,122	7,008	290	4
Chicago-Northwestern Indiana <sup>4</sup> -----	159,824	336	18,304	54,368	42,808	26,470	13,810	3,556	166	6
White-----	123,926	42	11,332	42,554	34,384	21,392	11,204	2,868	144	6
Nonwhite--	35,898	294	6,972	11,814	8,424	5,078	2,606	688	22	-

<sup>1</sup>Figures by color exclude data for those standard metropolitan statistical areas consisting wholly or in part of metropolitan counties in New Jersey because reporting of color was incomplete for this State. Therefore, figures by color do not agree with those shown for metropolitan counties in table 1-49.

<sup>2</sup>Figures by color are not shown because reporting was incomplete for New Jersey; see Technical Appendix.

<sup>3</sup>Comprised of four standard metropolitan statistical areas--New York, N.Y., Newark, N.J., Jersey City, N.J., and Paterson-Clifton-Passaic, N.J.--and two nonmetropolitan counties--Middlesex and Somerset Counties, N.J.

<sup>4</sup>Comprised of two standard metropolitan statistical areas--Chicago, Ill., and Gary-Hammond-East Chicago, Ind.

## SECTION 1 - NATALITY

1-107

Table 1-51. Live Births by Live-Birth Order and Color, for Metropolitan and Nonmetropolitan Counties: United States and Each State, 1963

(By place of residence. Refers only to births occurring within the United States. Based on a 50-percent sample. Live-birth order refers to number of children born alive to mother. Figures by color for the United States exclude data for residents of New Jersey. "Metropolitan counties" include all counties that are in standard metropolitan statistical areas (metropolitan State economic areas for New England). "Nonmetropolitan counties" include all other counties. For discussion of color item for New Jersey and definitions of metropolitan and nonmetropolitan counties, see Technical Appendix)

## SECTION 1 - NATALITY

1-113

Table 1-52. Live Births by Live-Birth Order and Color, for Standard Metropolitan Statistical Areas of the United States:

1963

(By place of residence. Refers only to births occurring within the United States. Based on a 50-percent sample. Live-birth order refers to number of children born alive to mother. Areas shown are those listed in Standard Metropolitan Statistical Areas issued in 1961 by the Bureau of the Budget, except for New England, where areas are metropolitan State economic areas as established by the Bureau of the Census in 1960. For definitions of areas, see Technical Appendix)

Nonwhite--	35,898	8,330	7,016	5,394	4,292	3,276	2,452	1,836	3,288	14

<sup>1</sup>Figures by color exclude data for those standard metropolitan statistical areas consisting wholly or in part of metropolitan counties in New Jersey because reporting of color was incomplete for this State. Therefore, figures by color do not agree with those shown for metropolitan counties in table 1-51.

<sup>2</sup>Figures by color are not shown because reporting was incomplete for New Jersey; see Technical Appendix.

<sup>3</sup>Comprised of four standard metropolitan statistical areas--New York, N.Y., Newark, N.J., Jersey City, N.J., and Paterson-Clifton-Passaic, N.J.--and two nonmetropolitan counties--Middlesex and Somerset Counties, N.J.

<sup>4</sup>Comprised of two standard metropolitan statistical areas--Chicago, Ill., and Gary-Hammond-East Chicago, Ind.

Table 1-53. Live Births by Age of Father, Age of Mother, Sex of Child, and Color: United States, 1963

(Refers only to births occurring within the United States. Based on a 50-percent sample. Figures by color exclude data for residents of New Jersey; see Technical Appendix. Figures for age of mother not stated are distributed)

SECTION 1 - NATALITY

Table 1-55. Illegitimate Live Births by Age of Mother and Color, for Urban and Rural Areas and Specified Urban Places: 35 Reporting States, 1963

(By place of residence. Refers only to illegitimate births occurring within the reporting area to residents of area. Based on a 50-percent sample. Specified urban places are those with populations of 50,000 or more in 1960. Figures for white and nonwhite are shown separately for each State, urban and rural totals, and for specified urban places in which the 1960 population for nonwhite formed 10 percent of the total or numbered 10,000 or more, except for New Jersey. For discussion of color item for New Jersey and definition of areas, see Technical Appendix. Figures for age of mother not stated are distributed)

<sup>a</sup>Figures exclude an unknown number of illegitimate births due to erroneous filing of a substitute record which did not include the item on legitimacy status.

## *Section 2. Natality-Local Area Statistics*

Table	Page
2-1. Live births by attendant and color: United States, each State and county, and specified urban places, 1963-----	2-3
2-2. Live births by attendant, birth weight, and color, for urban and rural areas in metropolitan and nonmetropolitan counties: United States and each State, 1963-----	2-60

2-1

SECTION 2 - NATALITY

Table 2-1. Live Births by Attendant and Color: United States, Each State and County, and Specified Urban Places, 1963

(Refers only to births occurring within the United States. Based on a 50-percent sample. Specified urban places are those with populations of 10,000 or more in 1960 and are incorporated unless otherwise noted. Figures for white and nonwhite are shown separately for those counties and urban places in which the 1960 populations for nonwhite formed 10-percent or more of the total or numbered 10,000 or more, except for New Jersey. All figures by color for the United States exclude data for residents of New Jersey. Figures by color by State and county of occurrence for States other than New Jersey also exclude data for residents of New Jersey; see Technical Appendix)

\*Classified as urban under special rule; see Technical Appendix.  
<sup>1</sup>It is assumed that all births in hospitals or institutions are attended by physicians.  
<sup>2</sup>"Districts" shown are election districts, the nearest equivalent of counties.  
<sup>3</sup>Includes District 1, Prince of Wales.  
<sup>4</sup>Includes data for Texarkana, Ark., only.  
<sup>5</sup>The cities of Honolulu and Hilo have legally established limits and, therefore, are treated as incorporated places.  
<sup>6</sup>Geographically located within limits of Idaho, Montana, and Wyoming.  
<sup>7</sup>Figures by color are not shown because reporting was incomplete; see Technical Appendix.  
<sup>8</sup>Nashville city became coextensive with Davidson County as of April 1, 1963.  
<sup>9</sup>Includes data for Bristol, Tenn., only.  
<sup>10</sup>Includes data for Texarkana, Tex., only.  
<sup>11</sup>Independent cities having populations of less than 10,000 according to the 1960 census are: Buena Vista, Clifton Forge, Colonial Heights, Franklin, Galax, Norton, Radford, South Boston, and Williamsburg.  
<sup>12</sup>Includes data for Bristol, Va., only.  
<sup>13</sup>Independent city as of January 1, 1963; formed by consolidating Norfolk County and the independent city of South Norfolk.  
<sup>14</sup>Princess Anne County consolidated with this independent city, January 1, 1963.  
<sup>15</sup>Includes data for Bluefield, W. Va., only.

SECTION 2 - NATALITY

Table 2-2. Live Births by Attendant, Birth Weight, and Color, for Urban and Rural Areas in Metropolitan and Nonmetropolitan Counties: United States and Each State, 1963

(By place of residence. Refers only to births occurring within the United States. Based on a 50-percent sample. "Metropolitan counties" include all counties that are in standard metropolitan statistical areas (metropolitan State economic areas for New England). "Nonmetropolitan counties" include all other counties. Figures by color for the United States exclude data for residents of New Jersey. For discussion of color item for New Jersey and definitions of areas, see Technical Appendix)

<sup>1</sup>Births attended by other and not specified persons are not shown separately but are included in total births. For the United States, these births totaled 7,518 in 1963.<sup>2</sup>It is assumed that all births in hospitals or institutions are attended by physicians.<sup>3</sup>Equivalents of the gram weights in terms of pounds and ounces are as follows: 2,500 grams or less = 5 lb. 8 oz. or less; 2,501 grams or more = 5 lb. 9 oz. or more.<sup>4</sup>County equivalents.<sup>5</sup>Figures by color are not shown because reporting was incomplete; see Technical Appendix.

## *Section 3. Puerto Rico and Virgin Islands (U.S.)*

Table	Page
3-1. Live births and birth rates: Puerto Rico and Virgin Islands, 1940-63-----	3-3
3-2. Live births by month for Puerto Rico and Virgin Islands; and by color for Virgin Islands: 1963-----	3-3
3-3. Live births by birth weight for Puerto Rico and Virgin Islands; and by color for Virgin Islands: 1963-----	3-4
3-4. Live births by period of gestation for Puerto Rico and Virgin Islands; and by color for Virgin Islands: 1963---	3-4
3-5. Number and ratio of illegitimate live births, by age of mother: Puerto Rico and Virgin Islands, 1963-----	3-4
3-6. Live births by age of mother and live-birth order for Puerto Rico and Virgin Islands; and by color for Virgin Islands: 1963-----	3-5
3-7. Live births by age of father and sex of child for Puerto Rico and Virgin Islands; and by color for Virgin Islands: 1963-----	3-5
3-8. Live births by attendant: Puerto Rico and each municipio, 1963-----	3-6
3-9. Live births by attendant and color: Virgin Islands by island and specified urban place, 1963-----	3-6

## NOTES

### **Occurrence and residence allocation**

In contrast with the method of allocating births to place of residence for each of the 50 States and the District of Columbia, residence data for the Commonwealth of Puerto Rico include only those births occurring in Puerto Rico. Births to non-residents of the Commonwealth are included in the total, but births to residents of Puerto Rico occurring elsewhere are excluded. The same qualification applies to resident live births in the Virgin Islands.

Data are shown by both place of occurrence and place of residence in Puerto Rico for the primary geographic subdivision, "municipio," and in the Virgin Islands for St. Croix Island and St. John and St. Thomas Islands (the latter two combined). Births by place of residence are not shown for urban places having a population of 10,000 or more in Puerto Rico, but they are shown for Charlotte Amalie in the Virgin Islands.

### **Race and color**

For 1963, births are not shown by color for Puerto Rico; they are classified as white and nonwhite for the Virgin Islands.

### **Attendant at birth**

In the United States, virtually all in-hospital births are attended by physicians; in Puerto Rico and the Virgin Islands, a large proportion of hospital births are attended by other than physicians.

### **Completeness of registration**

Data for Puerto Rico and the Virgin Islands refer to registered births; no adjustment has been made for possible underreporting. Tests of birth registration completeness were made for these areas in 1950, and the results are given in chapter 6 of Volume I, *Vital Statistics of the United States, 1950*.

Section 4—the Technical Appendix—discusses other factors concerning these natality statistics.

## SECTION 3 - NATALITY

3-3

Table 3-1. Live Births and Birth Rates: Puerto Rico and Virgin Islands, 1940-63

(Refers only to births occurring within the specified area. Rates per 1,000 total population in each area except as noted. Rates for 1940, 1950, and 1960 based on population enumerated as of April 1; for all other years, based on population estimated as of July 1)

YEAR	PUERTO RICO		VIRGIN ISLANDS

## SECTION 4. TECHNICAL APPENDIX

### SOURCES OF DATA

Natality statistics for 1963 are based on information obtained from microfilm copies of the original certificates. These copies were received from the registration offices of all States, certain cities, the District of Columbia, and Puerto Rico. The Virgin Islands sends transcripts rather than filmed copies of the certificates. The statistical information on these records was edited, classified, placed on punchcards, and tabulated in the National Center for Health Statistics (NCHS).

The United States vital statistics system covers the 50 States, the District of Columbia, Puerto Rico, and the Virgin Islands. However, in the statistical tabulations, *United States* refers only to the aggregate of the 50 States and the District of Columbia. Tabulations for Puerto Rico and the Virgin Islands are shown separately in Section 3.

Birth data for the United States are confined to events registered within the United States and include events occurring to nonresident aliens. The data do not cover any vital events for U.S. citizens occurring outside the United States. Similarly, the data for Puerto Rico and the Virgin Islands are confined to events registered in these areas.

#### Standard certificate

The Standard Certificate of Live Birth, issued by the Public Health Service, has served for many years as the principal means of attaining uniformity in the content of the documents used to collect information on births in the United States. It has been modified in each State to the extent necessitated by the particular needs of the State or by special provisions of the State vital statistics law. However, the certificates of most States conform closely in content and arrangement to the standard certificate.

The first issue of the standard certificate of birth appeared shortly before the formation of the registration area. Since then it has been revised periodically by the national vital statistics agency through consultation with State health officers and registrars; Federal agencies concerned with vital statistics; national, State, and county medical societies; and others working in the fields of public health, social welfare, demography, and insurance. This

revision procedure has assured careful evaluation of each item in terms of its current and future usefulness for registration, identification, legal, medical, and research purposes. New items have been added when necessary, and old items have been modified to ensure better reporting or in some cases have been dropped when their usefulness appeared to be limited.

The most recent revision of the Standard Certificate of Live Birth occurred in 1955. It was made in close collaboration with the Public Health Conference on Records and Statistics and was recommended to the States for adoption as of January 1, 1956 (figure 4-A).

With a few exceptions, only minor changes in content and format were made in the 1956 revision of the standard certificate. In an effort to obtain a more accurate designation for place of residence, the question "Is residence inside city limits?" was added. Studies conducted in a few States had indicated that this question helped to correctly locate the residence of persons living near but outside the corporate limits of cities.

Table 4-1 indicates the States that did and those that did not include the checkbox item on residence within city limits on all or part of the certificate forms which they used during 1963.

### HISTORY

The first birth statistics published by the Federal Government concerned events in 1850 and were for the entire United States. These statistics were based on information collected during the decennial census of that year. Similar decennial collections were made by census enumerators at each census up to and including the census of 1900, but because of the time interval between the occurrence of a birth and the census enumeration, these reports were inaccurate and incomplete.

The national birth-registration area was not established until 1915, and no birth statistics were published by the Bureau of the Census from 1900 to 1914. The original birth-registration area of 1915 consisted of 10 States and the District of Columbia. The growth of this area is indicated in table 4-2.

Table 4-2 also presents for each year through 1932 the estimated midyear population of the United States and those States included in the registration system. From 1933 through 1958 the birth and death statistics for the United States included 48 States and the District of Columbia. Alaska was added in 1959 and Hawaii in 1960.

Because of the growth of the area for which data have been collected and tabulated, a national series of geographically comparable data prior to 1933 can be obtained only by estimation. Annual estimates of births have been prepared by P. K. Whelpton for the period 1909-34 (table 1-2 in Section 1). These estimates include an adjustment for underregistration and for States not in the birth-registration area prior to 1933.

## CLASSIFICATION OF DATA

The principal value of vital statistics data is obtained through the presentation of such data in the form of rates, which are computed by relating the vital events of a class to the population of a similarly defined class. Vital statistics and population statistics must therefore be classified ac-

ording to similarly defined systems and tabulated in comparable groups. Even when the variables common to both—such as geographic area, age, race, and sex—have been similarly classified and tabulated, differences between the enumeration method of obtaining population data and the registration method of obtaining vital statistics data may result in significant discrepancies.

Table 4-1. INCLUSION OF CHECKBOX ITEM FOR USUAL RESIDENCE ON CERTIFICATES OF BIRTH, DEATH, AND FETAL DEATH: UNITED STATES, 1963

(In general, certificates containing checkbox items on usual residence are those certificates revised since the 1956 revisions of the standard certificates. The standard certificates contain the checkbox item "Is residence inside city limits?" Data were abstracted from copies of certificates received in the National Center for Health Statistics and include only those certificates used by the areas during all or part of 1963. Certificates revised in 1963 but not in use during the year are not included.)

The complete rules followed in the classification of geographic and personal items for births are set forth in an instruction manual.<sup>1</sup> The classification of certain important items is discussed below.

### Classification by occurrence and residence

Beginning with 1960 statistics by place of occurrence, events were classified according to the county in which the vital event took place but were not classified to any smaller geographic unit. In the vital statistics for years prior to 1960, place of occurrence was classified by smaller units within the county in the same detail as are statistics by place of residence.

Place of residence in birth statistics refers to the geographic area which constituted the mother's usual residence at the time of the birth. The data by place of residence are classified to units within a county as follows: (1) each incorporated place of 10,000 inhabitants or more, (2) each unincorporated place of 10,000 inhabitants or more classified as urban under special rule, (3) the aggregate of incorporated places of 2,500 to 10,000 inhabitants and unincorporated places of this size defined as urban under special rule, and (4) the residual part of the county. For vital statistics purposes, the residual part of the county is referred to as rural.

For residence statistics, all events occurring within the United States, that is, the 50 States and the District of Columbia, are allocated to a place of residence within the United States. For nonresident aliens, the place of residence is considered to be the same as the place of occurrence. The events occurring within Puerto Rico are allocated to a residence in Puerto Rico and similarly for the Virgin Islands.

*Residence error.*—Tests made in 1950 indicate that for the country as a whole, errors in residence reporting result in a significant overstatement of births to residents of urban places and a corresponding understatement in the number to residents of areas classified as rural. The extent of bias varies from State to State and from city to city in the same State. Residence errors occur largely because of the major growth in population areas close to cities. Frequently, parts of these surrounding areas have city mailing addresses, and unless special care is taken in asking for residence information, they could be identified as being inside the cities. This situation has assumed special importance because of a concomitant development—the increased utilization of hospitals in cities by residents of nearby places. Misstatements of residence are more likely to remain undetected in such cases than when the birth occurs in the place of residence.

Item 2 on the Standard Certificate of Live Birth is "Usual residence of mother." In addition to asking for State, county, city, town, or location and street address, the standard certificate form includes the question "Is residence inside city limits?" Table 4-1 shows the States which include this item on their certificates. There is some evidence that use

of this question has improved the accuracy of residence reporting, but the degree of improvement is not known. For a variety of reasons, the information entered in item 2 does not always permit an accurate decision as to the proper allocation of residence.

In some cases, the place named in item 2c (city, town, or location) is actually a subdivision of a city. If the place named does not appear in the geographic code manual as a separate place, allocation is made to the "balance of county" unless there is some other information available to the coder. In some cases, the additional information consists of a residence code entered by the local registrar or by the State vital statistics office. In other cases, lists of place names which are actually inclusions of listed cities are furnished by the State offices. It is probable, however, that a number of certificates filled out in this manner are incorrectly coded for residence, either because additional information is not available or because information on hand is outdated. City boundaries might change, for example, without either the State vital statistics office or the National Center for Health Statistics being notified.

Many people receive their mail in a geographic subdivision other than that in which they live, and when asked for their place of residence, they give their correct mailing address. Thus proper use of the checkbox in item 2e (Is residence inside city limits?) will prevent allocation to the city named in 2c but does not necessarily assure correct allocation.

### Geographic classification<sup>2</sup>

*Standard metropolitan statistical areas.*—The standard metropolitan statistical areas (SMSA's) used in this report are the same as those established by the Bureau of the Budget as of 1960 and used by the Bureau of the Census, except in the New England States.

In the other 44 States, an SMSA is a county or a group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000 in the 1960 census. In addition, contiguous counties are included in an SMSA if, according to specified criteria, they are (a) essentially metropolitan in character and (b) socially and economically integrated with the central city or cities.<sup>3</sup>

In the New England States, the Bureau of the Budget uses towns and cities rather than counties as geographic components of the SMSA. The National Center for Health Statistics cannot use the SMSA classification for these States because its data are not coded to identify all towns. Instead, the metropolitan State economic area (MSEA) established by the

<sup>2</sup>The rules followed in the classification of geographic areas for births are set forth in the instruction manual cited in footnote 1. The geographic code structure is given in National Center for Health Statistics, "Geographic Reference Manual—Codes Used in Computer Operations for 1962-1963," *Vital Statistics Instruction Manual*, Public Health Service, Washington, D. C., 1964.

<sup>3</sup>For a more complete discussion, see U. S. Bureau of the Census, *U. S. Census of Population, 1960, Number of Inhabitants, United States Summary*, Final Report PC (1)-1A, Washington, U. S. Government Printing Office, 1961; and Bureau of the Budget, *Standard Metropolitan Statistical Areas*, Washington, U. S. Government Printing Office, 1961.

<sup>1</sup>National Vital Statistics Division: Coding and punching geographic and personal particulars for births occurring in 1963. *Vital Statistics Instruction Manual*. Public Health Service. Washington, D. C., 1963.

Bureau of the Census, which is made up of county units, is used.<sup>4</sup>

*Standard consolidated areas.*—For the metropolitan complexes around New York and Chicago, several contiguous SMSA's and additional counties that do not appear to meet the formal integration criteria for SMSA's but do have strong interrelationships of other kinds have been combined into the New York-Northeastern New Jersey and the Chicago-Northwestern Indiana Standard Consolidated Areas.<sup>5</sup>

*Metropolitan and nonmetropolitan counties.*—Counties which are included in SMSA's or MSEA's (in New England) are called metropolitan counties; all other counties are classified as nonmetropolitan.

*Urban and rural areas.*—Vital statistics data for 1963 are classified as urban or rural according to the population of the area enumerated in the 1960 census.

The urban population consists of inhabitants residing in the following places:

1. Each incorporated city, borough, village, and town of 2,500 inhabitants or more (except towns in New England, New York, and Wisconsin).
2. Each town in New England and each township in New Jersey and Pennsylvania that has no incorporated municipality as a subdivision and has either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile.<sup>6</sup>
3. Each county in States other than the New England States, New Jersey, and Pennsylvania that has no incorporated municipality within its boundary and has a density of 1,500 persons or more per square mile.<sup>7</sup>

The rural population consists of inhabitants residing in all other areas.

This classification of urban population differs from the 1960 census definition. The latter definition includes, in addition, persons living in (a) unincorporated places of 2,500 inhabitants or more not included in the above definition of "urban" and (b) incorporated and unincorporated places of less than 2,500 inhabitants located within urban fringes of urbanized areas.

It was not feasible to use the 1960 census definitions of urban and rural for classifying vital statistics data since (a) boundary delineations for many urban unincorporated places were made by the Bureau of the Census for enumeration purposes only; many unincorporated places do not conform to political units and their boundaries change with population growth; in most instances the residence information on vital records is insufficient to allocate residence to arbitrary delimitations of unincorporated areas; (b) vital statistics were not tabulated separately for places of less

than 2,500 inhabitants. The difference in the percent distribution of the population in 1960 according to NCHS and the Bureau of the Census is as follows:

	Census	NCHS	Percent difference <sup>8</sup>
Total -----	100.0	100.0	...
Urban -----	69.9	61.1	-12.6
Rural -----	30.1	38.9	+29.2

### Age of mother and birth order

The birth certificate asks for "Age (at time of this birth)." Some sources of minor errors in the age data are apparent. A small number of records are filed with age not reported, and some births are not registered. In previous reports, the "not stated" ages were shown separately. In this report, not stated ages of mother have been distributed. However, the number of not stated ages of father is relatively large because information on the father is frequently not stated for illegitimate births. Therefore these are shown separately and are not distributed. Measures of variation of completeness of registration with age of mother are available from tests of completeness in 1950 and 1940. They show that registration completeness is approximately the same for all ages, except for the oldest age group, where it is lower.<sup>9</sup>

The 1950 test of registration completeness indicated that registration completeness decreased slightly with each higher birth order. Whereas first births were 99 percent registered, eighth and higher order births were only 93 percent registered.<sup>10</sup>

The matched birth certificates and census records obtained in the same tests also provide information on the consistency of age reporting in these two sources. An analysis of the 1950 data indicates a high degree of consistency, particularly when the ages are combined in the usual 5-year age groups.<sup>11</sup>

Differences in reported birth order are considerably greater, particularly for the higher orders. For each birth order, the order stated on the census record tends to be lower than that given on the birth certificate. Birth order is probably reported more accurately on the birth certificate than on the census record.

*Reporting birth order for Massachusetts.*—A small percentage of birth records in all States omit information on birth order. Prior to and including 1962, birth order was not coded or tabulated for births occurring in Massachusetts. Partial reporting of the item "Total number of children

<sup>4</sup>For discussion of MSEA's, see U.S. Bureau of the Census, *State Economic Areas*, Washington, U.S. Government Printing Office, 1951, and the first reference cited in footnote 3. For the 1960 listing of MSEA's, see the manual cited in footnote 2.

<sup>5</sup>See footnote 3.

<sup>6</sup>These areas are identified by the symbol (UT) in table 30 of the U.S. Bureau of the Census publication cited in footnote 3.

<sup>7</sup>Arlington County, Virginia, is the only county in this category.

born alive previous to this birth" on the Massachusetts live birth certificate began in 1961. In 1963, the reporting was about 76 percent complete and was therefore judged to be sufficient for coding and tabulating.

### Race and color

Births in the United States in 1963 are classified for vital statistics according to the race of the parents in the categories white, Negro, American Indian, Chinese, Japanese, Aleut and Eskimo combined, Hawaiian and Part-Hawaiian combined, and "other nonwhite." In most tables a less detailed classification of "white" and "nonwhite" is used.

The category "white" includes births to parents classified as white, Mexican, Puerto Rican, or "not stated." If one parent is Hawaiian and the other is not, the birth is classified as Part-Hawaiian. If one parent is Negro and the other is not Hawaiian, the birth is classified as Negro. In other cases of mixed parentage if both parents are nonwhite the child is assigned the father's race; if the father is white, the child is assigned the mother's race.

Completeness of birth registration in 1963 for white births is estimated to be 99.4 percent and for nonwhite births 96.8 percent. The most recent figures for other groups are from the 1950 test which indicated registration completeness at that time to be 85.1 percent for American Indians and 97.4 percent for "other races," chiefly Chinese and Japanese. Both figures are probably higher for 1963, but more precise estimates are not available.

A comparison of the race designation in matched sets of birth certificates and census records from the 1950 registration completeness test indicates a high percentage of agreement for white persons and Negroes. There were, however, substantially fewer American Indians recorded on birth records than on census records.<sup>12</sup>

*New Jersey.*—Figures by race are not available for New Jersey in 1962 and 1963. This State omitted the item on color or race from its certificates of live birth, death, and fetal death in use at the beginning of 1962. The item was restored during the latter part of 1962. However, the certificate revision without the race item was used for most of 1962 as well as 1963. Therefore it was necessary to make certain changes in processing and publishing the statistics.

In all tables giving data for individual States or their geographic subdivisions, the "color or race" classification is not shown for New Jersey for 1962 and 1963.

In tables by place of residence, all births for residents of States other than New Jersey have been classified by color or race. In the relatively infrequent cases where the birth occurred in New Jersey to a resident of another State it was arbitrarily classified as "white." This was done to eliminate the "not stated" category in the many tables by place of residence.

In tables by place of occurrence, the figures for "white" and "nonwhite" do not add to the total for some areas. This results from a decision to classify all births to residents of New Jersey as "color or race not stated," including cases in which the birth occurred in another State.

All statistics for the United States as a whole by color or race are affected by the lack of this information for New

Jersey residents. As stated previously, all births to residents of New Jersey were classified as "color or race not stated." This "not stated" category is not shown in the tables in the interest of space conservation; however, the frequencies of births classified as "color or race not stated" can be obtained from each table by subtracting from the total for all races the sum of the births classified by color or race. For example, in table 1-1 in Section 1 the total number of live births for the United States is 4,098,020, of which 3,965,272 are classified by color—3,326,344 as white and 638,928 as nonwhite. The difference between the sum of the births classified by color and the total births—132,748—represents the live births to residents of New Jersey, births which were classified as "color or race not stated."

The absence of color or race information for New Jersey live births affects all birth rates classified by color or race for the total United States. This results from the fact that it was not possible to obtain denominators by color to correspond to the natality data with New Jersey excluded because postcensal population estimates by age, color, and sex are not available for individual States. Therefore in order to prepare birth rates by color for the United States it was necessary to make estimates of the United States population by age, color, and sex excluding New Jersey. These estimates are based on the assumption that the ratio of the population of the United States excluding New Jersey (classified by age, color, and sex) to the total population of the United States (classified by these variables) is the same in 1963 as that calculated from the 1960 Census of Population.

Ratios derived in this manner were applied to the 1963 United States population in each specific age, sex, and color group to obtain the population denominators which exclude New Jersey. The estimated 1963 populations used to compute birth rates for each color group are shown in table 4-4. Consideration of the relatively small proportion of the United States population contributed by New Jersey and the maximum probable degree of error in the estimation procedure justified the conclusion that the rates approximate closely those that would have been obtained if natality data by color had been available for New Jersey.

### Illegitimate births

The following 16 States did not report legitimacy statistics on the birth record in 1963: Arizona, Arkansas, California, Colorado, Connecticut, Georgia, Idaho, Maryland, Massachusetts, Montana, Nebraska, New Hampshire, New Mexico, New York, Oklahoma, and Vermont.

Figures for the United States as a whole were derived by adding an estimate of the number of illegitimate live births in States for which legitimacy data were not available to the number of illegitimate live births tabulated for the reporting States. No adjustments were included for misstatements of legitimacy status on the birth records or for failure to register illegitimate births because quantitative information is not available. The figures are based on a 50-percent sample of illegitimate live births in the reporting States.

For illegitimate births reported as second or higher birth orders, it is not known whether previous deliveries to the mother occurred out of wedlock since the marital status

<sup>12</sup>Ibid.

of the mother at the time of these earlier pregnancies is not available from the birth record.<sup>13</sup>

### Attendant at birth

The term "attended by physician" as used in this publication includes births attended by physicians out of hospitals and all births in hospitals or institutions. Births are classified as occurring "in hospital or institution" on the basis of entries on the birth certificate. The classification is unrelated to American Hospital Association (AHA) registered hospital listings. In comparing data from the National Center for Health Statistics with those published by the AHA, it should also be noted that the surveys on which the AHA figures are based cover a reporting period from October 1 to September 30 whereas the data in this volume are for the calendar year.

### Birth weight

In practically all areas, birth weight is reported in terms of pounds and ounces rather than in grams. However, the metric system has been used in tabulating and presenting the statistics to facilitate comparison with data published by other groups in the United States. The equivalents in pounds and ounces of the gram intervals are given in each table containing weight data.

For purposes of classification, the term "immature" is defined as referring to infants weighing 2,500 grams or less at birth. This definition was recommended by the American Academy of Pediatrics in 1935 and later adopted in the Sixth Revision of the International Lists of Diseases and Causes of Death (1948). "Premature," although containing the concept of duration of pregnancy, has also been used for many years in connection with the birth weight criterion. It is possible, however, that basic differences in physical development between different groups—for example, white and nonwhite infants—might make the weight criterion for immaturity too high or too low for a particular group.

Median weights were, in effect, computed from data classified by pounds and ounces, then converted to grams, and rounded for publication. To establish the continuity of class intervals needed to compute medians, the endpoints of these intervals were assumed to be ½ ounce less at the lower end and ½ ounce more at the upper end. For example, "2 lb. 4 oz. to 3 lb. 4 oz." is interpreted as 2 lb. 3½ oz. to 3 lb. 4½ oz.

### Period of gestation

An examination of the reported information on period of gestation suggests a substantial heaping at the intervals "36 weeks" and "40 weeks and over." These biases result from the fact that the gestation period is frequently not

carefully observed and that the newborn infant of normal size is generally assumed to have had a gestation period of 40 weeks or 9 months, depending upon conventional usage. Such errors in reporting are minimized in areas where the gestation period item on the birth certificate requests the "first day of the last normal menstrual period." Areas using this wording of the item are California, the city of Baltimore, the District of Columbia, and New York City.

*Maryland and Massachusetts.*—Maryland, except for the city of Baltimore, and Massachusetts did not require reporting of period of gestation in 1963. The gestation data shown for these two States are for births in other States occurring to residents of Maryland and Massachusetts. In 1963 they accounted for a small proportion of all births to residents of these States, 14.3 percent and 1.2 percent for Maryland and Massachusetts, respectively. Gestation data for births to residents of the city of Baltimore were included in the "not stated" category.

### Quality control procedures

The coding and punching of birth data were performed simultaneously directly from microfilm images or transcripts of the original certificates. Approximately 85 percent of all cards punched were verified on a 10-percent systematic sample. The expected result from this system of verification is that on the average 2.25 percent of the cards will contain one or more errors. The rest of the cards were verified completely and the errors remaining are presumably very few.

Both systems of verification involve controlling two types of error (coding and punching) at the same time, and the error rates are a combined measure of both types. While it may be assumed that punching errors are randomly distributed across all items on the card, this assumption cannot be made as readily for coding errors. It is possible for systematic errors in coding rare events to escape detection during sample verification. This is partially controlled by complete reverification of randomly selected lots from each operator's work. Errors detected by any method of verification are reviewed to determine coding bias.

After completion of coding and punching, card counts are balanced against control totals for each shipment of records from a registration area. Impossible codes are eliminated during the editing processes on the computer. These are adjusted by arbitrary code assignments or correction on the basis of reference to the source record. All subsequent operations involved in tabulating and table preparation are verified during the computer processing or by statistical clerks.

### INTERPRETATION OF DATA

While vital statistics data are useful for a variety of administrative and scientific purposes, they cannot be correctly interpreted unless various qualifying factors, in addition to methods of classification, are taken into account. The factors to be considered depend upon the specific purposes for which the data are to be used. It is not feasible to discuss all of the pertinent factors in the use of vital statistics tabulations, but some of the more important ones should be mentioned.

<sup>13</sup>For detailed reports on data for illegitimate births, see National Office of Vital Statistics, "Illegitimate Births, United States, 1938-57." by J. Schachter and M. McCarthy, *Vital Statistics—Special Reports*, Vol. 47, No. 8, Public Health Service, Washington, D.C., 1960; and New York State Department of Social Welfare, *Deterrents to Early Prenatal Care and Social Services Among Women Pregnant Out of Wedlock*, by B. Bernstein and M. Sauber, Albany, New York, 1960.

Most of the factors limiting the use of the data arise from imperfections in the original records or from the impracticability of tabulating these data in very detailed categories. These defects should not be ignored, but their existence does not vitiate the value of the data for most general purposes. Analysis of small differences or exact evaluation of vital statistics requires careful study of many related elements. However, the major trends and differences will not usually be changed materially by finer analysis.

### Sampling of birth records

Final birth data for 1951-54 and 1956-63 have been derived from 50-percent samples which consist of only even-numbered birth records. This applies to data for all States, the District of Columbia, and Puerto Rico. Data for the Virgin Islands are based on all the records filed. Statistics for these years were obtained by multiplying the sample figures by 2. Prior to 1951 and for 1955, annual birth statistics were based on the total file of birth records.

The sample data represent estimates which differ somewhat from figures that would have been derived by processing all the records. However, the manner in which records are numbered greatly reduces the sampling variability of totals for geographic areas. With few exceptions, records are numbered in the State offices of vital statistics as they are received from the local offices. The assignment of the last digit in the number is not selective, and the systematic sample of even-numbered records may be assumed to be unbiased. Furthermore, because the records are almost always in geographic order before numbering, twice the sample count of births occurring in the great majority of counties in table 2-1 in Section 2 is virtually the same as the corresponding figure based on all records.

The extent to which residence figures for urban places, counties, and States derived from the sample differ from the totals that would have resulted from a complete count depends on the amount of nonresident interchange. (This assumes virtually no error in the figures on a place-of-occurrence basis.) Since there is relatively little nonresident interchange of births among the States and between "metropolitan" and "nonmetropolitan" groups of counties in any State, the sampling errors for these geographic units are negligible.

The nonresident interchange factor is more important for many individual urban places and counties. During 1963, 17 percent of the births occurred in a county which was not the mother's place of residence. Figures are not shown in this volume on the amount of nonresident interchange in individual counties, but the net situation for a county can be determined by comparing the figures by place of occurrence and by place of residence in table 2-1. The percent error due to sampling in a county resident total varies between zero and the value obtained from the table described below. The amount of the error depends on the extent of nonresident interchange as judged from this comparison.

The table shown below presents approximate percent errors in the 1951-54 and 1956-63 figures for variates which are randomly distributed. The chances are about 2 out of 3 that the percent difference due to sampling variability between such a figure and the result that would be obtained by a complete count is less than the percent error. The

chances are about 19 out of 20 that the percent difference is less than twice the percent error.

NUMBER OF BIRTHS WITH A SPECIFIED CHARACTERISTIC	BIRTHS TO RESIDENTS OF AREA <sup>1</sup>					
	2,000	5,000	10,000	20,000	50,000	500,000
30-----	18.3	18.3	18.3	18.3	18.3	18.3
50-----	14.1	14.1	14.1	14.1	14.1	14.1

100,000-----	...	...	...	...	...	0.3

<sup>1</sup>An "area" is the smallest geographic unit to which the figure under consideration pertains.

### Completeness of registration

Although every State has adopted a law requiring the registration of births, these laws are not uniformly observed. In most areas practically all births are registered. For some areas, however, there is enough underregistration to affect the use of the statistics for certain purposes.

FIGURE 4-B

Nationwide tests of completeness of birth registration were made in both 1940 and 1950. For the United States as a whole, these tests indicated that birth registration was, respectively, 92.5 and 97.9 percent complete. A detailed discussion of the results of these tests was given in chapter 6 in Volume I of *Vital Statistics of the United States, 1950*. On the basis of results of the 1950 tests, it is estimated that in 1963 birth registration completeness was 98.9 percent for the country as a whole—99.4 for the white group and 96.8 for the nonwhite (figure 4-B in this section and table 1-21 in Section 1).

### Discontinuation of adjustment for underregistration

Several factors were taken into consideration in making the decision to discontinue adjustments for the underregistration of births in the published data beginning in 1960.

In the computation of birth rates, the numerator and the denominator of the rates are based on data from two independent sources, each subject to different kinds of errors. The numerator is the number of registered births, and the denominator is the population based on a census. The computed rate is subject to bias to the extent that there are differences between the two sets of data with regard to the completeness of overall counts and the accuracy of reporting pertinent items such as age, which is utilized in the calculation of age-specific rates. A method for assessing this bias in the rates involves the measurement of error in both the numerator and the denominator and correcting for this error before the rates are computed. A rate based on the corrected figures, regarded as a "true" rate, could then be compared with published "uncorrected" figures in order to judge the net effect of errors in the two sources of the data.

This approach was used in preparing the figures below. Estimates of 1950 population data prepared by Dr. Ansley Coale show population figures corrected for bias in both age reporting and census undercounts.<sup>14</sup> These were used as the denominators for the "true" rates. The numerators were based on the number of births in 1950 corrected for underregistration. The rates computed from the two sets of corrected data are shown in the first column of the table below. The rates in the second column are those that were routinely published by this office in which the numbers of births are adjusted and the population is unadjusted. The rates in the third column are computed entirely from unadjusted figures. It is obvious that the entirely uncorrected figures provide a closer approximation to the "true" rates than the routinely published rates, which are partially adjusted. This suggests that biases of approximately the same magnitude and direction exist in both the 1950 census figures and the 1950 birth data of the National Center for Health Statistics.

<sup>14</sup>Coale, A.: The population of the United States in 1950 classified by age, sex, and color—a revision of census figures. *J. A. S. A.* 50 (269): 16-54, Mar. 1955.

AGE AND COLOR	RATES BASED ON—		
	Both births and population adjusted	Adjusted births and unadjusted population	Both births and population unadjusted
<b>TOTAL</b>			
15-44 years <sup>1</sup> -----	103.8	106.2	103.9
10-14 years-----	1.0	1.0	0.9
15-19 years-----	79.3	81.6	79.1
20-24 years-----	191.6	196.6	192.5

<sup>1</sup>Rates computed by relating total births, regardless of age of mother, to female population aged 15-44 years.

<sup>2</sup>Rates computed by relating births to mothers aged 45 years and over to female population aged 45-49 years.

It is probable that a very similar relationship exists between the birth and population data for at least the entire 1950-60 period. As birth registration becomes more nearly complete, the effect of adjustment becomes smaller and smaller. In 1963 the estimated registration completeness was 99.4 percent for the white group and 96.8 percent for the nonwhite.

Pertinent to the question of continuing the adjusted series is the fact that more than 10 years have elapsed since the last test of birth registration completeness in 1950. The results of this test form the basis for all adjustments in the subsequent years. These adjustments are generally made by assuming that registration completeness by occurrence of events in and not-in-hospital, by color and by State is the

same for the year in question as in 1950. In effect, the estimated change in registration comes about from the increasing utilization of hospital facilities for obstetrical services. The difficulty is that the underlying assumptions become more tenuous as we move further away from the benchmark year. It is not known to what extent the basic coefficients of registration completeness have changed over time.

A practical difficulty is encountered in presenting an analysis of the data when they are in the form of adjusted numbers and rates through 1959 and registered thereafter. This change results in a discontinuity—not always trivial—of the time series. In the case of the nonwhite group, under-registration is still estimated at 3.4 percent. When making comparisons of the birth rates for nonwhite persons over the past decade, a more accurate indication of change might be obtained by using all figures adjusted or all figures unadjusted. The situation is similar for a number of States where registration completeness is relatively low. (See table 1-33 in Section 1, which shows the 1959 adjusted and unadjusted birth rates by State.)

Also, when numbers of births rather than birth rates are being used, as in making population projections or net migration estimates, it would be preferable to use adjusted data, particularly for geographic areas where a significant number of births are unregistered.

### Population bases

Except as noted, birth rates shown in this report for the United States and the individual States are based on the populations present in the respective areas. These populations exclude the Armed Forces overseas and persons living abroad but include the Armed Forces stationed in each area.

*Population estimates for 1963.*—Estimates of the population by age, color, and sex in 1963, published by the Bureau of the Census in *Current Population Reports*, Series P-25, No. 276, are shown in table 4-3. These populations are based on data from the 1960 census, final counts of births and deaths for 1960 and preliminary counts through June 1963, statistics on persons arriving from abroad as reported by the Immigration and Naturalization Service, and data on the size and distribution of the Armed Forces. Table 4-2 contains estimates of the total resident population excluding Armed Forces abroad and estimates including the Armed Forces abroad.

Provisional estimates of the total resident population in each State and Puerto Rico are shown in table 4-5. These estimates are consistent with the 1960 census counts and with the revised estimates of these areas for July 1, 1962 and 1961, published in Series P-25, No. 272.

*Population estimates for 1962 and 1963 excluding New Jersey.*—As indicated in the section on race and color, the birth, death, and fetal death records of the State of New Jersey did not contain the race item in 1962. Though the item was subsequently reinstated, the revised certificates—those with race omitted—continued in use and comprised the majority of the New Jersey certificates used for 1963 live births. Therefore this office estimated a comparable population base by color excluding New Jersey for 1963, as was done for the previous year. The estimates for 1963

are shown in table 4-4 of this report. Those for 1962 are shown in table 4-4 of the report for that year. The procedure used to make these estimates rests on the assumption that the ratio of the population of the United States excluding New Jersey classified by age, color, and sex to the total population of the United States classified by age, color, and sex can be represented by a ratio based on corresponding data from the 1960 Census of Population. Ratios derived in this manner were applied to the U.S. population<sup>15</sup> for 1962 and that for 1963<sup>16</sup> in each specific age, sex, and color group to estimate populations which exclude New Jersey.

*Revised rates for 1951-59.*—Birth rates for 1951-59 shown in this report are based on final intercensal estimates of the population.<sup>17</sup> These rates differ slightly from those previously published because rates in earlier reports were computed on preliminary intercensal estimates.

*Population estimates for cohort fertility tables.*—The various fertility measures shown for cohorts of women in tables 1-14 through 1-19 are based on population estimates that include allowances for underregistration and misstatement of age. These estimates were prepared by the Scripps Foundation for Research in Population Problems, and are described in Section A of the methodological appendix in a previous report.<sup>18</sup> The method described for population estimates for the years 1955-57 was also used for estimating populations in 1958-63.

### Computation of seasonal index

The seasonal indexes for 1954-63 are based largely on computations prepared by the Bureau of the Census, using an adaptation of the standard ratio to moving average method.<sup>19</sup> This procedure assumes that ratios of the original observations to a 12-month moving average include the seasonal and erratic components of a series but not the trend and cyclical components and that averages of the ratios for each of the 12 months measure the seasonal component alone.

### Computation of parity distribution

The percentage distributions of women by parity (number of children ever born to mother), shown in table 1-14 in Section 1 are derived from cumulative birth rates by order of birth, which are shown in table 1-17. The percentage of zero-parity women is found by subtracting the cumulative first birth rate from 1,000 and dividing by 10.

<sup>15</sup>U. S. Bureau of the Census: Estimates of the population of the United States, by age, color, and sex: July 1, 1950 to 1962. *Current Population Reports*, Series P-25, No. 265. Washington, D. C., 1963.

<sup>16</sup>U. S. Bureau of the Census: Estimates of the population of the United States, by age, color, and sex: July 1, 1963. *Current Population Reports*, Series P-25, No. 276. Washington, D. C., 1963.

<sup>17</sup>U. S. Bureau of the Census official records.

<sup>18</sup>National Office of Vital Statistics: Fertility tables for birth cohorts of American women, part 1, by P. K. Whelpton and A. A. Campbell. *Vital Statistics--Special Reports*, Vol. 51, No. 1. Public Health Service. Washington, D. C., 1960.

<sup>19</sup>Shiskin, J.: Seasonal computations on Univac. *Am. Statistician* 9(1):19-23, Feb. 1955.

The proportions of women at parities one through six are found from the following formula: Percent at N parity =

$$\frac{(\text{Cum. rate, order } N+1) - (\text{cum. rate, order } N)}{10}$$

The percentage of women at seventh and higher parities is found by dividing the cumulative rate for seventh order births by 10.

## SECTION 4 - NATALITY

Table 4-5. Provisional Estimates of the Total Resident Population of the United States, Each Division and State, and Puerto Rico: July 1, 1963

(Figures include Armed Forces stationed in each area and exclude Armed Forces stationed abroad. Due to rounding to the nearest thousand, detailed figures may not add to totals)

AREA	Population	AREA	Population	AREA	Population
UNITED STATES-----	188,531,000	EAST NORTH CENTRAL--Con.		EAST SOUTH CENTRAL--Con.	
GEOGRAPHIC DIVISIONS:		Illinois-----	10,182,000	Mississippi-----	2,290,000
New England-----	10,769,000	Michigan-----	8,116,000	WEST SOUTH CENTRAL:	
Middle Atlantic-----	35,603,000	Wisconsin-----	4,061,000	Arkansas-----	1,858,000
East North Central-----	37,226,000	WEST NORTH CENTRAL:		Louisiana-----	3,418,000
West North Central-----	15,664,000	Minnesota-----	3,500,000	Oklahoma-----	2,487,000
South Atlantic-----	27,705,000	Iowa-----	2,780,000	Texas-----	10,323,000
East South Central-----	12,425,000	Missouri-----	4,328,000	MOUNTAIN:	
West South Central-----	18,087,000	North Dakota-----	634,000	Montana-----	707,000
Mountain-----	7,645,000	South Dakota-----	737,000	Idaho-----	713,000
Pacific-----	23,407,000	Nebraska-----	1,460,000	Wyoming-----	337,000
NEW ENGLAND:		Kansas-----	2,225,000	Colorado-----	1,961,000
Maine-----	882,000	SOUTH ATLANTIC:		New Mexico-----	1,018,000
New Hampshire-----	627,000	Delaware-----	476,000	Arizona-----	1,559,000
Vermont-----	390,000	Maryland-----	3,289,000	Utah-----	983,000
Massachusetts-----	5,218,000	District of Columbia-----	798,000	Nevada-----	368,000
Rhode Island-----	885,000	Virginia-----	4,331,000	PACIFIC:	
Connecticut-----	2,666,000	West Virginia-----	1,778,000	Washington-----	3,050,000
MIDDLE ATLANTIC:		North Carolina-----	4,780,000	Oregon-----	1,826,000
New York-----	17,708,000	South Carolina-----	2,483,000	California-----	17,590,000
New Jersey-----	6,470,000	Georgia-----	4,140,000	Alaska-----	248,000
Pennsylvania-----	11,424,000	Florida-----	5,652,000	Hawaii-----	694,000
EAST NORTH CENTRAL:		EAST SOUTH CENTRAL:		Puerto Rico-----	2,529,000
Ohio-----	10,173,000	Kentucky-----	3,085,000		
Indiana-----	4,694,000	Tennessee-----	3,694,000		
		Alabama-----	3,547,000
