Detailed Diagnoses and Procedures National Hospital Discharge Survey, 1991

Series 13:
Data From the National Health Survey
No. 115

This report presents statistics on conditions diagnosed and surgical and nonsurgical procedures performed in non-Federal short-stay hospitals. The statistics are based on data collected through the National Hospital Discharge Survey from a national sample of the hospital records of discharged inpatients. Estimates of first-listed diagnoses, all-listed diagnoses, days of care for first-listed diagnoses, and all-listed procedures are shown by sex and age of patient and geographic region of hospital.

Detailed Diagnoses and Procedures, National Hospital Discharge Survey, 1991

by Edmund J. Graves, Division of Health Care Statistics

Introduction

The purpose of this report is to provide detailed data from the National Hospital Discharge Survey (NHDS). Data for 1991 are shown by age and sex of the patient and geographic region of the hospital for conditions diagnosed and surgical and nonsurgical procedures performed. The report is intended as a source document for researchers and others who need data for detailed diagnostic and procedure categories. Similar reports have been published with data for 1977-79 (1-3) and 1983-90 (4-11).

The survey has been conducted continuously by the National Center for Health Statistics (NCHS) since 1965. Estimates are produced from a sample of inpatient records that are obtained from a national sample of short-stay non-Federal general and specialty hospitals in the United States. The 1991 sample included approximately 274,000 medical records from 484 hospitals that participated in the survey.

The original universe for the survey consisted of 6,965 short-stay hospitals contained in the 1963 National Master Facility Inventory of Hospitals (NMFI). The universe was updated periodically from the lists of hospitals provided by the American Hospital Association. A description of the development of the original survey, which was in operation since 1964, has been published (12).

Beginning in 1988, the NHDS was redesigned in order to link it with other surveys conducted by NCHS and to improve efficiency through the use of information and technologies that were not available when the survey was first designed in 1964. Differences between NHDS statistics based on the 1965-87 sample and statistics based on the redesign may be due to factors other than real changes in hospital utilization.

The redesigned survey uses a three-stage stratified sample based on hospitals contained in the April 1987

Hospital Market Database from SMG Marketing Group, Inc. (13). In 1991 the sampling frame was updated to include hospitals from 1991 *SMG Hospital Market Database* (14). A brief description of the new design, along with information about data collection procedures, the estimation process, and relative standard errors, can be found in appendix I.

Familiarity with NHDS definitions is important to interpret the data properly and to compare them with statistical data on short-stay hospital utilization that are available from other sources. Definitions of the terms used in this report are presented in appendix II. The medical data for hospital patients are coded according to the *International Classification of Diseases, 9th Revision, Clinical Modification* (ICD-9-CM) (15). (See appendix III for ICD-9-CM codes.) This coding system is updated periodically. The reader is cautioned that annual estimates for new ICD-9-CM codes are underestimated for 1991. For a fuller discussion of this problem see the introduction to appendix IV. New ICD-9-CM codes for 1986-91 are shown in a conversion table in appendix IV. Information about newborn infants, although collected through the survey, is excluded from this report.

Information on short-stay hospital utilization is also collected through the National Health Interview Survey (NHIS) of NCHS. Estimates from that survey generally differ from NHDS estimates because of differences in collection procedures, populations sampled, and definitions. Data from NHIS are published in Series 10 of *Vital and Health Statistics*. However, data on the detailed diagnoses and procedures published in this report are not available through NHIS.

NOTE: This report was prepared in the Division of Health Statistics. Charles Adams and Malcolm Graham of the Technical Services Branch provided the computer programming for the report. This report was edited by Margaret Avery and typeset by Jacqueline M. Davis of the Publications Branch, Division of Data Services.

Use of tables

The detailed tables in this report show the conditions diagnosed and procedures performed according to the detailed code numbers of the *International Classification of Diseases, 9th Revision, Clinical Modification* (15). Measurements of hospital utilization are shown in terms of numbers of first-listed and all-listed diagnoses, of days of care for first-listed diagnoses, and of procedures performed for the individuals discharged.

Presentation of estimates

Tables 1–3 provide information by ICD–9–CM 3-, 4-, and 5-digit diagnostic codes. Table 4 shows 2-, 3-, and 4-digit procedure codes. A specific code appears in tables 1, 3, and 4 if the estimate of the total for the code is 5,000 or more. These estimates generally have a relative standard error (a measure of the reliability of the data) no higher than 30 percent and a sample size greater than 30. The codes that appear in table 2 for days of care are identical to those in table 1 for first-listed diagnoses. Only an asterisk (*) is shown in tables 1, 3, and 4 if the estimate of diagnoses or procedures for a sex or age group or region is less than 5,000. Only an asterisk is shown in table 2 for estimates of days of care derived from fewer than 5,000 estimated discharges.

In addition, all estimates of diagnoses and procedures less than 9,000 are preceded by an asterisk to indicate that they are based on a relatively small sample of discharge records. These estimates are generally based on fewer than 60 records. Days-of-care estimates derived from fewer than 9,000 estimated discharges are also indicated by asterisks. These estimates are usually less than 58,000.

The total for all codes presented at the beginning of each table includes estimates for codes not shown in the table. Likewise, the total for each diagnostic chapter or procedure category includes estimates for all the codes in the chapter or category, whether or not they are shown individually. Estimates for 5-digit codes may not add to the 4-digit total, 4-digit codes to the 3-digit total, or, for procedures, 3-digit codes to the 2-digit total because the totals include estimates for codes not shown or because the data were rounded to the nearest thousand for presentation.

Although 4- and 5-digit diagnostic codes are presented together under the 3-digit codes of which they are a part, the estimates for 4- and 5-digit codes cannot be added to obtain the estimate for the 3-digit code. For example, in table 1 the estimate for first-listed diagnosis code 008 is 110,000. If the estimates for the 4- and 5-digit

codes included in 008 are added, the total would be 128,000. This occurs because the estimate of 22,000 for code 008.49 is part of the estimate of 23,000 for code 008.4 and thus cannot be added to it. Similarly, estimates for 3- and 4-digit codes cannot be added together to obtain the estimate for a 2-digit code.

Diagnostic data

The first-listed diagnosis is the diagnosis identified as the principal diagnosis or listed first on the face sheet of the medical record. The number of all-listed diagnoses includes first-listed diagnoses and other diagnoses appearing on the medical record. At present, a minimum of one and up to a maximum of seven diagnoses are coded; before 1979, however, the maximum number was five.

With regard to all-listed diagnoses, it should be pointed out that there is a certain amount of “double coding” inherent in the ICD–9–CM; that is, certain diagnoses require the coding of two diagnostic codes. For example, females with deliveries all have one additional diagnostic code that indicates the outcome of their delivery (single liveborn; twins, both liveborn; and the like).

Procedure data

Procedures include surgical and nonsurgical operations, diagnostic procedures, and special treatments. Since 1979, up to four procedures have been coded for each discharge, an increase from the maximum of three procedures coded in preceding years. Beginning with the 1991 data, all ICD–9–CM procedure codes are used in the NHDS. Previously, selected codes, primarily for miscellaneous diagnostic and therapeutic procedures, were not used.

Computation of other statistics

The data in tables 1–4 can be used to compute other hospital-use statistics, such as rates of diagnoses and average lengths of stay for diagnoses. In general, a rate is the ratio between one statistic (for example, number of discharges) and another statistic (for example, the population) for a given period of time (such as 1 year). Usually the resulting figure is multiplied by some constant (for example, 100, 1,000, or 10,000) to produce rates greater than one. The rates shown in most NHDS publications are rates of discharges, diagnoses, and procedures per 1,000, 10,000, or 100,000 civilian population for a given year.

An average length of stay is calculated by dividing the number of days of care by the number of discharged patients. This statistic can be calculated for first-listed

diagnoses by dividing the days of care of patients with the diagnosis from table 2 by the number of patients with the diagnosis from table 1.

Statistical design of the National Hospital Discharge Survey

Scope of the survey—The National Hospital Discharge Survey (NHDS) covers discharges from noninstitutional hospitals, exclusive of Federal, military, and Veterans Administration hospitals, located in the 50 States and the District of Columbia. Only short-stay hospitals (hospitals with an average length of stay for all patients of less than 30 days) or those whose specialty is general (medical or surgical) or children's general are included in the survey. These hospitals must also have six beds or more staffed for patient use.

NHDS history—The National Center for Health Statistics (NCHS) has conducted the NHDS continuously since 1965. The original sample was selected in 1964 from a frame of short-stay hospitals listed in the National Master Facility Inventory. That sample was updated periodically with samples of hospitals that opened later. Sample hospitals were selected with probabilities ranging from certainty for the largest hospitals to 1 in 40 for the smallest hospitals. Within each sample hospital, a systematic random sample of discharges was selected. The development and design of the original NHDS has been published (12).

Until 1985, all data were collected by a system in which sample selection and transcription of information were done manually. Starting in 1985 some data were also collected using a system in which NCHS purchased data tapes containing discharge medical abstracts from commercial abstracting services and selected the samples from those tapes.

In 1988, the NCHS redesigned the NHDS to link it with other surveys conducted by NCHS and to improve efficiency through use of information and technologies that were not available when the survey was first designed in 1964. Details of the new design are outlined below.

The changes in the survey may affect trend data. That is, some of the differences between NHDS estimates based on the 1965–87 sample and estimates based on the 1988–90 sample may be due to survey redesign rather than to real changes in hospital utilization.

New sampling design—The 1988 NHDS sampling frame consisted of hospitals that were listed in the April 1987 SMG *Hospital Market Database* (13) and that began to accept inpatients by August 1987. The sampling frame was updated in 1991 to include hospitals from the 1991

SMG *Hospital Market Database* (14). The NHDS sample includes with certainty all hospitals with 1,000 beds or more or 40,000 discharges or more annually. The remaining sample of hospitals is based on a stratified three-stage design.

The first stage consists of 112 primary sampling units (PSU's) that comprise a probability subsample of PSU's used in the 1985–94 National Health Interview Survey (NHIS). The PSU's are counties, groups of counties, county equivalents (such as parishes or independent cities), or towns and townships (for some PSU's in New England). The NHDS sample includes with certainty the 26 PSU's with the largest populations. In addition, the sample includes half of the next 26 largest PSU's, and one PSU from each of 73 PSU strata formed from the remaining PSU's for the NHIS sample design. Those 73 PSU strata were defined within four geographical regions and were assigned metropolitan statistical area (MSA) or non-MSA status by using 1980 Census of Population data and a computer program that minimized the between-PSU variances for NHIS stratification variables. (MSA is a metropolitan statistical area defined by the U.S. Office of Management and Budget on the basis of the 1980 Census.) From the 73 strata thus formed, the PSU's were selected with probability proportional to the projected 1985 population. A more detailed analysis of the NHIS PSU sample design is presented in a Series 2 *Vital and Health Statistics* report (16).

The second stage consists of noncertainty hospitals selected from the sample PSU's. To assure distribution of the sample across PSU's and to maximize the potential for automated data collection, the noncertainty hospitals in those PSU's were stratified. The strata were defined by region, PSU, and in the 12 largest PSU's, by abstracting status (whether or not the hospital subscribes to a commercial abstracting service). Within the strata, the hospitals were ordered by PSU, abstracting service status, and the hospital specialty-size groups defined in table I. Within each specialty-size group, hospitals were arrayed by their annual numbers of discharges recorded in the April 1987 SMG Hospital Market Data Tape. Hospitals were then selected from each stratum's ordered array by systematic random sampling with probability proportional to their SMG-recorded 1987 annual numbers of discharges. The sampling rates were such that at least three hospitals were selected from every PSU containing three

eligible hospitals or more. In PSU's with fewer than three hospitals, all hospitals in the PSU were selected.

The hospital sample was updated in 1991 by continuing the sampling process among hospitals that were NHDS-eligible for the sampling frame in 1991, but not 1987. That is, the additional hospitals were added at the end of the list for the strata where they belonged, and the systematic sampling was continued as if the additional hospitals had been present during the initial sample selection. Hospitals that were no longer NHDS-eligible were deleted. The updating process will be repeated every third year. The 1991 sample consisted of 528 hospitals. Of those 528 hospitals, 7 were found to be out of scope (ineligible) because they had gone out of business or otherwise failed to meet the criteria for the NHDS universe. Of the 521 in-scope (eligible) hospitals, 484 hospitals responded. (NCHS collected data for at least half of the number of sample discharges expected in half or more of the months these hospitals were in scope.) The number of hospitals in the universe, the sample, and the responding sample are shown by region in table II.

At the third stage, a sample of discharges from each hospital was selected by a systematic random sampling technique. For hospitals using the manual system of data collection, the discharges were selected at the hospital from daily listing sheets, computer files, or other lists in which discharges were listed in some chronological order. For most of these hospitals, the sample discharges were selected on the basis of the terminal digit(s) of the patient's medical record number. In some cases, an admission number, billing number, or other number was used. If no patient numbers useful for sampling purposes were available in a hospital's list of discharges, the sample was

selected by starting with a randomly selected discharge and taking every *k*th discharge thereafter.

For hospitals whose data were collected via the automated system, the discharges were selected by NCHS from discharge medical abstract files after sorting by the first two digits of the ICD-9-CM code of the first-listed diagnosis, patient age group at time of admission (under 1 year, 1-14 years, 15-44 years, 45-64 years, 65-74 years, 75-84 years, 85 years and over, and age unknown), sex, and date of discharge. These samples were selected by starting with a randomly selected discharge and taking every *k*th discharge thereafter.

The third-stage sampling rate was determined by the hospital's sampling stratum and the system (manual or automated) used to collect data from the hospital. One percent and 5 percent of discharges in the certainty hospitals were selected under the manual and automated systems, respectively. Except for certainty hospitals, the target sample size was 250 discharges each from all manual system hospitals and from the automated system hospitals that had fewer than 4,000 discharges annually according to the 1987 sampling frame data. Samples of 2,000 were targeted for each of the remaining noncertainty automated system hospitals. The final sample for 1991 included about 274,000 discharge medical record abstracts.

Data collection and processing

Data collection—Two data collection procedures were used for the survey. One was a manual system of sample selection and data abstraction. The other was an automated method, used with approximately 33 percent of the

respondent hospitals in 1991, that involved the purchase of data tapes from abstracting service organizations, State data systems, or hospitals.

In the manual system, the sample selection and the transcription of information from the hospital records to abstract forms were performed at the hospitals. The completed forms, along with sample selection control sheets, were then forwarded to NCHS for coding, editing, and weighting. A few of these hospitals submitted their data via computer printout or tape. Of the hospitals using the manual system in 1991, about two-thirds had the work performed by their own medical records staff. In the remaining hospitals using the manual system, personnel of the U.S. Bureau of the Census did this work on behalf of NCHS. For the automated system, NCHS purchased tapes containing machine-readable medical record data from abstracting service organizations and selected sample discharges from these tapes.

Figure I shows the information collection form used in 1991. This form and the records on abstract service data tapes contain items relating to personal characteristics of the patient, including birth date, sex, race, ethnicity, marital status, ZIP Code (but not name and address), and expected sources of payment; administrative information, including admission and discharge dates, discharge status, and medical record number; and medical information, including diagnoses, surgical and nonsurgical operations or procedures, and dates of surgery. These data items conform with the Uniform Hospital Discharge Data Set (UHDDS) (17). The PSU, hospital name, medical record number, date of birth, and patient ZIP Code are confidential information and are not available to the public.

Medical coding and edit—The medical information recorded on the sample patient abstracts that was collected by the manual system was coded by NCHS staff. A maximum of seven diagnostic codes were assigned for each sample abstract. In addition, if the medical information included surgical or nonsurgical procedures, a maximum of four codes for these procedures were assigned. The system currently used for coding the diagnoses and procedures on the medical abstract forms, as well as the data that appear on the commercial abstracting services data tapes, is the *International Classification of Diseases, 9th Revision, Clinical Modification*, or ICD-9-CM (15). All of the diagnostic codes and procedure codes in the ICD-9-CM are used.

With two exceptions, the order of diagnoses and procedures for sampled discharges is preserved to reflect the order on the medical record face sheet or in the abstracting service file. One exception is for women admitted for delivery. In this case, a code of V27 from the supplemental classification must be assigned and it must be listed first. In the other exception, a decision was made to reorder some acute myocardial infarction diagnoses based on accepted medical coding practice. Whenever an acute myocardial infarction is encountered with other circulatory diagnoses and is other than the first entry, it must be reordered to first position.

An ongoing quality control program is undertaken on the coding and entering of data from abstracts to machine-readable form. Approximately 5 percent of the abstracts are independently recoded by an NHDS coder, with discrepancies resolved by the chief coder. The overall error rate for records manually coded by NCHS for the 1991 data year was 2.4 percent for medical (ICD-9-CM) coding and entering and 0.6 percent for demographic coding and entering.

Following conversion of the data on the medical abstract to computer tape and combining the data with the automated data tapes, a final medical edit was performed by computer inspection and by a manual review of rejected abstracts. If the sex or age of the patient was incompatible with the recorded medical information, priority was given to the medical information in the editing decision.

Presentation of estimates

Grouping of diagnoses and procedures—In this report, the diagnostic chapters, the broadest groupings of disease and injuries shown, correspond to ICD-9-CM chapters 1-17 and the supplementary classification of factors influencing health status and contact with health services. The procedure groupings used in this report are the groups numbered 1-16 in the ICD-9-CM section entitled "Procedure classification."

Patient characteristics not stated—Age or sex of the patient was not stated for about 1.1 percent of the sample discharges for 1991. These data were imputed by assigning the patient an age or sex consistent with the age or sex of other sampled patients with the same diagnostic code. Data on race were not available for 21.6 percent of the discharges, and missing values were not imputed. During 1991, 0.07 percent of the sampled records lacked an admission or discharge date. For these cases, a length of stay was imputed based on age unless the discharge was a newborn or a female with delivery, in which case a length of stay was assigned similar to the length of stay of sampled cases in these categories.

In addition to the edits performed by NCHS, data obtained through the automated system may have been edited by an abstract service and had data imputed. The extent of this imputation, if any, is unknown.

Rounded numbers—Estimates in this report have been rounded. Therefore, detailed figures may not add to totals. Rates and percents were calculated using unrounded figures and may not agree with computations made from the rounded data.

Population estimates—The population estimates used computing rates are from published and unpublished estimates for the U.S. civilian population, including institutionalized persons, on July 1 of the data year provided by the U.S. Bureau of the Census. The estimates by age, sex, and geographic region are presented in table III and are consistent with the population estimates published in *Current Population Reports*, Series P-25. Rates computed using these population estimates will be overestimates to

CONFIDENTIAL — All information which would permit identification of an individual or of an establishment will be held confidential, will be used only by persons engaged in and for the purposes of the survey, and will not be disclosed or released to other persons or used for any other purpose.

the extent that military personnel and non-U.S. citizens use NHDS-eligible hospitals and will be underestimates to the extent that civilians (for example, military dependents or retirees) use hospitals that are not in the NHDS universe, that is, hospitals that are institutional, Federal, military, veteran, or long-stay hospitals that are not general, maternal, or children's general hospitals.

Published and flagged estimates—Estimates are not presented unless a reasonable assumption regarding the probability distribution of the sampling error is possible on the basis of the Central Limit Theorem. The Central Limit Theorem states that, given a sufficiently large sample size, the sample estimate approximates the population estimate, and, upon repeated sampling, its distribution would be approximately normal.

Because of the complex sample design of the NHDS, estimates of diagnoses and procedures of lower than 5,000 and estimates of days of care derived from fewer than 5,000 estimated discharges are not shown. Only an asterisk (*) appears in the tables. These estimates generally have a relative standard error of more than 30 percent or are based on a sample of fewer than 30 cases. Estimates of 5,000-9,000 diagnoses or procedures and estimates of days of care derived from 5,000-9,000 estimated discharges are preceded by an asterisk to indicate that they may not be reliable. These estimates are generally based on fewer than 60 cases.

Estimation procedures

Statistics from NHDS are derived by a multistage estimation procedure that produces essentially unbiased national estimates and has three basic components: (1) inflation by reciprocals of the probabilities of sample selection, (2) adjustment for nonresponse, and (3) population-weighting ratio adjustments. The second and third components were made separately by admission

types—that is, for discharges of newborn infants (whose hospital stay began with their own births) and for discharges to other than newborn infants.

Inflation by reciprocals of probabilities of selection—There is one probability for each stage of sampling: (a) the probability of selecting the PSU, (b) the probability of selecting the hospital, and (c) the probability of selecting the discharge within the hospital. The last probability varies monthly and is calculated to be the sample size from the hospital for the month divided by the total number of discharges occurring at the hospital that month. The overall probability of selection is the product of the probabilities at each stage. The inverse of the overall selection probability is the basic inflation weight.

Adjustment for nonresponse—NHDS data were adjusted to account for two types of nonresponse. The first type of nonresponse occurred when an in-scope (NHDS eligible) sample hospital did not respond for more than half of the months during which it was in scope, thus making it a nonrespondent hospital. In this case, the weights of discharges from hospitals similar to the nonrespondent hospitals were inflated to account for discharges represented by the nonrespondent hospitals. For this purpose, hospitals were judged to be similar if they were in the same region, hospital specialty-size group, and if possible, the same sampling stratum (that is, the same abstracting status group if the nonrespondent hospital was in the 12 largest PSU's and in the same PSU otherwise). The adjustments for this nonresponse were made separately for admission types—that is, for discharges of newborn infants and for all other discharges. The adjustment consisted of a ratio for which the numerator was the weighted number of discharges of the admission type in all similar sample hospitals (regardless of response status) and the denominator was the weighted total of discharges of that admission type from the hospitals similar to the nonrespondent hospitals. Data on the number of discharges for each admission type for each hospital came from either the hospitals or the April 1992 SMG *Hospital Market Database* (18).

The second type of nonresponse occurred when NCHS failed to collect all the discharge abstracts expected (the number expected is the product of the hospital's total discharges each month and the discharge sampling rate assigned to the hospital). In each month when the hospital was respondent (at least half the expected abstracts were collected), the weights of abstracts collected for the month were inflated to account for the missing abstracts. For a hospital's month(s) of nonresponse, the weights of discharges in the hospital's respondent months were inflated by ratios that varied with discharge groups defined by the ICD-9-CM diagnostic classes of those discharges' first-listed diagnoses. The adjustment ratio for each partially-respondent hospital and each discharge group was calculated using only data from sample hospitals that were both NHDS eligible and respondent for all 12 months of the data year. The ratio had as its numerator the weighted sum of discharges in that discharge group for all months in

which the partially respondent hospital was in scope and had as its denominator the weighted sum of discharges in that discharge group that occurred in the months when the partially respondent hospital did respond to the NHDS.

Population weighting ratio adjustment—Adjustments were made within each of 16 noncertainty hospital groups defined by region and hospital specialty-size classes to adjust for oversampling or undersampling of discharges reported in the sampling frame for the data year. For discharges other than newborn infants, the adjustment is a multiplicative factor that had as its numerator the number of admissions reported for the year at sampling frame hospitals within each region-specialty-size group and as its denominator the estimated number of those admissions for that same hospital group. The adjustment for discharges of newborn infants was similar, but numbers of births were used in place of admissions. The ratio numerators were based on the figures obtained from the SMG *Hospital Market Database* (18) and the ratio denominators were obtained through a simple inflation of the SMG figures for the NHDS sample hospitals.

Reliability of estimates

Nonsampling errors—As from any survey, results are subject to nonsampling errors, which include errors that are due to sampling frame errors, hospital nonresponse, missing abstracts, and recording and processing errors. The magnitude of the nonsampling errors cannot be determined. However, errors resulting from the exclusion of in-scope hospitals from the sampling frame are believed to be small because the hospitals excluded are hospitals that opened after the frame was constructed and, hence, they tend to have few discharges relative to hospitals that are in the frame. Other nonsampling errors are kept to a minimum by methods built into the survey procedures, such as training the data collectors in sampling and data abstraction, quality checks of sampling and abstracting, manual and computer editing, and verification of key-punching and coding. Some nonsampling errors are discussed under “Presentation of estimates.”

Sampling errors—Because the statistics presented in this report are based on a sample, they may differ from the figures that would be obtained if a complete census had been taken using the same forms, definitions, instructions, and procedures. However, the probability design of NHDS permits the calculation of sampling errors. The standard error is primarily a measure of sampling variability that occurs by chance because only a sample rather than the entire population is surveyed. The standard error, as calculated for the NHDS, also reflects part of the variation that arises in the measurement process, but does not include estimates of any systematic bias. The chances are about 68 in 100 that an estimate from the sample would differ from a complete census by less than the standard error. The chances are about 95 in 100 that the difference would be less than twice

the standard error, and about 99 in 100 that it would be less than 2.5 times as large.

The relative standard error of an estimate is obtained by dividing the standard error by the estimate. The resulting value is multiplied by 100, which expresses the relative standard error as a percent of the estimate.

Estimates of sampling variability were calculated with SESUDAAN software, which computes standard errors by using a first-order Taylor approximation of the deviation of estimates from their expected values. A description of the software and the approach it uses was published (19).

Relative standard errors for aggregate estimates—The constants for relative standard error curves for the National Hospital Discharge Survey aggregate statistics by statistic type are presented in table IV. The relative standard error [RSE(X)] of an estimate X may be estimated from the formula:

$$\text{RSE}(X) = 100 \sqrt{a + b/X}$$

where X , a , and b are as defined in table IV.

Relative standard errors for estimates of percents—The relative standard errors for a percent $100p$ ($0 < p < 1$) may be calculated directly using the formula:

$$\text{RSE}(p) = 100 \sqrt{b(1-p)/(pX)}$$

where $100p$ is the percent of interest, X is the base of the percent, and b is the parameter b in the formula for approximating the RSE(X). The values for b are given in table IV.

The approximation is valid if the relative standard error of the denominator is less than 0.05 or the relative standard errors of the numerator and denominator are both less than 0.10 (20,21).

RSE for average length of stay and other averages, ratios, or rates where the numerator is not a subclass of the denominator—If the denominator of the rate is a number produced by the U.S. Bureau of the Census for the total U.S. population or one or more of the age-sex-race groups of the total population, then the approximate relative standard error of the rate is equivalent to the relative standard error of the numerator that can be obtained from table IV.

If the numerator X and denominator Y are both estimated from the NHDS, then the relative standard error of the ratio X/Y is approximated by

$$\text{RSE}(X/Y) = 100 \sqrt{[\text{RSE}(X)]^2 + [\text{RSE}(Y)]^2}$$

This approximation is valid if the relative standard error of the denominator is less than 0.05 or the relative standard errors of the numerator and denominator are both less than 0.10 (20,21).

Estimates of differences between two statistics—The relative standard errors shown in this appendix are not directly applicable to differences between two sample

estimates. The standard error of a difference is approximately the square root of the sum of squares of each standard error considered separately. This formula represents the standard error quite accurately for the

difference between separate and uncorrelated characteristics, although it is only a rough approximation in most other cases.

Appendix II

Definitions of certain terms used in this report

Terms relating to hospitalization

Hospitals—All hospitals with an average length of stay for all patients of less than 30 days or hospitals whose specialty is general (medical or surgical) or children's general are eligible for inclusion in the National Hospital Discharge Survey except Federal hospitals and hospital units of institutions, and hospitals with fewer than six beds staffed for patients' use.

Patient—A person who is formally admitted to the inpatient service of a short-stay hospital for observation, care, diagnosis, or treatment. The terms "patient" and "inpatient" are used synonymously.

Newborn infant—A patient admitted by birth to a hospital.

Discharge—The formal release of a patient by a hospital; that is, the termination of a period of hospitalization by death or by disposition to place of residence, nursing home, or another hospital. The terms "discharges" and "patients discharged" are used synonymously.

Discharge rate—The ratio of the number of hospital discharges during a year to the number of persons in the civilian population on July 1 of that year.

Days of care—The number of patient days accumulated at time of discharge by a patient. A stay of less than 1 day (patient admission and discharge on the same day) is counted as 1 day in the summation of total days of care. For patients admitted and discharged on different days, the number of days of care is computed by counting all days from (and including) the date of admission to (but not including) the date of discharge.

Rate of days of care—The ratio of the number of days of care accumulated during a year to the number of persons in the civilian population on July 1 of that year.

Average length of stay—The number of days of care accumulated by patients discharged during the year divided by the number of these patients.

Terms relating to diagnoses

Diagnosis—A disease or injury (or factor that influences health status and contact with health services that is not itself a current illness or injury) on the medical record of a patient. (See "Medical coding and edit" in the "Data

collection and processing" section of appendix I for further detail.)

Principal diagnosis—The condition established after study to be chiefly responsible for occasioning the admission of the patient to the hospital for care.

First-listed diagnosis—The coded diagnosis identified as the principal diagnosis or listed first on the face sheet or discharge summary of the medical record if the principal diagnosis cannot be identified. The number of first-listed diagnoses is equivalent to the number of discharges.

All-listed diagnoses—The number of diagnoses on the face sheet of the medical record. In the NHDS a maximum of seven diagnoses are coded.

Terms relating to procedures

Procedure—A surgical or nonsurgical operation, diagnostic procedure, or special treatment reported on the medical record of a patient. (See "Medical coding and edit" in the "Data collection and processing" section of appendix I for further details.) Beginning with the 1991 data, all ICD-9-CM procedure codes are used in the NHDS. Previously, selected codes—primarily codes for miscellaneous diagnostic and therapeutic procedures—were not used.

All-listed procedures—The number of procedures on the face sheet of the medical record. In the NHDS a maximum of four procedures are coded.

Rate of procedures—The ratio of the number of procedures during a year to the number of persons in the civilian population on July 1 of that year determines the rate of procedures.

Demographic terms

Population—The U.S. resident population excluding members of the Armed Forces.

Age—Patient's age at birthday prior to admission to the hospital.

Geographic region—Hospitals are classified by location in one of the four geographic regions of the United States that correspond to those used by the U.S. Bureau of the Census.

Appendix III

ICD-9-CM codes for the 1991 National Hospital Discharge Survey

Coding of the diagnostic and procedure data in the National Hospital Discharge Survey is based on the *International Classification of Diseases, 9th Revision, Clinical Modification*, or ICD-9-CM (15). This appendix presents a list of all diagnostic and procedure codes. Part A shows the classification of diseases and injuries and supplementary classifications and is to be used with tables 1-3. Part B includes the codes for surgical, nonsurgical, and diagnostic procedures and is to be used with table 4. It is important to consult the appropriate volume of ICD-9-CM for more detailed information about the coding scheme, such as the specific terms included in or excluded from a particular code.

The following abbreviations are used in the list of codes: NEC (not elsewhere classified) and NOS (not otherwise specified). Codes added to the ICD-9-CM on October 1, 1991, are preceded by a slash (/) and codes changed at that time are referenced with a slash between the old and new ICD-9-CM descriptions.

Part A. Classification of diseases and injuries and supplementary classification

001-139	Infectious and parasitic diseases
001	Cholera
.0	Cholera due to <i>Vibrio cholerae</i>
.1	Cholera due to <i>Vibrio cholerae</i> el tor
.9	Cholera, unspecified
002	Typhoid and paratyphoid fevers
.0	Typhoid fever
.1	Paratyphoid fever A
.2	Paratyphoid fever B
.3	Paratyphoid fever C
.9	Paratyphoid fever, unspecified
003	Other salmonella infections
.0	Salmonella gastroenteritis
.1	Salmonella septicemia
.2	Localized salmonella infections
.20	Localized salmonella infection, unspecified
.21	Salmonella meningitis
.22	Salmonella pneumonia
.23	Salmonella arthritis
.24	Salmonella osteomyelitis
.29	Other localized salmonella infections
.8	Other specified salmonella infections
.9	Salmonella infection, unspecified
004	Shigellosis
.0	Shigella dysenteriae
.1	Shigella flexneri
.2	Shigella boydii
.3	Shigella sonnei
.8	Other specified shigella infections
.9	Shigellosis, unspecified
005	Other food poisoning (bacterial)
.0	Staphylococcal food poisoning
.1	Botulism
.2	Food poisoning due to <i>Clostridium perfringens</i> (C. welchii)
.3	Food poisoning due to other <i>Clostridia</i>
.4	Food poisoning due to <i>Vibrio parahaemolyticus</i>

.8	Other bacterial food poisoning
.9	Food poisoning, unspecified
006	Amebiasis
.0	Acute amebic dysentery without mention of abscess
.1	Chronic intestinal amebiasis without mention of abscess
.2	Amebic nondysenteric colitis
.3	Amebic liver abscess
.4	Amebic lung abscess
.5	Amebic brain abscess
.6	Amebic skin ulceration
.8	Amebic infection of other sites
.9	Amebiasis, unspecified
007	Other protozoal intestinal diseases
.0	Balantidiasis
.1	Giardiasis
.2	Coccidiosis
.3	Intestinal trichomoniasis
.8	Other specified protozoal intestinal diseases
.9	Unspecified protozoal intestinal disease
008	Intestinal infections due to other organisms
.0	Intestinal infection due to <i>Escherichia coli</i> (E. coli)
.1	Intestinal infection due to Arizona group of paracolon bacilli
.2	Intestinal infection due to <i>aerobacter aerogenes</i>
.3	Intestinal infection due to <i>proteus (mirabilis) (morganii)</i>
.4	Intestinal infection due to other specified bacteria
.41	Intestinal infection due to staphylococcus
.42	Intestinal infection due to pseudomonas
.49	Intestinal infection due to other specified bacteria
.5	Bacterial enteritis, unspecified
.6	Enteritis due to specified virus
.8	Intestinal infection due to other organism, not elsewhere classified
009	Ill-defined intestinal infections
.0	Infectious colitis, enteritis, and gastroenteritis
.1	Colitis, enteritis, and gastroenteritis of presumed infectious origin
.2	Infectious diarrhea
.3	Diarrhea of presumed infectious origin
010	Primary tuberculous infection
.0	Primary tuberculous complex
.00	Primary tuberculous complex, unspecified examination
.01	Primary tuberculous complex, bacteriological or histological examination not done
.02	Primary tuberculous complex, bacteriological or histological examination results unknown (at present)
.03	Primary tuberculous complex, tubercle bacilli found (in sputum) by microscopy
.04	Primary tuberculous complex, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.05	Primary tuberculous complex, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.06	Primary tuberculous complex, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.1	Tuberculous pleurisy in primary progressive tuberculosis
.10	Tuberculous pleurisy in primary progressive tuberculosis, unspecified examination
.11	Tuberculous pleurisy in primary progressive tuberculosis, bacteriological or histological examination not done
.12	Tuberculous pleurisy in primary progressive tuberculosis, bacteriological or histological examination results unknown (at present)
.13	Tuberculous pleurisy in primary progressive tuberculosis, tubercle bacilli found (in sputum) by microscopy

.14	Tuberculous pleurisy in primary progressive tuberculosis, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.15	Tuberculosis of lung, nodular, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.15	Tuberculous pleurisy in primary progressive tuberculosis, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically	.16	Tuberculosis of lung, nodular, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.16	Tuberculous pleurisy in primary progressive tuberculosis, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.2	Tuberculosis of lung with cavitation
.8	Other primary progressive tuberculosis	.20	Tuberculosis of lung with cavitation, unspecified examination
.80	Other primary progressive tuberculosis, unspecified examination	.21	Tuberculosis of lung with cavitation, bacteriological or histological examination not done
.81	Other primary progressive tuberculosis, bacteriological or histological examination not done	.22	Tuberculosis of lung with cavitation, bacteriological or histological examination results unknown (at present)
.82	Other primary progressive tuberculosis, bacteriological or histological examination results unknown (at present)	.23	Tuberculosis of lung with cavitation, tubercle bacilli found (in sputum) by microscopy
.83	Other primary progressive tuberculosis, tubercle bacilli found (in sputum) by microscopy	.24	Tuberculosis of lung with cavitation, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.84	Other primary progressive tuberculosis, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.25	Tuberculosis of lung with cavitation, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.85	Other primary progressive tuberculosis, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically	.26	Tuberculosis of lung with cavitation, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.86	Other primary progressive tuberculosis, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.3	Tuberculosis of bronchus
.9	Primary tuberculous infection, unspecified type	.30	Tuberculosis of bronchus, unspecified examination
.90	Primary tuberculous infection, unspecified type, unspecified examination	.31	Tuberculosis of bronchus, bacteriological or histological examination not done
.91	Primary tuberculous infection, unspecified type, bacteriological or histological examination not done	.32	Tuberculosis of bronchus, bacteriological or histological examination results unknown (at present)
.92	Primary tuberculous infection, unspecified type, bacteriological or histological examination results unknown (at present)	.33	Tuberculosis of bronchus, tubercle bacilli found (in sputum) by microscopy
.93	Primary tuberculous infection, unspecified type, tubercle bacilli found (in sputum) by microscopy	.34	Tuberculosis of bronchus, tubercle bacilli not found (in sputum) by microscopy, but found in bacterial culture
.94	Primary tuberculous infection, unspecified type, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.35	Tuberculosis of bronchus, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.95	Primary tuberculous infection, unspecified type, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically	.36	Tuberculosis of bronchus, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.96	Primary tuberculous infection, unspecified type, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.4	Tuberculous fibrosis of lung
011	Pulmonary tuberculosis	.40	Tuberculous fibrosis of lung, unspecified examination
.0	Tuberculosis of lung, infiltrative	.41	Tuberculous fibrosis of lung, bacteriological or histological examination not done
.00	Tuberculosis of lung, infiltrative, unspecified examination	.42	Tuberculous fibrosis of lung, bacteriological or histological examination unknown (at present)
.01	Tuberculosis of lung, infiltrative, bacteriological or histological examination not done	.43	Tuberculous fibrosis of lung, tubercle bacilli found (in sputum) by microscopy
.02	Tuberculosis of lung, infiltrative, bacteriological or histological examination results unknown (at present)	.44	Tuberculous fibrosis of lung, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.03	Tuberculosis of lung, infiltrative, tubercle bacilli found (in sputum) by microscopy	.45	Tuberculous fibrosis of lung, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.04	Tuberculosis of lung, infiltrative, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.46	Tuberculous fibrosis of lung, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.05	Tuberculosis of lung, infiltrative, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically	.5	Tuberculous bronchiectasis
.06	Tuberculosis of lung, infiltrative, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.50	Tuberculous bronchiectasis, unspecified examination
.1	Tuberculosis of lung, nodular	.51	Tuberculous bronchiectasis, bacteriological or histological examination not done
.10	Tuberculosis of lung, nodular, unspecified examination	.52	Tuberculous bronchiectasis, bacteriological or histological examination results unknown (at present)
.11	Tuberculosis of lung, nodular, bacteriological or histological examination not done	.53	Tuberculous bronchiectasis, tubercle bacilli found (in sputum) by microscopy
.12	Tuberculosis of lung, nodular, bacteriological or histological examination results unknown (at present)	.54	Tuberculous bronchiectasis, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.13	Tuberculosis of lung, nodular, tubercle bacilli found (in sputum) by microscopy	.55	Tuberculous bronchiectasis, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.14	Tuberculosis of lung, nodular, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.56	Tuberculous bronchiectasis, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
		.6	Tuberculous pneumonia (any form)
		.60	Tuberculous pneumonia (any form), unspecified examination
		.61	Tuberculous pneumonia (any form), bacteriological or histological examination not done

.62	Tuberculous pneumonia (any form), bacteriological or histological examination results unknown (at present)	.06	Tuberculous pleurisy, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.63	Tuberculous pneumonia (any form), tubercle bacilli found (in sputum) by microscopy	.1	Tuberculosis of intrathoracic lymph nodes
.64	Tuberculous pneumonia (any form), tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.10	Tuberculosis of intrathoracic lymph nodes, unspecified examination
.65	Tuberculous pneumonia (any form), tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically	.11	Tuberculosis of intrathoracic lymph nodes, bacteriological or histological examination not done
.66	Tuberculous pneumonia (any form), tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.12	Tuberculosis of intrathoracic lymph nodes, bacteriological or histological examination results unknown (at present)
.7	Tuberculous pneumothorax	.13	Tuberculosis of intrathoracic lymph nodes, tubercle bacilli found (in sputum) by microscopy
.70	Tuberculous pneumothorax, unspecified examination	.14	Tuberculosis of intrathoracic lymph nodes, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.71	Tuberculous pneumothorax, bacteriological or histological examination not done	.15	Tuberculosis of intrathoracic lymph nodes, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.72	Tuberculous pneumothorax, bacteriological or histological examination results unknown (at present)	.16	Tuberculosis of intrathoracic lymph nodes, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.73	Tuberculous pneumothorax, tubercle bacilli found (in sputum) by microscopy	.2	Isolated tracheal or bronchial tuberculosis
.74	Tuberculous pneumothorax, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.20	Isolated tracheal or bronchial tuberculosis, unspecified examination
.75	Tuberculous pneumothorax, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically	.21	Isolated tracheal or bronchial tuberculosis, bacteriological or histological examination not done
.76	Tuberculous pneumothorax, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.22	Isolated tracheal or bronchial tuberculosis, bacteriological or histological examination results unknown (at present)
.8	Other specified pulmonary tuberculosis	.23	Isolated tracheal or bronchial tuberculosis, tubercle bacilli found (in sputum) by microscopy
.80	Other specified pulmonary tuberculosis, unspecified examination	.24	Isolated tracheal or bronchial tuberculosis, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.81	Other specified pulmonary tuberculosis, bacteriological or histological examination not done	.25	Isolated tracheal or bronchial tuberculosis, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.82	Other specified pulmonary tuberculosis, bacteriological or histological examination results unknown (at present)	.26	Isolated tracheal or bronchial tuberculosis, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.83	Other specified pulmonary tuberculosis, tubercle bacilli found (in sputum) by microscopy	.3	Tuberculous laryngitis
.84	Other specified pulmonary tuberculosis, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.30	Tuberculous laryngitis, unspecified examination
.85	Other specified pulmonary tuberculosis, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically	.31	Tuberculous laryngitis, bacteriological or histological examination not done
.86	Other specified pulmonary tuberculosis, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.32	Tuberculous laryngitis, bacteriological or histological examination results unknown (at present)
.9	Unspecified pulmonary tuberculosis	.33	Tuberculous laryngitis, tubercle bacilli found (in sputum) by microscopy
.90	Unspecified pulmonary tuberculosis, unspecified examination	.34	Tuberculous laryngitis, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.91	Unspecified pulmonary tuberculosis, bacteriological or histological examination not done	.35	Tuberculous laryngitis, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.92	Unspecified pulmonary tuberculosis, bacteriological or histological examination results unknown (at present)	.36	Tuberculous laryngitis, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.93	Unspecified pulmonary tuberculosis, tubercle bacilli found (in sputum) by microscopy	.8	Other specified respiratory tuberculosis
.94	Unspecified pulmonary tuberculosis, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.80	Other specified respiratory tuberculosis, unspecified examination
.95	Unspecified pulmonary tuberculosis, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically	.81	Other specified respiratory tuberculosis, bacteriological or histological examination not done
.96	Unspecified pulmonary tuberculosis, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.82	Other specified respiratory tuberculosis, bacteriological or histological examination results unknown (at present)
012	Other respiratory tuberculosis	.83	Other specified respiratory tuberculosis, tubercle bacilli found (in sputum) by microscopy
.0	Tuberculous pleurisy	.84	Other specified respiratory tuberculosis, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.00	Tuberculous pleurisy, unspecified examination	.85	Other specified respiratory tuberculosis, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.01	Tuberculous pleurisy, bacteriological or histological examination not done	.86	Other specified respiratory tuberculosis, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.02	Tuberculous pleurisy, bacteriological or histological examination results unknown (at present)	013	Tuberculosis of meninges and central nervous system
.03	Tuberculous pleurisy, tubercle bacilli found (in sputum) by microscopy	.0	Tuberculous meningitis
.04	Tuberculous pleurisy, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.00	Tuberculous meningitis, unspecified examination
.05	Tuberculous pleurisy, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically		

.01	Tuberculous meningitis, bacteriological or histological examination not done	.50	Tuberculous abscess of spinal cord, unspecified examination
.02	Tuberculous meningitis, bacteriological or histological examination results unknown (at present)	.51	Tuberculous abscess of spinal cord, bacteriological or histological examination not done
.03	Tuberculous meningitis, tubercle bacilli found (in sputum) by microscopy	.52	Tuberculous abscess of spinal cord, bacteriological or histological examination results unknown (at present)
.04	Tuberculous meningitis, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.53	Tuberculous abscess of spinal cord, tubercle bacilli found (in sputum) by microscopy
.05	Tuberculous meningitis, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically	.54	Tuberculous abscess of spinal cord, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.06	Tuberculous meningitis, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.55	Tuberculous abscess of spinal cord, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.1	Tuberculoma of meninges	.56	Tuberculous abscess of spinal cord, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.10	Tuberculoma of meninges, unspecified examination	.6	Tuberculous encephalitis or myelitis
.11	Tuberculoma of meninges, bacteriological or histological examination not done	.60	Tuberculous encephalitis or myelitis, unspecified examination
.12	Tuberculoma of meninges, bacteriological or histological examination results unknown (at present)	.61	Tuberculous encephalitis or myelitis, bacteriological or histological examination not done
.13	Tuberculoma of meninges, tubercle bacilli found (in sputum) by microscopy	.62	Tuberculous encephalitis or myelitis, bacteriological or histological examination results unknown (at present)
.14	Tuberculoma of meninges, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.63	Tuberculous encephalitis or myelitis, tubercle bacilli found (in sputum) by microscopy
.15	Tuberculoma of meninges, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically	.64	Tuberculous encephalitis or myelitis, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.16	Tuberculoma of meninges, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.65	Tuberculous encephalitis or myelitis, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.2	Tuberculoma of brain	.66	Tuberculous encephalitis or myelitis, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.20	Tuberculoma of brain, unspecified examination	.8	Other specified tuberculosis of central nervous system
.21	Tuberculoma of brain, bacteriological or histological examination not done	.80	Other specified tuberculosis of central nervous system, unspecified examination
.22	Tuberculoma of brain, bacteriological or histological examination results unknown (at present)	.81	Other specified tuberculosis of central nervous system, bacteriological or histological examination not done
.23	Tuberculoma of brain, tubercle bacilli found (in sputum) by microscopy	.82	Other specified tuberculosis of central nervous system, bacteriological or histological examination results unknown (at present)
.24	Tuberculoma of brain, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.83	Other specified tuberculosis of central nervous system, tubercle bacilli found (in sputum) by microscopy
.25	Tuberculoma of brain, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically	.84	Other specified tuberculosis of central nervous system, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.26	Tuberculoma of brain, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.85	Other specified tuberculosis of central nervous system, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.3	Tuberculous abscess of brain	.86	Other specified tuberculosis of central nervous system, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.30	Tuberculous abscess of brain, unspecified examination	.9	Unspecified tuberculosis of central nervous system
.31	Tuberculous abscess of brain, bacteriological or histological examination not done	.90	Unspecified tuberculosis of central nervous system, unspecified examination
.32	Tuberculous abscess of brain, bacteriological or histological examination results unknown (at present)	.91	Unspecified tuberculosis of central nervous system, bacteriological or histological examination not done
.33	Tuberculous abscess of brain, tubercle bacilli found (in sputum) by microscopy	.92	Unspecified tuberculosis of central nervous system, bacteriological or histological examination results unknown (at present)
.34	Tuberculous abscess of brain, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.93	Unspecified tuberculosis of central nervous system, tubercle bacilli found (in sputum) by microscopy
.35	Tuberculous abscess of brain, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically	.94	Unspecified tuberculosis of central nervous system, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.36	Tuberculous abscess of brain, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.95	Unspecified tuberculosis of central nervous system, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.4	Tuberculoma of spinal cord	.96	Unspecified tuberculosis of central nervous system, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.40	Tuberculoma of spinal cord, unspecified examination	014	Tuberculosis of intestines, peritoneum, and mesenteric glands
.41	Tuberculoma of spinal cord, bacteriological or histological examination not done	.0	Tuberculous peritonitis
.42	Tuberculoma of spinal cord, bacteriological or histological examination results unknown (at present)	.00	Tuberculous peritonitis, unspecified examination
.43	Tuberculoma of spinal cord, tubercle bacilli found (in sputum) by microscopy	.01	Tuberculous peritonitis, bacteriological or histological examination not done
.44	Tuberculoma of spinal cord, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.02	Tuberculous peritonitis, bacteriological or histological examination results unknown (at present)
.45	Tuberculoma of spinal cord, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically		
.46	Tuberculoma of spinal cord, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)		
.5	Tuberculous abscess of spinal cord		

.03	Tuberculous peritonitis, tubercle bacilli found (in sputum) by microscopy	.5	Tuberculosis of limb bones
.04	Tuberculous peritonitis, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.50	Tuberculosis of limb bones, unspecified examination
.05	Tuberculous peritonitis, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically	.51	Tuberculosis of limb bones, bacteriological or histological examination not done
.06	Tuberculous peritonitis, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.52	Tuberculosis of limb bones, bacteriological or histological examination results unknown (at present)
.8	Tuberculosis of intestines and mesenteric glands	.53	Tuberculosis of limb bones, tubercle bacilli found (in sputum) by microscopy
.80	Tuberculosis of intestines and mesenteric glands, unspecified examination	.54	Tuberculosis of limb bones, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.81	Tuberculosis of intestines and mesenteric glands, bacteriological or histological examination not done	.55	Tuberculosis of limb bones, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.82	Tuberculosis of intestines and mesenteric glands, bacteriological or histological examination results unknown (at present)	.56	Tuberculosis of limb bones, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.83	Tuberculosis of intestines and mesenteric glands, tubercle bacilli found (in sputum) by microscopy	.6	Tuberculosis of mastoid
.84	Tuberculosis of intestines and mesenteric glands, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.60	Tuberculosis of mastoid, unspecified examination
.85	Tuberculosis of intestines and mesenteric glands, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically	.61	Tuberculosis of mastoid, bacteriological or histological examination not done
.86	Tuberculosis of intestines and mesenteric glands, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.62	Tuberculosis of mastoid, bacteriological or histological examination results unknown (at present)
015	Tuberculosis of bones and joints	.63	Tuberculosis of mastoid, tubercle bacilli found (in sputum) by microscopy
.0	Tuberculosis of vertebral column	.64	Tuberculosis of mastoid, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.00	Tuberculosis of vertebral column, unspecified examination	.65	Tuberculosis of mastoid, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.01	Tuberculosis of vertebral column, bacteriological or histological examination not done	.66	Tuberculosis of mastoid, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.02	Tuberculosis of vertebral column, bacteriological or histological examination results unknown (at present)	.7	Tuberculosis of other specified bone
.03	Tuberculosis of vertebral column, tubercle bacilli found (in sputum) by microscopy	.70	Tuberculosis of other specified bone, unspecified examination
.04	Tuberculosis of vertebral column, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.71	Tuberculosis of other specified bone, bacteriological or histological examination not done
.05	Tuberculosis of vertebral column, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically	.72	Tuberculosis of other specified bone, bacteriological or histological examination results unknown (at present)
.06	Tuberculosis of vertebral column, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.73	Tuberculosis of other specified bone, tubercle bacilli found (in sputum) by microscopy
.1	Tuberculosis of hip	.74	Tuberculosis of other specified bone, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.10	Tuberculosis of hip, unspecified examination	.75	Tuberculosis of other specified bone, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.11	Tuberculosis of hip, bacteriological or histological examination not done	.76	Tuberculosis of other specified bone, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.12	Tuberculosis of hip, bacteriological or histological examination results unknown (at present)	.8	Tuberculosis of other specified joint
.13	Tuberculosis of hip, tubercle bacilli found (in sputum) by microscopy	.80	Tuberculosis of other specified joint, unspecified examination
.14	Tuberculosis of hip, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.81	Tuberculosis of other specified joint, bacteriological or histological examination not done
.15	Tuberculosis of hip, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically	.82	Tuberculosis of other specified joint, bacteriological or histological examination results unknown (at present)
.16	Tuberculosis of hip, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.83	Tuberculosis of other specified joint, tubercle bacilli found (in sputum) by microscopy
.2	Tuberculosis of knee	.84	Tuberculosis of other specified joint, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.20	Tuberculosis of knee, unspecified examination	.85	Tuberculosis of other specified joint, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
.21	Tuberculosis of knee, bacteriological or histological examination not done	.86	Tuberculosis of other specified joint, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.22	Tuberculosis of knee, bacteriological or histological examination results unknown (at present)	.9	Tuberculosis of unspecified bones and joints
.23	Tuberculosis of knee, tubercle bacilli found (in sputum) by microscopy	.90	Tuberculosis of unspecified bones and joints, unspecified examination
.24	Tuberculosis of knee, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture	.91	Tuberculosis of unspecified bones and joints, bacteriological or histological examination not done
.25	Tuberculosis of knee, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically	.92	Tuberculosis of unspecified bones and joints, bacteriological or histological examination results unknown (at present)
.26	Tuberculosis of knee, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.93	Tuberculosis of unspecified bones and joints, tubercle bacilli found (in sputum) by microscopy
		.94	Tuberculosis of unspecified bones and joints, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture

.95	Tuberculosis of unspecified bones and joints, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically	.44	Tuberculosis of epididymis, tubercle bacilli not found (in sputum) by microscopy, but found by bacterial culture
.96	Tuberculosis of unspecified bones and joints, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)	.45	Tuberculosis of epididymis, tubercle bacilli not found by bacteriological examination, but tuberculosis confirmed histologically
016	Tuberculosis of genitourinary system	.46	Tuberculosis of epididymis, tubercle bacilli not found by bacteriological or histological examination, but tuberculosis confirmed by other methods (inoculation of animals)
.0	Tuberculosis of kidney	.5	Tuberculosis of other male genital organs
.00	Tuberculosis of kidney, unspecified examination	.50	Tuberculosis of other male genital organs, unspecified examination
.01	Tuberculosis of kidney, bacteriological or histological examination not done	.51	Tuberculosis of other male genital organs, bacteriological or histological examination not done

Conversion table of changes in ICD-9-CM codes

Although the *International Classification of Diseases, 9th Revision, Clinical Modification* has been used for coding NHDS data since 1979, the classification undergoes annual updating. Assignment of new diagnostic and procedure codes, fourth and fifth digit expansion of codes, as well as code deletions, are contained in addenda developed by the ICD-9-CM Coordination and Maintenance Committee and approved by the Director of NCHS and the Administrator of the Health Care Financing Administration. Addenda to the ICD-9-CM become effective October 1 of the affected year and have been released for 1986, 1987, 1988, 1989, 1990, and 1991.

As described earlier, the 1991 NHDS involved two data collection modes: manual and abstract. All data collected manually were coded using the ICD-9-CM

including the addenda for 1986-90. Data collected via abstract service were coded using two different ICD-9-CM revisions. For the first 9 months of 1991, the ICD-9-CM, including the addenda of October 1, 1986-90, was used. For the last 3 months of 1991, the ICD-9-CM, including the addenda of October 1, 1986-91, was used. Therefore, the reader is cautioned that annual estimates for new ICD-9-CM codes may be underestimated for 1991 and that it is necessary to note both the old and new descriptions for codes that were changed.

The following conversion table shows the new ICD-9-CM codes, the date they were introduced, and the code to which the diagnosis or procedure had been assigned prior to the development of the new code.

¹Before October 1987, contents of current code 36.05 would have been assigned to 36.0.

²Codes 78.90-78.99 were retitled as "Insertion of bone growth stimulator" in October 1987; the previous contents of codes 78.90-78.99 were reassigned to codes 78.40-78.49.

³Codes 99.71-99.79 were deleted in October 1987; their contents were not transferred elsewhere. In the October 1988 revision, codes 99.71-99.79 were reclassified as "Therapeutic apheresis."

Vital and Health Statistics series descriptions

- SERIES 1. Programs and Collection Procedures**—These reports describe the data collection programs of the National Center for Health Statistics. They include descriptions of the methods used to collect and process the data, definitions, and other material necessary for understanding the data.
- SERIES 2. Data Evaluation and Methods Research**—These reports are studies of new statistical methods and include analytical techniques, objective evaluations of reliability of collected data, and contributions to statistical theory. These studies also include experimental tests of new survey methods and comparisons of U.S. methodology with those of other countries.
- SERIES 3. Analytical and Epidemiological Studies**—These reports present analytical or interpretive studies based on vital and health statistics. These reports carry the analyses further than the expository types of reports in the other series.
- SERIES 4. Documents and Committee Reports**—These are final reports of major committees concerned with vital and health statistics and documents such as recommended model vital registration laws and revised birth and death certificates.
- SERIES 5. International Vital and Health Statistics Reports**—These reports are analytical or descriptive reports that compare U.S. vital and health statistics with those of other countries or present other international data of relevance to the health statistics system of the United States.
- SERIES 6. Cognition and Survey Measurement**—These reports are from the National Laboratory for Collaborative Research in Cognition and Survey Measurement. They use methods of cognitive science to design, evaluate, and test survey instruments.
- SERIES 10. Data From the National Health Interview Survey**—These reports contain statistics on illness; unintentional injuries; disability; use of hospital, medical, and other health services; and a wide range of special current health topics covering many aspects of health behaviors, health status, and health care utilization. They are based on data collected in a continuing national household interview survey.
- SERIES 11. Data From the National Health Examination Survey, the National Health and Nutrition Examination Surveys, and the Hispanic Health and Nutrition Examination Survey**—Data from direct examination, testing, and measurement on representative samples of the civilian noninstitutionalized population provide the basis for (1) medically defined total prevalence of specific diseases or conditions in the United States and the distributions of the population with respect to physical, physiological, and psychological characteristics, and (2) analyses of trends and relationships among various measurements and between survey periods.
- SERIES 12. Data From the Institutionalized Population Surveys**—Discontinued in 1975. Reports from these surveys are included in Series 13.
- SERIES 13. Data From the National Health Care Survey**—These reports contain statistics on health resources and the public's use of health care resources including ambulatory, hospital, and long-term care services based on data collected directly from health care providers and provider records.
- SERIES 14. Data on Health Resources: Manpower and Facilities**—Discontinued in 1990. Reports on the numbers, geographic distribution, and characteristics of health resources are now included in Series 13.
- SERIES 15. Data From Special Surveys**—These reports contain statistics on health and health-related topics collected in special surveys that are not part of the continuing data systems of the National Center for Health Statistics.
- SERIES 16. Compilations of Advance Data From Vital and Health Statistics**—Advance Data Reports provide early release of information from the National Center for Health Statistics' health and demographic surveys. They are compiled in the order in which they are published. Some of these releases may be followed by detailed reports in Series 10–13.
- SERIES 20. Data on Mortality**—These reports contain statistics on mortality that are not included in regular, annual, or monthly reports. Special analyses by cause of death, age, other demographic variables, and geographic and trend analyses are included.
- SERIES 21. Data on Natality, Marriage, and Divorce**—These reports contain statistics on natality, marriage, and divorce that are not included in regular, annual, or monthly reports. Special analyses by health and demographic variables and geographic and trend analyses are included.
- SERIES 22. Data From the National Mortality and Natality Surveys**—Discontinued in 1975. Reports from these sample surveys, based on vital records, are now published in Series 20 or 21.
- SERIES 23. Data From the National Survey of Family Growth**—These reports contain statistics on factors that affect birth rates, including contraception, infertility, cohabitation, marriage, divorce, and remarriage; adoption; use of medical care for family planning and infertility; and related maternal and infant health topics. These statistics are based on national surveys of childbearing age.
- SERIES 24. Compilations of Data on Natality, Mortality, Marriage, Divorce, and Induced Terminations of Pregnancy**—These include advance reports of births, deaths, marriages, and divorces based on final data from the National Vital Statistics System that were published as supplements to the *Monthly Vital Statistics Report* (MVSR). These reports provide highlights and summaries of detailed data subsequently published in *Vital Statistics of the United States*. Other supplements to the MVSR published here provide selected findings based on final data from the National Vital Statistics System and may be followed by detailed reports in Series 20 or 21.
