Universe: AGE = All

Description: All persons

Sources: ORIGIN_I; HHC.180

Recodes: None

Keywords: ethnicity; national origin; ancestry

Notes: "Other-specify" responses were assigned to specific groups where possible. Respondents who selected the generic "Hispanic/Spanish" response category were assigned "09", and in cases where the respondent refused to answer Hispanic origin or didn't know it, this variable was assigned "10" and "11", respectively. When Hispanic origin was not ascertained, this variable was also assigned "11". In cases where "Other-specify" responses were determined to be non-Hispanic, this variable was assigned "12" for not Hispanic/Spanish origin, and ORIGIN_I was back coded to "2" or "No" (no group represented respondent's national origin). Respondents coded as "12" answered 2,7,8, or 9 in ORIGIN_I. Data came from HHC.170 & HHC.180.

Keywords: race; old OMB race standards; bridge variable

Notes: MRACBPI2 creates a bridge between the old (MRACE_P in 1997 and 1998) and the new OMB race standards (MRACER_P in 1999, MRACRP_I in 2000, 2001 and 2002, and MRACRPI2 in 2003 and beyond). Data came from HHC.200 and HHC.220. If only one valid race was given, that answer was copied from RACE1 to here. If more than one race was given, the response was copied from MLTRAC (HHC.220). When comparing NHIS health measures across years by detailed race categories, MRACBPI2 should be used. For confidentiality reasons, it is not possible to create a bridge for the API (Asian and Pacific Islander) category. * Other race is included here for bridging purposes.

Description: Sample adults aged 18+ years

Sources: None

Recodes: None

Keywords: working; not working; looking for work

Notes: DOINGLWA is the ASD equivalent of DOINGLWP in the FSD section (and both variables replace DOINGLW1, the employment status indicator found in previous NHIS data years). For the majority of respondents, DOINGLWA and DOINGLWP will have the same values across their respective data files. However, it is possible that DOINGLWA and DOINGLWP may not be consistent. Users wishing to reconcile any discrepant values are advised to use the values of DOINGLWA rather than DOINGLWP since the information obtained from the family respondent during the FSD portion of the interview was subsequently confirmed and corrected by the sample adult during his or her ASD interview.

Notes: (1) BMI was calculated using the in-house version of the height and weight variables, which contain the greater range of height and weight values than are available on the public use file. The range of possible BMI values listed (0001-9994) does not reflect actual calculated BMI values at the extremes of the range, but rather, allows for the theoretical possibility of such unlikely values. (2) $BMI = [Weight (kg) / [Height(m) squared]]$ rounded to 2 decimal places. Conversion factors: 1 kg = 2.20462 pounds; 1 meter (m) = 39.37008 inches. For both men and women, underweight is BMI < 18.5; healthy weight is BMI 18.5 to <25; overweight is BMI > = 25 to <30; obese is BMI > = 30.

There are currently two kinds of flu vaccines available, the seasonal flu vaccine, and the 2009 H1N1 flu vaccine. I will first ask you questions about the vaccine for H1N1 flu, which is sometimes called swine flu or pandemic flu, and then ask you questions about the seasonal flu.

Since October 2009, have you had a H1N1 flu vaccination? There are two types of H1N1 flu vaccinations. One is a shot and the other is a spray, mist, or drop in the nose.

During the past 12 months, several kinds of flu vaccines have been available. I will ask you about your most recent flu vaccination.

DURING THE PAST 12 MONTHS, have you had a flu shot? A flu shot is usually given in the fall and protects against influenza for the flu season. [A flu shot is injected in the arm. Do not include an influenza vaccine sprayed in the nose.]

[Your most recent flu vaccination could have been the new 2010-2011 flu vaccine available starting this fall, or either of the two types available last season, one called "seasonal" and the other called "H1N1" or "swine" flu vaccine.]

AAU Appendix

For the 2009-2010 flu season, a seasonal flu vaccine was developed and manufactured before the 2009 H1N1 flu (swine flu) was identified. Once the H1N1 flu was identified, an H1N1 flu vaccine was developed. When available, the H1N1 vaccine was offered in addition to the seasonal flu vaccine. Both the seasonal vaccine and the H1N1 vaccine were available for administration either as a shot or as a nasal spray. In order to collect information about the seasonal and H1N1 flu vaccines for adults for the 2009-2010 flu season, the NHIS added supplemental questions about the H1N1 flu vaccines to the AAU section beginning in January 2010.

For the 2010-2011 flu season the H1N1 vaccine and the seasonal flu vaccine were combined into one flu vaccine for administration either as a shot or as a nasal spray. In order to collect information about flu vaccination for adults for the 2010-2011 flu season, the NHIS added new supplemental questions to the AAU section of the Sample Adult Instrument beginning on August 11, 2010.

When these new flu vaccination questions were introduced in August, the old questions on separate seasonal flu and H1N1 vaccinations were no longer applicable and were dropped from the survey. New variable names were assigned to the new vaccination variables, and the final data file will contain both the old and the new variables for all four quarters. However, the old flu variables contain data only for Quarters 1 and 2, and July 1-August 10 of Quarter 3, when the old flu questions were fielded. The old variables will be blank for the remaining weeks of Quarter 3 and all weeks of Quarter 4, when the new questions were fielded. Similarly, the new flu variables contain data only for August 11-September 30 of Quarter 3 and all of Quarter 4, when the new flu questions were fielded. The new variables will be blank for Quarters 1 and 2, and July 1-August 10 of Quarter 3, when the old questions were fielded.
