(HRA) 77-1113

GENERAL PATTERN OF VITAL REGISTRATION AND STATISTICS IN THE UNITED STATES

RESPONSIBLE PERSON OR AGENCY	BIRTH CERTIFICATE	DEATH CERTIFICATE	FETAL DEATH CERTIFICATE (Stillbirth)	REPORTING OFFICIALS	MARRIAGE RECORD	DIVORCE OR ANNULMENT RECORD
Physician, Other Professional Attendant, or Hospital Authority	<ol style="list-style-type: none"> 1. Completes entire certificate in consultation with parent(s). Physician's signature required. 2. Files certificate with local office of district in which birth occurred. 	<ol style="list-style-type: none"> 1. Completes medical certification and signs certificate. 2. Returns certificate to funeral director. 	<ol style="list-style-type: none"> 1. Completes or reviews medical items on certificate. 2. Certifies to the cause of fetal death and signs certificate. 3. Returns certificate to funeral director. 4. In absence of funeral director, files certificate. 	Clerk of Local Government	<ol style="list-style-type: none"> 1. Receives application for marriage license, and reviews application for completeness, accuracy, and compliance with law. 2. Issues marriage license, and records date. 3. Checks completeness of entries about the marriage ceremony. 4. Sends specified information regarding marriage to State Registrar. 	
Funeral Director		<ol style="list-style-type: none"> 1. Obtains personal facts about deceased. 2. Takes certificate to physician for medical certification. 3. Delivers completed certificate to local office of district where death occurred and obtains burial permit. 	<ol style="list-style-type: none"> 1. Obtains the facts about fetal death. 2. Takes certificate to physician for entry of causes of fetal death. 3. Delivers completed certificate to local office of district where delivery occurred and obtains burial permit. 	Marriage Officiant	<ol style="list-style-type: none"> 1. Checks the validity of the marriage license. 2. Performs the marriage ceremony. 3. Certifies to the facts of the marriage ceremony. 4. Returns the record to the license clerk within the legally prescribed time. 	
Local Office (may be Local Registrar or City or County Health Department)	<ol style="list-style-type: none"> 1. Verifies completeness and accuracy of certificate. 2. Makes copy, ledger entry, or index for local use. 3. Sends certificates to State Registrar. 	<ol style="list-style-type: none"> 1. Verifies completeness and accuracy of certificate. 2. Makes copy, ledger entry, or index for local use. 3. Issues burial permit to funeral director and verifies return of permit from cemetery attendant. 4. Sends certificates to State Registrar. 		Clerk of Court		<ol style="list-style-type: none"> 1. Provides form for report to plaintiff or attorney, or makes entries on such form from petition for decree. 2. Verifies entries on return form. 3. Enters information on final decree. 4. Sends completed report to State Registrar.
City and county health departments use certificates in allocating medical and nursing services, followups on infectious diseases, planning programs, measuring effectiveness of services, and conducting research studies.				Attorney for Plaintiff		<ol style="list-style-type: none"> 1. Enters personal characteristics of spouses. 2. Returns form to Clerk of Court.
State Registrar, Bureau of Vital Statistics	<ol style="list-style-type: none"> 1. Queries incomplete or inconsistent information. 2. Maintains files for permanent reference and as the source of certified copies. 3. Develops vital statistics for use in planning, evaluating, and administering State and local health activities and for research studies. 4. Compiles health related statistics for State and civil divisions of State for use of the health department and other agencies and groups interested in the fields of medical science, public health, demography, and social welfare. 5. Prepares copies of birth, death, fetal death, marriage, and divorce certificates or records for transmission to the National Center for Health Statistics. 					
Public Health Service National Center for Health Statistics	<ol style="list-style-type: none"> 1. Prepares and publishes national statistics of births, deaths, fetal deaths, marriages, and divorces; and constructs the official U.S. life tables and related actuarial tables. 2. Conducts health and social-research studies based on vital records and on sampling surveys linked to records. 3. Conducts research and methodological studies in vital statistics methods including the technical, administrative, and legal aspects of vital records registration and administration. 4. Maintains a continuing technical assistance program to improve the quality and usefulness of vital statistics. 					

NOTE.—In some States there is no central file for marriage and divorce records at the State level.

VITAL STATISTICS OF THE UNITED STATES, 1973

VOLUME I — NATALITY

A brief summary of the contents for each section is listed below for the convenience of the reader. A complete table of contents is shown at the beginning of each section and is identified by a narrow black edge which can be located easily by fanning the pages. Each section is paged independently, using the section number as the identifying prefix.

Section 1. Natality—Rates and Characteristics

Summary tables showing trends in period and cohort fertility measures and characteristics of live births including race, age of mother, age of father, live-birth order, sex, month, attendant, interval since last live birth and last pregnancy, educational attainment of mother and father, legitimacy status, and month of pregnancy prenatal care began.

Detailed frequency tabulations for each State, each metropolitan area, and other geographic areas of the United States. Data are shown by race, sex, place of birth of mother, month, age of mother, age of father, live-birth order, interval since last live birth and last pregnancy, educational attainment of mother and father, attendant, birth weight, period of gestation, plurality, legitimacy status, month of pregnancy prenatal care began, and number of prenatal visits.

Section 2. Natality—Local Area Statistics

Frequency tabulations by place of residence and occurrence for each State, county, and city with a population of 10,000 or more by race and attendant and by place of residence for population-size groups in metropolitan and nonmetropolitan counties within each State by race, attendant, and birth weight.

Section 3. Natality—Puerto Rico, the Virgin Islands (U.S.), and Guam

Trends in the crude birth rate. Frequency tabulations by race, sex, month, age of mother, age of father, live-birth order, attendant, birth weight, legitimacy, educational attainment of mother, month of pregnancy prenatal care began, and place of residence and occurrence.

Section 4. Technical Appendix

Text discussion of the source, classification, and quality of the natality statistics published in this volume. Includes population tables for computing vital rates.

1-13. Percent distribution of women by parity, by exact age, in selected groups of cohorts from 1896-1900 to 1955-59: United States, 1940-74 -----	1-15
1-14. Central birth rates by live-birth order and current age of mother, for women in selected groups of cohorts from 1896-1900 to 1954-58: United States, 1940-73-----	1-16
1-15. Cumulative birth rates by live-birth order and exact age of mother, for women in selected groups of cohorts from 1886-90 to 1955-59: United States, 1940-74-----	1-17
1-16. Central birth rates by live-birth order and current age of mother, for women in each cohort from 1924 to 1959: United States, 1973 -----	1-19
1-17. Cumulative birth rates by live-birth order and exact age of mother, for women in each cohort from 1924 to 1959: United States, 1974 -----	1-20
1-18. Live births by sex and sex ratio, by race: United States, 1940-73 -----	1-21
1-19. Percent completeness of birth registration by color: United States, 1933-73-----	1-21
1-20. Live births, birth rates, and fertility rates, by month: United States, 1964-73 -----	1-22
1-21. Birth rates and fertility rates by month, adjusted for seasonal variation: United States, 1964-73 -----	1-22
1-22. Percent distribution of live births by interval since last live birth, by age of mother, and race: Total of 40 reporting States and the District of Columbia, 1973 -----	1-23
1-23. Percent distribution of live births by interval since last live birth, by live-birth order, and race: Total of 40 reporting States and the District of Columbia, 1973 -----	1-23
1-24. Mean interval since last live birth by age of mother, live-birth order, and race: Total of 40 reporting States and the District of Columbia, 1973 -----	1-24
1-25. Mean interval since last live birth by educational attainment of mother, live-birth order, age of mother, and race: Total of 38 reporting States and the District of Columbia, 1973 -----	1-25

Table	Page
1-26. Mean interval since termination of last pregnancy by outcome of last pregnancy, live-birth order, age of mother, and race: Total of 39 reporting States and the District of Columbia, 1973-----	1-27
1-27. Percent distribution of live births by educational attainment of mother and of father, by race: Total of 41 reporting States and the District of Columbia, 1973 -----	1-29
1-28. Percent distribution of live births by educational attainment of mother, by age of mother and race: Total of 41 reporting States and the District of Columbia, 1973 -----	1-29
1-29. Estimated number of illegitimate live births and ratios by race: United States, 1940-73 -----	1-29
1-30. Estimated illegitimacy rates by age of mother for the United States, 1940-73; and by age of mother and race for the United States, 1940, 1950, and 1955-73 -----	1-30
1-31. Estimated birth rates for married women by age of mother for the United States, 1950-73; and by age of mother and race for the United States, 1950 and 1955-73 -----	1-32
1-32. Estimated number of illegitimate live births and ratios, by age of mother and race: United States, 1973 --	1-33
1-33. Estimated number of illegitimate live births and ratios, by live-birth order and race: United States, 1973 -----	1-33
1-34. Ratio of illegitimate live births to total live births, by race: 38 reporting States and the District of Columbia, 1973 -----	1-33
1-35. Number and percent distribution of live births by attendant and place of delivery, by race: United States, 1940, 1945, 1950, 1955, 1960, and 1965-73-----	1-34
1-36. Percent distribution of live births by attendant and place of delivery, by color: United States, each division and State, 1973 -----	1-35
1-37. Median birth weight and percent distribution of live births by birth weight, by age of mother and race: United States, 1973-----	1-36
1-38. Median birth weight by age of mother, live-birth order, and race: United States, 1973 -----	1-36
1-39. Median birth weight and percent distribution of live births by birth weight, by race for the United States and each geographic division; and by plurality for the United States: 1973 -----	1-37
1-40. Median birth weight and percent distribution of live births by birth weight, by period of gestation and race: Total of 40 reporting States and the District of Columbia, 1973-----	1-38
1-41. Number and percent distribution of live births by birth weight, month of pregnancy prenatal care began, and race: Total of 42 reporting States and the District of Columbia, 1973 -----	1-39
1-42. Percent distribution of live births by month of pregnancy prenatal care began, by age of mother, race, and live-birth order: Total of 42 reporting States and the District of Columbia, 1973-----	1-40
1-43. Percent distribution of live births by month of pregnancy prenatal care began, by educational attainment of mother and race: Total of 38 reporting States and the District of Columbia, 1973 -----	1-42
1-44. Number and percent distribution of live births by month of pregnancy prenatal care began, by legitimacy status and race: Total of 33 reporting States and the District of Columbia, 1973 -----	1-42
1-45. Birth rates: United States, each division and State, 1963-73 -----	1-43
1-46. Live births and birth rates for the 50 largest standard metropolitan statistical areas in the United States and their component counties: 1973 -----	1-44
1-47. Live births by State of occurrence distributed according to resident status: United States and each State, 1973 -----	1-46
1-48. Live births by month and State of occurrence: United States and each State, 1973 -----	1-49
1-49. Live births by month and race for the United States and each State; and by sex for the United States: 1973 -----	1-50
1-50. Live births by month, age of mother, live-birth order, and race: United States, 1973 -----	1-53

Table	Page
1-51. Live births by specified race or national origin and sex: United States, each division and State, 1973 ----	1-55
1-52. Live births by age of mother, live-birth order, sex of child, and race: United States, 1973 -----	1-56
1-53. Live births by age of father, age of mother, sex of child, and race: United States, 1973 -----	1-58
1-54. Live births by age of mother, live-birth order, and race: Each State, 1973 -----	1-59
1-55. Live births by single year of age of mother, live-birth order, and race: United States, 1973 -----	1-76
1-56. Live births by age of mother and race, for metropolitan and nonmetropolitan counties: United States and each State, 1973 -----	1-78
1-57. Live births by age of mother and race, for standard metropolitan statistical areas of the United States: 1973 -----	1-86
1-58. Live births by age of mother and race, for cities of 100,000 or more in the United States: 1973-----	1-103
1-59. Live births by live-birth order and race for metropolitan and nonmetropolitan counties: United States and each State, 1973 -----	1-115
1-60. Live births by live-birth order and race, for standard metropolitan statistical areas of the United States: 1973 -----	1-123
1-61. Live births by place of birth of mother, age of mother and race of child for metropolitan and nonmetropolitan counties and for population-size groups in metropolitan counties: United States and each region, 1973 -----	1-140
1-62. Live births by interval since last live birth, live-birth order, age of mother, and race: Total of 40 reporting States and the District of Columbia, 1973 -----	1-149
1-63. Live births by plurality of birth and race: United States and each State, 1973 -----	1-153
1-64. Live births by educational attainment of mother and father, and race: Total of 41 reporting States and the District of Columbia, 1973 -----	1-154
1-65. Live births by educational attainment of mother, age of mother, live-birth order, and race, for metropolitan and nonmetropolitan counties: Total of 41 reporting States and the District of Columbia, 1973 --	1-155
1-66. Live births by educational attainment of father, age of father, and race: Total of 41 reporting States and the District of Columbia, 1973 -----	1-163
1-67. Live births by educational attainment of mother and race: 41 reporting States and the District of Columbia, 1973-----	1-164
1-68. Live births by educational attainment of mother and race for standard metropolitan statistical areas: 41 reporting States and the District of Columbia, 1973 -----	1-167
1-69. Illegitimate live births by age of mother, live-birth order, and race, for metropolitan and nonmetropolitan counties: Total of 38 reporting States and the District of Columbia, 1973-----	1-179
1-70. Illegitimate live births by age of mother and race, for population-size groups and specified urban places of 50,000 or more: 38 reporting States and the District of Columbia, 1973-----	1-181
1-71. Live births by legitimacy status, educational attainment of mother, age of mother, and race: Total of 33 reporting States and the District of Columbia, 1973 -----	1-195
1-72. Number of illegitimate live births by age of mother and race, and illegitimacy ratios by race for standard metropolitan statistical areas: 38 reporting States and the District of Columbia, 1973-----	1-196
1-73. Live births by birth weight, plurality of birth, race, and sex: United States, 1973 -----	1-208
1-74. Live births by birth weight, age of mother, plurality of birth, and race: United States, 1973 -----	1-209
1-75. Live births by birth weight and race: United States and each State, 1973 -----	1-211
1-76. Percent of live births weighing 2,500 grams or less, by interval since last live birth, live-birth order, age of mother, and race: Total of 40 reporting States and the District of Columbia, 1973 -----	1-214

Table	Page
1-77. Percent of live births weighing 2,500 grams or less, by outcome of last pregnancy, interval since termination of last pregnancy, live-birth order, and race: Total of 39 reporting States and the District of Columbia, 1973-----	1-218
1-78. Selected birth weight characteristics of live births, by educational attainment of mother, age of mother, and race: Total of 41 reporting States and the District of Columbia, 1973 -----	1-221
1-79. Live births by birth weight, period of gestation, and race, for metropolitan and nonmetropolitan counties: Total of 40 reporting States and the District of Columbia, 1973-----	1-223
1-80. Live births by period of gestation, plurality of birth, and race, by sex of child and age of mother: Total of 40 reporting States and the District of Columbia, 1973 -----	1-225
1-81. Live births by period of gestation and race: 40 reporting States and the District of Columbia, 1973 -----	1-227
1-82. Live births by month of pregnancy prenatal care began and race: 42 reporting States and the District of Columbia, 1973 -----	1-229
1-83. Live births by number of prenatal visits, by age of mother and race: Total of 38 reporting States and the District of Columbia, 1973 -----	1-232
1-84. Live births by number of prenatal visits, by live-birth order and race: Total of 38 reporting States and the District of Columbia, 1973-----	1-232
1-85. Live births by number of prenatal visits, by educational attainment of mother and race, for population-size groups in metropolitan and nonmetropolitan counties: Total of 37 reporting States and the District of Columbia, 1973-----	1-233
1-86. Live births by number of prenatal visits, by birth weight and race: Total of 38 reporting States and the District of Columbia, 1973 -----	1-235
1-87. Live births by number of prenatal visits, by month of pregnancy prenatal care began, legitimacy status, and race: Total of 32 reporting States and the District of Columbia, 1973 -----	1-236

SECTION 1 - NATALITY

1-5

Table 1-1. Live Births and Birth Rates by Race: Birth-Registration States, 1915-32, and United States, 1933-73

[Rates per 1,000 population residing in area for specified group except as noted]

Area and year	Number				Rate ¹			
	Total	White	All other		Total	White	All other

Table 1-4. Gross and Net Reproduction Rates by Color: United States, 1940-73

[Gross reproduction rates are the sums of birth rates by 5-year age groups of mothers multiplied by 5 and by the proportion of births that were female. These rates represent the average number of daughters that a hypothetical cohort of women born on the same date would bear if they all survived from birth to the end of the childbearing period and if they experienced a given set of age-specific fertility rates. Net reproduction rates are the sums of birth rates by 5-year age groups of mothers multiplied by 5 and by the probability (as determined from the life table for the year) of women surviving to a specified age group and by the proportion of births that were female. These rates represent the average number of daughters that a hypothetical cohort of women would bear if they experienced given sets of age-specific mortality and fertility rates]

¹Rates computed by relating total births, regardless of age of father, to men aged 15-54 years.

²Rates computed by relating births to fathers under 20 years of age to men aged 15-19 years.

³Beginning 1970, excludes births to nonresidents of the United States; see Technical Appendix.

⁴Based on 100 percent of births in selected States and on a 50-percent sample of births in all other States; see Technical Appendix.

⁵Based on a 50-percent sample of births.

⁶Figures exclude data for residents of New Jersey; see Technical Appendix.

¹Based on 100 percent of births in selected States and on a 50-percent sample of births in all other States; see Technical Appendix.²Based on a 50-percent sample of births.³Based on a 20- to 50-percent sample of births.⁴Figures exclude data for residents of New Jersey; see Technical Appendix.

SECTION 1 - NATALITY

Table 1-12. Birth Probabilities for Women by Parity and Exact Age: United States, Selected Years, 1940-60 and 1965-73

[Based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses. Parity refers to the number of children ever borne alive by a woman. Probabilities are the number of births per 1,000 women in specified parity and exact age group. Figures in the "0 parity" column show the probability of first births to "0 parity" women, those in the "1 parity" column show the probability of second births to "1 parity" women, etc.]

SECTION 1 - NATALITY

Table 1-15. Cumulative Birth Rates by Live-Birth Order and Exact Age of Mother, for Women in Selected Groups of Cohorts From 1886-90 to 1955-59: United States, 1940-74-Con.

[Live-birth order refers to number of children born alive to mother. Rates are averages of the rates per 1,000 women for single cohorts and are based on births adjusted for underregistration and numbers of women adjusted for underenumeration and misstatements of age in the censuses]

Exact age of woman and cohort	As of January 1	Total	Live-birth order							
			1	2	3	4	5	6	7	8 and over
45-49 years:										
1885-89	1974	3,036.0	893.5	773.2	542.1	334.0	195.1	115.9	70.0	112.2

¹Excludes births to nonresidents of the United States; see Technical Appendix.

²Based on 100 percent of births in selected States and on a 50-percent sample of births in all other States; see Technical Appendix.

³Based on a 50-percent sample of births.

⁴Based on a 20- to 50-percent sample of births.

Table 1-21. Birth Rates and Fertility Rates by Month, Adjusted for Seasonal Variation: United States, 1964-73

[Monthly birth and fertility rates adjusted for seasonal variation are those that would have been observed if the characteristic seasonal pattern of births prevailing over the preceding 10 years were eliminated. Rates on an annual basis per 1,000 estimated population for specified month. Birth rates based on total population; fertility rates based on women aged 15-44 years. For method of seasonal adjustment, see Technical Appendix]

1969 ⁴ -----	90.6	90.6	123.3	101.6	73.4	35.5	10.3

¹Rates computed by relating total illegitimate births, regardless of age of mother, to unmarried women aged 15-44 years.

²Rates computed by relating illegitimate births to mothers aged 40 years and over to unmarried women aged 40-44 years. Rates by race for years prior to 1969 are computed by relating illegitimate births to mothers aged 35 years and over to unmarried women aged 35-44 years.

³Based on 100 percent of births in selected States and on a 50-percent sample of births in all other States; see Technical Appendix.

⁴Based on a 50-percent sample of births.

⁵Based on a 20- to 50-percent sample of births.

SECTION 1 - NATALITY

Table 1-31. Estimated Birth Rates for Married Women by Age of Mother for the United States, 1950-73, and by Age of Mother and Race for the United States, 1950 and 1955-73

[Rates are legitimate live births per 1,000 married women in specified group. Legitimate births are estimated for the United States from data for registration areas in which legitimacy is reported. Beginning 1970, excludes births to nonresidents of the United States; see Technical Appendix]

¹Computed to nearest 10 grams on basis of exact conversion of interval limits from pounds and ounces.

²Equivalents of gram weights in terms of pounds and ounces are shown in the Technical Appendix.

Table 1-38. Median Birth Weight by Age of Mother, Live-Birth Order, and Race: United States, 1973

[Based on 100 percent of births in selected States and on a 50-percent sample of births in all other States; see Technical Appendix. Live-birth order refers to number of children born alive to mother. Median birth weight is shown in grams, computed to nearest 10 grams on basis of exact conversion of interval limits from pounds and ounces]

¹Computed to nearest 10 grams on basis of exact conversion of interval limits from pounds and ounces.²Equivalents of the gram weights in terms of pounds and ounces are shown in the Technical Appendix.

SECTION 1 - NATALITY

Table 1-40. Median Birth Weight and Percent Distribution of Live Births by Birth Weight, by Period of Gestation and Race: Total of 40 Reporting States and the District of Columbia, 1973

[Based on 100 percent of births in selected States and on a 50-percent sample of births in all other States; see Technical Appendix. Figures by period of gestation are based on an item on the birth record, first day of last normal menstrual period (LMP); see Technical Appendix. Refers only to births occurring within the areas reporting the date of LMP to residents of these areas. Based only on cases for which birth weight is stated. For a listing of areas, see Technical Appendix, Table A]

¹Computed to nearest 10 grams on basis of exact conversion of interval limits from pounds and ounces.

²Equivalents of the gram weights in terms of pounds and ounces are shown in the Technical Appendix.

³Births with period of gestation of less than 20 weeks and not stated are included in the totals but not shown separately.

SECTION 1 - NATALITY

Table 1-41. Number and Percent Distribution of Live Births by Birth Weight, Month of Pregnancy Prenatal Care Began, and Race: Total of 42 Reporting States and the District of Columbia, 1973

[Based on 100 percent of births in selected States and on a 50-percent sample of births in all other States; see Technical Appendix. Refers only to births occurring within the areas reporting month of pregnancy prenatal care began to residents of these areas. For a listing of areas, see Technical Appendix, table A]

SECTION 1 - NATALITY

Table 1-59. Live Births by Live-Birth Order and Race for Metropolitan and Nonmetropolitan Counties: United States and Each State, 1973 -Con.

[Based on 100 percent of births in selected States and on a 50-percent sample of births in all other States. Live-birth order refers to number of children born alive to mother. For definition of areas and more information on sampling, see Technical Appendix]

SECTION 1 - NATALITY

Table 1-59. Live Births by Live-Birth Order and Race for Metropolitan and Nonmetropolitan Counties: United States and Each State, 1973-Con.

[Based on 100 percent of births in selected States and on a 50-percent sample of births in all other States. Live-birth order refers to number of children born alive to mother. For definition of areas and more information on sampling, see Technical Appendix]

1-123

Table 1-60. Live Births by Live-Birth Order and Race, for Standard Metropolitan Statistical Areas of the United States: 1973

[Based on 100 percent of births in selected States and on a 50-percent sample of births in all other States; see Technical Appendix. Live-birth order refers to number of children born alive to mother. Standard metropolitan statistical areas are those defined by the Office of Management and Budget for 1970 except for New England, where areas are 1970 metropolitan State economic areas defined by the Bureau of the Census. For further discussion of areas, see Technical Appendix]

SECTION 1 - NATALITY

1-167

Table 1-68. Live Births by Educational Attainment of Mother and Race for Standard Metropolitan Statistical Areas:
41 Reporting States and the District of Columbia, 1973

[Based on a 100 percent of births in selected States and on a 50-percent sample of births in all other States; see Technical Appendix. Refers only to births occurring within the areas reporting educational attainment to residents of SMSA's completely within these areas. For a listing of areas, see Technical Appendix, table A. SMSA's are those defined by the Office of Management and Budget for 1970 except for New England, where areas are 1970 metropolitan State economic areas defined by the Bureau of the Census. For further discussion of SMSA's, see Technical Appendix]

SECTION 1 - NATALITY

1-195

Table 1-71. Live Births by Legitimacy Status, Educational Attainment of Mother, Age of Mother, and Race:
Total of 33 Reporting States and the District of Columbia, 1973

[Based on 100 percent of births in selected States and on a 50-percent sample of births in all other States; see Technical Appendix, Refers only to births occurring within the areas reporting both legitimacy status and educational attainment to residents of these areas. For a listing of areas, see Technical Appendix, table A. Figures for legitimacy status not stated or not reported are included in legitimate births]

Legitimacy status, age of mother, and race	Total	Years of school completed by mother					
		0-8 years	9-11 years	12 years	13-15 years	16 years or more	Not stated

SECTION 1 - NATALITY

Table 1-72. Number of Illegitimate Live Births by Age of Mother and Race, and Illegitimacy Ratios by Race for Standard Metropolitan Statistical Areas: 38 Reporting States and the District of Columbia, 1973

[Based on 100 percent of births in selected States and on a 50-percent sample of births in all other States; see Technical Appendix. Refers only to births occurring within the areas reporting legitimacy status to residents of SMSA's completely within these areas. For a listing of areas, see Technical Appendix, table A. SMSA's are those defined by the Office of Management and Budget for 1970 except for New England, where areas are 1970 metropolitan State economic areas defined by the Bureau of the Census. For further discussion of SMSA's, see Technical Appendix.]

SECTION 1 - NATALITY

Table 1-81. Live Births by Period of Gestation and Race: 40 Reporting States and the District of Columbia, 1973-Con.

[Based on 100 percent of births in selected States and on a 50-percent sample of births in all other States; see Technical Appendix. Figures by period of gestation are based on an item on the birth record, first day of last normal menstrual period (LMP); see Technical Appendix. Refers only to births occurring within the areas reporting the date of LMP to residents of these areas. For a listing of areas, see Technical Appendix, table A]

Area and race	Total	Period of gestation

SECTION 1 - NATALITY

Table 1-87. Live Births by Number of Prenatal Visits, by Month of Pregnancy Prenatal Care Began, Legitimacy Status, and Race: Total of 32 Reporting States and the District of Columbia, 1973

[Based on 100 percent of births in selected States and on a 50-percent sample of births in all other States; see Technical Appendix. Refers only to births occurring within the areas reporting number of prenatal visits, month of pregnancy prenatal care began, and legitimacy status to residents of these areas. For a listing of areas, see Technical Appendix, table A. Figures for legitimacy not stated or not reported are included in legitimate births]

Table	Page
2-1. Live births by attendant and place of delivery and race: United States, each State and county, and specified urban places of 10,000 or more, 1973 -----	2-3
2-2. Live births by attendant and place of delivery and by birth weight, by race, for population-size groups in metropolitan and nonmetropolitan counties: United States and each State, 1973 -----	2-76

SECTION 2 - LOCAL AREA STATISTICS

Table 2-1. Live Births by Attendant and Place of Delivery and Race: United States, Each State and County, and Specified Urban Places of 10,000 or More, 1973

[Based on 100 percent of births in selected States and on a 50-percent sample of births in all other States. Small figures should be used with caution; for sampling errors, see Technical Appendix. Urban places are those with populations of 10,000 or more in 1970 and are incorporated unless otherwise noted. Figures for "Negro" are shown separately for those counties and urban places in which the 1970 populations for the "All other" group formed 10 percent of the total population of the area or numbered 10,000 or more.]

Area and race	Total births by county of occurrence	Births by place of residence			Area and race	Total births by county of occurrence	Births by place of residence

[#]Classified as urban under special rule; see Technical Appendix.

¹Includes all births in hospitals or institutions and births attended by physicians in clinics. A very large proportion of births in hospitals are attended by physicians; see Technical Appendix.

²"Districts" shown are election districts, the nearest equivalent of counties.

³Includes data for Texarkana, Ark., only.

⁴The cities of Honolulu and Hilo have legally established limits and, therefore, are treated as incorporated places.

⁵Includes data for Bristol, Tenn., only.

⁶Includes data for Texarkana, Tex., only.

⁷Independent cities having populations of less than 10,000 according to the 1970 census are Bedford, Buena Vista, Clifton Forge, Emporia, Franklin, Galax, Lexington, Norton, South Boston, Suffolk, and Williamsburg.

⁸Includes data for Bristol, Va., only.

⁹Includes data for Bluefield, W. Va., only.

Table 2-2. Live Births by Attendant and Place of Delivery and by Birth Weight, by Race, for Population-Size

Groups in Metropolitan and Nonmetropolitan Counties: United States and Each State, 1973

[Based on 100 percent of births in selected States and on a 50-percent sample of births in all other States; see Technical Appendix. Urban places in metropolitan counties are those with populations of 10,000 or more; urban places in nonmetropolitan counties are those with populations of 10,000 or more but less than 50,000. For definition of areas, see Technical Appendix]

¹Births attended by other and not specified persons are not shown separately but are included in total births. For the United States, these births totaled 4,441 in 1973.²Includes all births in hospitals or institutions and births attended by physicians in clinics. A very large proportion of births in hospitals are attended by physicians; see Technical Appendix.³Equivalents of the gram weights in terms of pounds and ounces are as follows: 2,500 grams or less = 5 lb. 8 oz. or less; 2,501 grams or more = 5 lb. 9 oz. or more.⁴Includes data for Middletown Township (Monmouth County), New Jersey, which had a 1970 population of 54,623. Monmouth County is not designated as metropolitan.⁵County equivalents.

Section 3. Puerto Rico, the Virgin Islands (U.S.), and Guam

Table	Page

3-9. Live births by month of pregnancy prenatal care began, birth weight, and race: Virgin Islands and Guam, 1973 -----	3-9
3-10. Live births by attendant and place of delivery: Puerto Rico and each municipio, 1973-----	3-10
3-11. Live births by attendant and place of delivery and race: Virgin Islands by Island and specified urban place, and Guam, 1973 -----	3-11

NOTES

Occurrence and residence allocation

Residence data for 1973 for the Commonwealth of Puerto Rico, the Virgin Islands, and Guam include only those births occurring within each of these areas to residents of each area respectively. Births occurring in Guam to residents of the United States are included with Guamanian resident births, since it has been determined that most of these births are to Armed Forces families, customarily considered residents of the area in which military installations are located. For 1966 and prior years births to nonresidents of Puerto Rico and the Virgin Islands were considered to be births to residents of the place of occurrence.

Data are shown by both place of occurrence and place of residence for Puerto Rico for the primary geographic subdivision, the "municipio," for the Virgin Islands for St. Croix Island and St. John and St. Thomas Islands, and for Guam as a whole.

Race

Births are not shown by race for Puerto Rico; they are classified as white, all other, and Negro for the Virgin Islands, and as white, all other, and Guamanian for Guam.

Completeness of registration

Data for Puerto Rico, the Virgin Islands, and Guam refer to registered births; no adjustment has been made for possible underreporting. Tests of birth-registration completeness made for Puerto Rico and the Virgin Islands in 1950 indicated that in that year registration was 95.9 percent complete in Puerto Rico and 100.0 percent complete in the Virgin Islands. No information on registration completeness is available for Guam.

The Technical Appendix, Section 4, discusses other factors concerning these natality statistics.

SECTION 3. PUERTO RICO, VIRGIN ISLANDS, AND GUAM

3-3

Table 3-1. Live Births and Birth Rates: Puerto Rico and Virgin Islands, 1940-73; and Guam, 1970-73

¹In Puerto Rico, legitimacy status is not reported on the birth certificate. However, marital status of the parents is reported in three categories: Legally married; not legally married and living together ("consensually married"); and not legally married and not living together. In publications, the Department of Health of Puerto Rico describes as illegitimate all births to parents who are not legally married. The same practice is used in this table, but in addition the two marital status groups included in this category are shown separately.

SECTION 4 - TECHNICAL APPENDIX

DEFINITION OF LIVE BIRTH

Every product of conception that gives signs of life after birth, regardless of the length of the pregnancy, is considered a live birth. This concept is embraced by the definition set forth by the World Health Organization¹ as follows:

Live birth is the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached; each product of such a birth is considered live-born.

This definition distinguishes in precise terms a live birth from a fetal death (see section on fetal deaths in the Technical Appendix of Volume II of this report). In the interest of comparable natality statistics, both the Statistical Commission of the United Nations and the National Center for Health Statistics have adopted this definition.^{2, 3}

HISTORY OF BIRTH-REGISTRATION AREA

The national birth-registration area was proposed in 1850, established in 1915, and completed in 1933. The organized territories of Hawaii and Alaska were admitted in 1929 and 1950, respectively; data from these areas were prepared separately until they became States—Alaska in 1959 and Hawaii in 1960. At present, the birth-registration system of the United States covers the 50 States, the District of Columbia, Puerto

Rico, the U.S. Virgin Islands, and Guam. However, in the statistical tabulations, *United States* refers only to the aggregate of the 50 States and the District of Columbia. Tabulations for Puerto Rico, the Virgin Islands, and Guam are shown separately in Section 3 of this volume.

The original birth-registration area of 1915 consisted of 10 States and the District of Columbia. The growth of this area is indicated in table 4-1. This table also presents for each year through 1932 the estimated midyear population of the United States and of those States included in the registration system.

Because of the growth of the area for which data have been collected and tabulated, a national series of geographically comparable data prior to 1933 can be obtained only by estimation. Annual estimates of births have been prepared by P. K. Whelpton for the period 1909-34 (table 1-2). These estimates include adjustments for underregistration as well as for States not in the birth-registration area before 1933.

SOURCES OF DATA

Natality statistics

Natality statistics for 1973 are based on information obtained from two sources. For the States of Colorado, Florida, Maine, Michigan, Missouri, New Hampshire, New York (exclusive of New York City), Rhode Island, and Vermont, statistics are based on information derived from computer tapes of data coded by these States and provided to the National Center for Health Statistics through the Cooperative Health Statistics System. Data from these States are based on the total file of records. Statistics for the remainder of the United States are based on information obtained from a 50-percent sample of microfilm copies of all certificates of live birth filed in these States. The National Center for Health Statistics receives these tapes and microfilm copies from the registration offices of each State, the District of Columbia, and the cities of New Orleans and New York.

Records from Puerto Rico and the Virgin Islands are received in the form of microfilm copies of birth certificates, and from Guam as photocopies of original birth certificates. Puerto Rican records are sampled on a 50-percent basis while all records from the Virgin Islands and Guam are included. Information for prior

³National Office of Vital Statistics: *International Recommendations on Definitions of Live Birth and Fetal Death*. PHS Pub. No. 39. Public Health Service. Washington. U.S. Government Printing Office, Oct. 1950. p. 6.

SECTION 4 - TECHNICAL APPENDIX

years for these three areas is published in the respective annual vital statistics reports of the Department of Health of the Commonwealth of Puerto Rico, the Department of Health of the Virgin Islands, the Department of Public Health and Social Services of the Government of Guam, and in selected *Vital Statistics of the United States* annual reports.

When the microfilmed data are received from the various registration offices, the information on the sampled microfilm records is coded onto magnetic tape for input to the electronic computer. The computer then edits all the taped records and produces tabulations of natality statistics that are adjusted for sampling factors.

Natality data for the United States are limited to births occurring within the United States, including those occurring to resident and nonresident aliens.

However, births to nonresident aliens are excluded from all tabulations by place of residence beginning in 1970. (See section on classification by occurrence and residence for further discussion.) Births occurring to U.S. citizens outside the United States are not included in any tabulations in this report. Similarly, the data for Puerto Rico, the Virgin Islands, and Guam are limited to births registered in these areas.

Standard Certificate of Live Birth

The Standard Certificate of Live Birth, issued by the Public Health Service, has served for many years as the principal means of attaining uniformity in the content of the documents used to collect information on births in the United States. It has been modified in each State to the extent required by the particular

1968 REVISION
PHS-796—REV. 1-68

needs of the State or by special provisions of the State vital statistics law. However, the certificates of most States conform closely in content to the standard certificate.

The first issue of the standard certificate of birth appeared shortly before the formation of the registration area in 1915. Since then it has been revised periodically by the national vital statistics agency through consultation with State health officers and registrars; Federal agencies concerned with vital statistics; national, State, and county medical societies; and others working in the fields of public health, social welfare, demography, and insurance. This revision procedure has assured careful evaluation of each item in terms of its current and future usefulness for registration, identification, legal, medical, and research purposes. New items have been added when necessary, and old items have been modified to ensure better reporting or in some cases have been dropped when their usefulness appeared to be limited.

1968 revision.—Beginning with January 1, 1968, a revised Standard Certificate of Live Birth (figure 4-A) was put into effect, replacing the 1956 revision. An important addition to the new Standard Certificate is the item on "Date last normal menses began." This item replaces length of pregnancy in completed weeks as the source of statistics on period of gestation. (For further discussion, see "Period of gestation" later in this appendix.) Other additions to the Standard Certificate include educational attainment of mother and father (education of the parents replaces occupation of the father as the principal indicator of socioeconomic status on the birth certificate), dates of last live birth and last fetal death, month of pregnancy that prenatal care began, number of prenatal visits, complications related to pregnancy, complications not related to pregnancy, complications of labor, birth injuries to the child, and congenital malformations or anomalies of the child. Tabulations of data from some of these new items were shown initially in the 1969 volume. For further discussion, see individual headings for each item.

CLASSIFICATION OF DATA

The principal value of vital statistics data is realized through the presentation of rates which are computed by relating the vital events of a class to the population of a similarly defined class. Vital statistics and population statistics must therefore be classified according to similarly defined systems and tabulated in comparable groups. Even when the variables common to both, such as geographic area, age, race, and sex, have been similarly classified and tabulated, differences between the enumeration method of obtaining population data

and the registration method of obtaining vital statistics data may result in significant discrepancies.

The general rules used in the classification of geographic and personal items for live births are set forth in *Vital Statistics Instruction Manual*, Part 3, "Classification and Encoder Instructions for Live Birth and Fetal Death Records, 1973." The classification of certain important items is discussed on the following pages.

Classification by occurrence and residence

Tabulations for States and other areas within the United States are by place of residence unless otherwise specified in the tables. Births to U.S. residents occurring outside this country are not reallocated to the United States. In tabulations by place of residence, births occurring within the United States to U.S. citizens and to resident aliens are allocated to the usual place of residence of the mother in the United States as reported on the birth certificate. Beginning in 1970 births to nonresidents of the United States occurring in the United States are excluded from these tabulations. From 1966 to 1969, births occurring in the United States to mothers who were nonresidents of the United States were considered as births to residents of the exact place of occurrence; in 1964 and 1965 all such births were allocated to "balance of county" of occurrence even if the birth had occurred in a city.

The change in coding beginning in 1970 to exclude births to nonresidents of the United States from residence data significantly affects the comparability of data with years prior to 1970 only for the State of Texas; in 1973, 85.9 percent of the 9,160 births to nonresidents of the United States occurred in this State. In 1973 births to residents of Mexico constituted 95.9 percent of all nonresident births in the United States. No evaluation of the effect of the change in procedure between 1965 and 1966 has been made.

For the total United States, the tabulations by place of residence and by place of occurrence are not identical. Births to nonresidents of the United States are included in data by place of occurrence, but are excluded from data by place of residence as indicated above.

Totals for individual States will vary from table to table when the tables involve items which are not reported by all States. These differences occur when a resident of a State that reports a certain item has a birth in a State which does not report that item. The birth is not included in tables showing data for that item for the State of residence. For example, Alabama does not require the reporting of educational attainment but Georgia does. Therefore births occurring in Alabama to residents of Georgia will not be included in

the tables showing educational attainment for residents of Georgia.

Residence error.—A nationwide test of birth-registration completeness in 1950 provided measures of residence error for natality statistics. The 1950 test indicated that for the country as a whole, errors in residence reporting tend to overstate the number of births to residents of urban areas and to understate the number to residents of other areas. This tendency has assumed special importance because of a concomitant development, the increased utilization of hospitals in cities by residents of nearby places—with the result that a number of births are erroneously reported as having occurred to residents of urban areas. Another factor which contributes to this overstatement of urban births is the customary procedure of using “city” addresses for persons living outside the city limits.

Incomplete residence.—In cases where only the State of residence is reported with no city or county specified and the State named is different from the State of occurrence the birth is allocated to the largest city of the State of residence. For years prior to 1973 such births were allocated to the exact place of occurrence.

Geographic classification

The rules followed in the classification of geographic areas for live births are contained in the instruction manual mentioned above. The geographic code structure for 1973 is given in another manual entitled “Geographic Codes” (revised January 1970).

United States.—In the statistical tabulations, “United States” refers only to the aggregate of the 50 States and the District of Columbia. Alaska has been included in the U.S. tabulations since 1959 and Hawaii since 1960.

Standard metropolitan statistical areas.—The standard metropolitan statistical areas (SMSA’s) used in all but one table in this report are those established for 1970 by the Office of Management and Budget and used by the U.S. Bureau of the Census except in the New England States. In table 1-46 in Section 1, the SMSA’s are those established for 1973.

Except in the New England States, an SMSA is a county or a group of contiguous counties containing at least one city of 50,000 inhabitants or more or “twin cities” with a combined population of at least 50,000. In addition to the county or counties containing such a city or cities, contiguous counties are included in an SMSA if, according to specified criteria, they are essentially metropolitan in character and are socially

and economically integrated with the central city or cities.⁴

In the New England States the Office of Management and Budget uses towns and cities rather than counties as geographic components of SMSA’s. The National Center for Health Statistics cannot, however, use the SMSA classification for these States because its data are not coded to identify all towns. Instead the metropolitan State economic areas (MSEA’s) are used. These areas are established by the Bureau of the Census and are made up of county units.⁵

Standard consolidated areas.—For the metropolitan complexes around New York and Chicago, several contiguous SMSA’s and additional counties that do not appear to meet the formal integration criteria for SMSA’s but do have strong interrelationships of other kinds have been combined into the New York—North-eastern New Jersey and the Chicago—Northwestern Indiana Standard Consolidated Areas.⁶

Metropolitan and nonmetropolitan counties.—Independent cities and counties included in SMSA’s or in New England MSEA’s are included in data for metropolitan counties; all other counties are classified as nonmetropolitan.

Population-size groups.—Beginning in 1970 vital statistics data for cities and certain other urban places are classified according to the population enumerated in the 1970 Census of Population. Classification of such areas into population-size groups for the years 1960-69 was determined by the population enumerated in the 1960 Census of Population. Beginning in 1964 cities and other urban places of 2,500 to 10,000 population have not been separately identified but are included with the areas formerly classified as rural. Data continue to be available for the individual cities and other urban places of 10,000 or more population. As a result of changes in population between 1960 and 1970, some urban places identified in previous reports are no longer included, while a number of other places have been added. Data for the remaining areas not separately identified are shown in the tables under the heading “balance of area” or “balance of county.”

⁴For a more complete discussion, see U.S. Bureau of the Census, *U.S. Census of Population, 1970, Number of Inhabitants*, Final Report PC(1)-A1, United States Summary, Washington, U.S. Government Printing Office, 1971, and U.S. Bureau of the Census, *Standard Metropolitan Statistical Areas*, Washington, U.S. Government Printing Office, 1967.

⁵For discussion of MSEA’s, see U.S. Bureau of the Census, *State Economic Areas*, Washington, U.S. Government Printing Office, 1951, and the first reference cited in footnote 4.

⁶See footnote 4.

Urban places other than incorporated cities for which vital statistics data are shown in this report include:

1. Each town in New England and each township in New Jersey and Pennsylvania that had no incorporated municipality as a subdivision and had either 25,000 inhabitants or more, or a population of 10,000 to 25,000 and a density of 1,500 persons or more per square mile.
2. Each county in States other than the New England States, New Jersey, and Pennsylvania that had no incorporated municipality within its boundary and had a density of 1,500 persons or more per square mile. (Arlington County, Virginia, is the only county classified as urban under this rule.)

Race or national origin and color

Births in the United States in 1973 are classified for statistical purposes according to the race or national origin of the parents. The categories are "White," "Negro," "American Indian," "Chinese," "Japanese," "Hawaiian," "Filipino," and "Other."

The newborn child is ordinarily assigned to the race or national origin of his parents. If the parents are of different races or national origins, the following rules apply: (1) When only one parent is white, the child is assigned the other parent's race or national origin. (2) When neither parent is white, the child is assigned the father's race or national origin with one exception; if the mother is Hawaiian or part-Hawaiian, the child is assigned to Hawaiian. If race is missing for one parent, the child is assigned the race of the parent for whom race is given. When information on race is missing for both parents, the race of a child is considered not stated and the birth is allocated according to rules discussed in the section "Race or national origin not stated."

The terms "color," "race," and "specified race or national origin" indicate the detail of classification of this variable. Tabulations by "color" have two categories, "White" and "All other." Tabulations by "race" show data separately for the Negro population as well. Tabulations by "specified race or national origin" are the most detailed, showing all categories of the classification. In most tables the less detailed classifications of "color" and "race" are used.

White.—The category "White" comprises births reported as white, Mexican, Puerto Rican, Cuban, and prior to 1964 all births for which race or national origin was not stated. Beginning in 1964 changes in the procedures for allocating race when race or national origin is not stated have changed the composition of this category. (See discussion on "Race or national origin not stated.")

All other.—The category "All other" comprises Negro, American Indian, Chinese, Japanese, Hawaiian and part-Hawaiian, Filipino, and "Other." Beginning in 1964 Aleuts and Eskimos are included in "American Indian," significantly increasing the births in this category when comparisons are made with previous years. The State of Alaska is particularly affected in this regard. Before 1964 Aleuts and Eskimos were assigned to the "Other" category.

For all years except 1964, if the race or national origin of a parent was ill-defined or not clearly identifiable with one of the categories used in the classification, e.g., if "oriental" or "yellow" was entered, an attempt was made to determine the specific race by examining the entry for place of birth. If the birthplace was not China or Japan, the parent's race was assigned to the category "Other." In 1964 no place of birth inquiries were made and such cases were assigned to "Race or national origin not stated." As a result, the numbers of births classified as Chinese, Japanese, and "Other" in 1964 were smaller than they would have been under the procedure used in other years.

The revision of the birth certificate for the State of Georgia which was effective July 1, 1972, does not provide for the specified race of the parents if the race is other than white or Negro. Cases for which it was indicated that parents were not of either of these races were assigned to the category "Other." This affects tabulations of births by specified race or national origin. It is reflected in an increase in births for the "Other" category and in a concomitant decrease in births for American Indian, Chinese, Japanese, and Filipino. Although we do not know the exact number of births involved, the number is small as there were only 150 births in these four race groups in Georgia during 1971.

Race or national origin not stated.—The race of a child is considered not stated in those cases in which information for both parents is missing. Before 1964 all such cases were tabulated as white. From 1964 through 1968 the race of the child was allocated by the computer as follows: If the race on the preceding record was white, the assignment was to white; otherwise the assignment was to Negro. Beginning in 1969 the race of the child has been allocated electronically according to the specific race of the child on the preceding record. Consequently, some of the not stated frequencies which had previously been assigned to the white or Negro category may now be assigned to one of the other race or national origin categories.

Nearly all statistics by color and race or national origin for the United States as a whole in 1962 and 1963 are affected by a lack of information for the State of New Jersey. Birth rates by color for those

years are computed on a population base which excludes New Jersey. (For the method of estimating the United States population by age, sex, and color excluding New Jersey in 1962 and 1963, see *Vital Statistics of the United States, 1963*, Volume I, page 4-8.) Estimates of illegitimate births by color for the United States, which include special estimates for New Jersey for 1962 and 1963, have been prepared and are shown in table 1-29.

Completeness of registration by color.—The quality of birth data by color is variable in that birth registration is higher for the white group than for the "All other" group. In 1973 birth-registration completeness was estimated to be 99.5 percent for white births and 98.5 percent for all other births. The most recent figures for specified racial or national origin groups are from the 1950 birth-registration completeness test. In that year the registration completeness for Negroes was estimated to be 93.7 percent; for American Indians, 85.1 percent; and for others, including Chinese and Japanese, 97.4 percent. These figures are probably higher for 1973, but more precise estimates are unavailable.

Age of mother

The birth certificate asks for "Age (at time of this birth)." The age of mother is edited for upper and lower limits. When mothers are reported to be below 10 years of age or age 50 and above, the age of the mother is considered not stated and is assigned as described below.

Age-specific birth rates shown in this report are based on populations of women by age which are prepared by the U.S. Bureau of the Census. In census years, the Census decennial counts are used. In intercensal years, estimates of the population of women by age are published in the *Current Population Reports* of the U.S. Bureau of the Census.

The 1970 Census of Population derived data on age from information requested on month and year of birth, which served as the basis for determining age in completed years as of April 1, 1970. Similarly, age was determined in the 1960 Census of Population from the question, "When was this person born?" and the replies were birth dates in terms of year and month. In censuses prior to 1960 "Age in completed years" was asked for. This was nearly the equivalent of the birth certificate question, which the 1950 matched test of birth and census records confirms by showing a high degree of consistency in the reporting of age in these two sources.⁷

⁷National Vital Statistics Division: Matched record comparison of birth certificate and census information, United States, 1950, by J. Schachter, *Vital Statistics—Special Reports*. Vol. 47, No. 12. Public Health Service. Washington, D.C. Mar. 1962.

Median age of mother.—Median age is the value which divides an age distribution into two equal parts, one-half of the values being less and one-half being greater. Beginning with the 1964 report, median ages have been computed using birth rates for 5-year age groups rather than from birth frequencies. This method eliminates the effects of changes in the age composition of the childbearing population over time. Changes in the median ages from year to year can thus be attributed solely to changes in the age-specific birth rates.

Not stated age of mother.—Beginning in 1964 birth records with age of mother not stated have been allocated according to the age appearing on the record previously processed for a mother of identical color and having the same total-birth order (total of fetal deaths and live births). In 1963 birth records with age not stated were allocated according to the age appearing on the record previously processed for a mother of identical color and parity (number of live births). For the years 1960-62 not stated and unknown ages were distributed in proportion to the known ages for each color group. Before 1960 this was done for age-specific birth rates but not for the birth frequency tables, which showed a separate category for age not stated.

Age of father

Age of father is coded as stated on the birth certificate. If the age is under 10 years, it is considered "not stated" and grouped with those cases for which age is not stated on the certificate. Information on age of father is usually missing on birth certificates of illegitimate children, greatly inflating the number of "not stated" in all tabulations by age of father. In computing birth rates by age of father, births tabulated as age of father not stated are distributed in the same proportions as births with known age within each 5-year age classification of the mother. The resulting distributions are summed to form a composite frequency distribution which is the basis for computing birth rates by age of father. This procedure avoids the distortion in rates which would result if the relationship between age of mother and age of father were disregarded.

Live-birth order and parity

Birth order and parity classifications shown in this volume refer to the total number of live births the mother has had, including the 1973 birth. Fetal deaths are excluded.

Birth order indicates what number the present birth represents, e.g., a baby born to a mother who has had two previous live births (even if one or both are not now living) has a birth order of three.

Parity indicates how many live births a mother has had. Prior to delivery a mother having her first baby has a parity of zero and a mother having her third baby has a parity of two. After delivery, the mother of a baby who is a first live birth has a parity of one and the mother of a baby who is a third live birth has a parity of three.

Birth order and parity are ascertained from two questions on the birth certificate, "How many other children are now living?" and "How many other children were born alive—now dead?"

Not stated birth order.—Before 1969 if both of these questions were blank, the birth was considered a first birth. Beginning in 1969 births for which neither question was answered have been tabulated as birth order not stated. As a result of this revised procedure, 46,159 births in 1973 which would have been assigned to the first birth order category under the old rules were assigned to the "Not stated" category.

Birth order could not be determined from information required on the July 1, 1972, revision of the Georgia birth certificate. Therefore for half of 1972 and all of 1973, birth order data for births occurring in Georgia are assigned to the "Not stated" category, resulting in a large increase in not stated birth order for tabulations of data by birth order for Georgia as well as for the United States as a whole. In 1973 Georgia accounted for 61 percent of the births with not stated birth order in the United States.

All births tabulated in the not stated birth order category are excluded from the computation of percents. In computing birth rates by live-birth order, births tabulated as birth order not stated are distributed in the same proportion as births of known live-birth order.

Dates of last live birth and last fetal death

Date of last live birth and date of last fetal death were added to the Standard Certificate of Live Birth in 1968 for the purpose of providing information on child spacing and pregnancy intervals. Tabulations on these items were presented for the first time in 1969. In 1973 information on date of last live birth was obtained from 40 States and the District of Columbia and on date of last fetal death from 39 States and the District of Columbia as indicated in table A. (The Massachusetts birth certificate requests date of last live birth but not date of last fetal death.) Data are shown only for births occurring within the areas reporting dates of last live birth and last fetal death to residents of these areas.

Interval since last live birth and last fetal death.—Data on intervals since last live birth and last fetal death are computed from the date of birth, date of last

live birth, and date of last fetal death. The interval since last live birth is the difference between the date of last live birth and the date of present birth; the interval since last fetal death is the difference between the date of last fetal death and the date of present birth. In order for an interval to be computed, it is necessary for both the month and year of the last live birth or the last fetal death to be valid. These intervals are computed only for events to mothers who have had at least one previous delivery.

Births for which the interval since last live birth is not stated are excluded from the computation of percents and means.

Georgia.—Although the Georgia birth certificate includes the items date of last live birth and date of last fetal death, information from this State was not used in the computation of intervals. This is because the interval data are always used with birth order which is not available for births occurring in Georgia during 1973. (For further discussion of birth order data for Georgia, see "Not stated birth order.")

Interval since last pregnancy and outcome of last pregnancy.—Data on interval since last pregnancy and outcome of last pregnancy are derived from the computed intervals since the last live birth and the last fetal death.

Births where the interval since last pregnancy is not stated are excluded from the computation of percents and means.

Maryland.—Maryland includes on its birth certificate an item on outcome and date of termination of last pregnancy rather than the dates of last live birth and fetal death. Since the interval since last pregnancy and the outcome of last pregnancy are determined by comparing the intervals since last live birth and last fetal death, data for Maryland are not included in the tables.

Zero interval.—An interval of zero months since last live birth or fetal death indicates the second born of a set of twins, the second or third born of a set of triplets, etc. Births with an interval of zero months are excluded from the computation of mean intervals.

Educational attainment

The educational attainment of both parents was collected beginning in 1968 and was tabulated for publication in 1969 for the first time. In 1973 data on education were obtained from 41 States and the District of Columbia, as indicated in table A. Data are shown only for births occurring in the areas reporting educational attainment to residents of these areas.

The educational attainment of either parent is defined as "the number of years of school completed."

SECTION 4 - TECHNICAL APPENDIX

Table A. Areas reporting educational attainment of parents, dates of last live birth and fetal death, date last normal menstrual period began (LMP), month of pregnancy prenatal care began, number of prenatal visits, and legitimacy status: Each State, 1973

¹ Certificate requests only date of last live birth.

Only those years completed in "regular" school, i.e., a formal educational system of public schools, or the equivalent in accredited private or parochial schools are counted. Business or trade schools, such as beauty and barber schools, are not considered "regular" schools for the purposes of this item. No attempt has been made to convert years of school completed in foreign school systems, ungraded school systems, etc., to equivalent grades in the American school system. Such entries have been included in the category "Not stated."

Persons who have completed only a partial year in high school or college are tabulated as having completed the highest preceding grade. For those certificates on which a specific degree was stated, years of school completed is coded to the level at which the degree is most commonly attained, e.g., persons reporting B.A., A.B., or B.S. degrees are considered to have completed 16 years of school.

Although the Maryland birth certificate includes items on the educational attainment of both parents, the reporting categories are not compatible with the categories shown in this report. Consequently, Maryland is not considered a reporting area and data for Maryland have been excluded from the tables showing educational attainment.

Education not stated.—The category "Not stated" includes all records in reporting areas for which there is no information on years of school completed as well as all records for which the information provided is not compatible with coding specifications.

Births tabulated as education not stated are excluded from the computations of percents.

Illegitimate births

Legitimacy status was reported in 38 States and the District of Columbia in 1973. The following 12 States did not require the reporting of this information in 1973: California, Connecticut, Georgia, Idaho, Maryland, Massachusetts, Montana, Nevada, New Mexico, New York, Ohio, and Vermont.

In making estimates of the number of illegitimate births occurring in the country as a whole, the States are grouped into the nine geographic divisions. The combined ratio of illegitimate births per 1,000 total live births for all reporting States in a single geographic division is then applied to all live births occurring to residents of that division. This estimating procedure is done separately by race. The sum of the estimates of illegitimate births for the nine geographic divisions comprises the estimates for the United States.

In processing the data, no adjustments are made for errors in the reporting of legitimacy status on the birth record or for failure to register illegitimate births

because the extent of such reporting problems is unknown. A birth with legitimacy status not stated is considered to be legitimate. Illegitimacy figures for each reporting State are based on births occurring to its residents within the legitimacy reporting area.

When illegitimate births are reported as second or higher order births, it is not known whether previous deliveries to the mother occurred out of wedlock since the marital status of the mother at the time of these earlier births is not available from the birth record.⁸

Illegitimacy rates.—Age-specific illegitimacy rates shown for 1941-49 are based on U.S. Bureau of the Census estimates of the unmarried female population (single, widowed, and divorced women). Rates by color are not shown for these years since the necessary estimates of the unmarried female population are not available. The illegitimacy rates by age and by color for 1940 and 1950 are based on decennial census counts. In this report rates by age for 1951-73 and by age and color or race for 1955-73 are based on a smoothed series of Bureau of the Census population estimates.⁹ Since the original Bureau of the Census population estimates fluctuate erratically from year to year because of sampling error, they have been smoothed so that the rates computed from them do not show similar variations. The rates shown in this report differ, therefore, from those published in issues of *Vital Statistics of the United States* prior to 1969, which were based on the original estimates provided annually by the Bureau of the Census.

Due to the availability of more detailed population data, illegitimate and legitimate birth rates by race for women aged 35-39 years and 40-44 years are shown in this volume, beginning with the 1969 data year. For years prior to 1969 rates for women in these age groups are not available by color or race.

Attendant at birth

The classification of births by attendant at birth combines information about place of delivery and the person in attendance at birth. Births occurring in hospitals and institutions regardless of the person in attendance and those occurring in clinics, centers, or homes that were attended by physicians are included in the category "In hospital." In this context the word "homes" does not refer to the mother's residence but

⁸ For a detailed report on data for illegitimate births, see National Center for Health Statistics, "Trends in Illegitimacy, United States, 1940-1965," *Vital and Health Statistics*, PHS Pub. No. 1000-Series 21-No. 15, Public Health Service, Washington, U.S. Government Printing Office, Feb. 1968.

⁹ *Ibid.*, Appendix I, p. 71.

to an institution such as a home for unwed mothers. Births occurring in hospitals are not classified by type of attendant. However, a special tabulation of births in 1964 showed that of the 3,834,334 births that occurred in hospitals or institutions, 97.4 percent were delivered by physicians. Of the remainder, 0.1 percent were delivered by midwives (these were probably certified nurse midwives, who are registered nurses trained in obstetrics) and 2.5 percent were delivered by persons other than physicians and midwives or by persons for whom no status was specified.

Births occurring outside hospitals are classified by attendant at birth rather than by place of delivery. For such births, separate classifications are shown for physicians, midwives, and for "other and not specified" attendants. This last category also includes births for which no information is reported for place of birth.

The place of delivery of an infant born in a moving vehicle is defined as the place where he was removed from the vehicle; for instance, babies born en route to the hospital are classified as having been born in the hospital. This may account for some of the hospital births not delivered by physicians.

Birth weight

In practically all areas, birth weight is reported in terms of pounds and ounces rather than in grams. However, the metric system has been used in tabulating and presenting the statistics to facilitate comparison with data published by other groups. The equivalents of the gram intervals in pounds and ounces are as follows:

500 grams or less	=	1 lb. 1 oz. or less
501 - 1,000 grams	=	1 lb. 2 oz. - 2 lb. 3 oz.
1,001 - 1,500 grams	=	2 lb. 4 oz. - 3 lb. 4 oz.
1,501 - 2,000 grams	=	3 lb. 5 oz. - 4 lb. 6 oz.
2,001 - 2,500 grams	=	4 lb. 7 oz. - 5 lb. 8 oz.
2,501 - 3,000 grams	=	5 lb. 9 oz. - 6 lb. 9 oz.
3,001 - 3,500 grams	=	6 lb. 10 oz. - 7 lb. 11 oz.
3,501 - 4,000 grams	=	7 lb. 12 oz. - 8 lb. 13 oz.
4,001 - 4,500 grams	=	8 lb. 14 oz. - 9 lb. 14 oz.
4,501 - 5,000 grams	=	9 lb. 15 oz. - 11 lb. 0 oz.
5,001 grams or more	=	11 lb. 1 oz. or more

For purposes of classification, infants weighing 2,500 grams or less at birth are considered to be of low birth weight. This criterion was recommended by the American Academy of Pediatrics in 1935 and adopted by the World Health Organization in the Sixth Revision of the International Lists of Diseases and Causes of Death (1948).

After data classified by pounds and ounces are converted to grams, median weights are computed and rounded prior to publication. To establish the continu-

ity of class intervals needed to convert pounds and ounces to grams, the end points of these intervals are assumed to be half an ounce less at the lower end and half an ounce more at the upper end. For example, 2 lb. 4 oz.-3 lb. 4 oz. is interpreted as 2 lb. 3 1/2 oz.-3 lb. 4 1/2 oz.

Births for which birth weight is not reported are excluded from the computation of percents and medians.

Period of gestation

The period of gestation is defined as beginning with the first day of the last normal menstrual period (LMP) and ending with the day of birth. The LMP is used as the initial date since it can be more accurately determined than the date of conception, which usually occurs 2 weeks after the LMP.

An examination of the period of gestation information reported in terms of weeks or months in previous years shows a substantial heaping at 40 weeks. This bias results from the fact that the gestation period is frequently not carefully observed and that the newborn infant of normal size is generally assumed to have had a gestation period of 40 weeks or 9 months, depending on conventional usage. Such errors in reporting are minimized in areas where this item on the birth certificate requests the "date last normal menses began" as suggested on the 1968 revision of the U.S. Standard Certificate of Live Birth.

For 1973 the computation of period of gestation is based entirely on LMP data from the 40 States and the District of Columbia reporting LMP as indicated in table A. Data for the State of Massachusetts are excluded since LMP information is recorded on a sample of birth certificates only. Gestation data for the nine States reporting period of gestation in terms of weeks or months are also excluded from the tabulations in this report. Data are shown only for births occurring in the areas reporting LMP to residents of these areas.

Births occurring prior to 37 weeks of gestation are considered to be "preterm" or "premature" for purposes of classification. This distinction is in accordance with that adopted by the World Health Organization Expert Group on Prematurity established in 1950.

The period of gestation is computed only when there is a valid month, day, and year of LMP. The calculated period of gestation is edited for upper and lower limits. If the interval between date of last normal menstrual period and date of birth is 16 weeks or less, or 53 weeks or more, the period of gestation is considered not stated.

Month of pregnancy prenatal care began

Data on month of pregnancy prenatal care began are derived from the certificates of 42 States and the District of Columbia (see table A). Data are shown only for births occurring in the areas reporting this item to residents of these areas.

For those cases in which the name of the month is entered for this item, instead of first, second, third, etc., the month of pregnancy in which prenatal care began is determined from the month named and the month last normal menses began. If the item "date last normal menses began" is not on the certificate or not stated, month of pregnancy prenatal care began is tabulated as not stated.

Pennsylvania and Virginia report the beginning of prenatal care in trimesters rather than individual months, and Massachusetts collects prenatal care information for only a sample of births. Consequently, data from these States have been excluded from the tables showing month of pregnancy prenatal care began.

Number of prenatal visits

Tabulations on the number of prenatal visits were presented for the first time in 1972. In 1973 these data were collected from the birth certificates of 38 States and the District of Columbia (see table A). Data are shown only for births occurring in the areas reporting this item to residents of these areas.

Although New York City includes this item on its birth certificate, it is not reported by New York State. Data for the entire State of New York are excluded from tabulations showing number of prenatal visits.

QUALITY OF DATA

While vital statistics data are useful for a variety of administrative and scientific purposes, they cannot be correctly interpreted unless various qualifying factors and methods of classification are taken into account. The factors to be considered depend on the specific purposes for which the data are to be used. It is not feasible to discuss all the pertinent factors in the use of vital statistics tabulations, but some of the more important ones should be mentioned.

Most of the factors limiting the use of data arise from imperfections in the original records or from the impracticability of tabulating these data in very detailed categories. These defects should not be ignored, but their existence does not vitiate the value of the data for most general purposes.

Completeness of registration

It is estimated that 99.3 percent of all births occurring in the United States in 1973 were registered. This estimate is based on the results of the 1964-68 test of birth-registration completeness according to place of delivery (in or out of hospital) and color and on the 1973 proportions of births in these categories. The primary purpose of the test was to obtain current measures of registration completeness for births in and out of hospital by color on a national basis. Data for States were not available, as they were from the previous birth-registration tests in 1940 and 1950. (For a detailed discussion of the method and results of the 1964-68 birth-registration test, see U.S. Bureau of the Census, *Census of Population and Housing, 1970, Evaluation and Research Program, Test of Birth-Registration Completeness, 1964 to 1968, PHC(E) 2.*)

The 1964-68 test has provided an opportunity to revise the estimates of birth-registration completeness for the years since the previous test in 1950 to reflect the improvement in registration. This has been done using registration completeness figures from the two tests by place of delivery and color. Estimates of registration completeness for four groups (based on place of delivery and color) for 1951-65 were computed by interpolation between the test results. (It was assumed that the data from the more recent test are for 1966, the midpoint of the test period.) The results of the 1964-68 test are assumed to prevail for 1966 and later years. These estimates were used with the proportions of births registered in these categories to obtain revised numbers of births adjusted for under-registration for each year. The overall percent of birth-registration completeness by color was then computed. The figures for 1951-68 shown in table 1-19 differ slightly from those shown in annual reports for years prior to 1969.

Data adjusted for underregistration for the years 1951-59 shown in tables 1-2, 1-3, 1-4, 1-6, and 1-8 have been revised to be consistent with the 1964-68 test results and differ slightly from data shown in annual reports for years prior to 1969. For these years the published number of births and birth rates for both color groups have been revised slightly downward since the 1964-68 test indicated that previous adjustments to registered births were slightly inflated. Since registration completeness figures by age of mother and by live-birth order are not available from the 1964-68 test, it must be assumed that the relationships among these variables have not changed since 1950.

Discontinuation of adjustment for underregistration, 1960.—Adjustment for underregistration of births

was discontinued in 1960, when birth registration for the United States was estimated to be 99.1 percent complete. This removed a bias introduced into age-specific rates when adjusted births classified by age were used. Age-specific rates are calculated by dividing the number of births to an age group of mothers by the population of women in that age group. Tests have shown that population figures are likely to be understated through census undercounts; these errors compensate for underregistration of births. Adjustment for underregistration of births, therefore, removes the compensating error of underenumeration, biasing the age-specific rates more than when uncorrected birth and population data are used. (For further details, see *Vital Statistics of the United States, 1963, Volume I, page 4-11.*)

The age-specific rates used in the cohort fertility tables (tables 1-12 through 1-17) represent an exception to the above statement. These rates are computed from births corrected for underregistration and population estimates adjusted for underenumeration and misstatement of age. Adjusted births and population estimates are used for the cohort rates because they are an integral part of a series of rates, estimated with a consistent methodology, that extends back to 1917. It was considered desirable to maintain consistency with respect to the cohort rates, even though it means that they will not be precisely comparable with other rates shown for 5-year age groups.

Quality control procedures

Nativity data coded by NCHS are simultaneously coded and entered onto magnetic tape for input to the computer. Errors are controlled by an independent replication of the original coding by verification clerks and by resolution of any discrepancies. Original coding entries are subject to total verification with the exception of work by coders who maintain an error rate of 2.5 percent or less. In the case of these qualified coders, the original coding is verified on the basis of a 10-percent sample of the coded natality records until the allowable error rate is exceeded. Then their coding is verified on a 100-percent basis until it requalifies for sample verification. Errors detected by any method of verification are reviewed to determine coding bias.

Data that are coded by States and received through the Cooperative Health Statistics System are subject to the verification procedures used in the various States. NCHS monitors the quality of these data through independent verification of a sample of records to ensure an item error rate of not more than 2.0 percent.

After completion of coding, counts of the taped records are balanced against control totals for each

shipment of records from a registration area. Impossible codes are eliminated during the editing processes on the computer and are corrected on the basis of reference to the source record or adjusted by arbitrary code assignment. All subsequent operations involved in tabulating and table preparation are verified during the computer processing or by statistical clerks.

Sampling of birth records

Birth statistics presented in this report for years prior to 1951 and for 1955 are based on the total file of birth records. Statistics for 1951-54, 1956-66, and 1968-71 are based on 50-percent samples with the exception of data for Guam and the Virgin Islands which are based on all the records filed. Beginning in 1972 statistics are based on all records filed in the States submitting computer tapes and on a 50-percent sample of records in all other States. During the course of processing the 1967 data, the sampling rate was reduced from 50 percent to 20 percent. For details of this procedure and its consequences for the 1967 data, see *Vital Statistics of the United States, 1967, Volume I, pages 3-9 to 3-11.*

The sample design is essentially a stratified random sample. The sampling frame consists of births that occur in the United States during a calendar year and that are recorded by State registrars of vital statistics. Each month the birth certificates that have been filed during that month are sent by local registrars to the State registrars, where the records are numbered consecutively as they are received. Therefore the records for each local registration area, usually a county, are numbered sequentially, and the total file of birth records for each State is grouped by county of occurrence. Microfilm copies of the birth records filed in the States are generally forwarded each month to the National Center for Health Statistics, where a sample is drawn on the basis of the terminal digit of the record number. Even-numbered records are selected for the 50-percent sampling rate.

Total births by place of occurrence are not subject to sampling error. There is, however, sampling error in the total number of births when tabulated by place of residence. There is also sampling error in the numbers of births by characteristics such as color and age of mother when tabulated by either residence or occurrence.

Sampling error is the difference between an estimate based on a sample and the true value (assuming there is no measurement error). As calculated for this report, the standard error reflects this error as well as random measurement errors that may have been made in data collection and processing. However, it does not include any systematic biases in the data. The chances

Table B. Standard errors of estimated births by size of estimate and total births in the area: United States, 1973

Number of births with a specified characteristic	Total births in the area ¹								
	250	500	1,000	2,000	5,000	10,000	20,000	50,000	500,000
10	3.1	3.1	3.2	3.2	3.2	3.2	3.2	3.2	3.2
20	4.3	4.4	4.4	4.5	4.5	4.5	4.5	4.5	4.5
30	5.1	5.3	5.4	5.4	5.5	5.5	5.5	5.5	5.5
50	6.3	6.7	6.9	7.0	7.1	7.1	7.1	7.1	7.1
100	7.7	8.9	9.5	9.7	9.9	9.9	10.0	10.0	10.0

5,000					0.0	50.0	60.0	65.0	70.0
10,000						0.0	70.0	90.0	100.0
20,000							0.0	100.0	140.0
50,000								0.0	200.0
100,000									300.0

¹By place of occurrence "Total births in the area" refers to the number of births occurring in the city, county, or State; by place of residence "Total births in the area" refers to the number of births to residents of the State.

are about two out of three that a sample estimate differs from the value which would have been obtained from all births by less than one standard error. The chances are about 19 out of 20 that the difference is less than twice the standard error and about 99 out of 100 that it is less than 2 1/2 times as large.

For estimated numbers of births in 1973 by characteristics, the approximate standard errors for a sampling rate of 50 percent are presented in table B. To determine the standard error of an estimate from table B, one must know the total number of births in the area and the estimate of the number of births with a specified characteristic. For estimated births with a specified characteristic by place of occurrence, the appropriate "Total births in the area" is the number occurring in the area, e.g., city, county, or State. For the estimated total number of births and the number of births with a specified characteristic by place of residence, the number of births to residents of the State is used as the total births in the area.

For example, consider a State with 50,000 total births and an estimate of 500 births to women 30-34 years of age in an SMSA of that State. Table B shows that when "Total births in the area" is 50,000, the

standard error for an estimate of 500 births is 22 births. Applying the concept stated above the probability is 0.67 that the actual number of births is between 478 and 522 and about 0.95 that the actual number is between 456 and 544.

The sample errors shown in table B are likely to be slight overstatements for estimated numbers of births with specified characteristics by place of occurrence at the State and national levels; for county and city statistics they should be quite accurate. For the estimated total number of births and numbers of births with specified characteristics by county or city of residence, the sampling errors in table B are slight overstatements in most cases; for some areas the sampling errors may be considerably lower than those shown.

COMPUTATION OF RATES AND OTHER MEASURES

Population bases

Rates for 1940, 1950, 1960, and 1970 are based on the population enumerated as of April 1 in the

censuses of those years. Rates for all other years are based on the estimated midyear (July 1) population for the respective years.

Population estimates for 1973.—Preliminary estimates of the total resident population (excluding Armed Forces abroad) used to compute rates by age, race, and sex for 1973 are shown in table 4-2. They are consistent with estimates published by the U.S. Bureau of the Census in *Current Population Reports*, Series P-25, Number 519. Estimates of the total resident population of each State, shown in table 4-3, are published in Series P-25, Number 518. Estimates of the total resident population (excluding Armed Forces abroad) by month for the United States for 1973 are published in *Current Population Reports*, Series P-25, Number 525. Rates for SMSA's shown in table 1-46 are based on estimated populations of SMSA's published in selected reports from Series P-26.

Population estimates for 1972.—Preliminary estimates of the total resident population (excluding Armed Forces abroad) used to compute rates by age, race, and sex for 1972 are shown in table 3-2, *Vital Statistics of the United States, 1972*, Volume I. They are consistent with estimates published by the U.S. Bureau of the Census in *Current Population Reports*, Series P-25, Number 519. Estimates of the total resident population of each State are published in Series P-25, Number 488. Estimates of the total resident population (excluding Armed Forces abroad) by month for the United States for 1972 are published in *Current Population Reports*, Series P-25, Number 512. Rates for SMSA's are based on estimated populations of SMSA's published in Series P-25, Number 517.

Population estimates for 1971.—Preliminary estimates of the total resident population (excluding Armed Forces abroad) used to compute rates by age, race, and sex for 1971 are shown in table 4-2, *Vital Statistics of the United States, 1971*, Volume I. They are consistent with estimates published by the U.S. Bureau of the Census in *Current Population Reports*, Series P-25, Numbers 511 and 519. Estimates of the total resident population of each State are published in Series P-25, Number 500. Estimates of the total resident population (excluding Armed Forces abroad) by month for the United States for 1971 are published in *Current Population Reports*, Series P-25, Number 509. Estimated populations of SMSA's are published in Series P-25, Number 505.

Population estimates used to compute natality rates for 1971 differ from those used to compute mortality and marriage and divorce rates. Population estimates for natality rates are based on complete-count 1970 census data adjusted to reflect postcensal corrections for overstatements of the "other races" population and of centenarians in the 1970 census. Mortality and

marriage and divorce rates were computed before these population estimates became available.

Population estimates for 1970.—The enumerated total resident population (excluding Armed Forces abroad) used to compute rates by age, race, and sex for 1970 is published in the *U.S. Census of Population: 1970, General Population Characteristics*, Final Report PC(1)-B1, United States Summary. The enumerated resident population of each State is published in the *U.S. Census of Population: 1970, Number of Inhabitants*, Final Report PC(1)-A1, United States Summary. Estimates of the total resident population (excluding Armed Forces abroad) by month for 1970 are published in *Current Population Reports*, Series P-25, Number 455.

Population estimates for 1969.—Preliminary estimates of the total resident population (excluding Armed Forces abroad) used to compute rates by age, race, and sex for 1969 are shown in table 3-2, *Vital Statistics of the United States, 1969*, Volume I. They are consistent with estimates published by the U.S. Bureau of the Census in *Current Population Reports*, Series P-25, Number 441. Provisional estimates of the total resident population of each State are published in Series P-25, Number 436. Estimates of the total resident population of the United States for 1969 by month are published in Series P-25, Number 443.

Population estimates for 1968.—Preliminary estimates of the total resident population (excluding Armed Forces abroad) used to compute rates by age, color, and sex for 1968 are shown in table 3-2, *Vital Statistics of the United States, 1968*, Volume I. They are consistent with estimates published by the U.S. Bureau of the Census in *Current Population Reports*, Series P-25, Number 416. Provisional estimates of the total resident population of each State are published in Series P-25, Number 414.

Population estimates for 1967.—Preliminary estimates of the total resident population of the United States by age, color, and sex for 1967 are consistent with estimates published by the Bureau of the Census in *Current Population Reports*, Series P-25, Number 385. These estimates are shown in table 3-2 of *Vital Statistics of the United States, 1967*, Volume I. Provisional estimates of the total resident population of each State are published in Series P-25, Number 380.

Population estimates for 1966.—Preliminary estimates of the total resident population of the United States by age, color, and sex in 1966 are published by the Bureau of the Census in *Current Population Reports*, Series P-25, Number 352. Estimates of the total resident population of each State were obtained from Series P-25, Number 354.

Population estimates for 1965.—Preliminary estimates of the total resident population of the United States by age, color, and sex in 1965 are published by the Bureau of the Census in *Current Population Reports*, Series P-25, Number 321. Estimates of the population of the 50 States and the District of Columbia are published in Series P-25, Number 354.

Population estimates for 1961-64.—Birth rates in this volume for the years 1961-64 are based on revised estimates of the population and thus may differ slightly from rates published in those years. The revised estimates are published by the Bureau of the Census in *Current Population Reports*, Series P-25, Number 321 (total resident population of the United States by age, color, and sex) and Number 324 (total resident population of each State).

Population estimates for 1951-59.—Final intercensal estimates of the population by age, color, and sex and by State for 1951-59 are shown in tables 4-4 and 4-5 of Volume I, *Vital Statistics of the United States, 1966*. Beginning with 1963 these final estimates have been used to compute birth rates for 1951-59 in all issues of *Vital Statistics of the United States*.

Population estimates for cohort fertility tables.—The various fertility measures shown for cohorts of women in tables 1-12 through 1-17 are computed from births adjusted for underregistration and population estimates corrected for underenumeration and misstatement of age. These estimates were prepared by the Scripps Foundation for Research in Population Problems and are described in Section A of the methodological appendix in a previous report.¹⁰ The method described for population estimates for the years 1955-57 was also used for estimating populations in 1958-73.

Age-sex-adjusted birth rates

The age-sex-adjusted birth rates shown in table 1-3 are computed by the direct method. The age distribution of women aged 10-49 as enumerated in 1940 and the total population of the United States for that year are used as the standard populations. The birth rates by age of mother and race that are used to compute these adjusted rates are shown in table 1-6. The age-sex-adjusted birth rates show differences in the level of fertility independent of differences in the age and sex composition of the population. It is important not to confuse these adjusted rates with the crude rates shown in other tables.

¹⁰National Office of Vital Statistics: Fertility tables for birth cohorts of American women, by P. K. Whelpton and A. A. Campbell, *Vital Statistics Special Reports*, Vol. 51, No. 1. Public Health Service, Washington, D.C., Jan. 1960.

Total fertility rate

The total fertility rate is the sum of the birth rates by age of mother (in 5-year age groups) multiplied by 5. It is an age-adjusted rate because it is based on the assumption that there are the same number of women in each age group. In table 1-6 the rate of 1,896 in 1973, for example, means that if a hypothetical group of 1,000 women were to have the same birth rates in each age group that were observed in the actual childbearing population in 1973, they would have a total of 1,896 children by the time they reached the end of the reproductive period (taken here as age 50), assuming that all of the women survive to that age.

Intrinsic vital rates

The intrinsic vital rates shown in table 1-5 are calculated from a stable population. A stable population is that hypothetical population, closed to external migration, which would become fixed in age-sex structure after repeated applications of a constant set of age-sex specific birth and death rates. (For the mathematical derivation of intrinsic vital rates, see *Vital Statistics of the United States, 1962*, Volume I, pages 4-13 and 4-14. For the technique of calculating intrinsic vital rates, see *Techniques of Population Analysis* by George W. Barclay, New York, John Wiley and Sons, Inc., 1958, pages 216-222.)

Parity distribution

The percent distributions of women by parity (number of children ever born alive to mother) shown in table 1-13 are derived from cumulative birth rates by order of birth, which are shown in table 1-15. The percent of zero-parity women is found by subtracting the cumulative first birth rate from 1,000 and dividing by 10. The proportions of women at parities one through six are found from the following formula:

$$\text{Percent at N parity} = \frac{(\text{cum. rate, order N}) - (\text{cum. rate, order N+1})}{10}$$

The percent of women at seventh and higher parities is found by dividing the cumulative rate for seventh order births by 10.

Seasonal adjustment of rates

The seasonally adjusted birth and fertility rates shown in table 1-21 are computed from the X-11

variant of Census Method II.¹¹ This method of seasonal adjustment used since 1964 differs slightly from the BLS Seasonal Factor Method, which was used for *Vital Statistics of the United States, 1964*. The fundamental technique is the same in that it is an adaptation of the ratio-to-moving-average method. Prior to 1964 the method of seasonal adjustment was based on the X-9 variant and other variants of Census Method II. A comparison between Census Method II and the BLS Seasonal Factor Method shows the differences in the seasonal patterns of births to be negligible.¹²

Seasonally adjusted rates for 1972 have been revised and differ from those published in *Vital Statistics of the United States, 1972*. No changes have been made in the rates for 1971 or prior years.

¹¹ U.S. Bureau of the Census: *The X-11 Variant of the Census Method II Seasonal Adjustment Program*. Technical Paper No. 15. Washington. U.S. Government Printing Office, 1965.

Computation of percents, medians, and means

Percent distributions, medians, and means are computed using only events for which the characteristic is reported. The "Not stated" category is subtracted from the total before computation of these measures. Data are shown with an asterisk (*) when the base of the percent, median, or mean is less than 20 events.
