Series 13:
Data From the National Health Survey
No. 113

This report presents statistics on conditions diagnosed and surgical and nonsurgical procedures performed in non-federal short-stay hospitals. The statistics are based on data collected through the National Hospital Discharge Survey from a national sample of the hospital records of discharged inpatients. Estimates of first-listed diagnoses, all-listed diagnoses, days of care for first-listed diagnoses, and all-listed procedures are shown by sex and age of patient and geographic region of hospital.

Detailed Diagnoses and Procedures, National Hospital Discharge Survey, 1990

by Edmund J. Graves, Division of Health Care Statistics

Introduction

The purpose of this report is to provide detailed data from the National Hospital Discharge Survey (NHDS). Data for 1990 are shown by age and sex of the patient and geographic region of the hospital for conditions diagnosed and surgical and nonsurgical procedures performed. The report is intended as a source document for researchers and others who need data for detailed diagnostic and procedure categories. Similar reports have been published with data for 1977 (1), 1978 (2), 1979 (3), 1983 (4), 1984 (5), 1985 (6), 1986 (7), 1987 (8), 1988 (9), and 1989 (10).

The survey has been conducted continuously by the National Center for Health Statistics (NCHS) since 1965. Estimates are produced from a sample of inpatient records that are obtained from a national sample of short-stay non-Federal general and specialty hospitals in the United States. The 1990 sample included approximately 266,000 medical records from 474 hospitals that participated in the survey.

The original universe for the survey consisted of 6,965 short-stay hospitals contained in the 1963 National Master Facility Inventory of Hospitals (NMFH). The universe was updated periodically from the lists of hospitals provided by the American Hospital Association. A description of the development of the original survey, which was in operation since 1964, has been published (11).

Beginning in 1988, the NHDS was redesigned in order to link it with other surveys conducted by NCHS and to improve efficiency through the use of information and technologies that were not available when the survey was first designed in 1964. Differences between NHDS statistics based on the 1965-87 sample and statistics based on the redesign may be due to factors other than real changes in hospital utilization.

The redesigned survey uses a three-stage stratified sample based on hospitals contained in the April 1987 Hospital Market Data Tape from SMG Marketing Group, Inc. (12). Only hospitals accepting inpatients by August 1987 were included. A brief description of the new design, along with information about data collection procedures, the estimation process, and relative standard errors, can be found in appendix I.

Familiarity with NHDS definitions is important to interpret the data properly and to compare them with statistical data on short-stay hospital utilization that are available from other sources. Definitions of the terms used in this report are presented in appendix II. The medical data for hospital patients are coded according to the *International Classification of Diseases, 9th Revision, Clinical Modification* (ICD-9-CM) (13). (See appendix III for ICD-9-CM codes.) This coding system is updated periodically. The reader is cautioned that annual estimates for new ICD-9-CM codes are underestimated for 1990. For a fuller discussion of this problem see the introduction to appendix IV. New ICD-9-CM codes for 1986-90 are shown in a conversion table in appendix IV. Information about newborn infants, although collected through the survey, is excluded from this report.

Information on short-stay hospital utilization is also collected through the National Health Interview Survey (NHIS) of NCHS. Estimates from that survey generally differ from NHDS estimates because of differences in collection procedures, populations sampled, and definitions. Data from NHIS are published in Series 10 of *Vital and Health Statistics*. However, data on the detailed diagnoses and procedures published in this report are not available through NHIS.

Use of tables

The detailed tables in this report show the conditions diagnosed and procedures performed by the detailed code numbers of the *International Classification of Diseases, 9th Revision, Clinical Modification* (13). Measurements of hospital utilization are shown in terms of numbers of first-listed and all-listed diagnoses, of days of care for first-listed diagnoses, and of procedures performed for the individuals discharged.

Presentation of estimates

Tables 1–3 provide information by ICD–9–CM 3-, 4-, and 5-digit diagnostic codes. Table 4 shows 2-, 3-, and 4-digit procedure codes. A specific code appears in the tables if the estimate of the total for the code has a relative standard error (a measure of the reliability of the data) no larger than 30 percent and the sample size is greater than 30. The codes that appear in table 2 for days of care are identical to those in table 1 for first-listed diagnoses. Only an asterisk (*) is shown in the tables if the relative standard error of an estimate for a sex or age group or a region is larger than 30 percent or the sample size is less than 30.

In addition, all estimates of diagnoses and procedures less than 9,000 are preceded by an asterisk to indicate that they are based on a relatively small sample of discharge records. These estimates are generally based on fewer than 60 records. Days of care estimates derived from fewer than 9,000 estimated discharges are also indicated by asterisks. These estimates are usually less than 58,000.

The total for all codes presented at the beginning of each table includes estimates for codes not shown in the table. Likewise, the total for each diagnostic chapter or procedure category includes estimates for all the codes in the chapter or category, whether or not they are shown individually. Estimates for 5-digit codes may not add to the 4-digit total, 4-digit codes to the 3-digit total, or, for procedures, 3-digit codes to the 2-digit total because the totals include estimates for codes not shown or because the data were rounded to the nearest thousand for presentation.

Although 4- and 5-digit diagnostic codes are presented together under the 3-digit codes of which they are a part, the estimates for 4- and 5-digit codes cannot be added to obtain the estimate for the 3-digit code. For example, in table 1 the estimate for first-listed diagnosis code 008 is 102,000. If the estimates for the 4- and 5-digit codes included in 008 are added, the total would be 117,000. This occurs because the estimate of 20,000 for code 008.49 is part of the estimate of 21,000 for code 008.4 and thus cannot be added to it. Similarly, estimates for 3-

and 4-digit codes cannot be added together to obtain the estimate for a 2-digit code.

Diagnostic data

The first-listed diagnosis is the diagnosis identified as the principal diagnosis or listed first on the face sheet of the medical record. The number of all-listed diagnoses includes first-listed diagnoses and other diagnoses appearing on the medical record. At present, a minimum of one and up to a maximum of seven diagnoses are coded; before 1979, however, the maximum number was five.

With regard to all-listed diagnoses, it should be pointed out that there is a certain amount of “double coding” inherent in the ICD–9–CM; that is, certain diagnoses require the coding of two diagnostic codes. For example, females with deliveries all have one additional diagnostic code that indicates the outcome of their delivery (single liveborn; twins, both liveborn; and the like).

Procedure data

Procedures include surgical and nonsurgical operations, diagnostic procedures, and special treatments. Since 1979, up to four procedures have been coded for each discharge, an increase from the maximum of three procedures coded in preceding years. Certain ICD–9–CM procedure codes are not used in NHDS. These codes are listed in appendix II.

Computation of other statistics

The data in tables 1–4 can be used to compute other hospital use statistics, such as rates of diagnoses and average lengths of stay for diagnoses. In general, a rate is the ratio between one statistic (for example, number of discharges) and another statistic (for example, the population) for a given period of time (such as 1 year). Usually the resulting figure is multiplied by some constant (for example, 100, 1,000, or 10,000) to produce rates greater than one. The rates shown in most National Hospital Discharge Survey publications are rates of discharges, diagnoses, and procedures per 1,000, 10,000, or 100,000 civilian population for a given year.

An average length of stay is calculated by dividing the number of days of care by the number of discharged patients. This statistic can be calculated for first-listed diagnoses by dividing the days of care of patients with the diagnosis from table 2 by the number of patients with the diagnosis from table 1.

Table 2. Number of days of care for inpatients discharged from short-stay non-Federal hospitals, by ICD-9-CM code of first-listed diagnosis, sex and age of patient, and geographic region of hospital: United States, 1990—Con.

[Excludes newborn infants. Code numbers are from the *International Classification of Diseases, 9th Revision, Clinical Modification (ICD-9-CM)*; see Appendix III for category titles. Totals include data for categories not listed in table; See "Use of tables" in text]

Technical notes on methods

Statistical design of the National Hospital Discharge Survey

Scope of the survey—The National Hospital Discharge Survey (NHDS) covers discharges from noninstitutional hospitals, exclusive of Federal, military, and Veterans Administration hospitals, located in the 50 States and the District of Columbia. Only short-stay hospitals (hospitals with an average length of stay for all patients of less than 30 days) or those whose specialty is general (medical or surgical) or children's general are included in the survey. These hospitals must also have six beds or more staffed for patient use.

NHDS history—The National Center for Health Statistics (NCHS) has conducted the NHDS continuously since 1965. The original sample was selected in 1964 from a frame of short-stay hospitals listed in the National Master Facility Inventory. That sample was updated periodically with samples of hospitals that opened later. Sample hospitals were selected with probabilities ranging from certainty for the largest hospitals to 1 in 40 for the smallest hospitals. Within each sample hospital, a systematic random sample of discharges was selected. The development and design of the original NHDS has been published (11).

Until 1985, all data were collected by a system in which sample selection and transcription of information were done manually. Starting in 1985 some data were also collected using a system in which NCHS purchased data tapes containing discharge medical abstracts from commercial abstracting services and selected the samples from those tapes.

In 1988, the NCHS redesigned the NHDS to link it with other surveys conducted by NCHS and to improve efficiency through use of information and technologies that were not available when the survey was first designed in 1964. Details of the new design are outlined below.

The changes in the survey may affect trend data. That is, some of the differences between NHDS estimates based on the 1965–87 sample and estimates based on the 1988–90 sample may be due to survey redesign rather than to real changes in hospital utilization.

New sampling design—The NHDS sampling frame consists of hospitals that were listed in the April 1987 SMG Hospital Market Data Tape (11) and that began to accept inpatients by August 1987. The NHDS sample includes with certainty all hospitals with 1,000 beds or

more or 40,000 discharges or more annually. The remaining sample of hospitals is based on a stratified three-stage design.

The first stage consists of 112 primary sampling units (PSU's) that comprise a probability subsample of PSU's used in the 1985–94 National Health Interview Survey (NHIS). The PSU's are counties, groups of counties, county equivalents (such as parishes or independent cities), or towns and townships (for some PSU's in New England). The NHDS sample includes with certainty the 26 PSU's with the largest populations. In addition, the sample includes half of the next 26 largest PSU's, and one PSU from each of 73 PSU strata formed from the remaining PSU's for the NHIS sample design. Those 73 PSU strata were defined within four geographical regions and were assigned metropolitan statistical area (MSA) or non-MSA status by using 1980 Census of Population data and a computer program that minimized the between-PSU variances for NHIS stratification variables. (MSA is a metropolitan statistical area defined by the U.S. Office of Management and Budget on the basis of the 1980 Census.) From the 73 strata thus formed, the PSU's were selected with probability proportional to the projected 1985 population. A more detailed analysis of the NHIS PSU sample design is presented in a Series 2 *Vital and Health Statistics* report (14).

The second stage consists of noncertainty hospitals selected from the sample PSU's. To assure distribution of the sample across PSU's and to maximize the potential for automated data collection, the noncertainty hospitals in those PSU's were stratified. The strata were defined by region, PSU, and in the 12 largest PSU's, by abstracting status (whether or not the hospital subscribes to a commercial abstracting service). Within the strata, the hospitals were ordered by PSU, abstracting service status, and the hospital specialty-size groups defined in table I. Within each specialty-size group, hospitals were arrayed by their annual numbers of discharges recorded in the April 1987 SMG Hospital Market Data Tape. Hospitals were then selected from each stratum's ordered array by systematic random sampling with probability proportional to their SMG recorded 1987 annual numbers of discharges. The sampling rates were such that at least three hospitals were selected from every PSU containing three eligible hospitals or more. In PSU's with fewer than three hospitals, all hospitals in the PSU were selected. For 1990,

the sample consisted of 542 hospitals. Of the 542 hospitals, 23 were found to be out of scope (ineligible) because prior to 1990 they went out of business or otherwise failed to meet the criteria for the NHDS universe. Of the 519 in-scope (eligible) hospitals, 474 hospitals responded (NCHS collected data for at least half of the number of sample discharges expected in half or more of the months these hospitals were in scope). The number of hospitals in the universe, the sample, and the responding sample are shown by region in table II.

At the third stage, a sample of discharges from each hospital was selected by a systematic random sampling technique. For hospitals using the manual system of data collection, the discharges were selected at the hospital from daily listing sheets, computer files, or other lists in which discharges were listed in some chronological order. For most of these hospitals, the sample discharges were selected on the basis of the terminal digit(s) of the patient's medical record number. In some cases, an admission number, billing number, or other number was used. If no patient numbers useful for sampling purposes were available in a hospital's list of discharges, the sample was selected by starting with a randomly selected discharge and taking every *k*th discharge thereafter.

For hospitals whose data were collected via the automated system, the discharges were selected by NCHS from discharge medical abstract files after sorting by the first two digits of the ICD-9-CM code of the first-listed diagnosis, patient age group at time of admission (under 1 year, 1-14 years, 15-44 years, 45-64 years, 65-74 years, 75-84 years, 85 years and over, and age unknown), sex, and date of discharge. These samples were selected by

starting with a randomly selected discharge and taking every *k*th discharge thereafter.

The third-stage sampling rate was determined by the hospital's sampling stratum and the system (manual or automated) used to collect data from the hospital. One percent and 5 percent of discharges in the certainty hospitals were selected under the manual and automated systems, respectively. Except for certainty hospitals, the target sample size was 250 discharges each from all manual system hospitals and from the automated system hospitals that had fewer than 4,000 discharges annually according to the 1987 sampling frame data. Samples of 2,000 were targeted for each of the remaining noncertainty automated system hospitals. The final sample for 1990 included about 266,000 discharge medical record abstracts.

Data collection and processing

Data collection—Two data collection procedures were used for the survey. One was a manual system of sample selection and data abstraction. The other was an automated method, used with approximately 34 percent of the respondent hospitals in 1990, that involved the purchase of data tapes from abstracting service organizations.

In the manual system, the sample selection and the transcription of information from the hospital records to abstract forms were performed at the hospitals. The completed forms, along with sample selection control sheets, were then forwarded to NCHS for coding, editing, and weighting. A few of these hospitals submitted their data via computer printout or tape. Of the hospitals using

the manual system in 1990, about two-thirds had the work performed by their own medical records staff. In the remaining hospitals using the manual system, personnel of the U.S. Bureau of the Census did this work on behalf of NCHS. For the automated system, NCHS purchased tapes containing machine-readable medical record data from abstracting service organizations and selected sample discharges from these tapes.

Figure I shows the information collection form used in 1990. This form and the records on abstract service data tapes contain items relating to personal characteristics of the patient, including birth date, sex, race, ethnicity, marital status, ZIP Code (but not name and address), and expected sources of payment; administrative information, including admission and discharge dates, discharge status, and medical record number; and medical information, including diagnoses, surgical and nonsurgical operations or procedures, and dates of surgery. These data items conform with the Uniform Hospital Discharge Data Set (UHDDS) (15). The PSU, hospital name, medical record number, and patient ZIP Code are confidential information and are not available to the public.

Medical coding and edit—The medical information recorded on the sample patient abstracts that was collected by the manual system was coded by NCHS staff. A maximum of seven diagnostic codes were assigned for each sample abstract. In addition, if the medical information included surgical or nonsurgical procedures, a maximum of four codes for these procedures were assigned. The system currently used for coding the diagnoses and procedures on the medical abstract forms, as well as the data that appear on the commercial abstracting services data tapes, is the *International Classification of Diseases, 9th Revision, Clinical Modification*, or ICD-9-CM (13). All of the diagnostic codes and most of the procedure codes in the ICD-9-CM are used with the exception of selected procedure codes in chapter 16 (see appendix II).

With two exceptions, the order of diagnoses and procedures for sampled discharges is preserved to reflect the order on the medical record face sheet or in the abstracting service file. One exception is for women admitted for delivery. In this case, a code of V27 from the supplemental classification must be assigned and it must be listed first. In the other exception, a decision was made to reorder some acute myocardial infarction diagnoses based on accepted medical coding practice. Whenever an acute myocardial infarction is encountered with other circulatory diagnoses and is other than the first entry, it must be reordered to first position.

An ongoing quality control program is undertaken on the coding and entering of data from abstracts to machine readable form. Approximately 5 percent of the abstracts are independently recoded by an NHDS coder, with discrepancies resolved by the chief coder. The overall error rate for records manually coded by NCHS for the 1990 data year was 1.6 percent for medical (ICD-9-CM) coding and entering and 0.5 percent for demographic coding and entering.

Following conversion of the data on the medical abstract to computer tape and combining the data with the automated data tapes, a final medical edit was performed by computer inspection and by a manual review of rejected abstracts. If the sex or age of the patient was incompatible with the recorded medical information, priority was given to the medical information in the editing decision.

Presentation of estimates

Grouping of diagnoses and procedures—In this report, the diagnostic chapters, the broadest groupings of disease and injuries shown, correspond to ICD-9-CM chapters 1-17 and the supplementary classification of factors influencing health status and contact with health services. The procedure groupings used in this report are the groups numbered 1-16 in the ICD-9-CM section entitled "Procedure classification."

Patient characteristics not stated—Age or sex of the patient were not stated for about 1.5 percent of the sample discharges for 1990. These data were imputed by assigning the patient an age or sex consistent with the age or sex of other sampled patients with the same diagnostic code. Data on race were not available for 19.4 percent of the discharges, and missing values were not imputed. During 1990, 0.16 percent of the sampled records lacked an admission or discharge date. For these cases a length of stay was imputed based on age unless the discharge was a newborn or a female with delivery, in which case a length of stay was assigned similar to the length of stay of sampled cases in these categories.

In addition to the edits performed by NCHS, data obtained through the automated system may have been edited by an abstract service and had data imputed. The extent of this imputation, if any, is unknown.

Rounded numbers—Estimates in this report have been rounded. Therefore, detailed figures may not add to totals. Rates and percents were calculated using unrounded figures and may not agree with computations made from the rounded data.

Population estimates—The population estimates shown in table III are for the U.S. civilian population, including institutionalized persons, on July 1, 1990. The data are from unpublished tabulations provided by the U.S. Bureau of the Census that do not include the results of the 1990 census. Rates computed using these population estimates will be overestimates to the extent that military personnel and non-U.S. citizens use NHDS-eligible hospitals and will be underestimates to the extent that civilians (for example, military dependents or retirees) use hospitals that are not in the NHDS universe, that is, hospitals that are institutional, Federal, military, veteran, or long-stay hospitals that are not general, maternal, or children's general hospitals.

Published and flagged estimates—Estimates are not presented unless a reasonable assumption regarding the probability distribution of the sampling error is possible on the basis of the Central Limit Theorem. The Central

Limit Theorem states that, given a sufficiently large sample size, the sample estimate approximates the population estimate, and upon repeated sampling, its distribution would be approximately normal.

Based on consideration of the complex sample design of the NHDS, the following guidelines are used for presenting the NHDS estimates:

- If the relative standard error of an estimate is larger than 30 percent or the sample size is less than 30, the estimate is not shown. Only an asterisk (*) appears in the tables.
- If the sample size is less than 60, the value of the estimate should not be assumed to be reliable. The estimate is preceded by an asterisk (*) in the tables.

Estimation procedures

Statistics from NHDS are derived by a multistage estimation procedure that produces essentially unbiased national estimates and has three basic components: (1) inflation by reciprocals of the probabilities of sample selection, (2) adjustment for nonresponse, and (3) population weighting ratio adjustments. The second and third components were made separately by admission types—that is, for discharges of newborn infants (whose hospital stay began with their own births) and for discharges to other than newborn infants.

Inflation by reciprocals of probabilities of selection—There is one probability for each stage of sampling: (a) the probability of selecting the PSU, (b) the probability of selecting the hospital, and (c) the probability of selecting the discharge within the hospital. The last probability varies monthly and is calculated to be the sample size from the hospital for the month divided by the total number of discharges occurring at the hospital that month. The overall probability of selection is the product of the probabilities at each stage. The inverse of the overall selection probability is the basic inflation weight.

Adjustment for nonresponse—NHDS data were adjusted to account for two types of nonresponse. The first type of nonresponse occurred when an in-scope (NHDS eligible) sample hospital did not respond for more than half of the months during which it was in scope, thus making it a nonrespondent hospital. In this case, the weights of discharges from hospitals similar to the nonrespondent hospitals were inflated to account for discharges represented by the nonrespondent hospitals. For this purpose, hospitals were judged to be similar if they were in the same region, hospital specialty-size group, and if possible, the same sampling stratum (that is, the same abstracting status group if the nonrespondent hospital was in the 12 largest PSU's and in the same PSU otherwise). The adjustments for this nonresponse were made separately for admission types—that is, for discharges of newborn infants and for all other discharges. The adjustment consisted of a ratio for which the numerator was the weighted number of discharges of the admission type in all similar sample hospitals (regardless of response status) and the denominator was the weighted total of discharges of that admission type from the hospitals similar to the nonrespondent hospitals. Data on the number of discharges for each admission type for each hospital came from either the hospitals or the April 1991 SMG Hospital Market Data Tape (16).

The second type of nonresponse occurred when NCHS failed to collect all the discharge abstracts expected (the number expected is the product of the hospital's total discharges each month and the discharge sampling rate assigned to the hospital). In each month when the hospital was respondent (at least half the expected abstracts were collected), the weights of abstracts collected for the month were inflated to account for the missing abstracts. For a hospital's month(s) of nonresponse, the weights of discharges in the hospital's respondent months were inflated by ratios that varied with discharge groups defined by the ICD-9-CM diagnostic classes of those discharges' first-listed diagnoses. The adjustment ratio for each partially respondent hospital and each discharge group was calculated using only data from sample hospitals that were both NHDS eligible and respondent for all 12 months of the data year. The ratio had as its numerator the weighted sum of discharges in that discharge group for all months in which the partially respondent hospital was in scope and had as its denominator the weighted sum of discharges in that discharge group that occurred in the months when the partially respondent hospital did respond to the NHDS.

Population weighting ratio adjustment—Adjustments were made within each of 16 noncertainty hospital groups defined by region and hospital specialty-size classes to adjust for oversampling or undersampling of discharges reported in the sampling frame for the data year. For discharges other than newborn infants, the adjustment is a multiplicative factor that had as its numerator the number of admissions reported for the year at sampling frame hospitals within each region-specialty-size group and as its

denominator the estimated number of those admissions for that same hospital group. The adjustment for discharges of newborn infants was similar, but numbers of births were used in place of admissions. The ratio numerators were based on the figures obtained from the SMG Hospital Market Data Tape (16) and the ratio denominators were obtained through a simple inflation of the SMG figures for the NHDS sample hospitals.

Reliability of estimates

Nonsampling errors—As from any survey, results are subject to nonsampling errors, which include errors that are due to sampling frame errors, hospital nonresponse, missing abstracts, and recording processing errors. The magnitude of the nonsampling errors cannot be determined. However, errors resulting from the exclusion of in-scope hospitals from the sampling frame are believed to be small because the hospitals excluded are hospitals that opened after the frame was constructed and, hence, they tend to have few discharges relative to hospitals that are in the frame. Other nonsampling errors are kept to a minimum by methods built into the survey procedures, such as training the data collectors in sampling and data abstraction, quality checks of sampling and abstracting, manual and computer editing, and verification of keypunching and coding. Some nonsampling errors are discussed under “Presentation of estimates.”

Sampling errors—Because the statistics presented in this report are based on a sample, they may differ from the figures that would be obtained if a complete census had been taken using the same forms, definitions, instructions, and procedures. However, the probability design of NHDS permits the calculation of sampling errors. The standard error is primarily a measure of sampling variability that occurs by chance because only a sample rather

than the entire population is surveyed. The standard error, as calculated for the NHDS, also reflects part of the variation that arises in the measurement process, but does not include estimates of any systematic bias. The chances are about 68 in 100 that an estimate from the sample would differ from a complete census by less than the standard error. The chances are about 95 in 100 that the difference would be less than twice the standard error, and about 99 in 100 that it would be less than 2.5 times as large.

The relative standard error of an estimate is obtained by dividing the standard error by the estimate. The resulting value is multiplied by 100, which expresses the relative standard error as a percent of the estimate.

Estimates of sampling variability were calculated with SESUDAAN software, which computes standard errors by using a first-order Taylor approximation of the deviation of estimates from their expected values. A description of the software and the approach it uses was published (17).

Relative standard errors for aggregate estimates—The constants for relative standard error curves for the National Hospital Discharge Survey aggregate statistics by statistic type are presented in table IV. The relative standard error [RSE(*X*)] of an estimate *X* may be estimated from the formula:

$$RSE(X) = \sqrt{a + b/X}$$

where *X*, *a*, and *b* are as defined in table IV.

Relative standard errors for estimates of percents—The relative standard errors for a percent 100*p* (0 < *p* < 1) may be calculated directly using the formula:

$$RSE(p) = \sqrt{b(1-p) / (p X)}$$

where 100*p* is the percent of interest, *X* is the base of the percent, and *b* is the parameter *b* in the formula for

NOTE: The relative standard error (RSE) for an estimate (*X*) can be determined from the equation $RSE(X) = \sqrt{a + b/X}$.

approximating the $RSE(X)$. The values for b are given in table IV.

The approximation is valid if the relative standard error of the denominator is less than 0.05 or the relative standard errors of the numerator and denominator are both less than 0.10 (18,19).

RSE for average length of stay and other averages, ratios, or rates where the numerator is not a subclass of the denominator—If the denominator of the rate is a number produced by the U.S. Bureau of the Census for the total U.S. population or one or more of the age-sex-race groups of the total population, then the approximate relative standard error of the rate is equivalent to the relative standard error of the numerator that can be obtained from table IV.

If the numerator X and denominator Y are both estimated from the NHDS, then the relative standard

error of the ratio X/Y is approximated by

$$RSE(X/Y) = \sqrt{[RSE(X)]^2 + [RSE(Y)]^2}$$

This approximation is valid if the relative standard error of the denominator is less than 0.05 or the relative standard errors of the numerator and denominator are both less than 0.10 (18,19).

Estimates of differences between two statistics—The relative standard errors shown in this appendix are not directly applicable to differences between two sample estimates. The standard error of a difference is approximately the square root of the sum of squares of each standard error considered separately. This formula represents the standard error quite accurately for the difference between separate and uncorrelated characteristics, although it is only a rough approximation in most other cases.

Appendix II

Definitions of certain terms used in this report

Terms relating to hospitalization

Hospitals—All hospitals with an average length of stay for all patients of less than 30 days or hospitals whose specialty is general (medical or surgical) or children's general are eligible for inclusion in the National Hospital Discharge Survey except Federal hospitals and hospital units of institutions, and hospitals with less than six beds staffed for patients' use.

Patient—A person who is formally admitted to the inpatient service of a short-stay hospital for observation, care, diagnosis, or treatment. The terms "patient" and "inpatient" are used synonymously.

Newborn infant—A patient admitted by birth to a hospital.

Discharge—The formal release of a patient by a hospital; that is, the termination of a period of hospitalization by death or by disposition to place of residence, nursing home, or another hospital. The terms "discharges" and "patients discharged" are used synonymously.

Discharge rate—The ratio of the number of hospital discharges during a year to the number of persons in the civilian population on July 1 of that year.

Days of care—The number of patient days accumulated at time of discharge by a patient. A stay of less than 1 day (patient admission and discharge on the same day) is counted as 1 day in the summation of total days of care. For patients admitted and discharged on different days, the number of days of care is computed by counting all days from (and including) the date of admission to (but not including) the date of discharge.

Rate of days of care—The ratio of the number of days of care accumulated during a year to the number of persons in the civilian population on July 1 of that year.

Average length of stay—The number of days of care accumulated by patients discharged during the year divided by the number of these patients.

Terms relating to diagnoses

Diagnosis—A disease or injury (or factor that influences health status and contact with health services that is not itself a current illness or injury) on the medical record of a patient. (See "Medical coding and edit" in the "Data collection and processing" section of appendix I for further detail.)

Principal diagnosis—The condition established after study to be chiefly responsible for occasioning the admission of the patient to the hospital for care.

First-listed diagnosis—The coded diagnosis identified as the principal diagnosis or listed first on the face sheet or discharge summary of the medical record if the principal diagnosis cannot be identified. The number of first-listed diagnoses is equivalent to the number of discharges.

All-listed diagnoses—The number of diagnoses on the face sheet of the medical record. In the NHDS a maximum of seven diagnoses are coded.

Terms relating to procedures

Procedure—A surgical or nonsurgical operation, diagnostic procedure, or special treatment reported on the medical record of a patient. (See "Medical coding and edit" in the "Data collection and processing" section of appendix I for further details.) The following ICD-9-CM procedure codes were not used in the the NHDS in 1990:

87.09, 87.11-87.12, 87.16-87.17, 87.22-87.29, 87.39, 87.43-87.49, 87.85, 87.89, 87.92, 87.95, 87.99, 88.09, 88.16, 88.19, 88.21-88.29, 88.31, 88.33, 88.35, 88.37, 88.39, 89.01-89.09, 89.11-89.13, 89.15-89.16, 89.26, 89.29, 89.31, 89.33-89.39, 89.7, 89.8, 90.01-90.99, 91.01-91.99, 93.01-93.09, 93.11-93.19, 93.21-93.25, 93.27, 93.28, 93.31-93.39, 93.61-93.67, 93.71-93.78, 93.81-93.89, 94.01-94.19, 94.21-94.23, 94.29, 94.31-94.39, 94.41-94.49, 94.51-94.59, 95.01-95.03, 95.05-95.09, 95.14-95.15, 95.31-95.36, 95.41-95.48, 96.11-96.19, 96.26-96.28, 96.34-96.39, 96.41-96.48, 96.51-96.59, 96.6, 97.01-97.04, 97.14-97.16, 97.21-97.29, 97.31-97.39, 97.41-97.49, 97.51-97.59, 97.61-97.69, 97.72-97.79, 97.81-97.87, 97.89, 99.12-99.13, 99.14, 99.16-99.18, 99.26-99.29, 99.31-99.39, 99.41-99.48, 99.51-99.59.

All-listed procedures—The number of procedures on the face sheet of the medical record. In the NHDS a maximum of four procedures are coded.

Rate of procedures—The ratio of the number of procedures during a year to the number of persons in the civilian population on July 1 of that year determines the rate of procedures.

Demographic terms

Population—The U.S. resident population excluding members of the Armed Forces.

Age—Patient's age at birthday prior to admission to the hospital.

Geographic region—Hospitals are classified by location in one of the four geographic regions of the United States that correspond to those used by the U.S. Bureau of the Census.

<i>Region</i>	<i>States included</i>
Northeast	Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania
Midwest	Michigan, Ohio, Illinois, Indiana, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas .

Region

South

States included—Con.
Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, and Texas

West

Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Washington, Oregon, California, Hawaii, and Alaska

Appendix III

ICD-9-CM codes for the 1990 National Hospital Discharge Survey

Coding of the diagnostic and procedure data in the National Hospital Discharge Survey is based on the *International Classification of Diseases, 9th Revision, Clinical Modification*, or ICD-9-CM (13). This appendix presents a list of all diagnostic and procedure codes for which data were received by the National Hospital Discharge Survey (NHDS) for 1990. Part A shows the classification of diseases and injuries and supplementary classifications and is to be used with tables 1-3. Part B includes the codes for surgical, nonsurgical, and diagnostic procedures

and is to be used with table 4. It is important to consult the appropriate volume of ICD-9-CM for more detailed information about the coding scheme, such as the specific terms included in or excluded from a particular code.

The following abbreviations are used in the list of codes: N.E.C. (not elsewhere classified) and N.O.S. (not otherwise specified). Codes added to the ICD-9-CM on October 1, 1990, are preceded by a slash (/) and codes changed at that time are referenced with a slash between the old and new ICD-9-CM descriptions.

Part A. Classification of diseases and injuries and supplementary classification

001-139	Infectious and parasitic diseases	009	Ill-defined intestinal infections
001	Cholera	.0	Infectious colitis, enteritis, and gastroenteritis
.9	Cholera, unspecified	.1	Colitis, enteritis, and gastroenteritis of presumed infectious origin
002	Typhoid and paratyphoid fevers	.2	Infectious diarrhea
0	Typhoid fever	.3	Diarrhea of presumed infectious origin
.1	Paratyphoid fever A	010	Primary tuberculous infection
003	Other salmonella infections	.1	Tuberculous pleurisy in primary progressive tuberculosis
.0	Salmonella gastroenteritis	.13	Tuberculous pleurisy in primary progressive tuberculosis, tubercle bacilli found (in sputum) by microscopy
.1	Salmonella septicemia	.8	Other primary progressive tuberculosis
.2	Localized salmonella infections	.85	Other primary progressive tuberculosis, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.24	Salmonella osteomyelitis	.9	Primary tuberculous infection, unspecified type
.29	Other localized salmonella infections	.90	Primary tuberculous infection, unspecified type, unspecified examination
.8	Other specified salmonella infections	011	Pulmonary tuberculosis
.9	Salmonella infection, unspecified	.0	Tuberculosis of lung, infiltrative
004	Shigellosis	.00	Tuberculosis of lung, infiltrative, unspecified examination
.0	Shigella dysenteriae	.02	Tuberculosis of lung, infiltrative, bacteriological or histological examination results unknown (at present)
.1	Shigella flexneri	.03	Tuberculosis of lung, infiltrative, tubercle bacilli found (in sputum) by microscopy
.3	Shigella sonnei	.05	Tuberculosis of lung, infiltrative, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.8	Other specified shigella infections	.06	Tuberculosis of lung, infiltrative, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.9	Shigellosis, unspecified	.1	Tuberculosis of lung, nodular
005	Other food poisoning (bacterial)	.15	Tuberculosis of lung, nodular, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.0	Staphylococcal food poisoning	.2	Tuberculosis of lung with cavitation
.1	Botulism	.20	Tuberculosis of lung with cavitation, unspecified examination
.8	Other bacterial food poisoning	.23	Tuberculosis of lung with cavitation, tubercle bacilli found (in sputum) by microscopy
.9	Food poisoning, unspecified	.24	Tuberculosis of lung with cavitation, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
006	Amebiasis	.25	Tuberculosis of lung with cavitation, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.0	Acute amebic dysentery without mention of abscess	.26	Tuberculosis of lung with cavitation, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.3	Amebic liver abscess		
.8	Amebic infection of other sites		
.9	Amebiasis, unspecified		
007	Other protozoal intestinal diseases		
.1	Giardiasis		
.2	Coccidiosis		
.3	Intestinal trichomoniasis		
008	Intestinal infections due to other organisms		
0	Intestinal infection due to escherichia coli (E. coli)		
.2	Intestinal infection due to aerobacter aerogenes		
.3	Intestinal infection due to proteus (mirabilis) (morganii)		
.4	Intestinal infection due to other specified bacteria		
.41	Intestinal infection due to staphylococcus		
.42	Intestinal infection due to pseudomonas		
.49	Intestinal infection due to other specified bacteria		
.5	Bacterial enteritis, unspecified		
.6	Enteritis due to specified virus		
.8	Intestinal infection due to other organism, not elsewhere classified		

.3	Tuberculosis of bronchus	.1	Tuberculosis of hip
.30	Tuberculosis of bronchus, unspecified examination	.10	Tuberculosis of hip, unspecified examination
.4	Tuberculous fibrosis of lung	.2	Tuberculosis of knee
.41	Tuberculous fibrosis of lung, bacteriological or histological examination not done	.26	Tuberculosis of knee, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.42	Tuberculous fibrosis of lung, bacteriological or histological examination unknown (at present)	.7	Tuberculosis of other specified bone
.43	Tuberculous fibrosis of lung, tubercle bacilli found (in sputum) by microscopy	.70	Tuberculosis of other specified bone, unspecified examination
.6	Tuberculous pneumonia (any form)	.75	Tuberculosis of other specified bone, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.60	Tuberculous pneumonia (any form), unspecified examination	.9	Tuberculosis of unspecified bones and joints
.63	Tuberculous pneumonia (any form), tubercle bacilli found (in sputum) by microscopy	.90	Tuberculosis of unspecified bones and joints, unspecified examination
.64	Tuberculous pneumonia (any form), tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.96	Tuberculosis of unspecified bones and joints, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.66	Tuberculous pneumonia (any form), tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	016	Tuberculosis of genitourinary system
.7	Tuberculous pneumothorax	.0	Tuberculosis of kidney
.72	Tuberculous pneumothorax, bacteriological or histological examination results unknown (at present)	.00	Tuberculosis of kidney, unspecified examination
.73	Tuberculous pneumothorax, tubercle bacilli found (in sputum) by microscopy	.06	Tuberculosis of kidney, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.74	Tuberculous pneumothorax, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.3	Tuberculosis of other urinary organs
.8	Other specified pulmonary tuberculosis	.30	Tuberculosis of other urinary organs, unspecified examination
.80	Other specified pulmonary tuberculosis, unspecified examination	.5	Tuberculosis of other male genital organs
.83	Other specified pulmonary tuberculosis, tubercle bacilli found (in sputum) by microscopy	.55	Tuberculosis of other male genital organs, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.9	Unspecified pulmonary tuberculosis	017	Tuberculosis of other organs
.90	Unspecified pulmonary tuberculosis, unspecified examination	.0	Tuberculosis of skin and subcutaneous cellular tissue
.91	Unspecified pulmonary tuberculosis, bacteriological or histological examination not done	.00	Tuberculosis of skin and subcutaneous cellular tissue, unspecified examination
.93	Unspecified pulmonary tuberculosis, tubercle bacilli found (in sputum) by microscopy	.2	Tuberculosis of peripheral lymph nodes
.94	Unspecified pulmonary tuberculosis, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.20	Tuberculosis of peripheral lymph nodes, unspecified examination
.95	Unspecified pulmonary tuberculosis, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically	.25	Tuberculosis of peripheral lymph nodes, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.96	Unspecified pulmonary tuberculosis, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.26	Tuberculosis of peripheral lymph nodes, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
012	Other respiratory tuberculosis	.7	Tuberculosis of spleen
.0	Tuberculous pleurisy	.70	Tuberculosis of spleen, unspecified examination
.00	Tuberculous pleurisy, unspecified examination	.8	Tuberculosis of esophagus
.04	Tuberculous pleurisy, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.86	Tuberculosis of esophagus, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.06	Tuberculous pleurisy, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.9	Tuberculosis of other specified organs
.1	Tuberculosis of intrathoracic lymph nodes	.90	Tuberculosis of other specified organs, unspecified examination
.10	Tuberculosis of intrathoracic lymph nodes, unspecified examination	.93	Tuberculosis of other specified organs, tubercle bacilli found (in sputum) by microscopy
013	Tuberculosis of meninges and central nervous system	.94	Tuberculosis of other specified organs, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.0	Tuberculous meningitis	018	Miliary tuberculosis
.00	Tuberculous meningitis, unspecified examination	.8	Other specified miliary tuberculosis
.3	Tuberculous abscess of brain	.82	Other specified miliary tuberculosis, bacteriological or histological examination results unknown (at present)
.30	Tuberculous abscess of brain, unspecified examination	.84	Other specified miliary tuberculosis, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.9	Unspecified tuberculosis of central nervous system	.86	Other specified miliary tuberculosis, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.90	Unspecified tuberculosis of central nervous system, unspecified examination	.9	Unspecified miliary tuberculosis
014	Tuberculosis of intestines, peritoneum, and mesenteric glands	.90	Unspecified miliary tuberculosis, unspecified examination
.0	Tuberculous peritonitis	.93	Unspecified miliary tuberculosis, tubercle bacilli found (in sputum) by microscopy
.00	Tuberculous peritonitis, unspecified examination	.94	Unspecified miliary tuberculosis, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.03	Tuberculous peritonitis, tubercle bacilli found (in sputum) by microscopy	.95	Unspecified miliary tuberculosis, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.8	Tuberculosis of intestines and mesenteric glands	.96	Unspecified miliary tuberculosis, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.80	Tuberculosis of intestines and mesenteric glands, unspecified examination	020	Plague
.82	Tuberculosis of intestines and mesenteric glands, bacteriological or histological examination results unknown (at present)	.8	Other specified types of plague
015	Tuberculosis of bones and joints	021	Tularemia
.0	Tuberculosis of vertebral column	.0	Ulceroglandular tularemia
.00	Tuberculosis of vertebral column, unspecified examination	023	Brucellosis
.01	Tuberculosis of vertebral column, bacteriological or histological examination not done	.9	Brucellosis, unspecified
.02	Tuberculosis of vertebral column, bacteriological or histological examination results unknown (at present)		
.05	Tuberculosis of vertebral column, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically		

027	Other zoonotic bacterial diseases	.3	Causing other specified conditions
.0	Listeriosis	.9	Acquired immunodeficiency syndrome-related complex, unspecified
.1	Erysipelothrix infection		Other human immunodeficiency virus infection, unspecified
.2	Pasteurellosis	044	Acute poliomyelitis
031	Diseases due to other mycobacteria	045	Acute poliomyelitis with other paralysis
.0	Pulmonary diseases due to other mycobacteria	.1	Acute poliomyelitis with other paralysis, unspecified type of poliovirus
.1	Cutaneous diseases due to other mycobacteria	.10	Acute nonparalytic poliomyelitis
.8	Other specified mycobacterial diseases		Acute nonparalytic poliomyelitis, unspecified type of poliovirus
.9	Unspecified diseases due to mycobacteria	.2	Unspecified acute poliomyelitis
032	Diphtheria	.20	Unspecified acute poliomyelitis, unspecified type of poliovirus
.8	Other specified diphtheria	.9	Unspecified acute poliomyelitis, poliovirus type I
.89	Other specified diphtheria	.90	Unspecified acute poliomyelitis, poliovirus type II
.9	Diphtheria, unspecified	.91	Unspecified acute poliomyelitis, poliovirus type III
033	Whooping cough	.92	Slow virus infection of central nervous system
.0	Whooping cough due to bordetella pertussis (B. pertussis)	.93	Kuru
.1	Whooping cough due to bordetella parapertussis (B. parapertussis)	046	Jakob-Creutzfeldt disease
.9	Whooping cough, unspecified organism	.0	Subacute sclerosing panencephalitis
034	Streptococcal sore throat and scarlet fever	.1	Progressive multifocal leukoencephalopathy
.0	Streptococcal sore throat	.2	Other specified slow virus infection of central nervous system
.1	Scarlet fever	.3	Meningitis due to enterovirus
035	Erysipelas	.8	Meningitis due to echo virus
036	Meningococcal infection	.9	Other specified viral meningitis
.0	Meningococcal meningitis	047	Unspecified viral meningitis
.1	Meningococcal encephalitis	.1	Other enterovirus diseases of central nervous system
.2	Meningococemia	.8	Other non-arthropod-borne viral diseases of central nervous system
.3	Waterhouse-friderichsen syndrome, meningococcal	048	Non-arthropod-borne lymphocytic choriomeningitis
.8	Other specified meningococcal infections	049	Other specified non-arthropod-borne viral diseases of central nervous system
.89	Other specified meningococcal infections	.0	Unspecified non-arthropod-borne viral diseases of central nervous system
.9	Meningococcal infection, unspecified	.8	Cowpox and paravaccinia
038	Septicemia	.9	Contagious pustular dermatitis
.0	Streptococcal septicemia	051	Chickenpox
.1	Staphylococcal septicemia	.2	Postvaricella encephalitis
.2	Pneumococcal septicemia	.0	Varicella (hemorrhagic) pneumonitis
.3	Septicemia due to anaerobes	.1	Chickenpox with other specified complications
.4	Septicemia due to other gram-negative organisms	.7	Chickenpox with unspecified complication
.40	Septicemia due to gram-negative organism, unspecified	.8	Varicella without mention of complication
.41	Septicemia due to hemophilus influenzae (H. influenzae)	.9	Herpes zoster
.42	Septicemia due to escherichia coli (E. coli)	052	Herpes zoster with meningitis
.43	Septicemia due to pseudomonas	.0	Herpes zoster with other nervous system complications
.44	Septicemia due to serratia	.1	Herpes zoster with unspecified nervous system complication
.49	Other septicemia due to gram-negative organisms	.2	Postherpetic trigeminal neuralgia
.8	Other specified septicemias	.7	Postherpetic polyneuropathy
.9	Unspecified septicemia	.8	Herpes zoster with other nervous system complications
039	Actinomycotic infections	.9	Herpes zoster with ophthalmic complications
.1	Pulmonary actinomycotic infection	053	Herpes zoster dermatitis of eyelid
.2	Abdominal actinomycotic infection	.0	Herpes zoster keratoconjunctivitis
.3	Cervicofacial actinomycotic infection	.1	Herpes zoster with other ophthalmic complications
.8	Actinomycotic infection of other specified sites	.12	Herpes zoster with other specified complications
.9	Actinomycotic infection of unspecified site	.13	Otitis externa due to herpes zoster
040	Other bacterial diseases	.19	Herpes zoster with other specified complications
.0	Gas gangrene	.2	Herpes zoster with unspecified complication
.1	Rhinoscleroma	.20	Herpes zoster without mention of complication
.8	Other specified bacterial diseases	.21	Herpes simplex
.89	Other specified bacterial diseases	.29	Eczema herpeticum
041	Bacterial infection in conditions classified elsewhere and of unspecified site	.7	Genital herpes
.0	Streptococcus infection in conditions classified elsewhere and of unspecified site	.71	Genital herpes, unspecified
.1	Staphylococcus infection in conditions classified elsewhere and of unspecified site	.79	Herpetic vulvovaginitis
.2	Pneumococcus infection in conditions classified elsewhere and of unspecified site	.8	Herpetic ulceration of vulva
.3	Friedlander's bacillus infection in conditions classified elsewhere and of unspecified site	.9	Herpetic infection of penis
.4	Escherichia coli (E. coli) infection in conditions classified elsewhere and of unspecified site	054	Other genital herpes
.5	Hemophilus influenzae (H. influenzae) infection in conditions classified elsewhere and of unspecified site	.0	Herpetic gingivostomatitis
.6	Proteus (mirabilis) (morganii) infection in conditions classified elsewhere and of unspecified site	.1	Herpetic meningoencephalitis
.7	Pseudomonas infection in conditions classified elsewhere and of unspecified site	.10	Herpes simplex with ophthalmic complications
.8	Other specified bacterial infections in conditions classified elsewhere and of unspecified site	.11	Herpes simplex disciform keratitis
.9	Bacterial infection, unspecified, in conditions classified elsewhere and of unspecified site	.12	Herpes simplex with other ophthalmic complications
042	Human immunodeficiency virus infection with specified conditions	.13	Herpetic septicemia
.0	With specified infections	.19	Herpetic whitlow
.1	Causing other specified infections	.2	Herpes simplex with other specified complications
.2	With specified malignant neoplasms	.3	Herpes simplex meningitis
.9	Acquired immunodeficiency syndrome, unspecified	.4	Herpes simplex with other specified complications
043	Human immunodeficiency virus infection causing other specified conditions	.43	Herpes simplex without mention of complication
.0	Causing lymphadenopathy	.49	Measles
.1	Causing specified diseases of the central nervous system	.5	Postmeasles pneumonia
		.6	Postmeasles otitis media
		.7	Measles with other specified complications

.71	Measles keratoconjunctivitis	.6	Malaria, unspecified
.79	Measles with other specified complications	.9	Other pernicious complications of malaria
.8	Measles with unspecified complication	086	Trypanosomiasis
.9	Measles without mention of complication	.0	Chagas' disease with heart involvement
056	Rubella	.4	Rhodesian trypanosomiasis
.7	Rubella with other specified complications	087	Relapsing fever
.79	Rubella with other specified complications	.9	Relapsing fever, unspecified
.9	Rubella without mention of complication	088	Other arthropod-borne diseases
057	Other viral exanthemata	.0	Bartonellosis
.0	Erythema infectiosum (fifth disease)	.8	Other specified arthropod-borne diseases
.8	Other specified viral exanthemata	.81	Lyme disease
.9	Viral exanthem, unspecified	090	Congenital syphilis
062	Mosquito-borne viral encephalitis	.0	Early congenital syphilis, symptomatic
.3	St. Louis encephalitis	.4	Juvenile neurosyphilis
.5	California virus encephalitis	.40	Juvenile neurosyphilis, unspecified
.9	Mosquito-borne viral encephalitis, unspecified	.6	Late congenital syphilis, latent
063	Tick-borne viral encephalitis	.7	Late congenital syphilis, unspecified
.2	Central European encephalitis	.9	Congenital syphilis, unspecified
064	Viral encephalitis transmitted by other and unspecified arthropods	091	Early syphilis, symptomatic
066	Other arthropod-borne viral diseases	.2	Other primary syphilis
.1	Tick-borne fever	.3	Secondary syphilis of skin or mucous membranes
070	Viral hepatitis	.9	Unspecified secondary syphilis
.1	Viral hepatitis A without mention of hepatic coma	092	Early syphilis, latent
.2	Viral hepatitis B with hepatic coma	.9	Early syphilis, latent, unspecified
.3	Viral hepatitis B without mention of hepatic coma	093	Cardiovascular syphilis
.5	Other specified viral hepatitis without mention of hepatic coma	.2	Syphilitic endocarditis
.9	Unspecified viral hepatitis without mention of hepatic coma	.20	Syphilitic endocarditis of valve, unspecified
072	Mumps	094	Neurosyphilis
.1	Mumps meningitis	.0	Tabes dorsalis
.3	Mumps pancreatitis	.8	Other specified neurosyphilis
.9	Mumps without mention of complication	.89	Other specified neurosyphilis
073	Ornithosis	.9	Neurosyphilis, unspecified
.0	Ornithosis with pneumonia	095	Other forms of late syphilis, with symptoms
.9	Ornithosis, unspecified	.8	Other specified forms of late symptomatic syphilis
074	Specific diseases due to coxsackie virus	096	Late syphilis, latent
.0	Herpangina	097	Other and unspecified syphilis
.1	Epidemic pleurodynia	.0	Late syphilis, unspecified
.2	Coxsackie carditis	.1	Latent syphilis, unspecified
.21	Coxsackie pericarditis	.9	Syphilis, unspecified
.23	Coxsackie myocarditis	098	Gonococcal infections
.3	Hand, foot, and mouth disease	.0	Gonococcal infection (acute) of lower genitourinary tract
.8	Other specified diseases due to coxsackie virus	.1	Gonococcal infection (acute) of upper genitourinary tract
075	Infectious mononucleosis	.10	Gonococcal infection (acute) of upper genitourinary tract, site unspecified
076	Trachoma	.11	Gonococcal cystitis (acute)
.9	Trachoma, unspecified	.15	Gonococcal cervicitis (acute)
077	Other diseases of conjunctiva due to viruses and chlamydiae	.17	Gonococcal salpingitis, specified as acute
.1	Epidemic keratoconjunctivitis	.19	Other gonococcal infection (acute) of upper genitourinary tract
.3	Other adenoviral conjunctivitis	.2	Gonococcal infection, chronic, of lower genitourinary tract
.4	Epidemic hemorrhagic conjunctivitis	.3	Gonococcal infection, chronic, of upper genitourinary tract
.8	Other viral conjunctivitis	.37	Gonococcal salpingitis (chronic)
.9	Unspecified diseases of conjunctiva due to viruses and chlamydiae	.4	Gonococcal infection of eye
078	Other diseases due to viruses and chlamydiae	.40	Gonococcal conjunctivitis (neonatorum)
.0	Molluscum contagiosum	.5	Gonococcal infection of joint
.1	Viral warts	.50	Gonococcal arthritis
.2	Sweating fever	.51	Gonococcal synovitis and tenosynovitis
.3	Cat-scratch disease	.8	Gonococcal infection of other specified sites
.5	Cytomegalic inclusion disease	.86	Gonococcal peritonitis
.8	Other specified diseases due to viruses and chlamydiae	.89	Gonococcal infection of other specified sites
.89	Other specified diseases due to viruses and chlamydiae	099	Other venereal diseases
079	Viral infection in conditions classified elsewhere and of unspecified site	.0	Chancroid
.0	Adenovirus infection in conditions classified elsewhere and of unspecified site	.1	Lymphogranuloma venereum
.1	Echo virus infection in conditions classified elsewhere and of unspecified site	.3	Reiter's disease
.2	Coxsackie virus infection in conditions classified elsewhere and of unspecified site	.4	Other nongonococcal urethritis
.3	Rhinovirus infection in conditions classified elsewhere and of unspecified site	.9	Venereal disease, unspecified
.8	Other specified viral infections in conditions classified elsewhere and of unspecified site	100	Leptospirosis
.9	Unspecified viral infection in conditions classified elsewhere and of unspecified site	.9	Leptospirosis, unspecified
081	Other typhus	101	Vincent's angina
.9	Typhus, unspecified	102	Yaws
082	Tick-borne rickettsioses	.9	Yaws, unspecified
.0	Spotted fevers	104	Other spirochetal infection
.8	Other specified tick-borne rickettsioses	.9	Spirochetal infection, unspecified
.9	Tick-borne rickettsiosis, unspecified	110	Dermatophytosis
083	Other rickettsioses	.0	Dermatophytosis of scalp and beard
.0	Q fever	.1	Dermatophytosis of nail
.8	Other specified rickettsioses	.2	Dermatophytosis of hand
084	Malaria	.3	Dermatophytosis of groin and perianal area
.0	Falciparum malaria (malignant tertian)	.4	Dermatophytosis of foot
.1	Vivax malaria (benign tertian)	.5	Dermatophytosis of the body
		.8	Dermatophytosis of other specified sites
		.9	Dermatophytosis of unspecified site
		111	Dermatomycosis, other and unspecified
		.0	Pityriasis versicolor
		.8	Other specified dermatomycoses
		.9	Dermatomycosis, unspecified
		112	Candidiasis

.0	Candidiasis of mouth	1	Behcet's syndrome
1	Candidiasis of vulva and vagina	3	Pneumocystosis
.2	Candidiasis of other urogenital sites	.8	Other specified infectious and parasitic diseases
.3	Candidiasis of skin and nails	.9	Unspecified infectious and parasitic diseases
.4	Candidiasis of lung	137	Late effects of tuberculosis
5	Disseminated candidiasis	0	Late effects of respiratory or unspecified tuberculosis
.8	Candidiasis of other specified sites	1	Late effects of central nervous system tuberculosis
.81	Candidal endocarditis	.3	Late effects of tuberculosis of bones and joints
.89	Other candidiasis of other specified sites	138	Late effects of acute poliomyelitis
.9	Candidiasis of unspecified site	139	Late effects of other infectious and parasitic diseases
114	Coccidioidomycosis	.0	Late effects of viral encephalitis
.0	Primary coccidioidomycosis (pulmonary)	.8	Late effects of other and unspecified infectious and parasitic diseases
.3	Other forms of progressive coccidioidomycosis		
.9	Coccidioidomycosis, unspecified	140-239	Neoplasms
115	Histoplasmosis	140	Malignant neoplasm of lip

.8	Other specified infectious and parasitic diseases complicating pregnancy, childbirth, or the puerperium	.84	Abnormal glucose tolerance of mother, postpartum
.80	Other specified infectious and parasitic diseases of mother, complicating pregnancy, childbirth, or the puerperium, unspecified as to episode of care	9	Other current conditions complicating pregnancy, childbirth, or the puerperium
.81	Other specified infectious and parasitic diseases of mother, with delivery	.90	Other current conditions classifiable elsewhere of mother, complicating pregnancy, childbirth, or the puerperium, unspecified as to episode of care
.82	Other specified infectious and parasitic diseases of mother, with delivery, with mention of postpartum complication	.91	Other current conditions classifiable elsewhere of mother, with delivery
.83	Other specified infectious and parasitic diseases of mother, antepartum	.92	Other current conditions classifiable elsewhere of mother, with delivery, with mention of postpartum complication
.84	Other specified infectious and parasitic diseases of mother, postpartum	.93	Other current conditions classifiable elsewhere of mother, antepartum
.9	Unspecified infection or infestation complicating pregnancy, childbirth, or the puerperium	.94	Other current conditions classifiable elsewhere of mother, postpartum
.91	Unspecified infection or infestation of mother, with delivery	650	Delivery in a completely normal case
.92	Unspecified infection or infestation of mother, with delivery, with mention of postpartum complication	651	Multiple gestation
.93	Unspecified infection or infestation of mother, antepartum	.0	Twin pregnancy
648	Other current conditions in the mother classifiable elsewhere, but complicating pregnancy, childbirth, or the puerperium	.00	Twin pregnancy, unspecified as to episode of care
.0	Diabetes mellitus complicating pregnancy, childbirth, or the puerperium	.01	Twin pregnancy, delivered
.00	Diabetes mellitus of mother, complicating pregnancy, childbirth, or the puerperium, unspecified as to episode of care	.03	Twin pregnancy, antepartum condition or complication
.01	Diabetes mellitus of mother, with delivery	.1	Triplet pregnancy
.02	Diabetes mellitus of mother, with delivery, with mention of postpartum complication	.11	Triplet pregnancy, delivered
.03	Antepartum diabetes mellitus	.13	Triplet pregnancy, antepartum condition or complication
.04	Postpartum diabetes mellitus	.2	Quadruplet pregnancy
.1	Thyroid dysfunction complicating pregnancy, childbirth, or the puerperium		
.11	Thyroid dysfunction of mother, with delivery		

.21	Quadruplet pregnancy, delivered	.12	Tumors of body of uterus, delivered, with mention of postpartum complication
.3	Twin pregnancy with fetal loss and retention of one fetus	.13	Tumors of body of uterus, antepartum condition or complication
.31	Twin pregnancy with fetal loss and retention of one fetus, delivered, with or without mention of antepartum condition	.2	Uterine scar from previous surgery complicating pregnancy, childbirth, or the puerperium
.9	Unspecified multiple gestation	.20	Uterine scar from previous surgery, unspecified as to episode of care in pregnancy
.91	Unspecified multiple gestation, delivered		/ Previous cesarean section unspecified as to episode of care or not applicable
.93	Unspecified multiple gestation, antepartum condition or complication	.21	Uterine scar from previous surgery, with delivery
652	Malposition and malpresentation of fetus		/ Previous cesarean section delivered, with or without mention of antepartum condition
.0	Unstable lie of fetus	.23	Uterine scar from previous surgery, antepartum condition or complication
.01	Unstable lie, delivered		/ Previous cesarean section antepartum condition or complication
.1	Breech or other malpresentation successfully converted to cephalic presentation	.3	Retroverted and incarcerated gravid uterus
.10	Breech or other malpresentation successfully converted to cephalic presentation, unspecified as to episode of care	.31	Retroverted and incarcerated gravid uterus, delivered
.11	Breech or other malpresentation successfully converted to cephalic presentation, delivered	.33	Retroverted and incarcerated gravid uterus, antepartum
.13	Breech or other malpresentation successfully converted to cephalic presentation, antepartum	.4	Other abnormalities in shape or position of gravid uterus and of neighboring structures
.2	Breech presentation without mention of version	.40	Other abnormalities in shape or position of gravid uterus and of neighboring structures, unspecified as to episode of care
.20	Breech presentation without mention of version, unspecified as to episode of care	.41	Other abnormalities in shape or position of gravid uterus and of neighboring structures, delivered
.21	Breech presentation without mention of version, delivered	.43	Other abnormalities in shape or position of gravid uterus and of neighboring structures, antepartum
.23	Breech presentation without mention of version, antepartum	.5	Cervical incompetence complicating pregnancy, childbirth, or the puerperium
.3	Transverse or oblique presentation of fetus	.50	Cervical incompetence, unspecified as to episode of care in pregnancy
.31	Transverse or oblique presentation, delivered	.51	Cervical incompetence, with delivery
.33	Transverse or oblique presentation, antepartum	.53	Cervical incompetence, antepartum condition or complication
.4	Face or brow presentation of fetus	.54	Cervical incompetence, postpartum condition or complication
.41	Face or brow presentation, delivered	.6	Other congenital or acquired abnormality of cervix complicating pregnancy, childbirth, or the puerperium
.5	High fetal head at term	.61	Other congenital or acquired abnormality of cervix, with delivery
.51	High head at term, delivered	.63	Other congenital or acquired abnormality of cervix, antepartum condition or complication
.53	High head at term, antepartum	.7	Congenital or acquired abnormality of vagina complicating pregnancy, childbirth, or the puerperium
.6	Multiple gestation with malpresentation of one fetus or more	.71	Congenital or acquired abnormality of vagina, with delivery
.61	Multiple gestation with malpresentation of one fetus or more, delivered	.73	Congenital or acquired abnormality of vagina, antepartum condition or complication
.63	Multiple gestation with malpresentation of one fetus or more, antepartum	.8	Congenital or acquired abnormality of vulva complicating pregnancy, childbirth, or the puerperium
.7	Prolapsed arm of fetus	.81	Congenital or acquired abnormality of vulva, with delivery
.71	Prolapsed arm of fetus, delivered	.82	Congenital or acquired abnormality of vulva, delivered, with mention of postpartum complication
.8	Other specified malposition or malpresentation of fetus	.9	Unspecified abnormality of organs and soft tissues of pelvis complicating pregnancy, childbirth, and the puerperium
.81	Other specified malposition or malpresentation, delivered	.91	Unspecified abnormality of organs and soft tissues of pelvis, with delivery
.83	Other specified malposition or malpresentation, antepartum		/ Other and unspecified delivered, with or without mention of antepartum condition
.9	Unspecified malposition or malpresentation of fetus	655	Known or suspected fetal abnormality affecting management of mother
.91	Unspecified malposition or malpresentation, delivered	.0	Central nervous system malformation in fetus affecting management of mother
653	Disproportion in pregnancy, labor, and delivery	.00	Central nervous system malformation in fetus, unspecified as to episode of care in pregnancy
.0	Major abnormality of bony pelvis, not further specified, in pregnancy, labor, and delivery	.01	Central nervous system malformation in fetus, with delivery
.01	Major abnormality of bony pelvis, not further specified, delivered	.03	Central nervous system malformation in fetus, antepartum
.1	Generally contracted pelvis in pregnancy, labor, and delivery	.1	Chromosomal abnormality in fetus affecting management of mother
.11	Generally contracted pelvis, delivered	.10	Chromosomal abnormality in fetus, affecting management of mother, unspecified as to episode of care in pregnancy
.13	Generally contracted pelvis, antepartum	.11	Chromosomal abnormality in fetus, affecting management of mother, with delivery
.2	Inlet contraction of pelvis in pregnancy, labor, and delivery	.13	Chromosomal abnormality in fetus, affecting management of mother, antepartum
.21	Inlet contraction of pelvis, delivered	.2	Hereditary disease in family possibly affecting fetus, affecting management of mother
.3	Outlet contraction of pelvis in pregnancy, labor, and delivery	.21	Hereditary disease in family possibly affecting fetus, affecting management of mother, with delivery
.31	Outlet contraction of pelvis, delivered	.3	Suspected damage to fetus from viral disease in the mother, affecting management of mother
.33	Outlet contraction of pelvis, antepartum	.30	Suspected damage to fetus from viral disease in the mother, affecting management of mother, unspecified as to episode of care in pregnancy
.4	Fetopelvic disproportion	.31	Suspected damage to fetus from viral disease in the mother, affecting management of mother, with delivery
.40	Fetopelvic disproportion, unspecified as to episode of care	.4	Suspected damage to fetus from other disease in the mother, affecting management of mother
.41	Fetopelvic disproportion, delivered		
.43	Fetopelvic disproportion, antepartum		
.5	Unusually large fetus causing disproportion		
.51	Unusually large fetus causing disproportion, delivered		
.53	Unusually large fetus causing disproportion, antepartum		
.6	Hydrocephalic fetus causing disproportion		
.61	Hydrocephalic fetus causing disproportion, delivered		
.7	Other fetal abnormality causing disproportion		
.71	Other fetal abnormality causing disproportion, delivered		
.73	Other fetal abnormality causing disproportion, antepartum		
.8	Disproportion of other origin in pregnancy, labor, and delivery		
.81	Disproportion of other origin, delivered		
.9	Unspecified disproportion in pregnancy, labor, and delivery		
.91	Unspecified disproportion, delivered		
654	Abnormality of organs and soft tissues of pelvis complicating pregnancy, childbirth, or the puerperium		
.0	Congenital abnormalities of uterus complicating pregnancy, childbirth, or the puerperium		
.01	Congenital abnormalities of uterus, with delivery		
.03	Congenital abnormalities of uterus, antepartum condition or complication		
.1	Tumors of body of uterus complicating pregnancy, childbirth, or the puerperium		
.10	Tumors of body of uterus, unspecified as to episode of care in pregnancy		
.11	Tumors of body of uterus, with delivery		

.41	Suspected damage to fetus from other disease in the mother, affecting management of mother, with delivery	.30	Delayed delivery after artificial rupture of membranes, unspecified as to episode of care
5	Suspected damage to fetus from drugs, affecting management of mother	.31	Delayed delivery after artificial rupture of membranes, delivered
.51	Suspected damage to fetus from drugs, affecting management of mother, delivered	.4	Infection of amniotic cavity
.8	Other known or suspected fetal abnormality, not elsewhere classified, affecting management of mother	.40	Infection of amniotic cavity, unspecified as to episode of care
.80	Other known or suspected fetal abnormality, not elsewhere classified, affecting management of mother, unspecified as to episode of care	.41	Infection of amniotic cavity, delivered
.81	Other known or suspected fetal abnormality, not elsewhere classified, affecting management of mother, delivered	.43	Infection of amniotic cavity, antepartum
.83	Other known or suspected fetal abnormality, not elsewhere classified, affecting management of mother, antepartum condition or complication	.8	Other problems associated with amniotic cavity and membranes
9	Known or suspected fetal abnormality affecting management of mother, unspecified	.81	Other problems associated with amniotic cavity and membranes, delivered
.91	Unspecified known or suspected fetal abnormality, affecting management of mother, delivered	.83	Other problems associated with amniotic cavity and membranes, antepartum
656	Other fetal and placental problems affecting management of mother	.9	Unspecified problem associated with amniotic cavity and membranes
.0	Fetal-maternal hemorrhage affecting management of mother	.91	Unspecified problem associated with amniotic cavity and membranes, delivered
.01	Fetal-maternal hemorrhage, with delivery	659	Other indications for care or intervention related to labor and delivery, not elsewhere classified
.1	Rhesus isoimmunization affecting management of mother	.0	Failed mechanical induction of labor
.10	Rhesus isoimmunization, unspecified as to episode of care in pregnancy	.01	Failed mechanical induction of labor, delivered
.11	Rhesus isoimmunization, affecting management of mother, delivered	.03	Failed mechanical induction of labor, antepartum
.13	Rhesus isoimmunization, affecting management of mother, antepartum condition	.1	Failed medical or unspecified induction of labor
.2	Isoimmunization from other and unspecified blood-group incompatibility affecting management of mother	.10	Failed medical or unspecified induction of labor, unspecified as to episode of care
.21	Isoimmunization from other and unspecified blood-group incompatibility, affecting management of mother, delivered	.11	Failed medical or unspecified induction of labor, delivered
.23	Isoimmunization from other and unspecified blood-group incompatibility, affecting management of mother, antepartum	.13	Failed medical or unspecified induction of labor, antepartum
.3	Fetal distress affecting management of mother	.2	Maternal pyrexia during labor, unspecified
.31	Fetal distress, affecting management of mother, delivered	.21	Unspecified type maternal pyrexia during labor, delivered
.33	Fetal distress, affecting management of mother, antepartum	.23	Unspecified type maternal pyrexia, antepartum
.4	Intrauterine death affecting management of mother	.3	Generalized infection during labor
.40	Intrauterine death, affecting management of mother, unspecified as to episode of care	.31	Generalized infection during labor, delivered
.41	Intrauterine death, affecting management of mother, delivered	.4	Grand multiparity, with current pregnancy
.43	Intrauterine death, affecting management of mother, antepartum	.40	Grand multiparity, with current pregnancy, unspecified as to episode of care
.5	Poor fetal growth affecting management of mother	.41	Grand multiparity, with current pregnancy, delivered
.51	Poor fetal growth, affecting management of mother, delivered	.43	Grand multiparity, with current pregnancy, antepartum
.53	Poor fetal growth, affecting management of mother, antepartum condition or complication	.5	Elderly primigravida
.6	Excessive fetal growth affecting management of mother	.51	Elderly primigravida, delivered
.61	Excessive fetal growth, affecting management of mother, delivered	.53	Elderly primigravida, antepartum
.63	Excessive fetal growth, affecting management of mother, antepartum	.8	Other specified indications for care or intervention related to labor and delivery
.7	Other placental conditions affecting management of mother	.81	Other specified indications for care or intervention related to labor and delivery, delivered

Appendix IV

Conversion table of changes in ICD-9-CM codes

Although the *International Classification of Diseases, 9th Revision, Clinical Modification* has been used for coding NHDS data since 1979, the classification undergoes annual updating. Assignment of new diagnostic and procedure codes, fourth and fifth digit expansion of codes, as well as code deletions, are contained in addenda developed by the ICD-9-CM Coordination and Maintenance Committee and approved by the Director of NCHS and the Administrator of the Health Care Financing Administration. Addenda to the ICD-9-CM become effective October 1 of the affected year and have been released for 1986, 1987, 1988, 1989, and 1990.

As described earlier, the 1990 NHDS involved two data collection modes: manual and abstract. All data collected manually were coded using the ICD-9-CM including the addenda for 1986-90. Data collected via abstract service were coded using two different ICD-9-CM revisions. For the first 9 months of 1990, the ICD-9-CM including the addenda of October 1, 1986-89 was used. For the last 3 months of 1990, the ICD-9-CM including the addenda of October 1, 1986-90 was used. Therefore, the reader is cautioned that annual estimates for new ICD-9-CM codes may be underestimated for 1990 and that it is necessary to note both the old and new descriptions for codes that were changed.

The following conversion table shows the new ICD-9-CM codes, the date they were introduced, and the code to which the diagnosis or procedure had been assigned prior to the development of the new code.

Diagnosis Codes

*Codes 78.90-78.99 were retitled as "Insertion of bone growth stimulator" in October 1987; the previous contents of codes 78.90-78.99 were reassigned to codes 78.40-78.49.

[‡]Codes 99.71-99.79 were deleted in October 1987; their contents were not transferred elsewhere. In the October 1988 revision, codes 99.71-99.79 were reclassified as "Therapeutic apheresis."

Vital and Health Statistics series descriptions

- SERIES 1. Programs and Collection Procedures**—These reports describe the data collection programs of the National Center for Health Statistics. They include descriptions of the methods used to collect and process the data, definitions, and other material necessary for understanding the data.
- SERIES 2. Data Evaluation and Methods Research**—These reports are studies of new statistical methods and include analytical techniques, objective evaluations of reliability of collected data, and contributions to statistical theory. These studies also include experimental tests of new survey methods and comparisons of U.S. methodology with those of other countries.
- SERIES 3. Analytical and Epidemiological Studies**—These reports present analytical or interpretive studies based on vital and health statistics. These reports carry the analyses further than the expository types of reports in the other series.
- SERIES 4. Documents and Committee Reports**—These are final reports of major committees concerned with vital and health statistics and documents such as recommended model vital registration laws and revised birth and death certificates.
- SERIES 5. International Vital and Health Statistics Reports**—These reports are analytical or descriptive reports that compare U.S. vital and health statistics with those of other countries or present other international data of relevance to the health statistics system of the United States.
- SERIES 6. Cognition and Survey Measurement**—These reports are from the national Laboratory for Collaborative Research in Cognition and Survey Measurement. They use methods of cognitive science to design, evaluate, and test survey instruments.
- SERIES 10. Data From the National Health Interview Survey**—These reports contain statistics on illness; unintentional injuries; disability; use of hospital, medical, and other health services; and a wide range of special current health topics covering many aspects of health behaviors, health status, and health care utilization. They are based on data collected in a continuing national household interview survey.
- SERIES 11. Data From the National Health Examination Survey, the National Health and Nutrition Examination Surveys, and the Hispanic Health and Nutrition Examination Survey**—Data from direct examination, testing, and measurement on representative samples of the civilian noninstitutionalized population provide the basis for (1) medically defined total prevalence of specific diseases or conditions in the United States and the distributions of the population with respect to physical, physiological, and psychological characteristics, and (2) analyses of trends and relationships among various measurements and between survey periods.
- SERIES 12. Data From the Institutionalized Population Surveys**—Discontinued in 1975. Reports from these surveys are included in Series 13.
- SERIES 13. Data From the National Health Care Survey**—These reports contain statistics on health resources and the Public's use of health care resources including ambulatory, hospital, and long-term care services based on data collected directly from health care providers and provider records.
- SERIES 14. Data on Health Resources: Manpower and Facilities**—Discontinued in 1990. Reports on the numbers, geographic distribution, and characteristics of health resources are now included in Series 13.
- SERIES 15. Data From Special Surveys**—These reports contain statistics on health and health-related topics collected in special surveys that are not part of the continuing data systems of the National Center for Health Statistics.
- SERIES 16. Compilations of Advance Data From Vital and Health Statistics**—Advance Data Reports provide early release of information from the National Center for Health Statistics' health and demographic surveys. They are compiled in the order in which they are published. Some of these releases may be followed by detailed reports in series 10–13.
- SERIES 20. Data on Mortality**—These reports contain statistics on mortality that are not included in regular, annual, or monthly reports. Special analyses by cause of death, age, other demographic variables, and geographic and trend analyses are included.
- SERIES 21. Data on Natality, Marriage, and Divorce**—These reports contain statistics on natality, marriage, and divorce that are not included in regular, annual, or monthly reports. Special analyses by health and demographic variables and geographic and trend analyses are included.
- SERIES 22. Data From the National Mortality and Natality Surveys**—Discontinued in 1975. Reports from these sample surveys, based on vital records, are now published in series 20 or 21.
- SERIES 23. Data From the National Survey of Family Growth**—These reports contain statistics on factors that affect birth rates, including contraception, infertility, cohabitation, marriage, divorce, and remarriage; adoption; use of medical care for family planning and infertility; and related maternal and infant health topics. These statistics are based on national surveys of childbearing age.
- SERIES 24. Compilations of Data on Natality, Mortality, Marriage, Divorce, and Induced Terminations of Pregnancy**—These include advance reports of births, deaths, marriages, and divorces based on final data from the National Vital Statistics System that were published as supplements to the *Monthly Vital Statistics Report (MVSR)*. These reports provide highlights and summaries of detailed data subsequently published in *Vital Statistics of the United States*. Other supplements to the MVSR published here provide selected findings based on final data from the National Vital Statistics System and may be followed by detailed reports in series 20 or 21.
