Table 12. Birth rates, by age of mother: United States and each state, 2006

[By place of residence. Fertility rates are births per 1,000 women aged 15–44 years estimated in each area; total fertility rates are sums of birth rates for 5-year age groups multiplied by 5; birth rates by age are births per 1,000 women in specified age group estimated in each area. Populations estimated as of July 1. Rates have been revised using population estimates based on the 2010 census, and may differ from rates previously published; see "Technical Notes" of "Births: Final Data for 2011"]

* Figure does not meet standards of reliability or percision; birth rates based on fewer than 20 births.

¹Rates computed by relating births to women aged 45 and over to women aged 45-49; see "Technical Notes" of "Births: Final Data for 2006."

NOTE: Population data for computing birth rates were provided by the U.S. Census Bureau. Rates by state may differ from rates computed on the basis of other population estimates. SOURCE: Division of Vital Statistics, National Center for Health Statistics, Centers for Disease Control and Prevention.
