

Acute Conditions
Incidence and Associated Disability
United States, July 1975-June 1976

Statistics on the incidence of acute conditions and the associated days of restricted activity, bed disability, and time lost from work or school, by age, sex, calendar quarter, place of residence, and geographic region. Based on data collected in household interviews during the period July 1975-June 1976.

ACUTE CONDITIONS

Incidence and Associated Disability

Jai W. Choi, *Division of Health Interview Statistics*

INTRODUCTION

This report presents national estimates of the incidence of acute conditions and days of disability associated with these conditions for the civilian noninstitutionalized population of the United States. The data upon which these estimates are based were collected in the Health Interview Survey during the fiscal year July 1975-June 1976. The detailed tables included in this report show the incidence and associated disability of acute conditions by type of condition, measures of impact, sex, age, place of residence, geographic region, and calendar quarter. The text briefly highlights some of the findings and offers limited data on acute conditions and associated disability for earlier years.

This is one of a series of annual reports on the incidence of acute illness or injuries based on data collected in the Health Interview Survey. The Acute Condition reports in Series 10 by fiscal year basis are numbers 1, 10, 15, 26, 38, 44, 54, 69, 77, 82, 88, 98, 102, and 114 for 1962 through 1975. A same data set based on a calendar year is presented in summary form in the Current Estimates reports, Series 10, Numbers 52, 60, 63, 72, 79, 85, 95, 100, and 115 from 1967 to 1975.

SOURCE AND LIMITATIONS OF THE DATA

Information presented in this report is based on data collected in a continuing nationwide survey conducted by household interview. Each

week a probability sample of the civilian noninstitutionalized population is interviewed by trained personnel of the U.S. Bureau of the Census to obtain information about the health and other characteristics of each member of the household. During July 1975-June 1976, the sample was composed of about 40,000 households containing some 115,000 persons living at the time of the interview. The total noninterview rate was about 3.4 percent of which 1.9 percent was due to respondent refusal and the remainder was primarily due to failure to find an eligible respondent at home after repeated calls.

Descriptions of the design of the survey, of the methods used in estimation, and of general qualifications of the data obtained from the survey are presented in appendix I. Since estimates shown in this report are based on a sample of the population rather than on the entire population, they are subject to sampling error. Therefore, particular attention should be paid to the section entitled "Reliability of Estimates." Sampling errors for most of the estimates are of relatively low magnitude. However, where an estimated number or the numerator or the denominator of a rate or percentage is small, the sampling error may be high.

Certain terms used in this report are defined in appendix II. Some of the terms have specialized meanings for the purpose of the survey. For example, estimates of the incidence of acute conditions include, with certain exceptions, those conditions which had started within the 2 weeks prior to the week of interview and which had involved either medical attention or restricted activity. The exceptions, listed in appen-

dix II, are certain conditions such as heart trouble and diabetes which are always considered chronic regardless of duration or onset.

Annual estimates of the number of disability days associated with each acute condition are derived from the number of such days experienced during the 2-week period prior to the week of interview and include all those reported, even if the acute illness causing the disability had its onset prior to the 2-week period. Since any particular day of disability may be associated with more than one condition, the sum of days for all conditions adds to more than the total number of person days of disability.

The questionnaire used for the Health Interview Survey during 1975 is illustrated in the Current Estimates report for that year (Series 10, Number 115). Appendix III of this report shows the probe question pages for acute conditions and the condition pages used in 1976. The entire questionnaire will be illustrated in the Current Estimates report for 1976.

INCIDENCE OF ACUTE CONDITIONS AND ASSOCIATED DISABILITY DAYS

During July 1975-June 1976 an estimated 449,870,000 acute illnesses or injuries involving either medical attention or restriction of usual daily activity occurred in the civilian noninstitutionalized population of the United States (table 1). The annual incidence of acute conditions was 214.3 cases per 100 persons. Acute respiratory illness accounted for 53.7 percent of the annual incidence, or an incidence rate of 115.1. Contributing to this rate were influenzalike illnesses with an incidence of 50.8 conditions per 100 persons per year. The annual incidence of injuries was 33.6 per 100 persons per year, representing 15.7 percent of the annual incidence of acute conditions. Infective and parasitic diseases accounted for 11.1 percent and digestive system conditions for 4.6 percent of the annual incidence.

Table A shows that these rates resemble those for July 1971-June 1972 and for preceding years but not those of the intervening 3 years. The rates for these intervening years (1972-73, 1973-74, and 1974-75) reflect underestimates of the incidence of acute conditions

during calendar years 1973 and 1974. These underestimates were wholly or in part a function of the data collection procedures used during those 2 years. The reasons for these underestimates have been discussed in previous reports.^a

It should also be noted that the relatively high incidence rate for injuries for July 1974-June 1975 and July 1975-June 1976 (table A) probably reflects the influence of an extensive injury probe supplement added to the 1975 Health Interview Survey.

The previous comments on problems related to the estimates of acute conditions and injuries should be considered before making an interpretation regarding trends. However, the problem affecting the underestimates of the incidence of acute conditions for calendar years 1973 and 1974 did not affect the estimates of associated disability days also shown in table A.

Acute conditions caused about 939.2 days of restricted activity per 100 persons (825.6 days for males and 1,045.1 days for females) for the current year (tables A and 2), decreasing from the high of 973.1 days (884.7 days for males and 1,055.6 days for females)^b recorded in the previous year. The rate of bed-disability days due to the acute illnesses or injuries during July 1975-June 1976 (422.4 days per 100 persons) was about the same as for the previous year (tables A and 3).

For July 1975-June 1976, about 18.7 percent of the acute illnesses and injuries were medically attended but caused no activity limitation; about 37.3 percent were medically attended and caused activity restriction; and about 44.0 percent caused activity limitation but were not medically attended (tables B and 4).

The incidence of acute conditions per 100 persons per year declined as age increased (figure I), and the age-specific rates for females exceeded those for males for most of the lifespan. Only among children does the rate for males exceed that for females (table 5).

The average duration of disability per incidence of acute condition was about 4.4 days per

^a See Series 10, Number 100 (page 1) and Series 10, Number 102 (pages 2-4).

All other acute conditions	66,797	100.0	34.5	43.7	21.7

Figure 1. Incidence of acute conditions per 100 persons per year by sex and age

person in restricted activity and 2.0 days per person in bed disability during the current year compared with 4.2 and 1.8 days,^c respectively, reported during July 1971-June 1972 (tables C, 6, and 7). Among the variables shown in table C,

^c See table C, Series 10, Number 88, Acute Conditions, United States, July 1971-June 1972.

age and the type of acute condition are the major variables explaining differences in average duration of acute conditions.

Acute conditions caused 4.6 days lost from school per child 6-16 years of age (table 8). More than half of this disability (2.8 days) was caused by respiratory illness. The rate for school-loss days due to injuries was considerably higher for males (50.4 per 100 persons) than for females (22.4 per 100 persons).

The incidence of acute conditions per 100 currently employed persons per year was 185.0 (table 9). These conditions caused 3.5 days lost from work per currently employed person (table 10). The rate per 100 persons of absence from work due to acute illness or injury was higher for females (382.7) than for males (334.9).

GEOGRAPHIC DISTRIBUTION

For data year July 1975-June 1976, the incidence rate of acute conditions per 100 persons per year was considerably higher in metropolitan areas (220.1) than in either nonfarm (205.5) or farm areas (167.3) outside metropolitan districts (table 11); this lower incidence rate for acute conditions in farm areas corresponded to lower rates for restricted-activity (table 12) and bed-disability days (table 13).

Table C. Incidence of acute conditions per 100 persons per year and average duration of days of restricted activity and bed disability per condition by selected characteristics: United States, July 1975-June 1976

Characteristic	Incidence of acute conditions per 100 persons per year	Average duration of disability	
		Restricted activity	Bed disability
		Duration in days per condition	
All acute conditions	214.3	4.4	2.0
<u>Condition group</u>			
Infective and parasitic diseases	23.8	4.0	2.2

17-44 years.....	215.3	4.1	1.8
45-64 years.....	136.7	6.6	2.8
65 years and over	105.5	11.0	4.5
<u>Place of residence</u>			
SMSA.....	220.1	4.4	2.0
Outside SMSA:			
Nonfarm.....	205.5	4.4	2.0
Farm	167.3	3.8	1.5
<u>Geographic region</u>			
Northeast	199.3	4.5	2.1
North Central	216.4	4.0	1.7
South	204.8	4.3	2.0
West	247.8	4.9	2.1

For most types of acute conditions, residents in metropolitan areas experienced higher incidence than did those in nonmetropolitan areas; some incidence rates, like that for influenza-like illnesses, were about the same in both places of residence (table 14). The average rate of disability days due to acute conditions was remarkably lower in farm areas than in metropolitan areas (tables 15 and 16). For example, about 631.8 days of restricted activity and 243.1 bed-disability days were reported per 100 farm residents per year, while the comparable

rates were about 968.0 and 438.4, respectively, for residents in metropolitan areas.

Among the four geographic regions, the West had the highest incidence rates (table 17). Figure 2 shows that this relationship held for all ages. The number of restricted-activity days (table 18) and bed-disability days (table 19) per 100 persons per year followed the same regional pattern. Tables 20-22 show the regional distributions for the incidence of acute conditions and associated restricted-activity and bed-disability days by type of acute conditions.

SEASONAL VARIATION BY CALENDAR QUARTER

The incidence of acute conditions per 100 persons per quarter was highest in the January through March period (table 23). Most of this seasonal variation derives from the seasonal variations in respiratory conditions (table 24). The variation by the main types of acute conditions is shown in figure 3. However, interpretation of trends in recent years should take into account the earlier discussions of problems with acute condition estimates during previous years.

The rates for restricted-activity days (tables 25 and 26) and bed-disability days associated with acute conditions (tables 27 and 28) vary seasonally in a pattern similar to that for the incidence of acute conditions.

Tables 29 and 30 present data on the seasonal variation of acute respiratory illness and injuries per 100 persons per quarter and also show rates of disability days associated with these conditions.

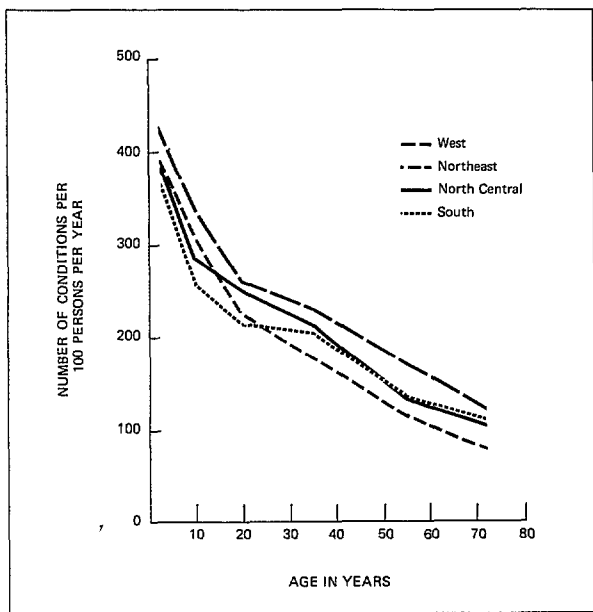

Figure 2. Incidence of acute conditions per 100 persons per year by geographic region and age

Figure 3. Incidence of acute conditions per 100 persons per quarter by condition group

APPENDIX I

TECHNICAL NOTES ON METHODS

Background of This Report

This report is one of a series of statistical reports prepared by the National Center for Health Statistics (NCHS). It is based on information collected in a continuing nationwide sample of households in the Health Interview Survey (HIS).

The Health Interview Survey utilizes a questionnaire which obtains information on personal and demographic characteristics, illness, injuries, impairments, chronic conditions, and other health topics. As data relating to each of these various broad topics are tabulated and analyzed, separate reports are issued which cover one or more of the specific topics.

The population covered by the sample for the Health Interview Survey is the civilian non-institutionalized population of the United States living at the time of the interview. The sample does not include members of the Armed Forces or U.S. nationals living in foreign countries. It should also be noted that the estimates shown do not represent a complete measure of any given topic during the specified calendar period since data are not collected in the interview for persons who died during the reference period. For many types of statistics collected in the survey, the reference period covers the 2 weeks prior to the interview week. For such a short period, the contribution by decedents to a total inventory of conditions or services should be very small. However, the contribution by decedents during a long reference period (e.g., 1 year) might be sizable, especially for older persons.

Statistical Design of the Health Interview Survey

General plan.—The sampling plan of the survey follows a multistage probability design which permits a continuous sampling of the civilian noninstitutionalized population of the United States. The sample is designed in such a way that the sample of households interviewed each week is representative of the target population and that weekly samples are additive over time. This feature of the design permits both continuous measurement of characteristics of samples and more detailed analysis of less common characteristics and smaller categories of health-related items. The continuous collection has administrative and operational advantages as well as technical assets since it permits fieldwork to be handled with an experienced, stable staff.

The overall sample was designed so that tabulations can be provided for each of the four major geographic regions and for urban and rural sectors of the United States.

The first stage of the sample design consists of drawing a sample of 376 primary sampling units (PSU's) from approximately 1,900 geographically defined PSU's. A PSU consists of a county, a small group of contiguous counties, or a standard metropolitan statistical area. The PSU's collectively cover the 50 States and the District of Columbia.

With no loss in general understanding, the remaining stages can be combined and treated in this discussion as an ultimate stage. Within PSU's, then, ultimate stage units called segments are defined in such a manner that each segment

contains an expected four households. Three general types of segments are used.

Area segments which are defined geographically.

List segments, using 1970 census registers as the frame.

Permit segments, using updated lists of building permits issued in sample PSU's since 1970.

Census address listings were used for all areas of the country where addresses were well defined and could be used to locate housing units. In general the list frame included the larger urban areas of the United States from which about two-thirds of the HIS sample was selected.

The usual HIS sample consists of approximately 12,000 segments containing about 50,000 assigned households, of which 9,000 were vacant, demolished, or occupied by persons not in the scope of the survey. The 41,000 eligible occupied households yield a probability sample of about 120,000 persons.

Descriptive material on data collection, field procedures, and questionnaire development in the HIS has been published^{1,2} as well as a detailed description of the sample design³ and a report on the estimation procedure and the method used to calculate sampling errors of estimates derived from the survey.⁴

⁴National Center for Health Statistics: Estimation and sampling variance in the Health Interview Survey. *Vital and Health Statistics*. PHS Pub. No. 1000-Series 2-No. 38. Public Health Service. Washington. U.S. Government Printing Office, June 1970.

Collection of data.—Field operations for the survey are performed by the U.S. Bureau of the Census under specifications established by the National Center for Health Statistics. In accordance with these specifications the Bureau of the Census participates in survey planning, selects the sample, and conducts the field interviewing as an agent of NCHS. The data are coded, edited, and tabulated by NCHS.

Estimating procedures.—Since the design of the HIS is a complex multistage probability sample, it is necessary to use complex procedures in the derivation of estimates. Four basic operations are involved:

1. *Inflation by the reciprocal of the probability of selection.*—The probability of selection is the product of the probabilities of selection from each step of selection in the design (PSU, segment, and household).
2. *Nonresponse adjustment.*—The estimates are inflated by a multiplication factor which has as its numerator the number of sample households in a given segment and as its denominator the number of households interviewed in that segment.
3. *First-stage ratio adjustment.*—Sampling theory indicates that the use of auxiliary information which is highly correlated with the variables being estimated improves the reliability of the estimates. To reduce the variability between PSU's within a region, the estimates are ratio adjusted to the 1970 populations within 12 color-residence classes.
4. *Poststratification by age-sex-color.*—The estimates are ratio adjusted within each of 60 age-sex-color cells to an independent estimate of the population of each cell for the survey period. These independent estimates are prepared by the Bureau of the Census. Both the first-stage and poststratified ratio adjustments take the form of multiplication factors applied to the weight of each elementary unit (person, household, condition, and hospitalization).

The effect of the ratio-estimating process is to make the sample more closely representative of the civilian noninstitutionalized population by age, sex, color, and residence, which thereby reduces sampling variance.

As noted, each week's sample represents the population living during that week and characteristics of the population. Consolidation of samples over a time period, e.g., a calendar quarter, produces estimates of average characteristics of the U.S. population for the calendar quarter. Similarly, population data for a year are averages of the four quarterly figures.

For prevalence statistics, such as number of persons with speech impairments or number of persons classified by time interval since last physician visit, figures are first calculated for each calendar quarter by averaging estimates for all weeks of interviewing in the quarter. Prevalence data for a year are then obtained by averaging the four quarterly figures.

For other types of statistics—namely those measuring the number of occurrences during a specified time period—such as incidence of acute conditions, number of disability days, or number of visits to a doctor or dentist, a similar computational procedure is used, but the statistics are interpreted differently. For these items, the questionnaire asks for the respondent's experience over the 2 calendar weeks prior to the week of interview. In such instances the estimated quarterly total for the statistic is 6.5 times the average 2-week estimate produced by the 13 successive samples taken during the period. The annual total is the sum of the four quarters. Thus the experience of persons *interviewed during a year*—experience which actually occurred for each person in a 2-calendar-week interval prior to week of interview—is treated as though it measured the total of such experience *during the year*. Such interpretation leads to no significant bias.

General Qualifications

Nonresponse.—Data were adjusted for nonresponse by a procedure which imputes to persons in a household who were not interviewed the characteristics of persons in households in the same segment who were interviewed.

The interview process.—The statistics presented in this report are based on replies obtained in interviews with persons in the sample households. Each person 19 years of age and over present at the time of interview was interviewed individually. For children and for adults not present in the home at the time of the interview, the information was obtained from a related household member such as a spouse or the mother of a child.

There are limitations to the accuracy of diagnostic and other information collected in household interviews. For diagnostic information, the household respondent can usually pass on to the interviewer only the information the physician has given to the family. For conditions not medically attended, diagnostic information is often no more than a description of symptoms. However, other facts, such as the number of disability days caused by the condition, can be obtained more accurately from household members than from any other source since only the persons concerned are in a position to report this information.

Rounding of numbers.—The original tabulations on which the data in this report are based show all estimates to the nearest whole unit. All consolidations were made from the original tabulations using the estimates to the nearest unit. In the final published tables, the figures are rounded to the nearest thousand, although these are not necessarily accurate to that detail. Devised statistics such as rates and percent distributions are computed after the estimates on which these are based have been rounded to the nearest thousand.

Population figures.—Some of the published tables include population figures for specified categories. Except for certain overall totals by age, sex, and color, which are adjusted to independent estimates, these figures are based on the sample of households in the HIS. These are given primarily to provide denominators for rate computation, and for this purpose are more appropriate for use with the accompanying measures of health characteristics than other population data that may be available. With the exception of the overall totals by age, sex, and color mentioned above, the population figures differ from figures (which are derived from different

sources) published in reports of the Bureau of the Census. Official population estimates are presented in Bureau of the Census reports in Series P-20, P-25, and P-60.

Reliability of Estimates

Since the statistics presented in this report are based on a sample, they will differ somewhat from the figures that would have been obtained if a complete census had been taken using the same schedules, instructions, and interviewing personnel and procedures.

As in any survey, the results are also subject to reporting and processing errors and errors due to nonresponse. To the extent possible, these types of errors were kept to a minimum by methods built into survey procedures.⁵ Although it is very difficult to measure the extent of bias in the Health Interview Survey, a number of studies have been conducted to study this problem. The results have been published in several reports.⁶⁻⁹

No. 1000-Series 2-No. 26. Public Health Service. Washington. U.S. Government Printing Office, Mar. 1968.

The standard error is primarily a measure of sampling variability, that is, the variations that might occur by chance because only a sample of the population is surveyed. As calculated for this report, the standard error also reflects part of the variation which arises in the measurement process. However, it does not include systematic biases which might be in the data. The chances are about 68 out of 100 that an estimate from the sample would differ from a complete census by less than the standard error. The chances are about 95 out of 100 that the difference would be less than twice the standard error and about 99 out of 100 that it would be less than 2½ times as large.

Standard error charts.—The relative standard error of an estimate is obtained by dividing the standard error of the estimate by the estimate itself and is expressed as a percentage of the estimate. For this report, asterisks are shown for any cell with more than a 30-percent relative standard error. Included in this appendix are charts from which the relative standard errors can be determined for estimates shown in the report. In order to derive relative errors which would be applicable to a wide variety of health statistics and which could be prepared at a moderate cost, a number of approximations were required. As a result, the charts provide an estimate of the approximate relative standard error rather than the precise error for any specific aggregate or percentage.

Three classes of statistics for the health survey are identified for purposes of estimating variances.

1. *Narrow range.*—This class consists of (1) statistics which estimate a population attribute, e.g., the number of persons in a particular income group, and (2) statistics for which the measure for a single individual during the reference period used in data collection is usually either 0 or 1 on occasion may take on the value 2 or very rarely 3.
2. *Medium range.*—This class consists of other statistics for which the measure for a single individual during the reference period used in data collection will rarely lie outside the range 0 to 5.

3. *Wide range.*—This class consists of statistics for which the measure for a single individual during the reference period used in data collection can range from 0 to a number in excess of 5, e.g., the number of days of bed disability.

In addition to classifying variables according to whether they are narrow-, medium-, or wide-range, statistics in the survey are further classified as to whether they are based on a reference period of 2 weeks, 6 months, or 12 months.

General rules for determining relative standard errors.—The following rules will enable the reader to determine approximate relative standard errors from the charts for estimates presented in this report. These charts represent standard errors of HIS data.

Rule 1. *Estimates of aggregates:* Approximate relative standard errors for estimates of aggregates such as the number of persons with a given characteristic are obtained from appropriate curves, figures I through III. The number of persons in the total U.S. population or in an age-sex-color class of the total population is adjusted to official Bureau of the Census figures and is not subject to sampling error.

Rule 2. *Estimates of percentages in a percent distribution:* Relative standard errors for percentages in a percent distribution of a total are obtained from appropriate curves, figures IV through VII. For values which do not fall on one of the curves presented in the chart, visual interpolation will provide a satisfactory approximation.

Rule 3. *Estimates of rates where the numerator is a subclass of the denominator:* This rule applies for prevalence rates or where a unit of the numerator occurs, with few exceptions, only once in the year for any one unit in the denominator. For example, in computing the rate of visual impairments per 1,000 population, the numerator consisting of persons with the

impairment is a subclass of the denominator, which includes all persons in the population. Such rates if converted to rates per 100 may be treated as though they were percentages and the relative standard errors obtained from the percentage charts for population estimates. Rates per 1,000, or on any other base, must first be converted to rates per 100; then the percentage chart will provide the relative standard error per 100.

Rule 4. *Estimates of rates where the numerator is not a subclass of the denominator:* This rule applies where a unit of the numerator often occurs more than once for any one unit in the denominator. For example, in the computation of the number of persons injured per 100 currently employed persons per year, it is possible that a person in the denominator could have sustained more than one of the injuries included in the numerator. Approximate relative standard errors for rates of this kind may be computed as follows:

- (a) Where the denominator is the total U.S. population or includes all persons in one or more of the age-sex-color groups of the total population, the relative error of the rate is equivalent to the relative error of the numerator, which can be obtained directly from the appropriate chart.
- (b) In other cases the relative standard error of the numerator and of the denominator can be obtained from the appropriate curve. Square each of these relative errors, add the resulting values, and extract the square root of the sum. This procedure will result in an upper bound on the standard error and often will overstate the error.

Rule 5. *Estimates of difference between two statistics (mean, rate, total, etc.):* The standard error of a difference is approximately the square root of the sum of

the squares of each standard error considered separately. A formula for the standard error of a difference,

$$d = X_1 - X_2$$

is

$$\sigma_d = \sqrt{(X_1 V_{x1})^2 + (X_2 V_{x2})^2}$$

where X_1 is the estimate for class 1, X_2 is the estimate for class 2, and V_{x1} and

V_{x2} are the relative errors of X_1 and X_2 respectively. This formula will represent the actual standard error quite accurately for the difference between separate and uncorrelated characteristics although it is only a rough approximation in most other cases. The relative standard error of each estimate involved in such a difference can be determined by one of the four rules above, whichever is appropriate.

Figure I. RELATIVE STANDARD ERRORS FOR NUMBER OF ACUTE CONDITIONS OR PERSONS INJURED¹

¹This curve represents estimates of relative standard errors based on 1 to 4 quarters of data collection for narrow range estimates of aggregates using a 2-week reference period.

Example of use of chart: An estimate of 1,000,000 acute respiratory conditions (on scale at bottom of chart) has a relative standard error of 23 percent (read from scale at left side of chart), or a standard error of 230,000 (23 percent of 1,000,000).

Figure II. RELATIVE STANDARD ERRORS FOR DAYS OF RESTRICTED ACTIVITY OR BED DISABILITY (A) AND FOR DAYS LOST FROM WORK OR SCHOOL (B)¹

¹These curves represent estimates of relative standard errors based on 1 to 4 quarters of data collection for wide range estimates of aggregates using a 2-week reference period.

Example of use of chart: An estimate of 10,000,000 days of restricted activity (on scale at bottom of chart) has a relative standard error of 22 percent (read from Curve A on scale at left side of chart), or a standard error of 2,200,000 (22 percent of 10,000,000).

Figure III. RELATIVE STANDARD ERRORS FOR POPULATION CHARACTERISTICS¹

¹This curve represents estimates of relative standard errors based on 4 quarters of data collection for narrow range estimates of population characteristics or narrow range estimates of aggregates using a 12-month reference period

Example of use of chart: An estimate of 10,000,000 persons with annual family income of \$15,000 or more, or 10,000,000 persons who were hospitalized one or more times in the past year (on scale at bottom of chart) has a relative standard error of 1.7 percent (read from scale at left side of chart), or a standard error of 170,000 (1.7 percent of 10,000,000).

Figure IV. RELATIVE STANDARD ERRORS OF PERCENTAGES OF POPULATION CHARACTERISTICS¹

(Base of percentage shown on curves in millions)

¹These curves represent estimates of relative standard errors of percentages of population characteristics based on 4 quarters of data collection for narrow range estimates.

Example of use of chart: An estimate of 20 percent (on scale at bottom of chart) based on an estimate of 10,000,000 has a relative standard error of 3.6 percent (read from the scale at the left side of chart), the point at which the curve for a base of 10,000,000 intersects the vertical line for 20 percent. The standard error in percentage points is equal to 20 percent \times 3.6 percent or 0.72 percentage points.

Figure V. RELATIVE STANDARD ERRORS OF PERCENTAGES OF ACUTE CONDITIONS OR PERSONS INJURED¹

(Base of percentage shown on curves in millions)

*These curves represent estimates of relative standard errors of percentages of acute conditions or persons injured based on 1 to 4 quarters of data collection for narrow range data using a 2-week reference period.

Example of use of chart: An estimate of 20 percent (on scale at bottom of chart) based on an estimate of 10,000,000 has a relative standard error of 14.5 percent (read from the scale at the left side of chart), the point at which the curve for a base of 10,000,000 intersects the vertical line for 20 percent. The standard error in percentage points is equal to 20 percent \times 14.5 percent; or 2.9 percentage points.

Figure VI. RELATIVE STANDARD ERRORS OF PERCENTAGES OF DAYS OF RESTRICTED ACTIVITY OR BED DISABILITY¹

(Base of percentage shown on curves in millions)

¹ These curves represent estimates of relative standard errors of percentages of days of restricted activity or bed disability based on 1 to 4 quarters of data collection for wide range data using a 2 week reference period.

Example of use of chart: An estimate of 20 percent (on scale at bottom of chart) based on an estimate of 50,000,000 days has a relative standard error of 19.7 percent (read from scale at the left side of chart), the point at which the curve for a base of 50,000,000 intersects the vertical line for 20 percent. The standard error in percentage points is equal to 20 percent \times 19.7 percent, or 3.9 percentage points.

Figure VII. RELATIVE STANDARD ERRORS OF PERCENTAGES OF DAYS LOST FROM WORK OR SCHOOL¹

(Base of percentage shown on curves in millions)

¹These curves represent estimates of relative standard errors of percentages of days lost from work or school based on 1 to 4 quarters of data collection for wide range data using a 2 week reference period.

Example of use of chart: An estimate of 20 percent (on scale at bottom of chart) based on an estimate of 50,000,000 days has a relative standard error of 15.6 percent (read from scale at the left side of chart), the point at which the curve for a base of 50,000,000 intersects the vertical line for 20 percent. The standard error in percentage points is equal to 20 percent \times 15.6 percent, or 3.1 percentage points.

APPENDIX II

DEFINITIONS OF CERTAIN TERMS USED IN THIS REPORT

Terms Relating to Conditions

Condition.—A morbidity condition, or simply a condition, is any entry on the questionnaire which describes a departure from a state of physical or mental well-being. It results from a positive response to one of a series of “medical-disability impact” or “illness-recall” questions. In the coding and tabulating process conditions are selected or classified according to a number of different criteria such as whether they were medically attended, whether they resulted in disability, or whether they were acute or chronic; or according to the type of disease, injury, impairment, or symptom reported. For the purposes of each published report or set of tables, only those conditions recorded on the questionnaire which satisfy certain stated criteria are included.

Conditions except impairments are classified by type according to the *Eighth Revision International Classification of Diseases, Adapted for Use in the United States*,¹⁰ with certain modifications adopted to make the code more suitable for a household interview survey.

Acute condition.—An acute condition is defined as a condition which has lasted less than 3 months and which has involved either medical attention or restricted activity. Because of the

procedures used to estimate incidence, the acute conditions included in this report are the conditions which had their onset during the 2 weeks prior to the interview week and which involved either medical attention or restricted activity during the 2-week period. However, excluded are the following conditions which are always classified as chronic even though the onset occurred within 3 months prior to week of interview:

- Allergy, any
- Arthritis or rheumatism
- Asthma
- Cancer
- Cleft palate
- Club foot
- Condition present since birth
- Deafness or serious trouble with hearing
- Diabetes
- Epilepsy
- Hardening of the arteries
- Hay fever
- Heart trouble
- Hemorrhoids or piles
- Hernia or rupture
- High blood pressure
- Kidney stones
- Mental illness
- Missing fingers, hand, or arm—toes, foot, or leg
- Palsy
- Paralysis of any kind
- Permanent stiffness or deformity of the foot, leg, fingers, arm, or back
- Prostate trouble
- Repeated trouble with back or spine

¹⁰National Center for Health Statistics: *Eighth Revision International Classification of Diseases, Adapted for Use in the United States*. PHS Pub. No. 1693. Public Health Service. Washington. U.S. Government Printing Office, 1967.

Rheumatic fever
 Serious trouble with seeing, even when wearing
 glasses
 Sinus trouble, repeated attacks of
 Speech defect, any
 Stomach ulcer
 Stroke
 Thyroid trouble or goiter
 Tuberculosis

Tumor, cyst, or growth
 Varicose veins, trouble with

Acute condition groups.—In this report all tables which have data classified by type of condition employ a 5-category regrouping plus several selected subgroups. The condition groups and the International Classification code numbers included in each category are shown in figure VIII.

<i>Condition Group</i>	<i>International Classification Code Number</i>
Infective and parasitic diseases	000-136
Common childhood diseases	033, 052, 055, 056, 072
Virus not otherwise specified	079.9
Other infective and parasitic diseases	000-032, 034-051, 053, 054, 057-071, 073-136
Respiratory conditions	460-486, 501, 508-516, 519, 783
Upper respiratory conditions	460-465, 501, 508
Common cold	460
Other upper respiratory conditions	461-465, 501, 508
Influenza	470-474
Influenza with digestive manifestations	473
Other influenza	470-472, 474
Other respiratory conditions	466, 480-486, 510-516, 519, 783
Pneumonia	480-486
Bronchitis	466
Other respiratory conditions	510-516, 519, 783
Digestive system conditions	520.6-521.5, 521.7-523.9, 525-530, 535-543, 560, 561, 564-577, 784, 785
Dental conditions	520.6-521.5, 521.7-523.9, 525
Functional and symptomatic upper gastrointestinal disorders not elsewhere classifiable	536, 784.0, 784.1, 784.3, 784.7, 785.4 pt.
Other digestive system conditions	526-530, 535, 537, 540-543, 560, 561, 564-577, 784.2, 784.4-784.6, 785 pt.
Injuries	N800-N870, N872-N884, N890-N894, N900-N994, N996-N999
Fractures, dislocations, sprains, and strains	N800-N848
Fractures and dislocations	N800-N839
Sprains and strains	N840-N848
Open wounds and lacerations	N870, N872-N884, N890-N894, N900-N907
Contusions and superficial injuries	N910-N929
Other current injuries	N850-N869, N930-N994, N996-N999
All other acute conditions	All other acute code numbers
Diseases of the ear	380-387, 745.0-745.3, 781.3
Headaches	791
Genitourinary disorders	580-629, 786, 789
Deliveries and disorders of pregnancy and the puerperium	630-678
Diseases of the skin	680-709
Diseases of the musculoskeletal system	717-733, 787
All other acute conditions	Other acute code numbers

Figure VIII. Acute condition groups with subgroups and ICDA codes

Incidence of conditions.—The incidence of conditions is the estimated number of conditions having their onset in a specified time period. As previously mentioned, minor acute conditions involving neither restricted activity nor medical attention are excluded from the statistics. The incidence data shown in some reports are further limited to various subclasses of conditions, such as “incidence of conditions involving bed disability.”

Onset of condition.—A condition is considered to have had its onset when it was first noticed. This could be the time the person first felt sick or became injured, or it could be the time when the person or his family was first told by a physician that he had a condition of which he was previously unaware.

Activity-restricting condition.—An activity-restricting condition is one which had its onset in the past 2 weeks and which caused at least 1 day of restricted activity during the 2 calendar weeks before the interview week. (See “Restricted-activity day” under “Terms Relating to Disability.”)

Bed-disabling condition.—A condition with onset in the past 2 weeks involving at least 1 day of bed disability is called a bed-disabling condition. (See “Bed-disability day” under “Terms Relating to Disability.”)

Medically attended condition.—A condition with onset in the past 2 weeks is considered medically attended if a physician has been consulted about it either at its onset or at any time thereafter. However, when the first medical attention for a condition does not occur until after the end of the 2-week period, the case is treated as though there was no medical attention. Medical attention includes consultation either in person or by telephone for treatment or advice. Advice from the physician transmitted to the patient through the nurse is counted as well as visits to physicians in clinics or hospitals. If during the course of a single visit the physician is consulted about more than one condition for each of several patients, each condition of each patient is counted as medically attended.

Discussions of a child’s condition by the physician and a responsible member of the household are considered as medical attention even if the child was not seen at that time.

For the purpose of this definition the term “physician” includes doctors of medicine and osteopathic physicians.

Terms Relating to Disability

Disability.—Disability is the general term used to describe any temporary or long-term reduction of a person’s activity as a result of an acute or chronic condition.

Disability day.—Short-term disability days are classified according to whether they are days of restricted activity, bed days, hospital days, work-loss days, or school-loss days. All hospital days are, by definition, days of bed disability; all days of bed disability are, by definition, days of restricted activity. The converse form of these statements is, of course, not true. Days lost from work and days lost from school are special terms which apply to the working and school-age populations only, but these too are days of restricted activity. Hence “days of restricted activity” is the most inclusive term used to describe disability days.

Restricted-activity day.—A day of restricted activity is one on which a person cuts down on his usual activities for the whole of that day because of an illness or an injury. The term “usual activities” for any day means the things that the person would ordinarily do on that day. For children under school age, usual activities depend on whatever the usual pattern is for the child’s day, which will in turn be affected by the age of the child, weather conditions, and so forth. For retired or elderly persons, usual activities might consist of almost no activity, but cutting down on even a small amount for as much as a day would constitute restricted activity. On Sundays or holidays, usual activities are the things the person usually does on such days—going to church, playing golf, visiting friends or relatives, or staying at home and listening to the radio, reading, looking at television, and so forth. Persons who have permanently reduced their usual activities because of a chronic condition might not report any restricted-activity days during a 2-week period. Therefore absence of restricted-activity days does *not* imply normal health.

Restricted activity does not imply complete inactivity, but it does imply only the minimum of usual activities. A special nap for an hour after lunch does not constitute cutting down on usual activities, nor does the elimination of a heavy chore such as cleaning ashes out of the furnace or hanging out the wash. If a farmer or housewife carries on only the minimum of the day's chores, however, this is a day of restricted activity.

A day spent in bed or a day home from work or school because of illness or injury is, of course, a restricted-activity day.

Bed-disability day.—A day of bed disability is one on which a person stays in bed for all or most of the day because of a specific illness or injury. All or most of the day is defined as more than half of the daylight hours. All hospital days for inpatients are considered to be days of bed disability even if the patient was not actually in bed at the hospital.

Work-loss day.—A day lost from work is a day on which a person did not work at his job or business for at least half of his normal workday because of a specific illness or injury. The number of days lost from work is determined only for persons 17 years of age and over who reported that at any time during the 2-week period covered by the interview they either worked at or had a job or business. (See "Currently employed persons" under "Demographic Terms.")

School-loss day.—A day lost from school is a normal school day on which a child did not attend school because of a specific illness or injury. The number of days lost from school is determined only for children 6-16 years of age.

Condition-day.—Condition-days of restricted activity, bed disability, and so forth are days of the various forms of disability associated with any one condition. Since any particular day of disability may be associated with more than one condition, the sum of days for conditions may add to more than the total number of person-days.

Demographic Terms

Age.—The age recorded for each person is the age at last birthday. Age is recorded in single

years and grouped in a variety of distributions depending on the purpose of the table.

Geographic region.—For the purpose of classifying the population by geographic area, the States are grouped into four regions. These regions, which correspond to those used by the U.S. Bureau of the Census, are shown in figure IX.

Place of residence.—The place of residence of a member of the civilian, noninstitutionalized population is classified as inside a standard metropolitan statistical area (SMSA) or outside an SMSA and either farm or nonfarm.

Standard metropolitan statistical areas.—The definitions and titles of SMSA's are established by

<i>Region</i>	<i>States Included</i>
Northeast	Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania
North Central . . .	Michigan, Ohio, Indiana, Illinois, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Kansas, Nebraska
South	Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Texas, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma
West	Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Washington, Alaska, Oregon, California, Hawaii

Figure IX. States included in the four geographic regions

the U.S. Office of Management and Budget with the advice of the Federal Committee on Standard Metropolitan Statistical Areas. There were 212 SMSA's defined for the 1960 decennial census.

The definition of an individual SMSA involves two considerations: first, a city or cities of specified population which constitute the central city and identify the county in which it is located as the central county; second, economic and social relationships with contiguous counties (except in New England) which are metropolitan in character so that the periphery of the specific metropolitan area may be determined. SMSA's are not limited by State boundaries. In New England SMSA's consist of towns and cities, rather than counties.

Central cities.—Each SMSA must include at least one central city. The complete title of an SMSA identifies the central city or cities. If only one central city is designated, then it must have 50,000 inhabitants or more. The area title may include, in addition to the largest city, up to two city names on the basis and in the order of the following criteria: (1) the additional city has at least 250,000 inhabitants or (2) the additional city has a population of one-third or more of that of the largest city and a minimum population of 25,000. An exception occurs where two cities have contiguous boundaries and constitute, for economic and social purposes, a single community of at least 50,000, the smaller of which must have a population of at least 15,000.

Farm and nonfarm residence.—The population residing outside SMSA's is subdivided into the farm population, which comprises all non-SMSA residents living on farms, and the nonfarm population, which comprises the remaining outside SMSA population. The farm population includes persons living on places of 10 acres or more from which sales of farm products amounted to \$50 or more during the previous 12 months or on places of less than 10 acres from which sales of farm products amounted to \$250 or more during the preceding 12 months. Other persons living outside an SMSA were classified as non-

farm if their household paid rent for the house but their rent did not include any land used for farming.

Sales of farm products refer to the gross receipts from the sale of field crops, vegetables, fruits, nuts, livestock and livestock products (milk, wool, etc.), poultry and poultry products, and nursery and forest products produced on the place and sold at any time during the preceding 12 months.

In labor force.—All persons 17 years and older who worked at or had a job or business or were looking for work or on layoff from work during the 2-week period prior to the week of interview are in the labor force. The labor force consists of persons currently employed and those not employed as defined below.

Currently employed.—Persons 17 years of age and over who reported that at any time during the 2-week period covered by the interview they either worked at or had a job or business are currently employed. Current employment includes paid work as an employee of someone else; self-employment in business, farming, or professional practice; and unpaid work in a family business or farm. Persons who were temporarily absent from a job or business because of a temporary illness, vacation, strike, or bad weather are considered as currently employed if they expected to work as soon as the particular event causing the absence no longer existed.

Free-lance workers are considered currently employed if they had a definite arrangement with one employer or more to work for pay according to a weekly or monthly schedule, either full time or part time.

Excluded from the currently employed population are persons who have no definite employment schedule but work only when their services are needed. Also excluded from the currently employed population are (1) persons receiving revenue from an enterprise but not participating in its operation, (2) persons doing housework or charity work for which they receive no pay, (3) seasonal workers during the portion of the year

they were not working, and (4) persons who were not working, even though having a job or business, but were on layoff or looking for work.

The number of currently employed persons estimated from the Health Interview Survey (HIS) will differ from the estimates prepared from the Current Population Survey (CPS) of the U.S. Bureau of the Census for several reasons. In addition to sampling variability they include three primary conceptual differences, namely: (1) HIS estimates are for persons 17 years of age and over; CPS estimates are for persons 16 years of age and over. (2) HIS uses a 2-week reference period, while CPS uses a 1-week reference period. (3) HIS is a continuing survey with separate samples taken weekly; CPS is a monthly sample taken for the survey week which includes the 12th of the month.

Currently unemployed.—Persons 17 years and over who during the 2-week period prior to interview did not work or had no job or business but were looking for work and those who had a job but were on layoff or looking for work are considered currently unemployed.

Quarter.—The quarters used by the Health Interview Survey are actually 13-week periods rather than 3 calendar months. Since each 13-week period begins on a Monday and ends on a Sunday, the actual dates of the beginning and end of each 13-week period may overlap into another calendar quarter. Therefore the time periods in the table headings are the approximate rather than the precise periods during which the interviewing was conducted.

APPENDIX III

PROBE QUESTIONS ON DISABILITY DAYS AND PHYSICIAN VISITS DURING 2-WEEK REFERENCE PERIOD, AND CONDITION PAGES

<p>This survey is being conducted to collect information on the Nation's health. I will ask about visits to doctors and dentists, illness in the family, and other health related items. (Hand calendar) The next few questions refer to the past 2 weeks, the 2 weeks outlined in red on that calendar, beginning Monday, _____ (date), and ending this past Sunday, _____ (date).</p>						
4a. During those 2 weeks, did -- stay in bed because of any illness or injury?	00	Y (4b) N } If age: 17+ (5) 6-16 (6) Under 6 (8)				
b. During that 2-week period, how many days did -- stay in bed all or most of the day?	00	Days				
5. During those 2 weeks, how many days did illness or injury keep -- from work? (For females): not counting work around the house?	00	WL days (7) <input type="checkbox"/> None (8)				
6. During those 2 weeks, how many days did illness or injury keep -- from school?	00	SL days <input type="checkbox"/> None (8)				
If one or more days in 4b, ask 7; otherwise go to 8.						
7. On how many of these -- days lost from <table border="1" style="display: inline-table; vertical-align: middle;"><tr><td>work</td></tr><tr><td>school</td></tr></table> did -- stay in bed all or most of the day?	work	school	00	Days <input type="checkbox"/> None		
work						
school						
8a. (NOT COUNTING the day(s) <table border="1" style="display: inline-table; vertical-align: middle;"><tr><td>in bed</td></tr><tr><td>lost from work</td></tr><tr><td>lost from school</td></tr></table>) Were there any (other) days during the past 2 weeks that -- cut down on the things he usually does because of illness or injury?	in bed	lost from work	lost from school	1	Y	
in bed						
lost from work						
lost from school						
	2	N (9)				
b. (Again, not counting the day(s) <table border="1" style="display: inline-table; vertical-align: middle;"><tr><td>in bed</td></tr><tr><td>lost from work</td></tr><tr><td>lost from school</td></tr></table>) During that period, how many (other) days did he cut down for as much as a day?	in bed	lost from work	lost from school	00	Days <input type="checkbox"/> None	
in bed						
lost from work						
lost from school						
If one or more days in 4-8, ask 9; otherwise go to next person.						
9a. What condition caused -- to <table border="1" style="display: inline-table; vertical-align: middle;"><tr><td>stay in bed</td></tr><tr><td>miss work</td></tr><tr><td>miss school</td></tr><tr><td>cut down</td></tr></table> during the past 2 weeks?	stay in bed	miss work	miss school	cut down	9a.	Enter condition in item C Ask 9b
stay in bed						
miss work						
miss school						
cut down						
b. Did any other condition cause him to <table border="1" style="display: inline-table; vertical-align: middle;"><tr><td>stay in bed</td></tr><tr><td>miss work</td></tr><tr><td>miss school</td></tr><tr><td>cut down</td></tr></table> during that period?	stay in bed	miss work	miss school	cut down	b.	Y N (NP)
stay in bed						
miss work						
miss school						
cut down						
c. What condition?	c.	Enter condition in item C (9b)				
Fill item C, (BED DAYS), from 4b for all persons.						
10a. During the past 2 weeks, did anyone in the family, that is you, your --, etc., have any (other) accidents or injuries?	Y	N (11)				
b. Who was this? - Mark "Accident or injury" box in person's column.	10b.	<input type="checkbox"/> Accident or injury				
c. What was the injury?	c.	Injury				
d. Did anyone have any other accidents or injuries during that period? If "Accident or injury," ask:	Y (Reask 10b and c)	N				
e. As a result of the accident, did -- see a doctor or did he cut down on the things he usually does?	e.	Y (Enter injury in item C) N				

DISABILITY DAY PROBE QUESTIONS

13. During the past 2 weeks (the 2 weeks outlined in red on that calendar) how many times did -- see a medical doctor? Do not count doctors seen while a patient in a hospital.		13.	00 <input type="checkbox"/> None ____ Number of visits } NP
(Besides those visits)			
14a. During that 2-week period did anyone in the family go to a doctor's office or clinic for shots, X-rays, tests, or examinations?			
Y N (15)			
b. Who was this? -- Mark "Doctor visit" box in person's column.		14b.	<input type="checkbox"/> Doctor visit
c. Anyone else?			
Y (Reask 14b and c) N			
If "Doctor visit," ask:			
d. How many times did -- visit the doctor during that period?		d.	____ Number of visits (NP)
15a. During that period, did anyone in the family get any medical advice from a doctor over the telephone?			
Y N (16)			
b. Who was the phone call about? -- Mark "Phone call" box in person's column.		15b.	<input type="checkbox"/> Phone call
c. Any calls about anyone else?			
Y (Reask 15b and c) N			
If "Phone call," ask:			
d. How many telephone calls were made to get medical advice about -- ?		d.	____ Number of calls (NP)
<p>Fill item C, (OV), from 13-15 for all persons. Ask 16a for each person with visits in DV box.</p>			<p>Condition (Item C THEN 16d) Pregnancy (16e) No condition</p>
16a. For what condition did -- see or talk to a doctor during the past 2 weeks?		16a.	
b. Did -- see or talk to a doctor about any specific condition?		b.	Y N (NP)
c. What condition?		c.	Enter condition in item C Ask 16d
d. During that period, did -- see or talk to a doctor about any other condition?		d.	Y (16c) N (NP)
e. During the past 2 weeks was -- sick because of her pregnancy?		e.	Y N (16d)
f. What was the matter?		f.	Enter condition in item C (16d)
17a. During the past 12 months, (that is since (date) a year ago), about how many times did -- see or talk to a medical doctor? (Do not count doctors seen while a patient in a hospital.) (Include the -- visits you already told me about.)		17a.	000 <input type="checkbox"/> Only when in hospital 000 <input type="checkbox"/> None ____ Number of visits
b. ABOUT how long has it been since -- LAST saw or talked to a medical doctor? Include doctors seen while a patient in a hospital.		b.	1 <input type="checkbox"/> 2-week DV 2 <input type="checkbox"/> Past 2 weeks not reported (13 and 16) 3 <input type="checkbox"/> 2 wks.-6 mos. 4 <input type="checkbox"/> Over 6-12 mos. 5 <input type="checkbox"/> 1 year 6 <input type="checkbox"/> 2-4 years 7 <input type="checkbox"/> 5+ years 8 <input type="checkbox"/> Never
Ages 17+	18a. What was -- doing MOST OF THE PAST 12 MONTHS -- (For males): working or doing something else? If "something else," ask: b. What was -- doing? (For females): keeping house, working, or doing something else? c. Is -- retired? d. If "retired," ask: Did he retire because of his health?	18. & 19.	1 <input type="checkbox"/> Working (23a) 2 <input type="checkbox"/> Keeping house (23b) 3 <input type="checkbox"/> Retired, health (22) 4 <input type="checkbox"/> Retired, other (22) 5 <input type="checkbox"/> Going to school (25) 6 <input type="checkbox"/> 17+ something else (22) 7 <input type="checkbox"/> 6-16 something else (24)
Ages 6-16	19a. What was -- doing MOST OF THE PAST 12 MONTHS -- going to school or doing something else? If "something else," ask: b. What was -- doing?		
Ages under 6			0 <input type="checkbox"/> 1-5 years (20) 0 <input type="checkbox"/> Under 1 (21)

PHYSICIAN VISIT PROBE QUESTIONS

CONDITION 1

1. Person number Name of condition

2. When did -- last see or talk to a doctor about his . . . ?
 1 In interview week (Reask 2) 2 Past 2 wks. (Item C) 3 2 wks.-6 mos. 4 Over 6-12 mos. 5 2-4 yrs. 6 5+ yrs. 7 Never 8 DK if Dr. seen 9 DK when Dr. seen

A1 Examine "Name of condition" entry and mark
 Accident or injury (A2) On Card C (A2) Neither (3a)

If "Doctor not talked to," transcribe entry from item 1.
 If "Doctor talked to," ask:
 3a. What did the doctor say it was? - Did he give it a medical name?

Do not ask for Cancer On Card C (A2)
 b. What was the cause of . . . ?
 Accident or injury (A2)

If the entry in 3a or 3b includes the words:

Ailment	Condition	Disorder	Trouble	} Ask c:
Anemia	Cyst	Growth	Tumor	
Asthma	Defect	Measles	Ulcer	
Attack	Disease	Rupture		

c. What kind of . . . is it?

For allergy or stroke, ask:
 d. How does the allergy (stroke) affect him?

If in 3a-d there is an impairment or any of the following entries:

Abscess	Damage	Paralysis	} Ask e:
Ache (except head or ear)	Growth	Rupture	
Bleeding	Hemorrhage	Sore	
Blood clot	Infection	Soreness	
Bail	Inflammation	Tumor	
Cancer	Neuralgia	Ulcer	
Cramps (except menstrual)	Neuritis	Varicose veins	
Cyst	Pain	Weak	
	Palsy	Weakness	

e. What part of the body is affected?

Show the following detail:
 Head skull, scalp, face
 Back spine/vertebra upper, middle, lower
 Ear or eye one or both
 Arm one or both; shoulder, upper, elbow, lower, wrist, hand
 Leg one or both; hip, upper, knee, lower, ankle, foot

A2 Ask remaining questions as appropriate for the condition entered in:
 1 Item 1 3 Q. 3b 5 Q. 3d
 2 Q. 3a 4 Q. 3c 6 Q. 3e

4. During the past 2 weeks, did his . . . cause him to cut down on the things he usually does? 1 Y 2 N (9)

5. During that period, how many days did he cut down for as much as a day? ___ Days
 oo None (9)

6. During that 2-week period, how many days did his . . . keep him in bed all or most of the day? ___ Days
 oo None

Ask if 17+ years:
 7. How many days did his . . . keep him from work during that 2-week period? (For females): not counting work around the house? ___ Days (9)
 oo None (9)

Ask if 6-16 years:
 8. How many days did his . . . keep him from school during that 2-week period? ___ Days
 oo None

9. When did -- first notice his . . . ?
 1 Last week 4 2 weeks-3 months
 2 Week before 5 Over 3-12 months
 3 Past 2 weeks-DK which 6 More than 12 months ago
 (Was it during the past 12 months or before that time?)
 (Was it during the past 3 months or before that time?)
 (Was it during the past 2 weeks or before that time?)

A3 1 Not an eye cond. (AA) 3 First eye cond. (6+ yrs.) (Item C, then 10)
 2 First eye cond. (under 6) (AA) 4 Not first eye cond. (AA)

10. Can -- see well enough to read ordinary newspaper print WITH GLASSES with his { left } eye? . . . 1 Y 2 N
 { right } 1 Y 2 N

FOOTNOTES

CONDITION PAGE

AA

1 Missing extremity (A4)
 2 Condition in C2 does not have a letter as source (A4)
 3 Condition in C2 has a letter as source, Doctor seen (11)
 4 Condition in C2 has a letter as source, Doctor not seen (15)

11a. Does -- NOW take any medicine or treatment for his . . . ? 1 Y 2 N (12)

b. Was any of this medicine or treatment recommended by a doctor? 1 Y 2 N

12. Has he ever had surgery for this condition? 1 Y 2 N

13. Was he ever hospitalized for this condition? 1 Y 2 N

14. During the past 12 months, about how many times has -- seen or talked to a doctor about his . . . ? ___ Times (Do not count visits while a patient in a hospital.) 000 None

15a. About how many days during the past 12 months has this condition kept him in bed all or most of the day? ___ Days 000 None

Ask if 17+ years:

b. About how many days during the past 12 months has this condition kept him from work? ___ Days For females: Not counting work around the house? 000 None

16a. How often does his . . . bother him -- all of the time, often, once in a while, or never?
 1 All the time 2 Often 3 Once in a while
 0 Never (16c) 8 Other -- Specify _____

b. When it does bother him, is he bothered a great deal, some, or very little?
 1 Great deal 2 Some 3 Very little
 4 Other -- Specify _____
 All the time in 16a (A4)

c. Does -- still have this condition?
 1 Y (A4) N

d. Is this condition completely cured or is it under control?
 2 Cured 3 Under control (A4)
 4 Other -- Specify _____ (A4)

e. About how long did -- have this condition before it was cured?
 0 Less than one month ___ Months ___ Years

A4 Accident or injury Other (NC)

17a. Did the accident happen during the past 2 years or before that time?
 During the past 2 years Before 2 years (18a)

b. When did the accident happen?
 Last week Over 3-12 months
 Week before 1-2 years
 2 weeks-3 months

18a. At the time of the accident what part of the body was hurt?
 What kind of injury was it? Anything else?

Part(s) of body	Kind of injury

If accident happened more than 3 months ago, ask:

b. What part of the body is affected now?
 How is his -- affected? Is he affected in any other way?

Part(s) of body	Present effects

19. Where did the accident happen?
 1 At home (inside house)
 2 At home (adjacent premises)
 3 Street and highway (includes roadway and public sidewalk)
 4 Farm
 5 Industrial place (includes premises)
 6 School (includes premises)
 7 Place of recreation and sports, except at school
 8 Other -- Specify _____

20. Was -- at work at his job or business when the accident happened?
 1 Y 3 While in Armed Services
 2 N 4 Under 17 at time of accident

21a. Was a car, truck, bus, or other motor vehicle involved in the accident in any way? 1 Y 2 N (NC)

b. Was more than one vehicle involved? Y N

c. Was it (either one) moving at the time? 1 Y 2 N

CONDITION PAGE

VITAL AND HEALTH STATISTICS PUBLICATIONS SERIES

Formerly Public Health Service Publication No. 1000

- Series 1. Programs and Collection Procedures.*—Reports which describe the general programs of the National Center for Health Statistics and its offices and divisions, data collection methods used, definitions, and other material necessary for understanding the data.
- Series 2. Data Evaluation and Methods Research.*—Studies of new statistical methodology including experimental tests of new survey methods, studies of vital statistics collection methods, new analytical techniques, objective evaluations of reliability of collected data, contributions to statistical theory.
- Series 3. Analytical Studies.*—Reports presenting analytical or interpretive studies based on vital and health statistics, carrying the analysis further than the expository types of reports in the other series.
- Series 4. Documents and Committee Reports.*—Final reports of major committees concerned with vital and health statistics, and documents such as recommended model vital registration laws and revised birth and death certificates.
- Series 10. Data from the Health Interview Survey.*—Statistics on illness; accidental injuries; disability; use of hospital, medical, dental, and other services; and other health-related topics, based on data collected in a continuing national household interview survey.
- Series 11. Data from the Health Examination Survey.*—Data from direct examination, testing, and measurement of national samples of the civilian, noninstitutionalized population provide the basis for two types of reports: (1) estimates of the medically defined prevalence of specific diseases in the United States and the distributions of the population with respect to physical, physiological, and psychological characteristics; and (2) analysis of relationships among the various measurements without reference to an explicit finite universe of persons.
- Series 12. Data from the Institutionalized Population Surveys.*—Discontinued effective 1975. Future reports from these surveys will be in Series 13.
- Series 13. Data on Health Resources Utilization.*—Statistics on the utilization of health manpower and facilities providing long-term care, ambulatory care, hospital care, and family planning services.
- Series 14. Data on Health Resources: Manpower and Facilities.*—Statistics on the numbers, geographic distribution, and characteristics of health resources including physicians, dentists, nurses, other health occupations, hospitals, nursing homes, and outpatient facilities.
- Series 20. Data on Mortality.*—Various statistics on mortality other than as included in regular annual or monthly reports. Special analyses by cause of death, age, and other demographic variables; geographic and time series analyses; and statistics on characteristics of deaths not available from the vital records, based on sample surveys of those records.
- Series 21. Data on Natality, Marriage, and Divorce.*—Various statistics on natality, marriage, and divorce other than as included in regular annual or monthly reports. Special analyses by demographic variables; geographic and time series analyses; studies of fertility; and statistics on characteristics of births not available from the vital records, based on sample surveys of those records.
- Series 22. Data from the National Mortality and Natality Surveys.*—Discontinued effective 1975. Future reports from these sample surveys based on vital records will be included in Series 20 and 21, respectively.
- Series 23. Data from the National Survey of Family Growth.*—Statistics on fertility, family formation and dissolution, family planning, and related maternal and infant health topics derived from a biennial survey of a nationwide probability sample of ever-married women 15-44 years of age.
