

Deaths: Leading Causes for 2005

by Melonie Heron, Ph.D., and Betzaida Tejada-Vera, B.S.,
Division of Vital Statistics

Abstract

Objectives—This report presents final 2005 data on the 10 leading causes of death in the United States by age, race, sex, and Hispanic origin. Leading causes of infant, neonatal, and postneonatal death are also presented. This report supplements the annual report of final mortality statistics.

Methods—Data in this report are based on information from all death certificates filed in the 50 states and the District of Columbia in 2005. Causes of death classified by the *International Classification of Diseases, Tenth Revision* (ICD-10) are ranked according to the number of deaths assigned to rankable causes. Cause-of-death statistics are based on the underlying cause of death.

Result—In 2005, the 10 leading causes of death were, in rank order: Diseases of heart; Malignant neoplasms; Cerebrovascular diseases; Chronic lower respiratory diseases; Accidents (unintentional injuries); Diabetes mellitus; Alzheimer's disease; Influenza and pneumonia; Nephritis, nephrotic syndrome and nephrosis; and Septicemia. They accounted for about 77 percent of all deaths occurring in the United States. Differences in the rankings are evident by age, sex, race, and Hispanic origin. Leading causes of infant death for 2005 were, in rank order: Congenital malformations, deformations and chromosomal abnormalities; Disorders related to short gestation and low birthweight, not elsewhere classified; Sudden infant death syndrome; Newborn affected by maternal complications of pregnancy; Newborn affected by complications of placenta, cord and membranes; Accidents (unintentional injuries); Respiratory distress of newborn; Bacterial sepsis of newborn; Neonatal hemorrhage; and Necrotizing enterocolitis of newborn. Important variations in the leading causes of infant death are noted for the neonatal and postneonatal periods.

Keywords: mortality • leading causes of death • vital statistics • ICD-10

Introduction

Ranking causes of death is a popular method to present mortality statistics. Leading cause-of-death data have been published

since 1952 (beginning with 1949 mortality data) when official tabulations ranking causes of death were first introduced (1). Users of this method of presentation should be aware of its inherent limitations. Ranking causes of death is to some extent an arbitrary procedure. The rank order of any particular cause of death will depend on the list of causes from which selection is made and on the rules applied to make the selection. Different cause lists and different ranking rules will typically produce different leading causes of death. Recognizing the need for a consistent ranking procedure to be used by state health departments and the National Office of Vital Statistics, in 1951 the Public Health Conference on Records and Statistics recommended that state and federal agencies responsible for identifying diseases of public health importance adopt a uniform ranking procedure using a standard list of causes of death (2). The procedures implemented in 1952 are essentially the same as those used currently by the Centers for Disease Control and Prevention's National Center for Health Statistics (NCHS); however, the cause-of-death lists have been expanded and altered over time with each subsequent revision of the *International Classification of Diseases* (ICD). Cause-of-death data are based on the underlying cause of death.

Cause-of-death ranking is a useful tool for illustrating the relative burden of cause-specific mortality. However, it should be used with a clear understanding of what the rankings mean. Literally, the rankings denote the most frequently occurring causes of death among those causes eligible to be ranked. Rankings do not illustrate cause-specific mortality risk or absolute burden as depicted by mortality rates. The rank of a specific cause—its mortality burden relative to other causes—may decline over time even if its mortality rate has not changed, or its rank may remain the same over time even if its mortality rate is on the decline.

It is also important to note that rankings do not necessarily denote the causes of death of greatest public health importance. Some causes of death of public health import are excluded from the ranking procedure. For example, Malignant neoplasms of the trachea, bronchus and lung (lung cancer), and Motor vehicle accidents are not rankable causes of death (see "Procedures for ranking causes of death") though

they can be identified using the standard mortality tabulation lists. Were they included in the current rankings, both causes would be placed among the 10 leading causes of death—lung cancer would rank third and Motor vehicle accidents would rank ninth. However, each of these is subsumed in broader rankable categories, namely, Malignant neoplasms and Accidents (unintentional injuries), respectively. Although not perfectly suitable in all circumstances, the current framework provides a rankable list of causes of death that has broad appeal and acceptance in the general public health community.

Another tool used in this report to depict the relative burden of cause-specific mortality is the proportion of total deaths due to the rankable causes. This maps directly to the rankings such that, within a given year or population group, the causes with the highest rankings also have the highest proportion of total deaths. When making comparisons over time, however, it is important to note that the rank of a specific cause may be the same over time even though the proportion of deaths attributable to that cause may have changed. Similarly, two population groups may have the same rank for a specific cause but different attributable proportions.

This report presents final 2005 data on leading causes of death in the United States by age, race, sex, and Hispanic origin. These data accompany the release of final national mortality statistics for 2005, which are presented in a separate report (3). Further detail beyond that published in this report is provided in leading-cause work tables available from: http://www.cdc.gov/nchs/nvss/mortality_tables.htm#cod. Also presented in this report is the procedure used by NCHS to rank causes of death, along with tables showing causes that are designated as rankable.

Data and Methods

Data

Data in this report are based on information from all death certificates filed in the 50 states and the District of Columbia in 2005. Death certificates are generally completed by funeral directors, attending physicians, medical examiners, and coroners. Cause-of-death statistics for 2005 presented in this report are classified in accordance with the 10th revision of the ICD (ICD-10) (4).

Procedures for ranking causes of death

The procedures used by NCHS for ranking causes of death are consistent with the recommendations of the 1951 Public Health Conference on Records and Statistics (2). Causes are ranked according to the number of deaths assigned to rankable causes. The number of deaths is used as the ranking criteria because it most accurately reflects the frequency of cause-specific mortality. Although crude death rates could technically be used as a ranking criteria—the population denominator of the rate is constant across all cause-of-death categories—they are less than ideal. Crude death rates are typically expressed per 100,000 population and are often rounded to one decimal place, reducing the precision of the ranking criteria. This is especially problematic when ranking causes of death for small population subgroups or geographic areas, as it may be impossible to differentiate the ranks for several causes. Age-adjusted death rates should never be used to rank causes of death. The numerical value of the age-adjusted death rate depends on the population age

distribution used to standardize the rate (5). Thus, rankings based on age-adjusted death rates will tend to vary depending on which standard is used. For example, when the standard age distribution gives more weight to the older population, the rank of causes of death that primarily affect the older population tends to be higher and the rank of causes that primarily affect the younger population tends to be lower.

The original cause list from which rankable causes of death were selected according to the recommendations of the 1951 conference was the “List of 64 selected causes of death” prepared for use with the 6th revision of the ICD (2). With each subsequent revision of the ICD, the cause list from which rankable causes are selected has changed to reflect the improved classification system. Developed for use with ICD-10, the “List of 113 selected causes of death” (6) shown in [Table A](#) is used to select 50 rankable causes (denoted by the symbol #) from which the leading causes presented in [Tables 1](#) and [2](#) are derived.

The selection of the 50 rankable causes from the “List of 113 selected causes of death” was guided by some basic principles. As in the past, vaguely-defined categories were summarily excluded from selection as rankable causes. These included the category “Symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified” and all categories beginning with the words “other,” “all other,” “certain other,” or “unspecified.” Among the remaining cause-of-death categories, decisions were made to select as rankable the causes of death considered most useful from a public health perspective, with the following condition: The rankable causes must be mutually exclusive. If a category representing a subtotal (such as Tuberculosis or Malignant neoplasms) is selected as a rankable cause, its component parts are not selected as rankable. Efforts were also made to maintain historical continuity where possible.

Beginning with 1980 mortality data, NCHS introduced a separate ranking procedure for infant causes of death using a specialized list of infant causes. This was done to include in the rankings causes specific to infancy (especially the perinatal period—the period beginning shortly before and ending shortly after birth) that would otherwise be excluded. The ICD-10 “List of 130 selected causes of infant death” (6) ([Table B](#)) is used to select 71 rankable causes of infant death from which the rankings in [Tables 3](#) and [4](#) are derived. The same principles for selecting the rankable causes from the “List of 113 selected causes of death” guided the selection of rankable causes from the infant cause list.

Age groupings

Leading causes of death for those aged 1 year and over are presented in [Tables 1](#) and [2](#) for the following age categories: 1–4, 5–9, 10–14, 15–19, 20–24, 25–34, 35–44, 45–54, 55–64, 65 years and over, 65–74, 75–84, and 85 years and over. This set of age categories responds to an increasing number of requests from data users for more age detail and represent a substantial expansion from the age categories previously used in these tables to present leading-cause data (1–4, 5–14, 15–24, 25–44, 45–64, and 65 years and over) (7). Leading causes by further age detail, along with the previously used age categories, are published on the NCHS website (http://www.cdc.gov/nchs/nvss/mortality_tables.htm#cod). [Tables 3](#) and [4](#), which present data for infants (under 1 year), also show leading

Table A. List of 113 selected causes of death[The asterisk (*) preceding the cause-of-death codes indicates they are not part of the *International Classification of Diseases, Tenth Revision* (ICD-10); see "Technical Notes"]

Number	Cause of death (based on the <i>International Classification of Diseases, Tenth Revision, 1992</i>)	
1#	Salmonella infections	(A01–A02)
2#	Shigellosis and amebiasis	(A03,A06)
3	Certain other intestinal infections	(A04,A07–A09)
#	Tuberculosis	(A16–A19)
4	Respiratory tuberculosis	(A16)
5	Other tuberculosis	(A17–A19)
6#	Whooping cough	(A37)
7#	Scarlet fever and erysipelas	(A38,A46)
8#	Meningococcal infection	(A39)
9#	Septicemia	(A40–A41)
10#	Syphilis	(A50–A53)
11#	Acute poliomyelitis	(A80)
12#	Arthropod-borne viral encephalitis	(A83–A84,A85.2)
13#	Measles	(B05)
14#	Viral hepatitis	(B15–B19)
15#	Human immunodeficiency virus (HIV) disease	(B20–B24)
16#	Malaria	(B50–B54)
17	Other and unspecified infectious and parasitic diseases and their sequelae	(A00,A05,A20–A36,A42–A44,A48–A49,A54–A79,A81–A82, A85.0–A85.1,A85.8,A86–B04,B06–B09,B25–B49,B55–B99)
#	Malignant neoplasms	(C00–C97)
18	Malignant neoplasms of lip, oral cavity and pharynx	(C00–C14)
19	Malignant neoplasm of esophagus	(C15)
20	Malignant neoplasm of stomach	(C16)
21	Malignant neoplasms of colon, rectum and anus	(C18–C21)
22	Malignant neoplasms of liver and intrahepatic bile ducts	(C22)
23	Malignant neoplasm of pancreas	(C25)
24	Malignant neoplasm of larynx	(C32)
25	Malignant neoplasms of trachea, bronchus and lung	(C33–C34)
26	Malignant melanoma of skin	(C43)
27	Malignant neoplasm of breast	(C50)
28	Malignant neoplasm of cervix uteri	(C53)
29	Malignant neoplasms of corpus uteri and uterus, part unspecified	(C54–C55)
30	Malignant neoplasm of ovary	(C56)
31	Malignant neoplasm of prostate	(C61)
32	Malignant neoplasms of kidney and renal pelvis	(C64–C65)
33	Malignant neoplasm of bladder	(C67)
34	Malignant neoplasms of meninges, brain and other parts of central nervous system	(C70–C72)
	Malignant neoplasms of lymphoid, hematopoietic and related tissue	(C81–C96)
35	Hodgkin's disease	(C81)
36	Non-Hodgkin's lymphoma	(C82–C85)
37	Leukemia	(C91–C95)
38	Multiple myeloma and immunoproliferative neoplasms	(C88,C90)
39	Other and unspecified malignant neoplasms of lymphoid, hematopoietic and related tissue	(C96)
40	All other and unspecified malignant neoplasms	(C17,C23–C24,C26–C31, C37–C41,C44–C49,C51–C52,C57–C60,C62–C63,C66,C68–C69,C73–C80,C97)
41#	In situ neoplasms, benign neoplasms and neoplasms of uncertain or unknown behavior	(D00–D48)
42#	Anemias	(D50–D64)
43#	Diabetes mellitus	(E10–E14)
#	Nutritional deficiencies	(E40–E64)
44	Malnutrition	(E40–E46)
45	Other nutritional deficiencies	(E50–E64)
46#	Meningitis	(G00,G03)
47#	Parkinson's disease	(G20–G21)
48#	Alzheimer's disease	(G30)
#	Major cardiovascular diseases	(I00–I78)
	Diseases of heart	(I00–I09,I11,I13,I20–I51)
49	Acute rheumatic fever and chronic rheumatic heart diseases	(I00–I09)
50	Hypertensive heart disease	(I11)
51	Hypertensive heart and renal disease	(I13)
	Ischemic heart diseases	(I20–I25)
52	Acute myocardial infarction	(I21–I22)
53	Other acute ischemic heart diseases	(I24)
	Other forms of chronic ischemic heart disease	(I20,I25)
54	Atherosclerotic cardiovascular disease, so described	(I25.0)
55	All other forms of chronic ischemic heart disease	(I20,I25.1–I25.9)
	Other heart diseases	(I26–I51)
56	Acute and subacute endocarditis	(I33)
57	Diseases of pericardium and acute myocarditis	(I30–I31,I40)
58	Heart failure	(I50)
59	All other forms of heart disease	(I26–I28,I34–I38, I42–I49,I51)

See note at end of table.

Table A. List of 113 selected causes of death[The asterisk (*) preceding the cause-of-death codes indicates they are not part of the *International Classification of Diseases, Tenth Revision (ICD-10)*; see "Technical Notes"]

Number	Cause of death (based on the <i>International Classification of Diseases, Tenth Revision, 1992</i>)	
60#	Essential (primary) hypertension and hypertensive renal disease	(I10,I12)
61#	Cerebrovascular diseases	(I60-I69)
62#	Atherosclerosis	(I70)
	Other diseases of circulatory system	(I71-I78)
63#	Aortic aneurysm and dissection	(I71)
64	Other diseases of arteries, arterioles and capillaries	(I72-I78)
65	Other disorders of circulatory system	(I80-I99)
#	Influenza and pneumonia	(J10-J18)
66	Influenza	(J10-J11)
67	Pneumonia	(J12-J18)
	Other acute lower respiratory infections	(J20-J22)
68#	Acute bronchitis and bronchiolitis	(J20-J21)
69	Unspecified acute lower respiratory infection	(J22)
#	Chronic lower respiratory diseases	(J40-J47)
70	Bronchitis, chronic and unspecified	(J40-J42)
71	Emphysema	(J43)
72	Asthma	(J45-J46)
73	Other chronic lower respiratory diseases	(J44,J47)
74#	Pneumoconioses and chemical effects	(J60-J66,J68)
75#	Pneumonitis due to solids and liquids	(J69)
76	Other diseases of respiratory system	(J00-J06,J30-J39,J67,J70-J98)
77#	Peptic ulcer	(K25-K28)
78#	Diseases of appendix	(K35-K38)
79#	Hernia	(K40-K46)
#	Chronic liver disease and cirrhosis	(K70,K73-K74)
80	Alcoholic liver disease	(K70)
81	Other chronic liver disease and cirrhosis	(K73-K74)
82#	Cholelithiasis and other disorders of gallbladder	(K80-K82)
#	Nephritis, nephrotic syndrome and nephrosis	(N00-N07,N17-N19,N25-N27)
83	Acute and rapidly progressive nephritic and nephrotic syndrome	(N00-N01,N04)
84	Chronic glomerulonephritis, nephritis and nephropathy not specified as acute or chronic, and renal sclerosis unspecified	(N02-N03, N05-N07,N26)
85	Renal failure	(N17-N19)
86	Other disorders of kidney	(N25,N27)
87#	Infections of kidney	(N10-N12,N13.6,N15.1)
88#	Hyperplasia of prostate	(N40)
89#	Inflammatory diseases of female pelvic organs	(N70-N76)
#	Pregnancy, childbirth and the puerperium	(O00-O99)
90	Pregnancy with abortive outcome	(O00-O07)
91	Other complications of pregnancy, childbirth and the puerperium	(O10-O99)
92#	Certain conditions originating in the perinatal period	(P00-P96)
93#	Congenital malformations, deformations and chromosomal abnormalities	(Q00-Q99)
94	Symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified	(R00-R99)
95	All other diseases	(Residual)
#	Accidents (unintentional injuries)	(V01-X59,Y85-Y86)
	Transport accidents	(V01-V99,Y85)
96	Motor vehicle accidents	(V02-V04,V09.0,V09.2,V12-V14, V19.0-V19.2,V19.4-V19.6,V20-V79,V80.3-V80.5,V81.0-V81.1, V82.0-V82.1,V83-V86,V87.0-V87.8,V88.0-V88.8,V89.0,V89.2)
97	Other land transport accidents	(V01,V05-V06,V09.1, V09.3-V09.9,V10-V11,V15-V18,V19.3,V19.8-V19.9, V80.0-V80.2,V80.6-V80.9,V81.2-V81.9,V82.2-V82.9, V87.9,V88.9,V89.1,V89.3,V89.9)
98	Water, air and space, and other and unspecified transport accidents and their sequelae	(V90-V99,Y85)
	Nontransport accidents	(W00-X59,Y86)
99	Falls	(W00-W19)
100	Accidental discharge of firearms	(W32-W34)
101	Accidental drowning and submersion	(W65-W74)
102	Accidental exposure to smoke, fire and flames	(X00-X09)
103	Accidental poisoning and exposure to noxious substances	(X40-X49)
104	Other and unspecified nontransport accidents and their sequelae	(W20-W31,W35-W64,W75-W99,X10-X39,X50-X59,Y86)
#	Intentional self-harm (suicide)	(*U03,X60-X84,Y87.0)
105	Intentional self-harm (suicide) by discharge of firearms	(X72-X74)
106	Intentional self-harm (suicide) by other and unspecified means and their sequelae	(*U03,X60-X71,X75-X84,Y87.0)
#	Assault (homicide)	(*U01-*U02,X85-Y09,Y87.1)
107	Assault (homicide) by discharge of firearms	(*U01.4,X93-X95)
108	Assault (homicide) by other and unspecified means and their sequelae	(*U01.0-*U01.3,*U01.5-*U01.9,*U02,X85-X92,X96-Y09,Y87.1)
109#	Legal intervention	(Y35,Y89.0)
	Events of undetermined intent	(Y10-Y34,Y87.2,Y89.9)
110	Discharge of firearms, undetermined intent	(Y22-Y24)
111	Other and unspecified events of undetermined intent and their sequelae	(Y10-Y21,Y25-Y34,Y87.2,Y89.9)
112#	Operations of war and their sequelae	(Y36,Y89.1)
113#	Complications of medical and surgical care	(Y40-Y84,Y88)

NOTE: The causes designated by # are ranked to determine leading causes of death for specified population groups.

Table B. List of 130 selected causes of infant death[The asterisk (*) preceding the cause-of-death codes indicates they are not part of the *International Classification of Diseases, Tenth Revision* (ICD-10); see "Technical Notes"]

Number	Cause of death (based on the <i>International Classification of Diseases, Tenth Revision, 1992</i>)	
	Certain infectious and parasitic diseases	(A00–B99)
1	Certain intestinal infectious diseases	(A00–A08)
2#	Diarrhea and gastroenteritis of infectious origin	(A09)
3#	Tuberculosis	(A16–A19)
4#	Tetanus	(A33, A35)
5#	Diphtheria	(A36)
6#	Whooping cough	(A37)
7#	Meningococcal infection	(A39)
8#	Septicemia	(A40–A41)
9#	Congenital syphilis	(A50)
10#	Gonococcal infection	(A54)
	Viral diseases	(A80–B34)
11#	Acute poliomyelitis	(A80)
12#	Varicella (chickenpox)	(B01)
13#	Measles	(B05)
14#	Human immunodeficiency virus (HIV) disease	(B20–B24)
15#	Mumps	(B26)
16	Other and unspecified viral diseases	(A81–B00, B02–B04, B06–B19, B25, B27–B34)
17#	Candidiasis	(B37)
18#	Malaria	(B50–B54)
19#	Pneumocystosis	(B59)
20	All other and unspecified infectious and parasitic diseases	(A20–A32, A38, A42–A49, A51–A53, A55–A79, B35–B36, B38–B49, B55–B58, B60–B99)
	Neoplasms	(C00–D48)
#	Malignant neoplasms	(C00–C97)
21	Hodgkin's disease and non-Hodgkin's lymphomas	(C81–C85)
22	Leukemia	(C91–C95)
23	Other and unspecified malignant neoplasms	(C00–C80, C88, C90, C96–C97)
24#	In situ neoplasms, benign neoplasms and neoplasms of uncertain or unknown behavior	(D00–D48)
#	Diseases of the blood and blood-forming organs and certain disorders involving the immune mechanism	(D50–D89)
25	Anemias	(D50–D64)
26	Hemorrhagic conditions and other diseases of blood and blood-forming organs	(D65–D76)
27	Certain disorders involving the immune mechanism	(D80–D89)
	Endocrine, nutritional and metabolic diseases	(E00–E88)
28#	Short stature, not elsewhere classified	(E34.3)
29#	Nutritional deficiencies	(E40–E64)
30#	Cystic fibrosis	(E84)
31#	Volume depletion, disorders of fluid, electrolyte and acid-base balance	(E86–E87)
32	All other endocrine, nutritional and metabolic diseases	(E00–E32, E34.0–E34.2, E34.4–E34.9, E65–E83, E85, E88)
	Diseases of the nervous system	(G00–G98)
33#	Meningitis	(G00, G03)
34#	Infantile spinal muscular atrophy, type I (Werdnig-Hoffman)	(G12.0)
35#	Infantile cerebral palsy	(G80)
36#	Anoxic brain damage, not elsewhere classified	(G93.1)
37	Other diseases of nervous system	(G04, G06–G11, G12.1–G12.9, G20–G72, G81–G92, G93.0, G93.2–G93.9, G95–G98)
38#	Diseases of the ear and mastoid process	(H60–H93)
#	Diseases of the circulatory system	(I00–I99)
39	Pulmonary heart disease and diseases of pulmonary circulation	(I26–I28)
40	Pericarditis, endocarditis and myocarditis	(I30, I33, I40)
41	Cardiomyopathy	(I42)
42	Cardiac arrest	(I46)
43	Cerebrovascular diseases	(I60–I69)
44	All other diseases of circulatory system	(I00–I25, I31, I34–I38, I44–I45, I47–I51, I70–I99)
	Diseases of the respiratory system	(J00–J98)
45#	Acute upper respiratory infections	(J00–J06)
#	Influenza and pneumonia	(J10–J18)
46	Influenza	(J10–J11)
47	Pneumonia	(J12–J18)
48#	Acute bronchitis and acute bronchiolitis	(J20–J21)
49#	Bronchitis, chronic and unspecified	(J40–J42)
50#	Asthma	(J45–J46)
51#	Pneumonitis due to solids and liquids	(J69)
52	Other and unspecified diseases of respiratory system	(J22, J30–J39, J43–J44, J47–J68, J70–J98)
	Diseases of the digestive system	(K00–K92)
53#	Gastritis, duodenitis, and noninfective enteritis and colitis	(K29, K50–K55)
54#	Hernia of abdominal cavity and intestinal obstruction without hernia	(K40–K46, K56)
55	All other and unspecified diseases of digestive system	(K00–K28, K30–K38, K57–K92)
	Diseases of the genitourinary system	(N00–N95)
56#	Renal failure and other disorders of kidney	(N17–N19, N25, N27)
57	Other and unspecified diseases of genitourinary system	(N00–N15, N20–N23, N26, N28–N95)

Table B. List of 130 selected causes of infant death[The asterisk (*) preceding the cause-of-death codes indicates they are not part of the *International Classification of Diseases, Tenth Revision (ICD-10)*; see "Technical Notes"]

Number	Cause of death (based on the <i>International Classification of Diseases, Tenth Revision, 1992</i>)	
	Certain conditions originating in the perinatal period	(P00–P96)
	Newborn affected by maternal factors and by complications of pregnancy, labor and delivery	(P00–P04)
58#	Newborn affected by maternal hypertensive disorders	(P00.0)
59#	Newborn affected by other maternal conditions which may be unrelated to present pregnancy	(P00.1–P00.9)
#	Newborn affected by maternal complications of pregnancy	(P01)
60	Newborn affected by incompetent cervix	(P01.0)
61	Newborn affected by premature rupture of membranes	(P01.1)
62	Newborn affected by multiple pregnancy	(P01.5)
63	Newborn affected by other maternal complications of pregnancy	(P01.2–P01.4, P01.6–P01.9)
#	Newborn affected by complications of placenta, cord and membranes	(P02)
64	Newborn affected by complications involving placenta	(P02.0–P02.3)
65	Newborn affected by complications involving cord	(P02.4–P02.6)
66	Newborn affected by chorioamnionitis	(P02.7)
67	Newborn affected by other and unspecified abnormalities of membranes	(P02.8–P02.9)
68#	Newborn affected by other complications of labor and delivery	(P03)
69#	Newborn affected by noxious influences transmitted via placenta or breast milk	(P04)
	Disorders related to length of gestation and fetal malnutrition	(P05–P08)
70#	Slow fetal growth and fetal malnutrition	(P05)
#	Disorders related to short gestation and low birth weight, not elsewhere classified	(P07)
71	Extremely low birth weight or extreme immaturity	(P07.0, P07.2)
72	Other low birth weight or preterm	(P07.1, P07.3)
73#	Disorders related to long gestation and high birth weight	(P08)
74#	Birth trauma	(P10–P15)
#	Intrauterine hypoxia and birth asphyxia	(P20–P21)
75	Intrauterine hypoxia	(P20)
76	Birth asphyxia	(P21)
77#	Respiratory distress of newborn	(P22)
	Other respiratory conditions originating in the perinatal period	(P23–P28)
78#	Congenital pneumonia	(P23)
79#	Neonatal aspiration syndromes	(P24)
80#	Interstitial emphysema and related conditions originating in the perinatal period	(P25)
81#	Pulmonary hemorrhage originating in the perinatal period	(P26)
82#	Chronic respiratory disease originating in the perinatal period	(P27)
83#	Atelectasis	(P28.0–P28.1)
84	All other respiratory conditions originating in the perinatal period	(P28.2–P28.9)
	Infections specific to the perinatal period	(P35–P39)
85#	Bacterial sepsis of newborn	(P36)
86#	Omphalitis of newborn with or without mild hemorrhage	(P38)
87	All other infections specific to the perinatal period	(P35, P37, P39)
	Hemorrhagic and hematological disorders of newborn	(P50–P61)
88#	Neonatal hemorrhage	(P50–P52, P54)
89#	Hemorrhagic disease of newborn	(P53)
90#	Hemolytic disease of newborn due to isoimmunization and other perinatal jaundice	(P55–P59)
91#	Hematological disorders	(P60–P61)
92#	Syndrome of infant of a diabetic mother and neonatal diabetes mellitus	(P70.0–P70.2)
93#	Necrotizing enterocolitis of newborn	(P77)
94#	Hydrops fetalis not due to hemolytic disease	(P83.2)
95	Other perinatal conditions	(P29, P70.3–P70.9, P71–P76, P78–P81, P83.0–P83.1, P83.3–P83.9, P90–P96)
#	Congenital malformations, deformations and chromosomal abnormalities	(Q00–Q99)
96	Anencephaly and similar malformations	(Q00)
97	Congenital hydrocephalus	(Q03)
98	Spina bifida	(Q05)
99	Other congenital malformations of nervous system	(Q01–Q02, Q04, Q06–Q07)
100	Congenital malformations of heart	(Q20–Q24)
101	Other congenital malformations of circulatory system	(Q25–Q28)
102	Congenital malformations of respiratory system	(Q30–Q34)
103	Congenital malformations of digestive system	(Q35–Q45)
104	Congenital malformations of genitourinary system	(Q50–Q64)
105	Congenital malformations and deformations of musculoskeletal system, limbs and integument	(Q65–Q85)
106	Down's syndrome	(Q90)
107	Edward's syndrome	(Q91.0–Q91.3)
108	Patau's syndrome	(Q91.4–Q91.7)
109	Other congenital malformations and deformations	(Q10–Q18, Q86–Q89)
110	Other chromosomal abnormalities, not elsewhere classified	(Q92–Q99)
	Symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified	(R00–R99)
111#	Sudden infant death syndrome	(R95)
112	Other symptoms, signs and abnormal clinical and laboratory findings, not elsewhere classified	(R00–R53, R55–R94, R96–R99)
113	All other diseases (Residual)	(F01–F99, H00–H57, L00–M99)

See note at end of table.

Table B. List of 130 selected causes of infant death[The asterisk (*) preceding the cause-of-death codes indicates they are not part of the *International Classification of Diseases, Tenth Revision (ICD-10)*; see "Technical Notes"]

Number	Cause of death (based on the <i>International Classification of Diseases, Tenth Revision, 1992</i>)
	External causes of mortality (*U01,V01–Y84)
#	Accidents (unintentional injuries) (V01–X59)
	Transport accidents (V01–V99)
114	Motor vehicle accidents (V02–V04,V09.0,V09.2,V12–V14, V19.0–V19.2,V19.4–V19.6,V20–V79,V80.3–V80.5,V81.0–V81.1, V82.0–V82.1,V83–V86,V87.0–V87.8,V88.0–V88.8,V89.0,V89.2)
115	Other and unspecified transport accidents (V01,V05–V06, V09.1,V09.3–V09.9,V10–V11,V15–V18,V19.3,V19.8–V19.9, V80.0–V80.2,V80.6–V80.9,V81.2–V81.9,V82.2–V82.9,V87.9, V88.9,V89.1,V89.3,V89.9,V90–V99)
116	Falls (W00–W19)
117	Accidental discharge of firearms (W32–W34)
118	Accidental drowning and submersion (W65–W74)
119	Accidental suffocation and strangulation in bed (W75)
120	Other accidental suffocation and strangulation (W76–W77,W81–W84)
121	Accidental inhalation and ingestion of food or other objects causing obstruction of respiratory tract (W78–W80)
122	Accidents caused by exposure to smoke, fire and flames (X00–X09)
123	Accidental poisoning and exposure to noxious substances (X40–X49)
124	Other and unspecified accidents (W20–W31,W35–W64,W85–W99,X10–X39, X50–X59)
#	Assault (homicide) (*U01,X85–Y09)
125	Assault (homicide) by hanging, strangulation and suffocation (X91)
126	Assault (homicide) by discharge of firearms (*U01.4,X93–X95)
127	Neglect, abandonment and other maltreatment syndromes (Y06–Y07)
128	Assault (homicide) by other and unspecified means (*U01.0–*U01.3, *U01.5–*U01.9,X85–X90,X92,X96–Y05,Y08–Y09)
129#	Complications of medical and surgical care (Y40–Y84)
130	Other external causes (X60–X84,Y10–Y36)

NOTE: The causes designated by # are ranked to determine leading causes of infant death for specified population groups.

causes of death for the age subcategories neonatal (under 28 days) and postneonatal (28 days to 11 months).

The age grouping used when ranking causes of death can have an impact on the rankings assigned to any particular age (8). For example, in 2005, the rankings for the 10 leading causes of death for a 45 year-old male were slightly different depending on whether the ranking was based on the age group 45–49 or 45–54 years. To illustrate, the category Viral hepatitis was not ranked among the 10 leading causes for 45–49 year-old men, but was ranked 10th for men aged 45–54. Assault (homicide) was ranked ninth for men aged 45–49, but was not ranked in the top 10 for men aged 45–54. Each aggregation of age resulted in a different understanding of the relative importance of Viral hepatitis and homicide for those at or near age 45.

Results

In 2005, the 10 leading causes of death accounted for about 77 percent of all deaths occurring in the United States and the rank order remained unchanged from 2004 (Table C).

From 2004 to 2005, the number of deaths due to Cerebrovascular diseases (stroke) and Diseases of heart (heart disease) decreased by 4.3 and 0.1 percent, respectively (Table C). The number of deaths for each of the other leading causes increased during this period. The largest increases were observed for Alzheimer's disease (8.5 percent), Chronic lower respiratory diseases (CLRD) (7.3 percent), Influenza and pneumonia (5.6 percent), and Accidents (unintentional injuries) (5.2 percent).

Table C. Deaths and percentage of total deaths for the 10 leading causes of death: United States, 2004–2005

Cause of death (based on the <i>International Classification of Diseases, Tenth Revision, 1992</i>)	2005			2004	
	Rank ¹	Deaths	Percentage of total deaths	Deaths	Percentage of total deaths

. . . Category not applicable.

¹Rank based on number of deaths.

The top two causes, heart disease and Malignant neoplasms (cancer), accounted for roughly one-half of all deaths in 2005. This represents continued improvement since 1980—when both accounted for about 59 percent of all deaths—largely due to the declining relative burden of heart disease mortality (Figure 1). Stroke ranked third in 2005, followed by CLRD and unintentional injuries, which ranked fourth and fifth, respectively. The proportion of deaths due to stroke declined from 9 percent in 1980 to 6 percent in 2005—a trend interrupted by a slight increase from 1994 through 2000 (data not shown). Despite an overall decline over time in the proportion of deaths due to stroke (1,9–15), this cause has maintained the same rank since the 1950s when official statistics on leading causes of death were first published using standard rules. The proportion of deaths due to CLRD rose from 1980 through 2005 while that due to unintentional injuries declined during the 1980s, hovered at about 4 percent in the 1990s, then incrementally trended upwards since 2001. These top five causes accounted for about 66 percent of all deaths in 2005, down from 76 percent in 1980. Completing the top 10 for 2005 were Diabetes mellitus (diabetes) (6th), Alzheimer’s disease (7th), Influenza and pneumonia (8th), Nephritis, nephrotic syndrome and nephrosis (kidney disease) (9th), and Septicemia (10th) (Table C).

Sex differences

Table D contrasts leading causes of death for males and females in 2005. There were some similarities in the ranking of certain causes of death. Heart disease and cancer ranked as the first

and second leading causes of death, respectively, for both men and women. Over time, both groups have experienced a decline in the proportion of deaths due to heart disease (Figures 2 and 3). In 1980, compared with men, women initially had a slightly higher proportion of deaths due to heart disease despite the identical ranking. By 2005, both groups had the same relative burden of heart disease, about 27 percent. In contrast, since the 1980s, men have persistently had a slightly higher relative burden of cancer mortality than women despite the identical ranking for both groups. In 2005, the proportion of deaths due to cancer was 24 percent for men compared with 22 percent for women (Table D). Other causes with an identical rank for both sexes in 2005 were CLRD, the fourth leading cause, and kidney disease, the ninth leading cause.

Men and women diverge on the ranking of other causes of death. In 2005, unintentional injuries were the third leading cause of death for males but the sixth for females. Although the proportion of deaths due to unintentional injuries declined overall for both groups from 1980 through 2005, the relative burden of mortality from this cause is typically higher for men than women (Figures 2 and 3). During this period, unintentional injuries remained in the top four causes of death for men, but among women it gradually moved down in rank and dropped out of the top five in 1987 (9). In 2005, unintentional injuries accounted for 6.3 percent of all deaths to men but 3.3 percent of all deaths to women (Table D). There has been an upward trend in the proportion of deaths due to unintentional injuries among men since 2001 and among women since 2002 (12–15). Stroke, diabetes, and Influenza and pneumonia ranked fifth, sixth, and seventh, respectively, for males in 2005, but

¹Rank based on number of deaths.

²Ranks above 10 are provided for informational purposes when a cause is among the top 10 for one of the groups being compared.

ranked third, seventh, and eighth, respectively, for females. Influenza and pneumonia dropped out of the top five causes of death for women in 1999, the same year as the ICD-9 to ICD-10 conversion. This conversion had the result of decreasing the number of deaths for which pneumonia was selected as the underlying cause of death (9,10). Intentional self-harm (suicide) ranked eighth for males, but was not

ranked among the 10 leading causes for females. Similarly, Septicemia ranked 10th for females but was not ranked among the top 10 for males. Alzheimer's disease ranked 10th for males but 5th for females. This cause, which has accounted for an increasing number of deaths over time, made its debut into the top 10 causes for women in 1994, moving into the top 5 in 2002 (9-13).

Figure 2. Percentage of total deaths for the top five causes of death among males: United States, 1980-2005

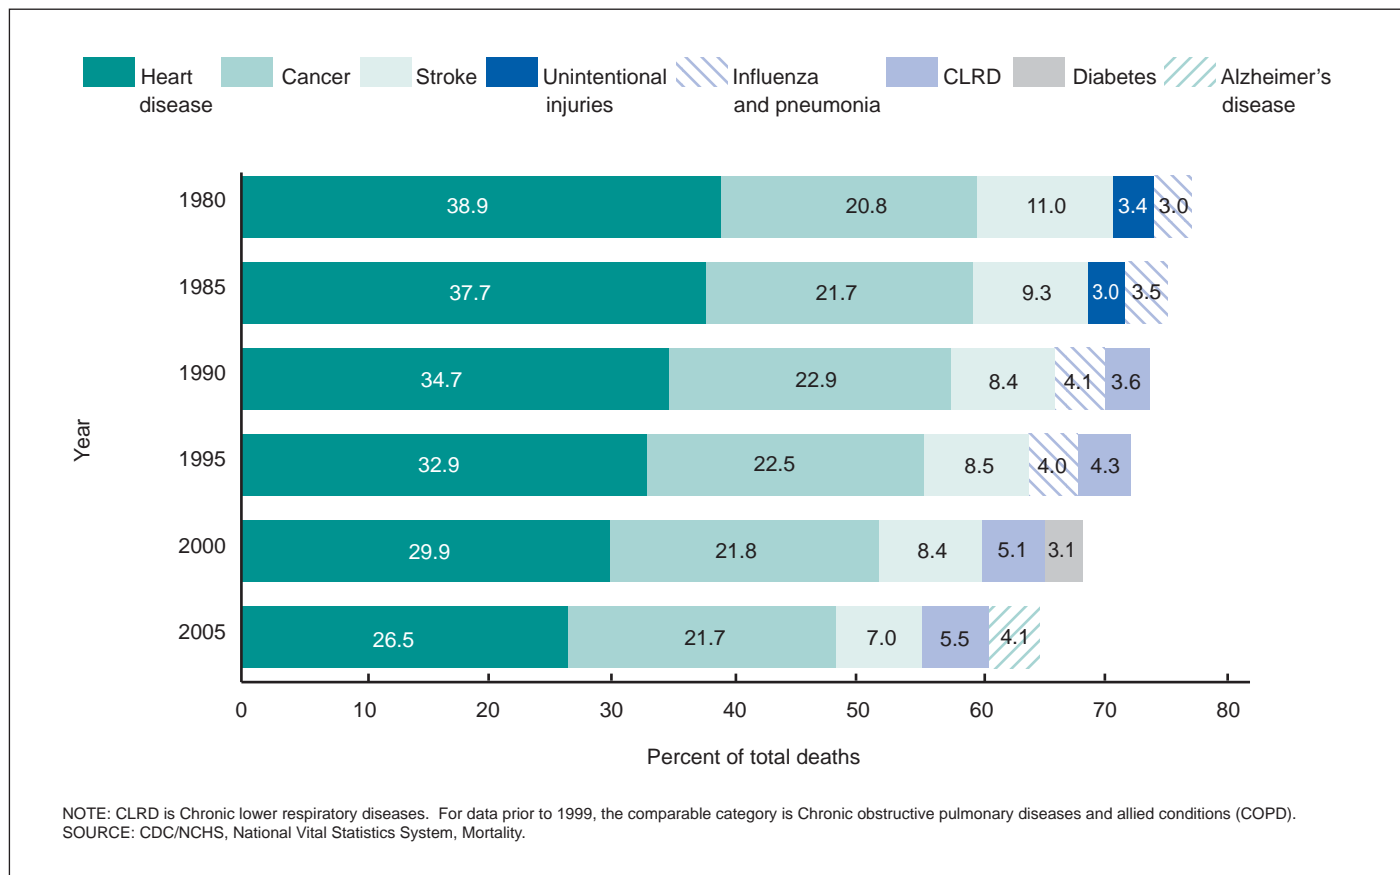

Figure 3. Percentage of total deaths for the top five causes of death among females: United States, 1980–2005

In contrast with 2004 (15), CLRD and stroke switched ranks among men in 2005. CLRD, the fifth leading cause among men in 2004, became the fourth leading cause in 2005, whereas stroke moved down from the fourth to the fifth rank. There were no changes in the rank order of the 10 leading causes among women between years.

Age differences

In 2005, the leading causes of death varied substantially by age group (Table 1). However, there were some general similarities by broad age group in the pattern of leading causes. For the population aged 1–44 years, the leading cause of death was unintentional injuries. Homicide and suicide were also important causes of death in this broad age category: Homicide was consistently one of the top five causes of death in the population aged 1–34 years, and suicide was a top five killer in the 10–44 age group. The proportion of deaths due to unintentional injuries, homicide, and suicide combined ranged from 31 percent to 75 percent in the age groups among those 1–44 years. Cancer, heart disease, Congenital malformations, deformations and chromosomal abnormalities, Human immunodeficiency virus disease (HIV disease), stroke, and Influenza and pneumonia were also consistently ranked among the 10 leading causes for the population aged 1–44 years.

For the population aged 45 and over, chronic diseases accounted for far more deaths than other causes. Cancer and heart disease were the first and second leading causes respectively for the population aged 45–74 years, whereas for those aged 75 and over, heart disease was

the leading cause, with cancer second. The proportion of deaths due to these two causes ranged from 47 percent to 60 percent in the age groups among those aged 45 years and over. Other leading causes prevalent among the 45 and over age groups were CLRD, stroke, diabetes, Septicemia, Chronic liver disease and cirrhosis, kidney disease, unintentional injuries, Alzheimer's disease, and Influenza and pneumonia.

The pattern of change over time in the proportion of deaths due to specific causes varies by age. For illustrative purposes, Table E contrasts the mortality experiences over time in the top five causes of death for three broad age groups: 5–14, 25–44, and 65 years and over. The leading cause of death in the population aged 5–14 and the population aged 25–44 is unintentional injuries. However, the relative burden of mortality from unintentional injuries is far greater in the population aged 5–14 than in the population aged 25–44. Also, the pattern of change in the relative burden of unintentional injuries is different for these two populations. From 1980 through 2005, in the population aged 5–14, the proportion of deaths due to unintentional injuries declined from 49 percent to 37 percent. However, for the population aged 25–44, the proportion of deaths due to unintentional injuries trended downward from 25 percent in 1980 to 17 percent in 1995, only to start trending upward in 1996 (7,10–21). In 2005, this cause accounted for 24 percent of deaths in the 25–44 age group, only slightly lower than the relative burden in 1980. Unintentional injuries was not among the top five causes of death for the population aged 65 years and over from 1980 through 2005. The leading cause of death in the 65 years and over age group is heart disease. In 1980, it

Table E. Percentage of total deaths for the 5 leading causes of death in selected age groups: United States, 1980–2005

Assault (homicide)(*U01–*U02,X85–Y09,Y87.1)	10.2	8.3				6.2
Intentional self-harm (suicide)(*U03,X60–X84,Y87.0)	9.1	9.4	8.5	8.0	8.7	9.1
Human immunodeficiency virus (HIV) disease(B20–B24)			13.1	19.2	6.4	
All races, both sexes, 65 years and over						
Diseases of heart(I00–I09,I11,I13,I20–I51)	44.4	42.2	38.6	36.3	33.0	29.7
Malignant neoplasms(C00–C97)	19.3	20.3	22.4	22.5	21.8	21.7
Cerebrovascular diseases(I60–I69)	10.9	9.0	8.1	8.2	8.2	6.9
Influenza and pneumonia(J10–J18)	3.4	4.0	4.6	4.4	3.3	
Chronic lower respiratory diseases(J40–J47)	3.2	4.1	4.7	5.2	5.9	6.3
Alzheimer’s disease(G30)						4.0

accounted for 44 percent of deaths in the population aged 65 years and over, 13 percent of deaths in the 25–44 year age group, and 3 percent of deaths in the 5–14 year age group. The age group 65 years and over experienced large improvements in the relative burden of heart disease mortality from 1980 through 2005, whereas the younger age groups did not. By 2005, heart disease accounted for 30 percent of deaths in the 65 years and over age group, 13 percent of deaths in the 25–44 year age group, and was not among the top five causes of death for the 5–14 year age group. The 25–44 year age group experienced a temporary decline in the proportion of deaths due to heart disease during the 1990s when HIV disease was a dominant cause of death. However, in 1997, heart disease regained its position as the third leading cause of death, and the proportion of deaths due to heart disease started a slow upward trend toward pre-HIV levels, in the population aged 25–44 years (7,10–21). Despite the slight increase over time in the relative burden of heart disease mortality for the population aged 5–14 years, heart disease was eventually replaced by suicide as a top five cause of death for this group.

Race differences

Table F shows variation across the four major race groups in the 10 leading causes of death in 2005. The four groups shown shared seven of the leading causes in common but had different relative disease burden. Heart disease and cancer were the first and second leading causes of death, respectively, for the white, black, and American Indian or Alaska Native (AIAN) populations; for the Asian or Pacific Islander (API) population, cancer was the leading cause of death, with heart disease second. Stroke ranked third for the white, black, and API populations, but ranked fifth for the AIAN population.

CLRD, unintentional injuries, diabetes, and kidney disease also ranked among the top 10 causes of death for each race group. CLRD ranked fourth for the white population and seventh for the black, AIAN, and API populations. Unintentional injuries ranked fifth for the white population, fourth for the black and API populations, and third for the AIAN population. Diabetes ranked fourth for the AIAN population, fifth for the black and API populations, and seventh for the white population. Kidney disease ranked 9th for the white population, 8th for the black and API populations, and 10th for the AIAN population.

Some of the leading causes were shared by some groups but not by others. Influenza and pneumonia ranked sixth for the API population, eighth for the white population, and ninth for the AIAN population, but was not ranked in the leading 10 causes of death for the black population. Similarly, suicide was not ranked in the top 10 for the black population but was among the 10 leading causes for the other three groups: 8th for the AIAN population, 9th for the API population, and 10th for the white population. Alzheimer’s disease ranked 6th and 10th for the white and API populations, respectively, but was not among the top 10 for the black and AIAN populations.

Furthermore, at least one of the 10 leading causes was unique to each of two groups. For the AIAN population, Chronic liver disease and cirrhosis ranked sixth but was not ranked in the top 10 for the other three race groups. For the black population, homicide ranked 6th, HIV disease 9th, and Septicemia 10th, but these causes were not ranked among the top 10 for the other race groups.

The rank order of the 10 leading causes did not change for the white or AIAN populations in 2005 from 2004 (15), but did for the other groups. For the black population, CLRD moved up one position to become the seventh leading cause; kidney disease moved down from

Table F. Deaths and percentage of total deaths for the 10 leading causes of death, by race: United States, 2005

[Data for races other than white and black should be interpreted with caution because of misreporting of race on death certificates; see "Technical Notes." The asterisk (*) preceding cause of death codes indicates they are not part of the *International Classification of Diseases, Tenth Revision (ICD-10)*; see "Technical Notes"]

¹Rank based on number of deaths.

²Ranks above 10 are provided for informational purposes when a cause is among the top 10 for at least one of the groups being compared.

the seventh to the eighth rank; unintentional injuries became the fourth rather than the fifth leading cause; and diabetes switched from the fourth to the fifth rank. For the API population, kidney disease and suicide switched positions from ninth and eighth, respectively, in 2004 (15) to eighth and ninth in 2005.

A closer look at the differences between the white population and each of the other populations reveals racial variation in patterns of relative disease burden over time (Figures 4-7). For the black population, the relative burden of both heart disease and cancer mortality—as measured by cause-specific percentage of total deaths within each population—is lower than that for the white population (Table F and Figures 4 and 5). This difference has narrowed but persisted over time despite improvements for both groups in heart disease mortality. In 1980, heart disease and cancer accounted for about 61 percent of deaths in the white population and about 51 percent of deaths in the black population. In 2005, these two causes accounted for 50 percent of deaths in the white population and 47 percent of deaths in the black population. Both the black and white populations have had roughly the same relative burden of stroke mortality and have experienced a similar decline in the proportion of deaths due to strokes from 1980 through 2005. For the white population, both the content and pattern of change in the top five causes of death mirror those in the general population (Figures 1 and 4). However, for the black population, homicide was previously one of the five leading causes of death until the mid-1990s (Figure 5). HIV disease was also briefly among the top five killers for the black population during the 1990s. As deaths due to HIV disease declined in this group, diabetes became one of the top five causes of death beginning in 1997

(16-21). Over time, the rising burden of diabetes mortality, relative to other causes, has been greater for the black population than the white population.

For the AIAN population, the relative burden of heart-disease mortality was consistently lower than that for the white population from 1980 through 2005 (Table F and Figures 4 and 6). The proportion of deaths due to heart disease declined for both populations during this period, but more so for the white population—which experienced a decline from 39 to 27 percent, compared with 22 to 19 percent for the AIAN population. The relative burden of cancer mortality is also lower for the AIAN population than for the white population. However, in contrast with heart disease, both groups experienced an increase in relative cancer mortality burden from 1980 through 2005. The increase was larger for the AIAN population—11 to 18 percent compared with 21 to 23 percent for the white population. The relative burden of unintentional injuries is much higher for the AIAN population than the white population. In 1980, this was the fourth leading cause for the white population, accounting for 5 percent of deaths, and the second leading cause for the AIAN population, accounting for 19 percent of deaths. In the AIAN population, the proportion of deaths due to unintentional injuries dropped from 19 percent in 1980 to 12 percent in 2005—still higher than the 5 percent relative burden for the white population in 2005. Both populations have stroke in common as a top five killer. However, stroke's relative mortality burden is higher in the white population—which experienced a small decline from 9 percent in 1980 to 6 percent in 2005—than in the AIAN population—which has had a mortality burden of about 5 percent throughout most of this period. Chronic liver disease and cirrhosis was among the top five killers for

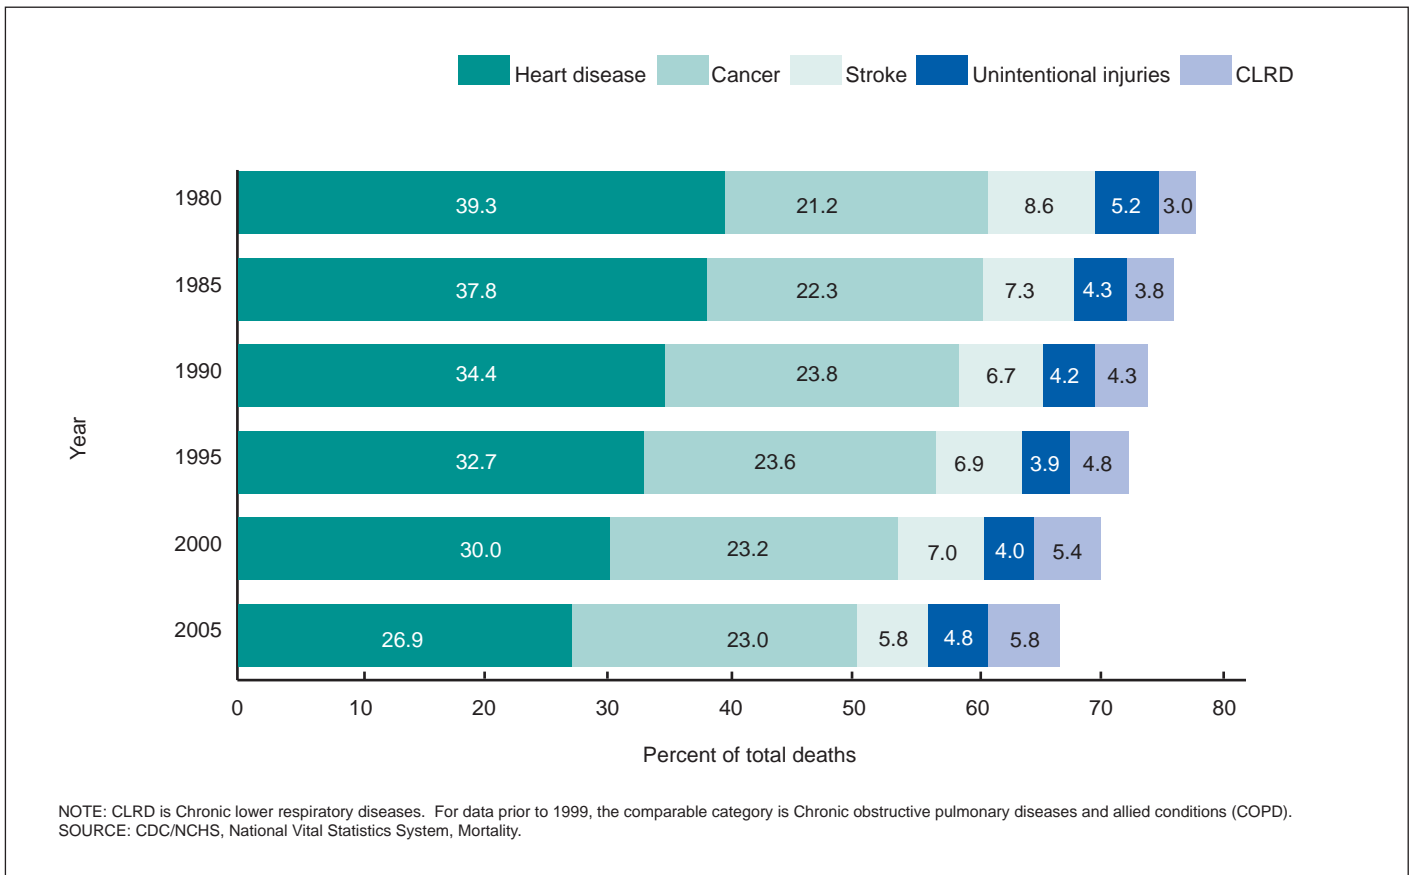

Figure 4. Percentage of total deaths for the top five causes of death among white persons: United States, 1980–2005

Figure 5. Percentage of total deaths for the top five causes of death among black persons: United States, 1980–2005

Figure 6. Percentage of total deaths for the top five causes of death among American Indian or Alaska Native persons: United States, 1980–2005

the AIAN population throughout the 1980s and again in 1991 and 2003 (data not shown). The relative burden of this cause has declined from 1980 through 2005, whereas that of diabetes has been on the increase. Diabetes became one of the top five killers among the AIAN population in 1990. It briefly dropped out of the top five in 1991, but has consistently been the fifth leading cause for this population since 1992 (data not shown).

For the API population, the proportion of deaths due to heart disease was consistently lower than that for the white population from 1980 through 2005 (Table F and Figures 4 and 7). Both groups experienced a decline in the relative burden of heart disease mortality during this period—from 39 to 27 percent for the white population compared with a smaller decline from 30 to 24 percent for the API population. In contrast, the relative cancer mortality burden tends to be slightly higher for the API population than the white population, a pattern that has persisted from 1980 through 2005. For both populations, the proportion of deaths due to cancer has increased over time. In 2005, cancer accounted for 27 percent of all deaths in the API population compared with 23 percent of all deaths in the white population. Cancer surpassed heart disease in 2000 to become the top killer for the API population. The latter also has a higher relative burden of stroke mortality than the white population. In 1980, the proportion of deaths due to stroke was approximately 9 percent for the API and white populations. This gap widened over time, and in 2005, the proportion of deaths due to stroke was 8 percent for the API population and 6 percent for the white population. From 1980 through 2005, the relative burden of mortality from unintentional injuries declined from 7 percent to 5 percent for the

API population—thus closing the small gap between the API and white populations. While CLRD was among the top five killers for the white population from 1980 through 2005, during this period, CLRD was a top five cause of death for the API population only briefly in 2000. Rather, Influenza and pneumonia was among the five leading causes for the API population from 1980 until 1999—the same year as the transition from ICD–9 to ICD–10 (data not shown). As with the AIAN and black populations, the relative burden of diabetes mortality increased over time for the API population. Diabetes has been the fifth leading cause of death for the API population from 1999 through 2005, with the brief exception of 2000 (10–15).

Hispanic origin

Table G contrasts the 10 leading causes of death for the Hispanic, non-Hispanic, non-Hispanic white, and non-Hispanic black populations in 2005. Heart disease and cancer ranked first and second for all four groups. Unintentional injuries ranked third for the Hispanic population, fourth for the non-Hispanic black population, and fifth for the other non-Hispanic groups. The fourth-ranked cause for the Hispanic population was stroke, which also ranked fourth for the non-Hispanic white population but third for the non-Hispanic and non-Hispanic black populations. Diabetes ranked fifth for both the Hispanic and non-Hispanic black populations, but seventh for the non-Hispanic and non-Hispanic white populations. Chronic liver disease and cirrhosis was unique to the Hispanic population; it ranked sixth for this group but was not among the 10 leading causes

Figure 7. Percentage of total deaths for the top five causes of death among Asian or Pacific Islander persons: United States, 1980–2005

Table G. Deaths and percentage of total deaths for the 10 leading causes of death, by Hispanic origin and race for non-Hispanic population: United States, 2005

[Race and Hispanic origin are reported separately on the death certificate. Persons of Hispanic origin may be of any race. Data for Hispanic origin should be interpreted with caution because of misreporting of Hispanic origin on death certificates; see “Technical Notes.” The asterisk (*) preceding the cause-of-death codes indicates they are not part of the *International Classification of Diseases, Tenth Revision (ICD-10)*; see “Technical Notes”]

... Category not applicable. ¹Rank based on number of deaths. ²Ranks above 10 are provided for informational purposes when a cause is among the top 10 for at least one of the groups being compared.

of death for the other race-ethnic populations. Homicide ranked seventh for the Hispanic population and sixth for the non-Hispanic black population, but was not ranked among the top 10 causes for the non-Hispanic or non-Hispanic white populations. CLRD ranked much higher for the non-Hispanic (fourth) and non-Hispanic white populations (third) than for the Hispanic (eighth) and non-Hispanic black populations (seventh). Influenza and pneumonia also ranked lower for the Hispanic population (ninth) than for the non-Hispanic or non-Hispanic white populations (both eighth); it was not among the 10 leading causes for the non-Hispanic black population. The 10th ranked cause for the Hispanic population was Certain conditions originating in the perinatal period (perinatal conditions), which was also unique to this group as a top 10 cause of death. The relatively high ranking of perinatal conditions was primarily a reflection of the relatively young age distribution of the Hispanic population. Causes that ranked among the 10 leading causes for the other race-ethnic groups but not for the Hispanic group were: kidney disease (ranked 8th for the non-Hispanic black population and 9th for both the non-Hispanic and non-Hispanic white populations); Alzheimer's disease (ranked 6th for both the non-Hispanic white and non-Hispanic populations); suicide (ranked 10th for the non-Hispanic white population); and HIV disease (ranked 9th for the non-Hispanic black population). Furthermore, Septicemia ranked 10th for the non-Hispanic and non-Hispanic black populations but did not appear among the top 10 causes for the Hispanic and non-Hispanic white populations in 2005.

Figure 8 illustrates trends over time in the relative burden of cause-specific mortality for the Hispanic population. Cancer and heart disease accounted for only 42 percent of all deaths in 2005, a lower proportion than in the general, non-Hispanic white and non-Hispanic black populations because of the comparatively younger Hispanic age structure. This proportion has changed little from 1990 through 2005 for the Hispanic population because an overall decrease in the relative burden of heart disease mortality over time was counterbalanced by an increase in the relative burden of cancer mortality (7,10–15,18–21). For the Hispanic population, the proportion of deaths due to homicide—previously a top five cause of death—has declined over time. Also, HIV disease was one of the top five causes of death for the Hispanic population in the mid-1990s but quickly dropped in rank. In contrast, the relative burden of diabetes mortality has increased over time such that this cause became one of the top five killers of the Hispanic population in 1997 (18–21); in 2005, diabetes accounted for about 5 percent of all deaths in the Hispanic population. Even though other race and ethnic groups have experienced a decrease in the relative burden of unintentional-injury mortality over time, in the Hispanic population, this cause accounted for approximately 9 percent of deaths in 2005, a proportion that has changed very little over time. The relative mortality burden of unintentional injuries in 2005 for Hispanics was almost double that of the non-Hispanic, non-Hispanic white, and non-Hispanic black populations (Table G)—which is due in part to the younger age structure of the Hispanic population.

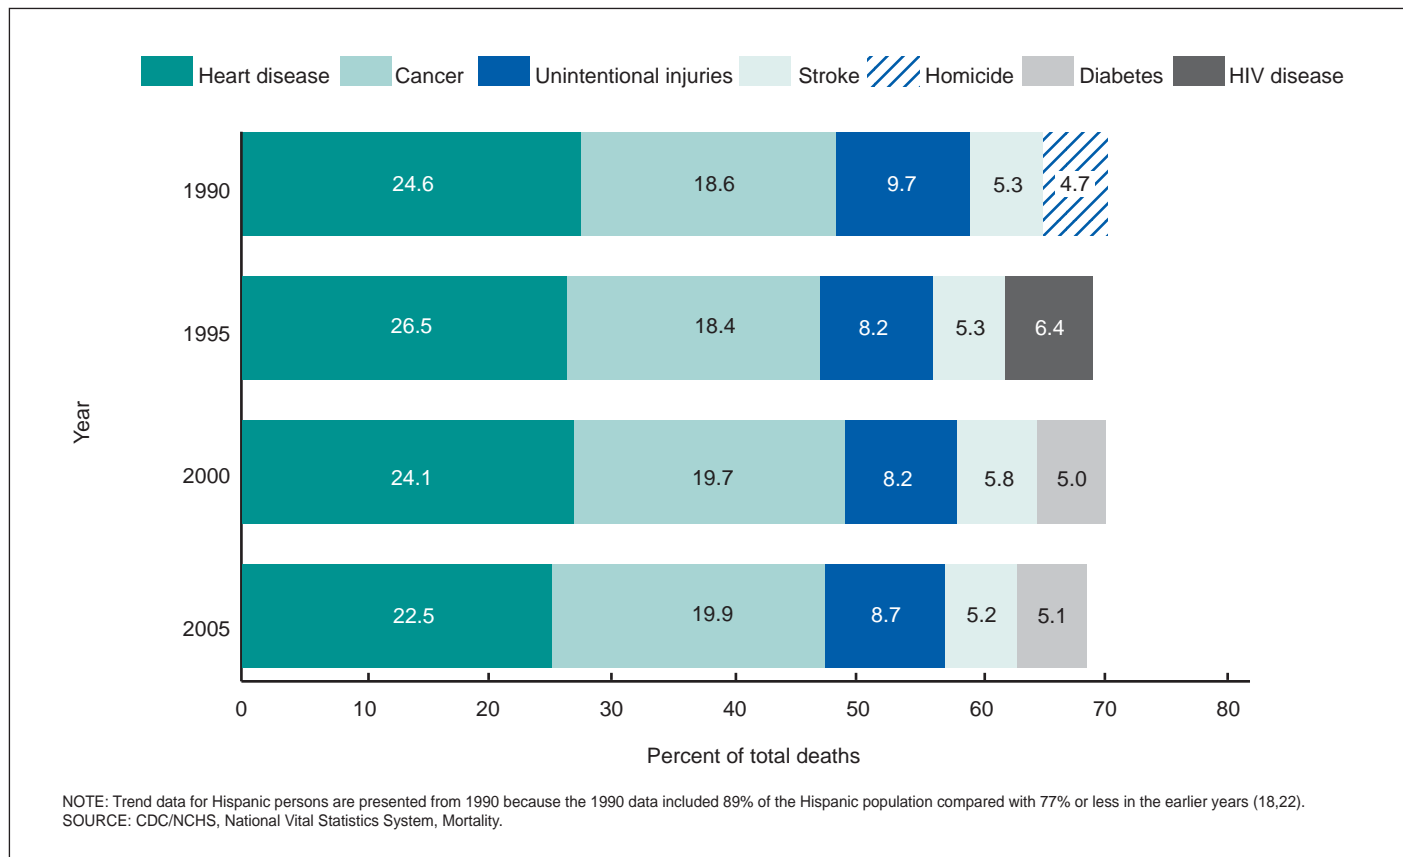

Figure 8. Percentage of total deaths for the top five causes of death among Hispanic persons: United States, 1980–2005

Leading causes of infant death

The leading cause of infant death in 2005 was Congenital malformations, deformations and chromosomal abnormalities (congenital malformations) and accounted for one-fifth of all infant deaths (Table H). Disorders related to short gestation and low birthweight (LBW), not elsewhere classified ranked 2nd, followed by Sudden infant death syndrome (SIDS) (3rd); Newborn affected by maternal complications of pregnancy (4th); Newborn affected by complications of placenta, cord and membranes (5th); unintentional injuries (6th); Respiratory distress of newborn (7th); Bacterial sepsis of newborn (8th); Neonatal hemorrhage (9th); and Diseases of the circulatory system (10th). In all, the 10 leading causes of infant death accounted for 68 percent of all infant deaths. In 2005, compared with 2004, the rank order of the 10 leading causes of infant death did not change, except that unintentional injuries and Newborn affected by complications of placenta, cord and membranes switched ranks.

Neonatal and postneonatal mortality

Stark differences were evident when comparing leading causes of death in the neonatal (less than 28 days after birth) and postneonatal (from 28 days through 11 months after birth) periods (Table J). Disorders related to short gestation and LBW, not elsewhere classified was the leading cause of neonatal death in 2005. In contrast, Sudden infant death syndrome (SIDS) was the leading cause in the postneonatal period. Congenital malformations—the leading cause of infant death overall—ranked second for both neonates and postneonates. The remaining leading causes of neonatal death were characterized by conditions occurring in the perinatal period, whereas in the postneonatal period, the remaining leading causes included several conditions prevalent among the general population. These included unintentional injuries (ranked third), Septicemia (sixth, an increase in rank from eighth in 2004), homicide (seventh, a decrease in rank from fifth in 2004), and Influenza and pneumonia (which moved down one position in the rankings to eighth).

Differences in infant mortality, including neonatal and postneonatal mortality, by race and Hispanic origin are presented in Tables 3 and 4 for the readers' information but are not discussed. Race reported on the death certificate is considered to be fairly accurate for white and black infants; however both race and Hispanic origin may be misreported for other groups (23–25); see "Technical Notes." Consequently, readers are directed to the report using data from the linked file of live births and infant deaths for better measures of infant mortality by race and Hispanic origin (25).

Discussion

This report presents leading causes of death in the United States by age, race, sex, and Hispanic origin, and for the infant, neonatal, and postneonatal periods. Cause-of-death ranking is a popular method of presenting mortality statistics and is a useful tool for illustrating the relative burden of cause-specific mortality, but it must be used cautiously with a clear understanding of the limitations underlying the method.

When comparing rankings across groups or over time, one should be mindful of the age distribution of the populations being compared. Leading causes of death for populations with younger age distributions will tend to show higher rankings for causes of death that are prevalent among the young, such as homicide, unintentional injuries, and HIV infection. Leading causes for older populations will tend to show higher rankings for causes that are more prevalent among the elderly, such as Alzheimer's disease, heart disease, cancer, and stroke.

Consideration should also be given to the effects of random variation on cause-of-death rankings. When the number of events is small (perhaps less than 100 deaths), estimates of mortality risk are subject to random fluctuations; see "Technical Notes." Especially when comparing rankings based on small numbers of deaths between groups or over time, it is important to be aware that differences in relative rankings may be attributable to random variability.

Because the rank order of any particular cause of death will depend on the list of causes from which selection is made and on the

Table H. Deaths and percentage of total deaths for the 10 leading causes of infant death: United States, 2004–2005

¹Rank based on number of deaths.

rules applied in making the selection, a clearly defined, uniform method for ranking causes of death is vital to maintain consistency in the reporting of leading causes by federal and state agencies. The standard method and cause lists described in this and other publications (1–3,6) provide this needed structure.

List of Detailed Tables

1. Deaths, percentage of total deaths, and death rates for the 10 leading causes of death in selected age groups, by race and sex: United States, 2005	21
2. Deaths, percentage of total deaths, and death rates for the 10 leading causes of death in selected age groups, by Hispanic origin, race for non-Hispanic population, and sex: United States, 2005	58
3. Infant, neonatal, and postneonatal deaths, percentage of total deaths, and mortality rates for the 10 leading causes of infant death, by race and sex: United States, 2005	80
4. Infant, neonatal, and postneonatal deaths, percentage of total deaths, and mortality rates for the 10 leading causes of infant death, by Hispanic origin, race for non-Hispanic population, and sex: United States, 2005	89

Table 1. Deaths, percentage of total deaths, and death rates for the 10 leading causes of death in selected age groups, by race and sex: United States, 2005

[Rates per 100,000 population in specified group. Data for races other than white and black should be interpreted with caution because of misreporting of race on death certificates; see "Technical Notes." The asterisk (*) preceding the cause-of-death codes indicates that they are not part of the *International Classification of Diseases, Tenth Revision* (ICD-10); see "Technical Notes"]

Rank ¹	Cause of death (based on the <i>International Classification of Diseases, Tenth Revision, 1992</i>), race, sex, and age	Number ²	Percentage of total deaths	Rate ²	Rank ¹	Cause of death (based on the <i>International Classification of Diseases, Tenth Revision, 1992</i>), race, sex, and age	Number ²	Percentage of total deaths	Rate ²

Table 2. Deaths, percentage of total deaths, and death rates for the 10 leading causes of death in selected age groups, by Hispanic origin, race for non-Hispanic population, and sex: United States, 2005—Con.

[Rates per 100,000 population in specified group. Persons of Hispanic origin may be of any race. Data for Hispanic persons are not tabulated by race; data for non-Hispanic persons are tabulated by race. Data for Hispanic origin should be interpreted with caution because of misreporting of Hispanic origin on the death certificate; see "Technical Notes." The asterisk (*) preceding the cause-of-death codes indicates that they are not part of the *International Classification of Diseases, Tenth Revision (ICD-10)*; see "Technical Notes"]

Table 2. Deaths, percentage of total deaths, and death rates for the 10 leading causes of death in selected age groups, by Hispanic origin, race for non-Hispanic population, and sex: United States, 2005—Con.

[Rates per 100,000 population in specified group. Persons of Hispanic origin may be of any race. Data for Hispanic persons are not tabulated by race; data for non-Hispanic persons are tabulated by race. Data for Hispanic origin should be interpreted with caution because of misreporting of Hispanic origin on the death certificate; see "Technical Notes." The asterisk (*) preceding the cause-of-death codes indicates that they are not part of the *International Classification of Diseases, Tenth Revision (ICD-10)*; see "Technical Notes"]

Table 2. Deaths, percentage of total deaths, and death rates for the 10 leading causes of death in selected age groups, by Hispanic origin, race for non-Hispanic population, and sex: United States, 2005—Con.

[Rates per 100,000 population in specified group. Persons of Hispanic origin may be of any race. Data for Hispanic persons are not tabulated by race; data for non-Hispanic persons are tabulated by race. Data for Hispanic origin should be interpreted with caution because of misreporting of Hispanic origin on the death certificate; see "Technical Notes." The asterisk (*) preceding the cause-of-death codes indicates that they are not part of the *International Classification of Diseases, Tenth Revision* (ICD-10); see "Technical Notes"]

Table 2. Deaths, percentage of total deaths, and death rates for the 10 leading causes of death in selected age groups, by Hispanic origin, race for non-Hispanic population, and sex: United States, 2005—Con.

[Rates per 100,000 population in specified group. Persons of Hispanic origin may be of any race. Data for Hispanic persons are not tabulated by race; data for non-Hispanic persons are tabulated by race. Data for Hispanic origin should be interpreted with caution because of misreporting of Hispanic origin on the death certificate; see "Technical Notes." The asterisk (*) preceding the cause-of-death codes indicates that they are not part of the *International Classification of Diseases, Tenth Revision* (ICD-10); see "Technical Notes"]

Table 2. Deaths, percentage of total deaths, and death rates for the 10 leading causes of death in selected age groups, by Hispanic origin, race for non-Hispanic population, and sex: United States, 2005—Con.

[Rates per 100,000 population in specified group. Persons of Hispanic origin may be of any race. Data for Hispanic persons are not tabulated by race; data for non-Hispanic persons are tabulated by race. Data for Hispanic origin should be interpreted with caution because of misreporting of Hispanic origin on the death certificate; see "Technical Notes." The asterisk (*) preceding the cause-of-death codes indicates that they are not part of the *International Classification of Diseases, Tenth Revision* (ICD-10); see "Technical Notes"]

Table 3. Infant, neonatal, and postneonatal deaths, percentage of total deaths, and mortality rates for the 10 leading causes of infant death, by race and sex: United States, 2005—Con.

[Rates are infant (under 1 year), neonatal (under 28 days), and postneonatal (28 days-11 months) deaths per 100,000 live births in specified group. Deaths for races other than white or black should be interpreted with caution because of inconsistencies between reporting race on birth and death certificates. Deaths based on race of decedent; live births based on race of mother; see "Technical Notes." The asterisk preceding the cause-of-death codes indicates that they are not part of the *International Classification of Diseases, Tenth Revision* (ICD-10); see "Technical Notes"]

Table 3. Infant, neonatal, and postneonatal deaths, percentage of total deaths, and mortality rates for the 10 leading causes of infant death, by race and sex: United States, 2005—Con.

[Rates are infant (under 1 year), neonatal (under 28 days), and postneonatal (28 days-11 months) deaths per 100,000 live births in specified group. Deaths for races other than white or black should be interpreted with caution because of inconsistencies between reporting race on birth and death certificates. Deaths based on race of decedent; live births based on race of mother; see "Technical Notes." The asterisk preceding the cause-of-death codes indicates that they are not part of the *International Classification of Diseases, Tenth Revision* (ICD-10); see "Technical Notes"]

¹Rank based on number of deaths; see "Technical Notes."

Table 4. Infant, neonatal, and postneonatal deaths, percentage of total deaths, and mortality rates for the 10 leading causes of infant death, by Hispanic origin, race for non-Hispanic population, and sex: United States, 2005

[Rates are infant (under 1 year), neonatal (under 28 days), and postneonatal (28 days-11 months) deaths per 100,000 live births in specified group. Race and Hispanic origin are reported separately on the death certificate. Persons of Hispanic origin may be of any race. Data for Hispanic persons are not tabulated separately by race; data for non-Hispanic persons are tabulated by race. Data for Hispanic origin should be interpreted with caution because of inconsistencies between reporting Hispanic origin on birth and death certificates; see "Technical Notes." National linked files should be used to measure infant mortality for specific Hispanic subgroups. The asterisk (*) preceding the cause-of-death codes indicates that they are not part of the *International Classification of Diseases, Tenth Revision* (ICD-10); see "Technical Notes"]

Table 4. Infant, neonatal, and postneonatal deaths, percentage of total deaths, and mortality rates for the 10 leading causes of infant death, by Hispanic origin, race for non-Hispanic population, and sex: United States, 2005—Con.

[Rates are infant (under 1 year), neonatal (under 28 days), and postneonatal (28 days-11 months) deaths per 100,000 live births in specified group. Race and Hispanic origin are reported separately on the death certificate. Persons of Hispanic origin may be of any race. Data for Hispanic persons are not tabulated separately by race; data for non-Hispanic persons are tabulated by race. Data for Hispanic origin should be interpreted with caution because of inconsistencies between reporting Hispanic origin on birth and death certificates; see "Technical Notes." National linked files should be used to measure infant mortality for specific Hispanic subgroups. The asterisk (*) preceding the cause-of-death codes indicates that they are not part of the *International Classification of Diseases, Tenth Revision (ICD-10)*; see "Technical Notes"]

¹Rank based on number of deaths; see "Technical Notes."

Technical Notes

Nature and sources of data

Data in this report are based on information from all death certificates filed in the 50 states and the District of Columbia in 2005. The U.S. Standard Certificate of Death—which is used as a model by the states—was revised for 2003 (27,28). Prior to this, it had last been revised for 1989 (29,30). This report includes data for 18 areas that used the 2003 revision throughout 2005 (California, Connecticut, Florida, Idaho, Kansas, Michigan, Montana, Nebraska, New Hampshire, New Jersey, New York City, New York State, Oklahoma, South Carolina, South Dakota, Utah, Washington and Wyoming); the District of Columbia, which implemented the 2003 revision for part of 2005; and the remaining 33 areas that continued to use the 1989 revision in 2005. Most of the items presented in this report are largely comparable despite changes to item wording and format in 2003; hence, data from both groups of reporting areas are combined unless otherwise stated.

Information from death certificates is coded by the states and provided to the National Center for Health Statistics (NCHS) through the Vital Statistics Cooperative Program and from copies of the original certificates received by NCHS from the state registration offices. In 2005, all the states and the District of Columbia participated in this program and submitted part or all of the mortality data for 2005 in electronic data files to NCHS.

Cause-of-death classification

The mortality statistics presented here were compiled in accordance with the World Health Organization (WHO) regulations, which specify that member nations classify and code causes of death in accordance with the current revision of the International Statistical Classification of Diseases and Related Health Problems (ICD). The ICD provides the basic guidance used in virtually all countries to code and classify causes of death. Effective with deaths occurring in 1999, the United States began using the 10th revision of this classification, (ICD–10) (4).

The ICD not only details disease classification but also provides definitions, tabulation lists, the format of the death certificate, and the rules for coding cause of death. Cause-of-death data presented in this report were coded by procedures outlined in annual issues of the NCHS Instruction Manuals (31–33). The manuals include rules for selecting the underlying cause of death for tabulation purposes, definitions, tabulation lists, and regulations on the use of the classification.

Before 1968, mortality medical data were based on manual coding of an underlying cause of death for each certificate in accordance with WHO rules. Effective with data year 1968, NCHS converted to computerized coding of the underlying cause and manual coding of all causes (multiple causes) on the death certificate. In this system, called “Automated Classification of Medical Entities” (ACME) (34), multiple cause codes serve as inputs to the computer software that employs WHO rules to select the underlying cause. Many states have implemented ACME and provide multiple cause and underlying cause data to NCHS in electronic form; for those states that have not, NCHS coded the mortality medical data using ACME.

The ACME system is used to select the underlying cause of death for all death certificates in the United States. In addition, NCHS has

developed two computer systems as inputs to ACME. Beginning with 1990 data, the Mortality Medical Indexing, Classification, and Retrieval system (MICAR) (35,36), was introduced to automate coding multiple causes of death. In addition, MICAR provides more detailed information on the conditions reported on death certificates than is available through the *International Classification of Diseases* (ICD) code structure. Then, beginning with data year 1993, SuperMICAR, an enhancement of the MICAR system, was introduced. SuperMICAR allows for literal entry of the multiple cause-of-death text as reported by the certifier. This information is then automatically processed by the MICAR and ACME computer systems. Records that cannot be automatically processed by MICAR or SuperMICAR are manually multiple-cause coded and then further processed through ACME.

In this report, tabulations of cause-of-death statistics are based solely on the underlying cause of death. The underlying cause is defined by WHO as the disease or injury that initiated the train of events leading directly to death, or the circumstances of the accident or violence that produced the fatal injury (4). It is selected from the conditions entered by the physician in the cause-of-death section of the death certificate. When more than one cause or condition is entered by the physician, the underlying cause is determined by the sequence of conditions on the certificate, provisions of the ICD, and associated selection rules and modifications. Generally, more medical information is reported on death certificates than is directly reflected in the underlying cause of death. This is captured in NCHS multiple cause-of-death statistics (37–39).

Terrorism-related deaths

Starting in 2001, terrorism deaths are classified using a set of codes and guidelines developed by NCHS within the framework of ICD–10 (40,41). The codes developed include U01–U02 for terrorism involving an assault (homicide) and U03 for terrorism involving intentional self-harm (suicide). The asterisk (*) preceding these codes indicates that the code was introduced by the United States, but is not officially part of the ICD. Codes from the “U” Chapter of ICD–10 were selected because this chapter was reserved specifically for “future additions and changes and for possible interim classifications to solve difficulties arising at the national and international levels between revisions (4).” To maintain international comparability in reporting homicide and suicide rates, deaths coded to U01–U02 are included in tabulations of leading causes of death with other homicides (*U01–*U02, X85–Y09, Y87.1) and deaths coded to *U03 are included with other suicides (*U03, X60–X84, Y87.0). No terrorism deaths were represented in 2005 mortality statistics.

Race and Hispanic origin

Race and Hispanic origin are reported separately on the death certificate. Therefore, data shown by race include persons of Hispanic or non-Hispanic origin, and data for Hispanic origin include persons of any race. In this report, unless otherwise specified, deaths of Hispanic origin are included in the totals for each race group—white, black, American Indian or Alaska Native (AIAN), and Asian or Pacific Islander (API)—according to the decedent’s race as reported on the death certificate. Data shown for Hispanic persons include all persons of Hispanic origin of any race.

The 2003 revision of the U.S. Standard Certificate of Death allows the reporting of more than one race (multiple races) (28). This change was implemented to reflect the increasing diversity of the U.S. population and is consistent with the decennial census. The race and ethnicity items on the revised certificate are compliant with the new standards issued by the Office of Management and Budget (OMB) in 1997, which mandate the collection of more than one race for federal data (42). In addition, the new certificate is compliant with the OMB-mandated minimum of five races to be reported for federal data. Multiple race includes any combination of white, black or African-American, AIAN, and API. If two or more specific subgroups such as Korean and Chinese are reported, these count as a single race of Asian rather than as multiple races.

In 2005, multiple race was reported for the entire year on the revised death certificates of California, Connecticut, Florida, Idaho, Kansas, Michigan, Montana, Nebraska, New Hampshire, New Jersey, New York, Oklahoma, South Carolina, South Dakota, Utah, Washington, and Wyoming, as well as on the unrevised certificates of Hawaii, Maine, Minnesota, and Wisconsin. The District of Columbia began reporting multiple race in March 2005 when implementation of the revised certificate was started. More than one race was reported for 0.4 percent of the records in the 21 states for which multiple-race reporting has been implemented (because the District of Columbia did not report multiple race for the entire data year, it was not included in this computation). Data from the remaining 29 states are based on the 1989 revision of the U.S. Standard Certificate of Death, which follows the older 1977 OMB standard of allowing only a single race to be reported (29,43). In addition, these states report a minimum of four races as stipulated by said standard: white, black or African American, AIAN, and API.

In order to provide uniformity and comparability of the data during the transition to the new multiple-race format, it was necessary to “bridge” the responses of those who reported multiple races to one race in a procedure similar to that used to bridge multiracial population estimates (44,45). Multiracial decedents are imputed to a single race (either white, black, AIAN, or API) according to their combination of races, Hispanic origin, sex, and age indicated on the death certificate. The imputation procedure is described in detail at http://www.cdc.gov/nchs/data/dvs/Multiple_race_docu_5-10-04.pdf.

Mortality data for the Hispanic-origin population are based on deaths to residents of all 50 states and the District of Columbia. Data year 1997 was the first year in which mortality data for the Hispanic population were available for the entire United States.

Quality of race and Hispanic origin data—Death rates for Hispanic, AIAN, and API persons should be interpreted with caution because of misreporting of race on the death certificate (23,24,46). A number of studies have been conducted on the reliability of race reported on the death certificate by comparing race on the death certificate with that reported on another data collection instrument, such as the census or a survey. Differences may arise because of differences in who provides race information on the compared records. Race information on the death certificate is reported by the funeral director as provided by an informant or in the absence of an informant, on the basis of observation. In contrast, race on the census or on the Current Population Survey (CPS) is obtained while the individual is alive and is self-reported or reported by another member of the household familiar with the individual and therefore may be considered more valid. A high level of

agreement between the death certificate and the census or survey report is essential to assure unbiased death rates by race.

Studies (24,47) show that a person self-reported as AIAN, API, or Hispanic origin on census or survey records was sometimes reported as white on the death certificate. The net effect of misclassification is an underestimation of deaths and death rates for races other than white and black and for Hispanic origin. In addition, undercoverage of some minority groups in the census and resultant population estimates introduces biases into death rates by race and Hispanic origin (23,48,49). For a more detailed discussion, see “Deaths: Final Data for 2005” (3).

Other races and race not stated—Beginning in 1992, all records coded as “Other races” (0.23 percent of the total deaths in 2005) were assigned to the specified race of the previous record. Records for which race was unknown, not stated, or not classifiable (0.12 percent) were assigned the racial designation of the previous record.

Infant mortality rates—For 2005, as in previous years, infant deaths continue to be tabulated by the race of the decedent. However, beginning with the 1989 data year, the method of tabulating live births by race was changed from race of parents to race of mother as stated on the birth certificate. This change affects infant mortality rates because live births are the denominators of these rates (50,51).

Quantitatively, the change in the basis for tabulating live births by race results in more white births and fewer black births and births of other races. Consequently, infant and maternal mortality rates under the new tabulating procedure tend to be about 2 percent lower for white infants and about 5 percent higher for black infants than when they are computed by the previous method of tabulating live births by race of parents. Rates for most other minority races also are higher when computed by race of mother (30,50,51).

Infant mortality rates for specified race are subject to error because of reporting problems that affect the classification of race on the birth (race of mother) and death (race of infant) certificates for the same infant. Infant mortality rates by specified race are more accurate when based on the linked file of infant deaths and live births (25). The linked file computes infant mortality rates using the race of the mother from the birth certificate in both the numerator and denominator. Race information on the birth certificate is considered to be more accurate than that on the death certificate because, on the birth certificate, race is generally reported by the mother at the time of delivery. Estimates of reporting errors have been made by comparing rates based on the linked files with those in which the race of infant death is based on information from the death certificate (23,25).

Infant mortality rates for the Hispanic-origin population are based on numbers of resident infant deaths reported to be of Hispanic origin and numbers of resident live births by Hispanic origin of mother for the United States. In computing infant mortality rates, deaths and live births of unknown origin are not distributed among the specified Hispanic and non-Hispanic groups. The percentage of infant deaths of unknown origin was 0.8 and the percentage of live births to mothers of unknown origin was 0.7 for the United States in 2005. Infant mortality rates by Hispanic origin are more accurate when based on linked files of infant deaths and live births (25).

Computation of rates and population bases

Rates in this report (except for infant mortality rates) are crude death rates presented per 100,000 estimated population in a speci-

fied group. Population estimates represent the population at risk of dying in a specified group. The populations used for computing death rates in this report are estimates for July 1, 2005, and were produced under a collaborative arrangement with the U.S. Census Bureau (52). Reflecting the new standards for the classification of race and ethnicity issued in 1997 by the U.S. Office of Management and Budget (OMB), Census 2000 included an option for individuals to report more than one race, as appropriate, for themselves and household members (42). In addition, the standards specified five minimum race categories to be used for tabulation (American Indian or Alaska Native, Asian, Black or African American, Native Hawaiian or Other Pacific Islander, and White). This is a modification of the previous 1977 OMB standards in which only four race categories were specified (Asian and Pacific Islander persons were treated as a single group) and respondents reported only one of the four (43). Death certificates from most reporting areas currently collect only one race for the decedent, according to the 1977 OMB guidelines, and are thus incompatible with population data based on the 2000 census for calculating death rates.

In order to produce 2000 populations with race categories comparable to those still used on most death certificates, the enumerated population data with multiple-race categories was “bridged” back to single-race categories. In addition, the 2000 census counts were modified to be consistent with the old OMB race categories (i.e., data for Asian persons and Native Hawaiians or other Pacific Islanders were combined into a single category, Asian or Pacific Islanders). The procedures used to produce the “bridged” populations are described in separate publications (44,45). It is anticipated that “bridged” population data will be used over the next few years for computing population-based rates. Beginning with deaths occurring in 2003, a few states collected multiple-race data on the death certificate. Once all states begin collecting data on race according to the new OMB standards, it is expected that the use of “bridged” populations will be discontinued.

It is important to emphasize that the population data used to calculate the race-specific mortality statistics presented in this report are based on special estimation procedures and are not true counts. The estimation procedures used to develop these populations are subject to error. Smaller populations (e.g., AIANs) are likely to be affected much more than larger populations (44). Whereas the nature and magnitude of these errors is unknown, the potential for error should be kept in mind when evaluating trends and differentials. Over the next several years, additional information will be incorporated in the estimation procedures, resulting in more robust race-specific population estimates.

Population estimates by race, sex, and the age categories presented in this report are shown in [Table I](#). Population estimates by Hispanic origin, race for the non-Hispanic population, sex, and age are shown in [Table II](#).

Infant mortality rates are the most commonly used index for measuring the risk of dying during the first year of life. Infant mortality rates use the number of live births to approximate the population at risk of dying before the first birthday. They are calculated by dividing the number of infant deaths in a calendar year by the number of live births registered for the same period and are presented as rates per 100,000

live births. Neonatal and postneonatal mortality rates are also calculated using live births in the denominator. For final birth figures used in the denominator for infant mortality rates, see “Births: Final Data for 2005” (53).

Random variation

The mortality data presented in this report are not subject to sampling error. However, mortality data, even based on complete counts, may be affected by random variation. When the number of events is small (perhaps less than 100) and the probability of such an event is small, caution must be observed when interpreting mortality data. This is less problematic when analyzing the relative ranking of causes of death because the observed frequency of deaths for any particular cause is fixed for any given group in any given year, and the ranking is based on that fixed value. Nevertheless, when comparing rankings based on small numbers of deaths between groups or over time, it is important to be aware that differences in relative rankings may be attributable to random variability (see reference 3 for a more detailed discussion of random variation and formulas for calculating standard errors for death rates and infant mortality rates).

Table I. Estimated population, by age, race, and sex: United States, July 1, 2005

Age	All races			White			Black			American Indian or Alaska Native			Asian or Pacific Islander
